A. D. 1898-1900.—The results of twenty years of the presidency of Porfirio Diaz.—The wonderful advance of the Republic.—In his interesting book on Mexico, entitled "The Awakening of a Nation," written in 1898, Mr. Charles F. Lummis expresses the opinion that, under the Presidency of Porfirio Diaz, that country "has graduated to be the most compact and unified nation in the New World"; that "she has acquired not only a government which governs, but one which knows how to govern—and contemporaneously a people which has learned how to be ruled"; and he characterizes its government as "logical paternalism—a scheme frightfully dangerous under a bad father, incalculably beneficial under a good one." Two years later, in a contribution to an elaborate "Review of the Nineteenth Century," by many writers, which was published by the "New York Evening Post," January 12, 1901, Mr. Lummis wrote: "Before Diaz, the rich and ancient capital had spent two and a half centuries and ten millions in vain attempts to relieve its recurrent floods. Sewerage was unknown. To-day the valley is drained and sewered by a system nowhere surpassed. Electric lighting, transit, and power-transmission are in vogue. Law and order are of a proportion we may well envy. Public education and individual scholarship have no call to blush in any fair comparison with any land. Business is prosperous, almost without individual exceptions. Factories of all sorts—and some of the costliest and finest factories in the world—have sprung up by the thousand. The comminuted bones of a national spirit have knit as they never were before. Nowadays, it is not Mexico, but we, who are 'fooled' when we omit her from the category of the nations that count. She does count; she will count far more. She has mastered anarchy, she has triumphed even over free silver. She is busily engaged in practising one of the first gospels and mottoes of the American colonies—'Mind Your Own Business'—and is making a magnificent success at it. It is a curious problem in the philosophies of history, what shall be the outcome of a nation which instead of being born rugged and growing old and easy, was born old and in the last quarter-century has come into the heritage of sturdy youth. For it is as a young nation, with muscles still growing, that we must think of new Old Mexico."

Hon. John W. Foster, writing to the "New York Tribune," on the 9th of January, 1901, from the City of Mexico, where he formerly resided for some years as United States Minister, has borne similar testimony to the astonishing progress of the country. "Since the advent of General Porfirio Diaz to power in 1876," writes Mr. Foster, "there has been no foreign war and no serious disturbance of an internal character, the only exception being the outbreak of certain semi-independent Indian tribes. In the previous fifty years of the existence of the republic there had been as many presidents, the majority of whom owed their existence to revolutionary movements. The wretched story of Mexican history of that period is too familiar to be repeated here. . . . In his inaugural address to Congress last month, on being again installed as President, he [President Diaz] referred to the achievements of Mexico in the last twenty-five years, and modestly said that in it there were no brilliant deeds to chronicle. From that notable address I make this extract: 'If it were true that a peaceful and laborious people have no history, the administration period I am about to review would almost be devoid of history. But, on the contrary, those nations that deserve to be called happy in the only intelligible sense of the word, far from being without a history, have a very glorious and interesting one, if, besides being peaceful and laborious, they are also progressive. That history is the history of their progress, their achievements, their growing prosperity, of the improvements of every kind which they have introduced—a history which, in this modern age and the present constitution of civilized societies, is as interesting as that of their past and just as deserving of attention.'"

A report for 1900 by the British Consul at Vera Cruz is to the same effect. The result of the recent elections he describes as an assurance of prosperity and a guarantee of the foreign capital invested in the country. Few countries, the Consul observes, can boast of such rapid and beneficial reforms as Mexico; these have, in a short time, prepared the way for the development of her extensive resources, which are themselves a sufficient assurance of the future. The finances have of recent years been brought to a high state of excellence, and commerce throughout the Republic has flourished. Foreign capital has flowed in steadily, railway construction has progressed, and other modes of communication have improved, the telegraph and postal service have been reformed. The improvement of inter-oceanic communication across the Tehuantepec isthmus, with the harbors now being constructed on both coasts, will revolutionize the foreign trade of Mexico. It will take more than three years to complete the reconstruction of the railway and to put the ports in a condition to enable freight to be taken from the ship's side at one port and placed alongside the ship at the other within 24 hours. The Consul thinks the route is destined to become one of the principal thoroughfares of the world, competing with all other routes between Europe and the Far East.

Of what has been done for public education in Mexico under the Diaz government the following account is given in one of the publications (1900) of the Bureau of the American Republics: "Education in Mexico has been for many years the subject of serious consideration on the part of the Government, on account of the difficulty experienced in combating the conservative ideas pre-

vailing in the Republic. The main obstacles have, however, been overcome, and the country to-day enjoys the benefit of a liberal system of education, which is administered under three branches—gratuitous, lay, and obligatory. . . . The law making education compulsory was promulgated March 23, 1888, but its enforcement was not decreed at that time, and the first Congress of Public Education was convened for the purpose of adopting such measures as should tend to establish an efficient and uniform system of education. This congress met on December 1, 1889, and closed its sessions on March 31, 1890. . . . A second congress was convened on December 1, 1890, which solved certain problems on compulsory elemental education, fixed the methods to be followed in the schools of superior primary education, and settled matters pertaining to normal schools, preparatory education, and special schools. As the result of this congress, the law of March 21, 1891, was enacted, regulating compulsory education in the Federal District and the Territories of Tepic and Lower California, which law became effective on January 17, 1892. . . .

"On May 19, 1896, the law of public education was promulgated, its salient points being as follows: Official primary elemental education in the Federal Districts and Federal Territories was placed under the exclusive control of the Executive; primary superior education was organized as an intermediate educational system between elementary and preparatory instruction. A general board of primary education was created, charged to develop and maintain the same under a scientific and administrative plan. Preparatory education was decreed to be uniform for all professions, its extent being limited to the study of such matters as are necessary to the development of the physical and intellectual faculties and the morals of youth, it being further directed that professional education be reorganized, limiting it to technical matters which pertain to the profession or professions to which each particular school is devoted.

"By virtue of this law public education ceased to be in charge of the Board of Aldermen (ayuntamientos) of the above-mentioned sections. At the time of its promulgation the municipality of Mexico contained 113 schools, supported by the Board of Aldermen, 14,246 students being entered on the rolls, with an average attendance of 9,798. Each State defrays the expenses of public education, either with funds specially appropriated for that purpose or with the municipal funds.

"According to statistical data, in 1876, there were throughout the country 8,165 primary schools, with 368,754 students of both sexes. In 1895 Government schools reached the number of 4,056, of which 2,189 were for males, 1,119 for females, and 748 for both sexes; municipal schools numbered 3,394—for males, 1,754; females, 932; both sexes, 708. These comprised 7,380 primary, 32 secondary, and 35 professional schools, the number of students enrolled being 310,496 males and 181,484 females (a total of 491,980), and the mean attendance 338.066. The total cost to the Government and the municipalities for the maintenance of these institutions was $3,973,738. In the same year private schools to the number of 1,816 were being conducted, 659 for males, 460 for females, and the remainder under a coeducational system. In addition, 276 were supported by the clergy and 146 by associations, the total number of students enrolled being 68,879, of which 40,135 were males and 38,744 females. The total number of private schools was accordingly 2,238, of which 2,193 were devoted to primary education, 34 to secondary instruction, and 11 to professions.

"The statistics for 1897, which are the latest available, give the following figures:

Schools.	1896.	1897.
Federal and State Governments....	5,852	6,141
Municipal.....	3,218	1,953
Private institutions.....	1,953	1,797
Supported by the clergy.....	303	285
Supported by associations.....	186	122

"Using the figures given in 1896 for Vera Cruz and the Federal District as identical for 1897, it may be safely assumed that on December 31, 1897, the public schools in Mexico (Federal, State, and municipal) stood as follows:

Number of schools	9,065
Students enrolled	666,787
Average monthly attendance . . .	458,035
Private institutions	2,361
Number of students	92,387
Average attendance	75,857

"The total expenditures for the support of Federal, State, and municipal schools amounted in 1897 to $6,291,000. In addition to the normal and primary schools, the Government also supports the following institutions: School of jurisprudence, school of medicine, school of agriculture and veterinary instruction, school of engineers, school of fine arts, school of arts and trades for men, and a similar institution for women, school of commerce and administration, National conservatory of music, preparatory school, schools for the blind, for deaf-mutes, reform schools, etc., also 9 museums, and 17 libraries containing from 400 to 159,000 volumes. Beside the Government institutions above mentioned, there are throughout the country 26 museums, 83 libraries, 32 scientific and literary associations, and 457 periodical publications."—*Bureau of Am. Republics, Mexico: a Geographical Sketch, p.* 313.

A. D. 1899 (May—July).—Representation in the Peace Conference at The Hague. See (in this vol.) Peace Conference.

A. D. 1900 (January).—Re-election of President Diaz.—President Porfirio Diaz was re-elected on January 1, for a sixth term of four years.

A. D. 1900 (October).—Census of the Republic.—Gains shown in five years.—Announcement was made from Washington, on the 24th of February, 1901, that "complete official returns of the census taken on October 28, 1900, received by the Bureau of American Republics, shows that the population of Mexico is 13,570,545, against a population of 12,632,427 [given by M. Romero as 12,570,195—see above] in 1895. The gain in five years was 938,118, or 7.43 per cent. due in part to the greater accuracy of the latest enumeration. The Federal District, in which is located the City of Mexico, is the most densely populated portion of the republic, and contains

530,723 people. The City of Mexico increased about 20,000 in five years, and now has nearly 357,000 inhabitants. The population of seven States, Jalisco, Guanajuato, Puebla, Vera Cruz, Oaxaca, Michoacan and Mexico, is 6,995,880, or a little more than one-half of the entire population of the country. The population of the States of Sonora, Tamaulipas, Tlaxcala, Morelos, Tabasco, Aguas Calientes, Campeche, Colima, and the territories of Tepic and Lower California, the total area of which is more than one-fourth the entire country, is slightly in excess of 1,380,000, or a density of only about 2.7 inhabitants to the square kilometre. The central and southern portions of the republic are the most thickly populated, the Western and Northern States being the most sparsely settled, and the Gulf region, or eastern coast, contains a larger number of inhabitants than the Pacific Coast region. . . . The greatest percentage of increase is noted in the northern States. These States, in addition to being good agricultural districts, are enormously rich in mineral wealth, and the large increase in population in this part of the country is chiefly due to the rapid development of the mines of the republic, the erection of smelters and manufacturing plants, and to the general stimulus given to trade and commerce by the construction of railroads and the heavy investments of foreign capital in the republic."

MINNESOTA: A. D. 1896.—Constitutional amendments.—Use of the Referendum.—Several constitutional amendments were submitted to the voters of the State and adopted; among them one requiring citizenship of the United States for three months and residence in the State for six months before permitting a new-comer to vote; another vesting the pardoning power in a Board of Pardons; another empowering cities to frame their own charters, subject to the State laws. At the same time, the Referendum was brought into practical use, by the submission of several legislative acts to the popular vote. One of the acts thus submitted, providing for the holding of a constitutional convention, was rejected.

MISSIONS, Christian: The Ecumenical Conference of 1900 in New York.—Statistics of the Protestant foreign missionary work of the world.—The third Ecumenical Conference on Protestant foreign missions (the second having been held in London in 1888) was assembled at New York on the 21st of April, 1900, under circumstances related as follows in vol. I. of the official report: "The immediate origin of the Ecumenical Conference of 1900 was the discussion of a question put in the 'question box' at the Annual Conference of Foreign Missions Boards of the United States and Canada, which met in New York in January, 1896, as to whether it would be advisable to invite the secretaries or representatives of societies from the other side of the Atlantic to meet with the Annual Conference of the American societies as it was then held, consisting chiefly of the officers of the Boards. The Rev. F. F. Ellinwood, D. D., speaking to the question, said: 'I have had a hope that in the year 1898, ten years from the great London Conference, we might invite our brethren from all lands to a great Ecumenical Conference on Missions.'

"Following this suggestion, a committee of five, consisting of the Rev. Drs. Judson Smith, F. F. Ellinwood, A. B. Leonard, S. W. Duncan, and William S. Langford was appointed 'to consider the advisability of calling an Ecumenical Missionary Conference, to meet in this country within the next four years, to make preliminary preparation therefor, if deemed advisable, and to report at the Conference of the following year.' This committee corresponded with missionary societies throughout the world, and at the next Annual Conference recommended that such a Conference be held in New York City in April of the year 1900; that this recommendation be communicated to the societies, and a final date agreed upon. In January, 1898, after further correspondence, the place and date were finally decided." Measures were taken to raise a guarantee fund of $30,000 for expenses, and other preparations were made. Then "under date of

June 1, 1899, a general invitation was sent to every missionary whose name and address could be secured, to attend the Conference and participate in the discussions."

The Conference was opened in Carnegie Hall, New York, on the 21st of April, 1900, and continued its sessions, there and in neighboring churches, until the 1st of May. "The personnel of the Conference was broadly representative. It consisted (1) of delegates appointed by organizations conducting foreign missions outside of Europe and America; (2) the missionaries of such organizations, and (3) members elected by the Executive Committee. The British and Continental and other foreign societies were invited to send as many delegates as possible. The American and Canadian societies were limited in the number of their delegates; the total from both countries, being fixed at 1,666, was apportioned among the societies on the basis of their expenditures in foreign missions. All foreign missionaries in active service or retired were received as full members. Some of the honorary members and vice-presidents who were unable to attend desired to have their names connected with so historic a gathering. Members of committees and speakers, who were not already delegates, were by a general act of the Executive Committee, constituted 'special members.' In addition to the members of the Conference a large number of persons came from far and near to attend the meetings. Over fifty thousand tickets to the Carnegie Hall and alternate meetings were distributed among this class of visitors. Many thousands more attended the sectional and overflow meetings where no tickets were required. The Hon. Benjamin Harrison, for four years President of the United States of America, occupied the chair, and made an opening speech."

The magnitude of the organizations of missionary work, all the interests, needs and fruits of which were discussed in the Conference, is most succinctly represented in the subjoined tables, prepared by Dr. James S. Dennis, which are given in the appendix to the official report (pp. 424–6, vol. 2). The classification appearing in the tables is explained as follows:

"The Bible Societies, the Tract and Literature Societies, the United Society of Christian Endeavor, the Epworth Leagues, and similar organizations, philanthropic specialties like that of the Pundita Ramabai in India, with a considerable number of organizations, foreign missionary in title and purpose, but simply rendering financial or other aid to existing societies—demand recognition, and yet should they be counted as strictly and technically foreign missionary societies? It was chosen for the present purpose, to differentiate and classify, naming three classes of societies as follows: Class I. Societies directly engaged in conducting foreign missions. Class II. Societies indirectly co-operating or aiding in foreign missions. Class III. Societies or Institutions independently engaged in specialized effort in various departments of foreign missions."

MISSISSIPPI: A. D. 1890-1892.—New State Constitution.—Qualification of the suffrage.—A new State Constitution, framed and put in force in 1890 by a constitutional convention, without submission to the people, established a qualification of the suffrage which heavily diminished the negro vote by its effect. It imposed a poll tax of two dollars per head, to which any county might add a further tax not exceeding one dollar per head, which poll tax for the year every voter must have paid before his ballot would be received at any election. A further clause of the Constitution on the subject was as follows: "On and after the first day of January, A. D. 1892, the following qualifications are added to the foregoing: Every qualified elector shall be able to read any section of the Constitution of this State, or he shall be able to understand the same when read to him, or to give a reasonable interpretation thereof. A new registration shall be made before the next ensuing election after these qualifications are established. Electors in municipal elections shall possess all the qualifications herein prescribed, and such additional qualifications as may be prescribed by law." In 1892 the Supreme Court of the State affirmed the validity of the Constitution, which had been challenged on two grounds, namely: that it had not been submitted to the vote of the people, and that it was in conflict with the Fourteenth Amendment of the Constitution of the United States.

So far, the disfranchisement of the mass of blacks seems to have had an unlooked for evil effect. "The Negro eliminated, only one political party remains, and political stagnation has followed. In Mississippi, the requirement that a poll tax be paid long before the election deprives many white men also of their votes. But it does not bar them out of nominating conventions. Many communities are ruled by a mere handful of whites who cannot even cast a ballot. For instance, there are 320,000 males of voting age in Mississippi, but the whole vote cast in the State in November was only 59,000. This is 11,000 votes less than were cast four years ago under the same restrictions of suffrage. In other words, the whole State of Mississippi cast practically no more ballots to elect seven members of Congress than were cast in a single congressional district in New York. (The fourteenth New York district cast 58,000 votes.) In the town of Eudora, where a mayor, a marshal, a treasurer, and four aldermen were elected, only eight votes were cast, and of the eight voters seven are said to have been candidates for office.

"'The same men,' says a trustworthy despatch from New Orleans, 'were voters, candidates for office, and judges of election to pass as judges on their own votes as voters for themselves; and in spite of all their efforts they could get only one outsider to come to the polls and cast his ballot.' This is an extreme case; but in every State that has disfranchised the Negro (making a discrimination between him and the ignorant white man, in the white man's favor) political activity has constantly disappeared, the vote has shrunk, public spirit in politics has died. In Louisiana the total vote in November fell from 99,000 in 1896 to 61,000; of Mississippi, from 69,000 to 59,000; of South Carolina, from 68,000 to 50,000—the shrinkage in four years in these three States being nearly 68,000 votes, in spite of the increase of population."—*The World's Work, Feb.*, 1901.

A. D. 1897.—Renewal of the privileges of the Bank of France.—The privileges of the Bank of France, as the fiscal agent of the French Government, expired with the close of the year 1897, and renewal of them was opposed by the Radicals and Socialists, who demanded the creation of a State Bank. The government succeeded, however (June, 1897), in carrying the measure necessary for continuing the existing system, on terms somewhat more favorable to the state than before.

A. D. 1897 (March).—Adoption of the gold standard in Japan.—By a law of the Japanese Parliament, passed in March, 1897, to come into force October 1, a gold monetary standard was adopted, at the ratio of 32⅓ to 1, the silver dollar to be legal tender until six months after notice given of its withdrawal.

A. D. 1897 (April—October).—Negotiation by American Commissioners in Europe for an international bi-metallic agreement.—In fulfilment of the pledge given by the Republican party, at its national convention, in 1896, that it would use efforts to bring about an international agreement for free coinage of gold and silver at some common ratio, the following Act was passed by the two Houses of Congress in January and February, 1897: "That whenever after March 4, 1897, the president of the United States shall determine that the United States should be represented at any international conference called by the United States or any other country with a view to securing by international agreement a fixity of relative value between gold and silver as money by means of a common ratio between these metals, with free mintage at such ratio, he is hereby authorized to appoint five or more commissioners to such international conference; and for compensation of said commissioners, and for all reasonable expenses connected therewith, to be approved by the secretary of state, including the proportion to be paid by the United States of the joint expenses of any such conference, the sum of $100,000, or so much thereof as may be necessary, is hereby appropriated. That the president of the United States is hereby authorized, in the name of the government of the United States, to call, in his discretion, such international conference, to assemble at such point as may be agreed upon. And he is further authorized, if in his judgment the purpose specified in the first section hereof can thus be better attained, to appoint one or more special commissioners or envoys to such of the nations of Europe as he may designate, to seek by diplomatic negotiations an international agreement for the purpose specified in the first section hereof. And in case of such appointment so much of the appropriation herein made as shall be necessary shall be available for the proper expenses and compensation of such commissioners or envoys." Pursuant to this Act, President McKinley, on the 12th of April, appointed Senator Edward O. Wolcott, of Colorado, ex-Vice-President Adlai E. Stevenson, of Illinois, and General Charles J. Paine, of Massachusetts, to be commissioners for the purpose which the bill describes. The commissioners first visited Paris, and there obtained assurances from the French government of cordial coöperation and support. They then proceeded to London, for negotiation with the British authorities, on whose attitude towards the movement for international action in the matter its success was well known to depend. Some members of the British government, conspicuously Mr. Balfour, were outspoken advocates of bi-metallism, and much was hoped from the discussion to be opened with them. The American commissioners were cordially received, and they were invited to a formal meeting, on the 12th of July, with Lord Salisbury, the Prime Minister, Mr. Balfour, First Lord of the Treasury, Sir Michael Hicks-Beach, Chancellor of the Exchequer, and Lord George Hamilton, Secretary of State for India. The American Ambassador, Mr. Hay, accompanied them to the conference, which was held at the Foreign Office. A memorandum of the conversation at this meeting, and at a second one held on the 15th, together with a correspondence which followed, were published later in a parliamentary "blue book," from which the following account is drawn. Mr. Wolcott explained the wish of the American envoys to obtain the views of several governments, preliminary to the inviting of an international bi-metallic conference. He added that they expected to have, in England, the full coöperation of the Ambassador of the French Republic, who happened, for the moment, to be absent from the country, but who had requested them to proceed with the meeting in his absence. "Mr. Wolcott then presented some reasons which, in the opinion of the Special Envoys, rendered it desirable that some international agreement for the restoration of bimetallism should be reached, and explained why, in their opinion, the success of this effort depended upon the attitude which England would take regarding the question. He then stated that the Special Envoys requested that England should agree to open English mints as its contribution to an attempt to restore bimetallism by international agreement, and dwelt upon the importance of the fact that France and the United States were together engaged in an attempt to bring about such an agreement, and were co-operating together to that end. Lord Salisbury desired to know if the French Government would co-operate upon the basis of opening their mints

to the free and unlimited coinage of silver. Mr. Wolcott answered in the affirmative. Lord Salisbury then asked at what ratio, and was informed by Mr. Wolcott that the French Government preferred the ratio of 15½ to 1, and that the United States were inclined to yield this point and accept this as a proper ratio. Considerable discussion on the question of the ratio and the method by which it should be settled then took place. . . . It was then suggested that further proceedings should be deferred until the French Ambassador might be also present. The Chancellor of the Exchequer, in further conversation, said that if the suggestion of opening the English mints was to be made, he thought an answer in the negative would undoubtedly be given. The First Lord of the Treasury asked whether, assuming this request for opening English mints to be refused, it was desired that the subject be discussed upon the basis of something different and less than the opening of English mints. Upon a mutual understanding that in the absence of the French Ambassador, anything said should be considered as said informally, a discussion then took place as to the concessions that England might make towards an international solution of the question, if it should refuse to open English mints. Mr. Wolcott, for the Special Envoys, presented the following as a list of contributions which, among others, England might make towards bimetallism if an international agreement could be effected:—1. Opening of the Indian mints. Repeal of the order making the sovereign legal tender in India. 2. Placing one-fifth of the bullion in the Issue Department of the Bank of England in silver. 3.—(a.) Raising the legal tender limit of silver to, say, £10. (b.) Issuing the 20s. notes based on silver, which shall be legal tender. (c.) Retirement, gradual or otherwise, of the 10s. gold pieces, and substitution of paper based on silver. 4. Agreement to coin annually £ of silver [present silver coinage average for five years about £1,000,000, less annual withdrawal of worn and defaced coin for recoinage, £350,000]. 5. Opening of English mints to coinage of rupees, and for coinage of British dollar, which shall be full tender in Straits Settlements and other silver standard Colonies, and tender in the United Kingdom to the limit of silver legal tender. 6. Colonial action, and coinage of silver in Egypt. 7. Something having the general scope of the Huskisson plan. Some general conversation followed in regard to the preceding suggestions, and the interview terminated, to be resumed on the 15th July, 1897, when it was understood that the French Ambassador would also be present."

At the second meeting, July 15, Baron de Courcel, Ambassador of the French Republic, and M. L. Geoffray, French Minister Plenipotentiary, were present, and the former spoke at length, stating the position of the French government on the question of the free coinage of silver. He said: "'Our population, notably the agricultural population, finds that it has not at its disposition sufficient resources in currency, in metallic money. On the other hand, if the Government in the actual state of affairs reopens the mints to the free coinage of silver, we would be flooded by the abundance of this metal coming from all other countries of the world, and we could not resist the even greater evil of the inevitable depreciation of one of our precious metals, that is to say, of the effective destruction of the legal ratio upon which our monetary system is based. . . . In other words, we think that the production of silver, more active in certain quarters of the globe in the last quarter of a century, is not of itself considerable enough to change in an enduring manner the normal ratio between gold and silver after these two metals will have been scattered over the entire surface of the world among all nations who are called upon to absorb them. There is, then, in our eyes, a need which is perhaps transitory, but which is actually common to all the commercial nations, of taking measures adequate for assuring, by a common understanding, the re-establishment of the normal ratio of 15½ between silver and gold. If measures of this kind should be adopted by all the commercial nations, we would be able to reopen our mints to the free coinage of silver without fear of being submerged by an excessive influx of this metal. The reopening of the mints of all the commercial countries to the free coinage of silver in the ratio of 15½ with gold would be the most natural and the most efficacious means of arriving at the result sought for. This is the desideratum which I am instructed to bring forward here, and which I am particularly to urge upon the English Government as a primordial condition of the success of the common understanding. If the Government of the Queen, even in consenting to reopen the mints in India, should refuse to adopt the same measure for England, at least would they not be able to take certain measures which would be, up to a certain point, equivalent, in order to maintain the full value of silver, and to prevent India from being the victim of a depreciation of this metal in consequence of an unlimited coinage? . . . By way of suggestion, I would indicate, as one of the measures which the English Government might usefully adopt, the annual purchase of a certain quantity of silver metal, which might afterwards be disposed of as seemed best—either it might be preserved in ingots, or it might be used for regular consumption, or it might be sent to India. This quantity might be fixed approximately, at least, for a number of years, at a sum of £10,000,000 in nominal value. This is, perhaps, only a palliative; it is, in any event, only one of the expedients which would be deemed necessary. But I am to urge strongly that the English Government determine to take measures of this kind, or other equivalent measures, if, as I believe, it recognizes with us the necessity of improving the monetary situation in a great part of its Empire—I may say, in a great part of the entire world.' Lord Salisbury then asked whether the French Government would decline to open its mints unless England would also open her mints. The French Ambassador replied that he preferred to discuss the subject upon the basis that France would go to open mints if England would consent to open her mints, but that he would not exclude from his view the question of contributions by England towards maintaining the value of silver, short of open mints. The Chancellor of the Exchequer, in response to this, stated definitely that the English Government would not agree to open English mints to the unlimited coinage of silver, and that, whatever views he and his colleagues might separately hold on the question of bimetallism, he thought he could say they

were united upon this point. . . . The suggestions made by the Special Envoys at the interview on the 12th July were again read, and the Special Envoys accepted also as important and desirable the proposal that the English Government should purchase annually, say, £10,000,000 of silver, with proper safeguards and provisions as to the place and manner of its use. The French Ambassador expressed his approval generally of the suggestions of the Special Envoys, as being serviceable in the consideration of the question. It was then understood that the proposals submitted by the French Ambassador and by the Special Envoys of the United States should be considered, and due notice given when a reply could be made."

The proposal for the reopening of the Indian mints to silver was submitted at once by the home authorities of the India Office, at London, to the government of India, and the reply of the latter was not received until the following October. When the reply came, it extinguished hopes of the arrangement which the American and French governments desired. In a long despatch, the Indian government explained with clearness the monetary situation in that country, and discussed the effect which a return to the unrestricted mintage of silver would have upon it, under the circumstances and prospects of the time. "The currency system of India," said the despatch, "is in a transition state; the Government of India in 1893 decided to establish a gold standard, and the first step towards that object was the closing of the mints to silver by Act VIII of 1893. The silver rupee is still the sole legal tender coin, though the Government has by Executive orders undertaken to receive gold and sovereigns under certain restrictions, . . . the rate of exchange adopted being 16d. the rupee or 15 rupees=£1. The measures to be taken when the transition period has passed have not been laid down, but it is probable that the Indian mints will be opened to gold, and gold coins will be made legal tender to an unlimited amount; silver rupees would also continue to be legal tender to an unlimited amount, and the ratio between the rupee and the gold coins as legal tender would at the same time be finally settled. The system towards which India is moving is thus a gold standard of the same kind as that which now exists in France and the United States, but with a different ratio for legal tender; but for the present the mints are closed both to gold and silver. The transition period has lasted for more than four years, but there is ground for hope that it is now drawing to a close. The changes which are involved in the arrangements proposed to Her Majesty's Government are the following. France and the United States are to open their mints to the free coinage of silver, continuing the free coinage of gold and the unlimited legal tender of coins of both metals, the ratio remaining unchanged in France and being altered to the French ratio of 15½ to 1 in the United States. India is to open her mints to silver, to keep them closed to gold, and to undertake not to make gold legal tender. France and the United States would thus be bimetallic; India would be monometallic (silver); while most of the other important countries of the world would be monometallic (gold). The object which the proposers have in view is the establishment of a stable relation between the values of gold and of silver. This would include the establishment of a stable exchange between the rupee and sterling currency, which was the object of the Government of India in the proposals made in our financial despatch of the 21st June, 1892, which proposals ultimately resulted in the adoption, in view to the attainment of that object, of the policy of a gold standard, and in the closing of the mints to the free coinage of silver. If, then, it were certain that the suggested measures would result in the establishment of a stable ratio, the Government of India might well consider whether their adoption would not be preferable to the policy to which they committed themselves in 1893 in the hope of attaining the same result by isolated action on the part of India alone. The principal questions therefore for us to consider are whether the measures are more likely to succeed than the policy of 1893, and what consequences to India may be apprehended if the measures should fail of success after being brought into operation. . . . The first result of the suggested measures, if they even temporarily succeed in their object, would be an intense disturbance of Indian trade and industry by the sudden rise in the rate of exchange, which, if the ratio adopted were 15½ to 1, would be a rise from about 16d. to about 23d. the rupee. Such a rise is enough to kill our export trade, for the time at least. If the public were not convinced that the arrangement would have the effect intended, or believed that it would not be permanent, the paralysis of trade and industry would be prolonged and accompanied by acute individual suffering, none of the advantages expected would be attained, and the country would pass through a critical period which would retard its progress for years. How long the crisis would last before normal or stable conditions were restored it is not possible to conjecture. It would be long even if the mercantile and banking community saw that silver was being steadily maintained at the prescribed ratio, while any indication of unsteadiness would greatly prolong the period by giving foundation for doubt. If the doubt should happen to be justified by the results, the position would be disastrous alike to the State, to individuals, and to trade generally. . . . We cannot help seeing that if the policy of 1893 is now abandoned, and if the triple union now proposed as a substitute should fail in its operation or should terminate, and in its failure subject Indian trade to the violent shocks we have described, the Government of India could not, as a responsible Government, call upon the commercial public to face another prolonged period of doubt, suspense, agitation, and difficulties. For it must be clearly and fully recognized that if India joins in the proposed measures, we shall be left dependent, as the sole means of attaining stability in exchange, on the success of those measures, and that if they should fail, India must be content to remain permanently under the silver standard with all its admitted disadvantages. . . . We have given very careful consideration to the question whether France and the United States are likely, with the help of India, to be able to maintain the relative value of gold and silver permanently at the ratio they intend to adopt, and have come to the conclusion that while we admit a possibility of the arrangements proposed resulting in the permanent maintenance of the

value of gold and silver at the ratio of 15½ to 1, the probability is that they will fail to secure that result, and that it is quite impossible to hold that there is anything approaching a practical certainty of their doing so. One reason for this conclusion is, that the arrangement would rest on too narrow a basis. A union consisting of two countries, with a third lending assistance, is a very different thing from the general international union of all or most of the important countries of the world, which was advocated by the Government of India in the despatches of March and June 1892 and of February and September 1886. To afford a hope that a monetary union will succeed in establishing stability in the relative value of gold and silver, it is essential that the nations adhering to it should be of such number and importance that the metallic currency of the whole body shall be of sufficient extent to allow of the exercise of adequate influence on the value of the two metals. We doubt whether any two, or even three, nations in the world, unless, indeed, one of them was Great Britain, could comply with this condition, and we have no hesitation in saying that France and the United States and India certainly could not. . . . We have no hesitation in recommending your Lordship to refuse to give the undertaking desired by the Governments of France and the United States. We are quite clearly of opinion that the interests of India demand that her mints shall not be opened as part of an arrangement to which two or three countries only are parties, and which does not include Great Britain." Immediately on receiving this reply, Lord Salisbury informed Ambassador Hay that "Her Majesty's Government feel it their duty to state that the first proposal of the United States Representatives is one which they are unable to accept," and expressing a wish to know "how far the views of the American and French Governments are modified by the decision now arrived at, and whether they desire to proceed further with the negotiations at the present moment."—*Great Britain, Parliamentary Publications (Papers by Command: Commercial, No.* 8, 1897).

In the view of the American envoys, it seemed useless to proceed, with no hope of coöperation from Great Britain, and they returned to America with a discouraging report.

NAVIES OF THE SEA POWERS: A. D. 1900.—The following tables are compiled from a return issued by the British Admiralty in the spring of 1900, showing the state of the fleets of Great Britain, France, Russia, Germany, Italy, the United States, and Japan, including vessels then built and in progress of construction.

Of battle-ships, there were built and building in the several navies:

Great Britain	70,	with a displacement of		821,605
France	35,	"	"	339,599
Russia	24,	"	"	262,912
Germany	25,	"	"	191,259
Italy	19,	"	"	193,004
United States	16,	"	"	184,144
Japan	7,	"	"	92,420

Of armored and protected cruisers, there were built and building:

Great Britain	147,	with a displacement of		827,430
France	60,	"	"	297,486
Russia	23,	"	"	144,673
Germany	22,	"	"	107,844
Italy	25,	"	"	93,673
United States	26,	"	"	140,274
Japan	23,	"	"	114,479

Of unprotected cruisers, armored coast-defence vessels, and special vessels there were built and building:

Great Britain	31,	with a displacement of		104, 250
France	29,	"	"	93,385
Russia	26,	"	"	66,886
Germany	35,	"	"	59,617
Italy	3,	"	"	13,821
United States	30,	"	"	77,150
Japan	13,	"	"	24,065

Of torpedo vessels and torpedo-boat destroyers the number built and building was:

Great Britain	238,	with a displacement of		70,311
France	305,	"	"	34,002
Russia	233,	"	"	37,735
Germany	130,	"	"	20,094
Italy	180,	"	"	24,863
United States	50,	"	"	12,121
Japan	71,	"	"	9,537

A consolidation of the above figures shows a total of ships in the principal navies as follows: Great Britain, 486; France, 429; Russia, 306; Germany, 212; Italy, 227; United States, 122; Japan, 114.

A writer in the "Fortnightly Review," discussing the above returns, points out the imperfectness of the representation which such gross figures give of the actual naval strength of the several Powers, and he has undertaken to correct them by a calculation of what he calls the "fighting weight" of the ships, based on the age of each and its displacement in tons. He says: "The scale of depreciation for age that I have used is as follows: Ships, built and now building, that were launched, or which will be launched, during 1895–1899 (and later), are reckoned at their full value of fighting weight; i. e., at 100 per cent. Ships launched during 1890–1894 are reckoned as now worth only 80 per cent. of their fighting weight. The other depreciations being: Ships launched 1885–1889 are valued at 60 per cent. of their nominal fighting weight; 1880–1884, at 40 per cent.; before 1880, at 20 per cent."

By this mode of reckoning, the table of battle-ships is converted to the following exhibit of estimated "naval strength":

Great Britain	70,	adjusted fighting weight		604,141
France	35,	"	"	220,635
Russia	24,	"	"	221,988
Germany	25,	"	"	152,929
Italy	19,	"	"	112,899
United States	16,	"	"	176,708
Japan	7,	"	"	88,088

This method of depreciating the tonnage on the basis of the age of a ship causes the respective proportions of Great Britain, France and Italy, in battle-ships, to become smaller, while the respective proportions of Russia, Germany, United States and Japan become larger. The United States lose but 4 per cent. of the nominal value of their battle-ships; Japan, 5 per cent.; Russia, 16; Germany, 20; Great Britain, 26; France, 35; Italy, 42.

Applying the same arithmetic to the returns of armored and protected cruisers, the writer shows that Japan suffers a loss of 10 per cent. of their nominal fighting weight, France 14, United States 14, Italy 18, Great Britain 21, Russia 23, Germany 24.

Reducing in like manner all the remaining returns, he arrives at the following summary of "the seven navies arranged in the order of their strength"—taking the navy of Japan as the unit: Great Britain, Degree of strength, 6.38; France, 2.57; Russia, 1.88; United States, 1.65; Germany, 1.34; Italy, 1.03; Japan, 1.00. Stated in "tons of fighting weight," his comparison stands: Great Britain, 1,347,000; France, 543,000; Russia, 397,000; United States, 349,000; Germany, 282,000; Italy, 218,000; Japan, 211,000.

Turning next to the consideration of armaments, the writer has compiled the following table, which shows "for each class of gun separately, and for all classes of guns combined, the number of these guns that are possessed by the seven naval powers":

POWER.	Breech-Loading Guns.	Quick-Firing Guns.	Muzzle-Loading Guns.	Torpedo Tubes.	All classes of Guns.
Great Britain	912	7,454	340	1,534	10,240
France	471	3,653	–	928	5,052
Russia	393	2,589	–	625	3,607
Germany	258	1,995	–	611	2,864
Italy	140	1,791	4	573	2,508
United States	303	1,791	–	230	2,324
Japan	110	1,168	–	314	1,592
All the Powers combined	2,587	20,441	344	4,815	28,187

In this comparison the United States drops from the fourth rank to the sixth.

A. D. 1896.—Electoral Reform Act.—A notable extension of the franchise was accomplished by an Act passed this year by the States General, to have effect in the elections of 1897. It made voters of all Dutch citizens not under 25 years of age who present "certain outward and positive signs of capacity and well-being. The chief sign is the fact of payment of one or more direct State taxes (for the land tax an amount of 1 florin is sufficient). Besides these, the Reform Act admits as electors all those who can prove that they are householders, and have paid rent of houses or lodgings during a fixed term, or that they are owners or tenants of boats of not less than 24 tons capacity, or that they have been during a fixed term in employment with an annual wage or salary of at least £22 18s. 4d., or possess a certificate of State interest of at least 100 florins, or a State savings bank deposit of at least 50 florins, or the legal qualifications for any profession or employment."—*Statesman's Year-Book*, 1899, *p.* 807.

A. D. 1897.—First election under the new Franchise Law.—The first election in Holland under the new franchise law, held June 15–25, 1897, returned to the Chamber 47 Liberals, 22 Catholics, 22 Protestant anti-Revolutionists, 4 Radicals, and one deputy who is styled an Historic Christian.

A. D. 1898.—Enthronement of Queen Wilhelmina.—Queen Wilhelmina, who succeeded to the crown on the death of her father, William III., in 1890, reached the age of 18 on the 31st of August, 1898, and received the reins of government from her mother, Queen Emma, who had acted as Regent until that time. The young Queen was enthroned September 6 in the New Church at Amsterdam, where she delivered, with a simplicity and fervor which impressed those present, her address to the States-General and took her oath of allegiance to the Constitution. "I am happy and thankful," the Queen said, "to rule over the people of the Netherlands, who, although small in numbers, are great in virtue and strong by nature and character. I esteem it a great privilege that it is my life's task and duty to dedicate all my powers to the prosperity and interests of my dear fatherland; and I adopt the words of my beloved father,—'Yes, Orange can never do enough for the Netherlands.'" After the Queen and the Queen-Mother, the most striking figures at the ceremony were the Princes from the Dutch Indies.

A. D. 1897-1900.—The Reid contract.—The question in politics.—In the fall of 1897 a line of narrow-gauge railway, with branches over six hundred miles in total length, was completed and opened to traffic. The main line of rail extends from the capital, St. Johns, to Port-aux-Basques, at the southwestern extremity of the island, and is expected to produce an important development of resources from the forests and mines, as well as from agricultural lands. The railway was constructed by a contractor, Mr. Reid, who agreed to operate it for seven years at his own expense, receiving therefor a land grant of 5000 acres per mile. In 1898 a new contract was made with Mr. Reid, which placed most of the resources of the island under his control. For an additional land-grant of 2500 acres per mile of road he undertook to operate the road for fifty years. By a present cash payment of $1,000,000 to the colony treasury, he purchased the reversion of its right to the possession of the road at the end of that period. At the same time he secured the right to purchase from the government its telegraph lines and the dry-dock at St. Johns, for half a million of dollars, and was given a monopoly for 30 years of the coast mail steam service, with an annual subsidy of $150,000, he undertaking to maintain in it eight steamers, well equipped. This remarkable contract was bitterly denounced by a large party in the island, and the Imperial government was strongly petitioned to nullify the whole transaction; but the British Colonial Secretary, Mr. Chamberlain, while he characterized the contract as representing "the most unparalled abrogation of its functions by a respon-

sible government," decided that he could not properly interfere. The "Reid Deal," as it was known, then became a burning issue in Newfoundland politics, and the Ministry responsible for it, led by Sir James Winter, was ousted from the government in February, 1900. Mr. Reid was then arranging to transfer his Newfoundland contract and franchises to a company, which required the sanction of the colonial government. The new (Liberal) Ministry, of which Mr. Robert Bond was Premier, refused consent to the transfer unless Mr. Reid would amend his bargain with the colony in several very important particulars. He offered some concessions, but not to the extent demanded; and so the question between him and the Bond Ministry went into the canvass of 1900, for the election of a new Assembly, and the Conservatives, heavily backed by Mr. Reid, were defeated overwhelmingly, winning but 4 seats out of 36 in the Lower House of the Legislature. On this result of the elections the "London Times" of Nov. 26, 1900, comments as follows: "The course which the victorious Bond Ministry will now take must be awaited with interest. . . . A policy of compromise would certainly appear to be the wisest and the safest for all parties. Mr. Reid, it seems to be acknowledged, has carried out his part of the bargain of 1898 fully and even generously, and the colony, it is stated, has profited largely in consequence. In the absence of actual fraud or corruption it would be difficult in these circumstances to justify the rescission or even the material modification of the agreement, on the faith of which he has spent his money, without his assent. A repeal of the Act of 1898 against his will would savour of repudiation. It would assuredly damage the credit of the colony very seriously."

A. D. 1899-1901.—The French Shore Question.—The Modus Vivendi.—"At the period of the negotiation of the Treaty of Utrecht, in 1713, by which the rights of the French fishermen were regulated [see, in vol. 4, NEWFOUNDLAND: A. D. 1713], thousands of French fishing vessels availed themselves of the inshore fisheries about the island; and that they might be not altogether without facilities for the drying and curing of their fish, they were granted under the Treaty the 'right to use a strip of the coast seven hundred miles long and half a mile wide.' Accompanying the Treaty, but, be it noted, not a part of it, was a declaration of King George, that British subjects on the island were not to interfere with these French coast rights by erecting permanent structures upon it, calculated to obstruct the operations of the French fishermen. This Royal declaration was harmless and unimportant when the population of the island was very small, and the French fishermen resorted to the inshore fisheries of Newfoundland. But to-day, a different condition exists. The French fishermen no longer use the inshore fisheries of the island, but prosecute, instead, their fishing operations on the Grand Banks, several hundred miles distant, drying their product either at the French islands of St. Pierre and Miquelon, which are more adjacent to the Banks, or transporting the fish direct to France. . . . The need for which the French shore right was granted has practically ceased to exist; and inasmuch as the prohibition to the people of the island from erecting permanent structures on the island was merely a mandate emanating from the King, and not an integral part of the Treaty itself; and because the reason for the observance of the mandate has thus ceased to exist, it is imperative that, in the interests of the prosperity of the island, this Royal concession should be revoked. . . . But what, it may be asked, on a perusal of the whole case, has caused the Newfoundland question to suddenly become paramount? Why is its urgency greater in 1899 than it was in 1889? Is there not some concentrated force, some propelling power, at work behind the scenes? There is —and that power is a millionaire. The name of this millionaire is Robert Gillespie Reid, who, having voluntarily assumed, by means of the measure known as the Reid contract, the responsibility of developing the island's resources, finds himself, at the outset, confronted by a situation which precludes all present enterprise. This gentleman has acquired, in fee simple, some three or four million acres of land in Newfoundland; and where the islanders were content to wait patiently for justice, he, as a business-man, eager to exploit his mines and timber, can hardly be expected to pin his faith to assurances so frail, and of fulfilment so remote."—B. Wilson, *Newfoundland's Opportunity* (*Fortnightly Rev.*, *Feb.*, 1899).

A royal commission which lately investigated the situation of affairs on the Treaty Coast of Newfoundland found that the coast "is 800 miles in extent, with a permanent population of 13,300, all but 76 of whom are native-born, while the total of French frequenting the territory during the fishing season does not exceed 600 men. The French, last year, according to the official reports furnished to the Admiralty, occupied only eight cod and nine lobster stations, with a personnel as above, while their catch of cod was but 18,000 qtls., worth about 36,000 dollars, and their pack of lobsters about 7,000 cases, of about equal value. And is it not monstrous that, in order to satisfy vexatious French claims and perpetuate obsolete treaty claims, the people of the Treaty Coast should be coerced and victimised, and the development of the whole colony retarded, as has been the case? The Commissioners found that, despite the liberal bounties given by France for fishing on the Treaty Coast, the allowance of 50 francs per head by the St. Pierre municipality for the same purpose, and the special appropriation the past two seasons in the French colonial grant 'for extending operations on the Newfoundland coast, 4,000 francs,' the number of men frequenting there and the number of stations operated are steadily declining every year, and in ten years' time it is doubtful if there would be a Frenchman on the coast. Still, so powerful is the French fetish that the shore is tabooed as far as industrial development is concerned, and the hinterland likewise. No grant of land can be given there except with the stipulation that it is subject to French rights. No permanent building can be erected within half a mile of high-water mark, because the French claim the strand for drying their fish. No wharves can be built by which to load minerals, because they will interfere with the French fishery. (Only last year they stopped the erection of one which was twenty-two miles from their nearest station, and Mr. Reid, the railway contractor, when he wanted to build a wharf at Bay St. George to land construction materials,

had to seize the opportunity of the French warship in the Bay leaving to coal and renew stores, and put an army of men to work, who built it in seventeen days, so that it was completed when the Frenchmen returned.) No mineral developments are permitted because they may hamper the French. Competition on near-by fishing grounds is prohibited for the same reason. Illicit (?) lobster packers are hunted like malefactors for disregarding a 'modus vivendi' as unjust as it is ridiculous. Bait-selling is only possible by permission of the French and on their terms. The railway was deflected 120 miles out of its proper course because of French objection to a terminus on the shore. In fact, fishing is only pursued with the greatest difficulty, while the land is closed to agricultural settlement and mining enterprise. And that, too, in the face of the fact that the French 'army of occupation' consists of about one vessel, one station, and about sixty fishermen on every 100 miles of coast, whose annual catch is worth about 10,000 dollars."—P. T. McGrath, *France in Newfoundland* (*Nineteenth Century, Jan.*, 1899).

In 1890, a temporary agreement ("modus vivendi") concerning the lobster packing and other questions, was arranged between the British and French governments, which has been extended from time to time, very much to the dissatisfaction of the Province. The last extension expired at the end of the year 1900, and the Newfoundlanders showed a strong disposition to resist any renewal of it. A letter from St. Johns, in December, 1900, stated the feeling of the colony as follows: "Last year the term of the 'modus vivendi' was allowed to run out, and a deadlock, such as now seems inevitable, would doubtless have been created; but when the end of December came the reverses in South Africa appealed to our patriotism as the oldest British colony, and the Legislature unanimously passed at one sitting a Bill renewing the arrangement for another year. The colony was unable to afford any more substantial aid at the time, as her naval reserve had not then been inaugurated, but this course on her part testified to her sympathy with the Imperial mother, and her readiness to relieve her from other difficulties. This year Newfoundland is taking the bit between her teeth, and the result must be a complication which, however unwelcome to the Imperial Cabinet, cannot but have been regarded as inevitable sooner or later. If our case is as strong as we are led to believe that the Royal Commission represents it to be, there is certainly good ground for our insisting upon remedial measures. It must not be forgotten that the French now keep up less than 15 cod and lobster stations altogether on the treaty coast, and that about 550 men is the number they had there last season. As against this the resident population is nearly 14,000, and the objections which they urged against the 'modus vivendi' in its early days apply with equal strength now. These people are shamefully treated, the colony as a whole is humiliated, and the recognition of such conditions by England without making an attempt to get rid of them is a cause of reproach which she should remove without delay."

Much newspaper discussion of the subject has been going on in both England and France, with an apparent showing of readiness on the part of the latter country to bargain with the British for cessions in West Africa or elsewhere. How much of a price Great Britain is willing to pay for release from the treaty of Utrecht is a question the answer to which cannot be forever postponed.

Despite its reluctance, the Newfoundland Legislature was prevailed upon, in February, 1901, to pass an Act renewing the "modus vivendi" for another year. Several members who supported the measure declared that they did so for the last time, and only because of an unwillingness to embarrass the British government during the continuance of the South African war.

A. D. 1901.—Change of Government.—Early in the year, Sir Henry McCallum was transferred from the governorship of Newfoundland to that of Natal, and Sir Cavendish Boyle was appointed to succeed him.

NEW JERSEY: A. D. 1897.—Constitutional Amendments.—On the 28th of September, several proposals of constitutional amendment were voted on in New Jersey. One prohibitory of gambling was adopted by a small majority. Another, that would give the suffrage in school elections to women, was rejected by about 10,000 majority.

NEW SOUTH WALES. See (in this vol.) AUSTRALIA; and CONSTITUTION OF AUSTRALIA.

NEW YORK CITY: A. D. 1894-1895.—The Lexow Investigation of Tammany government.—Election of Mayor Strong.—"On the second Sunday in February 1892 the minister of a wealthy Presbyterian church, Dr. Charles Parkhurst, startled his congregation by preaching an outspoken political sermon, in which he attacked the Tammany administration in most unmeasured language. 'The mayor and those associated with him are polluted harpies [he declared]. Under the pretence of governing this city they are feeding day and night on its quivering vitals. They are a lying, perjured, rum-soaked, and libidinous lot. . . . Every effort to make men respectable, honest, temperate, and sexually clean is a direct blow between the eyes of the mayor and his whole gang of lecherous subordinates, in the sense that while we fight iniquity they shield and patronise it; while we try to convert criminals they manufacture them, and they have a hundred dollars invested in the manufacturing business to every one invested in converting machinery. . . . Police and criminals all stand in with each other. It is simply one solid gang of criminals, one half in office and the other half out.' This sermon was the starting point of the new anti-Tammany movement. Dr. Parkhurst was called before the grand jury to prove his words, but he was obliged to admit that all he knew was the repeated accusations that appeared in almost every local newspaper. Thereupon the grand jury publicly rebuked him, and sent a formal presentment to the Recorder declaring their 'disapproval and condemnation' of the sermon. Every one at once concluded that no more would be heard of Parkhurst in politics, but they did not know the man. The clergyman called a couple of detectives to his aid, and personally visited the lowest resorts, to obtain the necessary evidences of corruption. A month later he preached a second political sermon, and this time he took into the pulpit with him a

bundle of affidavits. He repeated and emphasised his former accusations, and again he was summoned before the grand jury. This time the result was different. 'The police are either incompetent or corrupt,' the jury declared, and citizens generally agreed. . . .

"In 1894, the State Senate . . . appointed a committee, this time under Senator Lexow, to inquire into New York municipal affairs. Soon after the committee was appointed Mr. Croker found it convenient to hastily resign the leadership of Tammany and go to Europe. The worst accusations of the bitterest enemies of Crokerism were almost all more than substantiated by the evidence given before the committee. It was found that the police were utterly corrupt, that they extorted blackmail from gambling house keepers, women of ill fame, saloon keepers, and others, and in return gave them their protection. Even thieves, in some instances, were found to be regularly paying their police dues in return for immunity from arrest. One police justice had to admit that he received a hundred dollars from a keeper of a disorderly house. Everywhere that the Lexow Committee probed, or that other competent critics examined, the same thing was found. For several years New York had been living under a system of universal blackmail. Saloon keepers had to pay Tammany to be allowed to evade the Sunday closing law, merchants to be granted the simplest conveniences for getting their goods into their premises. But in the case of Mr. Croker no dishonesty could be proved. It was known that he had in a few years risen from a poor man to a millionaire, but in no instance could it be shown that he had acquired this wealth by corruption. His friends said he had made his money by horse-racing and real estate speculation, but unfortunately Mr. Croker did not go before the witness stand to finally clear up the matter. While the committee was sitting he remained in Europe.

"The usual storm of indignation followed the 'Lexow' exposure, and most reputable citizens united once more to overthrow Tammany. Colonel Strong, a well-known banker, was chosen reform candidate for mayor, and secured a majority of fifty thousand. In 1895 he began his administration, and initiated a vigorous reform movement. The police force was entirely reorganised; municipal offices were given for merit rather than political reward; the streets, for the first time in the memory of the oldest inhabitant, were really kept clean, and the whole local government was taken out of politics. Mayor Strong's time of office has not been without its faults, but among those faults dishonesty has not been one. Rather the mistake has been to enforce all laws too rigidly, and make too few allowances for the weaknesses of human nature in a cosmopolitan resort. Police President Roosevelt's strict enforcement of the Sunday closing and social purity laws was only his duty, but yet it cost the reformers many votes. Although the report of the 'Lexow' Committee did Tammany much temporary harm, it recovered quickly. After the mayoral defeat of 1894 it pulled its forces together again, and rallied around it all the ambitious men who were disappointed in Mayor Strong's bestowal of his patronage. In the autumn of 1895 it was able to score a minor victory at the polls, and it carefully nursed its strength for the election of November 1897. Mr. Croker, notwithstanding his repeated declarations that he was 'out of politics,' came back to New York, and at once took over command of his party." —F. A. McKenzie, *Tammany* (*Nineteenth Century, Dec.*, 1897).

A. D. 1895.—Consolidation of the Astor, Lenox and Tilden foundations to form the New York Public Library. See (in this vol.) Library, New York Public.

A. D. 1896-1897.—Consolidation of New York, Brooklyn, and neighboring towns, in the Greater New York.—"The project of uniting the cities of New York, Brooklyn, and the cities, towns and villages contiguous to the same, into one great municipality, although long mooted before 1890, first took definite form in that year, by the passage on May 8th, by the Legislature, of Laws 1890, Chap. 11, entitled 'An Act to create a commission to inquire into the expediency of consolidating the various municipalities in the State of New York, occupying the several islands in the harbor of New York.' . . . Pursuant to the provisions of this act, a commission consisting of the following members was appointed, viz.: Andrew H. Green, Frederick W. Devoe, John L. Hamilton, J. Seaver Page of New York; J. S. T. Stranahan, Edward F. Linton, William D. Veeder of Brooklyn; John H. Brinkerhoff of Queen's county; George G. Greenfield of Richmond county; Charles P. McClelland of Westchester county; and Campbell W. Adams, State Engineer and Surveyor, ex officio, and Albert E. Henschel acting as secretary. In 1893, the commission presented to the Legislature a bill providing for the submission of the question of consolidation to a vote of the residents of the various municipalities proposed to be united into one city. The following year the Legislature provided for the referendum suggested by the commission. . . . The following vote was cast upon the question of consolidation in the ensuing election on November 6, 1894: New York, for consolidation, 96,938; against, 59,959; Kings, for, 64,744; against, 64,467; Queens, for, 7,712; against, 4,741; Richmond, for, 5,531; against, 1,505; Mount Vernon, for, 873; against, 1,603; Eastchester, for, 374; against, 260; Westchester, for, 620; against, 621; Pelham, for, 261; against, 153. At the opening of the Legislature in 1895, the Commission of Municipal Consolidation Inquiry presented a report with a proposed bill declaring the entire district before mentioned (with the exception of the city of Mount Vernon) consolidated with the city of New York. The bill, however, failed of passage because of the addition of an amendment of referendum in the last hours of the session of 1895, too late for further action. The Legislature, as a result no doubt of this vote on consolidation, did annex to New York city the towns of Westchester, Eastchester, Pelham and other parts of Westchester county.

"Early in January, 1896, the Legislature appointed a joint sub-committee of the Cities Committees of both Houses to inquire into the subject of the proposed consolidation and report March 1, 1896. The committee made a report and submitted a bill favoring consolidation. The bill as reported was passed by the Legislature and was submitted to the Mayors of the cities of New York and Brooklyn, and to the Mayor and Common Council of Long Island City pursuant to the provisions of the Constitution. The bill was re-

turned to the Legislature without the acceptance of the cities of New York and Brooklyn. The Legislature repassed the bill over the vetoes of the Mayors of New York and Brooklyn, and it became a law May 11, 1896, with the approval of the Governor. This act (L. 1896, ch. 488) is entitled, 'An Act consolidating the local governments of the territory within the city and county of New York, the counties of Kings and Richmond and Long Island City and the towns of Newtown, Flushing and Jamaica and part of the town of Hempstead, in the county of Queens, and providing for the preparation of bills for enactment into laws for the government thereof.' . . . Pursuant to the act of consolidation, the Governor (Levi P. Morton) appointed on June 9, 1896, the following members of the commission to draft the proposed charter, viz.: Seth Low, Benjamin F. Tracy, John F. Dillon, Ashbel P. Fitch, Stewart L. Woodford, Silas B. Dutcher, Wm. C. De Witt, George M. Pinney, Jr., Harrison S. Moore. Mr. Fitch having resigned from the commission, the Governor appointed Thomas F. Gilroy in his place. By virtue of the act, the following gentlemen were members of the commission: Andrew H. Green, president of the commission appointed by L. 1890, ch. 311; Campbell W. Adams, State Engineer; Theodore E. Hancock, Attorney-General; William L. Strong, Mayor of New York; Frederick W. Wurster, Mayor of Brooklyn; and Patrick Jerome Gleason, Mayor of Long Island City. The commission organized on June 25, 1896, appointed Benjamin F. Tracy as president and George M. Pinney, Jr., as secretary, and named William C. De Witt, John F. Dillon, Thomas F. Gilroy, Seth Low, Andrew H. Green, Benjamin F. Tracy, and George M. Pinney, Jr., as a committee on draft of proposed charter."—M. Ash, *The Greater New York Charter, introd.*

The committee submitted a draft charter to the commission on the 24th of December, with a report in which a fundamental feature of its plan is thus set forth: "It is clear that the work of administering all of the Departments over so large a space of territory, situated on three islands and partly on the main land, must be subdivided in order to be successfully done. The draft, therefore, proposes to divide the city into the five Boroughs which nature and history have already formed; that is to say: (1.) Manhattan, which consists of the island of Manhattan and the outlying islands naturally related to it. (2.) The Bronx; that is to say, all that part of the present City of New York lying north of the Harlem, a territory which comprises two-thirds of the area of the present City of New York. (3.) Brooklyn. (4.) Queens, consisting of that portion of Queens County to be incorporated into the Greater New York. (5.) Richmond, that is, Staten Island. Power is given to the Municipal Assembly to subdivide these Boroughs still further, in case of need. The Greater New York will start with these five Boroughs for administrative purposes. Your Committee have reconstructed the Borough system, as submitted in the tentative draft, upon lines which we are of one accord in believing to be a better and more appropriate development of the plan for the Greater New York. These lines give to each Borough various boards through which the prosecution of local improvements may be facilitated within the limits of small districts, but reserve to the Municipal Assembly the right to incur indebtedness and to authorize the making of contracts."

The draft thus prepared was subjected to criticism in the commission and in public hearings, and, after amendment and revision, was reported to the Legislature in February, 1897, as the charter recommended by the Commission for the consolidated city called "The Greater New York." It received some amendment and was passed. On submission, as required by the State constitution, to the mayors of New York and Brooklyn and the mayor and Common Council of Long Island City, it was approved in Brooklyn and Long Island City, but returned without approval by the mayor of New York. The Legislature then re-enacted the bill, and it was made law, by the governor's signature, on the 4th of May, 1897.

A. D. 1897 (September—November).—Election of the first Mayor of Greater New York.—The first municipal election in Greater New York excited a passion of interest that was natural in the city itself, but extraordinary in the degree and the extent to which it spread, not only throughout the United States, but widely in the foreign world. The election was looked upon as the test of a vastly important experiment in the democratic government of an enormous city. The charter of the great consolidated municipality had lodged tremendous, unprecedented power and responsibility in the office of its mayor. The people were given an opportunity to determine by a single act of suffrage—by their choice of a single man—the character of their government. Would they choose that man, at the beginning of the new system, in the interest of the corrupting organization in party politics which had misruled the old city of New York for years, or would they rise to the grand opportunity afforded them, and set a strong, free, independently honest man at the head of their local government. Democracy in municipal affairs, at least, had never been put on trial so sharply before. To a great number of the citizens of New York the duty of the hour was plain, and they promptly set their hands to it. Many months before the election they began the organization of a Citizens' Union, in which men of all political parties, sinking every other difference, should join for the defeat of Tammany and "Boss" Croker, and for the election to the mayor's office of the best mayor to be found. With remarkable unanimity, their thought of the man turned to Seth Low, President of Columbia University, but one time mayor of Brooklyn, where his vigor, his firmness and his independence had been conspicuously proved. An extensive canvass of the city showed so widely spread a feeling in favor of Mr. Low that he was named at the beginning of September as the candidate of the non-partisan Citizens' Union.

It was hoped that the whole opposition to Tammany Hall could be united in support of Mr. Low, representing as he did no partisan hostility to any organization in national or state politics. It was especially hoped and believed that the Republican party organization would endorse the choice of the Citizens' Union and make Mr. Low (himself a strong Republican) its own candidate. By nothing less than a general combination could the compact forces of Tammany Hall be overcome, and that fact was well understood. It was a fact so plain, indeed, that

A. D. 1898.—Primary Election Law.—An Act which aims to make the political party caucus for nominating candidates, and for choosing delegates to nominating conventions, a "primary election," conducted under strict regulations of law and guarded by registration, was passed by the New York State Legislature and signed by the Governor March 23, 1898.

A. D. 1899.—New Civil Service Enactment. See (in this vol.) CIVIL SERVICE REFORM: A. D. 1897–1899.

A. D. 1899 (May).—Taxation of public franchises.—A measure of great importance, introducing a new and eminently just principle in taxation, was carried through the Legislature of New York in May, by the energetic influence of Governor Roosevelt. Recommended by the Governor in a special message in the first of March and passed in an unsatisfactory form, a bill to provide for the taxing of public franchises which did not promise successful working was being left on his hands when the Legislature adjourned. He promptly called a special session and renewed to it his urgent recommendations. "I recommend," he said, "the enactment of a law which shall tax all these franchises as realty, which shall provide for the assessment of the tax by the Board of State Tax Commissioners, and which shall further provide that from the tax thus levied for the benefit of each locality, there shall be deducted the tax as now paid by the corporation in question. Furthermore, as the time for assessing the largest and wealthiest corporations in the cities of New York and Buffalo, has passed for this year, and as it will be preferable not to have the small country corporations taxed before the larger corporations of the cities are taxed, I suggest that the operations of the law be delayed until October 1, of this year."

Within a few days, the desired bill was passed by both Houses of the Legislature, signed by the Governor and became a law. The public franchises to which it relates are defined in its first section, as follows:

"The terms 'land,' 'real estate,' and 'real property,' as used in this chapter, include the land itself above and under water, all buildings and other articles and structures constructed upon and superstructures erected upon, under or above, or affixed to the same; all wharves and piers, including the value of the right to collect wharfage, cranage, or dockage thereon; all bridges, all telegraph lines, wires, poles, and appurtenances; all supports and inclosures for electrical conductors and other appurtenances upon, above, and underground; all surface, underground, or elevated railroads, including the value of all franchises, rights, or permission to construct, maintain, or operate the same in, under, above, on, or through streets, highways, or public places; all railroad structures, substructures, and superstructures, tracks, and the iron thereon, branches, switches, and other fixtures permitted or authorized to be made, laid, or placed on, upon, above, or under any public or private road, street, or grounds; all mains, pipes, and tanks laid or placed in, upon, above, or under any public or private street or place for conducting steam, heat, water, oil, electricity, or any property, substance or product capable of transportation or conveyance therein, or that is protected thereby, including the value of all franchises, rights, authority, or permission to construct, maintain, or operate in, under, above, upon, or through any streets, highways, or public places, any mains, pipes, tanks, conduits, or wires, with their appurtenances, for conducting water, steam, heat, light, power, gas, oil, or other substance, or electricity for telegraphic, telephonic, or other purposes; all trees and underwood growing upon land, and all mines, minerals, quarries, and fossils in and under the same, except mines belonging to the state. A franchise, right, authority, or permission, specified in this subdivision, shall, for the purpose of taxation, be known as a special franchise. A special franchise shall be deemed to include the value of the tangible property of a person, copartnership, association, or corporation, situated in, upon, under, or above any street, highway, public place, or public waters in connection with the special franchise. The tangible property so included shall be taxed as a part of the special franchise."

NEW ZEALAND.

A. D. 1891-1900.—Democratic experiments.—Labor laws and the land system.—Compulsory industrial arbitration and its working.—"I have been a studious observer of every phase of social life and legislative change that has taken place in this colony during the past seven years," wrote U. S. Consul Connolly at Auckland in July, 1896. "I arrived at the very beginning of the experimental era—and it is no exaggeration to call much of the legislation of the past few years experimental in the most extreme sense" (in this vol.), AUSTRALIA [Recent Advances in the Art of Democracy]. But while it is a matter of most gratifying feature [illegible] the violence done to the [illegible] motto has been 'let us [illegible] as they are, they suit [illegible] the legislative innovations of the immediate past have shocked the sensibilities of a large number of prominent and well-to-do colonists is unquestionably true, but, at the same time, as against any inconvenience they may have experienced on this account, there is the fact of increased prosperity in nearly every branch of trade and industrial life throughout the country, farm products are fetching satisfactory prices, manufacturing industries are running full time and paying good wages and fair interest on the capital invested, labor is remuneratively employed, interest on money has fallen from 6 and 7 per cent to 4 and 5 per cent (this of itself, is sufficient to prove that money is abundant). Millions of English capital are flowing in for the development of the gold fields of the colony, and the credit of the country at no period of its history stood so high on the English market as it does to-day. I may also mention that, through the genuine encouragement given by the Govern-

ment to the small-farmer class, the waste lands of the country are being rapidly taken up wherever land is found suitable for farming or grazing purposes. Notwithstanding the admitted prosperity of the colony and the fact that the Government have had a substantial surplus over expenditure now for a number of years, the national debt continues to increase. But the increased indebtedness is not of the usual character, for the reason that the country has security for nearly all the money borrowed in recent years. Money had to be borrowed under Government guaranty to save the Bank of New Zealand from closing its doors. This was done to avert financial disaster. . . .

"Money has been borrowed to purchase large estates for the purposes of settlement. Those who take up land under this system, as already stated, pay an annual rental sufficient to cover the interest on the purchase money and the cost of administration. The land is always vested in the Government and this must be regarded as a good asset. One million and a half sterling was borrowed last year in England at 3 per cent per annum. This £1,500,000 loan is called the 'advances to settlers loan.' This money is lent out to farmers at 4 per cent per annum. . . . I need scarcely add that the large landholders, the mortgage companies, and the money lenders generally did not favor this kind of legislation, particularly the cheap advances to settlers, but their opposition was utterly futile. With the advent of the one-man-one-vote and the extension of the franchise to women, the power of corporate wealth in this country appears to have been irrevocably destroyed. Whether this be for good or evil, I am not, of course, in a position to say. I can say, however, that no ill effects of the change are apparent up to the present; on the contrary, the country is more prosperous and at least as honestly and as economically administered as it was under the old régime.

"To say that this country is, in my opinion, more truly democratic than any country in the world would be merely stating a simple truth; and to say that the present Government is a workingman's Government is equally true. A great deal of the legislation of recent years, however, is in advance of the requirements and ideas of the people, with the result that some of it has proved to be annoying and irksome to many. This is especially true of some of the labor laws. The Government are honestly endeavoring to place the masses in possession of their legitimate rights with as little friction as possible, and at the same time with due regard to vested interests and the propriety of things generally. But while struggling thus with the duties and responsibilities of their official positions, the members of the Ministry are torn asunder by the clamorous and impracticable demands of the unreasonable and irresponsible. The sympathies of the Government are unmistakably with the people, but the honor, the dignity, and the welfare of the country will not permit them to depart from a course too inconsistent with the sense of obligation, fair dealing, integrity, and responsibility which are the admitted characteristics and duty of all civilized governments. The great danger at the present moment is too much legislation in one direction. This is the one thing wherein the Government find it really hard to resist the demands of organized labor. There is, however, a very gratifying disposition manifesting itself among the more reasonable members of the labor societies to let well enough alone for the present—a disposition it is much to be hoped may extend throughout the whole body of the workers. If not, I have no hesitation in predicting a serious revulsion of public sentiment and sympathy within the next few years."—*U. S. Consular Reports, January*, 1897, *p.* 35.

"Australian experience seems in many ways to prove the value of our system of written constitutions, to be construed and enforced by the courts. The effect on the minds of ill-informed legislators of the knowledge that they can do anything for which they can get a majority, is naturally to beget extravagance and an overweening sense of power, and lead to excessive experimentation. . . . It is in devices for the protection of labor that most of this experimentation occurs. New Zealand affords the best example of it. It provides elaborate legal protection for the eight-hour day. A workman cannot consent to work overtime without extra pay. The state sees that he gets the extra pay. It looks closely after the condition of women and children in the factories. It sees that servant girls are not overcharged by the registry offices for getting them places. It prescribes one half-holiday a week for all persons employed in stores and offices, and sees that they take it. It will not allow even a shopkeeper who has no employees to dispense with his half-holiday; because if he does not take it, his competition will injure those who do. The 'labor department' of the government has an army of inspectors, who keep a close watch on stores and factories, and prosecute violations of the law which they themselves discover. They do not wait for complaints; they ferret out infractions, so that the laborer may not have to prejudice himself by making charges. The department publishes a 'journal' once a month, which gives detailed reports of the condition of the labor market in all parts of the colony, and of the prosecutions which have taken place anywhere of employers who have violated the law. It provides insurance for old age and early death, and guarantees every policy. It gives larger policies for lower premiums than any of the private offices, and depreciates the private offices in its documents. It distributes the profits of its business as bonuses among the policy-holders, and keeps a separate account for teetotalers, so that they may get special advantages from their abstinence. The 'journal' is, in fact, in a certain sense a labor manual, in which everything pertaining to the comfort of labor is freely discussed. The poor accommodation provided for servants in hotels and restaurants is deplored, and so is the difficulty which middle-aged men have in finding employment. More attention to the morals and manners of nursemaids is recommended. All the little dodges of employers are exposed and punished. If they keep the factory door fastened, they are fined. If housekeepers pretend that their servants are lodgers, and therefore not liable to a compulsory half-holiday, they are fined. If manufacturers are caught allowing girls to take their meals in a workshop, they are fined.

"As far as I can make out, too, without visiting the country, there is as yet no sign of reaction against this minute paternal care of the

laborer. The tendency to use the powers of the government chiefly for the promotion of the comfort of the working classes, whether in the matter of land settlement, education, or employment, seems to undergo no diminution. The only thing which has ceased, or slackened, is the borrowing of money for improvements. The results of this borrowing have been so disastrous that the present generation, at least, will hardly try that experiment again."—E. L. Godkin, *The Australian Democracy* (*Atlantic Monthly, March*, 1898).

Labor Laws.—Compulsory industrial arbitration.—"There is not in any other country in the world a more valuable or more enlightened body of Labour laws than those now upon the statute book of this progressive colony. They cover almost every risk to life, limb, health, and interest of the industrial classes. They send the law, as it were, everywhere a worker is employed for daily wages to fling the shield of the state over him or her in the labour of livelihood. The bare enumeration of these laws will indicate the far-reaching ground they cover:—The Coal Mines Act, the Master and Apprentices Act, the Conspiracy Law Amendment Act, the Trade Union Act, the Servant's Registry Offices Act (for the protection of servant girls against the risks of dishonest offices of that kind), Contractors and Workmen's Lien Act, three amended Employer's Liability Acts, three amended Shipping and Seamen's Acts, two Shops and Shop-assistants Acts, the Factories Act, and the Industrial Conciliation and Arbitration Act of 1894. . . . The Industrial Conciliation and Arbitration Act, passed in 1894 . . . has attracted much attention outside New Zealand. An Act with a similar purpose, but permissive in its operations, was passed . . . in the New South Wales Legislature in 1892. It was limited in duration to four years, and was not a success. The New Zealand bill was more skilfully drawn, and, possessing the element of a gentle compulsion, has so far achieved its aim. The Act begins by inviting all parties to join 'in lawful association for the purpose of protecting or furthering the interests of employers or workmen in, or in connection with, any industry in the colony.' Such parties as accept the legal invitation are allowed to register themselves as 'an industrial union,' and this step once taken they are enticed on through a network of solicitations, provisions, and safeguards, until they find themselves, almost without knowing it, agreeing to everything that follows. Trades Unions, or any other labour organization, or any combination of employers, can register as individual bodies without a mixed association of workers and employers. Once registered, they are in the network of arbitration:—'The effect of registration shall be to render the industrial union, and all persons who may be members of any society or trade union, so registered as an industrial union at the time of registration, or who after such registration may become members of any society or trade union so registered, subject to the jurisdiction by this Act given to a Board and the Court respectively, and liable to all the provisions of this Act, and all such persons shall be bound by the rules of the industrial union during the continuance of the membership.' . . . 'Every industrial agreement duly made and executed shall be binding on the parties thereto, and on every person who at any time during the term of such agreement is a member of any industrial union, trade union, or association party thereto, and on every employer who shall in the prescribed manner signify to the Registrar of the Supreme Court where such agreement is filed concurrence therein, and every such employer shall be entitled to the benefit thereof, and be deemed to be a party thereto.' . . . 'In and for every district there shall be established a Board of Conciliation, to have jurisdiction for the settlement of industrial disputes occurring in such district, which may be referred to it by one or more of the parties to an industrial dispute, or by industrial agreement.' . . . 'Every Board shall consist of such equal number of persons as the Governor may determine, being not more than six nor less than four persons, who shall be chosen by the industrial unions of employers and of workmen in the industrial district respectively, such unions voting separately, and electing an equal number of such members.' . . . Should this body itself be unable to come to a satisfactory decision it may refer the matter in question to a small committee of its members fairly representing each side. If a settlement or reconciliation be unattainable in this way, either party to the dispute can appeal to the Court of Arbitration, which is constituted as follows:—'There shall be one Court of Arbitration for the whole colony for the settlement of industrial disputes pursuant to this Act. . . . The Court shall consist of three members to be appointed by the Governor, one to be so appointed on the recommendation of the councils or a majority of the councils of the industrial associations of workmen in the colony, and one to be so appointed on the recommendation of the councils or a majority of the councils of the industrial associations of employers of the colony.' . . . 'No recommendation shall be made as to the third member, who shall be a Judge of the Supreme Court, and shall be appointed from time to time by the Governor, and shall be President of the Court.'"—M. Davitt, *Life and Progress in Australasia, ch.* 68.

Hon. W. P. Reeves, lately Agent-General of New Zealand in England, but who was Minister of Education and Labor in New Zealand from 1891 to 1896, and who is looked upon as the principal author of the industrial arbitration laws in that colony, wrote, during the summer of 1900, on the working of those laws, in an article contributed to the "London Express," as follows: "The arbitration law has been in constant use in New Zealand for about four years and a half. During those years there has never been a time when there has not been a dispute pending before one or other of the Conciliation Boards or the Central Arbitration Court. Writing, as I do, at some distance from London, I cannot say from memory what the exact number of disputes finally adjusted has been; but, so far, they cannot be less than sixty or seventy. Most of these have been carried, on appeal from some Conciliation Board, to the Arbitration Court and settled there. In about two cases out of seven the Conciliation Boards have been able successfully to arrange the disputes. Even where they have not done so, it by no means follows that their labors have been useless. Very often the appeal to the Arbitration Court is merely on one or two points out of many involved, and the advice of the Conciliation Board is accepted on the others. Often, too, most of the parties to a dispute have been ready to accept a board's suggestions, but it has

needed the firm hand of the Arbitration Court to bring one or two stubborn men to acquiescence.

"The process may be tedious, but it is not costly. Lawyers are not employed as counsel before either the boards or the court unless all parties to the action agree thereto, and they very seldom do agree. A firm of employers may appear by a manager or accredited representative, a trade union is usually represented by its Secretary or other official. During the hearing, of course, the factories concerned remain open, and work goes on as usual. Employers are secured not only against a dead stop of business, but against the meaner kinds of competition of undercutting rivals. In the organized trades all the shops of a district have to keep the same hours and pay the same wages. No man may filch trade from a neighbor by sweating his own people. The fair-minded employer now knows where he is, and is freed from many anxieties.

"For six years there has virtually been neither strike nor lockout in New Zealand. All these, except the first, have been years of remarkable and increasing prosperity. During the time of depression which came before them, wages had fallen. With improving times employers would have been faced by resolute demands from trade unions for a return to former high rates of pay, and had there been no arbitration system in working order a series of very bitter conflicts must have ensued. This has been avoided. Workmen and workwomen have gained notable advances of pay, and also improved conditions as to hours of labor and otherwise. But this has come about gradually, and only after careful and painstaking inquiry. Many of the demands of labor have been refused; many more have been modified. In no case has an industry been throttled or crippled. Not only can we claim that no factory has been closed for a single day in New Zealand by labor war, but we can claim that the peace thus obtained has not been bought at the dear price of hampered industry and discouraged enterprise.

"When the Arbitration act came into operation the number of hands returned as employed in the registered factories was about 26,000. It is now not far short of 50,000. A percentage of this striking increase may be due to more thorough registration. Far the larger part of it represents an actual increase of industry. During these years the imports and exports of the colony have grown apace. The revenue received from the customs, from the income tax, from the stamps, and the railways has risen in each case rapidly. Employment from being scarce has grown plentiful. Building has been brisk in all centres of population. The marriage rate has gone up. In a word, New Zealand shows all the signs which we connect with a highly prosperous country. It would be too much to claim that this is chiefly due to the working of the Arbitration act. It is perfectly fair, however, to claim that the Arbitration act and the improved condition of labor, and of confidence which it has brought about, have had some share in leading up to this happy state of things.

"It is frequently asked, How could you possibly enforce an award of the Arbitration Court upon an employer or a union stubbornly determined to go to all lengths rather than obey it? In the first place, for nearly five years the law has been in constant use without a single exhibition of this desperate resistance. That alone should be evidence of some weight that such a duel is not likely in a British community. It is quite true that an employer could go out of business rather than obey an award, and that the court could not prevent him from doing so. But employers are not given to ruining themselves merely because they may not like the decision of an impartial tribunal. It is suggested that the decision itself might be ruinous. There need be no fear of that. Experience has shown that if arbitrators err at all it is almost invariably in the direction of overcaution. They may show too great a desire to 'split the difference'; they are not in the least likely to impose intolerable conditions either upon masters or men. An employer who has the choice between accepting a legal decision arrived at after painstaking inquiry, and being taken into court and fined, will almost always accept the decision. In a very few cases he may run the risk of being fined once, but he will not lay himself open to a second penalty. That is the New Zealand experience.

"On the other hand, it has been flatly declared that the court cannot coerce trade unions. Vivid pictures have been painted of the tragic absurdity of endeavoring to collect fines from trade unionists by distraining on the goods of poor workmen whose union is without funds, and who are themselves penniless. The answer to that is that poverty-stricken unions, composed of penniless workers, are only too thankful to accept the decision of a State tribunal. They cannot strike against a powerful employer; much less can they hope to starve out a court of arbitration. Its decision may not altogether please them, but it is all they are likely to get. The Arbitration Court, therefore, is as potent to deal with trade unions as with employers. Wealthy unions it can fine. Penniless unions are helpless to fight it. Finally, at its back is the mighty force of public opinion, which is sick of labor wars and determined that the experiment of judicial adjustment shall have a full and fair trial."

The full text of the New Zealand "Industrial Conciliation and Arbitration Act" is published in pamphlet form by the United States Department of Labor, and appeared also in one of the Bulletins of the Department, in 1900.

Land system.—"The Crown lands of New Zealand are administered under 'the land act, 1892,' and the regulations made thereunder. The distinguishing features of the present land system are the outcome of ideas which have been gradually coming to maturity for some years past in this colony. These features involve the principle of State ownership of the soil, with a perpetual tenancy in the occupier. This, whatever may be the difference in detail, is the prevailing characteristic of the several systems under which land may now be selected. In New Zealand, this tendency to State ownership has taken a more pronounced form than in any other of the Australasian colonies, and the duration of the leases has become so extended as to warrant the name, frequently given to them, of 'everlasting leases.' In point of fact, most of the Crown lands are now disposed of for terms of 999 years. The rentals are based on the assessed value of the land at the time of disposal, without increase or recurring valuations. Under this system there is a fixity of tenure practically equal to freehold, and which, like freehold, necessarily carries with it the power of sale, sub-

lease, mortgage, or disposition by will. Since all lands held under the Crown 'by lease in perpetuity' are subject to the land tax, the necessity for the periodical revaluations under the perpetual-lease system is done away with, the State reaping the advantage of the unearned increment through the before-mentioned tax. At the same time, the improvements made in the soil by cultivation, etc., are secured to the tenant.

"The advantages of this system to the selector are manifest. When it is taken into consideration that, with few exceptions, the Crown lands are, in their prairie condition, incapable of producing anything until brought into cultivation, the advantage to the settler of setting free his capital to develop the capabilities of the soil, rather than having to expend it in the purchase of a freehold, is very apparent. One of the most striking benefits of this system is the advantage it gives to the poor man, who, with little more capital than his strong right arm, is enabled to make a home for himself, which, under the freehold system, he is frequently unable to accomplish. The values placed on the Crown lands are, as a rule, low, for the State does not so much seek to raise a revenue directly therefrom as to encourage the occupation of the lands by the people; this secures indirectly an increased revenue, besides other advantages, resulting from a numerous rural population.

"Again, underlying the whole of the New Zealand land system is a further application of the principle of 'the land for the people,' viz, the restriction in area which any man may hold. This subject has been forced upon the attention of the legislature by defects in former systems, under which one individual with means at his command could appropriate large areas, to the exclusion of his poorer fellow-settler. Under conditions where the price at which the land is offered is fixed and where choice of selection is by ballot, the poor settler has the same chance as the rich one and may, should he wish it, hold as much land. The limit that a selector may hold is so fixed as to encourage the class of small farmers, and up to that limit the amount he may select is left entirely to himself. The act defines the amount of land anyone may select at 640 acres of first-class or 2,000 acres of second-class land, inclusive of any land he may already hold. These limits apply to lands which are thrown open for 'free selection,' as it is termed, but in some cases, where found desirable, the limit is by regulation made much smaller.

"In addition to the many advantages offered by the 'lease-in-perpetuity' system, the land act provides others to meet the wants of different classes. The rule is almost invariable that land thrown open for so-called 'free selection' is offered to the public under three different tenures, and the choice left entirely to the would-be settler. The three tenures are: (1) For cash, in which one-fourth of the purchase-money is paid down at once, and the remainder within thirty days. The title does not issue until certain improvements have been made on the land. (2) Lease with a purchasing clause, at a 5-per-cent rental on the value of the land; the lease being for twenty-five years, with the right to purchase at the original upset price at any time after the first ten years. (3) Lease in perpetuity, at a rental of 4 per cent on the capital value, as already described above.

"The present [1895] land laws have been in force since the 1st of November, 1892, and, therefore, the returns of the Department of Lands and Survey for the year ending the 31st of March, 1895, will give a fair idea of the proportions in which lands are selected under the three tenures above described during the past two and a half years. The figures given below include the 'special settlements,' all of which must by law be held on lease in perpetuity: (1) Selected for cash, 1,542; area, 110,570 acres. (2) Occupation with right of purchase, 1,060; area, 236,270 acres. (3) Lease in perpetuity, 3,224; area, 634,086 acres.

"'The land act, 1892,' provides for a special class of settlement, which has found favor with the public to a very considerable extent during the last two years. This is known as the 'small-farm association' system. It provides that, where not less than twelve individuals have associated themselves together for mutual help, such an association can, with the approval of the Minister of Lands, select a block of land of not more than 11,000 acres, but there must be a selector to each 200 acres in the block. The extreme limit that one person may hold is fixed at 320 acres. Settlements of this class are held on 'lease in perpetuity' for 999 years, in the same way as lands under the same tenure when thrown open for free selection. The conditions of residence and improvements are the same."—S. Percy Smith, *in New Zealand Official Year-Book*, 1895 (*reprinted in U. S. Consular Reports, Jan.*, 1897, *p.* 4).

A. D. 1899.—Old-Age Pension Act.—In the winter of 1899 an old-age pension act was added to the radical legislation of New Zealand. The Agent-General for New Zealand in England has described the measure in a review article, as follows: "As finally licked into shape, the act is one for giving a small pension to the poorest section of aged colonists without any contribution on their part whatever. Briefly summarized, its effect will be that any New Zealander—man or woman—who has come to the age of sixty-five, after living not less than twenty-five years in New Zealand, shall be entitled to 6s. 11d. a week, or £18 a year. The full pension is to be paid to those whose income from any source is less than £34. When the private income is above £34 a year £1 is deducted from the pension for every £1 of such excess income. When, therefore, the private income is large enough to be £18 a year in excess of £34 no state pension is paid. In other words, no one who has an income of £52 a year is entitled to even a fraction of the pension. A rather more elaborate portion of the act deals with deductions to be made from the pension where the applicant for it is possessed of accumulated property. Under this the applicant's real and personal property are assessed, and his debts, if any, are subtracted from the total value thereof. Then he is allowed to own £325 without suffering any deduction therefor. After that he loses £1 of pension for every £15 worth of accumulated property. The result is that any one possessed of £600 worth of accumulated property ceases to be entitled to any allowance whatever. Men and women are equally entitled to the pension, and where a husband and wife are living together their property or income is divided by two for the purpose of the calculations above mentioned. That is to say, their united income

must amount to £104 or their united property to £1,200 before they are altogether disentitled to any part of the pension. They may have, between them, an income of £68, or as much as £650 of property, and yet be entitled to draw their respective pensions in full."

The government is only authorized to pay the required amounts during three years from the passage of the Act, after which Parliament will have to decide on its continuance or amendment. Mr. Reeves expects that "the opposition will, more or less in unison, submit a rival old-age pension scheme to the constituencies. One of their prominent members, Mr. George Hutchison, indicated in the debate on the third reading of the measure a scheme which some think will be generally adopted by his party. This is to draw a distinction between the older poor of the colony now living and the younger generation of colonists. All now over fifty years of age are to be permitted as they attain sixty-five to take advantage of Mr. Seddon's act without let or hindrance. But for the younger people a contributory scheme is to be drawn up, under which they would have to pay some such sum as sixpence a week, to go in aid of a substantial pension in their old age. Whatever may be thought of the economic merits of such a scheme, it might conceivably be expected at election-time to disarm the hostility of the aged poor to any such interference with their prospects under the present system as would be entailed by a complete repeal of the Seddon act."—*National Review, February,* 1899.

A. D. 1900 (March).—Looking towards federation with Australia.—New Zealand did not take part in the movements which led to the federation of the Australian colonies in the Commonwealth of Australia, but watched them with evident interest and a final wakening of inclination to be joined in union with them. When the Act of the Imperial Parliament "to constitute the Commonwealth of Australia" was under discussion in England (see, in this vol., AUSTRALIA: A. D. 1900), the Agent-General for New Zealand in London addressed to the Colonial Office (March 30, 1900) the following Memorandum, which explains the attitude of that colony towards the federation movement in Australia: "The Government of New Zealand desires to secure the insertion of certain amendments in the Commonwealth of Australia Constitution Bill shortly to be laid before the Imperial Parliament. These amendments are three in number. The first of them is, in effect, that New Zealand should preserve the right of joining the proposed Commonwealth of Australia on the same terms as the original States now about to be united in such Commonwealth. The second is, that while New Zealand remains outside the Commonwealth, litigants in her higher Courts, though reserving the right they now possess to appeal to the Queen in Council, should, as an alternative, have the right to appeal to the High Court of Australia on paying the fees and complying with the rules of that tribunal. The third amendment is, that the Australian Commonwealth and the Colony of New Zealand should be empowered to make the necessary arrangements to employ their naval and military forces for mutual aid and defence, including operations outside their own boundaries, and for that purpose to co-operate in forming a homogeneous Australasian force.

"The importance of the first amendment to New Zealand is great. The Colony is divided from Australia by 1,200 miles of unbroken sea. It still takes from four to five days for persons quitting New Zealand to reach any port in Australia. Though a large and valuable trade is carried on between the two countries, and though New Zealand is linked to Australia, not merely by financial ties, but by bonds of intercourse, cordial friendship, and sympathy, she has also vital and separate interests. Many, also, of the leading matters on which the discussions on Federation in Australia during the last 12 years have turned are topics with which the New Zealand people is almost unacquainted. It is therefore only to be expected that the Colony should watch the Federal movement with caution and reserve. It is also true that, until June of last year, New Zealand was unable to judge as to the intentions of the great Colony of New South Wales with regard to the Commonwealth Bill. It was not until the month of September that Queensland decided to enter the Commonwealth; Western Australia has not even yet done so. And it was directly after the decision of Queensland had become known that, in response to a request from Sir John Forrest, the leading statesmen of Australia intimated that, in their opinion, it was impossible to consider any further amendments of the Commonwealth Bill. From that moment the only course left open to New Zealand has been that now taken. About that time there appeared in New Zealand evidences of the growth of a feeling in the Colony in favour of a closer union with Australia. This was on the eve of the general elections, and Mr. Seddon, the Prime Minister, then defined his position, stating that the future relations of New Zealand with Australia were a matter for education and careful examination: that for himself he kept an open mind, but that prudent deliberation was advisable. At the general elections which took place in December last, Mr. Seddon was returned to power with an unusually large majority. It may therefore very safely be assumed that this cautious but not hostile attitude fairly represents the present view of the people of the Colony. Some stress may be laid on the foregoing facts in view of the possible objection that New Zealand's action now comes too late. The Colony virtually asks that, in view of its position of distance and difficulty, it should have more time given it to make up its mind than has been found necessary by colonies which are contiguous or almost so. If it should be proposed to fix a limit of time to this, that would clearly be a matter for reasonable consideration.

"In so far as the second amendment would give certain New Zealand litigants a right of resort to the High Court of Australia, it is scarcely likely to meet with objection in Australia unless on the general ground that no amendment whatever of the Commonwealth Bill is now desirable. In the event of the amendment being admitted, it is obvious that certain precautions might have to be taken to conserve the existing rights of New Zealand litigants, and also to prevent clashing of appeals, but doubtless these could be provided for. The third amendment, that providing for a species of partial federation for purposes of defence and mutual assistance, seems not only desirable but unobjectionable in every way. It does not pro-

pose that any kind of compulsion should be applied to either the Commonwealth or New Zealand: it merely empowers them to make such arrangements as may be deemed mutually advantageous. At present it seems more than doubtful whether either the Commonwealth or the Colony has the power to make simple, binding and effective arrangements which would involve operations and expenditure outside their own boundaries, and under which each would have to act so as to affect colonists not subject to their respective jurisdictions. Recent events have clearly shown that the time has passed by for regarding the military forces of a colony as something never to be employed outside of its own boundaries. I need not point out that such a co-operation would be of value not only to Australia and New Zealand, but to the Empire which both are so anxious to serve."

The reply of the Colonial Office to this Memorandum set forth that its suggestions had been submitted to the delegates of the federating colonies and did not meet their approval. "They pointed out that during the period of grace proposed to be allowed circumstances might arise which would cause grave embarrassment to the Commonwealth if it were open to New Zealand to claim admission on the same terms as the original States, and that Article 121 of the draft Bill provided sufficiently for the admission of New Zealand at any time upon such conditions as might be found mutually acceptable to the Colony and the Commonwealth." It was added that "the suggested amendments as to the appeal from New Zealand Courts to the High Court of Australia, and the arrangements for mutual defence, would, if undertaken now, lead to great delay, and involve a fresh referendum to the people of the Federating Colonies, while there does not appear to be any probability that the Federation would not favourably entertain any proposals of the kind, if put forward after Federation."

In the Constitution Act as passed, however, New Zealand is mentioned specifically among the "States" to which its provisions may apply, though not included in what relates to the "Original States." See (in this vol.) CONSTITUTION OF AUSTRALIA.—*Great Britain, Parliamentary Publications* (*Papers by Command: Cd.* 158, 1900, *pp.* 30–31, *and* 51).

A. D. 1900 (October).—Annexation of the Cook Islands.—A correspondent of the "London Times," writing from Rarotonga, the largest of the Cook (or Hervey) Islands, on the 10th of October, 1900, reported the arrival there of the Earl of Ranfurly, Governor of New Zealand, for the purpose of effecting the annexation of the islands to that colony, in accordance with the expressed wish of the natives. "Lord Ranfurly," he writes, "landed this morning, and, as the representative of her Majesty, addressed the Arikis, or high chiefs, on the question of annexation, for which they had asked. This is his second visit to the island, and he congratulated the people on now finding such a satisfactory condition of affairs in Rarotonga. He expressed pleasure at their liberality in subscribing so large a sum of money for the relief of those families who, in the fortunes of the war in South Africa, might lose their main support, and in sending one of their representative residents to represent them on the field of battle. All this and much more about the interest they took in the British Empire the Queen was aware of, and their petition for annexation had been laid at the foot of the Throne and duly considered. He urged them, however, to consider carefully their decision in this matter, and, further, that it should be arrived at of their own free and untrammelled will. He had heard from the British Resident that the high chiefs and all the people wanted annexation, but he wished to hear it from their own lips. It would then remain but for them to perform the act of cession to her Majesty, and for him formally to annex the group, hoisting the British flag, and proclaiming that from henceforth they were part of the British Empire whose prestige and honour they would from that moment share. The high chiefs unanimously agreed to annexation. . . . There are 2,300 Maoris on this island and 70 Europeans. All are intensely loyal to Queen Victoria. The island was discovered in 1823 by Messrs. Williams and Bourne, two officers of the London Mission Society, which for many years has had its headquarters for the Eastern Pacific located here. The volcanic soil of the island is marvellously fertile, coffee, cocoa, cotton, oranges, limes, cocoanuts and many other tropic fruits and trees growing without almost any cultivation. A British protectorate was declared over the group by Captain Bourke, of H. M. S. Hyacinth, in 1888. Since 1892 the interests of the protectorate have been guarded and directed by a British Resident, paid by the New Zealand Government, so that the islands will now probably be included within the boundaries of that colony. Nearly the whole of the trade is with New Zealand. There are six islands in the group annexed [700 miles southeast of Samoa] the total population of which is about 4,500." The "Times," commenting on the annexation, remarked: "The New Zealand Legislature has passed resolutions expressing its desire that the Suwaroff Island, to the north of the Cook group and about half-way to the Penrhyn group, should also be annexed to the colony. This island, although thinly inhabited, is said to possess one of the best ports in that part of the Pacific. The only quarter from which any protest against the acquisition of the Cook Islands has come so far seems to be New South Wales, which fears the influence of the introduction of the New Zealand tariff on its trade with that place."

NIGERIA: A. D. 1882-1899.—History of the formation of the Niger Coast Protectorate.—Conventions of Great Britain with

NIGERIA, 1882–1899.

Germany and France.—Settlement of the boundary of the French Sudan and Sahara Sphere.—The following "Notes on the Niger Districts and Niger Coast Protectorates, 1882–1893," tracing the several steps by which the existing Protectorate was formed, appear in a paper "presented to both Houses of Parliament by command of Her Majesty, 1899 (C.—9372)":

"In 1882 a Company, entitled the 'National African Company, Limited,' was formed to take over the business of the 'United Africa Company, Limited,' in Central Africa and in the Niger Regions. In October, 1884, the Company purchased the business and objects of the 'Compagnie Française de l'Afrique Equatoriale.' In the same year various treaties were concluded between Consul Hewett and native chiefs of the Niger Districts, by which these territories were placed under British protection. On the 26th February, 1885, the General Act of the Berlin Conference was signed, Chapter V. of which contained an 'Act of Navigation for the Niger,' which applied, generally, to the Niger and its affluents the free navigation articles of the Final Act of the Congress of Vienna of 1815. In April–June, 1885, the British and German Governments entered into an Agreement, by an exchange of Notes, defining their respective spheres of action in the Gulf of Guinea. By this Agreement Germany engaged not to make acquisition, accept Protectorates, or interfere with the extension of British influence in that part of the Gulf of Guinea lying between the right river bank of the mouth of the Rio del Rey entering the sea between 8° 42′ and 8° 46′ long. east of Greenwich and the British colony of Lagos, nor in the interior, to west of a line following the right river bank of the Rio del Rey from the said mouth to its source, thence striking direct to the left river bank of the Old Calabar or Cross River, and terminating, after crossing that river, at the point about 9° 8′ of long. east of Greenwich, marked 'Rapids' on the English Admiralty chart.

"On the 5th June, 1885, a Notification was inserted in the 'London Gazette' to the effect that a British Protectorate had been established over the Niger Districts; the territories comprised within the Protectorate were defined to be—the line of coast between the British Protectorate of Lagos, and the right or western bank of the mouth of the Rio del Rey; and also the territories on both banks of the Niger, from its confluence with the River Benué at Lukoja to the sea, as well as the territories on both banks of the River Benué, from the confluence up to and including Ibi. On the 10th July, 1886, a Royal Charter was granted to the 'National African Company, Limited.' In July–August, 1886, a Supplementary Agreement was entered into between the British and German Governments defining their respective spheres of action in the Gulf of Guinea from the Rio del Rey to a point to the east and near to Yola. On the 18th October, 1887, another Notification was inserted in the 'London Gazette,' in which it was stated that the British Protectorate of the Niger Districts then comprised the following territories:—On the line of coast between the British Protectorate of Lagos and the right or western river bank of the mouth of the Rio del Rey, and all territories in the basin of the Niger and its affluents, which were or might be for the time being subject to the government of the 'National African Company, Limited' (then called the 'Royal Niger Company'), in accordance with the provisions of the Charter of the said Company, dated 10th July, 1886.

"On the 5th August, 1890, a Declaration was signed by the British and French Governments, which contained the following clause:—'The Government of Her Britannic Majesty recognises the sphere of influence of France to the south of her Mediterranean Possessions up to a line from Say on the Niger to Barrawa on Lake Tchad, drawn in such manner as to comprise in the sphere of action of the Niger Company all that fairly belongs to the kingdom of Sokoto; the line to be determined by Commissioners to be appointed.' On the 1st July, 1890, another Agreement was entered into between the British and German Governments defining their spheres of influence in the Gulf of Guinea and in other parts of Africa. On the 18th June, 1892, that portion of the Niger Protectorate which lies on, or to the north of, the 7 degree of north latitude was, by notification to the Signatory Powers of the Brussels Act, placed under the terms of Art. 91 of that Act, within the zone of prohibition of alcoholic liquors. On the 14th April, 1893, an agreement was signed between the British and German Governments, in which it was declared that the right bank of the Rio del Rey waterway should be the boundary between the Oil Rivers Protectorate and the Colony of the Cameroons.

"On the 13th May, 1893, a Notification was inserted in the 'London Gazette,' announcing that the portion of the British Protectorate of the Niger Districts which was under the administration of Her Majesty's Commissioner and Consul would, from the date of that Notification, be administered under the name of the 'Niger Coast Protectorate,' and would cease to be known as the 'Oil Rivers Protectorate.' And on the 15th November, 1893, a further Agreement was signed between the British and German Governments defining the boundary between their respective spheres of influence in the region extending from the Rio del Rey to 'a point to the east of, and close to Yola,' and on Lake Chad.

"Between 1884 and 1893 numerous Treaties were concluded by the National Africa Company and by the Royal Niger Company with native Chiefs and others possessing territories in the basin of the Niger districts, by which they engaged to make no cession of territory or to enter into any Treaty negotiations with Foreign States without the previous consent of the British Government, and in return for which they were placed under British protection."—*Great Britain, Parliamentary Publications* (*Papers by Command, C.*—9372).

In October, 1897, after a number of threatening collisions between English and French claims and undertakings had occurred in the Niger region, representatives of the two nations met in Paris to negotiate an agreement concerning boundaries. The result of their work was embodied in a convention signed June 14, 1898, but not ratified by both governments until June 13, 1899. By this agreement, the frontiers separating the British colony of the Gold Coast from the French colonies of the Ivory Coast and Sudan, and the British colony of Lagos from the French colony of Dahomey, were defined with precision,

and the British and French possessions east of the Niger were then in the IVth article of the Convention, delimited as follows: Starting from a point on the left bank of the Niger which is fixed by the median line of the Dallul Mauri at its mouth, "the frontier shall follow this median line until it meets the circumference of a circle drawn from the centre of the town of Sokoto with a radius of 100 miles (160·932 metres). From this point it shall follow the northern arc of this circle as far as its second intersection with the 14th parallel of north latitude. From this second point of intersection it shall follow this parallel eastward for a distance of 70 miles (112·652 metres); then proceed due south until it reaches the parallel of 13° 20′ north latitude, then eastward along this parallel for a distance of 250 miles (402·230 metres); then due north until it regains the 14th parallel of north latitude; then eastwards along this parallel as far as its intersection with the meridian passing 35° east of the centre of the town of Kuka, and thence this meridian southward until its intersection with the southern shore of Lake Chad. The Government of the French Republic recognizes, as falling within the British sphere, the territory to the east of the Niger, comprised within the above-mentioned line, the Anglo-German frontier, and the sea. The Government of Her Britannic Majesty recognizes, as falling within the French sphere, the northern, eastern, and southern shores of Lake Chad, which are comprised between the point of intersection of the 14th degree of north latitude, with the western shore of the lake and the point of incidence on the shore of the lake of the frontier determined by the Franco-German Convention of the 15th March, 1894."

On the 21st of March, 1899, the following Declaration was added to the Convention, and ratified with it in the following June: "The IVth Article of the Convention of the 14th June, 1898, shall be completed by the following provisions, which shall be considered as forming an integral part of it:—

"1. Her Britannic Majesty's Government engages not to acquire either territory or political influence to the west of the line of frontier defined in the following paragraph, and the Government of the French Republic engages not to acquire either territory or political influence to the east of the same line.

"2. The line of frontier shall start from the point where the boundary between the Congo Free State and French territory meets the water-parting between the watershed of the Nile and that of the Congo and its affluents. It shall follow in principle that water-parting up to its intersection with the 11th parallel of north latitude. From this point it shall be drawn as far as the 15th parallel in such manner as to separate, in principle, the Kingdom of Wadai from what constituted in 1882 the Province of Darfur; but it shall in no case be so drawn as to pass to the west beyond the 21st degree of longitude east of Greenwich (18° 40′ east of Paris), or to the east beyond the 23rd degree of longitude east of Greenwich (20° 40′ east of Paris).

"3. It is understood, in principle, that to the north of the 15th parallel the French zone shall be limited to the northeast and east by a line which shall start from the point of intersection of the Tropic of Cancer with the 16th degree of longitude east of Greenwich (13° 40′ east of Paris), shall run thence to the south-east until it meets the 24th degree of longitude east of Greenwich (21° 40′ east of Paris), and shall then follow the 24th degree until it meets, to the north of the 15th parallel of latitude, the frontier of Darfur as it shall eventually be fixed.

"4. The two Governments engage to appoint Commissioners who shall be charged to delimit on the spot a frontier-line in accordance with the indications given in paragraph 2 of this Declaration. The result of their work shall be submitted for the approbation of their respective Governments.

"It is agreed that the provisions of Article IX of the Convention of the 14th June, 1898, shall apply equally to the territories situated to the south of the 14° 20′ parallel of north latitude, and to the north of the 5th parallel of north latitude, between the 14° 20′ meridian of longitude east of Greenwich (12th degree east of Paris) and the course of the Upper Nile."—*Great Britain, Papers by Command: Treaty Series, No.* 15, 1899.

Of the territorial partition in West Africa which this important treaty as first signed in 1898 determined, and of the magnitude of the empire which it conceded to France, a striking English view was given at the time in the following article: "Though we are perfectly satisfied with the agreement, and though we believe that the country as a whole will be perfectly satisfied, we do not disguise from ourselves the fact that under the Convention France receives the full title-deeds for the most magnificent piece of empire obtained this century by any European Power,—a dominion which, though 'in partibus infidelium,' is yet within easy reach of both the western and the southern shores of France. We do not grudge France the great possession that was finally rounded off and consolidated on Tuesday; nay, rather we are glad to see it in her hands, for we want monopoly neither in trade nor in empire. We see, however, no good in pretending that she has not obtained the most magnificent opportunity for over-sea development which has fallen to any Power within recent times. The best way of understanding the Convention is to realise what it is that France now possesses in West Africa. Let our readers look at a map of Africa, and first fix their eyes on Algiers and Tunis, with their rich soil and splendid harbours and their remains of an ancient and splendid civilisation,—Phœnician, Greek, Roman, Christian, and Arab. Then let them allow their eyes to travel downwards to the right bank of the greatest river of Africa, the Congo. From Constantine, with its great memories and its scenery almost European in charm and splendour, to Brazzaville and Stanley Pool, with their tropical vegetation and savage life, there is a continuous and uninterrupted stretch of French territory. As they say in our country districts, the French President might now ride on his own land from Tunis to Loango. The French dominion of West Africa (as says an official 'communiqué' to the Paris Press with very natural exultation) now extends over a space as great as that from Paris to Moscow. From Algeria to the Congo, from Senegal to Lake Chad—i. e., almost to the centre of Africa—stretches this vast tract of French territory. 'At the present moment,' to quote the words of the 'communiqué,' 'all our West African colonies—Algeria, Tunis, Senegal, Futa-

Jallon, the Ivory Coast, the Soudan, and the Congo—are in communication by their respective Hinterlands.'

"But probably this will not convey much to the ordinary English reader. Perhaps we can best make him realise the immensity of the French West African Empire by pointing out that, with the exception of certain great German and English and other 'enclaves' the whole of the huge piece of Africa which bulges out on the map towards the west now belongs to France. She has all the connecting links, all that does not specifically belong to some one else, and she cuts off short the Hinterlands of all the Powers with possessions on the West African coast. Let us begin at the most western point of the coast-line of Tripoli in the Mediterranean, and travel round the coast, marking off all that is not French.

"First, we come to Tunis,—that is in the possession of France just as Egypt is in our possession. Algiers comes next,—that is French. Then Morocco. Morocco is at present independent, but at the back of Morocco all the land, be it desert or cultivable, is French. Next comes a strip of Spanish coast, but it goes only a very little way inland, and all the back country is French. Next come the great French colonies of Senegambia and Futa-Jallon, with two little colonies embedded in them, one belonging to us—the Gambia—and the other belonging to Portugal. Next come our Sierra Leone and independent Liberia, but here again the Hinterlands are all French. Next comes the French Ivory Coast colony, then the British Gold Coast, then German Togoland, and then French Dahomey. Here again all the Hinterlands beyond, say, four hundred miles inland, belong, since the signing of the Convention, to France. After that comes our Colony of Lagos, then the German Cameroons, and finally the French Congo—the last French possession in West Africa. Here, too, the Hinterlands have been cut off by the French, and our Colonies have been made into 'enclaves' in the mighty French dominion. It is true that the Niger or Lagos 'enclave' is a very vast one, and stretches now up to Lake Chad, which becomes henceforth as international a sheet of water as the Lake of Constance. Still, it is an 'enclave,' for, as we read the Convention, he who embarks upon Lake Chad from the British shore and steers eastward will land on French territory. In other words, Nigeria cannot now cross Lake Chad and expand beyond it. We should be glad to hear that this is not the true reading of the Convention, but we fear it is. We have travelled, then, round the map of Africa, from Tunis to the Congo, and found that France is everywhere the chief owner,—that hers is the great estate, and that the other Powers only have odd bits of land here and there. We do not say this in any grumbling spirit, for our odd bit—Nigeria—is very possibly worth as much as the great estate if Algiers and Tunis are not counted. We merely wish to make the public understand clearly that West Africa as a political and geographical expression has finally passed to France, though we no doubt have carved one very valuable piece out of it."—*The Spectator* (*London*) *June* 18, 1898.

Nine months later, when the agreement embodied in the Declaration of March 21, 1899, had been added to the original convention, the "Spectator" explained its effect as follows: "It will be remembered that last year we and the French agreed upon a delimitation of 'spheres' in West Africa which extended as far as Lake Chad. As to the country east of Lake Chad nothing was said. It was left as a kind of No-man's Land. What has now been done is to extend the area of the French 'sphere' eastward beyond Lake Chad till it reaches Darfur and the Bahr-el-Ghazel. Darfur and the region of the Bahr-el-Ghazel are declared to be in the English 'sphere.' All the rest of Northern Central Africa is to become French. France, that is, is to have the great Mahommedan State of Wadai as well as Baghirmi and Kanem. In the territory between Lake Chad and the Nile each Power, however, is to allow the other equality of treatment in matters of commerce. This will no doubt allow France to have commercial establishments on the Nile and its affluents, but it will also allow us to have similar privileges for trade on the eastern shore of Lake Chad. But as our system of giving equal trading rights to all foreigners would in any case have secured commercial rights to France, we are not in the least hampered by this provision, while the concession to us of equal rights on the eastern shore of Lake Chad will improve our position in the face of French Colonial Protection. . . .

"The first thing that strikes one in considering the French possessions in Africa, after this latest addition, is their vastness. Practically, France will now have all North-Western, and all Northern, and all North Central Africa, except Morocco, our West African Colonies, Tripoli, Darfur, and the Valley of the Nile,—giving that phrase its widest interpretation, and regarding it as the whole of the country whence water flows into the Nile. . . . That, if she plays her cards properly, she ought to make a success of her African Empire we cannot doubt, for she starts with immense advantages. To begin with, she is nearer her African possessions than any other Power. You can go in a couple of days from Marseilles to Algiers and Tunis. Next, in Algiers and Tunis she has rich colonies with a temperate climate which may be made the basis for great developments in the way of railway extension. Lastly, her African possessions are conterminous, or, at any rate, connected with each other by land. She owns, that is, Northern Africa, and the rest of the Powers have only, as it were, enclaves—very large enclaves, no doubt, in many cases—in her territory. At present this advantage may not seem very great owing to the vast distances and the desert character of many of the French Hinterlands, but if and when France completes her Soudan railways, the strength of this continuity of territory will become apparent. But though France has many advantages, it would be foolish to deny that she has also many serious problems to solve. We shall perhaps be stating the most dangerous of them when we say that France now becomes the undisputed master of the great sect of El Senoussi. There are reported to be over twenty million followers of El Senoussi in North Africa, and, except in Tripoli, all these may now be said to be within the French 'sphere of influence.' The Sultanate of Wadai—which, be it remembered, is a very formidable State, and one which has never yet come into contact with any European Power—is a Senoussi State. But the followers of the Senoussi, besides being numerous, are extremely fanatical. Though practising a much purer form of Mahommedanism than the Dervishes, they hate Euro-

peans quite as ardently, and if once their religious zeal were to be thoroughly roused they would prove most formidable foes. We do not envy the French their task if they attempt to conquer Wadai."—*The Spectator, March* 25, 1899.

A. D. 1897: Massacre of British officials near Benin.—Capture of Benin.—An unarmed expedition from the Niger Coast Protectorate, going, in January, on a peaceful mission to the King of Benin, led by Acting Consul-General Phillips, was attacked on the way and the whole party massacred excepting two, who were wounded, but who hid themselves in the bush and contrived to make their way back. The Consul-General had been warned that the king would not allow the mission to enter Benin, but persisted in going on. A "punitive expedition" was sent against Benin the following month, and the town was reached and taken on the 18th, but the king had escaped.

"The city presented the most appalling sight, particularly around the King's quarters, from which four large main roads lead to the compounds of the bigger Chiefs, the city being very scattered. Sacrificial trees in the open spaces still held the corpses of the latest victims [of 'Ju Ju' sacrifice]—seven in all were counted—and on every path a freshly-sacrificed corpse was found lying, apparently placed there to prevent pursuit. One large open space, 200 to 300 yards in length, was strewn with human bones and bodies in all stages of decomposition. Within the walls, the sight was, if possible, more terrible. Seven large sacrifice compounds were found inclosed by walls 14 to 16 feet high, each 2 to 3 acres in extent; against the end wall in each, under a roof, was raised a daïs with an earthen (clay) sacrificial altar about 50 feet long close against the wall on which were placed the gods to whom sacrifice is made—mostly being carved ivory tusks, standing upright, mounted at base, in hideously-constructed brass heads. In front of each ivory god was a small earthen mound on which the victim's forehead would apparently be placed. The altars were covered with streams of dried human blood and the stench was too frightful. It would seem that the populace sat around in these huge compounds while the Ju Ju priests performed the sacrifices for their edification. In the various sacrifice compounds were found open pits filled with human bodies giving forth most trying odours. The first night several cases of fainting and sickness occurred owing to the stench, which was equally bad everywhere. In one of the pits, partially under other bodies, was found a victim, still living, who, being rescued, turned out to be a servant of Mr. Gordon's, one of the members of Mr. Phillips' ill-fated expedition. At the doors and gates of houses and compounds were stinking goats and fowls, sacrificed apparently to prevent the white man entering therein. The foregoing is but a feeble attempt to describe the horrors of this most terrible city, which after five days' continuous fatigue, working with about 1,000 natives, still presents most appalling and frightful sights. In the outlying parts of the city the same sights are met and the annual expenditure of human life in sacrifice must have been enormous. Most of the wells were also found filled with human bodies."—*Great Britain, Papers by Command: Africa, No.* 6, 1897, *p.* 28.

THE NINETEENTH CENTURY.

The date of the ending of the Century.—Controversy as to whether the Nineteenth Century came to its end at the ending of the year 1899 or the year 1900 seems nearly incomprehensible to one who takes the trouble to begin a counting of years from the beginning of the Christian Era, and so reaches in his reckoning the fact that the first century did not end until the 100th year was ended. That seems to clear all confusion from the question, since the 200th, 300th, 400th, and so on up to the 1900th, must be the closing years of the successive centuries, just as certainly as the 100th is the last year of the first century. Arithmetically, there is no question left, but some minds refuse to recognize the century as a merely arithmetical fact. They see in it an entity of time with which the counting of years has little to do. Their somewhat mystical view is set forth in the following, which we quote from a communication that appeared in the "New York Times":

"The centurial figures are the symbol, and the only symbol, of the centuries. Once every hundred years there is a change in the symbol, and this great secular event is of startling prominence. What more natural than to bring the century into harmony with its only visible mark? What more consonant with order than to make each group of a hundred years correspond with a single centennial emblem? Be it noticed that, apart from the centennial emblems, there is absolutely nothing to give the centuries any form. The initial figures 18 are time's standard which the earth carries while it makes 100 trips around the sun. Then a new standard, 19, is put up. Shall we wait now a whole year for 1901, at the behest of the abacists? No, we will not pass over the significant year 1900, which is stamped with the great secular change, but with cheers we will welcome it and the new century. The 1900 men, who compose the vast majority of the people, say to their opponents: 'We freely admit that the century you have in your mind, the artificial century, begins in 1901,

but the natural century (which we prefer) begins in 1900.'"

A consistent application of this view to the defining and naming of the centuries would seem to require that the years which carry the initial figures 18 should make up the Eighteenth, not the Nineteenth Century, and that we should turn back our centurial nomenclature a whole round.

The epoch of a transformation of the world.—In the last years of the Eighteenth Century a new epoch in history was entered,—an epoch marked by many distinctions, but most strikingly by what may be called the transformation of the world. The earlier great ages had been ages of simple expansion,—of a widening theatre for the leading races,—of a widening knowledge of the earth and the heavens,—of a widening range for human thought; but those expansive movements in civilization led up, at last, to more wonderful processes of transformation, which were just in their beginning when the Nineteenth Century dawned. For all the generations of mankind that had lived before this century, the earth, as a dwelling place, remained nearly unchanged. They had cleared some forests from its face, and smoothed some paths; but, in every substantial feature, the France, for example, of Napoleon was the unaltered Gaul that Julius Cæsar knew. Everywhere the material conditions of life were essentially the same for the man of the Eighteenth Century that they had been for the man of the First. Then began the amazing work of the brain and hand of man, by which he has been refashioning and refitting the planet he inhabits, and making a new world for his dwelling. As a habitable earth, to-day, it bears no likeness to the earth on which the first day of this century dawned. Its distances mean nothing that they formerly did; its dividing seas and mountains have nothing of their old effect; its pestilences have lost half their terror; its very storms are sentinelled and rarely surprise us in our travels or our work. Netted with steam and electric railways, seamed with canals, wire-strung with telegraphic and telephonic lines, its ocean-voyages made holiday excursions, its every-day labors, of the forge, the plough, the sickle, the spindle, the loom, the needle, and even of the pen, done with magical deftness by machines, which its coal mines and its waterfalls lend forces to move, it is nothing less than a new world that men are making for themselves, out of that in which they lived at the beginning of the era of mechanism and electricity and steam.

"Yet these are but outward features of the transformation that is being wrought in the world. Socially, politically, and morally, it has been undergoing a deeper change. A growth of fellow-feeling which began in the last century has been an increasing growth. It has not ended war, nor the passions that cause war, but it is rousing an opposition which gathers strength every year. It has made democratic institutions of government so common that the few arbitrary governments now remaining in civilized countries seem disgraceful to the people who endure them so long. It has broken old yokes of conquest, and revived the independence of long subjugated states. It has swept away unnatural boundary lines, which separated peoples of kindred language and race. It is pressing long-neglected questions of right and justice on the attention of all classes of men, everywhere, and requiring that answers shall be found.

"And, still, even these are but minor effects of the prodigious change which the Nineteenth Century has brought into the experience of mankind." Beyond them all in importance are the new conceptions of the universe, and of the method of God's working in it, which can, with no exaggeration, be said to have imparted a wholly new spirit and quality to the human mind. By what it learned from Copernicus, it was given a new standpoint in thinking. By what it learned from Newton, it was given a new and larger grasp. By what it has learned from Darwin and Spencer it has been equipped with a new insight, and looks at even the mystery of life as a problem to be solved. "If we live in a world that is different from that which our ancestors knew, it is still more the fact that we think of a different universe, and feel differently in all our relations to it."—J. N. Larned, *Hist. of England for the Use of Schools*, *p.* 561.

Comparison of the Century with all preceding ages, as regards man's power over Nature.—"No one, so far as I am aware, has yet pointed out the altogether exceptional character of our advance in science and the arts, during the century which is now so near its close. In order to estimate its full importance and grandeur—more especially as regards man's increased power over nature, and the application of that power to the needs of his life to-day, with unlimited possibilities in the future—we must compare it, not with any preceding century, or even with the last millennium, but with the whole historical period,—perhaps even with the whole period that has elapsed since the stone age."

Such a comparison is made in the following lists of "the great inventions and discoveries of the two eras":

"Of the Nineteenth Century."	"Of all Preceding Ages."
1. Railways.	1. The Mariner's Compass.
2. Steam-ships.	2. The Steam Engine.
3. Electric Telegraphs.	3. The Telescope.
4. The Telephone.	4. The Barometer and Thermometer.
5. Lucifer Matches.	5. Printing.
6. Gas illumination.	6. Arabic numerals.
7. Electric lighting.	7. Alphabetical writing.
8. Photography.	8. Modern Chemistry founded.
9. The Phonograph.	9. Electric science founded.
10. Röntgen Rays.	10. Gravitation established.
11. Spectrum-analysis.	11. Kepler's Laws.
12. Anæsthetics.	12. The Differential Calculus.
13. Antiseptic Surgery.	13. The circulation of the blood.
14. Conservation of energy.	14. Light proved to have finite velocity.
15. Molecular theory of Gases.	15. The development of Geometry.
16. Velocity of Light directly measured, and Earth's Rotation experimentally shown.	
17. The uses of Dust.	
18. Chemistry, definite proportions.	
19. Meteors and the Meteoritic Theory.	
20. The Glacial Epoch.	
21. The Antiquity of Man.	
22. Organic Evolution established.	
23. Cell theory and Embryology.	
24. Germ theory of disease, and the function of the Leucocytes.	

NINETEENTH CENTURY.

"Of course these numbers are not absolute. Either series may be increased or diminished by taking account of other discoveries as of equal importance, or by striking out some which may be considered as below the grade of an important or epoch-making step in science or civilization. But the difference between the two lists is so large, that probably no competent judge would bring them to an equality. Again, it is noteworthy that nothing like a regular gradation is perceptible during the last three or four centuries. The eighteenth century, instead of showing some approximation to the wealth of discovery in our own age, is less remarkable than the seventeenth, having only about half the number of really great advances."—A. R. Wallace, *The Wonderful Century, ch.* 15 (*copyright, Dodd, Mead & Co., N. Y., quoted with permission*).

Difference of the Century from preceding ages.—"In the last 100 years the world has seen great wars, great national and social upheavals, great religious movements, great economic changes. Literature and art have had their triumphs and have permanently enriched the intellectual inheritance of our race. Yet, large as is the space which subjects like these legitimately fill in our thoughts, much as they will occupy the future historian, it is not among these that I seek for the most important and the most fundamental differences which separate the present from preceding ages. Rather is this to be found in the cumulative products of scientific research, to which no other period offers a precedent or a parallel. No single discovery, it may be, can be compared in its results to that of Copernicus; no single discoverer can be compared in genius to Newton; but, in their total effects, the advances made by the 19th century are not to be matched. Not only is the surprising increase of knowledge new, but the use to which it has been put is new also. The growth of industrial invention is not a fact we are permitted to forget. We do, however, sometimes forget how much of it is due to a close connection between theoretic knowledge and its utilitarian application which, in its degree, is altogether unexampled in the history of mankind. I suppose that, at this moment, if we were allowed a vision of the embryonic forces which are predestined most potently to affect the future of mankind, we should have to look for them not in the Legislature, nor in the Press, nor on the platform, nor in the schemes of practical statesmen, nor the dreams of political theorists, but in the laboratories of scientific students whose names are but little in the mouths of men, who cannot themselves forecast the results of their own labors, and whose theories could scarcely be understood by those whom they will chiefly benefit. . . .

"Marvellous as is the variety and ingenuity of modern industrial methods, they almost all depend in the last resort upon our supply of useful power; and our supply of useful power is principally provided for us by methods which, so far as I can see, have altered not at all in principle, and strangely little in detail, since the days of Watt. Coal, as we all know, is the chief reservoir of energy from which the world at present draws, and from which we in this country must always draw; but our main contrivance for utilizing it is the steam engine, and, by its essential nature, the steam engine is extravagantly wasteful. So that, when we are told, as if it was something to be proud of, that this is the age of steam, we may admit the fact, but can hardly share the satisfaction. . . . We have, in truth, been little better than brilliant spendthrifts. Every new invention seems to throw a new strain upon the vast but not illimitable, resources of nature. Lord Kelvin is disquieted about our supply of oxygen; Sir William Crookes about our supply of nitrates. The problem of our coal supply is always with us. Sooner or later the stored-up resources of the world will be exhausted. Humanity, having used or squandered its capital, will thenceforth have to depend upon such current income as can be derived from that diurnal heat of the sun and the rotation of the earth till, in the sequence of the ages, these also begin to fail. . . .

"After all, however, it is not necessarily the material and obvious results of scientific discoveries which are of the deepest interest. They have affected changes more subtle and perhaps less obvious which are at least as worthy of our consideration and are at least as unique in the history of the civilized world. No century has seen so great a change in our intellectual apprehension of the world in which we live. Our whole point of view has changed. The mental framework in which we arrange the separate facts in the world of men and things is quite a new framework. The spectacle of the universe presents itself now in a wholly changed perspective. We not only see more, but we see differently. The discoveries in physics and in chemistry, which have borne their share in thus re-creating for us the evolution of the past, are in process of giving us quite new ideas as to the inner nature of that material whole of which the world's traversing space is but an insignificant part. Differences of quality once thought ultimate are constantly being resolved into differences of motion or configuration. What were once regarded as things are now known to be movement. . . . Plausible attempts have been made to reduce the physical universe, with its infinite variety, its glory of color and of form, its significance and its sublimity, to one homogeneous medium in which there are no distinctions to be discovered but distinction of movement or of stress. And although no such hypothesis can, I suppose, be yet accepted, the gropings of physicists after this, or some other not less audacious unification, must finally, I think, be crowned with success. The change of view which I have endeavored to indicate is purely scientific, but its consequences cannot be confined to science. How will they manifest themselves in other regions of human activity, in literature, in art, in religion?"—A. J. Balfour, *The Nineteenth Century* (*Address before the University Extension Students at Cambridge, Aug.* 2, 1900).

The intellectual and social trend of the Century.—"The two influences which have made the nineteenth century what it is seem to me to be the scientific spirit and the democratic spirit. Thus, the nineteenth century, singularly enough, is the great interpretative century both of nature and of the past, and at the same time the century of incessant and uprooting change in all that relates to the current life of men. It is also the century of national systems of popular education, and at the same time of nation-great

armies; the century that has done more than any other to scatter men over the face of the earth, and to concentrate them in cities; the century of a universal suffrage that is based upon a belief in the inherent value of the individual; and the century of the corporation and the labor union, which in the domain of capital and of labor threaten to obliterate the individual. . . .

"The mind has been active in all fields during this fruitful century; but, outside of politics, it is to science that we must look for the thoughts that have shaped all other thinking. When von Helmholtz was in this country, a few years ago, he said that modern science was born when men ceased to summon nature to the support of theories already formed, and instead began to question nature for her facts, in order that they might thus discover the laws which these facts reveal. I do not know that it would be easy to sum up the scientific method, as the phrase runs, in simpler words. It would not be correct to say that this process was unknown before the present century; for there have been individual observers and students of nature in all ages. . . . But it is true that only in this century has this attitude toward nature become the uniform attitude of men of science. . . .

"One of the chief results of the scientific method as applied to nature and the study of the past is the change that it has wrought in the philosophic conception of nature and of human society. By the middle of the century, Darwin had given what has been held to be substantial proof of the theory of the development of higher forms out of lower in all living things; and since then, the doctrine of evolution, not as a body of exact teaching, but as a working theory, has obtained a mastery over the minds of men which has dominated all their studies and all their thinking. . . .

"Every public educational system of our day, broadly speaking, is the child of the nineteenth century. The educational system of Germany, which in its results has been of hardly less value to mankind than to Germany itself, dates from the reconstitution of the German universities after the battle of Jena. Whatever system France may have had before the Revolution went down in the cataclysm that destroyed the ancient régime, so that the educational system of France also dates from the Napoleonic period. In the United States, while the seeds of the public school system may have been planted in the eighteenth, or perhaps even in the seventeenth century, it has only been in the nineteenth century, with the development of the country, that our public school system has grown into what we now see; while in England, the system of national education, in a democratic sense, must be dated from 1870. . . . Out of the growth of the democratic principle has come the belief that it is worth while to educate all the children of the state; and out of the scientific method, which has led to the general acceptance of the evolutionary theory, has been developed the advance in educational method which is so marked a feature of the last decades of the century. . . .

"Not only has the scientific method furnished a philosophy of nature and of human life, but, by the great increase in man's knowledge of natural law to which it has led, it has resulted in endless inventions, and these, in turn, have changed the face of the world. . . . The rapid progress of invention during the century has been concident with one far-reaching change in the habits of society, the importance of which is seldom recognized. I refer to deposit banking. Of all the agencies that have effected the world in the nineteenth century, I am sometimes inclined to think that this is one of the most influential. If deposit banking may not be said to be the result of democracy, it certainly may be said that it is in those countries in which democracy is most dominant that deposit banking thrives best. . . . Some one has said that it would have been of no use to invent the railroad, the submarine cable, or the telephone at an earlier period of the world's history, for there would have been no money at command to make any one of them available before this modern banking system had made its appearance. If this be so, then indeed the part that has been played by deposit banking in the developments of the century cannot be overestimated.

"During the century the conditions of the world's commerce have been radically altered. It is not simply that the steamboat and the locomotive have taken the place of the sailing-ship and the horse; that the submarine cable has supplanted the mails; nor even that these agencies have led to such improvements in banking facilities that foreign commerce is done, for the most part, for hardly more than a brokerage upon the transaction. These are merely accidents of the situation. The fundamental factors have been the opening up of virgin soil in vast areas to the cultivation of man, and the discovery of how to create artificial cold, which makes it possible to transport for long distances produce that only a few years ago was distinctly classed as perishable. The net result of these influences has been to produce a world competition at every point of the globe. . . .

"Democracy, as a political theory, emphasizes the equality of men and the equal rights and privileges of all men before the law. The tendency of it has been, in this country, to develop in multitudes of men great individuality and self-reliance. Side by side with this tendency, however, we see the corporation supplanting the individual capitalist, and the trade union obliterating the individual laborer, as direct agents in the work of the world. Strange as this contrast is, both tendencies must be consistent with democracy, for the corporation and the trade union flourish most where democracy is most developed. Indeed, they seem to be successful and powerful just because democracy pours into them both its vital strength. . . .

"The tendency to democracy in politics is unquestionably the dominant political fact of the century. . . . Outside of Russia, and possibly even there, monarchical government in Europe is obliged to depend for its support upon the great body of the nation, instead of upon the power of the great and the noble. . . . In the United States, the century, though it began with a limited suffrage, ends with universal manhood suffrage, and even with woman suffrage in some of the Western States. . . . Undoubtedly, universal suffrage and the large immigration of people without any experience in self-government have given form to many of our problems; but I often think there is far too great a disposition among us to magnify the difficulties which these conditions present. . . . The fact is, in

my judgment, that our problems arise not so much from universal suffrage as from the effect of the multiplication table applied to all the problems of life. . . . Any one building a house in the country, when he has dug a well has solved the problem of his water supply; but to supply water for a great city calls for the outlay of millions of dollars, and for the employment of the best engineering talent in the land. Yet nothing has happened except that the problem has been magnified. Thus the difficulties created by the multiplication table are real; so that the very enlargement of opportunity that democracy has brought with it has faced democracy with problems far harder than were formerly presented to any government. . . .

"To sum up, therefore, I should say that the trend of the century has been to a great increase in knowledge, which has been found to be, as of old, the knowledge of good and evil; that this knowledge has become more and more the property of all men rather than of a few; that, as a result, the very increase of opportunity has led to the magnifying of the problems with which humanity is obliged to deal; and that we find ourselves, at the end of the century, face to face with problems of world-wide importance and utmost difficulty, and with no new means of coping with them other than the patient education of the masses of men."—Seth Low, *The Trend of the Century* (*Atlantic Monthly, August*, 1898).

Dominant lines in the intellectual development of the Century.—"The future historian of thought will no doubt regard the promulgation and the rapid triumph of evolutionist doctrines as the most remarkable phenomenon in the intellectual development of the nineteenth century."—Leslie Stephen, *Evolution and Religious Conceptions* (*Review of the Nineteenth Century, in New York Evening Post, Jan.* 12, 1901).

"In the briefest sketch of what the nineteenth century has done in literature, it is absolutely imperative to mention the publication of 'The Origin of Species' [Darwin, 1859] and 'Principles of Psychology' [Spencer, 1855], because, although neither work is written with an attractive elegance, each is the starting point of an intellectual and moral revolution so vast that every branch of life is affected by it, and literature itself—in its lightest forms—can no longer ignore the germinal forces with which evolution has quickened all our emotions."—Edmund Gosse, *A Century of English Literature* (*in the same*).

"To an earlier age knowledge was power, merely that and nothing more; to us it is life and the 'summum bonum.' Emancipation from the bonds of self, of one's own prepossessions, importunately sought at the hands of that rational power before which all must ultimately bow—this is the characteristic that distinguishes all the great figures of nineteenth-century science from those of former periods."—Prof. Charles S. Peirce, *The Century's Great Men in Science* (*in the same*).

"The mark of the century has been a continuous attempt at a comprehensive understanding of nature, after the manner of Newton, but not limited or governed solely by his dynamical ideas. . . . The Newtonian laws of dynamics as applied to matter still hold, and will always hold, but they may no longer be fundamental or ultimate, they may be derivatives from a still deeper scheme; and it is towards this deeper scheme that physicists at present are groping. The realization of a need for some such scheme constitutes the chief philosophic feature of the latter part of the century."—Oliver J. Lodge, *The Scope and Tendencies of Physics* (*in the same*).

The failures of the Century.—Its sinful mismanagement of the powers which Science has given it.—"The Nineteenth Century . . . has been characterised by a marvellous and altogether unprecedented progress in knowledge of the universe and of its complex forces; and also in the application of that knowledge to an infinite variety of purposes, calculated, if properly utilized, to supply all the wants of every human being, and to add greatly to the comforts, the enjoyments, and the refinements of life. The bounds of human knowledge have been so far extended that new vistas have opened to us in directions where it had been thought that we could never penetrate, and the more we learn the more we seem capable of learning in the ever-widening expanse of the universe. . . .

"But the more we realize the vast possibilities of human welfare which science has given us, the more we must recognise our total failure to make any adequate rational use of them. With ample power to supply to the fullest extent necessaries, comforts, and even luxuries for all, and at the same time allow ample leisure for intellectual pleasures and æsthetic enjoyments, we have yet so sinfully mismanaged our social economy as to give unprecedented and injurious luxury to the few, while millions are compelled to suffer a lifelong deficiency of the barest necessaries for a healthy existence. Instead of devoting the highest powers of our greatest men to remedy these evils, we see the governments of the most advanced nations arming their people to the teeth, and expending much of their wealth and all the resources of their science, in preparation for the destruction of life, of property, and of happiness.

"With ample knowledge of the sources of health, we allow, and even compel, the bulk of our population to live and work under conditions which greatly shorten life; while every year we see from 50,000 to 100,000 infants done to death by our criminal neglect. In our mad race for wealth, we have made gold more sacred than human life; we have made life so hard for the many, that suicide and insanity and crime are alike increasing. With all our labour-saving machinery and all our command over the forces of nature, the struggle for existence has become more fierce than ever before; and year by year an ever-increasing proportion of our people sink into paupers' graves.

"Even more degrading, and more terrible in its consequences, is the unblushing selfishness of the greatest civilized nations. While boasting of their military power, and loudly proclaiming their Christianity, not one of them has raised a finger to save a Christian people, the remnant of an ancient civilization, from the most barbarous persecution, torture, and wholesale massacre. A hundred thousand Armenians murdered or starved to death while the representatives of the great powers coldly looked on—and prided themselves on their unanimity in all making the same useless protests—will surely be referred to by the historian of the future, as the most detestable combination of hypocrisy and inhuman-

ity that the world has yet produced, and as the crowning proof of the utter rottenness of the boasted civilization of the Nineteenth Century. When the brightness of future ages shall have dimmed the glamour of our material progress, the judgment of history will surely be, that the ethical standard of our rulers was a deplorably low one, and that we were unworthy to possess the great and beneficent powers that science had placed in our hands.

"But although this century has given us so many examples of failure, it has also given us hope for the future. True humanity, the determination that the crying social evils of our time shall not continue; the certainty that they can be abolished; an unwavering faith in human nature, have never been so strong, so vigorous, so rapidly growing as they are to-day."—A. R. Wallace, *The Wonderful Century, ch.* 21 (*copyright, Dodd, Mead & Co., N. Y., quoted with permission*).

Expansion of the European races during the Century.—Changes in the distribution of political power.—Dominance of the Anglo-American peoples.—Rise of the United States of America to the highest rank.—At a dinner given by the Manchester Statistical Society, October 17, 1900, Sir Robert Giffen, the eminent statistician, made a notable speech on the political ideas which the statistics of the Nineteenth Century suggest. "The first of these was the prodigious rate at which the civilized world—the community of European nations and nations of European origin—was growing. The population of Europe and of nations of European origin like the United States might now be put at something over 500,000,000. The United States themselves might be put at nearly 80 millions; Russia in its recent census showed a population which must already have grown to about 135 millions; Germany about 55 millions; the United Kingdom, with the self-governing colonies of Canada and Australasia and the white population of South Africa, 55 millions; Austria-Hungary, 45 millions; France, 40 millions; Italy, 32 millions; Spain and Portugal, 25 millions; Scandinavian countries, ten millions; Holland and Belgium, ten millions; and other European countries, 20 millions. A century ago the corresponding figure to this 500,000,000 would not have been more than about 170,000,000. The economic development of the people had been even more marvellous. The wealth of the people all told, which would probably not have been reckoned at more than £5,000,000,000 at the beginning of the century, must be reckoned now by tens of thousands of millions.

"Again the development was for the most part not uniform among the European populations. It was most marked in the Anglo-American section. The increase here was from a population of not more than about 20 millions, which was the population of the United States and the United Kingdom together 100 years ago, to a population of not less than 130 millions at the present time. Russia and Germany also showed remarkable increases, but nothing like this. This astonishing growth of population meant a great change in the relative position of the European nations in the world—their relative weight in international politics. Practically the non-European races of the world had all the time been stationary, except in India, where the 'pax Britannica' had permitted the native population to expand. The result was that the forces of civilization, as against those of the black and yellow races, had become practically irresistible. The numbers were relatively far greater than ever they were before, and the economic force was indefinitely greater. A great change in the distribution of political power among European nations themselves was also indicated. The existence alone of the United States implied an immense change. If we considered that an empire like that of Britain had its strength rather diminished than increased by the possession of territories like India, then the United States having a larger European population than that of the British Empire might be considered the most powerful State in the world as far as population and resources were concerned. No doubt Russia had a much larger population, but the inferiority of the units was so great that the preeminence of the United States was not in question. Germany, Russia, and the United Kingdom had all grown, while France and Austria had by comparison remained stationary, so that now the great world Powers were four only—the United States, Britain, Russia, and Germany, with France a doubtful fifth. The extent of the revolution that had taken place in a century was evident, and obviously accounted for much that was going on in international politics.

"If the forces now in existence continue to operate as they had done in the past century for only a few more generations, the close of the coming century must witness a further transformation, whose beginnings would be apparent in the lifetime of some amongst us. It was a reasonable probability that unless some great internal change should take place in the ideas and conduct of the European races themselves, the population of 500 millions would in another century become one of 1,500 to 2,000 millions. The black and yellow races still remaining, as far as one could see, comparatively stationary, this would make a greatly changed world. The yellow peril, for instance, of which we heard so much, would have vanished, because the yellow races themselves would be so much outnumbered. What would be the 400 millions of China compared with 1,500 or 2,000 millions of European race? Further progress must also be made in the redistribution of power among European nations. International politics would be more and more limited to the affairs of what were already the four great Powers—the United States, the United Kingdom, Germany, and Russia. The most serious problem would of course be whether the dilemma stated by Malthus and hitherto put aside by the occupation of new lands, would at length become an urgently practical question. It was impossible not to wonder which of the two forces—the growth of population and the increase of the needs of the growing population on the one side, and the growth of invention and mechanical power in supplying human wants on the other side—would gain as time went on. Referring to the desire to secure new markets abroad, Sir Robert Giffen said that the figures with which he had been dealing pointed to quite another source of new markets. Surely there could be no lack of new customers if the 500 millions of the advanced races themselves were to be doubled in from 30 to 50 years and trebled or quadrupled in a century."—*London Times, Oct.* 18, 1900.

The lengthened average of human life.—"What has been the chief characteristic of the nineteenth century? No two critics agree, nor can they, because each prefers a different quality. One singles out science, another, invention, as the dominant trait. A third, who looks mainly at the political aspect of life, says democracy. Others, again, say pessimism, philanthropy, doubt, or toleration. So many features, so much diversity, argue at least for many-sidedness.

"There is one characteristic, however, which distinguishes the nineteenth century from all previous centuries—a characteristic which has become too common to attract the attention it deserves, although it really measures all the rest: this is longevity. During the past one hundred years the length of life of the average man in the United States and in the more civilized parts of Europe has increased from a little over 30 to about 40 years. A multitude of causes, mostly physical, have contributed to this result. Foremost among these should be placed (1) whatever may be included under the general term sanitation; (2) improved methods in medicine; and (3) the more regular habits of living which are the direct outcome of industrial life on a large scale.

"These are some of the evident means by which life has been lengthened. Inventions, which have made production cheap and the transportation of all products both cheap and easy, have had an influence too great to be computed. And no doubt much has been due to a general improvement in methods of government; although, in the main, there has been much less progress in practical government than is commonly supposed. No great railroad company or banking house or manufacturing corporation could prosper if its officers and employees were chosen and kept in office according to the system by which political offices, almost everywhere, are filled. 'None but experts wanted,' is the sign written over the entrance to every profession, trade, and occupation — except government.

"But, whatever governments have done or left undone, the fact to be insisted on here is, that the average man to-day lives almost ten years longer than his grandfather lived."—W. R. Thayer, *Longevity and Degeneration* (*Forum, Feb.*, 1900).

The Musical Century.—"Music is the only one of the fine arts of which it can be said that it reached its highest development in the nineteenth century. It is the modern art par excellence; and while everybody has been told that it is the youngest of the arts, few realize how much is implied in that assertion."—Henry T. Finck, *The Musical Century* (*N. Y. Evening Post, Jan.* 12, 1901).

The Woman's Century.—"Victor Hugo predicted that the nineteenth century would be known as Woman's Century. The comparison of the woman of 1800 and the woman of 1900 offers abundant proof of the correctness of the prophecy."—Mrs. Carrie C. Catt, *Women in the Industries and Professions* (*N. Y. Evening Post, Jan.* 12, 1901).—"In 1900 a third of all the college students in the United States are women. Sixty per cent. of the pupils in the secondary schools, both public and private, are girls—i. e., more girls are preparing for college than boys. Women having in general more leisure than men, there is reason to expect that there will soon be more women than men in our colleges and graduate schools. The time, too, has passed when girls went to college to prepare themselves solely for teaching or for other bread-winning occupations. In considerable numbers they now seek intellectual resources and the enrichment of their private lives. Thus far between 50 and 60 per cent. of women college graduates have at some time taught. In the country at large more than 70 per cent. of the teaching is done by women, in the North Atlantic portion over 80 per cent. Even in the secondary schools, public and private, more women than men are teaching, though in all other countries the advanced instruction of boys is exclusively in the hands of men. Never before has a nation intrusted all the school training of the vast majority of its future population, men as well as women, to women alone."—Mrs. Alice F. Palmer, *The Higher Education of Women* (*in the same*).

The Age of Steel succeeding the Age of Iron.—"The age of iron, which passed away during the last century, was succeeded by the age of Bessemer steel, which enjoyed a reign of only thirty-six years, beginning, as it did, in 1864, and is in turn now passing away to be succeeded by the age of Siemens open-hearth steel. Already the product of open-hearth is far beyond that of Bessemer in Britain, and such the writer ventures to predict will soon be the case in the United States."—Andrew Carnegie, *The Development of Steel Manufacture* (*N. Y. Evening Post, Jan.* 12, 1901).

NIUCHWANG.—"Niuchwang, while a comparatively small city of but 60,000 population, is of especial importance to the United States as a treaty port. It is located at the extreme north of the Gulf of Pechili, considerably farther north than Tientsin, and is of especial importance to the United States because of the demand for goods from this country in that section. . . . The proposed Russian railway line, which is projected through Manchuria and the province of Shingking to the port of Port Arthur, passes near Niuchwang and is to be connected by a short line. Another line, to be built by British capital, will connect Niuchwang with Shanhaikwan, which is already in railway connection with Peking, the capital of the Empire."—*United States, Bureau of Statistics, Monthly Summary, March*, 1899, *p.* 2196.

CAROLINA: A. D. 1892–1899) to Fayetteville was passed by the Legislature in 1897, and several smaller towns secured local legislation to the same effect in 1899; but attempts to carry a general dispensary law for the State were defeated.

A. D. 1898.—Race war in Wilmington.—Wilmington, N. C., was the scene, in November, of what can only be called a fierce revolution, whereby the city government, dominated by the colored population, which outnumbered the white, was violently overturned by the latter. The race conflict was precipitated by an article in a Republican newspaper, edited by a negro, which reflected on the honor of some of the white women, and caused wild excitement among the white men. The offending newspaper office was destroyed and its editor fled. Resistance being offered, furious fighting occurred, in which a considerable number of negroes was killed, many were wounded, and hundreds were driven by terror from the town. White Republican officials were also expelled or took to flight, and their opponents secured control of city affairs.

A. D. 1900.—Constitutional amendment for the qualification of the suffrage.—By a constitutional amendment, adopted in August, 1900, the following qualification of the suffrage was established:

"SEC. 4. Every person presenting himself for registration shall be able to read and write any section of the constitution in the English language; and, before he shall be entitled to vote, he shall have paid, on or before the 1st day of May of the year in which he proposes to vote, his poll tax for the previous year as prescribed by Article V, section 1, of the constitution. But no male person who was, on January 1, 1867, or at any time prior thereto, entitled to vote under the laws of any State in the United States wherein he then resided, and no lineal descendant of any such person, shall be denied the right to register and vote at any election in this State by reason of his failure to possess the educational qualification herein prescribed, provided he shall have registered in accordance with the terms of this section prior to December, 1908. The general assembly shall provide for the registration of all persons entitled to vote without the educational qualifications herein prescribed, and shall, on or before November 1, 1908, provide for the making of a permanent record of such registration, and all persons so registered shall forever thereafter have the right to vote in all elections by the people in this State, unless disqualified under section 2 of this article: Provided, Such person shall have paid his poll tax as above required."

OTTAWA: A. D. 1900.—Great fire.—The city of Ottawa, capital of the Dominion of Canada, and the lumber manufacturing town of Hull, on the opposite side of the Ottawa River, were both devastated, on the 26th of April, by one of the most destructive fires of the century. It originated in the upsetting of a lamp in a dwelling in Hull. This was at half-past ten o'clock in the morning. A big gale blowing from the northeast made quick work of the inflammable houses in Hull, and by twelve o'clock the flames had reached the river-bank and leaped across to the Ottawa side. The fire then retraced its steps in Hull, and destroyed a group of factories. It "blazed a crescent-shaped path five miles long and a mile wide, destroying in its journey the public buildings and the residential part of Hull, the industrial area of the Chaudiere, and the suburbs of the Ottawa laboring classes at Mechanicsburg, Rochesterville, and Hintonburg. Fully 15,000 people were rendered homeless, and $15,000,000 worth of property was annihilated."—*Canadian Magazine, July*, 1900.

PAPACY.

A. D. 1894.—Conference with Eastern Patriarchs.—A conference of Eastern Patriarchs to consider the reunion of the Eastern Churches (Armenian, Maronite, Melchite, etc.) with the Church of Rome was opened at the Vatican, in October, under the presidency of the Pope. The meeting had no result.

A. D. 1894-1895.—The Hungarian Ecclesiastical Laws. See (in this vol.) AUSTRIA-HUNGARY: A. D. 1894–1895.

A. D. 1896 (March).—Resumption of authority over the Coptic Church.—The authority of the Pope over the Coptic Church was resumed on the 30th of March, 1896, after a suspension of four centuries, by the re-establishment of the Catholic Patriarchate of Alexandria. Bishop Macarius was appointed Patriarch and two bishops were appointed for Upper and Lower Egypt.

A. D. 1896 (September).—Decision on the invalidity of Anglican orders.—In September, 1896, the final decision of the Vatican, on a reopened question as to the validity of ordinations under the ritual of the Church of England, was announced by Pope Leo XIII. in a bull which declares: "After long study, I must confirm the decree of my predecessors, that all ordinations made under the Anglican rite are absolutely invalid." Soon after the decision was announced, a writer in the "Contemporary Review" gave the following account of circumstances connected with it:

"The question of Anglican Orders was taken up in connection with the appeal for union made by Leo XIII. in the Encyclical 'Præclara' of 1894, and more particularly in his letter to the English people. The group of Anglicans of whom Lord Halifax is the spokesman took this appeal seriously, and ever since that time negotiations have been going on more or less continuously between them and the Vatican. . . . The idea of an incorporate union, so dear to Lord Halifax, and so much favoured in the first instance by the Pope, could only be carried out on the basis of a prior admission that the Anglican Church had an existence as a Church, and was therefore in a position to discuss a union with the Roman Church. Once recognise the validity of her Orders, and it

would be possible to go into conference as to the points of difference between the two Churches, and the means of coming to an agreement. It is quite certain that the Pope entered heartily into these views. The Abbé Duchesne was accordingly deputed to inquire into the validity of the Anglican Orders, and was well aware that a favourable conclusion would be very well received. This was before the Abbé was put at the head of the French College at Rome. He made his investigation, arrived at the conclusion that the Orders were valid, sent his report to the Vatican, and received from Cardinal Rampolla a letter of thanks and congratulations, together with a grand silver medal, which the Holy Father sent him as a sign of his satisfaction and particular goodwill. All this happened in the winter of 1894–95.

"In the autumn of 1895 the idea of union was in higher favour at the Vatican than ever. Cardinal Rampolla encouraged the foundation of the 'Revue Anglo-Romaine,' a journal devoted to the treatment of problems concerning the union of Churches, and particularly the re-union of the Anglican Church, and edited by the Abbé Portal, a French priest, and a personal friend of Lord Halifax. This movement in favour of union was, however, regarded by the Catholics in England with no little apprehension and mistrust, and their opposition alone would have been sufficient to wreck it for the time being. Cardinal Vaughan viewed the idea of incorporate union as a chimera, but treated the efforts to realise it as a real danger. . . . Leo, who would fain have maintained an attitude of judicial impartiality, soon found out that he must take a side: he must either definitely encourage the hopes of the Anglicans, or he must do something to calm the excited fears of the Catholics. Even at Rome, if we except the Pope and Cardinal Rampolla, who for a long time fondly hoped that they could make this policy of union a means of accomplishing very large results, theological opinion was adverse to the validity. Were there not, indeed, decisions of the Sacred Congregations which settled the dispute? There were, but in spite of them all the Pope was not disabused of his fancy. Compelled at last to take some action, he named a Commission of theologians, which sat at Rome in the spring of the present year [1896], under the presidency of Cardinal Mazzella. . . . The theologians set forth the arguments which favoured their respective views; papers were written, and, after a series of deliberations, a report was placed in the hands of the Pope. No conclusion was arrived at; none could be come to in this preliminary assembly. Only the materials for a judgment were worked out, in case his Holiness should think fit to pronounce a decision. . . . The Pope himself tells us, in the Bull Apostolicæ Curæ, that he left the final examination of the question to the congregation of cardinals called 'Suprema.' . . . The 'Suprema' met on July 16, under the presidency of the Pope. All the cardinals were of opinion that the matter had been long since decided, and that the debates in the preliminary commission had served to show how wise the decision had been. . . . The Bull declaring Anglican Orders null and void was published about the middle of September." — Catholicus, *The Pope and the Anglicans: The Policy of the Bull* (*Contemporary Review, Dec.*, 1896).

A. D. 1899 (January).—Encyclical Letter of Pope Leo XIII. condemning certain opinions "called by some 'Americanism.'"—The following passages are from the translation of an encyclical letter addressed, on the 22d of January, 1899, by Pope Leo XIII. to Cardinal Gibbons, for communication to the bishops and clergy of the Catholic Church in America:

"To Our Beloved Son, James, Cardinal Gibbons, Cardinal Priest of the Title Sancta Maria, Beyond the Tiber, Archbishop of Baltimore: . . . We have often considered and admired the noble gifts of your nation which enable the American people to be alive to every good work which promotes the good of humanity and the splendor of civilization. Although this letter is not intended, as preceding ones, to repeat the words of praise so often spoken, but rather to call attention to some things to be avoided and corrected; still because it is conceived in that same spirit of apostolic charity which has inspired all our letters, we shall expect that you will take it as another proof of our love; the more so because it is intended to suppress certain contentions which have arisen lately among you to the detriment of the peace of many souls.

"It is known to you, beloved son, that the biography of Isaac Thomas Hecker, especially through the action of those who undertook to translate or interpret it in a foreign language, has excited not a little controversy, on account of certain opinions brought forward concerning the way of leading Christian life. We, therefore, on account of our apostolic office, having to guard the integrity of the faith and the security of the faithful, are desirous of writing to you more at length concerning this whole matter.

"The underlying principle of these new opinions is that, in order to more easily attract those who differ from her, the Church should shape her teachings more in accord with the spirit of the age and relax some of her ancient severity and make some concessions to new opinions. Many think that these concessions should be made not only in regard to ways of living, but even in regard to doctrines which belong to the deposit of the faith. They contend that it would be opportune, in order to gain those who differ from us, to omit certain points of her teaching which are of lesser importance, and to tone down the meaning which the Church has always attached to them. It does not need many words, beloved son, to prove the falsity of these ideas if the nature and origin of the doctrine which the Church proposes are recalled to mind. The Vatican Council says concerning this point: 'For the doctrine of faith which God has revealed has not been proposed, like a philosophical invention to be perfected by human ingenuity, but has been delivered as a divine deposit to the Spouse of Christ to be faithfully kept and infallibly declared. Hence that meaning of the sacred dogmas is perpetually to be retained which our Holy Mother, the Church, has once declared, nor is

PAPACY, 1899.

that meaning ever to be departed from under the pretense or pretext of a deeper comprehension of them.'—Constitutis de Fide Catholica, Chapter iv. . . .

"Let it be far from anyone's mind to suppress for any reason any doctrine that has been handed down. Such a policy would tend rather to separate Catholics from the Church than to bring in those who differ. There is nothing closer to our heart than to have those who are separated from the fold of Christ return to it, but in no other way than the way pointed out by Christ.

"The rule of life laid down for Catholics is not of such a nature that it cannot accommodate itself to the exigencies of various times and places. The Church has, guided by her Divine Master, a kind and merciful spirit, for which reason from the very beginning she has been what St. Paul said of himself: 'I became all things to all men that I might save all.'

"History proves clearly that the Apostolic See, to which has been intrusted the mission not only of teaching but of governing the whole Church, has continued 'in one and the same doctrine, one and the same sense, and one and the same judgment.'—Const. de fide, Chapter iv.

"But in regard to ways of living she has been accustomed to so yield that, the divine principle of morals being kept intact, she has never neglected to accommodate herself to the character and genius of the nations which she embraces. Who can doubt that she will act in this same spirit again if the salvation of souls requires it? In this matter the Church must be the judge, not private men who are often deceived by the appearance of right. In this, all who wish to escape the blame of our predecessor, Pius the Sixth, must concur. He condemned as injurious to the Church and the spirit of God who guides her the doctrine contained in proposition lxxviii of the Synod of Pistoia, 'that the discipline made and approved by the Church should be submitted to examination, as if the Church could frame a code of laws useless or heavier than human liberty can bear.'

"But, beloved son, in this present matter of which we are speaking, there is even a greater danger and a more manifest opposition to Catholic doctrine and discipline in that opinion of the lovers of novelty, according to which they hold such liberty should be allowed in the Church, that her supervision and watchfulness being in some sense lessened, allowance be granted the faithful, each one to follow out more freely the leading of his own mind and the trend of his own proper activity. They are of opinion that such liberty has its counterpart in the newly given civil freedom which is now the right and the foundation of almost every secular state.

"In the apostolic letters concerning the constitution of states, addressed by us to the bishops of the whole Church, we discussed this point at length; and there set forth the difference existing between the Church, which is a divine society, and all other social human organizations which depend simply on free will and choice of men. It is well, then, to particularly direct attention to the opinion which serves as the argument in behalf of this greater liberty sought for and recommended to Catholics.

"It is alleged that now the Vatican decree concerning the infallible teaching authority of the Roman Pontiff having been proclaimed that nothing further on that score can give any solicitude, and accordingly, since that has been safeguarded and put beyond question a wider and freer field both for thought and action lies open to each one. But such reasoning is evidently faulty, since, if we are to come to any conclusion from the infallible teaching authority of the Church, it should rather be that no one should wish to depart from it and moreover that the minds of all being leavened and directed thereby, greater security from private error would be enjoyed by all. And further, those who avail themselves of such a way of reasoning seem to depart seriously from the over-ruling wisdom of the Most High—which wisdom, since it was pleased to set forth by most solemn decision the authority and supreme teaching rights of this Apostolic See—willed that decision precisely in order to safeguard the minds of the Church's children from the dangers of these present times.

"These dangers, viz., the confounding of license with liberty, the passion for discussing and pouring contempt upon any possible subject, the assumed right to hold whatever opinions one pleases upon any subject and to set them forth in print to the world, have so wrapped minds in darkness that there is now a greater need of the Church's teaching office than ever before, lest people become unmindful both of conscience and of duty.

"We, indeed, have no thought of rejecting everything that modern industry and study has produced; so far from it that we welcome to the patrimony of truth and to an ever-widening scope of public well-being whatsoever helps toward the progress of learning and virtue. Yet all this, to be of any solid benefit, nay, to have a real existence and growth, can only be on the condition of recognizing the wisdom and authority of the Church. . . .

"From the foregoing it is manifest, beloved son, that we are not able to give approval to those views which, in their collective sense, are called by some 'Americanism.' But if by this name are to be understood certain endowments of mind which belong to the American people, just as other characteristics belong to various other nations, and if, moreover, by it is designated your political condition and the laws and customs by which you are governed, there is no reason to take exception to the name. But if this is to be so understood that the doctrines which have been adverted to above are not only indicated, but exalted, there can be no manner of doubt that our venerable brethren, the bishops of America, would be the first to repudiate and condemn it as being most injurious to themselves and to their country. For it would give rise to the suspicion that there are among you some who conceive and would have the Church in America to be different from what it is in the rest of the world.

"But the true church is one, as by unity of doctrine, so by unity of government, and she is catholic also. Since God has placed the centre and foundation of unity in the chair of Blessed Peter, she is rightly called the Roman Church, for 'where Peter is, there is the church.' Wherefore, if anybody wishes to be considered a real Catholic, he ought to be able to say from his heart the self-same words which Jerome addressed to Pope Damasus; 'I, acknowledging no other leader than Christ, am bound in fellowship with Your Holiness: that is, with the chair

of Peter. I know that the church was built upon him as its rock, and that whosoever gathereth not with you, scattereth.' . . ."—*American Catholic Quarterly Review, April*, 1899.

A. D. 1900-1901.—Proclamation of the Universal Jubilee of the Holy Year Nineteen Hundred.—Its extension for six months.—The following is the text of the Papal proclamation of the Universal Jubilee, in its English translation, as published in the "American Catholic Quarterly Review":

"To all the Faithful of Christ who shall read these Letters, Health and Apostolic Benediction. The century, which, by the grace of God, we have ourselves seen almost from its commencement, draws rapidly to its close. Willingly have we followed the institutions of our predecessors in so ordering things that they may redound in the good of all Christian peoples, and which may be perhaps for them the last proof of our care to the government of the Sovereign Pontificate. We speak of the Great Jubilee introduced in ancient times among Christian customs and observed by our predecessors, who bestowed upon the years of general jubilee the title of the Holy Year, because it was usual for such a year to be blessed by a greater number of holy ceremonies, as these furnish the most copious means of help for the correction of morals and the leading of souls to sanctity.

"We have ourselves seen with our own eyes the fruitful result of the last solemn celebration of the Holy Year. It was in the Pontificate of Leo XII, and we were as yet in the years of our youth. It was truly a grand sight to see then the manifestations of religious fervor in Rome. We can remember as if the scene were still before our eyes, the immense concourse of pilgrims, the multitudes which flocked processionally to one or other of the great basilicas, the sacred orators who preached in the public streets, and the most frequented quarters of the city resounding with the Divine praises. The Sovereign Pontiff himself, with a numerous suite of Cardinals and in the sight of all the people, gave a noble example of piety and charity.

"From such thoughts as these we turn with renewed sorrow to the times in which we now live; for such practices of piety, when without hindrance they were fulfilled under the eyes of all the citizens, augmented admirably the fervor and piety of the whole people; but now, on account of the changed condition of Rome, it is impossible to renew them, for in order to do so in any measure we must depend upon the arbitration of others. But however that may be, God, who ever blesses salutary counsels, will concede—such is our hope—success to this our design, undertaken solely for Him and for His glory. At what do we aim or what do we wish? Nothing else truly than to render more easy the way of eternal salvation to the souls confided to us, and for this end to administer to the infirm of spirit those remedies which it has pleased our Lord Jesus Christ to place in our hands. This administration seems to us not alone a duty of our apostolic office, but a duty which is peculiarly necessary to our times. The present age, however, cannot be said to be sterile, either in regard to good works or to Christian virtues. Thanks be to God, we have examples of both in abundance, nor is there any virtue, however lofty and arduous its attainment and practice, in which many are not found to signalize themselves, because it is a power proper to the Christian religion, Divinely founded, inexhaustible and perpetual, to generate and nourish virtue. Yet, casting our eyes around, we see, on the other hand, with what blindness, with what persistent error, whole peoples are hurrying to eternal ruin. And this thought strikes bitterly to our heart—how many Christians, led away by the license of hearing and of thought, absorbing with avidity the intoxicating errors of false doctrine, go on day by day dissipating and destroying the grand gift of the faith. Hence arise repugnance to Christian living, that insatiable appetite for the things of this world, and hence cares and thoughts alienated from God and rooted in the world. It is almost impossible to express in words the damage which has already accrued from this iniquitous source to the very foundations of society. The minds of men ordinarily rebellious, the blind tendency of popular cupidity, hidden perils, tragical crimes, are nothing more to those who seek their source and cause than the unrestrained strife to possess and enjoy the goods of this world.

"It is of supreme importance, therefore, to public no less than private life, to admonish men as to the duties of their state, to arouse souls steeped in forgetfulness of duty, to recall to the thought of their own salvation those who run imminent risk of perishing and of losing through their negligence and pride those celestial and unchangeable rewards for the possession of which we are born. This is the aim of the Holy Year. The Church, mindful only of her intrinsic benignity and mercy as a most tender Mother, studies at this time, with love and by every means within her ample power, to re-conduct souls to better counsels and to promote in each works of expiation by means of penance and emendation of life. To this end, multiplying prayers and augmenting the fervor of the faithful, she seeks to appease the outraged majesty of God and to draw down His copious and celestial gifts. She opens wide the rich treasury of indulgences, of which she is the appointed dispenser, and exhorts the whole of Christianity to the firm hope of pardon. She is purely intent upon vanquishing with unconquerable love and sweetness the most rebellious wills. How, then, may we not hope to obtain, with God's help, rich fruits and profuse, and such as are most adapted to the present needs?

"Several extraordinary solemnities, the notices of which we believe to be already sufficiently diffused, and which will serve in some manner to consecrate the end of the nineteenth century and the beginning of the twentieth, greatly increase the advantage of the opportunity now given. We speak of the honors to be rendered at this time in every part of the world to Jesus Christ as our Redeemer. On this account we were profuse in our approbation and praise of a project which had its source in the piety of private individuals, and, in fact, what could be more holy and salutary? All that which man should hope for and desire is contained in the

PAPACY, 1900–1901.

only-begotten Son of God, our Salvation, Life, and Resurrection. To desire to abandon Him is to desire eternal perdition. We could never silence adoration, praise, thanksgiving due to our Lord Jesus Christ, and without intermission they should be repeated everywhere, for in every place no thanksgiving, no honor, can be so great but that it may be increased. Our age produces perhaps many men who are forgetful and ungrateful, who ordinarily respond to the mercy of their Divine Saviour with disdain and to His gifts with offenses and injuries. Certainly the lives of many are so far removed from His laws and His precepts as to argue in themselves ungrateful and malicious souls. And what shall we say to see renewed again in these times and not once alone, the blasphemy of the Arian heresy regarding the Divinity of Jesus Christ. Courage, then, and to work, all you who with this new and most beautiful proposition seek to excite the piety of the people to new fervor. Do what you can in such manner that you impede not the course of the Jubilee and the appointed solemnities. Let it be added that in the forthcoming manifestations of faith and religion this special intention shall be kept in view—hatred of all that which within our memory has been impiously said or done, especially against the Divine Majesty of our Lord Jesus Christ, and to satisfy publicly for the injuries publicly inflicted upon Him. Now if we are really in earnest, we must know that to repent of evil done, and, having implored peace and pardon of God, to exercise ourselves with great diligence, in the duties necessary to virtue, and to assume those we have cast aside, is the means of satisfaction most desirable and assured, and which bears upon it the impress of truth. Since the Holy Year offers to all the opportunities which we have touched on in the beginning, it is a necessary provision that the Christian people enter upon it full of courage and of hope.

"For which reason, raising our eyes to heaven and praying from our heart that God, so rich in mercy, would vouchsafe to concede benignly His blessing and favor to our desires and works, and would illuminate with His Divine light the minds of all men, and move their souls to conform with His holy will and inestimable goodness, We, following in this the example of the Roman Pontiffs, our predecessors, with the assent of the Cardinals of the Holy Roman College, our Venerable Brethren, in virtue of these letters, with the authority of Christ, of the blessed Peter and Paul, and with our own authority, order and promulgate from this hour the great and universal jubilee, which will commence in this holy city of Rome at the first Vespers of the Nativity of our Lord Jesus Christ of the year 1899, and which will close at first Vespers of the Nativity of our Lord of the year 1900. May all redound to the glory of God, the salvation of souls, and the good of the Church. During this year of jubilee we concede and impart mercifully in our Lord full indulgence, remission and pardon of sin to all faithful Christians of either sex, who, being truly penitent shall confess and communicate, visiting devoutly the Roman basilicas of SS. Peter and Paul, St. John Lateran, and St. Mary Major, at least once a day for twenty days continuously or at intervals; that is, the obligation is to be fulfilled between the first Vespers of each day and the last Vespers of the day following, whether the Faithful be citizens of Rome or not, if they are residing permanently in Rome. If they come to Rome as pilgrims, then they must visit the said basilicas in the same manner for ten days, praying devoutly to God for the exaltation of Holy Church, for the extirpation of heresies, for peace and concord amongst Christian princes, and for the salvation of the whole Christian people.

"And since it may happen to many that with all their good-will they cannot or can only in part carry out the above, being either, while in Rome or on their journey, impeded by illness or other legitimate causes, we, taking into account their good-will, can, when they are truly repentant and have duly confessed and communicated, concede to them the participation in the same indulgences and remission of sins as if they had actually visited the basilicas on the days appointed. Rome, therefore, invites you lovingly to her bosom, beloved children, from all parts of the world, who have means of visiting her. Know also that to a good Catholic in this sacred time it is fitting that he come to Rome guided purely by Christian faith, and that he should renounce especially the satisfaction of sight-seeing merely idle or profane, turning his soul rather to those things which predispose him to religion and piety. And that which tends greatly so to predispose him, if he look within, is the natural character of the city, a certain character divinely impressed upon her, and not to be changed by human means, nor by any act of violence. For Jesus Christ, the Saviour of the world, chose only, amongst all its cities, that of Rome to be the centre of an action more than earthly, consecrating it to Himself. Here He placed, and not without long and careful preparation, the throne of His own empire; here He commanded that the see of His Vicar should be raised to the perpetuity of time; here He willed that the light of revealed truth should be jealously and inviolably guarded, and that from here light should be diffused throughout the whole earth in such a manner that those who are alienated from the faith of Rome are alienated from Christ. The religious monuments raised by our fathers, the singular majesty of her temples, the tomb of the Apostles, the Catacombs of the martyrs, all serve to increase the aspect of holiness and to impress those who visit her in the spirit of faith. Whosoever knows the voice of such monuments feels that he is no pilgrim in a foreign city, but a citizen in his own, and by God's grace he will realize this fact at his going, more forcibly than at his coming.

"We wish, in order that these present letters may be brought more easily under the notice of all, that printed copies, signed by a public notary and furnished with the seal of some ecclesiastical dignitary, shall be received with the same faith as would be given to the original by those who have heard or read it.

"To no one will it be lawful to alter any word of this our disposition, promulgation, concession, and will, or to rashly oppose it. If any should presume to make any such attempt, let them know that they incur thereby the indignation of God Almighty and of His Apostles Peter and Paul.

"Given at St. Peter's, Rome, on the 11th of May, in the year of the Incarnation of our Lord 1899, and the 22d of our Pontificate. C. Card. Aloisi-Masella, Pro-Datory. L. Card. Macchi.

"Witnessed on behalf of the Curia: G. DELL' AQUILA VISCONTI. Registered in the Secretariate of Briefs, J. CUGNONI. In the year of the Nativity of our Lord 1899, on the 11th day of May, feast of the Ascension of our Lord Jesus Christ, in the 22d year of the Pontificate of our Holy Father and Lord in Christ, Leo XIII, by Divine Providence Pope, I have read and solemnly promulgated the present apostolical letters in the presence of the people, in the porch of the Holy Patriarchal Vatican Basilica. GIUSEPPE DELL' AQUILA VISCONTI, Official of the Curia."

On the termination of the "holy year," by a letter "given at Rome in the year of Our Lord 1901," the Pope announced: "We do, therefore, by the authority of Almighty God, of the Blessed Apostles Peter and Paul, and by our own, extend and prorogue, for a period of six months, the Great Jubilee which has just been celebrated in the Holy City. Wherefore, to all the faithful of both sexes, in all parts of the earth, including even those that have come to Rome during the past year and there or elsewhere gained the Jubilee under any conditions, we grant and accord mercifully in the Lord, for once, the fullest indulgence, remission and pardon of their sins, the annual Paschal confession and communion being, however, not valid as conditions for gaining the Jubilee, provided that within six months from the date of the publication in each diocese of this letter they visit the cathedral in the episcopal city or the principal church in other parts of the different dioceses, together with three other churches in the same place, as appointed by the Ordinary either directly or through his officials, the parish priests or Vicar Foran, at least once a day for fifteen continuous or uninterrupted days, natural or ecclesiastical (the ecclesiastical day being that which commences with the first vespers of one day and ends with the dusk of the day following), and pray devoutly to God for the exaltation of the Church, the extirpation of heresy, the concord of Catholic princes and the salvation of the Christian people. In places where there are not four churches, power is granted in the same way to the Ordinaries to fix a smaller number of churches, or even one church where there is only one, in which the faithful may make the full number of visits, separate and distinct, on the same natural or ecclesiastical day, in such a way that the sixty visits be distributed through fifteen continuous or interrupted days."

Provisions relating to the circumstances of persons at sea or traveling, or in religious community, or in prison, are prescribed in the papal letter, and special privileges and powers are granted to "Jubilee confessors."

A. D. 1901.—Encyclical Letter of Pope Leo XIII. concerning Social and Christian Democracy.—In a letter dated January 18, 1901, addressed "to the Patriarchs, Primates, Archbishops, Bishops, and other Local Ordinaries in communion with the Apostolic See," the Pope has discussed the subjects of Democracy and Socialism, with reference to controverted views and opinions "defining what Catholics ought to think," and giving them "some injunctions so as to make their own action larger in scope and more beneficial to the commonwealth." The letter opens with these words: "Venerable Brethren—Grave economical disputes in more than one country have long been raging; peace and concord are affected; the violence of the disputants grows every day, insomuch that the thoughts of the wiser part are laden with doubt and apprehension. These disputes arise in the first instance from widespread philosophical and moral error. The scientific resources belonging to the age, increased facilities of communication and appliances of all kinds for economizing labor and making it more productive have resulted in a keener struggle for existence. Through the malefic influence of agitators the gulf between rich and poor has been widened, so that frequent disturbances arise and even great calamities seem impending such as would bring ruin on a country."

The Pope then refers to his early encyclicals ("Quod Apostolici Muneris," issued in 1878, on the error in socialistic opinions, and "Rerum Novarum," issued in 1891, on "the rights and duties binding together the two classes of capitalists and laborers"), and to the good influence which he finds reason to believe they have had, and says further: "Thus, therefore, under the guidance of the Church, some sort of concerted action and institutional provision has been set up among Catholics for the protection of the lower classes, who are very often as much the victims of dangerous machinations and snares as they are suffering from hardship and poverty. The creed of the benefactor of the people had originally no name of its own; that of Christian Socialism and its derivatives, which some brought in, has not undeservedly grown obsolete. Afterward many wanted, very rightly, to name it Popular Christianity. In some places those who devote themselves to such work are called Christian Socialists; elsewhere it is called Christian Democracy, and its supporters Christian Democrats, as opposed to the Social Democracy, which Socialists uphold. Of these two appellations, certainly that of Christian Socialists, if not also of Christian Democracy, is offensive to many right-minded people, inasmuch as they think there is a perilous ambiguity attaching to it. They are afraid of the name for several reasons—popular government may be covertly promoted or preferred to other forms of political constitution; the influence of Christianity may seem to be confined to the benefit of the common people, all other ranks being as it were left out in the cold; beneath the specious designation may lurk some design or other of subverting all legitimate authority, being civil and religious.

"There is now commonly much dispute, and sometimes over-bitter dispute, on this topic, and we deem it our duty to put an end to the controversy by defining what Catholics ought to think; moreover we intend to give them some injunctions so as to make their own action larger in scope and more beneficial to the commonwealth.

"What Social Democracy means, and what Christian ought to mean, does not surely admit of doubt. The former, more or less extreme, as the case may be, is by many carried to such extravagance of wickedness as to reckon human satisfaction supreme and acknowledge nothing higher, to pursue bodily goods and those of the natural world, and to make the happiness of man consist in attaining and enjoying them. Hence they would have the supreme power in a state to be in the hands of the common people, in such sort that all distinctions of rank being abolished and every citizen made equal to every other, all might have equal access also to the good things

PAPACY, 1901.

of life; the law of lordship is to be abolished, private fortunes confiscated and even socialization of the appliances of labor carried out. But Christian Democracy, as Christian, ought to have as its foundation the principles laid down by divine faith, having regard, indeed, to the temporal advantage of the lower orders, but designing therewith to fit their minds for the enjoyment of things eternal. Accordingly, to Christian Democracy, let there be nothing more sacred than law and right; let it bid the right of having and holding be kept inviolate; let it maintain the diversity of ranks which properly belong to a well-ordered state; in fine, let it prefer for human association that form and character which its divine author has imposed upon it. Clearly, therefore, Social and Christian Democracy can have nothing in common; the difference between them is no less than that between the sectarianism of socialism and the profession of the Christian law.

"Far be it from any one to pervert the name of Christian Democracy to political ends. For although democracy by its very name and by philosophical usage denotes popular rule, yet in this application it must be employed altogether without political significance, so as to denote nothing whatever besides this beneficent Christian action upon the people. For natural morality and the precepts of the Gospel, for the very reason that they transcend the chances of human existence, must necessarily be independent of any particular form of civil government and adapt themselves to all, so long as there is nothing to conflict with virtue and right. They are, therefore, and remain in themselves, absolutely external to all conflict of parties and vicissitudes of occurrence, so that, under whatever kind of government, people may and ought to abide by these precepts, which bid them love God above all and their neighbors as themselves. This has ever been the morality of the Church: by it Roman Pontiffs have constantly dealt with states whatever might be their executive government. And this being so, the mind and action of Catholics, when devoted to promoting the good of the lower orders, cannot by any possibility aim at embracing and introducing any one form of government in preference to another.

"Just in the same way must Christian Democracy repudiate the other ground of offense, which arises from paying so much regard to the interests of the lower classes as to seem to pass over the higher, who are nevertheless of equal importance to the preservation and development of the State. The Christian law of charity, which we have just mentioned, forbids this. It is large enough to embrace all ranks as the aim and the task of those who would have the common people in a Christian spirit on the one hand suitably relieved, and, on the other, preserved against the contagion of socialism. . . .

"We have recalled these various topics on which we have before this found occasion to dilate according to our ability, and we trust that all dispute over the name of Christian Democracy may now be laid aside, as well as any suspicion of dangerous signification attaching to it. This trust we rightly cherish. For making exception of the ideas of certain persons regarding the force and virtue of this kind of Christian Democracy, ideas which are not free from extravagance or error, surely there will be no single person to find fault with an endeavor, conformably to the law of nature and of God, to do merely this, to make the lives of laborers and artisans more tolerable, and gradually to give them the opportunity of self-culture, so that at home and in the world they may freely fulfil the obligations of virtue and religion, may feel themselves to be men, and not mere animals, Christian men, not pagans, and so strive with more felicity and earnestness to attain that 'one thing needful,' that final good, for which we came into the world. This is belonging to one and the same family, the offspring of the same all-beneficent Father, redeemed by one Saviour and called to the same eternal inheritance. . . .

"God forbid that under the name of Christian democracy should lie the surreptitious aim of throwing off all obedience and turning away from those in lawful authority. The law of nature, no less than that of Christ, enjoins respect for all such as in their several degree hold office in the State, and further enjoins obedience to their lawful commands. This is the only attitude worthy of a man and a Christian, and ought to be taken up heartily and as a matter of duty, 'for conscience's sake,' as the Apostle himself has admonished, when he ordained: 'Let every soul be subject to the highest powers.' . . .

"We spoke just now advisedly of virtue and religion. For it is the opinion of some, which is caught up by the masses, that the social question, as they call it, is 'economical' merely. The precise opposite is the truth—that it is first of all moral and religious, and for that reason its solution is to be expected mainly from the moral law and the pronouncements of religion. . . . Without the instincts which Christian wisdom implants and keeps alive, without providence, self-control, thrift, endurance and other natural qualities, you may try your hardest, but prosperity you cannot provide. That is the reason why we have never encouraged Catholics to form associations for the assistance of the poor, or introduce other schemes of the kind, without at the same time warning them that such things must not be attempted without the sanction of religion, without its inclusion and aid. . . . It is a laudable charity not merely to relieve the temporary needs of the poor, but to have an organized system of relief; this will be a more real and reliable assistance. It must be considered still more laudable to desire to instill into the minds of the mechanic and of the laborer notions of thrift and prudence, so that they may at least in part make provision for their declining years. It is an aim which not only relieves the cost of the wealthy, but it is a moral step for the poor themselves; it encourages them to approve their position, while it keeps them away from temptations, checks self-indulgence and leads them on to virtuous behavior. . . .

"Finally, we again enjoin with greater insistence that whatever schemes people take up in the popular cause, whether individually or in association, they should remember that they must be entirely submissive to episcopal authority. Do not let them be beguiled by an excessive ardor for charitable enterprise, which, if it induces any relaxation of due obedience, is itself false, unproductive of solid benefit and displeasing to God. Those who please God are those who are ready to give up their own ideas and listen to the bidding of the rulers of the Church,

absolutely as to His own." . . . *Catholic Union and Times, Feb.* 21, 1901.

PARIS: A. D. 1897.—Burning of the Charity Bazaar.—An awful destruction of life was caused on the 4th of May by fire breaking out in a charity bazaar, held in the Rue Jean Goujon, at Paris. Temporary structures had been erected, of wood and other combustible materials, to represent a street of Old Paris shops, and the flames ran through them like wildfire. The place was thronged with people, mostly of the aristocratic class and more than 200 are said to have perished.

PAUNCEFOTE, Sir Julian: British commissioner to the Peace Conference at The Hague. See (in this vol.) PEACE CONFERENCE.

PEACE CONFERENCE.

On the 24th of August, 1898, without previous heralding or intimation, Count Mouravieff, the Russian Minister for Foreign Affairs, placed copies of the following momentous proposal from the Tsar in the hands of all the foreign representatives attending his weekly reception at St. Petersburg: "The maintenance of universal peace and a possible reduction of the excessive armaments which weigh upon all nations represent, in the present condition of affairs all over the world, the ideal towards which the efforts of all Governments should be directed. This view fully corresponds with the humane and magnanimous intentions of His Majesty the Emperor, my august Master. Being convinced that this high aim agrees with the most essential interests and legitimate aspirations of all the Powers, the Imperial Government considers the present moment a very favourable one for seeking, through international discussion, the most effective means of assuring to all peoples the blessings of real and lasting peace, and above all of limiting the progressive development of existing armaments. During the last twenty years aspirations towards general pacification have particularly asserted themselves in the consciences of civilized nations. The preservation of peace has been made the aim of international policy; for the sake of peace the Great Powers have formed powerful alliances, and for the purpose of establishing a better guarantee of peace they have developed their military forces in an unprecedented degree, and continue to develop them without hesitating at any sacrifice. All these efforts, however, have not yet led to the beneficent results of the desired pacification. The ever increasing financial burdens strike at the root of public prosperity. The physical and intellectual forces of the people, labour and capital, are diverted for the greater part from their natural application and wasted unproductively. Hundreds of millions are spent in acquiring terrible engines of destruction which are regarded to-day as the latest inventions of science, but are destined to-morrow to be rendered obsolete by some new discovery. National culture, economical progress, and the production of wealth are either paralysed or developed in a wrong direction. Therefore, the more the armaments of each Power increase, the less they answer to the objects aimed at by the Governments. Economic disturbances are caused in great measure by this system of excessive armaments, and the constant danger involved in this accumulation of war material renders the armed peace of to-day a crushing burden more and more difficult for the nations to bear. It consequently seems evident that if this situation be prolonged, it will inevitably lead to that very disaster which it is desired to avoid, and the horrors of which make every humane mind shudder by anticipation. It is the supreme duty, therefore, at the present moment of all States to put some limit to these unceasing armaments, and to find means of averting the calamities which threaten the whole world. Deeply impressed by this feeling, His Majesty the Emperor has been pleased to command me to propose to all Governments who have Representatives at the Imperial Court the meeting of a Conference to discuss this grave problem. Such a Conference, with God's help, would be a happy augury for the opening century. It would concentrate in one powerful effort the strivings of all States which sincerely wish to bring about the triumph of the grand idea of universal peace over the elements of trouble and discord. It would, at the same time, cement their agreement by a united affirmation of the principles of law and equity on which rest the security of States and the welfare of peoples."—*Great Britain, Parliamentary Publications* (*Papers by Command: Russia, No.* 1, 1899).

Having allowed his supremely noble proposition to stand before the world for consideration during a period of four months, and having received from almost every governing authority a formal expression of willingness to join in the Conference recommended, the sovereign of Russia pursued his grand design, on the 11th of January, 1899, by the following communication to the foreign representatives at his court: "When, in the month of August last, my august master instructed me to propose to the Governments which have Representatives in St. Petersburg the meeting of a Conference with the object of seeking the most efficacious means for assuring to all peoples the blessings of real and lasting peace, and, above all, in order to put a stop to the progressive development of the present armaments, there appeared to be no obstacle in the way of the realization, at no distant date, of this humanitarian scheme. The cordial reception accorded by nearly all the Powers to the step taken by the Imperial Government could not fail to strengthen this expectation. While highly appreciating the sympathetic terms in which the adhesions of most of the Powers were expressed, the Imperial Cabinet has been also able to collect, with lively satisfaction, evidence of the warmest approval which has reached it, and continues to be received, from all classes of society in various parts of the globe. Notwithstanding the strong current of opinion which set in in favour of the ideas of general pacification, the political horizon has recently undergone a sensible change. Several Powers have undertaken fresh armaments, striving to increase further their military forces, and in the presence of this uncertain situation, it might be asked whether the Powers considered the present moment opportune for the international discussion of the ideas set forth in the Circular of the 12th (24th) August. In the hope, however, that the elements of trouble agitating political centres will soon give place to a calmer disposition of a nature to favour the success of the proposed Conference, the Imperial Government is of opinion that it would be possible to proceed forthwith to a preliminary exchange of ideas between the Powers, with the object:—(a.) Of seeking without delay means for putting a limit to the progressive increase of military and naval armaments, a question the solution of which becomes

PEACE CONFERENCE.

evidently more and more urgent in view of the fresh extension given to these armaments; and (b.) Of preparing the way for a discussion of the questions relating to the possibility of preventing armed conflicts by the pacific means at the disposal of international diplomacy. In the event of the Powers considering the present moment favourable for the meeting of a Conference on these bases, it would certainly be useful for the Cabinets to come to an understanding on the subject of the programme of their labours. The subjects to be submitted for international discussion at the Conference could, in general terms, be summarized as follows:—

"1. An understanding not to increase for a fixed period the present effective of the armed military and naval forces, and at the same time not to increase the Budgets pertaining thereto; and a preliminary examination of the means by which a reduction might even be effected in future in the forces and Budgets above-mentioned.

"2. To prohibit the use in the armies and fleets of any new kind of fire-arms whatever and of new explosives, or any powders more powerful than those now in use either for rifles or cannon.

"3. To restrict the use in military warfare of the formidable explosives already existing, and to prohibit the throwing of projectiles or explosives of any kind from balloons or by any similar means.

"4. To prohibit the use in naval warfare of submarine torpedo-boats or plungers, or other similar engines of destruction; to give an undertaking not to construct vessels with rams in the future.

"5. To apply to naval warfare the stipulations of the Geneva Convention of 1864, on the basis of the Additional Articles of 1868.

"6. To neutralize ships and boats employed in saving those overboard during or after an engagement.

"7. To revise the Declaration concerning the laws and customs of war elaborated in 1874 by the Conference of Brussels, which has remained unratified to the present day.

"8. To accept in principle the employment of good offices, of mediation and facultative arbitration in cases lending themselves thereto, with the object of preventing armed conflicts between nations; to come to an understanding with respect to the mode of applying these good offices, and to establish a uniform practice in using them.

"It is well understood that all questions concerning the political relations of States and the order of things established by Treaties, as generally all questions which do not directly fall within the programme adopted by the Cabinets, must be absolutely excluded from the deliberations of the Conference. In requesting you, Sir, to be good enough to apply to your Government for instructions on the subject of my present communication, I beg you at the same time to inform it that, in the interest of the great cause which my august master has so much at heart, His Imperial Majesty considers it advisable that the Conference should not sit in the capital of one of the Great Powers, where so many political interests are centred which might, perhaps, impede the progress of a work in which all the countries of the universe are equally interested."

General assent being given to the suggestions here offered, the next step toward realization of the grand project was taken, by an arrangement with the government of the Kingdom of the Netherlands, in accordance with which an invitation was addressed from The Hague, in April, to many governments, both the greater and the less of the political world, in the following terms: "For political reasons the Imperial Russian Government considered that it would not be desirable that the meeting of the Conference should take place in the capital of one of the Great Powers, and after securing the assent of the Governments interested, it addressed the Cabinet of The Hague with a view of obtaining its consent to the choice of that capital as the seat of the Conference in question. The Minister for Foreign Affairs at once took the orders of Her Majesty the Queen in regard to this request, and I am happy to be able to inform you that Her Majesty, my august Sovereign, has been pleased to authorize him to reply that it will be particularly agreeable to her to see the proposed Conference meet at The Hague. Consequently, my Government, in accord with the Imperial Russian Government, charges me to invite [the Government named] to be good enough to be represented at the abovementioned Conference, in order to discuss the questions indicated in the second Russian Circular of the 30th December, 1898 (11th January, 1899), as well as all other questions connected with the ideas set forth in the Circular of the 12th (24th) August, 1898, excluding, however, from the deliberations everything which refers to the political relations of States or the order of things established by Treaties. My Government trusts, that [the Government named] will associate itself with the great humanitarian work to be entered upon under the auspices of His Majesty the Emperor of All the Russias, and that it will be disposed to accept this invitation, and to take the necessary steps for the presence of its Representatives at The Hague on the 18th May next for the opening of the Conference, at which each Power, whatever may be the number of its Delegates, will only have one vote."—*Great Britain, Parliamentary Publications* (*Papers by Command: Miscellaneous, No.* 1, 1899, *pp.* 3–4 *and* 8).

In response to this definite invitation, the governments of Austria-Hungary, Belgium, Bulgaria, China, Denmark, France, Germany, Great Britain, Greece, Italy, Japan, Luxembourg, Mexico, Montenegro, the Netherlands, Persia, Portugal, Roumania, Russia, Servia, Siam, Spain, Sweden and Norway, Switzerland, Turkey, and the United States of America, appointed representatives who met at The Hague, on the 18th of May, 1899, and organized the Conference by electing M. de Staal, Russian Ambassador, to preside. The United States was represented by the Hon. Andrew D. White, Ambassador to Berlin, the Hon. Seth Low, President of Columbia University, the Hon. Stanford Newel, Envoy Extraordinary, &c., to The Hague, Capt. Alfred T. Mahan, U. S. N., Capt. William Crozier, U. S. A., and the Hon. Frederick W. Holls, of New York. The representatives of Great Britain were Sir Julian Pauncefote, Ambassador to the United States, Sir Henry Howard, Envoy Extraordinary, &c., to The Hague, Vice-Admiral Sir John A. Fisher, Major-General Sir J. C. Ardagh, and Lieutenant-Colonel C. à Court.

"The Conference at The Hague was a Parlia-

ment of Man representing, however imperfectly, the whole human race. The only independent ones not represented at the Huis ten Bosch were the South American republics, the Emperor of Morocco, the King of Abyssinia, and the Grand Lama of Tibet. That the South American republics were not represented is not the fault of the Russian Emperor. Mexico received and accepted an invitation. Brazil received, but rejected, the invitation to be present, and so did one other South American republic. The original Russian idea was to assemble representatives from every independent government in the world; nor did they even confine themselves to the secular governments. They were very anxious that the Pope should also be directly represented in this supreme assembly. Even with the Pope and South America left out, the Congress represented more of the world and its inhabitants than any similar assembly that has ever been gathered together for the work of international legislation. That circumstance in itself is sufficient to give distinction to the Conference at The Hague, which, it is expected, will be the forerunner of a series of conferences, each of which will aim at being more and more universally representative. On the eve of the twentieth century the human race has begun to federate itself. That is the supreme significance of the assembly which has just spent two months in the capital of Holland."—W. T. Stead, *The Conference at The Hague* (*Forum*, *Sept.*, 1899).

To systematize and facilitate the discussions of the Conference, three Commissions or Committees were appointed, between which the several subjects suggested in the Russian circular of January 11 (as given above), and agreed to by the several governments, were distributed. The 1st, 2d, 3d and 4th propositions of the programme were referred to the First Commission, the 5th, 6th and 7th to the Second, the 8th (concerning mediation and arbitration) to the Third. This was done on the 23d of May, after which the general Conference was held only at intervals, to receive and consider reports from the several Commissions, of agreements reached or disagreements ascertained. This went on until the 29th of July, when the several Conventions, Declarations, and Recommendations agreed upon for submission to the governments represented were summarized in the following "Final Act," signed by all: "In a series of meetings, between the 18th May and the 29th July, 1899, in which the constant desire of the Delegates above mentioned has been to realize, in the fullest manner possible, the generous views of the august Initiator of the Conference and the intentions of their Governments, the Conference has agreed, for submission for signature by the Plenipotentiaries, on the text of the Conventions and Declarations enumerated below and annexed to the present Act:—

"I. Convention for the pacific settlement of international conflicts.

"II. Convention regarding the laws and customs of war by land.

"III. Convention for the adaptation to maritime warfare of the principles of the Geneva Convention of the 22nd August, 1864.

"IV. Three Declarations:—1. To prohibit the launching of projectiles and explosives from balloons or by other similar new methods. 2. To prohibit the use of projectiles, the only object of which is the diffusion of asphyxiating or deleterious gases. 3. To prohibit the use of bullets which expand or flatten easily in the human body, such as bullets with a hard envelope, of which the envelope does not entirely cover the core, or is pierced with incisions.

"These Conventions and Declarations shall form so many separate Acts. These Acts shall be dated this day, and may be signed up to the 31st December, 1899, by the Plenipotentiaries of the Powers represented at the International Peace Conference at The Hague.

"Guided by the same sentiments, the Conference has adopted unanimously the following Resolution:—'The Conference is of opinion that the restriction of military budgets, which are at present a heavy burden on the world, is extremely desirable for the increase of the material and moral welfare of mankind.'

"It has, besides, formulated the following wishes:—

"1. The Conference, taking into consideration the preliminary steps taken by the Swiss Federal Government for the revision of the Geneva Convention, expresses the wish that steps may be shortly taken for the assembly of a Special Conference having for its object the revision of that Convention. This wish was voted unanimously.

"2. The Conference expresses the wish that the questions of the rights and duties of neutrals may be inserted in the programme of a Conference in the near future.

"3. The Conference expresses the wish that the questions with regard to rifles and naval guns, as considered by it, may be studied by the Governments with the object of coming to an agreement respecting the employment of new types and calibres.

"4. The Conference expresses the wish that the Governments, taking into consideration the proposals made at the Conference, may examine the possibility of an agreement as to the limitation of armed forces by land and sea, and of war budgets.

"5. The Conference expresses the wish that the proposal, which contemplates the declaration of the inviolability of private property in naval warfare, may be referred to a subsequent Conference for consideration.

"6. The Conference expresses the wish that the proposal to settle the question of the bombardment of ports, towns, and villages by a naval force may be referred to a subsequent Conference for consideration.

"The last five wishes were voted unanimously, saving some abstentions.

"In faith of which, the Plenipotentiaries have signed the present Act, and have affixed their seals thereto. Done at The Hague, 29th July, 1899, in one copy only, which shall be deposited in the Ministry for Foreign Affairs, and of which copies, duly certified, shall be delivered to all the Powers represented at the Conference."—*Great Britain*, *Parliamentary Publications* (*Papers by Command: Miscellaneous*, *No.* 1, 1899, *pp.* 3–4, 8 *and* 288–9).

The accompanying Conventions and Declarations were in no case unanimously signed, several delegations, in each case, claiming time for the governments they represented to consider certain questions involved. The most important of the proposed Conventions, namely, that "For the

Pacific Settlement of International Disputes," was signed at The Hague by the delegates from Belgium, Denmark, Spain, the United States of America, Mexico, France, Greece, Montenegro, the Netherlands, Persia, Portugal, Roumania, Russia, Siam, Sweden and Norway, and Bulgaria; but not by Austria-Hungary, Germany, Italy, Japan, Great Britain, Luxembourg, Switzerland, Servia, Turkey, or China. Ultimately, however, the great Treaty of Arbitration was signed by every one of the Powers represented. The signature of the delegates of the United States was given under reserve of a declaration which will be found in the following excerpt from the general report of the American Commission. The full text of each of the Conventions is given below.

"The entire plan for the tribunal and its use is voluntary, so far as sovereign States are concerned. The only seeming exceptions to this rule are contained in Article 1, which provides that the Signatory Powers agree to employ their efforts for securing the pacific regulation of international differences; and Article 27, which says that the Signatory Powers consider it to be a duty, in the case where an acute conflict threatens to break out between two or more of them, to remind those latter that the permanent court is open to them. The obligation thus imposed is not legal or diplomatic in its nature. These articles merely express a general moral duty for the performance of which each State is accountable only to itself. In order, however, to make assurance doubly sure and to leave no doubt whatever of the meaning of the Convention, as affecting the United States of America, the Commission made the following declaration in the full session of the Conference, held July 25:—'The Delegation of the United States of America, in signing the Convention regulating the peaceful adjustment of international differences, as proposed by the International Peace Conference, make the following declaration:—Nothing contained in this Convention shall be so construed as to require the United States of America to depart from its traditional policy of not intruding upon, interfering with, or entangling itself in the political questions or policy or internal administration of any foreign State; nor shall anything contained in the said Convention be construed to imply a relinquishment by the United States of America of its traditional attitude toward purely American questions.' Under the reserve of this declaration the United States delegates signed the Arbitration Convention itself. Article 8 of the Convention, providing for a special form of Mediation, was proposed individually by Mr. Holls of the United States Commission. . . . It is hoped that in particular crises, when the other means provided by the Convention for keeping or restoring peace have failed, it may prove to have real and practical value. It is certain that, by the Continental States of Europe, it has been exceedingly well received."—*General Report of the American Commission.*

"Objection has been made to [the International Court of Arbitration] on the ground that submission to it is purely voluntary and that no executive authority has been provided to carry out its decrees. The answer to all such objections is simply that the power of enlightened public opinion is relied upon to be amply sufficient for the purpose of insuring obedience to every just mandate of this Court. In the case of the United States of America the judgments of the Court, according to the decisions now in force, will have a peculiarly binding force. An agreement to submit a case to the Court cannot be made by the United States, except by way of a treaty, which, when ratified by the Senate, becomes the supreme law of the land. In the case of La Ninfa, Whitelaw v. The United States (75 Fed. Rep., 513), it was decided by the United States Circuit Court of Appeals in California that by virtue of the treaty the judgment of the Court of Arbitration provided for by the terms of the treaty has all the force of a federal statute, and it is itself the supreme law of the land, binding upon every individual citizen of the United States, including all federal and State authorities. For us, at least, the International Court of Arbitration at The Hague will, if this view prevails, in reality be the highest possible tribunal, with an authority binding even on our own United States Supreme Court.

"Article 27 aims, in a measure, to supply the deficiency of the provision for obligatory arbitration, in that it declares it to be the duty of all Signatory Powers to remind any one or more of themselves, in case of a threatened dispute, that the permanent Court of Arbitration is open to them. What particular effect this particular article will have must be left to the future. Without modification or reservation the article, when ratified by the United States, would have constituted a complete abandonment of the time-honored Monroe Doctrine. Accordingly the representatives of the United States declined to sign the treaty, except under a reservation or declaration, which was solemnly accepted by the Peace Conference, thus materially modifying the jurisdiction of the Court [see above]. . . . By this declaration the Monroe Doctrine was not only self-guarded, but it was stated and vindicated more emphatically than ever before in our history, and the people of this country are, therefore, in a position to cordially support the International Court of Arbitration, without the fear that the Court itself, or the fact of its establishment, may ever be used against this country, or to the embarrassment of its diplomacy and traditional policy. . . .

"The effect of the establishment of the Court upon European diplomacy is necessarily surrounded by great uncertainty. In a recent review of the work of the Peace Conference I ventured to use this language: 'It is most encouraging and of the highest importance that upon the whole Continent the governments are apparently in advance of public opinion upon the entire subject of the Peace Conference. The reason is not far to seek. No man who is fit for the position can to-day hold a place involving the direction of his country's international policy without feeling an almost intolerable pressure of responsibility. To him every remote chance of a lightening of his burden comes as a promise of blessed relief. It is a historical fact that none of the obstacles to success which the Peace Conference had to overcome originated in the mind of any sovereign or of any high minister of State. In every case they were raised by underlings without responsibility and anxious to show superior wisdom by finding fault. So long as this favorable governmental attitude continues there is every reason for encouragement.' 'Continental

PEACE CONFERENCE.

public opinion, especially in questions of foreign policy, seems more pliable than ever before, and is as clay in the hands of a potter, so far as alliances and sympathies are concerned, when following a popular monarch or foreign minister.' I have since been assured by the highest officials of at least two great European Powers, that this statement meets with their unqualified approval. The sneers of irresponsible journals and politicians cannot and will not affect the deliberate purposes of a high-minded and serious minister of State."—F. W. Holls, *The International Court of Arbitration at The Hague; a paper read before the N. Y. State Bar Association, Jan.* 15, 1901.

Convention for the Pacific Settlement of International Disputes.

TITLE I.—On the Maintenance of the General Peace.

ARTICLE I. With a view to obviating, as far as possible, recourse to force in the relations between States, the Signatory Powers agree to use their best efforts to insure the pacific settlement of international differences.

TITLE II.—On Good Offices and Mediation.

ARTICLE II. In case of serious disagreement or conflict, before an appeal to arms, the Signatory Powers agree to have recourse, as far as circumstances allow, to the good offices or mediation of one or more friendly Powers.

ARTICLE III. Independently of this recourse, the Signatory Powers recommend that one or more Powers, strangers to the dispute, should, on their own initiative, and as far as circumstances may allow, offer their good offices or mediation to the States at variance. Powers, strangers to the dispute, have the right to offer good offices or mediation, even during the course of hostilities. The exercise of this right can never be regarded by one or the other of the parties in conflict as an unfriendly act.

ARTICLE IV. The part of the mediator consists in reconciling the opposing claims and appeasing the feelings of resentment which may have arisen between the States at variance.

ARTICLE V. The functions of the mediator are at an end when once it is declared, either by one of the parties to the dispute, or by the mediator himself, that the means of reconciliation proposed by him are not accepted.

ARTICLE VI. Good offices and mediation, either at the request of the parties at variance, or on the initiative of Powers strangers to the dispute, have exclusively the character of advice and never have binding force.

ARTICLE VII. The acceptance of mediation can not, unless there be an agreement to the contrary, have the effect of interrupting, delaying, or hindering mobilization or other measures of preparation for war. If mediation occurs after the commencement of hostilities it causes no interruption to the military operations in progress, unless there be an agreement to the contrary.

ARTICLE VIII. The Signatory Powers are agreed in recommending the application, when circumstances allow, for special mediation in the following form :—In case of a serious difference endangering the peace, the States at variance choose respectively a Power, to whom they intrust the mission of entering into direct communication with the Power chosen on the other side, with the object of preventing the rupture of pacific relations. For the period of this mandate, the term of which, unless otherwise stipulated, cannot exceed thirty days, the States in conflict cease from all direct communication on the subject of the dispute, which is regarded as referred exclusively to the mediating Powers, who must use their best efforts to settle it. In case of a definite rupture of pacific relations, these Powers are charged with the joint task of taking advantage of any opportunity to restore peace.

TITLE III.—On International Commissions of Inquiry.

ARTICLE IX. In differences of an international nature involving neither honour nor vital interests, and arising from a difference of opinion on points of fact, the Signatory Powers recommend that the parties, who have not been able to come to an agreement by means of diplomacy, should as far as circumstances allow, institute an International Commission of Inquiry, to facilitate a solution of these differences by elucidating the facts by means of an impartial and conscientious investigation.

ARTICLE X. The International Commissions of Inquiry are constituted by special agreement between the parties in conflict. The Convention for an inquiry defines the facts to be examined and the extent of the Commissioners' powers. It settles the procedure. On the inquiry both sides must be heard. The form and the periods to be observed, if not stated in the inquiry Convention, are decided by the Commission itself.

ARTICLE XI. The International Commissions of Inquiry are formed, unless otherwise stipulated, in the manner fixed by Article XXXII of the present Convention.

ARTICLE XII. The powers in dispute engage to supply the International Commission of Inquiry, as fully as they may think possible, with all means and facilities necessary to enable it to be completely acquainted with and to accurately understand the facts in question.

ARTICLE XIII. The International Commission of Inquiry communicates its Report to the conflicting Powers, signed by all the members of the Commission.

ARTICLE XIV. The Report of the International Commission of Inquiry is limited to a statement of facts, and has in no way the character of an Arbitral Award. It leaves the conflicting Powers entire freedom as to the effect to be given to this statement.

TITLE IV.—On International Arbitration.

CHAPTER I.—On the System of Arbitration.

ARTICLE XV. International arbitration has for its object the settlement of differences between States by judges of their own choice, and on the basis of respect for law.

ARTICLE XVI. In questions of a legal nature, and especially in the interpretation or application of International Conventions, arbitration is recognized by the Signatory Powers as the most effective, and at the same time the most equitable, means of settling disputes which diplomacy has failed to settle.

ARTICLE XVII. The Arbitration Convention is concluded for questions already existing or for questions which may arise eventually. It may embrace any dispute or only disputes of a certain category.

ARTICLE XVIII. The Arbitration Convention implies the engagement to submit loyally to the Award.

ARTICLE XIX. Independently of general or private Treaties expressly stipulating recourse to arbitration as obligatory on the Signatory Powers, these Powers reserve to themselves the right of concluding, either before the ratification of the present Act or later, new Agreements, general or private, with a view to extending obligatory arbitration to all cases which they may consider it possible to submit to it.

CHAPTER II.—On the Permanent Court of Arbitration.

ARTICLE XX. With the object of facilitating an immediate recourse to arbitration for international differences, which it has not been possible to settle by diplomacy, the Signatory Powers undertake to organize a permanent Court of Arbitration, accessible at all times and operating, unless otherwise stipulated by the parties, in accordance with the Rules of Procedure inserted in the present Convention.

ARTICLE XXI. The Permanent Court shall be competent for all arbitration cases, unless the parties agree to institute a special Tribunal.

ARTICLE XXII. An International Bureau, established at The Hague, serves as record office for the Court. This Bureau is the channel for communications relative to the meetings of the Court. It has the custody of the archives and conducts all the administrative business. The Signatory Powers undertake to communicate to the International Bureau at The Hague a duly certified copy of any conditions of arbitration arrived at between them, and of any award concerning them delivered by special Tribunals. They undertake also to communicate to the Bureau the Laws, Regulations, and documents eventually showing the execution of the awards given by the Court.

ARTICLE XXIII. Within the three months following its ratification of the present Act, each Signatory Power shall select four persons at the most, of known competency in questions of international law, of the highest moral reputation, and disposed to accept the duties of Arbitrators. The persons thus selected shall be inscribed, as members of the Court, in a list which shall be notified by the Bureau to all the Signatory Powers. Any alteration in the list of Arbitrators is brought by the Bureau to the knowledge of the Signatory Powers. Two or more Powers may agree on the selection in common of one or more Members. The same person can be selected by different Powers. The Members of the Court are appointed for a term of six years. Their appointments can be renewed. In case of the death or retirement of a member of the Court, his place shall be filled in accordance with the method of his appointment.

ARTICLE XXIV. When the Signatory Powers desire to have recourse to the Permanent Court for the settlement of a difference that has arisen between them, the Arbitrators called upon to form the competent Tribunal to decide this difference, must be chosen from the general list of members of the Court. Failing the direct agreement of the parties on the composition of the Arbitration Tribunal, the following course shall be pursued :—Each party appoints two Arbitrators, and these together choose an Umpire. If the votes are equal, the choice of the Umpire is intrusted to a third Power, selected by the parties by common accord. If an agreement is not arrived at on this subject, each party selects a different Power, and the choice of the Umpire is made in concert by the Powers thus selected. The Tribunal being thus composed, the parties notify to the Bureau their determination to have recourse to the Court and the names of the Arbitrators. The Tribunal of Arbitration assembles on the date fixed by the parties. The Members of the Court, in the discharge of their duties and out of their own country, enjoy diplomatic privileges and immunities.

ARTICLE XXV. The Tribunal of Arbitration has its ordinary seat at The Hague. Except in cases of necessity, the place of session can only be altered by the Tribunal with the assent of the parties.

ARTICLE XXVI. The International Bureau at The Hague is authorized to place its premises and its staff at the disposal of the Signatory Powers for the operations of any special Board of Arbitration. The jurisdiction of the Permanent Court, may, within the conditions laid down in the Regulations, be extended to disputes between non-Signatory Powers, or between Signatory Powers and non-Signatory Powers, if the parties are agreed on recourse to this Tribunal.

ARTICLE XXVII. The Signatory Powers consider it their duty, if a serious dispute threatens to break out between two or more of them, to remind these latter that the Permanent Court is open to them. Consequently, they declare that the fact of reminding the conflicting parties of the provisions of the present Convention, and the advice given to them, in the highest interests of peace, to have recourse to the Permanent Court, can only be regarded as friendly actions.

ARTICLE XXVIII. A Permanent Administrative Council, composed of the Diplomatic Representatives of the Signatory Powers accredited to The Hague and of the Netherland Minister for Foreign Affairs, who will act as President, shall be instituted in this town as soon as possible after the ratification of the present Act by at least nine Powers. This Council will be charged with the establishment and organization of the International Bureau, which will be under its direction and control. It will notify to the Powers the constitution of the Court and will provide for its installation. It will settle its Rules of Procedure and all other necessary Regulations. It will decide all questions of administration which may arise with regard to the operations of the Court. It will have entire control over the appointment, suspension or dismissal of the officials and employés of the Bureau. It will fix the payments and salaries, and control the general expenditure. At meetings duly summoned the presence of five members is sufficient to render valid the discussions of the Council. The decisions are taken by a majority of votes. The Council communicates to the Signatory Powers without delay the Regulations adopted by it. It furnishes them with an annual Report on the labours of the Court, the working of the administration, and the expenses.

ARTICLE XXIX. The expenses of the Bureau shall be borne by the Signatory Powers in the proportion fixed for the International Bureau of the Universal Postal Union.

CHAPTER III. On Arbitral Procedure.

ARTICLE XXX. With a view to encourage the development of arbitration, the Signatory Powers have agreed on the following Rules which shall be applicable to arbitral procedure, unless other Rules have been agreed on by the parties.

ARTICLE XXXI. The Powers who have recourse to arbitration sign a special Act ("Compromis"), in which the subject of the difference is clearly defined, as well as the extent of the Arbitrators' powers. This Act implies the undertaking of the parties to submit loyally to the award.

ARTICLE XXXII. The duties of Arbitrator may be conferred on one Arbitrator alone or on several Arbitrators selected by the parties as they please, or chosen by them from the members of the Permanent Court of Arbitration established by the present Act. Failing the constitution of the Tribunal by direct agreement between the parties, the following course shall be pursued: Each party appoints two Arbitrators, and these latter together choose an Umpire. In case of equal voting, the choice of the Umpire is intrusted to a third Power, selected by the parties by common accord. If no agreement is arrived at on this subject, each party selects a different Power, and the choice of the Umpire is made in concert by the Powers thus selected.

ARTICLE XXXIII. When a Sovereign or the Chief of a State is chosen as Arbitrator, the arbitral procedure is settled by him.

ARTICLE XXXIV. The Umpire is by right President of the Tribunal. When the Tribunal does not include an Umpire, it appoints its own President.

ARTICLE XXXV. In case of the death, retirement, or disability from any cause of one of the Arbitrators, his place shall be filled in accordance with the method of his appointment.

ARTICLE XXXVI. The Tribunal's place of session is selected by the parties. Failing this selection the Tribunal sits at The Hague. The place thus fixed cannot, except in case of necessity, be changed by the Tribunal without the assent of the parties.

ARTICLE XXXVII. The parties have the right to appoint delegates or special agents to attend the Tribunal, for the purpose of serving as intermediaries between them and the Tribunal. They are further authorized to retain, for the defense of their rights and interests before the Tribunal, counsel or advocates appointed by them for this purpose.

ARTICLE XXXVIII. The Tribunal decides on the choice of languages to be used by itself, and to be authorized for use before it.

ARTICLE XXXIX. As a general rule the arbitral procedure comprises two distinct phases; preliminary examination and discussion. Preliminary examination consists in the communication by the respective agents to the members of the Tribunal and to the opposite party of all printed or written Acts and of all documents containing the arguments invoked in the case. This communication shall be made in the form and within the periods fixed by the Tribunal in accordance with Article XLIX. Discussion consists in the oral development before the Tribunal of the arguments of the parties.

ARTICLE XL. Every document produced by one party must be communicated to the other party.

ARTICLE XLI. The discussions are under the direction of the President. They are only public if it be so decided by the Tribunal, with the assent of the parties. They are recorded in the "procès-verbaux" drawn up by the Secretaries appointed by the President. These "procès-verbaux" alone have an authentic character.

ARTICLE XLII. When the preliminary examination is concluded, the Tribunal has the right to refuse discussion of all fresh Acts or documents which one party may desire to submit to it without the consent of the other party.

ARTICLE XLIII. The Tribunal is free to take into consideration fresh Acts or documents to which its attention may be drawn by the agents or counsel of the parties. In this case, the Tribunal has the right to require the production of these Acts or documents, but is obliged to make them known to the opposite party.

ARTICLE XLIV. The Tribunal can, besides, require from the agents of the parties the production of all Acts, and can demand all necessary explanations. In case of refusal, the Tribunal takes note of it.

ARTICLE XLV. The agents and counsel of the parties are authorized to present orally to the Tribunal all the arguments they may think expedient in defence of their case.

ARTICLE XLVI. They have the right to raise objections and points. The decisions of the Tribunal on those points are final, and cannot form the subject of any subsequent discussion.

ARTICLE XLVII. The members of the Tribunal have the right to put questions to the agents and counsel of the parties, and to demand explanations from them on doubtful points. Neither the questions put nor the remarks made by members of the Tribunal during the discussions can be regarded as an expression of opinion by the Tribunal in general, or by its members in particular.

ARTICLE XLVIII. The Tribunal is authorized to declare its competence in interpreting the "Compromis" as well as the other Treaties which may be invoked in the case, and in applying the principles of international law.

ARTICLE XLIX. The Tribunal has the right to issue Rules of Procedure for the conduct of the case, to decide the forms and periods within which each party must conclude its arguments, and to arrange all the formalities required for dealing with the evidence.

ARTICLE L. When the agents and counsel of the parties have submitted all explanations and evidence in support of their case, the President pronounces the discussion closed.

ARTICLE LI. The deliberations of the Tribunal take place in private. Every decision is taken by a majority of members of the Tribunal. The refusal of a member to vote must be recorded in the "procès-verbal."

ARTICLE LII. The award, given by a majority of votes, is accompanied by a statement of reasons. It is drawn up in writing and signed by each member of the Tribunal. Those members who are in the minority may record their dissent when signing.

ARTICLE LIII. The award is read out at a public meeting of the Tribunal, the agents and counsel of the parties being present, or duly summoned to attend.

ARTICLE LIV. The award, duly pronounced and notified to the agents of the parties at variance, puts an end to the dispute definitely and without appeal.

ARTICLE LV. The parties can reserve in the "Compromis" the right to demand the revision of the award. In this case, and unless there be an agreement to the contrary, the demand must be addressed to the Tribunal which pronounced the award. It can only be made on the ground of the discovery of some new fact calculated to exercise a decisive influence on the award, and which, at the time the discussion was closed, was unknown to the Tribunal and to the party demanding the revision. Proceedings for revision can only be instituted by a decision of the Tribunal expressly recording the existence of the new fact, recognizing in it the character described in the foregoing paragraph, and declaring the demand admissible on this ground. The "Compromis" fixes the period within which the demand for revision must be made.

ARTICLE LVI. The award is only binding on the parties who concluded the "Compromis." When there is a question of interpreting a Convention to which Powers other than those concerned in the dispute are parties, the latter notify to the former the "Compromis" they have concluded. Each of these Powers has the right to intervene in the case. If one or more of them avail themselves of this right, the interpretation contained in the award is equally binding on them.

ARTICLE LVII. Each party pays its own expenses and an equal share of those of the Tribunal.

General Provisions.

ARTICLE LVIII. The present Convention shall be ratified as speedily as possible. The ratification shall be deposited at The Hague. A "procès-verbal" shall be drawn up recording the receipt of each ratification, and a copy duly certified shall be sent, through the diplomatic channel, to all the Powers who were represented at the International Peace Conference at The Hague.

ARTICLE LIX. The non-Signatory Powers who were represented at the International Peace Conference can adhere to the present Convention. For this purpose they must make known their adhesion to the Contracting Powers by a written notification addressed to the Netherland Government, and communicated by it to all the other Contracting Powers.

ARTICLE LX. The conditions on which the Powers who were not represented at the International Peace Conference can adhere to the present Convention shall form the subject of a subsequent Agreement among the Contracting Powers.

ARTICLE LXI. In the event of one of the High Contracting Parties denouncing the present Convention, this denunciation would not take effect until a year after its notification made in writing to the Netherland Government, and by it communicated at once to all the other Contracting Powers. This denunciation shall only affect the notifying Power. In faith of which the Plenipotentiaries have signed the present Convention and affixed their seals to it. Done at The Hague, the 29th July, 1899, in a single copy, which shall remain in the archives of the Netherland Government, and copies of it, duly certified, be sent through the diplomatic channel to the Contracting Powers. — *United States, 56th Cong., 1st Sess., Senate Doc.* 159.

The Permanent Court of Arbitration.—The following is the membership of the Permanent Court of Arbitration, as finally organized, in January, 1901, and announced to be prepared for the consideration of any international dispute that may be submitted to it. Fifteen of the greater nations of the world are represented in this most august tribunal that has ever sat for judgment of the disputes of men :

Austria-Hungary. His Excellency Count Frederic Schonborn, LL. D., president of the Imperial Royal Court of Administrative Justice, former Austrian Minister of Justice, member of the House of Lords of the Austrian Parliament, etc. His Excellency Mr. D. de Szilagyi, ex-Minister of Justice, member of the House of Deputies of the Hungarian Parliament. Count Albert Apponyi, member of the Chamber of Magnates and of the Chamber of Deputies of the Hungarian Parliament, etc. Mr. Henri Lammasch, LL. D., member of the House of Lords of the Austrian Parliament, etc.

Belgium. His Excellency Mr. Beernaert, Minister of State, member of the Chamber of Representatives, etc. His Excellency Baron Lambermont, Minister of State, Envoy Extraordinary and Minister Plenipotentiary, Secretary-General of the Ministry of Foreign Affairs. The Chevalier Descamps, Senator. Mr. Rolin Jacquemyns, ex-Minister of the Interior.

Denmark. Professor H. Matzen, LL. D., Professor of the Copenhagen University, Counsellor Extraordinary of the Supreme Court, President of the Landsthing.

France. M. Leon Bourgeois, Deputy, ex-President of the Cabinet Council, ex-Minister for Foreign Affairs. M. de Laboulaye, ex-Ambassador. Baron Destournelles de Constant, Minister Plenipotentiary, Deputy. M. Louis Renault, Minister Plenipotentiary, Professor in the Faculty of Law at Paris, Law Office of the Department of Foreign Affairs.

Germany. His Excellency Mr. Bingner, LL. D., Privy Councillor, Senate President of the Imperial High Court at Leipsic. Mr. von Frantzius, Privy Councillor, Solicitor of the Department of Foreign Affairs at Berlin. Mr. von Martitz, LL. D., Associate Justice of the Superior Court of Administrative Justice in Prussia, Professor of Law at the Berlin University. Mr. von Bar, LL. D., Judicial Privy Councillor, Professor of Law at the Göttingen University.

Great Britain. His Excellency the Right Honorable Lord Pauncefote of Preston, G. C. B., G. C. M. G., Privy Councillor, Ambassador at Washington. The Right Honorable Sir Edward Baldwin Malet, ex-Ambassador. The Right Honorable Sir Edward Fry, member of the Privy Council, Q. C. Professor John Westlake, LL. D., Q. C.

Italy. His Excellency Count Constantin Nigra, Senator of the Kingdom, Ambassador at Vienna. His Excellency Commander Jean Baptiste Pagano Guarnaschelli, Senator of the Kingdom, First President of the Court of Cassation at Rome. His Excellency Count Tornielli Brusati di Vergano, Senator of the Kingdom, Ambassador at Paris. Commander Joseph Zanardelli, Attorney at Law, Deputy to the National Parliament.

PEACE CONFERENCE.

Japan. Mr. I. Motono, Envoy Extraordinary and Minister Plenipotentiary at Brussels. Mr. H. Willard Denison, Law Officer of the Minister for Foreign Affairs at Tokio.

Netherlands. Mr. T. M. C. Asser, LL. D., member of the Council of State, ex-Professor of the University of Amsterdam. Mr. F. B. Coninck Liefsting, LL. D., President of the Court of Cassation. Jonkheer A. F. de Savornin Lohman, LL. D., ex-Minister of the Interior, ex-Professor of the Free University of Amsterdam, member of the Lower House of the States General. Jonkheer G. L. M. H. Ruis de Beerenbrouck, ex-Minister of Justice, Commissioner of the Queen in the Province of Limbourg.

Portugal. Count de Macedo, Peer of the Realm, ex-Minister of Marine and Colonies, Envoy Extraordinary and Minister Plenipotentiary at Madrid.

Rumania. Mr. Theodore Rosetti, Senator, ex-President of the High Court of Cassation and Justice. Mr. Jean Kalindero, Administrator of the Crown Domain, ex-Judge of the High Court of Cassation and Justice. Mr. Eugene Statsco, ex-President of the Senate, ex-Minister of Justice and Foreign Affairs. Mr. Jean N. Lahovari, Deputy, ex-Envoy Extraordinary and Minister Plenipotentiary, ex-Minister of Foreign Affairs.

Russia. Mr. N. V. Mouravieff, Minister of Justice, Active Privy Councillor, Secretary of State of His Majesty the Emperor. Mr. C. P. Pobedonostzeff, Attorney-General of the Most Holy Synod, Active Privy Councillor, Secretary of State of His Majesty the Emperor. Mr. E. V. Frisch, President of the Department of Legislation of the Imperial Council, Active Privy Councillor, Secretary of State of His Majesty the Emperor. Mr. de Martens, Privy Councillor, permanent member of the Council of the Ministry of Foreign Affairs.

Spain. His Excellency the Duke of Tetuan, ex-Minister of Foreign Affairs, Senator of the Kingdom, Grandee of Spain. Mr. Bienvenido Oliver, Director-General of the Ministry of Justice, ex-Delegate of Spain to the Conference on Private International Law at The Hague. Dr. Manuel Torres Campos, Professor of international law at the University of Grenada, associate member of the Institute of International Law.

Sweden and Norway. Mr. S. R. D. K. D'Olivecrona, member of the International Law Institute, ex-Associate Justice of the Supreme Court of the Kingdom of Sweden, Doctor of Laws and Letters at Stockholm. Mr. G. Gram, ex-Minister of State of Norway, Governor of the Province of Hamar, Norway.

United States. Mr. Benjamin Harrison, ex-President of the United States. Mr. Melville W. Fuller, Chief Justice of the United States. Mr. John W. Griggs, Attorney-General of the United States. Mr. George Gray, United States Circuit Judge.

First Secretary of the Court—J. J. Rochussen. Second Secretary of the Court—Jonkheer W. Roell.

The Administrative Council consists of the Minister of Foreign Affairs of the Netherlands and the diplomatic representatives at The Hague of the ratifying Powers.

Secretary-General—Mr. R. Melvil, Baron Van Leyden, Judge of the District Court of Utrecht and a member of the First Chamber of the States-General.

Convention with respect to the Laws and Customs of War on Land.

ARTICLE I. The High Contracting Parties shall issue instructions to their armed land forces, which shall be in conformity with the "Regulations respecting the Laws and Customs of War on Land" annexed to the present Convention.

ARTICLE II. The provisions contained in the Regulations mentioned in Article I. are only binding on the Contracting Powers, in case of war between two or more of them. These provisions shall cease to be binding from the time when, in a war between Contracting Powers, a non-Contracting Power joins one of the belligerents.

ARTICLE III. The present Convention shall be ratified as speedily as possible. The ratifications shall be deposited at The Hague. A "procès-verbal" shall be drawn up recording the receipt of each ratification, and a copy, duly certified, shall be sent through the diplomatic channel, to all the Contracting Powers.

ARTICLE. IV. Non-Signatory Powers are allowed to adhere to the present Convention. For this purpose they must make their adhesion known to the Contracting Powers by means of a written notification addressed to the Netherland Government, and by it communicated to all the other Contracting Powers.

ARTICLE V. In the event of one of the High Contracting Parties denouncing the present Convention, such denunciation would not take effect until a year after the written notification made to the Netherland Government, and by it at once communicated to all the other Contracting Powers. This denunciation shall affect only the notifying Power.

In faith of which the Plenipotentiaries have signed the present Convention and affixed their seals thereto.

[Signed by representatives of Belgium, Denmark, Spain, Mexico, France, Greece, Montenegro, the Netherlands, Persia, Portugal, Roumania, Russia, Siam, Sweden and Norway, and Bulgaria.]

REGULATIONS.

SECTION I.—On Belligerents.—CHAPTER I.—On the qualifications of Belligerents.

ARTICLE I. The laws, rights, and duties of war apply not only to armies, but also to militia and volunteer corps, fulfilling the following conditions:—1. To be commanded by a person responsible for his subordinates; 2. To have a fixed distinctive emblem recognizable at a distance; 3. To carry arms openly; and, 4. To conduct their operations in accordance with the laws and customs of war. In countries where militia or volunteer corps constitute the army, or form part of it, they are included under the denomination "army."

ARTICLE II. The population of a territory which has not been occupied who, on the enemy's approach, spontaneously take up arms to resist the invading troops without having time to organize themselves in accordance with Article I, shall be regarded a belligerent, if they respect the laws and customs of war.

ARTICLE III. The armed forces of the belligerent parties may consist of combatants and non-combatants. In case of capture by the enemy

both have a right to be treated as prisoners of war.

CHAPTER II.—On Prisoners of War.

ARTICLE IV. Prisoners of war are in the power of the hostile Government, but not in that of the individuals or corps who captured them. They must be humanely treated. All their personal belongings, except arms, horses, and military papers remain their property.

ARTICLE V. Prisoners of war may be interned in a town, fortress, camp, or any other locality, and bound not to go beyond certain fixed limits; but they can only be confined as an indispensable measure of safety.

ARTICLE VI. The State may utilize the labour of prisoners of war according to their rank and aptitude. Their tasks shall not be excessive, and shall have nothing to do with the military operations. Prisoners may be authorized to work for the Public Service, for private persons, or on their own account. Work done for the State shall be paid for according to the tariffs in force for soldiers of the national army employed on similar tasks. When the work is for other branches of the Public Service or for private persons, the conditions shall be settled in agreement with the military authorities. The wages of the prisoners shall go towards improving their position, and the balance shall be paid them at the time of their release, after deducting the cost of their maintenance.

ARTICLE VII. The Government into whose hands prisoners of war have fallen is bound to maintain them. Failing a special agreement between the belligerents, prisoners of war shall be treated as regards food, quarters, and clothing, on the same footing as the troops of the Government which has captured them.

ARTICLE VIII. Prisoners of war shall be subject to the laws, regulations, and orders in force in the army of the State into whose hands they have fallen. Any act of insubordination warrants the adoption, as regards them, of such measures of severity as may be necessary. Escaped prisoners, recaptured before they have succeeded in rejoining their army, or before quitting the territory occupied by the army that captured them, are liable to disciplinary punishment. Prisoners who, after succeeding in escaping, are again taken prisoners, are not liable to any punishment for the previous flight.

ARTICLE IX. Every prisoner of war, if questioned, is bound to declare his true name and rank, and if he disregards this rule, he is liable to a curtailment of the advantages accorded to the prisoners of war of his class.

ARTICLE X. Prisoners of war may be set at liberty on parole if the laws of their country authorize it, and, in such a case, they are bound, on their personal honour, scrupulously to fulfil, both as regards their own Government and the Government by whom they were made prisoners, the engagements they have contracted. In such cases, their own Government shall not require of nor accept from them any service incompatible with the parole given.

ARTICLE XI. A prisoner of war cannot be forced to accept his liberty on parole; similarly the hostile Government is not obliged to assent to the prisoner's request to be set at liberty on parole.

ARTICLE XII. Any prisoner of war, who is liberated on parole and recaptured, bearing arms against the Government to whom he had pledged his honour, or against the allies of that Government, forfeits his right to be treated as a prisoner of war, and can be brought before the Courts.

ARTICLE XIII. Individuals who follow an army without directly belonging to it, such as newspaper correspondents and reporters, sutlers, contractors, who fall into the enemy's hands, and whom the latter think fit to detain, have a right to be treated as prisoners of war, provided they can produce a certificate from the military authorities of the army they were accompanying.

ARTICLE XIV. A Bureau for information relative to prisoners of war is instituted, on the commencement of hostilities, in each of the belligerent States and, when necessary, in the neutral countries on whose territory belligerents have been received. This Bureau is intended to answer all inquiries about prisoners of war, and is furnished by the various services concerned with all the necessary information to enable it to keep an individual return for each prisoner of war. It is kept informed of internments and changes, as well as of admissions into hospital and deaths. It is also the duty of the Information Bureau to receive and collect all objects of personal use, valuables, letters, &c., found on the battlefields or left by prisoners who have died in hospital or ambulance, and to transmit them to those interested.

ARTICLE XV. Relief Societies for prisoners of war, which are regularly constituted in accordance with the law of the country with the object of serving as the intermediary for charity, shall receive from the belligerents for themselves and their duly accredited agents every facility, within the bounds of military requirements and Administrative Regulations, for the effective accomplishment of their humane task. Delegates of these Societies may be admitted to the places of internment for the distribution of relief, as also to the halting places of repatriated prisoners, if furnished with a personal permit by the military authorities, and on giving an engagement in writing to comply with all their Regulations for order and police.

ARTICLE XVI. The Information Bureau shall have the privilege of free postage. Letters, money orders, and valuables, as well as postal parcels destined for the prisoners of war or despatched by them, shall be free of all postal duties, both in the countries of origin and destination, as well as in those they pass through. Gifts and relief in kind for prisoners of war shall be admitted free of all duties of entry and others, as well as of payments for carriage by the Government railways.

ARTICLE XVII. Officers taken prisoners may receive, if necessary, the full pay allowed them in this position by their country's regulations, the amount to be repaid by their Government.

ARTICLE XVIII. Prisoners of war shall enjoy every latitude in the exercise of their religion, including attendance at their own church services, provided only they comply with the regulations for order and police issued by the military authorities.

ARTICLE XIX. The wills of prisoners of war are received or drawn up on the same conditions as for soldiers of the national army. The same rules shall be observed regarding death certifi-

cates, as well as for the burial of prisoners of war, due regard being paid to their grade and rank.

ARTICLE XX. After the conclusion of peace, the repatriation of prisoners of war shall take place as speedily as possible.

CHAPTER III.—On the Sick and Wounded.

ARTICLE XXI. The obligations of belligerents with regard to the sick and wounded are governed by the Geneva Convention of the 22d August, 1864, subject to any modifications which may be introduced into it.

SECTION II.—On Hostilities.—CHAPTER I.—On means of injuring the Enemy, Sieges, and Bombardments.

ARTICLE XXII. The right of belligerents to adopt means of injuring the enemy is not unlimited.

ARTICLE XXIII. Besides the prohibitions provided by special Conventions, it is especially prohibited:—(a.) To employ poison or poisoned arms; (b.) To kill or wound treacherously individuals belonging to the hostile nation or army; (c.) To kill or wound an enemy who, having laid down arms, or having no longer means of defence, has surrendered at discretion; (d.) To declare that no quarter will be given; (e.) To employ arms, projectiles, or material of a nature to cause superfluous injury; (f.) To make improper use of a flag of truce, the national flag, or military ensigns and the enemy's uniform, as well as the distinctive badges of the Geneva Convention; (g.) To destroy or seize the enemy's property, unless such destruction or seizure be imperatively demanded by the necessities of war.

ARTICLE XXIV. Ruses of war and the employment of methods necessary to obtain information about the enemy and the country, are considered allowable.

ARTICLE XXV. The attack or bombardment of towns, villages, habitations or buildings which are not defended, is prohibited.

ARTICLE XXVI. The Commander of an attacking force, before commencing a bombardment, except in the case of an assault, should do all he can to warn the authorities.

ARTICLE XXVII. In sieges and bombardments all necessary steps should be taken to spare as far as possible edifices devoted to religion, art, science, and charity, hospitals, and places where the sick and wounded are collected, provided they are not used at the same time for military purposes. The besieged should indicate these buildings or places by some particular and visible signs, which should previously be notified to the assailants.

ARTICLE XXVIII. The pillage of a town or place, even when taken by assault, is prohibited.

CHAPTER II.—On Spies.

ARTICLE XXIX. An individual can only be considered a spy if, acting clandestinely, or on false pretences, he obtains, or seeks to obtain information in the zone of operations of a belligerent, with the intention of communicating it to the hostile party. Thus, soldiers not in disguise who have penetrated into the zone of operations of a hostile army to obtain information are not considered spies. Similarly, the following are not considered spies: soldiers or civilians, carrying out their mission openly, charged with the delivery of despatches destined either for their own army or for that of the enemy. To this class belong likewise individuals sent in balloons to deliver despatches, and generally to maintain communication between the various parts of an army or a territory.

ARTICLE XXX. A spy taken in the act cannot be punished without previous trial.

ARTICLE XXXI. A spy who, after rejoining the army to which he belongs, is subsequently captured by the enemy, is treated as a prisoner of war, and incurs no responsibility for his previous acts of espionage.

CHAPTER III.—On Flags of Truce.

ARTICLE XXXII. An individual is considered as bearing a flag of truce who is authorized by one of the belligerents to enter into communication with the other, and who carries a white flag. He has a right to inviolability, as well as the trumpeter, bugler, or drummer, the flag-bearer, and the interpreter who may accompany him.

ARTICLE XXXIII. The Chief to whom a flag of truce is sent is not obliged to receive it in all circumstances. He can take all steps necessary to prevent the envoy taking advantage of his mission to obtain information. In case of abuse, he has the right to detain the envoy temporarily.

ARTICLE XXXIV. The envoy loses his rights of inviolability if it is proved beyond doubt that he has taken advantage of his privileged position to provoke or commit an act of treachery.

CHAPTER IV.—On Capitulations.

ARTICLE XXXV. Capitulations agreed on between the Contracting Parties must be in accordance with the rules of military honour. When once settled, they must be scrupulously observed by both the parties.

CHAPTER V.—On Armistices.

ARTICLE XXXVI. An armistice suspends military operations by mutual agreement between the belligerent parties. If its duration is not fixed, the belligerent parties can resume operations at any time, provided always the enemy is warned within the time agreed upon, in accordance with the terms of the armistice.

ARTICLE XXXVII. An armistice may be general or local. The first suspends all military operations of the belligerent States; the second, only those between certain fractions of the belligerent armies and in a fixed radius.

ARTICLE XXXVIII. An armistice must be notified officially, and in good time, to the competent authorities and the troops. Hostilities are suspended immediately after the notification, or at a fixed date.

ARTICLE XXXIX. It is for the Contracting Parties to settle, in the terms of the armistice, what communications may be held, on the theatre of war, with the population and with each other.

ARTICLE XL. Any serious violation of the armistice by one of the parties gives the other party the right to denounce it, and even, in case of urgency, to recommence hostilities at once.

ARTICLE XLI. A violation of the terms of the armistice by private individuals acting on their own initiative, only confers the right of demanding the punishment of the offenders, and, if necessary, indemnity for the losses sustained.

SECTION III.—On Military Authority over Hostile Territory.

ARTICLE XLII. Territory is considered occupied when it is actually placed under the authority of the hostile army. The occupation applies only to the territory where such authority is established, and in a position to assert itself.

ARTICLE XLIII. The authority of the legitimate power having actually passed into the hands of the occupant, the latter shall take all steps in his power to re-establish and insure, as far as possible, public order and safety, while respecting, unless absolutely prevented, the laws in force in the country.

ARTICLE XLIV. Any compulsion of the population of occupied territory to take part in military operations against its own country is prohibited.

ARTICLE XLV. Any pressure on the population of occupied territory to take the oath to the hostile Power is prohibited.

ARTICLE XLVI. Family honours and rights, individual lives and private property, as well as religious convictions and liberty, must be respected. Private property cannot be confiscated.

ARTICLE XLVII. Pillage is formally prohibited.

ARTICLE XLVIII. If, in the territory occupied, the occupant collects the taxes, dues, and tolls imposed for the benefit of the State, he shall do it, as far as possible, in accordance with the rules in existence and the assessment in force, and will in consequence be bound to defray the expenses of the administration of the occupied territory on the same scale as that by which the legitimate Government was bound.

ARTICLE XLIX. If, besides the taxes mentioned in the preceding Article, the occupant levies other money taxes in the occupied territory, this can only be for military necessities or the administration of such territory.

ARTICLE L. No general penalty, pecuniary or otherwise, can be inflicted on the population on account of the acts of individuals for which it cannot be regarded as collectively responsible.

ARTICLE LI. No tax shall be collected except under a written order and on the responsibility of a Commander-in-chief. This collection shall only take place, as far as possible, in accordance with the rules in existence and the assessment of taxes in force. For every payment a receipt shall be given to the taxpayer.

ARTICLE LII. Neither requisitions in kind nor services can be demanded from communes or inhabitants except for the necessities of the army of occupation. They must be in proportion to the resources of the country, and of such a nature as not to involve the population in the obligation of taking part in military operations against their country. These requisitions and services shall only be demanded on the authority of the Commander in the locality occupied. The contributions in kind shall, as far as possible, be paid for in ready money; if not, their receipt shall be acknowledged.

ARTICLE LIII. An army of occupation can only take possession of the cash, funds, and property liable to requisition belonging strictly to the State, depôts of arms, means of transport, stores and supplies, and, generally, all movable property of the State which may be used for military operations. Railway plant, land telegraphs, telephones, steamers, and other ships, apart from cases governed by maritime law, as well as depôts of arms and, generally, all kinds of war material, even though belonging to Companies or to private persons, are likewise material which may serve for military operations, but they must be restored at the conclusion of peace, and indemnities paid for them.

ARTICLE LIV. The plant of railways coming from neutral States, whether the property of those States, or of Companies, or of private persons, shall be sent back to them as soon as possible.

ARTICLE LV. The occupying State shall only be regarded as administrator and usufructuary of the public buildings, real property, forests, and agricultural works belonging to the hostile State, and situated in the occupied country. It must protect the capital of these properties, and administer it according to the rules of usufruct.

ARTICLE LVI. The property of the communes, that of religious, charitable, and educational institutions, and those of arts and science, even when State property, shall be treated as private property. All seizure of, and destruction, or intentional damage done to such institutions, to historical monuments, works of art or science, is prohibited, and should be made the subject of proceedings.

SECTION IV.—On the Internment of Belligerents and the Care of the Wounded in Neutral Countries.

ARTICLE LVII. A neutral State which receives in its territory troops belonging to the belligerent armies shall intern them, as far as possible, at a distance from the theatre of war. It can keep them in camps, and even confine them in fortresses or localities assigned for this purpose. It shall decide whether officers may be left at liberty on giving their parole that they will not leave the neutral territory without authorization.

ARTICLE LVIII. Failing a special Convention, the neutral State shall supply the interned with the food, clothing, and relief required by humanity. At the conclusion of peace, the expenses caused by the internment shall be made good.

ARTICLE LIX. A neutral State may authorize the passage through its territory of wounded or sick belonging to the belligerent armies, on condition that the trains bringing them shall carry neither combatants nor war material. In such a case, the neutral State is bound to adopt such measures of safety and control as may be necessary for the purpose. Wounded and sick brought under these conditions into neutral territory by one of the belligerents, and belonging to the hostile party, must be guarded by the neutral State, so as to insure their not taking part again in the military operations. The same duty shall devolve on the neutral State with regard to wounded or sick of the other army who may be committed to its care.

ARTICLE LX. The Geneva Convention applies to sick and wounded interned in neutral territory.

The Convention establishing these regulations was not signed by the delegates from the United States, nor by those of Great Britain. The reasons for abstention on the part of the latter were stated in a communication from the British War Office, as follows: "Lord Lansdowne . . . considers it essential that the revised Articles,

together with the Preamble and final dispositions, should be submitted to the most careful examination by the high military authorities and by the legal advisers of Her Majesty's Government, before he can pronounce a definitive opinion on the three points raised. Subject to such reserves as may result from this examination, Lord Lansdowne is of opinion that the Project of Convention is in general of such a nature that it may, in principle, be accepted as a basis of instructions for the guidance of the British army, but he is unable, until that examination has been completed, to offer an opinion as to whether it is desirable to enter into an international engagement. Lord Lansdowne would therefore suggest, for Lord Salisbury's consideration, that instructions should be given to Sir Julian Pauncefote to reserve full liberty for Her Majesty's Government, to accept only such Articles as, after mature examination by their military and legal advisers, they may approve of." Probably the delegates from the United States were similarly instructed by their government.

Added to the Convention relative to Laws and Customs of War were three Declarations, separately signed, as follows:

1. "The contracting powers agree to prohibit, for a term of five years, the launching of projectiles and explosives from balloons, or by other new methods of a similar nature."

2. "The contracting parties agree to abstain from the use of bullets which expand or flatten easily in the human body, such as bullets with a hard envelope which does not entirely cover the core, or is pierced with incisions."

3. "The contracting parties agree to abstain from the use of projectiles the object of which is the diffusion of asphyxiating or deleterious gases."

The first of these Declarations was signed by the delegates from the United States, but not by those from Great Britain. The second and third were signed by neither British nor American representatives. In the discussion that preceded the adoption of the second Declaration by a majority of the Conference, Captain Crozier, of the American delegation, presented the objections to it, on which he and his colleagues were in agreement with the British representatives. He said "there was a great difference of opinion as to whether the bullets of small calibre rifles sufficed to put men 'hors de combat,' which was admitted on all sides to be the object which rifle fire was expected to achieve. He considered the proposition before the Conference to be unsatisfactory, since it limited the prohibition to details of construction which only included a single case, and left all others out of consideration. He would not enter into a recapitulation of all the advantages of small calibre rifles, since they were perfectly well known; but he felt sure that certain Powers might adopt calibres even smaller than those at present in use, and, in this case, he maintained that they would be compelled to secure increased shock by some new method of construction of the projectile. He considered that it would be perfectly easy to devise such projectiles while keeping within the terms of the proposed interdiction, and he thought that the result might be the ultimate adoption of a bullet of an even less humane character than those aimed at by the Resolution. He declared that he had nothing to say for or against the Dum-Dum bullet [see, in this vol., DUM-DUM BULLET], of which he knew nothing except what had been stated during the meetings of the First Commission, but that he was not disposed to make any condemnation without proofs, and these proofs had not been forthcoming."

As for the third Declaration, it was opposed by Captain Mahan, who spoke for the Americans, because "he considered the use of asphyxiating shell far less inhuman and cruel than the employment of submarine boats, and as the employment of submarine boats had not been interdicted by the Conference (though specially mentioned with that object in the Mouravieff Circular), he felt constrained to maintain his vote in favour of the use of asphyxiating shell on the original ground that the United States' Government was averse to placing any restriction on the inventive genius of its citizens in inventing and providing new weapons of war."

Convention for the adaptation to maritime warfare of the principles of the Geneva Convention of August 22, 1864.

ARTICLE I. Military hospital-ships, that is to say, ships constructed or assigned by States specially and solely for the purpose of assisting the wounded, sick, or shipwrecked, and the names of which shall have been communicated to the belligerent Powers at the commencement or during the course of hostilities, and in any case before they are employed, shall be respected and cannot be captured while hostilities last. These ships, moreover, are not on the same footing as men-of-war as regards their stay in a neutral port.

ARTICLE II. Hospital-ships, equipped wholly or in part at the cost of private individuals or officially recognized relief Societies, shall likewise be respected and exempt from capture, provided the belligerent Power to whom they belong has given them an official commission and has notified their names to the hostile Power at the commencement of or during hostilities, and in any case before they are employed. These ships should be furnished with a certificate from the competent authorities, declaring that they had been under their control while fitting out and on final departure.

ARTICLE III. Hospital-ships, equipped wholly or in part at the cost of private individuals or officially recognized Societies of neutral countries, shall be respected and exempt from capture, if the neutral Power to whom they belong has given them an official commission and notified their names to the belligerent Powers at the commencement of or during hostilities, and in any case before they are employed.

ARTICLE IV. The ships mentioned in Articles I, II, and III shall afford relief and assistance to the wounded, sick, and shipwrecked of the belligerents independently of their nationality. The Governments engage not to use these ships for any military purpose. These ships must not in any way hamper the movements of the combatants. During and after an engagement they will act at their own risk and peril. The belligerents will have the right to control and visit them; they can refuse to help them, order them off, make them take a certain course, and put a Commissioner on board; they can even detain them, if important circumstances require it. As far as

possible the belligerents shall inscribe in the sailing papers of the hospital-ships the orders they give them.

ARTICLE V. The military hospital-ships shall be distinguished by being painted white outside with a horizontal band of green about a metre and a half in breadth. The ships mentioned in Articles II and III shall be distinguished by being painted white outside with a horizontal band of red about a metre and a half in breadth. The boats of the ships above mentioned, as also small craft which may be used for hospital work, shall be distinguished by similar painting. All hospital-ships shall make themselves known by hoisting, together with their national flag, the white flag with a red cross provided by the Geneva Convention.

ARTICLE VI. Neutral merchantmen, yachts, or vessels, having, or taking on board, sick, wounded, or shipwrecked of the belligerents, cannot be captured for so doing, but they are liable to capture for any violation of neutrality they may have committed.

ARTICLE VII. The religious, medical, or hospital staff of any captured ship is inviolable, and its members cannot be made prisoners of war. On leaving the ship they take with them the objects and surgical instruments which are their own private property. This staff shall continue to discharge its duties while necessary, and can afterwards leave when the Commander-in-chief considers it possible. The belligerents must guarantee to the staff that has fallen into their hands the enjoyment of their salaries intact.

ARTICLE VIII. Sailors and soldiers who are taken on board when sick or wounded, to whatever nation they belong, shall be protected and looked after by the captors.

ARTICLE IX. The shipwrecked, wounded, or sick of one of the belligerents who fall into the hands of the other, are prisoners of war. The captor must decide, according to circumstances, if it is best to keep them or send them to a port of his own country, to a neutral port, or even to a hostile port. In the last case, prisoners thus repatriated cannot serve as long as the war lasts.

ARTICLE X. The shipwrecked, wounded, or sick, who are landed at a neutral port with the consent of the local authorities, must, failing a contrary arrangement between the neutral State and the belligerents, be guarded by the neutral State, so that they cannot again take part in the military operations. The expenses of entertainment and internment shall be borne by the State to which the shipwrecked, wounded, or sick belong.

ARTICLE XI. The rules contained in the above Articles are binding only on the Contracting Powers, in case of war between two or more of them. The said rules shall cease to be binding from the time when, in a war between the Contracting Powers, one of the belligerents is joined by a non-Contracting Power.

ARTICLE XII. The present Convention shall be ratified as soon as possible. The ratifications shall be deposited at The Hague. On the receipt of each ratification a "procès-verbal" shall be drawn up, a copy of which, duly certified, shall be sent through the diplomatic channel to all the Contracting Powers.

ARTICLE XIII. The non-Signatory Powers who accepted the Geneva Convention of the 22d August, 1864, are allowed to adhere to the present Convention. For this purpose they must make their adhesion known to the Contracting Powers by means of a written notification addressed to the Netherland Government, and by it communicated to all the other Contracting Powers.

ARTICLE XIV. In the event of one of the High Contracting Parties denouncing the present Convention, such denunciation shall not take effect until a year after the notification made in writing to the Netherland Government, and forthwith communicated by it to all the other Contracting Powers. This denunciation shall only affect the notifying Power.

In faith of which the respective Plenipotentiaries have signed the present Convention and affixed their seals thereto.

[Signed by the representatives of Belgium, Denmark, Spain, Mexico, France, Greece, Montenegro, the Netherlands, Persia, Portugal, Roumania, Russia, Siam, Sweden and Norway, and Bulgaria]

PERU: A. D. 1894-1899.—Overthrow of an unconstitutional government.—Legitimate authority restored.—The death of President Bermudez, in March, 1894, brought about a revolutionary movement in the interest of ex-President Caceres. Constitutionally, the First Vice-President, Dr. del Solar, would have succeeded the deceased President, until a new election was held; but the Second Vice-President, who was a partisan of Caceres, and who had the army with him, seized control of the government. In May, Caceres was proclaimed Provisional President, and in August it was claimed for him that he had been elected by Congress; but the election was not recognized by his opponents. A formidable rebellion was organized, under the lead of ex-President Pierola, who had been in exile and now returned. Civil war raged for nearly a year, Pierola gaining steadily. In February, 1895, his forces reached the capital and laid siege to it. On the 17th of March they entered the city, and there was desperate fighting in the streets of Lima for three days, nearly 2,000 of the combatants being killed and more than 1,500 wounded. Chiefly through the efforts of the Papal delegate, the bloody conflict was finally stopped and terms of peace arranged. A provisional government, made up from both parties, was formed, under which a peaceable election was held in the following July. Pierola was then elected President. Caceres and his partisans attempted a rising the next year (1896), but it had no success. In the northern department of Loreto, on the border of Ecuador, an abortive movement for independence was set on foot by an ambitious official, who gave the government considerable trouble, but accomplished nothing more. In 1899, President Pierola was succeeded by Eduardo L. de Romana, elected in May. A rebellion attempted that year by one General Durand was promptly suppressed.

PHILADELPHIA: A. D. 1897.—Opening of the Commercial Museum.—A Commercial Museum which has acquired great importance was opened in Philadelphia on the 2d of June, 1897. "In both aim and results the institution is unique. Other countries, also, have their commercial museums, which are doing excellent work. Their scope, however, is much more limited; the Museum of Philadelphia differing from them in that it is an active, not merely a passive, aid to the prospective exporter. The foreign museums, situated in London, Bremen, Hamburg, Stuttgart, Vienna, Havre, Brussels, and various other commercial centres, do not extend active aid, but content themselves with more or less complete displays of samples of domestic and foreign competitive goods sold in export markets. The theory of their organization is, that the manufacturer, contemplating a foreign business campaign, will be enabled to pursue it intelligently through the study of these samples. The initiative is left to the exporter himself, who must discover what opportunities exist for him abroad; and it is also left to him to take advantage of his opportunities in the way that may seem best to him. The display of manufactured samples is only a small part of the work of the Philadelphia Museum. This institution shows not only what goods are sold in foreign markets, but also where those markets are, what commercial conditions obtain in connection with them, what particular kinds of goods they demand, how these markets may be best competed for, and where the raw material may be most profitably purchased. It furnishes information, furthermore, as to business connections as well as the credit ratings of the agents or firms recommended. To secure specific information it is not necessary to visit the institution itself; for reports of trade opportunities abroad are distributed by the Museum to its members; and these reports are provided with photographs of many of the articles which, at that particular time, are in demand, in certain parts of the world. Under these circumstances, the exporter is practically provided with a staff of expert, foreign representatives, without any expense to himself beyond the merely nominal fee for membership. While its activities are dependent to a certain extent upon the income derived from subscribers, the Museum is not a money-making institution. Indeed, its income from this source does not cover half the expenditures. It is enabled to carry on its work only by reason of the generous, annual appropriation provided for it by the City Councils of Philadelphia. But a very large income is required to maintain a staff of 150 employees in Philadelphia, as well as 500 regular and several thousand occasional correspondents scattered throughout the world. The only advantage which the city itself derives from the Museum is that resulting indirectly from the presence of foreign buyers attracted to Philadelphia by the Museum's work."—W. P. Wilson, *The Phila. Commercial Museum* (*Forum, Sept.*, 1899).

PHILIPPINE ISLANDS.

Number, area, shore line, and population.—"In regard to the number and areas of the islands in the archipelago there must necessarily be a certain inaccuracy, because the group has never been properly surveyed, and the only method of determining the number and areas is by counting and measuring on the charts. The following figures are probably the best ever compiled. They are drawn from enumeration and mensuration on maps recently obtained by the United States commissioners to the Philippines and which are without doubt the most complete and the most thorough ever made. The following is quoted from the introduction to these maps, which are being published by the United States Coast and Geodetic Survey. All the islands or groups having an area of over 20 square miles have been measured, and the areas are here given in square miles and square kilometers. Many different statements have been made in regard to the number of the islands composing the archipelago. The cause for this must be attributed to the scale of the charts on which the count was made and the difficulty of distinguishing between rocks and formations of sufficient area to dignify them by the name of islands. Thus on a small-scale Spanish chart of the entire group 948 islands were counted; on various large-scale charts of the same area there were found 1,725. The principal islands, with the extent of shore line of some of them and their area, are given on the following lists. The areas were carefully measured, but are subject to the inaccuracy of the charts.

"The following [as to population] is a quotation from an article by W. F. Wilcox, of the United States Census Bureau. It is well to notice that the last official census was in 1887 and that the figures of that census, though probably underestimating the population of the islands, are the ones which, in default of better, we are obliged to take as final. It is probable that these are an understatement of the true population of the Philippines for several reasons, among which is one not observed by Mr. Wilcox, and which is therefore mentioned. It is, of course, only supposition, but is at least suggestive. For every adult counted in the census the officials were obliged to return a poll tax. Thus, for instance, if 100,000 persons were counted 100,000 pesetas would have to be returned to the treasury. It has therefore been supposed that the officials counted, say, 150,000 and returned only 100,000 pesetas and 100,000 names. Mr. Wilcox says (Am. Statistical Assoc. Publ., Sept., 1899): 'The population of the islands in 1872 was stated in a letter to Nature (6:162), from Manila, by Dr. A. B. Meyer, who gives the latest not yet published statistics as his authority. The letter gives the population of nine islands, as follows:

Luzon	4,467,111
Panay	1,052,586
Cebu	427,356
Leite	285,495
Bohol	283,515
Negros	255,873
Samar	250,062
Mindanao	191,802
Mindoro	70,926

"It also gives the population of each of the 43 provinces of the islands. The population was not counted, but estimated. The number who paid tribute was stated as 1,232,544. How this was ascertained we are not informed. The total population, 7,451,352, was approximated 'on the supposition that about the sixth part of the whole has to pay tribute.' In reality this population is 6.046 times the assigned tribute-paying population. But Dr. Meyer adds: 'As there exist in all the islands, even in Luzon, independent tribes and a large number in Mindanao, the number of 7,451,352 gives no correct idea of the real population of the Philippines. This is not known at all and will not be known for a long time to come.'

"Since 1872 there have been actual enumerations of the Philippines, but authorities differ as to the time when they occurred and the detailed results. These enumerations were usually confined to the subject and Catholic population, and omitted the heathen, Mohammedan, and independent tribes. Four reports of the entire population have been printed: 1. A report made by the religious orders in 1876 or 1877, in which the nationalities and creeds of the population were distinguished. 2. A manuscript report to Professor Blumentritt of the enumeration made by the religious orders in December, 1879. 3. The official report of the civil census of December 31, 1877, contained in Reseña geog. y estad. de España, 1888, p. 1079. 4. The official report upon the census taken by the civil officers December 31, 1887, and printed in the first volume of Censo de la Poblacion de España, at Madrid, in 1891. The first two may be compared, and tend somewhat to corroborate each other, as follows:

1. Tribute-paying natives	5,501,356
2. Army	14,545
3. Navy	2,924
4. Religious officers (Geistlichkeit)	1,962
5. Civil officers	5,552
6. Other Spaniards	13,265
Total Spaniards	38,248

	1876-77.	1879.
Total Catholics	5,539,604	5,777,522
Heathen and Mohammedan natives	602,853	632,645
Foreigners (in 1876 there were: British, 176; German, 109; Americans, 42; French, 30)	378	592
Chinese	30,797	39,054
Total	6,173,632	6,449,813

"The third enumeration reported 5,567,685 as the tribute-paying population. To this number should be added the estimated number of the independent tribes, 'Indios no sometidos'; this according to the missionaries' count was about 600,000, making a total of 6,167,685. Most experts agree that this official report is untrustworthy and involves serious omissions, but believe that the facts are so imperfectly known that they are unable to correct it. One author, del Pac, writing in 1882, started from the missionaries' census of 1876–77, viz, 6,173,632, assumed that this omitted as many as 600,000 members of independent tribes and that the increase of 1876–1882 would be 740,000. In this way he got 7,513,632. A second writer, Sanciano, estimated the population in 1881 as 10,260,249. The missionaries made an estimate of their own in 1885 which showed 9,529,841.

"The fourth enumeration of those mentioned above showed a population of 5,985,123 in 1887, and the totals both for the group as a whole and for the fifty odd provinces tend to confirm and to be confirmed by the civil count of 1877. This number, however, represents only the nominally Catholic or tribute-paying population. To it

must be added the Mohammedan or heathen tribes set down by clerical authorities as about 600,000. Perhaps the highest authority in this field, Professor Blumentritt, is confident that this number does not include all the independent tribes, but only those in the mountains who have a special arrangement freeing them from all the dues of the subject tribes. On the whole, therefore, Prof. H. Wagner is inclined to estimate these omissions of independent or non-Christian tribes at about 1,000,000 and the population of the group at about 7,000,000. This result is indorsed by the latest German authority, Hübner's Geographisch-Statistische Tabellen for 1898, which gives the population as 5,985,124 + 1,000,000=6,985,124, as follows:

	Spanish census.	Estimated number not counted.
Luzon and adjacent islands	3,443,000	150,000
Mindoro and Masbate	126,000	100,000
Visayas Archipelago	2,181,000	200,000
Mindanao	209,000	400,000
Calamianes and Palawan	22,000	50,000
Jolo (Sulu) Islands	4,000	100,000
Total	5,985,000	1,000,000

"Personally I am disposed to suspect that this number, although called by Professor Wagner an outside estimate, is below rather than above the truth. In favor of this position it may be urged that Professor Wagner's estimate makes no allowance either for the natural increase of population, 1887–1898, or for the fact that the first careful census of densely populated regions, like India and Japan, usually reveals a larger population than had been previously estimated. This analogy might reasonably be applied to Luzon and the Visayas."—*United States, 56th Cong., 1st Sess., Senate Doc. No.* 171, *pp.* 4–7.

The native inhabitants.—"The inhabitants of the Philippines belong to three sharply distinct races—the Negrito race, the Indonesian race, and the Malayan race. It is universally conceded that the Negritos of to-day are the disappearing remnants of a people which once populated the entire archipelago. They are, physically, weaklings of low stature, with black skin, closely-curling hair, flat noses, thick lips, and large, clumsy feet. In the matter of intelligence they stand at or near the bottom of the human series, and they are believed to be incapable of any considerable degree of civilization or advancement. Centuries ago they were driven from the coast regions into the wilder interior portions of the islands by Malay invaders, and from that day to this they have steadily lost ground in the struggle for existence, until but a few scattered and numerically insignificant groups of them remain. . . . It is believed that not more than 25,000 of them exist in the entire archipelago, and the race seems doomed to early extinction. . . .

"So far as is at present known, the Philippine tribes belonging to the Indonesian race are confined to the great island of Mindanao, the surface of which constitutes about one-third of the total land area of the archipelago. . . . The Philippine representatives of this race are physically superior not only to the Negritos, but to the more numerous Malayan peoples as well. They are tall and well developed, with high foreheads, aquiline noses, wavy hair, and often with abundant beards. The color of their skins is quite light. Many of them are very clever and intelligent. None of the tribes have been Christianized. Some of them have grown extremely fierce and warlike as a result of their long struggle with hostile Malayan peoples. Others, more happy in their surroundings, are pacific and industrious.

"The great majority of the inhabitants of the Philippines are of Malayan extraction, although the race is not found pure in any of the islands, but is everywhere more or less modified through intermarriage with Chinese, Indonesians, Negritos, Arabs, and, to a limited extent, Spaniards and other Europeans. The individuals belonging to these Malayan tribes are of medium size, with straight black hair. As a rule the men are beardless, and when they have a beard it is usually straggling, and appears late in life. The skin is brown and distinctly darker than that of the Indonesians, although very much lighter than that of the Negritos. The nose is short and frequently considerably flattened. The representatives of these three races are divided into numerous tribes, which often differ very greatly in language, manners, customs, and laws, as well as in degree of civilization. . . .

"Any estimate of the total population must manifestly depend on the number of inhabitants assigned to the various wild tribes, of which there are no less than 69. For the purposes of this report the commission has adopted as the total figure 8,000,000, considering this a conservative estimate. Baranera, whose figures are believed to be carefully prepared, places the total at 9,000,000. The extent of territory occupied in whole or in part by each of the more important civilized tribes can be estimated with a greater degree of accuracy, and is approximately as follows: Visayans (occupying 28,100 square miles) 2,601,600; Tagalogs (15,380 sq. miles) 1,663,900; Bicols (6,900 sq. miles) 518,100; Ilocanos (6,170 sq. miles) 441,700; Pangasinans (1,950 sq. miles) 365,500; Pampangas (1,950 sq. miles) 337,900; Moros (12,860 sq. miles) 268,000; Cagayans (11,500 sq. miles) 166,300. All of these peoples, although ignorant and illiterate, are possessed of a considerable degree of civilization, and, with the exception of the Mohammedan Moros, are Christianized."—*Philippine Commission, Report, Jan.* 31, 1900, *v.* 1, *pp.* 11–15.

A. D. 1896-1898.—The Katipunan and the rising against Spanish rule.—Appearance of Aguinaldo as a leader.—Dr. José Rizal.—The Treaty of Biac-na-bato.—Departure of Aguinaldo and his return with the American forces.—The Philippine Islands, discovered in 1521 by Magellan (or Maghallanes or Magalhaes), and occupied by the Spaniards in 1565, seems, for a long period, to have interested that people more as a missionary than as a commercial field. Indeed, the doings of the church and of the religious orders, and the acceptance of Roman teachings of Christianity by the greater part of the native population, make up the essential history of the Philippines until quite recent times. If the islands had offered gold mines, or pearl fisheries, or spice forests to their European discoverers, the story would certainly have been different. As it was, the Spaniards were not moved to much eagerness in exploiting such resources of commerce as they found; and so, through fortunate circumstances, the

PHILIPPINE ISLANDS, 1896–1898.

natives were made converts instead of slaves. By missionaries, more than by soldiers, they were subdued; by the church, more than by the Spanish state, they were ruled. It is certain that there were great corruptions and oppressions in the government, and it follows that a large share of responsibility for them rests on those who controlled the affairs of the church. For the past hundred years, at least, the more spirited part of the native population has been restive under the misrule and its burdens, and frequent attempts at insurrection have been made. Such an outbreak in 1872 was suppressed and punished with a vengefulness, in executions and banishment, which rankled ever afterwards in the hearts of the people.

A secret society, called the "Katipunan," or League, was then formed, which became a revolutionary organization, and from which sprang the most serious of Filipino rebellions, in 1896. The province of Cavite was the center of revolt, and it was there that Emilio Aguinaldo, then the schoolmaster at Silan, came into prominence as a leader. Mr. John Foreman, who was in the Philippines at the time of the insurrection, states that Aguinaldo was personally humane, but fearful atrocities were committed in the first months of the rising by some of the insurgents of his band. One captured priest, according to Mr. Foreman's account, "was cut up piecemeal; another was saturated with petroleum and set on fire; and a third was bathed in oil and fried on a bamboo spit run through the length of his body." The Spaniards, on their side, were equally inhuman in their treatment of captured rebels and "suspects." Says Mr. Foreman: "About 600 suspects were confined in the dungeons of Fort Santiago at the mouth of the Pasig River. Then occurred a frightful tragedy. The dungeons are below water-mark at high tide; the river filtered in through the crevices in the ancient masonry; thus twice a day these unfortunates were up to their waists or necks in water, according to the height of the men. The Spanish sergeant on duty threw his rug over the only light and ventilating shaft, and, in a couple of days, carts were seen by many citizens carrying away the dead, calculated to number 70. Provincial governors and parish priests seemed to regard it as a duty to supply the capital with batches of 'suspects' from their localities. In Vigan, where nothing had occurred, many of the heads of the best families and monied men were arrested and brought to Manila in a steamer. They were bound hand and foot, and carried like packages of merchandise in the hold. I happened to be on the quay when the steamer discharged her living freight, with chains and hooks to haul up and swing out the bodies like bales of hemp. . . .

"Thousands of peaceful natives were treated with a ferocity which would have shocked all Europe. . . . Within three months of the outbreak, hundreds of the richest natives and half-castes in Manila were imprisoned for a few days and released conditionally"—the condition being a payment of ransom, sometimes said to be as high as $40,000. But General Blanco, the then Governor-General, was not vigorous enough in his measures to satisfy the all-powerful clerical party in the islands, and he was replaced by General Polaveja, who received large reinforcements from Spain, and who succeeded in breaking the strength of the rebellion to a great extent. But the character of Polaveja's administration is thus described by Mr. Foreman: "Apart from the circumstances of legitimate warfare, in which probably neither party was more merciful than the other, he initiated a system of striking terror into the non-combatant population by barbarous tortures and wholesale executions. . . . Men were escorted to the prisons by pure caprice and subjected to horrible maltreatment. Many of them were liberated in the course of a few days, declared innocent, but maimed for life and forever unable to get a living. . . . The only apparent object in all this was to disseminate broadcast living examples of Spanish vengeance." The most notable victim at this period was Dr. José Rizal, a physician, highly educated in Europe, distinguished as an oculist, and the author of certain novels in which the condition of things in his native country was set forth. On his return to the Islands, Dr. Rizal incurred the enmity of the friars by opposing them, and was pursued by their hostility. From 1893 to 1896 he was kept in banishment, closely watched, at a small town in the island of Mindanao. Then he sought and obtained permission to go to Cuba in the medical staff of the Spanish army; but, just as he arrived at Manila, on his way to Spain, the insurrection of 1896 broke out, and though he was suffered to depart, his enemies pursued him with accusations of complicity in the rising and caused him to be brought back. Says Mr. Foreman, who was an eye-witness of what occurred: "Not a few of us who saw the vessel leave wished him 'God speed.' But the clerical party were eager for his extermination. . . . The lay authorities always had to yield to the monks, and history herein repeated itself. Dr. Rizal was cabled for to answer certain accusations, and so on his landing in the Peninsula he was incarcerated in the celebrated fortress of Montjuich (the scene of so many horrors), pending his re-shipment by the returning steamer. He reached Manila as a state prisoner in the Colon, isolated from all but his jailors. It was materially impossible for him to have taken any part in the rebellion, whatever his sympathies may have been." Nevertheless, he was tried by court-martial for sedition and rebellion, condemned and shot; and his memory is cherished in the islands as that of a martyred patriot. "The decree of execution was one of Polaveja's foulest acts."

Having scotched but not killed the insurrection, Polaveja went home, with broken health, in the spring of 1897, and was succeeded by General Primo de Rivera, who, after some months of continued warfare, opened negotiations with Aguinaldo, the recognized leader of the revolt. The result was a treaty, known as the "Pacto de Biac-na-bato, signed December 14. By this treaty "the rebels undertook to deliver up their arms and ammunition of all kinds to the Spaniards; to evacuate the places held by them; to conclude an armistice for three years for the application and development of the reforms to be introduced by the other part, and not to conspire against Spanish sovereignty in the Islands, nor aid or abet any movement calculated to counteract the reforms. Emilio Aguinaldo and 34 other leaders undertook to

quit the Philippine Islands, and not to return to them until so authorised by the Spanish Government. On behalf of the Spanish Government it was agreed to pay, through the medium of Pedro A. Paterno, to the rebels the sum of $1,000,000, and to the families who had sustained loss by reason of the war $700,000, in instalments and conditionally,"—the condition being that no renewal of rebellion or conspiracy occur. Aguinaldo and other chiefs of the insurrection left the Islands, accordingly; but they are said to have been utterly duped. One instalment, only ($400,000), of the promised money was ever paid; the promised reforms were not carried out, and persecution of those who had been in sympathy with the rising was renewed.—J. Foreman, *The Philippine Islands, ch.* 26 (*N. Y.: Chas. Scribner's Sons*).

"Aguinaldo and his associates went to Hongkong and Singapore. A portion of the money, $400,000, was deposited in banks at Hongkong, and a lawsuit soon arose between Aguinaldo and one of his subordinate chiefs named Artacho, which is interesting on account of the very honorable position taken by Aguinaldo. Artacho sued for a division of the money among the insurgents according to rank. Aguinaldo claimed that the money was a trust fund, and was to remain on deposit until it was seen whether the Spaniards would carry out their promised reforms, and if they failed to do so, it was to be used to defray the expenses of a new insurrection. The suit was settled out of court by paying Artacho $5,000. No steps have been taken to introduce the reforms, more than 2,000 insurgents, who had been deported to Fernando Po and other places, are still in confinment, and Aguinaldo is now using the money to carry on the operations of the present insurrection."—F. V. Greene, *Memorandum concerning the Situation in the Philippines, Aug.* 30, 1898 (*Treaty of Peace and Accompanying Papers: 55th Cong., 3d Sess., Senate Doc. No.* 62, *pt.* 1, *p.* 421.

A. D. 1898 (August—December).—The state of things following the occupation of Manila by American forces.—Growing distrust and unfriendliness of the Tagalos.—General Otis's report.—Of the state of things which followed the departure of General Merritt, August 30, General Otis, who succeeded him in command, reported subsequently as follows:

"Until October 14 [1898], the United States troops in the Philippines remained stationed at Manila and Cavite, as provided in General Merritt's orders of August 23, with very slight exceptions, Major-General Anderson retaining supervision of the district of Cavite and Major-General MacArthur of the troops stationed in Manila, the three organizations composing the provost guard continuing, however, under the control of Brigadier-General Hughes. They were most bountifully supplied with subsistence and medicines, but light clothing suited to the climate and facilities necessary for occupying and messing in barracks were needed. These were soon obtained through contract and purchase from the merchants of Hongkong and Manila and by shipment from the United States. The troops received tactical instructions daily, but the weather was too hot for much physical exertion, and time hung heavily upon them. They entertained the impression that the Spanish war had terminated, and the volunteers appeared to believe that they should be recalled to the United States at once and regular troops sent out to perform the monotonous garrison duties which were about to follow the victory of Manila. Many became ill from too free indulgence in the fruits and manufactured drinks of the country, and indifference to that care and attention of person which a tropical climate makes necessary. Homesickness alone produced illness in numerous cases, so that early in September the hospitals began to be rapidly filled. This led to the adoption of judicious precautionary measures. . . . In November improvement was noticeable, and in January the health of this army would compare favorably with those of any concentrated army of like proportions in existence. To be sure the men had become by this time fairly acclimatized, and new troops arriving here will be obliged to pass through this period of acclimatization before they become properly efficient for prolonged service in the field.

"During my first weeks of duty here I was impressed with the spirit of suspicion and the partially concealed unfriendly feeling manifested by the Tagalos toward the American forces. That they either had very little confidence in our promises or were then forming conclusions to oppose any establishment of United

States authority in Luzon was apparent, however loudly they might disclaim hostile intent or declare as an excuse for their attitude fear of the return of Spain. I saw, however, with satisfaction, their ablest men by education and mental equipment taking part in their authoritative deliberations, and I had considerable confidence in the efficacy of their suggestions and advice. Still, after carefully weighing conditions, I was unable to arrive at any satisfactory conclusions. . . .

"Measures were being applied constantly to improve the sanitary condition of the city, to increase the efficiency of the troops, and to meet any emergency which might develop from an uprising of the inhabitants, or from hasty action by any portion of our or the insurgent forces, which, though maintaining amicable intercourse, were, in fact, in an attitude of resistance and hostility upon all questions involving the right of armed occupation of the suburbs and defenses of Manila. The insurgent soldiers had looted extensively the portions of the city to which they gained access, and were greatly disappointed that this privilege over other parts of the same was not accorded them. Their enforced withdrawal to outer lines was the cause of discontent, and augmented any desire which they may have formerly entertained to resist or attack the American troops. This growing discontent was observable among the lower classes of the city's inhabitants, from whom a considerable share of Aguinaldo's army was drawn, and was undoubtedly increased by the reprehensible conduct and illegal actions of some of our own men, who were severely punished for their misdeeds when detected. Outwardly, however, relations of the most friendly character were maintained. The officers and enlisted men of the two armies mingled in friendly social intercourse. To the casual observer the only discordant element in this dense complex population, made up of every nation and tongue in existence, were the hated Spanish prisoners, whom the Filipinos still longed to persecute and kill, and who were obliged to keep within the walls of Old Manila for safety. Repeated conferences were held with influential insurgents, whose chief aim appeared to be to obtain some authoritative expression on the intent of the United States with regard to the Philippines, and complained that they were unable to discover anyone who could speak ex cathedra. They asserted that their Malolos arrangement was a government de facto, which had the right to ask an expression of intent from the United States Government. . . .

"My own confidence at this time in a satisfactory solution of the difficulties which confronted us may be gathered from a dispatch sent to Washington on December 7, wherein I stated that conditions were improving and that there were signs of revolutionary disintegration; that I had conferred with a number of the members of the revolutionary government and thought that the most of them would favor peaceful submission to United States authority. I had strong reasons for this expressed confidence from assurances made to me by some of the ablest Filipinos who had occupied positions of importance in the insurgent government and had signified their intention to withdraw from it."—*Report of General Otis, Aug.* 31, 1899 (*Message and Documents: Abridgment*, 1899–1900, *v.* 2, *pp.* 1048–52).

A. D. 1898 (August—December).—The state of things following the occupation of Manila, as represented by English witnesses.—The writer of the following remarks, in an interesting book on "The Inhabitants of the Philippines," published late in 1900, is an English civil engineer, who had resided in Luzon for fourteen years and knew the country and people thoroughly well: "Personally, I think that if a sympathetic and conciliatory attitude had been adopted, had the local government established been recognized, had Aguinaldo and his staff been given commissions in the Native Army or Civil Service, and the flower of the Tagal Army taken into the service of the United States, a peaceful settlement could have been made on the lines of a Protectorate. I therefore look upon the war as unnecessary, and consider the lives already sacrificed, and that will have to be sacrificed, as absolutely thrown away. The tragical side of American unpreparedness is manifest in the state of anarchy in which the whole Archipelago has been plunged by the American unreadiness to occupy the military posts as soon as they were vacated by the Spanish garrisons. A hideous orgy of murder, plunder, and slave-raiding has prevailed in Visayas, and especially in Mindanao.

"Three conditions were essential to a peaceful settlement: First.—A broad-minded and sympathetic representative of America, fully authorized to treat, and a lover of peace. Second.—A strict discipline amongst the American forces. Third.—The principal aim and object of the Tagal insurrection must be secured.

"General Otis does not seem to me to fulfil the first condition, he lacked prestige and patience, and he showed that he had an insufficient conception of the magnitude of his task by occupying himself with petty details of all kinds and by displaying an ill-timed parsimony. Apparently he had no power to grant anything at all, and only dealt in vague generalities which the Tagals could not be expected to accept.

"As regards the second point, I regret that I am not personally acquainted with the gentlemen from Nebraska, Colorado, Dakota and other states serving in the United States Army or volunteers. I have no doubt that they are good fighting-men, but from all I can hear about them they are not conspicuous for strict military discipline, and too many of them have erroneous ideas as to the most suitable drink for a tropical climate. Manila was in the time of the Spaniards a most temperate city; a drunken man was a very rare sight, and would usually be a foreign sailor. Since the American occupation, some hundreds of drinking saloons have been opened, and daily scenes of drunkenness and debauchery have filled the quiet natives with alarm and horror. When John L. Motley wrote his scathing denunciation of the army which the great Duke of Alva led from Spain into the Low Countries, to enforce the high religious purposes of Philip II., he could not foresee that his words would be applicable to an American Army sent to subjugate men struggling to be free 'for their welfare, not our gain,' nor that this army, besides bringing in its train a flood of cosmopolitan harlotry, would be allowed by its commander to inaugurate amongst a strictly temperate people a mad satur-

nalia of drunkenness that has scarcely a parallel. Such, however, is undoubtedly the case, and I venture to think that these occurrences have confirmed many of the Tagals in their resolve rather to die fighting for their independence than to be ruled over by such as these."—F. H. Sawyer, *The Inhabitants of the Philippines, p.* 113–114 (*N. Y.: Chas. Scribner's Sons*).

Substantially the same account of things at Manila in this period has been given in a magazine article by Mr. John Foreman, the well known writer on the Philippine Islands. "The conduct," he declares, "of the boisterous, undisciplined individuals who formed a large percentage of the first volunteer contingents sent to Manila had had an ineffaceably demoralizing effect on the proletariat, and has inspired a feeling of horror and loathful contempt in the affluent and educated classes who guide the Philippine public opinion. From the outset it was a mistake to treat the Christian Philippine population like savages ignorant of western civilization, considering that there are thousands of Filipinos mentally equal to the invading forces, and comparable, in intellectual training, with the average middle-class Europeans.

"Within a fortnight after the capitulation of Manila the drinking saloons had increased fourfold. According to the latest advices, there are at least twenty to one existing in the time of the Spaniards. Drunkenness, with its consequent evils, is rife all over the city among the new white population. The orgies of the new-comers, the incessant street brawls, the insults offered with impunity to natives of both sexes, the entry with violence into private houses by the soldiery, who maltreated the inmates and laid hands on what they chose, were hardly calculated to arouse in the natives admiration for their new masters. Brothels were absolutely prohibited under the Spanish rule, but since the evacuation there has been a great influx of women of ill fame, whilst native women have been pursued by lustful tormentors. During a certain period after the capitulation there was indiscriminate shooting, and no peaceable native's life was safe in the suburbs. Adventurers of all sorts and conditions have flocked to this centre of vice, where the sober native is not even spoken of as a man by many of the armed rank and file, but, by way of contempt, is called a yuyu. A few miles from Manila, the villages of Mandaloyan and Sant Ana were looted by the victors, much of the spoil being brought up to the capital and included in auction sales or sold to the Chinese. In Taal the houses of families, with whom I have been long acquainted, were ransacked, effects of little value, or too difficult to transport, being carelessly strewn about from sheer wantonness. And presumably no greater respect for private property was shown in the other numerous villages overrun by the invaders. . . .

"The situation then during this period was somewhat as follows: The Filipinos, aided by Dewey's victory, had driven the Spaniards from practically the whole Archipelago except the city of Manila, they had established a government of their own, and they looked upon the country as belonging both by nature and by right of conquest to them. We upon the other hand, having destroyed the Spanish fleet and captured the city of Manila, and being in the process of acquiring by treaty the Spanish title to the whole country regarded it as belonging to us. The situation was therefore critical."—J. Foreman, *Will the United States withdraw from the Philippines?* (*National Rev., Sept.*, 1900).

A. D. 1898 (September—December).—Instructions from the President of the United States to the Commissioners for the negotiation of peace with Spain concerning the Philippine Archipelago.—Cession of the Islands to the United States. See (in this vol.) UNITED STATES OF AM.: A. D. 1898 (JULY—DECEMBER).

A. D. 1898 (October—November).—State of the country under the native government of Aguinaldo, as witnessed by two U. S. naval officers who traversed it.—Conflicting opinions as to the fitness of the Filipinos for self-government.—During October and November, 1898, while the only authority in Luzon, outside of Manila and Cavite, was that exercised by the native government organized under Aguinaldo, two American naval officers, Paymaster W. B. Wilcox and Cadet Leonard R. Sargent, with permission from Admiral Dewey, made a tour of observation through seven provinces of the island, and rendered a report of what they saw and what they experienced, which Admiral Dewey sent to Washington, commending it to the attention of the government as containing "the most complete and reliable information obtainable in regard to the present state of the northern part of Luzon Island." Subsequently Mr. Sargent wrote articles descriptive of the journey, which were published in "The Outlook" and "The Independent," and which were reprinted, with the official report, in a document compiled for the U. S. Senate. The following is from the article in "The Outlook," September 2, 1899:

"Although this government has never been recognized, and in all probability will go out of existence without recognition, yet it cannot be denied that, in a region occupied by many millions of inhabitants, for nearly six months it stood alone between anarchy and order. The military forces of the United States held control only in Manila, with its environs, and in Cavite, and had no authority to proceed further; while in the vast remaining districts the representatives of the only recognized power on the field were prisoners in the hands of their despised subjects. It was the opinion at Manila during this anomalous period in our Philippine relations, and possibly in the United States as well, that such a state of affairs must breed something akin to anarchy. I can state unreservedly, however, that Mr. Wilcox and I found the existing conditions to be much at variance with this opinion. During our absence from Manila we travelled more than 600 miles in a very comprehensive circuit through the northern part of the island of Luzon, traversing a characteristic and important district. In this way we visited seven provinces, of which some were under the immediate control of the central government at Malolos, while others were remotely situated, separated from each other and from the seat of government by natural divisions of land, and accessible only by lengthy and arduous travel. As a tribute to the efficiency of Aguinaldo's government and to the law-abiding character of his subjects, I offer the fact that Mr. Wilcox and I pursued our journey throughout in perfect security, and returned to Manila with only the most pleasant recollections

of the quiet and orderly life which we found the natives to be leading under the new régime."

The following is from the official report, jointly made by Cadet Sargent and Paymaster Wilcox: "The Philippine officers, both military and civil, that we have met in all the provinces we have visited, have, with very few exceptions, been men of intelligent appearance and conversation. The same is true of all those men who form the upper class in each town. The education of most of them is limited, but they appear to seize every opportunity to improve it. They have great respect and admiration for learning. Very many of them desire to send their children to schools in the United States or Europe. Many men of importance in different towns have told us that the first use to be made of the revenues of their government, after there is no more danger of war, will be to start good schools in every village. The poorer classes are extremely ignorant on most subjects, but a large percentage of them can read and write. . . .

"Of the large number of officers, civil and military, and of the leading townspeople we have met, nearly every man has expressed in our presence his sentiment on this question [of independence]. It is universally the same. They all declare that they will accept nothing short of independence. They desire the protection of the United States at sea, but fear any interference on land. . . .

"There is much variety of feeling among the Philippines with regard to the debt of gratitude they owe the United States. In every town we found men who said that our nation had saved them from slavery, and others who claimed that without our interference their independence would have been recognized before this time. On one point they are united, however, viz., that whatever our Government may have done for them it has not gained the right to annex them. They have been prejudiced against us by the Spaniards. The charges made have been so numerous and so severe that what the natives have since learned has not sufficed to disillusion them. With regard to the record of our policy toward a subject people, they have received remarkable information on two points,—that we have mercilessly slain and finally exterminated the race of Indians that were natives of our soil, and that we went to war in 1861 to suppress an insurrection of negro slaves, whom we also ended by exterminating. Intelligent and well-informed men have believed these charges. They were rehearsed to us in many towns in different provinces, beginning at Malolos. The Spanish version of our Indian problem is particularly well known."—*United States, 56th Congress, 1st Sess., Senate Doc.* 66.

In the third number of the first series of its publications, the Philippine Information Society—see below: A. D. 1899 (JANUARY—FEBRUARY)—has brought together a number of conflicting opinions expressed by various persons concerning the capacity of the Filipinos for self-government, among them the following:

"The population of Luzon is reported to be something over 3,000,000, mostly natives. These are gentle, docile, and under just laws and with the benefits of popular education would soon make good citizens. In a telegram sent to the department on June 23 I expressed the opinion that 'these people are far superior in their intelligence and more capable of self-government than the natives of Cuba, and I am familiar with both races.' Further intercourse with them has confirmed me in this opinion."—Admiral Dewey, *Letter, Aug.* 29, 1898, *replying to inquiry of War Dept.*

"They [the natives] would have to be educated up to it [self-government]. They want a protectorate, but they do not exactly understand what that means. Their idea is that they should collect the revenues and keep them in their treasury, and that we should be at the expense of maintaining an army and a navy there for their protection, which is the kind of a protectorate they would like very much."—General Merritt, *statement before U. S. Peace Commission at Paris, Oct.* 4, 1898.

"If the United States should evacuate these islands, anarchy and civil war will immediately ensue and lead to foreign intervention. The insurgents were furnished arms and the moral support of the navy prior to our arrival, and we cannot ignore obligations, either to the insurgents or to foreign nations, which our own acts have imposed upon us. The Spanish Government is completely demoralized, and Spanish power is dead beyond all possibility of resurrection. . . . On the other hand, the Filipinos cannot govern the country without the support of some strong nation. They acknowledge this themselves, and say their desire is for independence under American protection, but they have only vague ideas as to what our relative positions would be—what part we should take in collecting and expending the revenue, and administering the government."—General F. V. Greene, *Memorandum concerning the Philippine Islands, made Aug.* 27, 1898.

"The capability of the Filipinos for self-government cannot be doubted. Such men as Arellano, Aguinaldo, and many others whom I might name are highly educated; nine tenths of the people can read and write, all are skilled artisans in one way or another; they are industrious, frugal, temperate, and, given a fair start, could look out for themselves infinitely better than our people imagine. In my opinion they rank far higher than the Cubans or the uneducated negroes to whom we have given right of suffrage."—General Charles King, *Letter to Milwaukee Journal, June* 22, 1899.

"Concerning the capacity of the Filipinos to govern themselves I regret to say that I see no reason to change the opinion previously expressed, that they are unfit. I wish my opinion might be otherwise, for I prefer to believe them capable of self-government. There are a number of Filipinos whom I have met, among them General Aguinaldo and a few of his leaders, whom I believe thoroughly trustworthy and fully capable of self-government, and the main reliance for small official positions and many larger ones would be upon people who know no standard of government other than that the Spaniards have furnished. Their sense of equity and justice seems not fully developed, and their readiness to coerce those who come under their power has been strongly illustrated in this city since our occupation. A regularly organized system of blackmail has been instituted under the guise of making subscriptions to the insurgent cause."—Major J. F. Bell [of Engineers, on "secret service"], *Letter to General Merritt, Manila, Aug.* 29, 1898.

"The people are the most enlightened and vigorous branch of the Malay race, and have been Christians for centuries, in fact longer than the principles of the Reformation were established in Great Britain, and are the nearest akin to European people of any alien race, and it is simply ridiculous to imagine that eight to ten millions of such people can be bought and sold as an article of commerce without first obtaining their consent. Let all those who are greedy for a slice of the archipelago ponder well over this before burning their fingers."—H. W. Bray [merchant and planter in the islands for fifteen years], *Letter to Singapore Free Press, June* 8, 1898.

"The native has no expansive ideas; he cannot go far enough to understand what it is to rule matters for the benefit of the common weal; he cannot get past his own most personal interest, or his town, at the most. I think the greatest length he would go would be his own town. But constructing laws, and obeying them, for the benefit of the commonwealth, I do not think he is capable of it at all. I think an attempt at a native government would be a fiasco altogether."—John Foreman, *Testimony before U. S. Peace Commission at Paris.*

"The excuse that they [the Filipinos] are not ripe for independence is not founded on facts. The Filipinos number more educated people than the kingdom of Servia and the principalities of Bulgaria and Montenegro. They have fewer illiterates than the states of the Balkan peninsula, Russia, many provinces of Spain and Portugal, and the Latin republics of America. There are provinces in which few people can be found who do not at least read. They pay more attention to education than Spain or the Balkan states do. There is no lack of trained men fit to govern their own country, and indeed in every branch, because under the Spanish rule the official business was entirely transacted by the native subalterns. The whole history of the Katipunan revolt and of the war against Spain and America serves to place in the best light the capability of the Filipinos for self-government."—F. Blumentritt, *The Philippine Islands, p.* 61.

A. D. 1898-1899 (December—January).—Instructions by the President of the United States to General Otis, Military Governor and Commander in the Philippines.—Their proclamation to the people of the Islands as modified by General Otis.—The effect.—On the 27th of December, 1898, the following instructions, dated Dec. 21, and signed by the President, were cabled by the Secretary of War to General Otis, in command of the United States forces in the Philippines. They were not made public in the United States until the 5th of January following, when they appeared in the newspapers of that day: "The destruction of the Spanish fleet in the harbor of Manila by the United States naval squadron commanded by Rear Admiral Dewey, followed by the reduction of the city and the surrender of the Spanish forces, practically effected the conquest of the Philippine Islands and the suspension of Spanish sovereignty therein. With the signature of the treaty of peace between the United States and Spain by their respective plenipotentiaries at Paris, on the 10th inst., and as the result of victories of the American arms, the future control, disposition and government of the Philippine Islands are ceded to the United States. In fulfilment of the offices of the sovereignty thus acquired, and the responsible obligations of government thus assumed, the actual occupation and administration of the entire group becomes immediately necessary, and the military government heretofore maintained by the United States in the city, harbor and bay of Manila is to be extended with all possible despatch to the whole of the ceded territory. In performance of this duty, the military commander of the United States is enjoined to make known to the inhabitants of the Philippine Islands that in succeeding to the sovereignty of the islands, in severing the former political relations of the inhabitants and in establishing a new political power, the authority of the United States is to be exerted for the security of the persons and property of the people of the islands and for the confirmation of all their private rights. It will be the duty of the commander of the forces of occupation to announce and proclaim in the most public manner that we come, not as invaders or conquerors, but as friends, to protect the natives in their homes, in their employments and in their personal and religious rights. All persons who, either by active aid or by honest submission, cooperate with the government of the United States to give effect to these beneficent purposes, will receive the reward of its support and protection. All others will be brought within the lawful rule we have assumed, with firmness if need be, but without severity so far as may be possible.

"Within the absolute domain of military authority, which necessarily is and must remain supreme in the ceded territory until the government of the United States shall otherwise provide, the municipal laws of the territory in respect to private interests and property and the repression of crime are continued in force, the authority to be administered by the ordinary tribunals so far as practicable. The operations of civil and municipal government are to be performed by such officers as may accept the supremacy of the United States by taking the oath of allegiance, or by officers chosen, as far as may be practicable, from the inhabitants of the islands. While the control of all the public property and the revenues of the state passes with the cession, and while the use and management of all public means are of necessity reserved to the authority of the United States, private property, whether belonging to individuals or corporations, is to be respected except for cause duly established. The taxes and duties heretofore payable by the inhabitants to the late government become payable to the authorities of the United States, unless it be seen fit to substitute for them other reasonable rates or modes of contribution to the expenses of government, whether general or local. If private property be taken for military use, it shall be paid for when possible in cash at a fair valuation, and when payment in cash is not practicable receipts are to be given.

"All ports and places in the Philippine Islands in the actual possession of the land and naval forces of the United States will be opened to the commerce of all friendly nations. All goods and wares not prohibited for military reasons by due announcement of the military authority will be admitted upon payment of such duties and other charges as shall be in force at the time of their importation. Finally, it should be the earnest

and paramount aim of the military administration to win the confidence, respect and affection of the inhabitants of the Philippines by assuring to them in every possible way that full measure of individual rights and liberties which is the heritage of free peoples, and by proving to them that the mission of the United States is one of benevolent assimilation, substituting the mild sway of justice and right for arbitrary rule. In the fulfilment of this high mission, supporting the temperate administration of affairs to the greatest good of the governed, there must be sedulously maintained the strong arm of authority, to repress disturbance and to overcome all obstacles to the bestowal of the blessings of good and stable government upon the people of the Philippine Islands under the free flag of the United States. WILLIAM MCKINLEY."

On receiving President McKinley's "proclamation," as the instructions of December 21 were commonly described, General Otis promptly forwarded a copy to General Miller, who had been sent to occupy the city of Iloilo, and the latter made it public. Meantime General Otis had studied the document with care and arrived at conclusions which he sets forth in his subsequent annual report as follows: "After fully considering the President's proclamation and the temper of the Tagalos with whom I was daily discussing political problems and the friendly intentions of the United States Government toward them, I concluded that there were certain words and expressions therein, such as 'sovereignty,' 'right of cession,' and those which directed immediate occupation, etc., though most admirably employed and tersely expressive of actual conditions, might be advantageously used by the Tagalo war party to incite widespread hostilities among the natives. The ignorant classes had been taught to believe that certain words, as 'sovereignty,' 'protection,' etc., had peculiar meaning disastrous to their welfare and significant of future political domination, like that from which they had recently been freed. It was my opinion, therefore, that I would be justified in so amending the paper that the beneficent object of the United States Government would be brought clearly within the comprehension of the people, and this conclusion was the more readily reached because of the radical change [a change of cabinet] of the past few days in the constitution of Aguinaldo's government, which could not have been understood at Washington at the time the proclamation was prepared. . . .

"The amended proclamation of January 4 appeared in the English, Spanish, and Tagalo languages, and was published in Manila through newspapers and posters. The English text is as follows: 'To the people of the Philippine Islands: Instructions of His Excellency the President of the United States relative to the administration of affairs in the Philippine Islands have been transmitted to me by direction of the honorable the Secretary of War, under date of December 28, 1898. They direct me to publish and proclaim, in the most public manner, to the inhabitants of these islands that in the war against Spain the United States forces came here to destroy the power of that nation and to give the blessings of peace and individual freedom to the Philippine people; that we are here as friends of the Filipinos; to protect them in their homes, their employments, their individual and religious liberty, and that all persons who, either by active aid or honest endeavor, co-operate with the Government of the United States to give effect to these beneficent purposes, will receive the reward of its support and protection. The President of the United States has assumed that the municipal laws of the country in respect to private rights and property and the repression of crime are to be considered as continuing in force in so far as they be applicable to a free people, and should be administered by the ordinary tribunals of justice, presided over by representatives of the people and those in thorough sympathy with them in their desires for good government; that the functions and duties connected with civil and municipal administration are to be performed by such officers as wish to accept the assistance of the United States, chosen in so far as it may be practicable from the inhabitants of the islands; that while the management of public property and revenues and the use of all public means of transportation are to be conducted under the military authorities, until such authorities can be replaced by civil administration, all private property, whether of individuals or corporations, must be respected and protected. If private property be taken for military uses it shall be paid for at a fair valuation in cash if possible, and when payment in cash is not practicable at the time, receipts therefor will be given to be taken up and liquidated as soon as cash becomes available. The ports of the Philippine Islands shall be open to the commerce of all foreign nations, and goods and merchandise not prohibited for military reasons by the military authorities shall be admitted upon payment of such duties and charges as shall be in force at the time of importation. The President concludes his instructions in the following language: "Finally, it should be the earnest and paramount aim of the Administration to win the confidence, respect, and affection of the inhabitants of the Philippines by insuring to them in every possible way the full measure of individual rights and liberty which is the heritage of a free people, and by proving to them that the mission of the United States is one of beneficent assimilation, which will substitute the mild sway of justice and right for arbitrary rule. In the fulfillment of this high mission, while upholding the temporary administration of affairs for the greatest good of the governed, there will be sedulously maintained the strong arm of authority to repress disturbance, and to overcome all obstacles to the bestowal of the blessings of good and stable government upon the people of the Philippine Islands."

" 'From the tenor and substance of the above instructions of the President, I am fully of the opinion that it is the intention of the United States Government, while directing affairs generally, to appoint the representative men now forming the controlling element of the Filipinos to civil positions of trust and responsibility, and it will be my aim to appoint thereto such Filipinos as may be acceptable to the supreme authorities at Washington. It is also my belief that it is the intention of the United States Government to draw from the Filipino people so much of the military force of the islands as is possible and consistent with a free and well-constituted government of the country, and it is my desire to inaugurate a policy of that character. I am also convinced that it is the intention of the

United States Government to seek the establishment of a most liberal government for the islands, in which the people themselves shall have as full representation as the maintenance of law and order will permit, and which shall be susceptible of development, on lines of increased representation and the bestowal of increased powers, into a government as free and independent as is enjoyed by the most favored provinces of the world. It will be my constant endeavor to coöperate with the Filipino people, seeking the good of the country, and I invite their full confidence and aid. E. S. Otis, Major-General, U. S. V., Military Governor.'

"Before publication of this proclamation I endeavored to obtain from able Filipino residents of the city an expression of opinion as to its probable effect upon the population, but was not much encouraged. A few days thereafter they declared the publication to have been a mistake, although the foreign residents appeared to believe the proclamation most excellent in tone and moderation, offered everything that the most hostile of the insurgents could expect, and undoubtedly would have a beneficial influence. It was received by the better classes of natives with satisfaction, as it was the first authoritative announcement of the attitude which the United States assumed toward the islands and declared the policy which it intended to pursue, and because the declared policy was one which, in their opinion, conditions imperatively demanded should be imposed for the interests of the Filipino people who were incapable of self-government. The publication separated more widely the friendly and war factions of the inhabitants and was the cause of exciting discussion. The ablest of insurgent newspapers, which was now issued at Malolos and edited by the uncompromising Luna, . . . attacked the policy of the United States as declared in the proclamation, and its assumption of sovereignty over the islands, with all the vigor of which he was capable. . . .

"Aguinaldo met the proclamation by a counter one in which he indignantly protested against the claim of sovereignty by the United States in the islands, which really had been conquered from the Spaniards through the blood and treasure of his countrymen, and abused me for my assumption of the title of military governor. Even the women of Cavite province, in a document numerously signed by them, gave me to understand that after all the men were killed off they were prepared to shed their patriotic blood for the liberty and independence of their country. The efforts made by Aguinaldo and his assistants made a decided impression on the inhabitants of Luzon outside of Manila. . . . Shortly before this time the insurgents had commenced the organization of clubs in the city, membership in which now, I was informed, amounted to 10,000. The chief organizer was a shrewd mestizo, a former close companion of Aguinaldo, by whom he had been commissioned to perform this work. He was a friend and associate of some of our officers; was engaged in organizing the clubs only, as he stated, to give the poorer classes amusement and education; held public entertainments in athletics to which our officers were invited, and in which our soldiers were asked to participate. Gradually arms were being secretly introduced and bolos were being manufactured and distributed. The arms were kept concealed in buildings, and many of them were subsequently captured. The Chinamen were carrying on a lucrative business in bolo making, but the provost-marshal had cruelly seized considerable of their stock. These clubs had received military organization and were commanded by cunning Filipino officers regularly appointed by the Malolos government. The chief organizer departed after organization had been perfected and thereafter became a confidential adviser in Malolos affairs. This organization was the subject of grave apprehension, as it was composed of the worst social element of the city, and was kept under police supervision as closely as possible. . . . The streets of the city were thronged with unarmed insurgent officers and enlisted men from the numerically increasing insurgent line on the outskirts, proud of their uniforms and exhibiting matchless conceit, amusing to our men, who were apparently unconcerned observers, but who were quick to take in the rapidly changing conditions. . . .

"Greater precautionary measures were directed and taken in the way of redistributing organizations throughout the city, in advancing and strengthening (though still far within our own mutually conceded military lines) our posts of observation, and for the quick response of the men if summoned for defensive action. Otherwise no change in the conduct, condition, or temper of the troops was observable. So quietly were these precautions effected that Filipino citizens, noticing the apparent indifference of our men, warned me repeatedly of the danger to be apprehended from a sudden simultaneous attack of the insurgents within and without the city, and were quietly informed that we did not anticipate any great difficulty. Another very noticeable proof of premeditated intent on the part of the insurgents was perceived in the excitement manifested by the natives and their removal in large numbers from the city. All avenues of exit were filled with vehicles transporting families and household effects to surrounding villages. The railway properties were taxed to their utmost capacity in carrying the fleeing inhabitants to the north within the protection of the established insurgent military lines. Aguinaldo, by written communications and messages, invited his old-time friends to send their families to Malolos, where their safety was assured, but Hongkong was considered a more secure retreat and was taken advantage of. A carefully prepared estimate showed that 40,000 of the inhabitants of the city departed within the period of fifteen days."—*Report of General Otis, Aug.* 31, 1899 (*Message and Documents: Abridgment*, 1899–1900, *v.* 2, *pp.* 1075–88).

The counter-proclamation of Aguinaldo, referrred to above by General Otis, was issued on the 5th of January, 1899, from Malolos, addressed to "My brothers, the Filipinos, all the honorable consuls, and other foreigners." It said: "Maj. Gen. E. S. Otis's proclamation published yesterday in the Manila papers obliges me to circulate the present one, in order that all who read and understand it may know of my most solemn protest against said proclamation, for I am moved by my duty and my conscience before God, by my political obligations with my beloved country, by my official and private relations to the North American nations. In the above mentioned proclamation, General Otis calls himself

'Military Governor in the Philippines,' and I protest once and a thousand times, with all the energy in my soul, against such an authority. I solemnly proclaim that I have never had, either at Singapore or here in the Philippines, any verbal or written contract for the recognition of American sovereignty over this cherished soil. . . . Our countrymen and foreigners are witnesses that the land and naval forces of the United States existing here have recognized by act the belligerency of the Philippines, not only respecting but also doing public honor to the Filipino banner, which triumphantly traversed our seas in view of foreign nations represented here by their respective consuls.

"As in his proclamation General Otis alludes to some instructions issued by His Excellency the President of the United States relating to the administration of affairs in the Philippines, I solemnly protest in the name of God, root and source of all justice and all right, who has visibly acceded me the power to direct my dear brethren in the difficult task of our regeneration, against this intrusion of the United States Government in the administration of these islands. In the same manner I protest against such an unexpected act which treats of American sovereignty in these islands in the face of all antecedents that I have in my possession referring to my relations with the American authorities, which are unequivocal testimony that the United States did not take me out of Hong Kong to make war against Spain for their own benefit, but for the benefit of our liberty and independence, to which end said authorities verbally promised me their active support and efficacious co-operation. So that you all may understand it, my beloved brothers, it is the principle of liberty and absolute independence that has been our noble ambition for the purpose of obtaining the desired object, with a force given by the conviction, now very widespread, not to retrace the path of glory that we have passed over."—*United States, 56th Congress, 1st Sess., Senate Doc.* 208, *p.* 103.

A. D. 1899 (January).—Appointment of the First Commission to the Philippines and the President's instructions to it.—On the 20th of January, 1899, the President of the United States addressed the following communication to the Secretary of State: "My communication to the Secretary of War, dated December 21, 1898, declares the necessity of extending the actual occupation and administration of the city, harbor, and bay of Manila to the whole of the territory which by the treaty of Paris, signed on December 10, 1898, passed from the sovereignty of Spain to the sovereignty of the United States, and the consequent establishment of military government throughout the entire group of the Philippine Islands. While the treaty has not yet been ratified, it is believed that it will be by the time of the arrival at Manila of the commissioners named below. In order to facilitate the most humane, pacific, and effective extension of authority throughout these islands, and to secure, with the least possible delay, the benefits of a wise and generous protection of life and property to the inhabitants, I have named Jacob G. Schurman, Rear-Admiral George Dewey, Maj. Gen. Elwell S. Otis, Charles Denby, and Dean C. Worcester to constitute a commission to aid in the accomplishment of these results. In the performance of this duty, the commissioners are enjoined to meet at the earliest possible day in the city of Manila and to announce, by a public proclamation, their presence and the mission intrusted to them, carefully setting forth that, while the military government already proclaimed is to be maintained and continued so long as necessity may require, efforts will be made to alleviate the burden of taxation, to establish industrial and commercial prosperity, and to provide for the safety of persons and of property by such means as may be found conducive to these ends.

"The commissioners will endeavor, without interference with the military authorities of the United States now in control of the Philippines, to ascertain what amelioration in the condition of the inhabitants and what improvements in public order may be practicable, and for this purpose they will study attentively the existing social and political state of the various populations, particularly as regards the forms of local government, the administration of justice, the collection of customs and other taxes, the means of transportation, and the need of public improvements. They will report through the Department of State, according to the forms customary or hereafter prescribed for transmitting and preserving such communications, the results of their observations and reflections, and will recommend such executive action as may from time to time seem to them wise and useful. The commissioners are hereby authorized to confer authoritatively with any persons resident in the islands from whom they may believe themselves able to derive information or suggestions valuable for the purposes of their commission, or whom they may choose to employ as agents, as may be necessary for this purpose.

"The temporary government of the islands is intrusted to the military authorities, as already provided for by my instructions to the Secretary of War of December 21, 1898, and will continue until Congress shall determine otherwise. The commission may render valuable services by examining with special care the legislative needs of the various groups of inhabitants, and by reporting, with recommendations, the measures which should be instituted for the maintenance of order, peace, and public welfare, either as temporary steps to be taken immediately for the perfection of present administration, or as suggestions for future legislation. In so far as immediate personal changes in the civil administration may seem to be advisable, the commissioners are empowered to recommend suitable persons for appointment to these offices from among the inhabitants of the islands who have previously acknowledged their allegiance to this Government.

"It is my desire that in all their relations with the inhabitants of the islands the commissioners exercise due respect for all the ideals, customs, and institutions of the tribes which compose the population, emphasizing upon all occasions the just and beneficent intentions of the Government of the United States. It is also my wish and expectation that the commissioners may be received in a manner due to the honored and authorized representatives of the American Republic, duly commissioned on account of their knowledge, skill, and integrity as bearers of the good will, the protection, and the richest bless-

PHILIPPINE ISLANDS, 1899.

ings of a liberating rather than a conquering nation. WILLIAM MCKINLEY."—*Report of the Philippine Commission, Jan.* 31, 1900, *v.* 1, *exhibit* 2 (*p.* 185).

A. D. 1899 (January—February).—Causes of and responsibility for the outbreak of hostilities between the Americans and the Filipinos.—"The Philippine Information Society," organized for the purpose of "placing within reach of the American people the most reliable and authoritative evidence attainable in regard to the people of the Philippine Islands and our relations to them," has published in No. VII of the First Series of its pamphlets a carefully made collection of information, from official and other sources, relative to the circumstances in which hostilities between the American and Filipino forces came about. On this as on other subjects which the society has investigated it seems to have pursued its inquiries with no aim but to learn and set forth the truth. Its conclusions, resting on the evidence which it submits, are stated in an introduction to the pamphlet as follows:

"It will presumably be admitted that the important question with regard to the Outbreak of Hostilities, February 4, 1899, is not, who fired the first shot, but who was responsible for the conditions that made it evident to every observer weeks before the clash came that a single shot might bring on war. . . . The situation may be briefly explained as follows: We believed that the Philippine Archipelago was and ought to be ours, and we were moving to take possession as rapidly as possible. The Filipinos, or at least Aguinaldo's government and followers, believed that the country was theirs and they resented every effort on our part to occupy it. We considered it ours through cession from Spain and right of conquest. They claimed that Spain no longer held possession of the country and therefore had no right to cede it to us; moreover, that by right of conquest we were entitled only to temporary occupation of Manila. We wished to extend our sovereignty throughout the Archipelago with all possible dispatch. They desired independence, or at least a protectorate which, while securing them from foreign aggression, should leave them control of their internal affairs. While a discussion of the justice of either position does not come within the limits of the present inquiry, it is important to remember that from the first a minority in this country urged that the Filipinos were entitled to a promise of ultimate independence, and that a resolution of Congress, similar to that passed in the case of Cuba, would avert all occasion for war. This course having been rejected by our country, the question arises, did the assertion of United States sovereignty render war inevitable? . . .

"No doubt most Americans believe that left to themselves the Filipinos would soon have lapsed into anarchy, while a few maintain that with temporary assistance in international affairs they would have developed a government better suited to their peculiar needs than we can ever give them. Still others who are familiar with the Filipinos and kindred races believe that their aspiration for an independent national existence was not deep rooted, that had we adopted an affectionate, admiring tone to their leaders, had we recognized their government and approved of it, we could soon have made their government our government, could have been as sovereign as we pleased, and had the people with us. Whatever view one may hold, it must be admitted that if we were to establish our sovereignty by peaceful methods it was essential to win the confidence and affection of the Filipinos. . . . There is every indication that the Filipinos were prepared, at first, to treat us as friends and liberators. General Anderson tells the following interesting story: The prevailing sentiment of the Filipinos towards us can be shown by one incident. About the middle of July the insurgent leaders in Cavite invited a number of our army and navy officers to a banquet. There was some post-prandial speech-making, the substance of the Filipino talk being that they wished to be annexed but not conquered. One of our officers in reply assured them that we had not come to make them slaves, but to make them free men. A singular scene followed. All the Filipinos rose to their feet, and Buencomeno, taking his wine-glass in his hand, said: We wish to be baptized in that sentiment. Then he and the rest poured the wine from their glasses over their heads. After the very first, however, the cultivation of intimate relations with the Filipino leaders seems to have been considered unimportant or inadvisable. General Merritt states that he never saw Aguinaldo. Social intercourse between our officers and the Filipinos was discouraged by General Otis. In fact after the surrender of Manila General Whittier seems to have been the only one of our superior officers who ever had a personal interview with Aguinaldo.

"Certainly after the proclamation of January 4, [see above: A. D. 1898—1899 (JANUARY—FEBRUARY)] war could only have been avoided by a decisive action of Congress promising ultimate independence to the Filipinos. That proclamation of January 4 raised the issue and provoked the counter proclamation of January 5, which so stirred the people against us—a proclamation in which Aguinaldo once and a thousand times and with all the energy of his soul protested against American sovereignty, and which closed with the words, 'upon their heads be all the blood which may be shed.' . . .

"Aguinaldo's proclamation was followed by a series of conferences of which General Otis reports 'It was one continued plea for some concession that would satisfy the people.' On January 16th he cabled to Washington, 'Aspiration Filipino people is independence with restrictions resulting from conditions which its government agree with American when latter agree to officially recognize the former.' Finally on January 25th he sent word to the insurgent commissioners that 'To this dispatch no reply has been received.' From this time General Otis states, the insurgents hurried forward preparations for war. Contemporaneous with these events in the Philippines the Treaty of Peace was pending in the United States Senate where it had been assigned for a vote on February 6th.

"With regard to the actual outbreak of hostilities, there is a sharp difference of opinion. The United States press dispatches announcing the outbreak, and the contemporaneous newspaper statements by the Filipinos . . . are of interest as evidence that from the very first each side claimed the other to be the aggressor. As to which of these opposing claims is borne out by the facts, the editors would say that after

careful study of all the accessible evidence they find that according to the most authoritative statements the outbreak occurred as the result of a trespass by four armed Filipinos on territory admitted by the Filipino in command to be within the jurisdiction of the United States. The number of Filipinos has been variously estimated. The editors follow the report of General MacArthur in command of the division in which the firing began, which agrees with the report of Second-Lieutenant Wheedon of the First Nebraska U. S. Volunteer Infantry, stationed at Santa Mesa. The action of the Filipino trespassers seems to have been an instance of bad discipline in the insurgent army. Certainly it was not ordered on that date by the insurgent leaders, although there are some indications that the leaders had planned to attack in a few days. The claim that our forces instigated the attack for the purpose of securing the votes necessary to ratify the treaty is absolutely unsupported by any evidence which has come to the attention of the editors."—Philippine Information Society, *Publications, First Series, VII., Introduction.*

A. D. 1899 (January—November).—Attack on American forces by the Tagalos.—Continued hostilities.—Progress of American conquest.—"No definite date had been set for the attack [by the hostile Tagalos], but a signal by means of rockets had been agreed upon, and it was universally understood that it would come upon the occurrence of the first act on the part of the American forces which would afford a pretext; and in the lack of such act, in the near future at all events. Persistent attempts were made to provoke our soldiers to fire. The insurgents were insolent to our guards and made persistent and continuous efforts to push them back and advance the insurgent lines farther into the city of Manila. . . . With great tact and patience the commanding general had held his forces in check, and he now made a final effort to preserve the peace by appointing a commission to meet a similar body appointed by Aguinaldo and to 'confer with regard to the situation of affairs and to arrive at a mutual understanding of the intent, purposes, aims, and desires of the Filipino people and of the people of the United States.' Six sessions were held, the last occurring on January 29, six days before the outbreak of hostilities. No substantial results were obtained, the Filipino commissioners being either unable or unwilling to give any definite statements of the 'intent, purposes, and aims of their people.' At the close of the last session they were given full assurances that no hostile act would be inaugurated by the United States troops. The critical moment had now arrived. Aguinaldo secretly ordered the Filipinos who were friendly to him to seek refuge outside the city. The Nebraska regiment at that time was in camp on the east line at Santa Mesa, and was guarding its front. For days before the memorable 4th of February, 1899, the outposts in front of the regiment had been openly menaced and assaulted by insurgent soldiers; they were attempting to push our outposts back and advance their line. They made light of our sentinels and persistently ignored their orders. On the evening of the 4th of February, an insurgent officer came to the front with a detail of men and attempted to pass the guard on the San Juan Bridge, our guard being stationed at the west end of the bridge. The Nebraska sentinel drove them back without firing, but a few minutes before 9 o'clock that evening a large body of insurgent troops made an advance on the South Dakota outposts, which fell back rather than fire. About the same time the insurgents came in force to the east end of the San Juan Bridge, in front of the Nebraska regiment. For several nights prior thereto a lieutenant in the insurgent army had been coming regularly to our outpost No. 2, of the Nebraska regiment, and attempting to force the outpost back and insisting on posting his guard within the Nebraska lines; and at this time and in the darkness he again appeared with a detail of about six men and approached Private Grayson, of Company D, First Nebraska Volunteers, the sentinel on duty at outpost No. 2. He, after halting them three times without effect, fired, killing the lieutenant, whose men returned the fire and then retreated. Immediately rockets were sent up by the Filipinos, and they commenced firing all along the line, . . . and continued to fire until about midnight; and about 4 o'clock on the morning of February 5 the insurgents again opened fire all around the city and kept it up until the Americans charged them and drove them with great slaughter out of their trenches."—*Philippine Commission, Preliminary Report* (*Exhibit* 1.—*Report, January* 31, 1900, *v.* 1, *pp.* 174–5).

"They [the insurgents] were promptly repulsed in a series of active engagements which extended through the night of the 4th, and the 5th, 6th, and 10th days of February. Our lines were extended and established at a considerable distance from the city in every direction. On the 22d of February a concerted rising of the Tagalogs in the city of Manila, of whom there are about 200,000, was attempted, under instructions to massacre all the Americans and Europeans in the city. This attempt was promptly suppressed and the city was placed under strict control. The troops composing the Eighth Army Corps under General Otis's command at that time were of regulars 171 officers and 5,201 enlisted men and of volunteers 667 officers and 14,831 enlisted men, making an aggregate of 838 officers and 20,032 enlisted men. All of the volunteers and 1,650 of the regulars were, or were about to become, entitled to their discharge, and their right was perfected by the exchange of ratifications of the treaty on the 11th of April. . . .

"The months of the most intense heat, followed by the very severe rainy season of that climate, were immediately approaching, and for any effective occupation of the country it was necessary to await both the close of the rainy season and the supply of new troops to take the place of those about to be discharged. Practically all the volunteers who were then in the Philippines consented to forego the just expectation of an immediate return to their homes, and to remain in the field until their places could be supplied by new troops. They voluntarily subjected themselves to the dangers and casualties of numerous engagements, and to the very great hardships of the climate. They exhibited fortitude and courage, and are entitled to high commendation for their patriotic spirit and soldierly conduct. . . .

"No attempt was . . . made to occupy the country, except in the vicinity of Manila, and at

such points as were important for the protection of our lines. Such movements as passed beyond this territory were designed primarily to break up threatening concentrations of insurgent troops, and to prevent undue annoyance to the positions which we occupied. On the 11th of February the city of Iloilo, on the island of Panay, the second port of the Philippines in importance, was occupied. After the capture of Iloilo the navy took possession of the city of Cebu, on the island of Cebu, and on the 26th of February a battalion of the 23d Infantry was dispatched to that port for the protection of the inhabitants and property. On the 1st of March a military district comprising the islands of Panay, Negros, and Cebu, and such other Visayan islands as might be thereafter designated, to be known as the 'Visayan Military District,' was established and placed under the supervision of Brig. Gen. Marcus P. Miller, commanding 1st Separate Brigade, Eighth Army Corps, with headquarters at Iloilo. The 3d Battalion of the 1st California Volunteer Infantry was thereupon ordered to the island of Negros, under the command of Col. (now Brig. Gen.) James F. Smith, and took possession of the city of Bacolod, on that island, without resistance. On the 5th of May Brig. Gen. James F. Smith assumed temporary command of the Visayan military district, and on the 25th of May Brig. Gen. R. P. Hughes, United States Volunteers, was assigned to the command of the district. On the 19th of May the Spanish garrison at Jolo, in the Sulu Archipelago, was replaced by American troops. By the 31st of August the number of troops stationed at Jolo and the Visayan Islands, including a small guard at the Cavite Arsenal, amounted to 4,145. . . .

"All of the forces who were entitled to be discharged as above mentioned have now [Nov. 29, 1899] been returned to this country and mustered out. The new troops designed to take the place of those returning to this country, and to constitute an effective army for the occupation of the Philippines, have been transported to Manila. . . . The troops now in the Philippines comprise 905 officers and 30,578 men of the regular force, and 594 officers and 15,388 men of the volunteer force, making an aggregate of 1,499 officers and 45,966 men, and when the troops on the way have arrived the total force constituting the Eighth Army Corps will be 2,051 officers and 63,483 men.

"By the 10th of October the process of changing armies and the approach of the dry season had reached a point where an advance toward the general occupation of the country was justified. At that time the American lines extended from the Bay of Manila to Laguna de Bay, and included considerable parts of the provinces of Cavite, Laguna, and Morong to the south and east of Manila, substantially all of the province of Manila and the southern parts of Bulacan and Pampanga, dividing the insurgent forces into two widely separated parts. To the south and east of our lines in Cavite and Morong were numerous bands occasionally concentrating for attack on our lines, and as frequently dispersed and driven back toward the mountains. On the 8th of October, the insurgents in this region having again gathered and attacked our lines of communication, General Schwan with a column of 1,726 men commenced a movement from Bacoor, in the province of Cavite, driving the enemy through Old Cavite, Noveleta, Santa Cruz, San Francisco de Malabon, Saban, and Perez das Marinas, punishing them severely, scattering them and destroying them as organized forces, and returning on the 13th to Bacoor. On the north of our lines stretched the great plain of central Luzon extending north from Manila about 120 miles. This plain comprises parts of the provinces of Manila, Pampanga, Bulacan, Tarlac, Nueva, Ecija, and Pangasinan. It is, roughly speaking, bounded on the south by the Bay of Manila; on the east and west by high mountain ranges separating it from the seacoasts, and on the north by mountains and the Gulf of Lingayen. Through the northeast and central portion flows the Rio Grande from the northern mountains southwesterly to the Bay of Manila, and near the western edge runs the only railroad on the island of Luzon, in a general southeasterly direction from Dagupan, on the Bay of Lingayen, to Manila. In this territory Aguinaldo exercised a military dictatorship, and with a so-called cabinet imitated the forms of civil government, having his headquarters at Tarlac, which he called his capital, and which is situated near the center of the western boundary of the plain.

"The operations commenced in October involved the movement of three separate forces: (1) A column proceeding up the Rio Grande and along the northeastern borders of the plain and bending around to the westward across the northern boundary toward the Gulf of Lingayen, garrisoning the towns and occupying the mountain passes which gave exit into the northeastern division of the island. (2) An expedition proceeding by transports to the Gulf of Lingayen, there to land at the northwestern corner of the plain and occupy the great coast road which from that point runs between the mountains and the sea to the northern extremity of the island, and to proceed eastward to a junction with the first column. (3) A third column proceeding directly up the railroad to the capture of Tarlac, and thence still up the road to Dagupan, driving the insurgent forces before it toward the line held by the first two columns. These movements were executed with energy, rapidity, and success, notwithstanding the exceedingly unfavorable weather and deluges of rain, which rendered the progress of troops and transportation of subsistence most difficult. On the 12th of October a strong column under General Lawton, with General Young commanding the advance, commenced the northerly movement up the Rio Grande from Arayat, driving the insurgents before it to the northward and westward. On the 18th the advance reached Cabiao. On the 19th San Isidro was captured, and a garrison established; on the 27th Cabanatuan was occupied, and a permanent station established there. On the 1st of November Aliaga and Talavera were occupied. In the meantime detachments, chiefly of Young's cavalry, were operating to the west of the general line of advance, striking insurgent parties wherever they were found and driving them toward the line of the railroad. By the 13th of November the advance had turned to the westward, and our troops had captured San Jose, Lupao, Humingan, San Quintin, Tayug, and San Nicolas. By the 18th of November the advance had occupied Asingan and Rosales, and was moving on Pozorrubio, a strongly intrenched post about 12 miles east of San Fabian. General Lawton's forces now held

a line of posts extending up the eastern side of the plain and curving around and across the northern end to within a few miles of the Gulf of Lingayen.

"On the 6th of November a force of 2,500, under command of General Wheaton, sailed from Manila for the Gulf of Lingayen, convoyed by ships of the Navy, and on the 7th the expedition was successfully landed at San Fabian with effective assistance from a naval convoy against spirited opposition. On the 12th the 33d Volunteers, of Wheaton's command, under Colonel Hare, proceeded southeastward to San Jacinto, attacked and routed 1,200 intrenched insurgents, with the the loss of the gallant Maj. John A. Logan and 6 enlisted men killed, and one officer and 11 men wounded. The enemy left 81 dead in the trenches and suffered a total loss estimated at 300. In the meantime, on the 5th of November, a column under General McArthur advanced up the railroad from Angeles to Magalang, clearing the country between Angeles and Arayat, encountering and routing bodies of the enemy at different points, and capturing Magalang. On the 11th it took Bamban, Capas, and Concepcion, and on the 12th of November entered Tarlac, from which the enemy fled on its approach. Meantime, parties, mainly of the 36th Volunteers, under Col. J. F. Bell, cleared the country to the right of the line of advance as far east as the points reached by General Lawton's flanking parties. On the 17th of November McArthur's column had occupied Gerona and Panique, to the north of Tarlac. On the 19th, Wheaton's troops, and on the 20th, McArthur's troops, entered Dagupan.

"On the 24th of November General Otis was able to telegraph to the Department as follows: 'Claim to government by insurgents can be made no longer under any fiction. Its treasurer, secretary of the interior, and president of congress in our hands; its president and remaining cabinet officers in hiding, evidently in different central Luzon provinces; its generals and troops in small bands scattered through these provinces, acting as banditti, or dispersed, playing the rôle of "Amigos," with arms concealed.' Since that time our troops have been actively pursuing the flying and scattered bands of insurgents, further dispersing them, making many prisoners, and releasing many Spanish prisoners who had been in the insurgents' hands. On the 23d General Young's column had reached Namacpacan, 30 miles north of San Fernando, in the province of Union, and passed north into the mountains; and on the 24th Vigan, the principal port of the northwest coast, was occupied by a body of marines landed from the battle ship Oregon. Wherever the permanent occupation of our troops has extended in the Philippine Islands civil law has been immediately put in force. The courts have been organized and the most learned and competent native lawyers have been appointed to preside over them. A system of education has been introduced and numerous schools have been established."—*Annual Report of the Secretary of War*, 1899 (*Message and Documents: Abridgment*, 1899–1900, *v.* 2, *pp.* 735–41).

General Young, whose movement is referred to above, reported to General Otis from Pozorrubio, on the 17th of November: "Aguinaldo is now a fugitive and an outlaw, seeking security in escape to the mountains or by sea. My cavalry have ridden down his forces wherever found, utterly routing them in every instance, killing some, capturing and liberating many prisoners, and destroying many arms, ammunition, and other war impediments." On the 30th, Major March was sent by General Young, as he expresses it, "on Aguinaldo's trail," and encountered the forces of the Filipino General Pilar in the Tila Pass. The following is Major March's report of the fight which then occurred, and in which the Filipino commander fell: "The trail winds up the Tila Mountains in a sharp zigzag. The enemy had constructed a stone barricade across the trail at a point where it commanded the turns of the zigzag for a considerable distance. The barricade was loopholed for infantry fire and afforded head cover for the insurgents. On passing on beyond Lingey the advance was checked by a heavy fire from this barricade, which killed and wounded several men, without having its position revealed. I brought up the remainder of the command at double time, losing two men wounded during the run up. On arriving at the point, I located the insurgents' position with my glasses—their fire being entirely Mauser and smokeless powder—by the presence of the insurgent officer who showed himself freely and directed the fire. On pushing forward, the number of my men who were hit increased so rapidly that it was evident that the position could not be taken by a front attack, when the trail only allowed the men to pass one at a time. On the left of the barricade was a gorge several hundred feet deep. On its right, as we faced it, was a precipitous mountain which rose 1,500 feet above the trail. Across the gorge and to the left front of the barricade was a hill, which, while it did not permit of flank fire into the barricade, commanded the trail in its rear, and this point I occupied with ten sharpshooters in command of Sergeant-Major McDougall. He lost one man wounded in getting to the top, and when there rendered most effective assistance. I then ordered Lieutenant Tompkins to take his company (H) and proceeding back on the trail to ascend the slope of the mountain under cover of a slight ridge which struck the face of the mountain about 150 feet from the summit. From there he had a straight-up climb to the top, where the men pulled themselves up by twigs and by hand. The ascent took two hours, during which the enemy kept up an incessant and accurate fire, which they varied by rolling down stones on our heads. When Tompkins' men appeared upon the crest of the hills over their heads, he had the command of the two other trenches which were constructed in rear of the barricade, I have described, around a sharp turn in the trail, and which were also held by the insurgents. He opened fire upon them and I charged the first barricade at the same time, and rushed the enemy over the hill. We found eight dead bodies on the trail, and the bushes which grew at the edge of the gorge were broken and blood-stained where dead or wounded men fell through. Among the dead bodies was that of Gregorio del Pilar, the general commanding insurgent forces. I have in my possession his shoulder straps; French field glasses, which gave the range of objects; official and private papers, and a mass of means of identification. He was also recognized personally by Mr. McCutcheon and Mr. Keene, two newspaper corre-

spondents who had met him before. The insurgents' report of their loss in this fight is 52, given to me after I reached Cervantes. My loss was 2 killed and 9 wounded. I reached the summit at 4.30 P. M. and camped there for the night. . . . At Cervantes I learned that the force at Tila Pass was a picked force from Aguinaldo's body guard, and that it was wiped out of existence. Aguinaldo with his wife and two other women and a handful of men were living in a convent at Cervantes, perfectly secure in his belief that Tila Pass was an impregnable position. It was the insurgents' Thermopylæ." — *Report of Lieutenant-General Commanding the Army*, 1900, *pt.* 4, *p.* 331.

Mr. McCutcheon, one of the newspaper correspondents referred to by Major March, gave to the "Chicago Record" a graphic account of the fight in Tila Pass, and wrote feelingly of the death to the young Filipino General Pilar:

"Gen. Gregorio del Pilar," wrote Mr. McCutcheon, "was the last man to fall. He was striving to escape up the trail and had already received a wound in the shoulder. A native was holding his horse for him and just as he was preparing to mount a Krag-Jorgensen bullet caught him in the neck, and passing through came out just below his mouth. The men of Company E, rushing up the trail, caught the native, who was endeavoring to secure the papers which the general had in his pockets, and a moment later captured the horse. At that time no one knew who the dead man was, but from his uniform and insignia they judged that he was an officer of high rank. The souvenir fiend was at once at work and the body was stripped of everything of value from the diamond ring to the boots. . . . Many letters were found, most of them from his sweetheart, Dolores Jose, who lived in Dagupan. A handkerchief bearing her name was also found in his pocket. One letter was found from the president of Lingay and gave the exact number of soldiers in March's command. Pilar's diary, which ran from November 19 on to the day of his death, was of remarkable interest, for it detailed many things regarding the wild flight of himself and Aguinaldo's party up the coast. The last words written in it were pathetic and indicated something of the noble character of the man. The passage, which was written only a few minutes previously, while the fight was on and while death even then was before him, said: 'I am holding a difficult position against desperate odds, but I will gladly die for my beloved country.'

"Pilar alive and in command, shooting down good Americans, was one thing, but Pilar lying in that silent mountain trail, his body half denuded of its clothes, and his young, handsome, boyish face discolored with the blood which saturated his blouse and stained the earth, was another thing. We could not help but feel admiration for his gallant fight, and sorrow for the sweetheart whom he left behind. The diary was dedicated to the girl, and I have since learned that he was to have married her in Dagupan about two weeks before. But the Americans came too soon. Instead of wedding bells there sounded the bugle calls of the foe and he was hurriedly ordered to accompany his chief, Aguinaldo, on that hasty retreat to the mountains. The marriage was postponed, and he carried out his orders by leaving for the north. Pilar was one of the best types of the Filipino soldier. He was only 23 years old, but he had been through the whole campaign in his capacity as brigadier-general. It was he who commanded the forces at Quingua the day that Col. Stotsenberg was killed, and it may be remembered that the engagement that day was one of the most bloody and desperate that has occurred on the island. He was a handsome boy, and was known as one of the Filipinos who were actuated by honestly patriotic motives, and who fought because they believed they were fighting in the right and not for personal gain or ambition." — *Chicago Record's Stories of Filipino Warfare*, *p.* 14.

A. D. 1899 (March—July).—The establishment of a provisional government in the island of Negros.—Negros "was the first island to accept American sovereignty. Its people unreservedly proclaimed allegiance to the United States and adopted a constitution looking to the establishment of a popular government. It was impossible to guarantee to the people of Negros that the constitution so adopted should be the ultimate form of government. Such a question, under the treaty with Spain and in accordance with our own Constitution and laws, came exclusively within the jurisdiction of the Congress. The government actually set up by the inhabitants of Negros eventually proved unsatisfactory to the natives themselves. A new system was put into force by order of the Major-General Commanding the Department [July 22, 1899], of which the following are the most important elements:

"It was ordered that the government of the island of Negros should consist of a military governor appointed by the United States military governor of the Philippines, and a civil governor and an advisory council elected by the people. The military governor was authorized to appoint secretaries of the treasury, interior, agriculture, public instruction, an attorney-general, and an auditor. The seat of government was fixed at Bacolod. The military governor exercises the supreme executive power. He is to see that the laws are executed, appoint to office, and fill all vacancies in office not otherwise provided for, and may, with the approval of the military governor of the Philippines, remove any officer from office. The civil governor advises the military governor on all public civil questions and presides over the advisory council. He, in general, performs the duties which are performed by secretaries of state in our own system of government. The advisory council consists of eight members elected by the people within territorial limits which are defined in the order of the commanding general. The times and places of holding elections are to be fixed by the military governor of the island of Negros. The qualifications of voters are as follows: (1) A voter must be a male citizen of the island of Negros. (2) Of the age of 21 years. (3) He shall be able to speak, read, and write the English, Spanish, or Visayan language, or he must own real property worth $500, or pay a rental on real property of the value of $1,000. (4) He must have resided in the island not less than one year preceding, and in the district in which he offers to register as a voter not less than three months immediately preceding the time he offers to register. (5) He must register at a time fixed by law before voting. (6) Prior to such registration he shall have

PHILIPPINE ISLANDS, 1899.

paid all taxes due by him to the Government. Provided, that no insane person shall be allowed to register or vote. The military governor has the right to veto all bills or resolutions adopted by the advisory council, and his veto is final if not disapproved by the military governor of the Philippines. The advisory council discharges all the ordinary duties of a legislature. The usual duties pertaining to said offices are to be performed by the secretaries of the treasury, interior, agriculture, public instruction, the attorney-general, and the auditor. The judicial power is vested in three judges, who are to be appointed by the military governor of the island. Inferior courts are to be established. Free public schools are to be established throughout the populous districts of the island, in which the English language shall be taught, and this subject will receive the careful consideration of the advisory council. The burden of government must be distributed equally and equitably among the people. The military authorities will collect and receive the customs revenue, and will control postal matters and Philippine inter-island trade and commerce. The military governor, subject to the approval of the military governor of the Philippines, determines all questions not specifically provided for and which do not come under the jurisdiction of the advisory council."—*Message of the President, Dec. 5, 1899 (Message and Documents: Abridgment, 1899-1900, v. 2, p. 47).* Also in: *Report of General Otis (Message and Documents, v. 2, pp. 1131-37).*

A. D. 1899 (May—August).—Agreement of terms with the Sultan of Jolo, concerning the Sulu Archipelago.—On the 19th of May, a detachment of U. S. troops took the place of the Spanish garrison at Jolo, the military station in the Sulu Archipelago. On the 3d of July, General Otis, Military Governor of the Philippines, issued orders as follows to General J. C. Bates, U. S. V.: "You will proceed as soon as practicable to the United States military station of Jolo, on the island of that name, and there place yourself in communication with the Sultan of Jolo, who is believed to be at Siassi, where he was sojourning when the last information concerning him was received. You are hereby appointed and constituted an agent on the part of the United States military authorities in the Philippines to discuss, enter into negotiations, and perfect, if possible, a written agreement of character and scope as hereinafter explained, with the Sultan, which upon approval at these headquarters and confirmation by the supreme executive authority of the United States, will prescribe and control the future relations, social and political, between the United States Government and the inhabitants of the archipelago. . . . In your discussions with the Sultan and his datos the question of sovereignty will be forced to the front, and they will undoubtedly request an expression of opinion thereon, as they seem to be impressed apparently with the belief that the recent Spanish authorities with whom they were in relationship have transferred full sovereignty of the islands to them. The question is one which admits of easy solution, legally considered, since by the terms of treaties or protocols between Spain and European powers Spanish sovereignty over the archipelago is conceded. Under the agreement between Spain and the Sultan and datos of July, 1878, the latter acknowledged Spanish sovereignty in the entire archipelago of Jolo and agreed to become loyal Spanish subjects, receiving in consideration certain specific payments in money. The sovereignty of Spain, thus established and acknowledged by all parties in interest, was transferred to the United States by the Paris treaty. The United States has succeeded to all the rights which Spain held in the archipelago, and its sovereignty over the same is an established fact. But the inquiry arises as to the extent to which that sovereignty can be applied under the agreement of 1878 with the Moros. Sovereignty, of course, implies full power of political control, but it is not incompatible with concessionary grants between sovereign and subject. The Moros acknowledged through their accepted chiefs Spanish sovereignty and their subjection thereto, and that nation in turn conferred upon their chiefs certain powers of supervision over them and their affairs. The kingly prerogatives of Spain, thus abridged by solemn concession, have descended to the United States, and conditions existing at the time of transfer should remain. The Moros are entitled to enjoy the identical privileges which they possessed at the time of transfer, and to continue to enjoy them until abridged or modified by future mutual agreement between them and the United States, to which they owe loyalty, unless it becomes necessary to invoke the exercise of the supreme powers of sovereignty to meet emergencies. You will therefore acquaint yourself thoroughly with the terms of the agreement of 1878, and take them as a basis for your directed negotiations. . . .

"It is greatly desired by the United States for the sake of the individual improvement and social advancement of the Moros, and for the development of the trade and agriculture of the islands in their interests, also for the welfare of both the United States and Moros, that mutual friendly and well-defined relations be established. If the Sultan can be made to give credit to and fully understand the intentions of the United States, the desired result can be accomplished. The United States will accept the obligations of Spain under the agreement of 1878 in the matter of money annuities, and in proof of sincerity you will offer as a present to the Sultan and datos $10,000, Mexican, with which you will be supplied before leaving for Jolo—the same to be handed over to them, respectively, in amounts agreeing with the ratio of payments made to them by the Spanish Government for their declared services. From the 1st of September next, and thereafter, the United States will pay to them regularly the sums promised by Spain in its agreement of 1878, and in any subsequent promises of which proof can be furnished. The United States will promise, in return for the concessions to be hereinafter mentioned, not to interfere with, but to protect the Moros in the free exercise of their religion and customs, social and domestic, and will respect the rights and dignities of the Sultan and his advisers."

Of the results of the mission of General Bates, General Otis reported subsequently as follows: "General Bates had a difficult task to perform and executed it with tact and ability. While a number of the principal datos were favorably inclined, the Sultan, not responding to invitations, kept aloof and was represented by his sec-

retary, until finally, the general appearing at Maibung, the Moro capital, a personal interview was secured. He being also Sultan of North Borneo and receiving large annual payments from the North Borneo Trading Company, expected like returns from the United States, and seemed more anxious to obtain personal revenue than benefits for his people. Securing the port of Siassi from the Spaniards, establishing there his guards and police, he had received customs revenues from the Sandaken trade which he was loath to surrender. Negotiations continued well into August, and finally, after long conferences, an agreement was reached by which the United States secured much more liberal terms than the Spaniards were ever able to obtain."—*Report of Gen. Otis, Aug.* 31, 1899 (*Message and Documents: Abridgment*, 1899–1900, *v.* 2, *pp.* 1162–64).

"By Article I the sovereignty of the United States over the whole archipelago of Jolo and its dependencies is declared and acknowledged. The United States flag will be used in the archipelago and its dependencies, on land and sea. Piracy is to be suppressed, and the Sultan agrees to co-operate heartily with the United States authorities to that end and to make every possible effort to arrest and bring to justice all persons engaged in piracy. All trade in domestic products of the archipelago of Jolo when carried on with any part of the Philippine Islands and under the American flag shall be free, unlimited, and undutiable. The United States will give full protection to the Sultan in case any foreign nation should attempt to impose upon him. The United States will not sell the island of Jolo or any other island of the Jolo archipelago to any foreign nation without the consent of the Sultan. Salaries for the Sultan and his associates in the administration of the islands have been agreed upon to the amount of $760 monthly. Article X provides that any slave in the archipelago of Jolo shall have the right to purchase freedom by paying to the master the usual market value. The agreement by General Bates was made subject to confirmation by the President and to future modifications by the consent of the parties in interest. I have confirmed said agreement, subject to the action of the Congress, and with the reservation, which I have directed shall be communicated to the Sultan of Jolo, that this agreement is not to be deemed in any way to authorize or give the consent of the United States to the existence of slavery in the Sulu archipelago."—*Message of the President, Dec.* 5, 1899 (*Message and Documents: Abridgment*, 1899–1900, *v.* 2, *pp.* 47–48).

"The population of the Sulu Archipelago is reckoned at 120,000, mostly domiciled in the island of Jolo, and numbers 20,000 fighting men. Hostilities would be unfortunate for all parties concerned, would be very expensive to the United States in men and money, and destructive of any advancement of the Moros for years to come. Spain's long struggle with these people and their dislike for the former dominant race in the Philippines, inherited, it would seem, by each rising generation during three centuries, furnishes an instructive lesson. Under the pending agreement General Bates, assisted by the officers of the Navy, quietly placed garrisons of one company each at Siassi and at Bongao, on the Tawai Tawai group of islands, where they were well received by the friendly natives. With the approval of the agreement, the only difficulty to a satisfactory settlement of the Sulu affairs will arise from discontent on the part of the Sultan personally because of a supposed decrease in anticipated revenues or the machinations of the insurgents of Mindanao, who are endeavoring to create a feeling of distrust and hostility among the natives against the United States troops.

"The Sultan's government is one of perfect despotism, in form at least, as all political power is supposed to center in his person; but this does not prevent frequent outbreaks on the part of the datos, who frequently revolt, and are now, in two or three instances, in declared enmity. All Moros, however, profess the Mohammedan religion, introduced in the fourteenth century, and the sacredness of the person of the Sultan is therefore a tenet of faith. This fact would prevent any marked success by a dato in attempting to secure supreme power. Spain endeavored to supplant the Sultan with one of his most enterprising chiefs and signally failed. Peonage or a species of serfdom enters largely into the social and domestic arrangements and a dato's following or clan submits itself without protest to his arbitrary will. The Moro political fabric bears resemblance to the state of feudal times—the Sultan exercising supreme power by divine right, and his datos, like the feudal lords, supporting or opposing him at will, and by force of arms occasionally, but not to the extent of dethronement, as that would be too great a sacrilege for a Mohammedan people to seek to consummate. The United States must accept these people as they are, and endeavor to ameliorate their condition by degrees, and the best means to insure success appears to be through the cultivation of friendly sentiments and the introduction of trade and commerce upon approved business methods. To undertake forcible radical action for the amelioration of conditions or to so interfere with their domestic relations as to arouse their suspicions and distrust would be attended with unfortunate consequences."—*Report of Gen. Otis, Aug.* 31, 1899 (*Message and Documents: Abridgment*, 1899–1900, *v.* 2, *p.* 1165).

A. D. 1899-1900.—Military operations against the insurgents.—Death of General Lawton.—"The enlargement of the field of operations and government in the Philippine Islands made it impracticable to conduct the business under the charge of the army in those islands through the machinery of a single department, and by order made April 7, 1900, the Philippine Islands were made a military division, consisting of four departments: The Department of Northern Luzon, the Department of Southern Luzon, the Department of the Visayas, and the Department of Mindanao and Jolo. The Department of Northern Luzon is subdivided into six, the Department of Southern Luzon into four, the Department of the Visayas into four, and the Department of Mindanao and Jolo into four military districts. . . .

"At the date of the last report (November 29, 1899 [see above]) the government established by the Philippine insurgents in central Luzon and the organized armed forces by which it was maintained had been destroyed, and the principal civil and military leaders of the insurrection, accompanied by small and scattered bands of troops, were the objects of pursuit in the western and the northern parts of the island. That

PHILIPPINE ISLANDS, 1899–1900.

pursuit was prosecuted with vigor and success, under conditions of extraordinary difficulty and hardship, and resulted in the further and practically complete disintegration of the insurrectionary bands in those regions, in the rescue of nearly all the American prisoners and the greater part of the Spanish prisoners held by the insurgents, in the capture of many of the leading insurgents, and in the capture and destruction of large quantities of arms, ammunition, and supplies. There still remained a large force of insurgents in Cavite and the adjacent provinces south of Manila, and a considerable force to the east of the Rio Grande de Pampanga, chiefly in the province of Bulacan, while in the extreme southeastern portions of Luzon, and in the various Visayan islands, except the island of Negros, armed bodies of Tagalogs had taken possession of the principal seacoast towns, and were exercising military control over the peaceful inhabitants. Between the insurgent troops in Bulacan and the mountains to the north, and the insurgents in the south, communication was maintained by road and trail, running along and near the eastern bank of the Mariquina River, and through the towns of Mariquina, San Mateo, and Montalban and the province of Morong. This line of communication, passing through rough and easily defended country, was strongly fortified and held by numerous bodies of insurgents.

"On the 18th of December, 1899, a column, under the command of Maj. Gen. Henry W. Lawton, proceeded from Manila, and between that date and the 29th of December captured all the fortified posts of the insurgents, took possession of the line of communication, which has ever since been maintained, and destroyed, captured, or dispersed the insurgent force in that part of the island. In the course of this movement was sustained the irremediable loss of General Lawton, who was shot and instantly killed while too fearlessly exposing his person in supervising the passing of his troops over the river Mariquina at San Mateo.

"On the 4th of January, 1900, Gen. J. C. Bates, U. S. V., was assigned to the command of the First Division of the Eighth Army Corps, and an active campaign under his direction was commenced in Southern Luzon. The plan adopted was to confront and hold the strong force of the enemy near Imus and to the west of Bacoor by a body of troops under General Wheaton, while a column, under General Schwan, should move rapidly down the west shore of the Laguna de Bay to Biñang, thence turn southwesterly and seize the Silang, Indang, and Naic road, capture the enemy's supplies supposed to be at the towns of Silang and Indang, and arrest the retreat of the enemy, when he should be driven from northern Cavite by our troops designated to attack him there, and thus prevent his reassembling in the mountains of southern Cavite and northern Batangas. This plan was successfully executed. General Schwan's column moved over the lines indicated with great rapidity, marching a distance of over 600 miles, striking and defeating numerous bodies of insurgents and capturing many intrenched positions, taking possession of and garrisoning towns along the line, and scattering and demoralizing all the organized forces of the enemy within that section of country. From these operations and the simultaneous attacks by our troops under General Wheaton in the north the rebel forces in the Cavite region practically disappeared, the members either being killed or captured or returning to their homes as unarmed citizens, and a few scattered parties escaping through General Schwan's line to the south. By the 8th of February the organized forces of the insurgents in the region mentioned had ceased to exist. In large portions of the country the inhabitants were returning to their homes and resuming their industries, and active trade with Manila was resumed. In the course of these operations about 600 Spanish prisoners were released from the insurgents, leaving about 600 more still in their hands in the extreme southeastern provinces of Camarines and Albay, nearly all of whom were afterwards liberated by our troops. In the meantime an expedition was organized under the command of Brig. Gen. William A. Kobbé, U. S. V., to expel the Tagalogs who had taken possession of the principal hemp ports of the islands situated in Albay, the extreme southeastern province of Luzon, and in the islands of Leyte, Samar, and Catanduanes. This expedition sailed from Manila on the 18th of January and accomplished its object. All of the principal hemp ports were relieved from control of the insurgents, garrisoned by American troops, and opened to commerce by order of the military governor of the islands on the 30th of January and the 10th and 14th of February. The expedition met with strong resistance at Legaspi by an intrenched force under the Chinese general, Paua. He was speedily overcome and went into the interior. After a few days he reassembled his forces and threatened the garrisons which had been left in Albay and Legaspi, whereupon he was attacked, and defeated, and surrendered. Thirty pieces of artillery, a large quantity of ammunition, a good many rifles, and a considerable amount of money were captured by this expedition.

"On the 15th of February an expedition, under the supervision of Major-General Bates and under the immediate command of Brig. Gen. James M. Bell, U. S. V., sailed from Manila to take possession of the North and South Camarines provinces and Western Albay, in which the insurgent forces had been swelled by the individuals and scattered bands escaping from our operations in various sections of the north. The insurgent force was defeated after a sharp engagement near the mouth of the Bicol River, pursued, and scattered. Large amounts of artillery and war material were captured. The normal conditions of industry and trade relations with Manila were resumed by the inhabitants. On the 20th of March the region covered by the last-described operations was created a district of southeastern Luzon, under the command of Gen. James M. Bell, who was instructed to proceed to the establishment of the necessary customs and internal-revenue service in the district. In the meantime similar expeditions were successfully made through the mountains of the various islands of the Visayan Group, striking and scattering and severely punishing the bands of bandits and insurgents who infested those islands. In the latter part of March General Bates proceeded with the Fortieth Infantry to establish garrisons in Mindanao. The only resistance was of a trifling character at Cagayan, the insurgent general in northeastern Mindanao surrendering and turn-

ing over the ordnance in his possession. With [the execution of these movements] all formal and open resistance to American authority in the Philippines terminated, leaving only an exceedingly vexatious and annoying guerilla warfare of a character closely approaching brigandage, which will require time, patience, and good judgment to finally suppress. As rapidly as we have occupied territory, the policy of inviting inhabitants to return to their peaceful vocations, and aiding them in the reëstablishment of their local governments, has been followed, and the protection of the United States has been promised to them. The giving of this protection has led to the distribution of troops in the Philippine Islands to over 400 different posts, with the consequent labor of administration and supply. The maintenance of these posts involves the continued employment of a large force, but as the Tagalogs who are in rebellion have deliberately adopted the policy of murdering, so far as they are able, all of their countrymen who are friendly to the United States, the maintenance of garrisons is at present necessary to the protection of the peaceful and unarmed Filipinos who have submitted to our authority; and if we are to discharge our obligations in that regard their reduction must necessarily be gradual."—*United States, Secretary of War, Annual Report, Nov.* 30, 1900, *pp.* 5-10.

A. D. 1900 (January).—Report of the First Philippine Commission.—The First Commission to the Philippines returned to the United States in the autumn of 1899, and then submitted to the President a brief preliminary statement of its proceedings in the Islands and the opinions its members had formed, concerning the spirit and extent of the Tagalo revolt, the general disposition of the people at large, their capacity for independent self-government, etc. On the 31st of January following the commissioners presented a report which deals extensively with many subjects of investigation and deliberation. In Part I., it sets forth the efforts made by the commission "toward conciliation and the establishment of peace," through interviews with various emissaries of Aguinaldo, and others, and by means of a proclamation to the people. In Part II., it gives an extended account of the races and tribes of which the native population of the Islands is composed. In Part III., it details the provision that has heretofore been made for education, and states the conclusions of the commission as to the capacity of the people and their fitness for a popular government. In Part IV., a very full account of the Spanish organization of government in the Philippines, general, provincial and municipal, is given, and the reforms that were desired by the Filipino people are ascertained. From this the commission proceeds to consider the question of a plan of government for the Islands under the sovereignty of the United States, and concludes that the Territorial system of the United States offers all that can be desired. "What Jefferson and the nation did for Louisiana," says the report, "we are . . . free to-day to do for the Philippines. The fact that Bonaparte had provided in the treaty that Louisiana should in due time be admitted as a State in the Union, and that in the meantime its inhabitants should have protection in the free enjoyment of their liberty, property, and religion, made no difference in the relation of Louisiana to the Constitution of the United States so long as Louisiana remained a Territory; and, if it had made a difference, it should have constituted something of a claim to the immediate enjoyment of some or all of the benefits of the Constitution. Unmoved by that consideration, however, the Jeffersonian policy established once for all the subjection of national domain outside the States to the absolute and unrestricted power of Congress. The commission recommends that in dealing with the Philippines this vast power be exercised along the lines laid down by Jefferson and Madison in establishing a government for Louisiana, but with . . . deviations in the direction of larger liberty to the Filipinos. . . . The result would be substantially the transformation of their second-class Territorial government of Louisiana into a Territorial government of the first-class for the Philippine Islands." To this recommendation of the Territorial system of government the commission adds a strenuous plea for a closely guarded civil service. "It is a safe and desirable rule," says the report, "that no American should be appointed to any office in the Philippines for which a reasonably qualified Filipino can, by any possibility, be secured. Of course the merit or business system must be adopted and lived up to; the patronage or spoils system would prove absolutely fatal to good government in this new Oriental territory." Further parts of the report are devoted to the Philippine judicial system, as it has been and as it should be; to "the condition and needs of the United States in the Philippines from a naval and maritime standpoint"; to the secular clergy and religious orders; to registration laws; to the currency; to the Chinese in the Philippines; and to public health. Among the exhibits appended in volume 1 of the published Report are the constitution of Aguinaldo's Philippine Republic (called the Malolos constitution), and several other constitutional drafts and proposals from Filipino sources, indicating the political ideas that prevail.—*Report of the Philippine Commission, Jan.* 31, 1900, *v.* 1.

A. D. 1900 (March).—Institution of municipal governments.—By General Orders, on the 29th of March, 1900, the Military Governor of the Islands promulgated a law providing for the election and institution of municipal governments, the provisions of which law had been framed by a board, appointed in the previous January, under the presidency of Don Cayetano Arellano, chief justice of the Philippines. The first chapter of the law reads as follows:

"ART. 1. The towns of the Philippine Islands shall be recognized as municipal corporations with the same limits as heretofore established, upon reorganizing under the provisions of this order. All property vested in any town under its former organization shall be vested in the same town upon becoming incorporated hereunder.

"ART. 2. Towns so incorporated shall be designated as 'municipios,' and shall be known respectively by the names heretofore adopted. Under such names they may, without further authorization, sue and be sued, contract and be contracted with, acquire and hold real and personal property for the general interests of the town, and exercise all the powers hereinafter

conferred. The city of Manila is exempt from the provisions of this order.

"ART. 3. The municipal government of each town is hereby vested in an alcalde and a municipal council. The alcalde and councilors, together with the municipal lieutenant, shall be chosen at large by the qualified electors of the town, and their term of office shall be for two years from and after the first Monday in January next after their election and until their successors are duly chosen and qualified: Provided, That the alcalde and municipal lieutenant elected in 1900 shall hold office until the first Monday in January, 1902, only; and that the councilors elected in 1900 shall divide themselves, by lot, into two classes; the seats of those of the first class shall be vacated on the first Monday of January, 1901, and those of the second class one year thereafter, so that one-half of the municipal council shall be chosen annually.

"ART. 4. Incorporated towns shall be of four classes, according to the number of inhabitants. Towns of the first class shall be those which contain not less than 25,000 inhabitants and shall have 18 councilors; of the second class, those containing 18,000 and less than 25,000 inhabitants and shall have 14 councilors; of the third class, those containing 10,000 and less than 18,000 inhabitants and shall have 10 councilors; of the fourth class, those containing less than 10,000 inhabitants and shall have 8 councilors. Towns of less than 2,000 inhabitants may incorporate under the provisions of this order, or may, upon petition to the provincial governor, signed by a majority of the qualified electors thereof, be attached as a barrio to an adjacent and incorporated town, if the council of the latter consents.

The qualifications of voters are defined in the second chapter as follows:

"ART. 5. The electors charged with the duty of choosing elective municipal officers must be male persons, 23 years of age or over, who have had a legal residence in the town in which they exercise the suffrage for a period of six months immediately preceding the election, and who are not citizens or subjects of any foreign power, and who are comprised within one of the following three classes: 1. Those who, prior to the 13th of August, 1898, held the office of municipal captain, gobernadorcillo, lieutenant or cabeza de barangay. 2. Those who annually pay 30 pesos or more of the established taxes. 3. Those who speak, read, and write English or Spanish."

Succeeding articles in this chapter prescribe the oath to be taken and subscribed by each elector before his ballot is cast, recognizing and accepting "the supreme authority of the United States of America"; appoint the times and places for holding elections, and set forth the forms to be observed in them. In the third chapter, the qualifications of officers are thus defined:

"ART. 13. An alcalde, municipal lieutenant, or councilor must have the following qualifications: 1. He must be a duly qualified elector of the municipality in which he is a candidate, of 26 years of age or over, and have had a legal residence therein for at least one year prior to the date of election. 2. He must correctly speak, read, and write either the English language or the local dialect.

"ART. 14. In no case can there be elected or appointed to municipal office ecclesiastics, soldiers in active service, persons receiving salary from municipal, provincial or government funds; debtors to said funds, whatever the class of said funds; contractors of public works and their bondsmen; clerks and functionaries of the administration or government while in said capacity; bankrupts until discharged, or insane or feeble-minded persons.

"ART. 15. Each and every person elected or appointed to a municipal office under the provisions of this order shall, before entering upon the duties thereof, take and subscribe before the alcalde or town secretary," — an oath analogous to that required from the electors.

Further articles in this chapter and the next define the duties of the alcalde, the municipal lieutenant, municipal attorney, municipal secretary, municipal treasurer, and the municipal councilors. The fifth chapter relates to taxation and finances; the sixth and seventh contain provisions as follows:

"ART. 53. The governor of the province shall be ex officio president of all municipal councils within the province and shall have general supervisory charge of the municipal affairs of the several towns and cities therein organized under the provisions of this order, and in his said supervisory capacity may inspect or cause to be inspected, at such times as he may determine, the administration of municipal affairs and each and every department thereof, and may hear and determine all appeals against the acts of municipal corporations or their officers. He, or those whom he may designate in writing for that duty, shall at all times have free access to all records, books, papers, moneys, and property of the several towns and cities of the province, and may call upon the officers thereof for an accounting of the receipts and expenditures, or for a general or special report of the official acts of the several municipal councils or of any and every of them, or of any and every of the officers thereof, at any time, and as often as he may consider necessary to inform himself of the state of the finances or of the administration of municipal affairs, and such requests when made must be complied with without excuse, pretext, or delay. He may suspend or remove municipal officers, either individually or collectively, for cause, and appoint substitutes therefor permanently, for the time being or pending the next general election, or may call a special election to fill the vacancy or vacancies caused by such suspension or removal, reporting the cause thereof with a full statement of his action in the premises to the governor of the islands without delay. He shall forward all questions or disputes that may arise over the boundaries or jurisdictional limits of the city, towns, or municipalities to the governor of the islands for final determination, together with full report and recommendations relative to the same. He may, with the approval of the governor of the islands, authorize the cities and towns to form among themselves associations or communities for determined ends, such as the construction of public works, the creation and foundation of beneficent, charitable, or educational institutions, for the better encouragement of public interests or the use of communal property.

"ART. 54. It shall be the duty of commanding officers of military districts, immediately after the publication of this order, to recommend

to the office of the military governor in which towns within their commands municipal governments shall be established, and upon approval of recommendations, either personally or through subordinate commanders designated by them, to issue and cause to be posted proclamations calling elections therein. Such proclamations shall fix the time and place of election and shall designate three residents of the town who shall be charged with the duty of administering electors' oaths; of preparing, publishing, and correcting, within specified dates, a list of electors having the qualifications hereinbefore set forth, and of presiding at and making a due return of the election thus appointed. The proclamation shall specify the offices to be filled, and in order to determine the number of councilors the commanders charged with calling the election shall determine, from the best available evidence, the class to which the town belongs, as hereinbefore defined; the classification thus made shall govern until the taking of an official census. The first alcaldes appointed under the provisions of this order shall take and subscribe the oath of office before the commanding officer of the military district or some person in the several towns designated by said commanding officer for the said purpose; whereupon the alcalde so sworn shall administer the said oath of office to all the other officers of the municipio there elected and afterwards appointed. The election returns shall be canvassed by the authority issuing the election proclamation, and the officers elected shall assume their duties on a date to be specified by him in orders.

"ART. 55. Until the appointment of governors of provinces their duties under this order will be performed by the commanding officers of the military districts. They may, by designation, confer on subordinate commanding officers of subdistricts or of other prescribed territorial limits of their commands the supervisory duties herein enumerated, and a subordinate commander so designated shall perform all and every of the duties herein prescribed for the superior commanding officer.

"ART. 56. For the time being the provisions of this order requiring that alcaldes be elected, in all cases shall be so far modified as to permit the commanding officers of military districts, in their discretion, either to appoint such officers or to have them elected as hereinbefore prescribed. The term of office of alcaldes appointed under this authority shall be the same as if they had been elected; at the expiration of such term the office shall be filled by election or appointment.

"ART. 57. The governments of towns organized under General Orders, No. 43, Headquarters Department of the Pacific and Eighth Army Corps, series 1899, will continue in the exercise of their functions as therein defined and set forth until such time as municipal governments therefor have been organized and are in operation under this order."—*United States, 56th Congress, 1st Sess., House Doc. No.* 659.

A. D. 1900 (April).—Appointment of the Second Commission to the Philippines and the President's instructions to it.—Steps to be taken towards the establishment of civil government, and the principles to be observed.—On the 7th of April, 1900, the President of the United States addressed the following communication to the Secretary of War, appointing a Second Commission to the Philippines, "to continue and perfect the work of organizing and establishing civil government" in the Islands, and defining the principles on which that work should proceed: "In the message transmitted to the Congress on the 5th of December, 1899, I said, speaking of the Philippine Islands: 'As long as the insurrection continues the military arm must necessarily be supreme. But there is no reason why steps should not be taken from time to time to inaugurate governments essentially popular in their form as fast as territory is held and controlled by our troops. To this end I am considering the advisability of the return of the commission, or such of the members thereof as can be secured, to aid the existing authorities and facilitate this work throughout the islands.'

"To give effect to the intention thus expressed I have appointed the Hon. William H. Taft of Ohio, Prof. Dean C. Worcester of Michigan, the Hon. Luke I. Wright of Tennessee, the Hon. Henry C. Ide of Vermont, and Prof. Bernard Moses of California, Commissioners to the Philippine Islands to continue and perfect the work of organizing and establishing civil government already commenced by the military authorities, subject in all respects to any laws which Congress may hereafter enact. The Commissioners named will meet and act as a board, and the Hon. William H. Taft is designated as President of the board. It is probable that the transfer of authority from military commanders to civil officers will be gradual and will occupy a considerable period. Its successful accomplishment and the maintenance of peace and order in the meantime will require the most perfect co-operation between the civil and military authorities in the island, and both should be directed during the transition period by the same executive department. The commission will therefore report to the Secretary of War, and all their action will be subject to your approval and control.

"You will instruct the commission to proceed to the City of Manila, where they will make their principal office, and to communicate with the Military Governor of the Philippine Islands, whom you will at the same time direct to render to them every assistance within his power in the performance of their duties. Without hampering them by too specific instructions, they should in general be enjoined, after making themselves familiar with the conditions and needs of the country, to devote their attention in the first instance to the establishment of municipal governments, in which the natives of the islands, both in the cities and in the rural communities, shall be afforded the opportunity to manage their own local affairs to the fullest extent of which they are capable, and subject to the least degree of supervision and control which a careful study of their capacities and observation of the workings of native control show to be consistent with the maintenance of law, order, and loyalty. The next subject in order of importance should be the organization of government in the larger administrative divisions corresponding to counties, departments, or provinces, in which the common interests of many or several municipalities falling within the same tribal lines, or the same natural geographical limits, may best be subserved by a common administration. Whenever the commission is of the opinion that the condition of affairs

in the islands is such that the central administration may safely be transferred from military to civil control, they will report that conclusion to you, with their recommendations as to the form of central government to be established for the purpose of taking over the control.

"Beginning with the 1st day of September, 1900, the authority to exercise, subject to my approval, through the Secretary of War, that part of the power of government in the Philippine Islands which is of a legislative nature is to be transferred from the Military Governor of the Islands to this commission, to be thereafter exercised by them in the place and stead of the Military Governor, under such rules and regulations as you shall prescribe, until the establishment of the civil central government for the islands contemplated in the last foregoing paragraph, or until Congress shall otherwise provide. Exercise of this legislative authority will include the making of rules and orders, having the effect of law, for the raising of revenue by taxes, customs duties, and imposts; the appropriation and expenditure of public funds of the islands; the establishment of an educational system throughout the islands; the establishment of a system to secure an efficient civil service; the organization and establishment of courts; the organization and establishment of municipal and departmental governments, and all other matters of a civil nature for which the Military Governor is now competent to provide by rules or orders of a legislative character. The commission will also have power during the same period to appoint to office such officers under the judicial, educational, and civil service systems and in the municipal and departmental governments as shall be provided for. Until the complete transfer of control the Military Governor will remain the chief executive head of the Government of the islands, and will exercise the executive authority now possessed by him and not herein expressly assigned to the commission, subject, however, to the rules and orders enacted by the commission in the exercise of the legislative powers conferred upon them. In the meantime the municipal and departmental governments will continue to report to the Military Governor, and be subject to his administrative supervision and control, under your direction, but that supervision and control will be confined within the narrowest limits consistent with the requirement that the powers of government in the municipalities and departments shall be honestly and effectively exercised and that law and order and individual freedom shall be maintained. All legislative rules and orders, establishments of Government, and appointments to office by the commission will take effect immediately, or at such times as it shall designate, subject to your approval and action upon the coming in of the commission's reports, which are to be made from time to time as its action is taken. Wherever civil Governments are constituted under the direction of the commission, such military posts, garrisons, and forces will be continued for the suppression of insurrection and brigandage, and the maintenance of law and order, as the military commander shall deem requisite, and the military forces shall be at all times subject under his orders to the call of the civil authorities for the maintenance of law and order and the enforcement of their authority.

"In the establishment of Municipal Governments the commission will take as the basis of its work the Governments established by the Military Governor under his order of Aug. 8, 1899, and under the report of the board constituted by the Military Governor by his order of Jan. 29, 1900, to formulate and report a plan of Municipal Government, of which his Honor Cayetano Arellano, President of the Audencia, was Chairman, and it will give to the conclusions of that board the weight and consideration which the high character and distinguished abilities of its members justify. In the constitution of Departmental or Provincial Governments it will give especial attention to the existing Government of the Island of Negros, constituted, with the approval of the people of that island, under the order of the Military Governor of July 22, 1899, and after verifying, so far as may be practicable, the reports of the successful working of that Government, they will be guided by the experience thus acquired, so far as it may be applicable to the conditions existing in other portions of the Philippines. It will avail itself, to the fullest degree practicable, of the conclusions reached by the previous commissions to the Philippines. In the distribution of powers among the Governments organized by the commission, the presumption is always to be in favor of the smaller sub-division, so that all the powers which can properly be exercised by the Municipal Government shall be vested in that Government, and all the powers of a more general character which can be exercised by the Departmental Government shall be vested in that Government, and so that in the governmental system, which is the result of the process, the Central Government of the islands, following the example of the distribution of the powers between the States and the National Government of the United States, shall have no direct administration except of matters of purely general concern, and shall have only such supervision and control over local Governments as may be necessary to secure and enforce faithful and efficient administration by local officers.

"The many different degrees of civilization and varieties of custom and capacity among the people of the different islands preclude very definite instruction as to the part which the people shall take in the selection of their own officers; but these general rules are to be observed: That in all cases the municipal officers, who administer the local affairs of the people, are to be selected by the people, and that wherever officers of more extended jurisdiction are to be selected in any way, natives of the islands are to be preferred, and if they can be found competent and willing to perform the duties, they are to receive the offices in preference to any others. It will be necessary to fill some offices for the present with Americans which after a time may well be filled by natives of the islands. As soon as practicable a system for ascertaining the merit and fitness of candidates for civil office should be put in force. An indispensable qualification for all offices and positions of trust and authority in the islands must be absolute and unconditional loyalty to the United States, and absolute and unhampered authority and power to remove and punish any officer deviating from that standard must at all times be retained in the hands of the central authority of the islands. In all the forms of government and administrative provisions

which they are authorized to prescribe, the commission should bear in mind that the government which they are establishing is designed not for our satisfaction, or for the expression of our theoretical views, but for the happiness, peace, and prosperity of the people of the Philippine Islands, and the measures adopted should be made to conform to their customs, their habits, and even their prejudices, to the fullest extent consistent with the accomplishment of the indispensable requisites of just and effective government.

"At the same time the commission should bear in mind, and the people of the islands should be made plainly to understand, that there are certain great principles of government which have been made the basis of our governmental system which we deem essential to the rule of law and the maintenance of individual freedom, and of which they have, unfortunately, been denied the experience possessed by us; that there are also certain practical rules of government which we have found to be essential to the preservation of these great principles of liberty and law, and that these principles and these rules of government must be established and maintained in their islands for the sake of their liberty and happiness, however much they may conflict with the customs or laws of procedure with which they are familiar. It is evident that the most enlightened thought of the Philippine Islands fully appreciates the importance of these principles and rules, and they will inevitably within a short time command universal assent. Upon every division and branch of the government of the Philippines, therefore, must be imposed these inviolable rules: That no person shall be deprived of life, liberty, or property without due process of law; that private property shall not be taken for public use without just compensation; that in all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, to be informed of the nature and cause of the accusation, to be confronted with the witnesses against him, to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense; that excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishment inflicted; that no person shall be put twice in jeopardy for the same offense, or be compelled in any criminal case to be a witness against himself; that the right to be secure against unreasonable searches and seizures shall not be violated; that neither slavery nor involuntary servitude shall exist except as a punishment for crime; that no bill of attainder or ex post facto law shall be passed; that no law shall be passed abridging the freedom of speech or of the press, or the rights of the people to peaceably assemble and petition the Government for a redress of grievances; that no law shall be made respecting an establishment of religion, or prohibiting the free exercise thereof, and that the free exercise and enjoyment of religious profession and worship without discrimination or preference shall forever be allowed.

"It will be the duty of the commission to make a thorough investigation into the titles to the large tracts of land held or claimed by individuals or by religious orders; into the justice of the claims and complaints made against such landholders by the people of the island or any part of the people, and to seek by wise and peaceable measures a just settlement of the controversies and redress of wrongs which have caused strife and bloodshed in the past. In the performance of this duty the commission is enjoined to see that no injustice is done; to have regard for substantial rights and equity, disregarding technicalities so far as substantial right permits, and to observe the following rules: That the provision of the treaty of Paris pledging the United States to the protection of all rights of property in the islands, and, as well, the principle of our own Government, which prohibits the taking of private property without due process of law, shall not be violated; that the welfare of the people of the islands, which should be a paramount consideration, shall be attained consistently with this rule of property right; that if it becomes necessary for the public interest of the people of the islands to dispose of claims to property which the commission finds to be not lawfully acquired and held, disposition shall be made thereof by due legal procedure, in which there shall be full opportunity for fair and impartial hearing and judgment; that if the same public interests require the extinguishment of property rights lawfully acquired and held, due compensation shall be made out of the public Treasury therefor; that no form of religion and no minister of religion shall be forced upon any community or upon any citizen of the islands; that, upon the other hand, no minister of religion shall be interfered with or molested in following his calling, and that the separation between State and Church shall be real, entire, and absolute.

"It will be the duty of the commission to promote and extend, and, as it finds occasion, to improve, the system of education already inaugurated by the military authorities. In doing this it should regard as of first importance the extension of a system of primary education which shall be free to all, and which shall tend to fit the people for the duties of citizenship and for the ordinary avocations of a civilized community. This instruction should be given in the first instance in every part of the islands in the language of the people. In view of the great number of languages spoken by the different tribes, it is especially important to the prosperity of the islands that a common medium of communication may be established, and it is obviously desirable that this medium should be the English language. Especial attention should be at once given to affording full opportunity to all the people of the islands to acquire the use of the English language. It may be well that the main changes which should be made in the system of taxation and in the body of the laws under which the people are governed, except such changes as have already been made by the military Government, should be relegated to the civil Government which is to be established under the auspices of the commission. It will, however, be the duty of the commission to inquire diligently as to whether there are any further changes which ought not to be delayed, and, if so, it is authorized to make such changes, subject to your approval. In doing so it is to bear in mind that taxes which tend to penalize or to repress industry and enterprise are to be avoided; that provisions for taxation should be simple, so that they may be understood by the

people; that they should affect the fewest practicable subjects of taxation which will serve for the general distribution of the burden.

"The main body of the laws which regulate the rights and obligations of the people should be maintained with as little interference as possible. Changes made should be mainly in procedure, and in the criminal laws to secure speedy and impartial trials, and at the same time effective administration and respect for individual rights. In dealing with the uncivilized tribes of the islands the commission should adopt the same course followed by Congress in permitting the tribes of our North American Indians to maintain their tribal organization and government, and under which many of those tribes are now living in peace and contentment, surrounded by a civilization to which they are unable or unwilling to conform. Such tribal governments should, however, be subjected to wise and firm regulation; and, without undue or petty interference, constant and active effort should be exercised to prevent barbarous practices and introduce civilized customs. Upon all officers and employés of the United States, both civil and military, should be impressed a sense of the duty to observe not merely the material but the personal and social rights of the people of the islands, and to treat them with the same courtesy and respect for their personal dignity which the people of the United States are accustomed to require from each other. The articles of capitulation of the City of Manila on the 13th of August, 1898, concluded with these words: 'This city, its inhabitants, its churches and religious worship, its educational establishments, and its private property of all descriptions, are placed under the special safeguard of the faith and honor of the American Army.' I believe that this pledge has been faithfully kept. As high and sacred an obligation rests upon the Government of the United States to give protection for property and life, civil and religious freedom, and wise, firm, and unselfish guidance in the paths of peace and prosperity to all the people of the Philippine Islands. I charge this commission to labor for the full performance of this obligation, which concerns the honor and conscience of their country, in the firm hope that through their labors all the inhabitants of the Philippine Islands may come to look back with gratitude to the day when God gave victory to American arms at Manila and set their land under the sovereignty and the protection of the people of the United States. WILLIAM McKINLEY."

A. D. 1900 (May).—Filipinos killed, captured and surrendered from the breaking out of hostilities with them to May, 1900.—Losses of American army.—In response to a resolution of the United States Senate, May 17, 1900, the following report, by cable, from Manila, was made by General MacArthur: "Filipinos killed, 10,780; wounded, 2,104; captured and surrendered, 10,425; number prisoners in our possession, about 2,000. No systematic record Filipino casualties these headquarters. Foregoing, compiled from large number reports made immediately after engagements, is as close an approximation as now possible, owing to wide distribution of troops. More accurate report would take weeks to prepare. Number reported killed probably in excess of accurate figures; number reported wounded probably much less, as Filipinos managed to remove most wounded from field, and comparatively few fell into our hands. Officers high rank and dangerous suspicious men have been retained as prisoners; most other men discharged on field as soon as disarmed. Propose to release all but very few prisoners at early date."—*56th Congress, 1st Sess., Senate Doc.* 435.—For returns of casualties in the American army during the same period, see (in this vol.) UNITED STATES OF AM.: A. D. 1900 (JUNE).

A. D. 1900 (July).—Appeal of citizens of Manila to the Congress of the United States.—An appeal "to the Congress of the United States," dated at Manila, July 15, 1900, and signed by 2,006 of the inhabitants of the city, who were said by Senator Hoar and Senator Teller to be "the leading people of that section of country—lawyers and bankers and professional men generally" was presented to the Senate on the 10th of January, 1901. It opens as follows: "The undersigned, Filipinos and peaceful inhabitants of this city, in their own name and in the name of the misnamed 'irreconcilables,' respectfully present themselves and submit to the worthy consideration of the Congress of the United States of America the following appeal:

"The people of the Philippine Islands, in view of their calamitous condition, demand in the name of her sons, in the name of all races, in the name of humanity, that an end be put to the misfortunes which afflict them which, while they distress and agonize her, compel her to struggle for the rights that are hers, and for the maintenance whereof she must, if necessary, continue to pour out her blood as she has so constantly and generously done on battlefields, in the woods, on the mountains, in the city, everywhere! The blood which has been shed and that is still being shed, and which will continue to be shed until she has secured her rights, is not shed because of the intrigues of a few who, according to misinformed persons, desire to exploit the people and enrich themselves at the cost of their brother's blood. It has, gentlemen, sprung from the hearts of the people, who alone are the real strength of nations, the sovereign king of races, the producers of the arts, of science, of commerce, of wealth, of agriculture, of civilization, of progress, and of all the productions of human labor and intelligence, in all of which the people of the Philippine Islands had made great progress. The Filipinos were not sunk in lethargy, as some untruthfully assert. They suffered, but the hour to break their chains came to them in August, 1896, and they proclaimed to the world their emancipation."

The paper proceeds to review the circumstances of the revolt against Spanish rule which broke out in 1896, and the later circumstances of the conflict between Filipinos and Americans at such length that it cannot be given in full. Its aim and its spirit may be sufficiently shown by

quotation of the following passages from the closing parts of the appeal: "Even supposing that America should force us to submit, and after many years of war the country should submit, as the lesser evil, to the proclamation of an ample autonomy, that autonomy would not produce a sincere bond of friendship between the two people, because, having sacrificed herself for her independence, the country could not look with affection upon those who would be the only obstacle to her happiness. She would always retain her aspirations, so that autonomy would be a short 'interregnum' which the country would necessarily take advantage of to regain new strength to be used in the attainment of her high political ideals, happen what may, and perhaps in some hour of peril strike a fatal blow at a hated oppressor. . . . In giving this warning we do not forget the good Americans whom we sincerely respect; we are mindful of the rupture of our good relations with the United States; we are mindful of the blood which will again run on the soil of our country. We see in that autonomy a new and sorrowful page in the history of the Philippines, and therefore we can not but look upon it with horror. Our people have had enough of suffering. . . . They steadfastly believe that their independence is their only salvation. Should they obtain it, they would be forever grateful to whomsoever shall have helped them in their undertaking; they would consider him as their redeemer, and his name will be engraved with bright letters in the national history, that all the generations to come may read it with sublime veneration. America, consistent with her tradition, is the only one which could play that great rôle in the present and future of the Philippines. If she recognizes their independence, they could offer her a part of the revenues of the Philippine state, according to the treaty which shall be stipulated; the protection in the country of the merchandise of the United States, and a moral and material guarantee for American capital all over the archipelago; finally, whatever may bring greater prosperity to America and progress to the country will, we doubt not, be taken into account in the treaty which shall be celebrated.

"That the independence of the country will be attended with anarchy is asserted only by those who, offending the truth and forgetting their dignity, represent the Filipinos under horrible colors, comparing them to beasts. Their assertions are backed by isolated acts of pillage and robbery. What revolution of the world was free from such deeds? At this epoch passions are unrestrained; vengeance finds opportunity to satisfy itself; private ambitions are often favored by the occasion. Could such criminal deeds be avoided? Pythagoras said: 'If you like to see monsters, travel through a country during a revolution.' . . .

"In order to end our appeal we will say, with the learned lawyer, Senor Mabini: 'To govern is to study the wants and interpret the aspirations of the people, in order to remedy the former and satisfy the latter.' If the natives who know the wants, customs, and aspirations of the people are not fit to govern them, would the Americans, who have had but little to do with the Filipinos, be more capable to govern the latter? We have, therefore, already proven—1. That the revolution was the exclusive work of the public; 2. That in preparing it they were moved by a great ideal, the ideal of independence; 3. That they are ready to sacrifice their whole existence in order to realize their just aspirations; 4. That in spite of the serious difficulties through which they are passing, they still expect from America that she will consider them with impartiality and justice, and will recognize what by right belongs to them, and thus give them an opportunity to show their boundless gratitude; 5. That the annexation of the Philippines to America is not feasible; 6. That the American sovereignty is not favored by the Philippine people; 7. That an ample autonomy can not be imposed without violating the Filipino will; 8. That the Filipinos are firm for self-government.

"From this it results that the only admissible solution for the present difficulties is the recognition by America of the independence of the Filipinos. In saying this we do not consider either the nullity or the legality of the Paris treaty on our country, but the well-known doctrine of the immortal Washington, and of the sons of the United States of America, worthy champions of oppressed people. Therefore we, in the name of justice and with all the energies of our souls, demand—1. That the independence of the Filipinos be recognized; 2. That all the necessary information regarding the events which are taking place, concerning the peaceful towns and places which are supporting the arms of the revolution, be obtained from Filipinos who, by their antecedents and by their actual conduct, deserve the respect and confidence of the Filipino people."—*Congressional Record, Jan.* 10, 1901, *p.* 850.

A. D. 1900 (September).—Adoption of civil service rules. See (in this vol.) CIVIL SERVICE REFORM: A. D. 1900.

A. D. 1900 (September—November).—Civil government of the Islands by the President's Commission. — Legislative measures. — Report of the Commission.—"In April of this year the second Philippine commission, of which Hon. William H. Taft, of Ohio, Prof. Dean C. Worcester, of Michigan, Hon. Luke I. Wright, of Tennessee, Hon. Henry C. Ide, of Vermont, and Prof. Bernard Moses, of California, were members, sailed for Manila with the powers of civil government prescribed in the instructions of April 7, 1900 [see above]. After devoting several months to familiarizing themselves with the conditions in the islands, this commission on the 1st of September, 1900, entered upon the discharge of the extensive legislative powers and the specific powers of appointment conferred upon them in the instructions, and they have since that time continued to exercise all that part of the military power of the President in the Philippines which is legislative in its character, leaving the military governor still the chief executive of the islands, the action of both being duly reported to this Department for the President's consideration and approval. . . . On consultation with the commission, and with the President's approval, a note of amnesty was issued by the military governor, dated June 21, 1900, and supplemented by a public statement by the military governor, under date of July 2, 1900, based, in the main, upon the instructions to the commission. . . . In pursuance of them something over 5,000 persons, of all grades of the civil and military service of the insurrection, presented themselves and

took the following oath: 'I hereby renounce all allegiance to any and all so-called revolutionary governments in the Philippine Islands and recognize and accept the supreme authority of the United States of America therein; and I do solemnly swear that I will bear true faith and allegiance to that government; that I will at all times conduct myself as a faithful and law-abiding citizen of said islands, and will not, either directly or indirectly, hold correspondence with or give intelligence to an enemy of the United States, neither will I aid, abet, harbor, or protect such enemy. That I impose upon myself this voluntary obligation without any mental reservation or purpose of evasion, so help me God.' This number included many of the most prominent officials of the former Tagalog government. . . .

"The commission in its legislative action is following the ordinary course of legislative procedure. Its sessions are open, and its discussion and the proposed measures upon which it is deliberating are public, while it takes testimony and receives suggestions from citizens as if it were a legislative committee. Its first legislative act was the appropriation, on the 12th of September, of $2,000,000 (Mexican), to be used in the construction and repair of highways and bridges in the Philippine Islands. The second act, on the same day, was an appropriation of $5,000 (Mexican) for a survey of a railroad to the mountains of Benguet, in the island of Luzon. The proposed railroad, about 45 miles in length, extending from the Manila and Dagupan road, near the Gulf of Lingayen, to the interior, will open, at a distance of about 170 miles from Manila, a high tableland exceedingly healthy, well wooded with pine and oak, comparatively dry and cool, and where the mercury is said to range at night in the hottest season of the year between 50° and 60° F. The value of such a place for the recuperation of troops and foreign residents will be very great. The third act of the commission was an appropriation for the payment of a superintendent of public instruction. They have secured for that position the services of Frederick W. Atkinson, recently principal of the high school of Springfield, Mass., who was selected by the commission for that purpose before their arrival in Manila.

"Before the 1st of September a board of officers had been engaged upon the revision of the tariff for the islands in the light of such criticisms and suggestions as had been made regarding the old tariff. The commission has considered the report of this board, and after full public hearings of business interests in the island has formulated a tariff law which has been transmitted to the Department. . . . A civil-service board has been constituted by the commission [see, in this vol., CIVIL SERVICE REFORM: A. D. 1900]. They have secured from the United States Civil Service Commission the experienced and capable services of Mr. Frank M. Kiggins, and a civil-service law has been enacted by the commission providing for the application of the merit system to appointments in the island."—*United States, Secretary of War, Annual Report, Nov.* 30, 1900, *pp.* 25–27.

A report by the Commission, dated November 30, was received at Washington late in January, 1901. Of the legislative work on which it entered September 1st, and which, at the time of reporting, it had prosecuted during three months, the Commission speaks as follows: "It adopted the policy of passing no laws, except in cases of emergency, without publishing them in the daily press after they had passed a second reading, and giving to the public an opportunity to come before the Commission and suggest objections or amendments to the bills. The Commission has likewise adopted as part of its regular procedure the submission of all proposed bills to the Military Governor for his consideration and comment before enactment. We think that the holding of public sessions furnishes instructive lessons to the people, as it certainly secures to the Commission a means of avoiding mistakes. . . . The Commission has now passed forty-seven laws of more or less importance. . . . A municipal code has been prepared and forwarded to you for the consideration of one or two critical matters, and has not yet been adopted, pending your consideration of it. A tariff bill . . . has been prepared. . . . A judicial and civil procedure bill is nearly completed. The same thing is true of a bill for provincial government organization. A new internal tax law must then be considered. The wealth of this country has largely been in agricultural lands, and they have been entirely exempt. This enabled the large landowners to escape any other taxation than the urbana, a tax which was imposed upon the rental value of city buildings only, and the cedula tax, which did not in any case exceed $37.50 (Mexican) a person. We think that a land tax is to be preferred, but of this there will be found more detailed discussion below. . . .

"The only legislation thus far undertaken by the Commission which bears directly on the conduct of municipal affairs in the city of Manila is a law regulating the sale of spirituous, malt, vinous or fermented liquors. It is provided that none of the so-called native 'wines' [said to be concocted by mixing alcohol with oils and flavoring extracts] shall be sold except by holders of native wine licenses, and that such holders shall not be allowed to sell intoxicants of any other sort whatever. . . . The selling of native wines to soldiers of the United States under any circumstances is strictly prohibited, because the soldiers are inclined to indulge in those injurious beverages to excess, with disastrous results. . . . The Filipino ordinarily uses them moderately, if at all. Fortunately, he does not, to any considerable extent, frequent the American saloon. With a view to preventing his being attracted there, the playing of musical instruments or the operation of any gambling device, phonograph, slot machine, billiard or pool table or other form of amusement in saloons, bars or drinking places is prohibited."

The report of the Commission urged strongly the establishing of a purely civil government in the Islands, for reasons thus stated: "The restricted powers of a military government are painfully apparent in respect to mining claims and the organization of railroad, banking and other corporations and the granting of franchises generally. It is necessary that there be some body or officer vested with legislative authority to pass laws which shall afford opportunity to capital to make investment here. This is the true and most lasting method of pacification. Now the only corporations here are of Spanish or English origin with but limited concessions, and American capital finds itself completely obstructed. Such

difficulties would all be removed by the passage of the Spooner bill [see below : A. D. 1901 (FEBRUARY—MARCH)] now pending in both houses. The far reaching effect upon the feeling of the people of changing the military government to one purely civil, with the Army as merely auxiliary to the administration of civil law, cannot be too strongly emphasized. Military methods in administering quasi-civil government, however successful in securing efficiency and substantial justice, are necessarily abrupt and in appearance arbitrary, even when they are those of the Army of the Republic; and until a civil government is established here it will be impossible for the people of the Philippine Islands to realize the full measure of the difference between a government under American sovereignty and one under that of Spain."

Another subject of great importance dealt with in the November report of the Commission was that concerning the employment of native troops and police, on which it was said : "The question as to whether native troops and a native constabulary are at present practicable has received much thought and a careful investigation by the Commission. . . . We have sought and obtained the opinions of a large number of Regular and volunteer officers of all rank, having their fields of operation in all parts of the islands, and there appears to be a general consensus of opinion among them that the time is ripe for these organizations, and this is also our conclusion. Assuming that Congress at its next session will provide for an increase of the Regular Army, it by no means follows that a large part thereof will, or should, be stationed here permanently. Considerations of public policy and economy alike forbid such a programme, nor in our judgment is it necessary.

"While the American soldier is unsurpassed in war, as it is understood among civilized people, he does not make the best policeman, especially among a people whose language and customs are new and strange to him, and in our opinion should not be put to that use when, as we believe, a better substitute is at hand. We therefore earnestly urge the organization of ten regiments of native troops of infantry and cavalry, the proportion between the two arms of the service to be fixed by competent military judges. These troops should in the main be officered by Americans. Certainly this should be the case as to their field officers and company commanders. Lieutenants might be Filipinos, judicially selected, and provision might be made for their promotion in the event of faithful or distinguished service.

"We further recommend that a comprehensive scheme of police organization be put in force as rapidly as possible ; that it be separate and distinct from the army, having for its head an officer of rank and pay commensurate with the importance of the position, with a sufficient number of assistants and subordinates to exercise thorough direction and control. This organization should embrace every township in the islands, and should be so constituted that the police of several contiguous townships could be quickly mobilized. The chief officers of this organization should be Americans, but some of the subordinate officers should be natives, with proper provision for their advancement as a reward for loyal and efficient services. The main duty of the police would, of course, be to preserve the peace and maintain order in their respective townships, but occasion would, no doubt, frequently arise when it would be necessary to utilize the forces of several townships against large bands of ladrones."

With regard to the organization of municipal government in the townships (pueblos) of the Islands the report of the Commission says, in part: "The 'pueblos' of these islands sometimes include a hundred or more square miles. They are divided into so-called 'barrios' or wards, which are often very numerous and widely separated. In order that the interests of the inhabitants of each ward may be represented in the Council, on the one hand, and that the body may not become so numerous as to be unwieldy, on the other, it is provided that the Councillors shall be few in number (eighteen to eight, according to the number of inhabitants), and shall be elected at large; that where the wards are more numerous than are the Councillors the wards shall be grouped into districts, and that one Councillor shall be in charge of each ward or district, with power to appoint a representative from among the inhabitants of every ward thus assigned to him, so that he may the more readily keep in touch with conditions in that portion of the township which it is his duty to supervise and represent. . . .

"In order to meet the situation presented by the fact that a number of the pueblos have not as yet been organized since the American occupation, while some two hundred and fifty others are organized under a comparatively simple form of government and fifty-five under a much more complicated form on which the new law is based, the course of procedure which must be followed in order to bring these various towns under the provisions of the new law has been prescribed in detail, and every effort has been made to provide against unnecessary friction in carrying out the change.

"In view of the disturbed conditions which still prevail in some parts of the archipelago it has been provided that the military government should be given control of the appointment and arming of the municipal police and that in all provinces where civil provincial government has not been established by the Commission the duties of the Provincial Governor, Provincial Treasurer and Provincial 'Fiscal' (prosecuting attorney) shall be performed by military officers assigned by the Military Governor for these purposes. It has been further provided that in these provinces the Military Governor shall have power through such subordinates as he may designate for the purpose to inspect and investigate at any time all the official books and records of the several municipalities, and to summarily suspend any municipal officer for inefficiency, misconduct or disloyalty to the United States. If upon investigation it shall prove that the suspended officer is guilty, the Military Governor has power to remove him and to appoint his successor, should he deem such a course necessary in the interest of public safety. It is thought that where the necessity still exists for active intervention on the part of the Military Governor it will ordinarily be desirable to allow the towns to retain their existing organization until such time as conditions shall improve ; but, should it prove necessary or desirable in individual instances to put the new

law into operation in such provinces, it is felt that the above provisions will give to the Military Governor ample power to deal with any situation which can arise, and he has expressed his satisfaction with them.

"There are at the present time a considerable number of provinces which, in the judgment of the Commission, are ready for a provincial civil government. It is believed that in the majority of cases it will be possible to organize all the municipalities of a province, creating at the same time a civil provincial government. So soon as civil government is established in any province, power to remove officials for inefficiency, misconduct or disloyalty, and, should public safety demand it, to fill the offices thus made vacant, is vested in the civil authorities. The law does not apply to the city of Manila or to the settlements of non-Christian tribes, because it is believed that in both cases special conditions require special legislation. The question as to the best methods of dealing with the non-Christian tribes is one of no little complexity. The number of these tribes is greatly in excess of the number of civilized tribes, although the total number of Mahometans and pagans is much less than the number of Christianized natives. Still, the non-Christian tribes are very far from forming an insignificant element of the population. They differ from each other widely, both in their present social, moral and intellectual state and in the readiness with which they adapt themselves to the demands of modern civilization."

A. D. 1900 (October).—United States military forces in the Islands.—"At the date of my last annual report there were in the Philippine Islands 971 officers and 31,344 enlisted men; and there were en route for service in those islands 546 officers and 16,553 enlisted men—the latter force being principally in California. Since that time an additional force ordered to China was diverted to the Philippine Islands, making a total of 98,668 men sent to the archipelago. Of this number 15,000 volunteers, first sent to that country in 1898, together with the sick and disabled, have been returned to the United States, leaving at the present time in the islands, according to last report, 2,367 officers and 69,161 enlisted men. Fifteen hundred men have been left in China to act as a guard for the American legation in that country and for other purposes." —*United States, Annual Report of Lieut.-Gen. Commanding the Army, Oct.* 29, 1900.

A. D. 1900 (November).—The problem of the Spanish Friars.—Two contradictory representations of their work and influence.—Views and recommendations of the United States Commission.—Of the character, work and influence of the Spanish religious orders in the Philippine Islands there are two diametrically opposite accounts given by different writers. Both are represented in two of the quotations below, and those are followed by extracts from a report made by the U. S. Commission, November 30, 1900, on the subject of the problem they present to the new government of the Islands. The first writer is condemnatory. He says:

"The better classes [of the Filipinos] have absorbed much of Spanish civilization in their three-century-old apprenticeship. They show extraordinary talent for music. The church of the mother land of Spain is much in evidence among them. It brought to them its blessings, but also incidentally a terrible curse. The mendicant orders—the Franciscans, the Dominicans, the Augustinians, no longer poor preachers, thinking only of serving, blessing, loving men, but grown rich, domineering, and, in many cases, sadly corrupt in morals—ate up the land. They added field to field, house to house, till there was but little space left for the people. They charged enormous rents to those who to put bread in their mouths must till their fields. Just such cause for revolt existed as that which in France aroused the storm of the great revolution; the people taxed without mercy, the clergy untaxed, reaping the benefit. Had the Christ-like St. Francis of Assisi been endowed with the gift of prophetic vision to see this gross degeneracy of his followers, more than ever would he have felt the soundness of his intuition which made him set his face like flint against the acquisition of any property by his order. His beloved fair Lady of Poverty would have seemed to him more beautiful than ever. He would have been horrified with the knowledge of the cruel rapacity of monks bearing his name, who, nevertheless, grossly oppressed the Philippine peasantry in rents and taxes,—the very poor whom St. Francis founded his order to serve.

"Perhaps the most deep-seated cause of Filipino insurrection against Spanish authority was this unchecked growth of ignorant, cruel, and oppressive ecclesiasticism. It was this which weighed most heavily upon the people. It made the mere question of gaining a livelihood difficult, but especially did it strangle intellectual and moral growth. It not only oppressed the Filipinos, but it overawed and dominated the Spanish authorities. It was the power of the mendicant orders which drove out the just Condé de Caspe, and later the well-disposed and clement Blanco, which stimulated and supported the frightful atrocities of the cruel Polavieja during the revolution of 1896. Archbishop Nozaleda, a Spanish monk of the Dominican order, was a leader in urging wholesale and often wholly unjustifiable arrests, which were succeeded by the torture and execution of hundreds of persons. It is difficult for a mind reared in the freedom and culture of modern Europe, or still freer America, to realize the horrible excesses and actual mediæval cruelties which were committed in the prisons of Manila and elsewhere in the islands upon Filipino insurgents, or those accused of being in league with them, during the revolution of 1896. The actual story of these things as it is unfolded, not only from Filipino sources, but from the Spanish archives of Manila, is like a scene evoked from the long-buried and forgotten past in the middle ages. Indeed, the only intelligible interpretation of events which cast shame on the name of Spanish authority and Spanish Christianity is found by reflecting that affairs in the Philippines, just previous to the battle of Manila, were controlled by ideas and forces which existed generally in Europe previous to the Reformation,—ideas which slowly retreated before the dawn of the new learning and the liberation of the individual conscience."—H. Welsh, *The Other Man's Country, ch.* 1 (*Phil.: J. B. Lippincott Co.*).

In the other view there is an appeal to results which cannot easily be divested of force. They are set forth in the following:

"The ideals of civilization for the Spanish

PHILIPPINE ISLANDS, 1900.

missionary priests in the Philippines were substantially the same as those of Bacon and Raleigh, of the founders of New England and the founders of New York. In the mind of all, a civilized people was one which lived under settled laws by steady labor, which was more or less acquainted with the material progress made amongst the races of Europe, and, as all would say, which was Christian. The Spanish friars undertook the task of giving such a civilization to the Malays of the Philippines, and no other body of men of any race or any faith have accomplished what they have done. A task of somewhat similar kind has been attempted by others in our own day in the name of Christian civilization but not the Catholic Church. Hawaii has been under control of missionaries from New England for seventy-five years more completely than the Philippines were ever under that of the Spanish friars. The native kings adopted the new creed and enforced its adoption on their subjects by vigorous corporal punishments. The missionaries were abundantly supplied with such resources of civilization as money could buy, and they have grown wealthy on their mission; but what has been the fate of the natives? They have dwindled in numbers to a fourth of what they were when Messrs. Bingham and Thurston entered their islands, their lands have been taken by strangers, their government overthrown by brute force, and the scanty remnant has dropped the religion imposed on them. In the Philippines in a hundred and forty years a million of Catholic natives has grown seven fold. In Hawaii under missioners of the world's manufacture a hundred and forty thousand of the same race has shrunk to thirty-eight thousand. Have the promises of the Spanish friars or those of the American ministers been the most truthfully kept? The actual condition of the Catholic population formed by the work of the religious orders should not be judged by the excesses which have marked the present revolution. Many old Christian nations have gone through similar experiences. It would be as unreasonable to judge the Christianity of France by the Reign of Terror as to condemn the Filipino population for the atrocities sanctioned by Aguinaldo. The mass of the country population has taken no part in these deeds of blood which are the work of a small number of political adventurers and aspirants for office by any means. Until lately revolutionary disturbance was unknown in the Philippines. During three centuries there was only one serious Indian rebellion, that of Silan, in the province of Illocos, at the time of the English invasion. The Spanish military force was always too small to hold the islands had there been any real disaffection to the Government. The whole force at Manila in the present war, as given by General Otis, was only fifty-six hundred, and about as many more represented the entire Spanish force among a population of seven millions.

"The disposition of the Catholic Filipinos is essentially law abiding. One of the friars lately driven from the islands by the revolution assured the writer that in Panay, an island with a population of half a million, a murder did not occur more often than once or twice in a year. In our own country last year the proportion was more than fifty times as great. There is no forced labor as in the Dutch Indian colonies to compel the native Filipinos to work, yet they support themselves in content without any of the fam ines so common in India under the boasted rule of civilized England. A sure evidence of material prosperity is the growth of the population, and of its religion a fair test is the proportion of Catholic marriages, baptisms and religious interments to the whole number. The proportion of marriages in 1896 to the population among the natives administered by the friars was one to every hundred and twenty, which is higher than England, Germany, or any European country. The number of baptisms exceeded the deaths by more than two and a half per cent, a greater proportion than in our own land. Compare this with Hawaii and one feels what a farce is the promise of increased prosperity held out by the American Press as the result of the expulsion of the Spanish friars. It is not easy to compare accurately the intellectual development of the Catholic Filipinos with American or European standards. The ideals of civilization of the Catholic missioners were different from those popular with English statesmen and their American admirers. The friars did not believe that the accumulation of wealth was the end of civilization, but the support of a large population in fair comfort. There are no trusts and few millionaires in the islands, but their population is six times greater than that of California after fifty years of American government. The test so often applied of reading and writing among the population finds the Filipinos fairly up to the standard of Europe at least. Of highly educated men the proportion is not so large as in Europe, but it is not inconsiderable, and neither in science nor in literature are the descendants of the Malay pirates unrepresented in their remote islands. The native languages have developed no important literature of their own, but they have a fair supply of translations from Spanish works in history, poetry, and philosophy. In that they are superior to the Hindoo of British India, though spoken by nearly a hundred millions. These are facts that throw a strange light on the real meaning of civilization as planted by the Spanish friars among a barbarian race. Compare them with the fate of the Indian races on our own territory and say what benefit the Filipinos may expect from the advent of 'Anglo-Saxon' civilization." — Bryan J. Clinch (*American Catholic Quarterly Rev., v. 24, p. 15*).

These opposing views are suggestive of the seriousness of the problem which the subject offers to the new authority in the Philippines. The American Commission now studying such problems in those islands has presented its first views concerning the Spanish friars in a lengthy report, written by Judge Taft, and transmitted to Washington as part of the general report of the Commission, bearing date November 30, 1900. The passages quoted below contain what is most essential in the interesting document: "Ordinarily, the Government of the United States and its servants have little or no concern with religious societies or corporations and their members. With us, the Church is so completely separated from the State that it is difficult to imagine cases in which the policy of a Church in the selection of its ministers and the assignment of them to duty can be regarded as of political moment, or as a proper subject of comment in the report of a public officer. In the

PHILIPPINE ISLANDS, 1900.

pacification of the Philippines by our Government, however, it is impossible to ignore the very great part which such a question plays. Excepting the Moros, who are Moslems, and the wild tribes, who are pagans, the Philippine people belong to the Roman Catholic Church. The total number of Catholic souls shown by the Church registry in 1898 was 6,559,998. To care for these in that year there were in the archipelago 746 regular parishes, 105 mission parishes and 116 missions, or 967 in all. Of the regular parishes all save 150 were administered by Spanish monks of the Dominican, Augustinian, or Franciscan orders. Natives were not admitted to these orders. There were two kinds of Augustinians in these islands, the shod and the unshod. The latter are called Recolletos, and are merely an offshoot from the original order of St. Augustine.

"By the revolutions of 1896 and 1898 against Spain, all the Dominicans, Augustinians, Recolletos, and Franciscans acting as parish priests were driven from their parishes to take refuge in Manila. Forty were killed and 403 were imprisoned, and were not all released until by the advance of the American troops it became impossible for the insurgents to retain them. Of the 1,124 who were in the islands in 1896, only 472 remain. The remainder were either killed or died, returned to Spain, or went to China or South America. There were also in the islands engaged in missions and missionary parishes, 42 Jesuits, 16 Capuchins, and six Benedictines, and while many of these left their missions because of disturbed conditions they do not seem to have been assaulted or imprisoned for any length of time. In addition to the members of the monastic orders, there were 150 native secular clergymen in charge of small parishes who were not disturbed. There were also many native priests in the larger parishes who assisted the friar curates and they have remained, and they have been and are acting as parish priests. The burning political question, discussion of which strongly agitates the people of the Philippines, is whether the members of the four great orders of St. Dominic, St. Augustine, St. Francis, and the Recolletos shall return to the parishes from which they were driven by the revolution. Colloquially the term 'friars' includes the members of these four orders. The Jesuits, Capuchins, Benedictines, and the Paulists, of whom there are a few teachers here, have done only mission work or teaching, and have not aroused the hostility existing against the four large orders to which we are now about to refer. . . .

"The truth is that the whole government of Spain in these islands rested on the friars. To use the expression of the Provincial of the Augustinians, the friars were 'the pedestal, or foundation, of the sovereignty of Spain in these islands,' which being removed, 'the whole structure would topple over.' . . . Once settled in a parish, a priest usually continued there until superannuation. He was, therefore, a constant political factor for a generation. The same was true of the Archbishop and the bishops. The civil and military officers of Spain in the island were here for not longer than four years, and more often for a less period. The friars, priests, and bishops, therefore, constituted a solid, powerful, permanent, well organized political force in the islands which dominated policies. The stay of those officers who attempted to pursue a course at variance with that deemed wise by the orders was invariably shortened by monastic influence. Of the four great orders, one, the Franciscans, is not permitted to own property, except convents and schools. This is not true of the other three. They own some valuable business property in Manila, and have large amounts of money to lend. But the chief property of these orders is in agricultural land. The total amount owned by the three orders in the Philippines is approximately 403,000 acres. Of this 121,000 acres is in the Province of Cavité alone. The whole is distributed as follows: Cavité, Province of Luzon, 121,747 acres; Laguna, Province of Luzon, 62,172 acres; Manila, Province of Luzon, 50,145; Bulacan, Province of Luzon, 39,341; Morong, Province of Luzon, 4,940; Bataan, Province of Luzon, 1,000; Cagayan, Province of Luzon, 49,400; Island of Cebu, 16,413; Island of Mindoro, 58,455. Total, 403,713. . . .

"It cannot admit of contradiction that the autocratic power which each friar curate exercised over the people and civil officials of his parish gave them a most plausible ground for belief that nothing of injustice, of cruelty, of oppression, of narrowing restraint of liberty, was imposed on them for which the friar was not entirely responsible. His sacerdotal functions were not in their eyes the important ones, except as they enabled him to clinch and make more complete his civil and political control. The revolutions against Spain's sovereignty began as movements against the friars. . . . Having in view these circumstances, the statement of the bishops and friars that the mass of the people in these islands, except only a few of the leading men of each town and the native clergy, are friendly to them cannot be accepted as accurate. All the evidence derived from every source but the friars themselves shows clearly that the feeling of hatred for the friars is well nigh universal and permeates all classes. In the provinces of Cavité, Laguna, and Bulacan, as well as in the country districts of Manila, the political feeling against the friars has in it also an element of agrarianism. For generations the friars have been lords of these immense manors, upon which, since 1880, they have paid no taxes, while every 'hombre' living on them paid his cedula, worked out a road tax, and, if he were in business of any kind, paid his industrial impost. . . .

"In the light of these considerations it is not wonderful that the people should regard the return of the friars to their parishes as a return to the conditions existing before the revolution. The common people are utterly unable to appreciate that under the sovereignty of the United States the position of the friar as curate would be different from that under Spain. This is not a religious question, though it concerns the selection of religious ministers for religious communities. The Philippine people love the Catholic Church. . . . The depth of their feeling against the friars may be measured by the fact that it exists against those who until two years ago administered the sacraments of the Church upon which they feel so great dependence and for which they have so profound a respect. The feeling against the friars is solely political. The people would gladly receive as ministers of the Roman Catholic religion any save those who are to them the embodiment of all in the Spanish

rule that was hateful. If the friars return to their parishes, though only under the same police protection which the American Government is bound to extend to any other Spanish subjects in these islands, the people will regard it as the act of that Government. They have so long been used to have every phase of their conduct regulated by governmental order that the coming again of the friars will be accepted as an executive order to them to receive the friars as curates with their old, all-absorbing functions. It is likely to have the same effect on them that the return of General Weyler under an American Commission as Governor of Cuba would have had on the people of that island.

"Those who are charged with the duty of pacifying these islands may therefore properly have the liveliest concern in a matter which, though on its surface only ecclesiastical, is, in the most important phase of it, political, and fraught with the most critical consequences to the peace and good order of the country, in which it is their duty to set up civil government. . . . It is suggested that the friars, if they returned, would uphold American sovereignty and be efficient instruments in securing peace and good order, whereas the native priests who now fill the parishes are, many of them, active insurgent agents or in strong sympathy with the cause. It is probably true that a considerable number of the Filipino priests are hostile to American sovereignty, largely because they fear that the Catholic Church will deem it necessary, on the restoration of complete peace, to bring back the friars or to elevate the moral tone of the priesthood by introducing priests from America or elsewhere. But it is certain that the enmity among the people against the American Government caused by the return of the friars would far outweigh the advantage of efforts to secure and preserve the allegiance of the people to American Sovereignty which might be made by priests who are still subjects of a monarchy with which the American Government has been lately at war, and who have not the slightest sympathy with the political principles of civil liberty which the American Government represents.

"We have set forth the facts upon this important issue because we do not think they ought to be or can be ignored. We earnestly hope that those who control the policy of the Catholic Church in these islands with the same sagacity and prevision which characterize all its important policies, will see that it would be most unfortunate for the Philippine Islands, for the Catholic Church and for the American Government to attempt to send back the friars, and that some other solution of the difficulties should be found. . . . The friars have large property interests in these islands which the United States Government is bound by treaty obligations and by the law of its being to protect. It is natural and proper that the friars should feel a desire to remain where so much of their treasure is. . . . It would avoid some very troublesome agrarian disturbances between the friars and their quondam tenants if the Insular Government could buy these large haciendas of the friars, and sell them out in small holdings to the present tenants, who, forgiven for the rent due during the two years of war, would recognize the title of the Government without demur, and gladly accept an opportunity, by payment of the price in small instalments, to become absolute owners of that which they and their ancestors have so long cultivated. With the many other calls upon the insular treasury a large financial operation like this could probably not be conducted to a successful issue without the aid of the United States Government, either by a direct loan or by a guaranty of bonds to be issued for the purpose. The bonds or loans could be met gradually from the revenues of the islands, while the proceeds of the land, which would sell readily, could be used to constitute a school fund. This object, if declared, would make the plan most popular, because the desire for education by the Filipinos of all tribes is very strong, and gives encouraging promise of the future mental development of a now uneducated and ignorant people. The provincials of the orders were understood in their evidence to intimate a willingness on the part of the orders to sell their agricultural holdings if a satisfactory price should be paid. What such a price would be we are unable without further investigation to state. If an agreement could not be reached it is probable, though upon this we express no definite opinion, that there would be ground in the circumstances for a resort to condemnation proceedings."

A. D. 1901.—Act of the United States Congress increasing army and authorizing the enlistment of native troops.— Rejection of the proviso of Senator Hoar. See (in this vol.) UNITED STATES OF AM. : A. D. 1901 (FEBRUARY).

A. D. 1901 (February—March).—Congressional grant of military, civil and judicial powers for the government of the Islands to persons whom the President may appoint.— The so-called "Spooner Amendment."—During the first session of the 56th Congress the following bill was introduced in the U. S. Senate by Mr. Spooner, of Wisconsin, but received no action : "Be it enacted, etc., That when all insurrection against the sovereignty and authority of the United States in the Philippine Islands, acquired from Spain by the treaty concluded at Paris on the 10th day of December, 1898, shall have been completely suppressed by the military and naval forces of the United States, all military, civil, and judicial powers necessary to govern the said islands shall, until otherwise provided by Congress, be vested in such person and persons, and shall be exercised in such manner as the President of the United States shall direct for maintaining and protecting the inhabitants of said islands in the free enjoyment of their liberty, property, and religion."

Half the following session of Congress passed before any disposition to take the action proposed by Senator Spooner was shown. Then the matter was brought to notice and pressed by the following communication to the Secretary of War, from the Commission in the Philippines : "If you approve, ask transmission to proper Senators and Representatives of following : Passage of Spooner bill at present session greatly needed to secure best result from improving conditions. Until its passage no purely central civil government can be established, no public franchises of any kind granted, and no substantial investment of private capital in internal improvements possible." This was repeated soon after-

wards more urgently by cable in the message following: "Sale of public lands and allowance of mining claims impossible until Spooner bill. Hundreds of American miners on ground awaiting law to perfect claims. More coming. Good element in pacification. Urgently recommend amendment Spooner bill so that its operation be not postponed until complete suppression of all insurrection, but only until in President's judgment civil government may be safely established."

The request of the Philippine Commission, endorsed by the Secretary of War, was communicated to Congress by the President, who said in doing so: "I earnestly recommend legislation under which the government of the islands may have authority to assist in their peaceful industrial development." Thereupon the subject was taken up in Congress, not as formulated in Senator Spooner's bill of the previous session, but in the form of an amendment to the Army Appropriation Bill, then pending in the Senate. The amendment, as submitted to discussion in the Senate on the 25th of February, 1901, was in the following terms:

"All military, civil, and judicial powers necessary to govern the Philippine Islands, acquired from Spain by the treaties concluded at Paris on the 10th day of December, 1898, and at Washington on the 7th day of November, 1900, shall, until otherwise provided by Congress, be vested in such person and persons and shall be exercised in such manner as the President of the United States shall direct, for the establishment of civil government and for maintaining and protecting the inhabitants of said islands in the free enjoyment of their liberty, property, and religion: Provided, That all franchises granted under the authority hereof shall contain a reservation of the right to alter, amend, or repeal the same. When a permanent government shall have been established in said archipelago full reports shall be made to Congress, on or before the first day of each regular session, of all legislative acts and proceedings of the temporary government instituted under the provisions hereof, and full reports of the acts and doings of said government and as to the condition of the archipelago and its people shall be made to the President, including all information which may be useful to the Congress in providing for a more permanent government."

Strenuous opposition was made, firstly to the hasty grafting of so profoundly important a measure of legislation on an appropriation bill, and secondly to the measure itself, as being a transgression of powers to the President which did not belong to him under the Constitution and to all the precedents and principles of the American government and also as having objects which would not only be a permanent wrong to the people of the Philippine Islands, but bring dishonor on those of the United States. The military authority already exercised by the President in the Philippines was, it was contended, for every purpose of temporary or provisional government there needed, its lack of ability to grant franchises and the disposal of the public lands. Hence it was strongly charged that the controlling influences which pressed this measure on the government came from capitalists and speculators who were scheming after valuable franchises, mining rights and land grants in the archipelago. Said Senator Daniel in the debate: "So far as any legislation which looks forward to the opening of the way to civil government may be involved to the softening of the conditions which exist, to the amelioration of the distresses which are upon the Philippine people, I would give most cheerful acquiescence. But because we desire to do these things in a good spirit, in a resolute and patriotic spirit, let us not permit the provocation of difficult conditions to lead us into enacting any kind of provision of law that is not necessary to these ends. Let us not undertake to give to the President of the United States any power of disposing of the permanent assets of the Philippine people; let us not put him in the attitude of being a franchise giver or a franchise seller or a franchise lessor. The franchises of those islands—their rivers, their ferries, their streets, their roads, the thousand and one privileges which are granted by public authority—are as important and as valuable to that people and as permanently associated with their happiness and their prosperity as are their fields or their mines or their fisheries or anything else which belongs to their country. . . . It is true there is the reservation of the right to alter, amend, or repeal, but while that is legally broad enough for any remedial legislation whatsoever to follow, we know that practically it is of very small consequence. If capital goes in and invests itself in improvements which are in themselves of a permanent nature, if railroads are constructed, telegraph lines run, telephones established, ferries built, steamers and boats, gas establishments, electrical establishments—if those things are disposed of, the man who once gets in will never be gotten out. In all such affairs possession is nine points of the law before they get into court, where it is generally made the tenth."

Senator Hoar called attention "to the fact that the report of the Taft commission urges that power be given to sell the public lands at once, as it is necessary for their development, and a large amount of capital is there now clamoring to be invested," and he remarked: "So I suppose that one of the chief purposes of this is that the public lands in the Philippine Islands may be sold before the people of the islands have any chance whatever to have a voice in their sale." He then quoted the following passages from the report of the Taft commission: "The commission has received a sufficient number of applications for the purchase of public land to know that large amounts of American capital are only awaiting the opportunity to invest in the rich agricultural field which may here be developed. In view of the decision that the military government has no power to part with the public land belonging to the United States, and that the power rests alone in Congress, it becomes very essential, to assist the development of these islands and their prosperity, that Congressional authority be vested in the government of the islands to adopt a proper public-land system, and to sell the land upon proper terms. There should, of course, be restrictions preventing the acquisition of too large quantities by any individual or corporation, but those restrictions should only be imposed after giving due weight to the circumstances that capital can not be secured for the development of the islands unless the investment may be sufficiently great to justify the expenditure of

large amounts for expensive machinery and equipments. Especially is this true in the cultivation of sugar land. . . . Restricted powers of a military government referred to in discussing the public lands are also painfully apparent in respect to mining claims and the organization of railroad, banking, and other corporations, and the granting of franchises generally. It is necessary that there be some body or officer vested with legislative authority to pass laws which shall afford opportunity to capital to make investment here. This is the true and most lasting method of pacification." "In other words," said Senator Hoar, "the leading, principal, bald proposal on which this amendment rests is that before those 10,000,000 people are allowed any share in their own government whatever their property is to be sold by Americans to Americans in large quantities, as on the whole the best means of pacification—that the best way to pacify a man is to have one foreign authority to sell his property and another to buy it."

An amendment to the amendment, offered by Senator Bacon, reserving to Congress the right to annul any grant or concession made, or any law enacted, by any governmental authority created under the powers proposed to be conferred on the President; another offered, by Senator Vest, providing that "no judgment, order, nor act by any of said officials so appointed shall conflict with the Constitution and laws of the United States," and still others of somewhat kindred aims, were voted down; but the influence of Senator Hoar prevailed with the Senate so far as to induce its acceptance of the following important modification of the so-called "Spooner Amendment":

"Provided, That no sale or lease or other disposition of the public land, or the timber thereon, or the mining rights therein, shall be made: And provided further, That no franchise shall be granted which is not approved by the President of the United States, and is not, in his judgment, clearly necessary for the immediate government of the islands and indispensable for the interests of the people thereof, and which can not, without great public mischief, be postponed until the establishment of a permanent civil government, and all such franchises shall terminate one year after the establishment of such civil government."

With this proviso added, the "Spooner amendment" was adopted by the Senate on the 26th of February (yeas 45, nays 27, not voting 16), and agreed to by the House on the 1st of March (yeas 161, nays 136, not voting 56).—*Congressional Record, Feb.* 25—*March* 1, 1901.

A. D. 1901 (March).—Organization of provincial governments.—Establishment of a department of public education.—Proposed tariff.—Date fixed for cessation of military régime.—On the 3d of March, the President of the Philippine Commission, Judge Taft, addressed a cable despatch to the U. S. Secretary of War in which he reported: "Commission has last three weeks organized five provincial governments—Pampanga, Pangasinan, Tarlac, Bulacan, Bataan—last two are Tagalog provinces. Attended each provincial capital in a body; met by appointment Presidentes, Councillors, and principal men of towns; explained provisions general provincial act and special bill for particular province and invited discussion natives present of both bills. Conventions thus held very satisfactory; amendments suggested, considered, special bills enacted, appointments followed. . . . In three large provinces natives appointed provisional Governors. In Bataan, on petition, eight out of nine towns, volunteer officer appointed. In Tarlac feeling between loyal factions required appointment American. . . . In compliance with urgent native invitations leave March 11 for south to organize provinces Tayabas, Romblon, Iloilo, Capiz, Zamboanga, such others are ready. Returning shall organize Zambales, Union, Cagayan, Ilocos Norte. Military Governor has recommended organization Batangas, Cavité, Laguna, Nueva Ecija, but shall delay action as to these until return from northern and southern trips."

On the 18th of March it was announced from Washington that a number of recent Acts of the Philippine Commission had been received at the War Department, among them one which establishes a general department of public instruction, with a central office at Manila, under the direction of a general superintendent, to be appointed by the commission, at a salary of $6,000 a year. "Schools are to be established in every pueblo in the archipelago where practicable, and those already established shall be reorganized where necessary. There are to be ten school divisions in the archipelago, each with a division superintendent, and there is to be a superior advisory board, composed of the general superintendent and four members to be appointed by the Philippine Commission, to consider the general subject of education in the islands and make regulations. The English language, as soon as practicable, shall be made the basis of all public instruction, and soldiers may be detailed as instructors until replaced by trained teachers. Authority is given to the general superintendent to obtain from the United States 1,000 trained teachers, at salaries of not less than $75 nor more than $100 a month, the exact salary to be fixed according to the efficiency of the teacher. The act provides that no teacher or other person "shall teach or criticise the doctrines of any church, religious sect or denomination or shall attempt to influence the pupils for or against any church or religious sect in any public school." Violation of this section is made punishable by summary dismissal from the public service. It is provided, however, that it may be lawful for the priest or minister of the pueblo where the school is situated to teach religion for half an hour three times a week in the school building to pupils whose parents desire it. But if any priest, minister or religious teacher use this opportunity "for the purpose of arousing disloyalty to the United States or of discouraging the attendance of pupils or interfering with the discipline of schools," the division superintendent may forbid such offending priest from entering the school building thereafter. The act also provides for a normal school at Manila for the education of natives in the science of teaching. It appropriates $400,000 for school buildings, $220,000 for text books and other supplies for the current calendar year, $25,000 for the normal school, $15,000 for the organization and maintenance of a trade school in Manila and the same amount for a school of agriculture.

The new tariff for the Islands, which the Commission had been long engaged in framing, was

PHILIPPINE ISLANDS, 1901.

submitted, in March, to the government at Washington for approval. "In his letter of transmittal Judge Taft says that the proposed bill follows largely the classification of the Cuban tariff, 'but has been considerably expanded by the introduction of articles requiring special treatment here by reason of different surroundings and greater distance from the markets.' Judge Taft says also that the disposition of the business interests of the islands is to accept any tariff the commission proposes, provided only that the duties are specific and not ad valorem. The question of revenue was kept steadily in view in the preparation of the schedules, but it was not the only consideration. Raw materials of Philippine industries, tools, implements and machinery of production, materials of transportation, the producers and transmitters of power and food products are taxed as lightly as possible. . . . Export duties are levied on only six articles—hemp, indigo, rice, sugar, cocoanuts, fresh or as copra, and tobacco. The free list admits natural mineral waters, trees, shoots and plants, gold, copper and silver ores, fresh fruits, garden produce, eggs, milk, ice and fresh meat, except poultry and game. There is also a list of articles conditionally free of duty. The importation of explosives is prohibited, but that of firearms is not."

It is announced from Washington that "Judge Taft and General MacArthur have agreed upon July 1 as the date for the establishment of civil government in the Philippines. The military régime in the islands will therefore cease on June 30, when General Chaffee will relieve General MacArthur of the command, and Governor Taft will be inaugurated the next day with considerable ceremony."

A. D. 1901 (March—April).—Capture of Aguinaldo.—His oath of allegiance to the United States.—His address to his countrymen, counselling peace.—A stratagem, executed with great daring by General Funston of the American forces, accomplished the capture of the Filipino leader, Aguinaldo, on the 23d of March. From intercepted correspondence, it had been learned that Aguinaldo, then occupying his headquarters at Palanan, Isabela Province, was expecting to be joined by some riflemen, whom his brother had been ordered to send to him from central Luzon. On this, General Funston conceived the plan of equipping a number of native troops who should pass themselves off as the expected reinforcements, several American officers going with them ostensibly as prisoners, the hope being that Aguinaldo might thus be reached and taken by surprise. Gen. MacArthur approved the scheme, and it was carried out with success. The party was made up of 78 Macabebe scouts, four Tagalogs who had formerly been officers in the insurgent army, and General Funston, Captain Newton, Lieutenants Hazzard and Mitchel, who acted the part of prisoners. They were taken by gunboat from Cavite to a point above Baler, whence they made their way on foot, sending a message in advance that the expected reinforcements were on the way and had captured some prisoners en route. The following brief narrative of what occurred subsequently is taken from a newspaper account of the expedition:

"For six days the expedition marched over an exceedingly difficult country, covering 90 miles. When the men reached a point eight miles from Aguinaldo's camp they were almost exhausted from lack of food and the fatigue of the march. They stopped at this place and sent a message to Aguinaldo, requesting him to send food to them. The ruse thus far had worked with the greatest success, and on March 22d, when Aguinaldo sent provisions, it was seen that he did not have the slightest suspicion. With the food he sent word that the Americans were not wanted in his camp, but instructing their supposed captors to treat them kindly. On March 23d the march was resumed, the Macabebe officers starting an hour ahead of the main body of the expedition. The 'prisoners,' under guard, followed them. When the party arrived at Aguinaldo's camp a bodyguard of 50 riflemen was paraded, and the officers were received at Aguinaldo's house, which was situated on the Palanan River. After some conversation with him, in which they gave the alleged details of their suppositious engagement with an American force, they made excuses and quietly left the house. They at once gave orders in an undertone for the Macabebes to get in position and fire on the bodyguard. The order was obeyed with the greatest rapidity, and three volleys were delivered. The insurgents were panic-stricken by the sudden turn in affairs, and they broke and ran in consternation. Two of them, however, were killed and eighteen wounded. Simultaneously with the delivery of the volleys the American officers rushed into Aguinaldo's house. Maj. Alhambra, one of Aguinaldo's staff, had been shot in the face. He, however, was determined not to be captured and he jumped from a window into the river and disappeared. Two captains and four lieutenants made their escape in a similar manner. Aguinaldo, Col. Villa, his chief of staff, and Santiago Barcelona, the insurgent treasurer, did not have time to make an attempt to get away before Gen. Funston and the others were upon them, demanding their surrender. Seeing that the situation was hopeless, they gave themselves up. Aguinaldo was furious at having been caught, but later he became philosophical and declared that the ruse by which he had been captured was the only one which would have proved successful if the Americans had tried for 20 years. One of the Macabebes was wounded. The party stayed two days at the camp and then marched overland to the coast, where the Vicksburg, whose arrival was excellently timed, picked them up and brought them back to Manila."

On the 2d of April, a despatch from General MacArthur to the War Department announced that Aguinaldo, on the advice of Chief Justice Arellano, had taken the following oath of allegiance to the United States: "I hereby renounce all allegiance to any and all so-called revolutionary governments in the Philippine Islands, and recognize and accept the supreme authority of the United States of America therein; I do solemnly swear that I will bear true faith and allegiance to that government; that I will at all times conduct myself as a faithful and law abiding citizen of the said islands, and will not, either directly or indirectly, hold correspondence with or give intelligence to an enemy of the United States, nor will I abet, harbor or protect such enemy; that I impose upon myself these voluntary obligations without any mental reservations or purpose of evasion, so help me God."

On the 19th of April, Aguinaldo issued the fol-

lowing address to his countrymen: "I believe I am not in error in presuming that the unhappy fate to which my adverse fortune has led me is not a surprise to those who have been familiar with the progress of the war. The lessons taught with a full meaning, and which have recently come to my knowledge, suggest with irresistible force that a complete termination of hostilities and lasting peace are not only desirable, but absolutely essential to the welfare of the Philippine Islands. The Filipinos have never been dismayed at their weakness, nor have they faltered in following the path pointed out by their fortitude and courage. The time has come, however, in which they find their advance along this path to be impeded by an irresistible force, which, while it restrains them, yet enlightens their minds and opens to them another course, presenting them the cause of peace. This cause has been joyfully embraced by the majority of my fellow countrymen who already have united around the glorious sovereign banner of the United States. In this banner they repose their trust and believe that under its protection the Filipino people will attain all those promised liberties which they are beginning to enjoy. The country has declared unmistakably in favor of peace. So be it. There has been enough blood, enough tears and enough desolation. This wish cannot be ignored by the men still in arms, if they are animated by a desire to serve our noble people, which has thus clearly manifested its will. So do I respect this will, now that it is known to me. After mature deliberation, I resolutely proclaim to the world that I cannot refuse to heed the voice of a people longing for peace, nor the lamentations of thousands of families yearning to see their dear ones enjoying the liberty and the promised generosity of the great American Nation. By acknowledging and accepting the sovereignty of the United States throughout the Philippine Archipelago, as I now do, and without any reservation whatsoever, I believe that I am serving thee, my beloved country. May happiness be thine."

PHŒNICIANS, The: Modified estimates of their influence upon early European civilization. See (in this vol.) ARCHÆOLOGICAL RESEARCH: CRETE.

PILLAGER INDIAN OUTBREAK. See (in this vol.) INDIANS, AMERICAN: A. D. 1898.

PLAGUE, The Bubonic.—For years the plague has "continued to breed in various inner parts of Asia, and in 1894, coming from the Chinese province of Yunnan, it invaded Canton, taking there 60,000 victims in a few weeks. Thence it spread to Hong Kong, reached next year the island of Haïnan and Macao, invaded Formosa in 1896, and in the autumn of the same year appeared at Bombay. In the big city of India it found all necessary conditions for breeding, unchecked, for several months in succession: famine, overcrowding, and the absence of all preventive measures; and from Bombay it was carried by rail and road, to different parts of India. . . . Happily enough, the plague is no longer the mysterious, revengeful being which it used to be for our ancestors. Its cause and modes of propagation are well known. It is an infectious disease with a short period of incubation. From four to six days after infection takes place, a sudden loss of forces—often a full prostration, accompanied by a high fever—sets in. A bubo appears, and soon grows to the size of an egg. Death soon follows. If not—there is a chance of slow and painful recovery; but that chance is very small, because even under the best conditions of nursing, the mortality is seldom less than four out of each five cases of illness. As to the means of propagation of the plague, they are many. The poison may infect a wound or a scratch; it may be ingested in food; it may be simply inhaled. Dust from an infected house was sufficient to infect healthy rats; and when healthy rats were shut up in one cage with unhealthy ones, all caught the disease and died. Already in 1881 Netten Redcliffe and Dr. Pichon indicated that before the plague attacks men it destroys mice and rats. This was fully confirmed in 1894 by the Japanese and French bacteriologists Kitasato and Yersin, at Hong Kong, and by Dr. Rennie, of the Chinese Customs, at Canton. Masses of dead rats were seen in the streets of the infested parts of Hong Kong, and the keeper of the west gates of Canton collected and buried 24,000 of these animals. Dr. Rennie also pointed out that among those inhabitants of Canton who lived in boats on the river there were no cases of plague, except a few imported from town, so that even rich Cantonese took to living in boats; and he explained the immunity of the boat-dwellers by the absence of infection through rats. The worst is, however, that swine, and even goats and buffaloes, snakes and jackals, are attacked by the plague. . . .

"As soon as the plague broke out at Hong Kong, the great Japanese bacteriologist Kitasato and the French doctor Yersin, who is well known for his work with Roux on the serum treatment of diphtheria, were already on the spot. Yersin obtained from the English authorities permission to erect a small straw hut in the yard of the chief hospital, and there he began his researches. Both Kitasato and Yersin had no difficulty in ascertaining that the plague buboes teemed with special bacteria, which had the shape of tiny microscopic sticklets, thickened at their ends. To isolate these bacteria, to cultivate them in artificial media, and to ascertain the deadly effects of these cultures upon animals, was soon done by such masters in bacteriology as Kitasato and Yersin. The cause of the plague was thus discovered. It was evident that infected rats and swine—especially swine with the Chinese, who keep them in their houses—were spreading the disease, in addition to men themselves. The same bacteria teemed in the dead animals. As to men, the discharges from their buboes, and even, in many cases, their expectorations, were full of plague bacteria. Besides, Yersin soon noticed that in his 'laboratory,' where he was dissecting animals killed by the plague, the flies died in numbers. He found that they were infested with the same bacteria, and carried them about: inoculations of bacteria obtained from the flies at once provoked the plague in guinea-pigs. Ants, gnats, and other insects may evidently spread infection in the same way, while in and round the infested houses the soil is impregnated with the same bacteria. As soon as the pest microbe became known, experiments were begun, at the Paris Institut Pasteur, for finding the means to combat it; and in July 1895 Yersin, Calmette, and Borel could already

PLAGUE.

announce that some very promising results had been obtained."—P. Kropotkin, *Recent Science* (*Nineteenth Century, July*, 1897).

Of the first appearance of the plague in India, at Bombay, and the early stages of its spread in that country, the Viceroy, Lord Elgin, made the following report to the Secretary of State for India, on the 27th of January, 1897: "The first official intimation of the outbreak which reached us was in a telegram from the Government of Bombay, dated the 29th September 1896. The disease was then reported to be of a mild type, and at first it showed no tendency to increase. . . . Throughout the months of October and November the disease made little or no progress, and the number of deaths reported a day averaged nine. Early in December there was a marked increase, and the number of deaths reported daily from the 2nd to the 23rd (inclusive) was about 32. From the 24th December onwards there was another marked increase, and the number of deaths reported from that date to the 14th January (inclusive) averaged about 51. The next week shows a further increase, the reported number of deaths averaging 74 a day. The total number of deaths reported during October was 276; during November, 268; during December, 1,160; and from the 1st to the 25th January, 1,444. The total number of deaths reported from the beginning of the outbreak thus amounts to 3,148. We have reason to fear that all deaths from the plague have not been reported as such, and that the true mortality from the disease is higher than is shown by the above figures. . . . For a considerable time, except for a few imported cases in some towns in Gujarat, the outbreak was confined to Bombay itself, but on the 23rd of December we learnt from the Government of Bombay that the plague had broken out in Karachi. . . . The total number of deaths that have been reported in Karachi, from the beginning of the outbreak up to the 24th January, is 608. It will be observed that the disease has been very malignant in Karachi, and that almost all the cases reported have been fatal. As soon as the Surgeon General with the Government of Bombay reported to that Government that he had seen cases of a mild type of bubonic plague in the city, preventive measures were adopted and a Committee of medical experts were appointed to report on the disease and the situation. The Municipal Corporation have from the outset required the infected quarters to undergo a thorough and systematic cleaning and disinfection; and they have also pushed on vigorously other sanitary measures, such as the improvement of house connections and the construction of surface drains in quarters where the drainage was defective. A house-to-house visitation by medical officers has also been instituted. The Corporation have sanctioned liberal measures towards these ends, and the executive officers have displayed great energy in carrying them out. . . . We have informed the Government of Bombay that we consider it necessary that the plan of removing all persons from infected houses, and thoroughly cleansing and disinfecting the buildings, should be carried out, and we have asked His Excellency in Council, if he agrees, to report the measures that are adopted to bring the plan into general effect."

To the above suggestion that all persons be removed from infected houses, the government of Bombay replied, on the 12th of February: "His Excellency is advised that, to give full effect to such a proposal, at the lowest computation, 30,000 persons belonging to different races, castes, and creeds would need to be provided with temporary dwellings. There is no site within the limits of the Bombay municipality which would accommodate a tenth of this number. Great difficulty has attended all attempts at the segregation of healthy inmates of infected houses hitherto made, and very limited success has been achieved. From the beginning of the outbreak of this disease it has been found that the native inhabitants of the city are very reluctant to leave their houses or to allow any member of their family afflicted with the disease to be taken away. Indeed, their dread of the disease itself appears to be hardly so powerful as their horror of being removed from their houses. Ignorance and superstition prevent them from discerning either that removal to a hospital is good for the sick or removal [from] infected dwellings good for the healthy, and they are far more easily moved by fear of the municipal and police authorities than by any realisation of the benefits that will accrue from a sensible course of action. It is estimated that not less than 300,000 persons have already fled from Bombay, moved so to do, not only by fear of the plague, but quite as much, if not more, by an unfounded and unreasonable fear of what might happen to them at the hands of the police and municipal authorities were they to remain."

Contending with such obstacles to the use of the most effective measures for checking the spread of the disease, the authorities at Bombay and elsewhere, who seem to have worked with energy, saw little to encourage their efforts for some time. In a second report to the Secretary of State for India, made February 10, Lord Elgin was compelled to write: "We much regret that we are unable to report that the plague shows any signs of abating. In both Bombay and Karachi there has been an increase in the daily number of seizures and deaths since the beginning of the current month." But, a month later, on the 10th of March, the Viceroy reported that "the position of affairs in Bombay is distinctly better. There has been a decrease in the reported number of plague seizures and deaths, and the total daily mortality from all causes shows a marked diminution. During the week ending the 22nd February, the average daily number of seizures and deaths was 115 and 117, respectively; during the following week the daily average fell to 107 and 99, whilst during the period March 2nd to March 8th it has been 99 and 84. . . . Persons are now returning to the quarters of Bombay, which are comparatively free from plague, from the more infected outlying suburbs, and the Government of Bombay have therefore found it necessary to watch persons entering as well as those leaving Bombay. In the suburbs of Kurla, Bandora, and Bhiwandi the plague continues to be severe. Outside Bombay in the Presidency proper the number of indigenous cases has increased, and the disease shows a tendency to spread, especially in the Thana and Surat districts. . . . Outside Karachi the plague shows no tendency to spread in Sind, and Sukkur is the only other place from which indigenous cases have been reported."—*Great Britain, Parliamentary Pub-*

lications (*Papers by Command: C.*—8386, 1897; *and C.*—8511, 1897).

From that time there appears to have been a nearly steady subsidence of the disease until the following September, when it showed renewed virulence at Poona, and began to be newly spread, invading districts in the Punjab and elsewhere outside of the Bombay Presidency. By the middle of November Poona was substantially empty of inhabitants, except those stricken with the disease and those who bravely cared for the sick and dying. In December there was a fresh outbreak in Bombay, which soon became more deadly than that of the previous winter and spring. By the beginning of February, 1898, and through March, the deaths from plague alone in Bombay had risen above a thousand a week. Then another subsidence occurred, followed by another recrudescence of the disease in August, and another decline in October. But the variations in other districts were not uniform with those in Bombay. At the end of 1898, the total of mortality from plague in all the afflicted districts of India, reckoning from the beginning, was believed to exceed 100,000, including 70,000 in the Bombay Presidency and Sind (28,000 in the city of Bombay), and 2,000 in the Punjab. In Calcutta there had been but 150 deaths. Although the measures taken for checking the spread of the pestilence were far less stringent than they would have been among people more capable of understanding what they meant and what their importance was, they alarmed the religious jealousies of both the Hindus and the Mohammedans, and were resisted and resented with dangerous fury at a number of times. At Poona, in June, 1897, two British officials were murdered by young Brahmins, who had been excited to the deed by native journals, the language of which was so violent that the government found it necessary to prosecute several for sedition. At Bombay, in March, 1898, when the plague was at its worst, there were very serious riots, in which a number of Europeans were killed, and troops were called to the help of the police before the frenzied mob could be overcome.

Again, in 1899, there was a revival of the disease in India, especially at Bombay, during the winter, with a decline in April and fresh virulence in September. At the end of the year the estimate of total mortality from plague in India since the beginning was 250,000.

Of the wider spreading of the pestilence during 1900 the following summary of information is given in the annual report of the United States Secretary of the Treasury, in connection with details of quarantine measures: "The Surgeon-General reports that plague has been more widely distributed during the year than was ever known in history, and for the first time obtained lodgment in the Western Hemisphere, at Santos, Brazil, in October, 1899. By this it is not meant that the disease has been actually more prevalent than before, but that its points of contact have embraced nearly every civilized country in the world, though its prompt recognition and application of modern methods have either entirely prevented its spread or have caused it to disappear after a short period of infection. The scientific knowledge of the disease renders it far less to be dreaded than before, but increase in rapid communication between different parts of the world facilitates its transportation. In illustration, the fact is cited that 20 vessels have been reported, arriving at as many principal seaports in different parts of the world, on which plague was discovered on arrival or had manifested itself during the voyage. As heretofore, its chief ravages have been in India, where preventive measures have been hindered by religious fanaticism. In India during the year there were 66,294 deaths. Notable outbreaks of the disease occurred in Kobé and in Formosa, Japan, at Oporto, Santos, Rio de Janeiro, Honolulu, Sydney, Mauritius, Hongkong, and Glasgow.

"In December, 1899, on account of the apparent spread of this disease, 12 commissioned officers were detailed by order of the President for duty in the offices of the United States consuls at the principal ports in England and on the Continent. In June, the disease fortunately not having become as widespread as anticipated, they were recalled, with the exception of five, who are still retained for the purpose of furnishing information and for service at any needed point. Two of those thus retained, when the plague was announced at Glasgow, Scotland, on August 28, 1900, were immediately sent to that point and began inspection of vessels for the United States and also for Canada, by request of that Government, thus enabling vessels to be entered at ports on this side without undue restraint. In the laboratory of the Service, scientific investigations as to the viability of the plague bacillus and the methods and efficiency of disinfection have been conducted, and the results, together with excerpts from all available literature bearing upon the prevention of plague, have been published in the Public Health Reports, forming, for this year, a volume containing most complete information upon this disease. About 700,000 doses of Haffkine's prophylactic were also prepared in the laboratory and sent to the United States quarantine officers at home and abroad, together with large quantities of Yersin's serum, purchased early in the year from the Pasteur Institute in Paris. In these two preparations, the one (Haffkine) a prophylactic and the other (Yersin) both prophylactic and a cure, the Surgeon-General says that science has effective methods of combating the spread of this disease."—*United States, Secretary of the Treasury, Annual Report, Dec.* 4, 1900.

The "antitoxin, or serum, first prepared by Professor Haffkine as a plague inoculation, called Haffkine's prophylactic, is now being used in Bombay and western India with remarkable results. This prophylactic is prepared by first taking the plague bacilli, or the young germs, from a person affected with the plague and cultivating them. These microbes are killed by artificial means and a high degree of heat. From these dead germs and their poisonous excrements is produced a fluid that is believed to have acquired the power, when injected into the human system, to render the blood immune from the attack of plague germs and to neutralize their effect. The injection of such a poison has the effect of an antitoxin and prevents the system from nourishing plague. A dead plague germ being inoculated into a person, plague will not follow. A person after having one attack of the disease is rarely liable to a second. The person first inoculated is subject to symptoms of the plague. In vaccination for smallpox a living germ is dealt with, whereas in plague inoculation

dead seed only are injected. . . . Inoculation is exceedingly unpopular among the natives. The government has had great labor in persuading the Hindoo mind of the efficacy of Haffkine's prophylactic against plague and at the same time of its utter harmlessness in every other respect. The Hindoo is suspicious that the dead germs and their toxic excreta may be of animal rather than vegetable substance, which would make the injection of the fluid into their body a religious offense."—*United States Consular Reports, Jan.*, 1900, *p.* 101.

"In the present epidemic, plague-spots are scattered over the whole face of the globe from Sydney to Santos and Hongkong, and recently from San Francisco suspicious cases have been reported. The annual pilgrimage of Moslems to worship at the shrines of Mecca and Medina is now, as in the past, of all human agencies, the most active in spreading the pest. . . . Since Egypt is nearest, plague first appears there in the seaport towns, particularly Alexandria. Sanitary conditions have improved vastly, like economics, under British control; and, last year, what in other times might have been a devastating epidemic was limited to relatively a few scattered cases. Recognizing the danger to themselves, the European powers have been led to take steps, under the Venice Convention, for their own protection. An international quarantine, under the control of the Egyptian Sanitary, Maritime, and Quarantine Council, in which the powers have one vote each and Egypt three, has established stations at two points on the Red Sea."—*American Review of Reviews, May*, 1900.

POET LAUREATE.—To the line of English Poets Laureate (see, in vol. 3, LAUREATE, ENGLISH POETS), there was added on the 1st of January, 1896, the name of Alfred Austin, succeeding Tennyson, who died October 6, 1892.

POLAND, Russian: Relaxation of oppressions. See (in this vol.) RUSSIA: A. D. 1897.

POLAR EXPLORATION, Arctic and Antarctic: A chronological record.—Until quite recent years, the antarctic region had had few explorers. In 1598–9 Dirk Gerritz was carried south by a storm and found land, probably the South Shetlands, at 64° S. lat. Capt. Cook made two antarctic voyages, in the second one reaching lat. 71° 10′ S., at long. 106° 54′ W., sailing entirely around the southern ocean in a high latitude, and discovering many islands. In a Russian expedition, 1819–21, Bellinghausen discovered Peter I. Island and Alexander I. Land. Enderby Land was discovered by John Biscoe in 1831–2. In 1840–3 the great English expedition under Capt. (afterward Sir) James Ross, in the Erebus and Terror, discovered and named Victoria Land, and reached lat. 78° 11′, Feb. 23, 1842. The continent which Capt. Charles Wilkes claimed to have discovered in 1840 has not been found by later explorers. In 1874 the Challenger was turned back by the ice in lat. 66° 43′ S.

1892-1893.—Whaling voyage of the Dundee vessels, the Balæna, Active, Diana and Polar Star, equipped for geographical observation by the Royal Geographical Society and others interested, carrying Wm. S. Bruce, C. W. Donald, and W. G. Burn Murdoch. Accompanied by the Norwegian sealer Jasen, under Capt. Larsen. South Shetlands and Graham Land visited and valuable observations made.

1893-1900.—Scientific exploration of Labrador by A. P. Low. Operations still in progress.

1894-1895.—Commercial voyage of the Norwegian whaler Antarctic, under Capt. Kristensen, sent by Capt. Svend Foyn, fitted out by H. J. Bull, and carrying the scientist C. E. Borchgrevinck. The valuable right whale was not found, but large beds of guano were discovered in Victoria Land, where a landing was made near Cape Adare.

1895.—Return of Peary relief expedition with Lieut. Robert E. Peary and his companions. In spite of great difficulties Lieut. Peary had again crossed the ice-sheet to Independence Bay, determined the northern limits of Greenland, charted 1,000 miles of the west coast, discovered eleven islands and the famous Iron Mountain (three great meteorites), and obtained much knowledge of the natives. The purely scientific results of the expedition are of great value. The relief expedition was organized by Mrs. Peary.

1895.—Cruise of Mr. Pearson and Lieut. Feilden in Barents Sea.

1895.—Return of Martin Ekroll from Spitzbergen after a winter's study of the ice conditions there. Convinced that his plan of reaching the pole by a sledge journey had little chance of success.

1895.—Survey of the lower Yenesei River and Obi Bay by Siberian hydrographic expedition.

1895.—Commercial expedition of Capt. Wiggins from England to Golchika, at the mouth of the Yenesei.

1895.—Russian geological expedition to Nova Zembla.

1895-.—Russian expedition under the geologist Bogdanovich to the Sea of Okhotsk and Kamchatka.

1895-1896.—Two scientific voyages of the Danish cruiser Ingolf in the seas west and east of Greenland.

1896.—Summer expedition of naturalists and college students to the northern coast of Labrador.

1896.—Attempt of Lieut. Peary to remove the great meteorite discovered by him at Cape York, Greenland. After dislodging it he was compelled by the ice to leave it. Small parties from Cornell University and Massachusetts Institute of Technology and one under Mr. George Bartlett, left by Peary at different points to make scientific observations and collections, returned with him.

1896.—Hydrographical survey of the Danish waters of Greenland and Iceland.

1896.—Hansen sent to Siberia to look for traces of Nansen.

1896.—Return of Dr. Nansen from voyage begun in 1893. After skirting the coast of Siberia almost to the Lena delta, the Fram was enclosed by the ice and drifted with it north and northwest. On March 14, 1895, in 84° 4′ N. lat.,

102° E. long., Nansen and Johansen left the Fram and pushed northward with dogs and sledges across an ice floe till they reached lat. 86° 13.6′, at about 95° W. long., on April 8, within 261 statute miles of the pole. With great difficulty they made their way to Franz Josef Land, where they wintered, and in June met explorer Jackson. Returning on the Jackson supply steamer Windward, they reached Vardö Aug. 13. The Fram drifted to lat. 85° 57′ N., 66° E. long., then southwestward, reaching Tromsoë Aug. 20, 1896. Nansen demonstrated the existence of a polar sea of great depth, comparatively warm below the surface, apparently with few islands; though he did not find the trans-polar current he sought.

1896.—Spitzbergen crossed for the first time, by Sir W. Martin Conway and party.

1896.—Many parties visit the northern coast of Norway and Nova Zembla to view the total eclipse of the sun, Aug. 8-9.

1896.—Expedition sent by Russian Hydrographic Department to find site for a sealers' refuge in Nova Zembla. Bielusha Bay, on the southwest coast, chosen.

1897.—Expedition sent by Canadian government to investigate Hudson Bay and Strait as a route to Central Canada. Passage found to be navigable for at least sixteen weeks each summer.

1897.—Seventh Peary expedition to Greenland. Accompanied by parties for scientific research. Preliminary arrangements made with the Eskimos for the expedition of 1898, and food-stations established. Relics of Greeley's expedition found on Cape Sabine, and the great meteorite at Cape York brought away at last.

1897.—Second expedition of Sir Martin Conway for the exploration of Spitzbergen.

1897.—A summer resort established on west coast of Spitzbergen, with regular steamer service for tourists during July and August.

1897.—Cruise of Mr. Arnold Pike and Sir Savile Crossley among the islands east of Spitzbergen.

1897.—Cruise of Mr. Pearson and Lieut. Feilden in the Laura in the Kara Sea and along the east coast of Nova Zembla, for the purpose of studying the natural history of the region.

1897.—Expedition of F. W. L. Popham with a fleet of steamers through Yugor Straits to the Yenesei.

1897.—Hydrological and commercial expedition, comprising seven steamers, under Rear-Admiral Makaroff, sent by the Russian government to the north Siberian sea.

1897.—Balloon voyage of Salamon August Andrée and two companions, Mr. Strindberg and Mr. Fraenkel, starting from Danes' Island, north of Spitzbergen, in the hope of being carried to the pole. Four buoys from the balloon have been found. The first, found in Norway in June, 1899, and containing a note from Andrée, was thrown out eight hours after his departure. The "north pole buoy," to be dropped when the pole was passed, was found empty on the north side of King Charles Island, north-east of Spitzbergen, Sept. 11, 1899. A third buoy, also empty, was found on the west coast of Iceland July 17, 1900. Another, reported from Norway, Aug. 31, 1900, contained a note showing that the buoy was thrown out at 10 P. M., July 11, 1897, at an altitude of 250 metres (820 ft.), moving N. 45 E., with splendid weather. Many search expeditions, some equipped at great expense, have returned unsuccessful. In spite of many rumors nothing definite is known of the fate of any of the party. One message from Andrée was brought back by a carrier pigeon. It was dated July 13, 12.30 P. M., in lat. 82° 2′, long. 12° 5′ E., and stated that the balloon was moving eastward.

1897.—New islands on the southern coast of Franz Josef Land discovered by Capt. Robertson of the Dundee whaler Balæna.

1897.—Return of Jackson-Harmsworth expedition from three years' exploration of Franz Josef Land and the region north of it. Franz Josef Land was resolved into a group of islands and almost entirely mapped. Small parties journeying northward over the ice, establishing depots of supplies, the most northern in latitude 81° 21′, discovered and named Victoria Sea, the most northern open sea in the world.

1897.—Anglo-Australasian antarctic conference in London.

1897-1899.—Journey of Andrew J. Stone through the Canadian Rockies, down Mackenzie River and along the arctic coast, in search of rare mammals and information concerning the native tribes. Mr. Stone often had only one companion. He traveled rapidly, in one period of five months covering 3,000 miles of arctic coast and mountains, between 70° and 72° N. lat. and between 117½° and 140° W. long.

1897-1899.—Belgian antarctic expedition under Capt. Adrien de Gerlache to lands south of America. Sailed from Antwerp to explore and chart coast line, expecting to leave party to winter at Cape Adare and explore interior. Near Alexander I. Land the Belgica caught in the ice pack and held for a year, drifting as far south as lat. 71° 36′, in long. 87° 39′ W. Finally released by the cutting of a canal through the ice. This dreary winter the first spent by men far enough south to lose sight of the sun. The continent found to be mountainous, glaciated, and without land animals except a few insects, though sea fowl abounded. One flowering grass, and a few mosses, rock lichens, and fresh-water algæ constitute the flora. Some 500 miles of coast chartered.

1898.—Expedition of Dr. K. J. V. Steenstrup to Greenland to study the glaciers of Disko island.

1898.—Completion by Dr. Thoroddsen of his systematic exploration of Iceland, begun in 1881.

1898.—Spitzbergen circumnavigated and surveyed by Dr. A. G. Nathorst. Coast mapped and important scientific observations made.

1898.—Pendulum observations made in Spitzbergen by Prof. J. H. Gore, with instruments of the United States Coast and Geodetic Survey, for the determination of the force of gravity in that latitude.

1898.—Cruise of Prince Albert of Monaco, on coast of Spitzbergen, for the purpose of making scientific observations.

1898.—Some claim to Spitzbergen made by Russia. Never before claimed by any nation.

1898.—German arctic expedition under Theodor Lerner to the islands east of Spitzbergen, for scientific purposes and to obtain news of Andrée if possible.

1898.—Andrée search expedition under J. Stadling sent to the Lena delta, the mouth of the Yenesei and the islands of New Siberia by

POLAR EXPLORATION.

the Swedish Anthropological and Geographical Society.

1898.—Conference on antarctic exploration held in the rooms of the Royal Society, London, Feb. 24.

1898-1899.—Reconnoitring expedition by Danish party under Lieut. G. C. Amdrup, to east coast of Greenland. Coast explored and mapped from Angmagsalik, 65¾° N. lat., to 67° 22′. Remains of a small extinct Eskimo settlement found.

1898-1899.—Second attempt by Walter Wellman to reach the north pole. Wintered in Franz Josef Land, establishing an outpost, called Fort McKinley, in lat. 81° N. In February Mr. Wellman, with three companions, started northward and seemed likely to succeed in their undertaking, but a serious accident befalling Mr. Wellman, and an icequake destroying many dogs and sledges, a hurried return to headquarters was necessary. Here important scientific observations were made. The 82d parallel was reached by the explorer.

1898-1899.—German expedition for deep-sea exploration in antarctic waters, in charge of Prof. Carl Chun, on the Valdivia. Southern ocean found to be of great depth.

1898-1900.—British antarctic expedition under Borchgrevinck to Victoria Land; the funds provided by Sir George Newnes. Lat. 78° 50′ S. reached, and the present position of the southern magnetic pole determined.

1898-.—Carefully planned expedition of Lieut. Peary, purposing to advance toward the pole by west coast of Greenland, establishing food stations and depending upon picked Eskimos for co-operation with his small party. In the last dash for the pole, supply sledges to be sent back as emptied, and the returning explorer, with two companions only, to be met by a relief party of Eskimos. The Windward was presented by Mr. Harmsworth for this expedition. Lieut. Peary was disabled for several weeks in 1898–9 by severe frost-bites, causing the loss of seven toes. The Greeley records were found at Fort Conger and sent back by the annual supply vessel. Sextant and record of the Nares expedition found and sent back; presented by Lieut. Peary to the Lords of the Admiralty of Great Britain and placed in the museum of the Royal Naval College at Greenwich. Vessel sent to Greenland each summer to carry supplies and bring back letters, carrying also small parties of explorers, scientists, university students and hunters, to be left at various points and picked up by the vessel on its return.

1898-.—Expedition of Capt. Sverdrup to northern Greenland — Lieut. Peary's especial field. Having planned a polar expedition similar to Peary's he sailed up the west coast, but the Fram was frozen in near Cape Sabine. Sverdrup therefore explored the western part of Ellesmere Land, then sailed again in an attempt to round the northern coast of Greenland.

1899.—International conference held at Stockholm in June recommended a program for hydrographical and biological work in the northern parts of the Atlantic ocean, the North Sea, the Baltic, and adjoining seas.

1899-.—Scientific expedition of Edward Bay, a Dane, to Melville Bay, Greenland.

1899.—Swedish expedition under Dr. A. G. Nathorst to search for Andrée in eastern Greenland. Valuable observations made and fjord-systems of King Oscar Fjord and Kaiser Franz Josef Fjord mapped.

1899.—Explorations in Iceland by F. W. W. Howell and party.

1899.—Hydrographic surveys on the coasts of Iceland and the Färoe Islands by MM. Holm and Hammer in the Danish guard-ship Diana.

1899.—Joint Russian and Swedish expedition to Spitzbergen, for the measurement of a degree of the meridian. Owing to the condition of the ice, the northern and southern surveying parties unable to connect their work.

1899.—Explorations in Spitzbergen by the Prince of Monaco, with a scientific staff.

1899.—Successful experimental voyage of the Russian Vice-Admiral Makaroff in his ice-breaking steamer, the Yermak, north of Spitzbergen.

1899.—Russian government expedition, to cost £5,400, to explore northern shores of Siberia to mouths of the Obi and Yenesei.

1899-1900.—Arctic expedition of the Duke of the Abruzzi. His ship, the Stella Polare, was left at Crown Prince Rudolf Land during the winter. The Duke became incapacitated by a fall and by the loss of two joints from the fingers of his left hand, incurably frost-bitten; but a small party under Capt. Cagni pushed northward till provisions were exhausted. Nansen's record was beaten, the Italian party reaching lat. 86° 33′, at about 56° E. long. No land was found north or northwest of Spitzbergen. Three men were lost from Cagni's party.

1899-.—Exploration of Ellesmere Land, Greenland, by Dr. Robert Stein, of the United States Geological Survey, Dr. Leopold Kann of Cornell, and Samuel Warmbath of Harvard, who took passage in the Peary supply ship Diana, trusting to chance for conveyance home. Their totally inadequate outfit was generously augmented by Peary's friends of the Diana. Dr. Kann returned in 1900, leaving Dr. Stein.

1900.—Seward peninsula, the most westward extension of Alaska, explored and surveyed by five government expeditions.

1900.—Exploration of the interior of northern Labrador by a party from Harvard University. Soundings along the coast by schooner Brave.

1900.—Second Danish expedition under Lieut. Amdrup to east Greenland, completing the work of 1898–9 by mapping the coast between 67° 20′ N. and Cape Gladstone, about 70° N., and making valuable scientific collections.

1900.—Swedish expedition, under Gustav Kolthoff, to eastern Greenland, for study of the arctic fauna.

1900.—Swedish scientific expedition of Prof. G. Kolthoff to Spitzbergen and Greenland.

1900.—Exploration of Spitzbergen by a Russian expedition under Knipovich.

1900.—Russian expedition to east coast of Nova Zembla by Lieut. Borissoff to complete survey of the islands.

1900-.—Dr. Nansen's expedition under the leadership of Dr. J. Hjort, for the physical and biological examination of the sea between Norway, Iceland, Jan Mayen and Spitzbergen.

1900-.—German expedition, under Capt. Bade, to explore East Spitzbergen, King Charles' Land and Franz Josef Land, and to look for traces of Andrée.

1900-.—Attempt of a German, Capt. Bauendahl, to reach the north pole, leaving his vessel

in the ice north of Spitzbergen and traveling over the ice with provisions for two years, weighing ten tons.

1900-.—Scientific expedition of Baron E. von Toll to the unexplored Sannikoff Land, sighted in 1805 from the northern coast islands of New Siberia. Preceded by a party which established food depots at various places months before.

1901.—Three exploring parties sent to Alaska by the United States Geological Survey.

1901.—Expedition sent by the Duke of the Abruzzi to Franz Josef Land to search for the three men lost from his party in 1900.

1901.—North polar expedition under Mr. Evelyn B. Baldwin of the United States Weather Bureau; splendidly equipped by Mr. Wm. Ziegler of New York. Mr. Baldwin, who has had arctic experience with Lieut. Peary and Mr. Wellman, will probably proceed by way of Franz Josef Land.

1901-.—Several expeditions to co-operate in exploration of the antarctic region and to reach the south pole if possible. The British expedition, long striven for by the Royal Geographical Society and the Royal Society and made possible by L. W. Longstaff's contribution of £25,000, to be under the command of Capt. Robert Scott and to explore the Victoria (90°–180° E.) and Ross (180°–90° W.) quadrants, — in the main the region south of the Pacific. The Weddell (90° W.–0°, Greenwich) and Enderby (0°–90 E.) quadrants assigned to the finely equipped German expedition, under Drygalski, which will first explore south of the Indian Ocean. The Swedish expedition under Dr. Nordenskïold to explore the lands south of America. A private Scottish expedition under Wm. S. Bruce to explore the Weddell Sea region south of the Atlantic Ocean. An Argentine expedition to visit the South Shetlands.

1901-.—Projected expedition of Capt. J. E. Bernier of Quebec, on Nansen's principle, with a specially built vessel, to sail through Bering Strait, coast Siberia to long. 170° or 165° E., then enter the ice. Sledging parties to push toward the pole, marking the route with hollow signal poles (of aluminum) packed with records and provisions, and maintaining communication with the ship by wireless telegraphy. This is one of two plans which he lays before the Canadian government. The other contemplates a movement, with dogs and reindeers, from Franz Josef Land, coming back to Spitzbergen, taking 12 or 14 men, all scientists.

1901-.—Projected expedition of Herr Annschütz-Kämpfe, of Munich, to the north pole, in a submarine boat capable of carrying five men and remaining under water for fifteen hours at a time.

1901-.—As this goes to press (April, 1901), a national antarctic expedition is being fitted out, jointly, by the Royal Geographical Society and the Royal Society of Great Britain, assisted by a subsidy of £45,000 from the British government. A steamer named the "Discovery," built especially for the expedition, at Dundee, was launched in March, and is being equipped with remarkable completeness. Special arrangements, says "The Times," will be made for magnetic work, while meteorology, geology and biology will be well cared for. "The staff of navigating officers and of scientific specialists has been carefully selected, and under Commander Robert Scott, R. N., who will be in command of the expedition, their work, we may be sure, will be so well organized that nothing of importance will be neglected. There will be five navigating officers, three of them belonging to the Royal Navy and two others to the Royal Naval Reserve, while the special scientific staff, including the two medical officers, will be of equal strength. . . . Captain Scott is at present investigating the question of the utility of balloons."

PORTO RICO.

Area and Population.—In the testimony given, Jan. 13, 1900, before the U. S. Senate Committee on Pacific Islands and Porto Rico, General George W. Davis, Military Governor of Porto Rico, gave the following information: "The island of Puerto Rico has an area of about 3,600 square miles, according to the best information that now exists, but that area has to be verified, and it is doubted if the area is quite so large. It has a population of about a million, perhaps—certainly one of the most densely populated areas of 3,000 or 4,000 square miles on the face of the earth, approximating the density of population of Belgium, I think, and considerably greater than that of any of our thickly settled agricultural regions in the United States. New England has about 200 to the square mile while Puerto Rico has nearly 300. The inhabitants are mostly of Spanish origin—emigrants from Spain during the last 400 years and their descendants. There is a large representation from the Canary Islands and the Balearic group in the Mediterranean, a large number of Corsicans and their descendants, and consequently they are French subjects, a few Germans, a few English, and very few Americans before the occupation; a few Venezuelans, a few from Santo Domingo, and a few Cubans, but the most of the population is Spanish. Included in that million are about 300,000 negroes and mulattoes, approximately a little

more than that number. About one-third of the entire population is of the negro or mixed race, what would be called in the United States 'colored' people. Of pure-blood negroes there are about 70,000, the remainder mulattoes, and all speaking Spanish, and largely the slaves liberated in 1874. The number of slaves liberated at that time was considerably less than the number of negroes in Puerto Rico, the number being only about 30,000, for whom some $11,000,000 was paid the owners. That statement gives a fair idea of the character of the population as respects numbers and race." Several small adjacent islands are regarded as belonging to Porto Rico and were included in the cession to the United States. One of these, named Viequez, about 15 miles long and 3 or 4 miles wide, is very fertile, and has about 7,000 inhabitants. On another, called Culebra, there are some 600 or 700 people. The remaining islands are smaller and unimportant.—56*th Congress*, 1*st Sess.*, *Senate Doc. No.* 147, *pp.* 1–2.

The government as it was under Spanish rule.—"The civil government of the island was the Governor-General, and the Governor-General was the civil government. All power was lodged in his hands and he was accountable only to Madrid. He was at once the executive, the legislative, and the judicial head. As Captain-General, he had chief command of the military forces, and made such disposition of them as he chose; as Governor-General, he conducted civil affairs, whether insular or municipal, according to his own pleasure. . . . If, as occasionally happened, he was a wise and good man, seeking the welfare of the people rather than his own personal enrichment or the advancement of his political friends, there was less cause for complaint from the people, who were completely ignored. As the position was one of great power and of large opportunities for pecuniary profit, it not infrequently went to those who were prepared to exploit it in their own interests. . . .

"The system of autonomy, which was proclaimed November 25, 1897 [see, in this vol., CUBA: A. D. 1897 (NOVEMBER)], was never fully installed. The war intervened, and the provincial legislature, which was its most important feature, was dissolved when Sampson's fleet appeared, and the Governor-General conducted the government practically on the old plan, except that the ministry, as provided by the autonomistic law, was retained, as follows: Secretary of government or of state, secretary of the treasury, secretary of the fomento or interior, including public works, public instruction, public lands, mines, etc., agriculture and commerce, and secretary of justice and worship. The last three secretaries were subordinate to the secretary of government, through whom all orders from the Governor-General and all communications to or from him must pass. The autonomist law allowed the secretaries or ministers to be members of one or the other of the two legislative chambers. The Governor-General with his council constituted the executive power. No act of his was valid unless approved by one of the secretaries, and the secretaries could issue no order which he had not countersigned. He had the power to convoke or dissolve the chambers, to refer objectionable bills to Madrid for approval or disapproval, and to appoint or remove the secretaries. All matters of a diplomatic character were in his hands exclusively, and, constituted by the Pope patronato real, he was the head of the church in the island and practical director of ecclesiastical affairs. The legislature consisted of two chambers, the council and the house of representatives. The council was composed of fourteen members, eight of whom were elected, and six appointed by the Crown; the house of representatives of one representative for each 25,000 inhabitants, elected by the people. The liberality of this law is further indicated by the fact that it gave the right of suffrage to all males of 25 years of age and over. The two chambers were empowered to legislate on all insular questions, such as the estimates, which must be adopted by the Cortes at Madrid, public instruction, public works, sanitation, charities, etc. It will be seen that the reforms granted by this autonomistic decree were large in the letter, taking powers which the Governor-General had exercised unquestioned and giving them to the people, who had never been allowed to participate in the government of their own country. Whether it would have proved liberal in practical operation is not so certain. The Government invariably discriminated against Porto Ricans in favor of Spaniards, and it is also to be remembered that Spanish laws as written and Spanish laws as administered are not always identical." H. K. Carroll (Special Commissioner), *Report on Porto Rico*, 1899, *pp.* 15–16.

A. D. 1898-1899 (August—July).—Popular feeling in the Island on the American occupation. — Welcome to the Stars and Stripes. — Expectations and desires of the people. — Their character. — Extent of illiteracy.—The Peones.—"All classes of natives of the island welcomed the American Army, American occupation, and American methods, and accepted without hesitation the Stars and Stripes in place of the red and yellow bars. They had not been disloyal to the old flag; but it had come to represent to them, particularly during the present century, in which a class feeling developed between the insular and the peninsular Spaniard, partiality and oppression. In the short war, some of the natives occupying official positions made demonstrations of loyalty to the Crown of Spain, as was perfectly natural, but they were among the first to submit to American rule when the protocol promised cession of the island to the United States. On the other hand, as the commissioner is informed, a Porto Rican who had hoped and prayed for American intervention for fifty years enrolled himself as a Spanish citizen some months after the war was concluded, and his hopes had been realized. Porto Ricans generally complained that the former Government discriminated in favor of the Spaniard, who, in the distribution of the offices, was preferred to the native, and who, aided by the powerful influence of the authorities, prospered in business as

banker, merchant, manufacturer, or agriculturist. They also insist that the internal improvement of the island was neglected; that agriculture bore more than its share of the burden of taxation; that the assessments were very inequitable and unequal; that education was not fostered, and that in general the welfare of the people was not the first concern of their rulers.

"They expect under American sovereignty that the wrongs of centuries will be righted; that they will have an honest and efficient government; the largest measure of liberty as citizens of the great Republic under the Constitution; home rule as provided by the Territorial system; free access to the markets of the United States and no customs duties on goods coming from our ports; a school system modeled after that of the United States; the adoption of the English language in due time and the general adaptation to the island of all those institutions which have contributed to the prosperity, progress, and happiness of the American people. The largest and most representative gathering, since American occupation, was held in San Juan, October 30, 1898, without distinction of party or class with the object of consultation and formulation of a programme for the future. In brief, the propositions of the congress as submitted to the commissioner for presentation to the President of the United States were these: Immediate termination of military and inauguration of civil government; establishment of the Territorial system, with laws common to other Territories of the Union; a legislature in two branches; suffrage for all male citizens of 21 years of age or over, the right to be surrendered at the end of the first two years by those who do not then know how to read and write; judicial reform; introduction of the jury system; autonomy for municipal governments; taxation on the basis of valuation; free and reciprocal commerce with the ports of the United States; aid for agriculture; obligatory and universal education; trade schools; savings banks. This programme of reforms seems to have very general support, although there is a difference of opinion on certain points. Many Porto Ricans urged the commissioner to represent them as desiring that the military régime be made as short as possible, not because the military governors were in any way objectionable or their rule oppressive, but because the civil status of the island should be fixed with no unnecessary delay. There was no other opinion except among foreign subjects, many of whom thought that the people were not yet ready for self-government, and that the firm hand of military power would be needed for probably two years. . . .

"If the desire to assume the burdens of local self-government may be taken as indicating some degree of capacity for self government, the people of Porto Rico certainly have the desire. They may be poor, but they are proud and sensitive, and would be bitterly disappointed if they found that they had been delivered from an oppressive yoke to be put under a tutelage which proclaimed their inferiority. Apart from such qualifications as general education and experience constitute, the commissioner has no hesitation in affirming that the people have good claims to be considered capable of self-government. Education and experience, although too high a value can hardly be set upon them, do not necessarily make good citizens. . . . The unswerving loyalty of Porto Rico to the Crown of Spain, as demonstrated by the truth of history, is no small claim to the confidence and trust of the United States. The people were obedient under circumstances which provoked revolt after revolt in other Spanish colonies. The habit of obedience is strong among them. Their respect for law is another notable characteristic. They are not turbulent or violent. Riots are almost unknown in the island; so is organized resistance to law; brigandage flourished only for a brief period after the war and its object was revenge rather than rapine. They are not a criminal people. The more violent crimes are by no means common. Burglary is almost unknown. There are many cases of homicide, but the number in proportion to population is not as large as in the United States. Thievery is the most common crime, and petty cases make up a large part of this list of offenses. The people as a whole are a moral, law-abiding class, mild in disposition, easy to govern, and possess the possibilities of developing a high type of citizenship."—H. K. Carroll (Special Commissioner), *Report on Porto Rico*, 1899, *pp.* 55–57.

"On the 25th day of July, 1899, an election was held in Adjuntas for municipal officers, and the registration was made in conformity to General Orders, No. 112, c. s., Headquarters Department of Puerto Rico. The order imposed the following qualifications for electors: Men over 21 years old, able to read and write, or who were taxpayers of record, who had been actual residents of the island for at least two years, and of the municipality for six months preceding the date of the election. The number who proved these qualifications before the board of registration was 906, out of a population, according to the census of 1897, of 18,505; that is, less than 5 per cent could vote under the conditions stated. There was much public interest in this election, and it is believed that about all who were eligible were registered. This incident indicated that in the whole island there may be approximately 45,000 who could vote under the conditions of the order above referred to. The class who can not fulfill these conditions, say 75 per cent of the males over 21 years of age, are usually in a state of abject poverty and ignorance, and are assumed to include one-fifth of the inhabitants. They are of the class usually called peones. This word in Spanish America, under old laws, defined a person who owed service to his creditor until the debt was paid. While those laws are obsolete, the condition of these poor people remains much as before. So great is their poverty that they are always in debt to the proprietors or merchants. They live in huts made of sticks and poles covered with thatches of palm leaves. A family of a dozen may be huddled together in one room, often with only a dirt floor. They have little food worthy of the name and only the most scanty clothing, while children of less than 7 or 8 years of age are often entirely naked. A few may own a machete or a hoe, but more have no worldly possessions whatever. Their food is fruit, and if they are wage-earners, a little rice and codfish in addition. They are without ambition and see no incentive to labor beyond the least that will provide the barest sustenance. All over the island they can

be seen to-day sitting beside their ruined huts, thinking naught of to-morrow, making no effort to repair and restore their cabins nor to replant for future food.

"The remarks of Mr. James Anthony Froude in his work on 'The English in the West Indies' apply with full force to these people: 'Morals in the technical sense they have none, but they can not be said to sin because they have no knowledge of law, and therefore they can commit no breach of the law. They are naked and not ashamed. They are married but not parsoned. The women prefer the looser tie, that they may be able to lose the man if he treats her unkindly. Yet they are not licentious. . . . The system is strange, but it answers. . . . There is evil, but there is not the demoralizing effect of evil. They sin, but they sin only as animals, without shame, because there is no sense of doing wrong. They eat the forbidden fruit, but it brings with it no knowledge of the difference between good and evil. . . . They are innocently happy in the unconsciousness of the obligations of morality. They eat, drink, sleep, and smoke, and do the least in the way of work they can. They have no ideas of duty, and therefore are not made uneasy by neglecting it.' Between the negro and the peon there is no visible difference. It is hard to believe that the pale, sallow, and often emaciated beings are the descendants of the conquistadores who carried the flag of Spain to nearly all of South America, and to one-third of North America."—General George W. Davis, *Report on the Civil Government of Puerto Rico, Sept.* 30, 1899 (*Message and Documents: Abridgment*, 1899–1900, *v.* 2, *pp.* 1293–4).—"The educated class of Puerto Ricans are as well educated and accomplished as the educated men of any country. They have had the benefit of a liberal education, a few in the United States, a good many in France, and a great many in Madrid and Habana, where they have passed through the universities. The lawyers and doctors are all graduates of either the university in Habana or some university in Spain, with very few exceptions. The merchants are largely Spanish, many of whom will probably preserve their nationality under the provision of the Treaty of Paris which gives them that right. A few may adopt American citizenship, and ultimately possibly all will, but many of the merchants who conduct the largest part of the business of Puerto Rico will retain their Spanish citizenship. There are a number of merchants who are natives, a few Germans, and a few English. I do not remember any American merchant in business there before the occupation. The schools in Puerto Rico conducted under the Spanish system were few in number. The amount allotted for education by the insular budget was something like 300,000 pesos a year, as I now recall the figures. The teachers were officers of the government, holding life positions and receiving pensions when superannuated. They belong to a civil-service class which is not dependent upon any change of administration, only being removed for cause. The lawyers, or judges, rather, of the island, occupy a similar position."—General George W. Davis, *Testimony before Senate Com.* (*56th Cong.*, *1st Sess.*, *Senate Doc. No.* 147).

A. D. 1898-1899 (October—October).—The military government instituted by the United States.—"The government of the island, its various civil institutions, its codes and its courts, the systems of taxation, etc., have been modified in very important particulars since the American occupation began, October 18, 1898. It will be useful, perhaps, to indicate the more important changes. Under General John R. Brooke [in command of the Department, October 18 to December 5, 1898] orders were issued declaring—(1) That the political relations of Porto Rico with Spain were at an end; that provincial and municipal laws were in force in so far as not incompatible with the changed conditions, and that they would be enforced substantially as they were before. (2) Abolishing the use of all stamped paper and stamps of every kind for documents, public and private. (3) Exempting all conveyances and contracts from the payment of royal dues. (4) Discontinuing the diputacion provincial, and distributing its duties among the secretaries or ministers. (5) Directing that appeals should not be sent to the supreme court in Madrid, but should be heard by the superior court at San Juan. (6) Abolishing the subdelegation of pharmacy which gave degrees to pharmacists. (7) Making the fisheries free to all. Appropriations for the support of the church ceased with American occupation, and the Government lottery was discontinued.

"Under the military government of Gen. Guy V. Henry [December 6, 1898 to May 8, 1899], orders were issued—(1) Appointing military commissions to try cases of arson and murder which had accumulated in the civil courts. (2) Closing public offices on Sunday, as far as possible. (3) Suspending the municipal tax on fresh beef for use of the Army. (4) Making Christmas and New Year's holidays. (5) Forbidding grants or concessions of public or corporate rights or franchises without the approval of the commanding general and the Secretary of War. (6) Abolishing the municipal consumo tax on articles of food, fuel, and drink, and providing for additional assessments on the sale of liquors and tobacco. (7) Separating the collection of customs duties from that of direct taxes. (8) Establishing a new system of land taxation, by which agricultural lands should be taxed according to the several classes instituted, from 1 peso down to 25 centavos per cuerda, and levying 50 per cent additional on lands whose owners reside abroad. (9) Providing for the free vaccination of the people of the island. (10) Prohibiting the exhumation of bodies in the cemeteries, recognizing the right of priests to control burials in consecrated grounds, and requiring municipalities to keep cemeteries in repair. (11) Reducing notarial fees from $1.88 to $1, from $4.50 to $1, from $11 to $1, and from $1 to 50 cents, according to class of document, and canceling others. (12) Reorganizing the cabinet, so as to make all the secretaries directly responsible to the governor-general. (13) Suspending the foreclosure of mortgages on agricultural property and machinery for one year. (14) Appointing February 22 a holiday. (15) Prohibiting the sale of liquor to children under 14 years of age. (16) Modifying the civil marriage law. (17) Declaring that eight hours shall constitute a day's work. (18) Creating an insular police.

"Under the military government of Gen. George W. Davis [May 8, 1899, to May 1, 1900], orders were issued—(1) Modifying the order of

General Henry concerning hours of labor, so as to allow agreements between employer and employee for longer or shorter hours. (2) Naming May 30 as a holiday. (3) Allowing the writ of habeas corpus to be issued. (4) Constituting a board of prison control and pardon. (5) Continuing the observance as a holiday of June 24. (6) Creating a provisional court on the basis of circuit and district courts of the United States for the hearing of cases not falling within the jurisdiction of local insular courts. (7) Creating a superior board of health for the island. (8) Reorganizing the bureau of public instruction and the system of education. (9) Relieving the judiciary from all control by the department of justice, discontinuing the office of secretary of justice, and appointing a solicitor-general. (10) Abolishing the sale at auction of the privilege of slaughter of cattle, and making it free. (11) Reorganizing the judicial system of the island, with a supreme court in San Juan and district courts in San Juan, Ponce, Mayaguez, Arecibo, and Humacao, and with modifications of civil and criminal procedure. (12) Discontinuing the departments of state, treasury, and interior, and creating bureaus of state and municipal affairs, of internal revenue, and of agriculture, to be placed under the direction of a civil secretary, responsible to the governor-general, and continuing the bureaus of education and public works, with an insular board of nine members to advise the governor-general on matters of public interest referred to them.

"The reductions in the budget of expenditures have been extensive. That of 1898–99, adopted in June, 1898, amounted to $4,781,920, native money. The appropriations for 'general obligations,' which went to Madrid, $498,502, for the clergy, $197,945; for the army, $1,252,378; for the navy, $222,668, making a total of $2,171,493, ceased to be obligations, leaving $2,610,428 for the fiscal year. A new budget was adopted for the calendar year 1899, which still further reduces expenditures, calling only for $1,462,276. This budget, if carried out, would have involved a reduction from the proposed budget of 1898–99 of $3,319,644; but a new budget was formed, as already stated, for 1899–1900, which appears to call for an increase over this very moderate sum. The revenues were reduced by the abolition of stamped paper, personal passports, export duties, royal dues on conveyances, the lottery system, and other sources of income, amounting, all told, to less probably than a million of pesos."—H. R. Carroll (Special Commissioner), *Report on Porto Rico, October* 6, 1899, *pp.* 53–55.

A. D. 1899 (August).—Destructive cyclone.—"On the morning of the 7th of August, 1899, the United States Weather Bureau, through its branch establishment here, announced the approach of a cyclonic disturbance, and the danger signal was ordered to be hoisted at substations of the Bureau at Ponce and Mayaguez. At the same time I directed that the danger be reported to all commanding officers of posts throughout the island. There had been no serious or destructive storm in Puerto Rico since 1867, and the inhabitants had ceased to feel great concern on account of tropical tempests. Except at seaports, little heed was given to the caution, and in some cases the telegraph operators failed to receive or to promptly deliver the warning messages. The vortex of the cyclone appears to have traversed the island throughout its whole length, from about Humacao to Mayaguez, and its path was a scene of very great devastation. . . . The gale struck the island at Humacao about midnight of August 7, and furiously blew all the rest of that night and well into the next day, while at Mayaguez the violence was not great until 9 o'clock on the morning of the 8th. But as the latter town was under the lee of high mountains, it suffered much less than it would have done had it been higher or not thus protected. Most of the habitations in the track of the center of the cyclone were entirely smashed and the débris strewn all over the country. The full reports of the loss of life bring the number of deaths up to 2,700. The wind worked dreadful havoc with nearly everything useful to man. Besides the mortality, which was appalling, the material damage was almost beyond belief. But the greatest loss of life resulted, not from the wind, but from the terrible downfall of rain that immediately followed. . . . Added to the horror of the situation there came with the gale on the southern coast a tidal wave, which submerged large areas with sea water and swept away what the wind and rain had spared, in some places completing the destruction. Every river bed or bottom of a land depression was a roaring torrent. The wind uprooted myriads of trees, and the rain, entering and permeating the soil, loosened it, and on steep declivities resulted in avalanches of earth, mud, and water, covering wide areas and piling up the débris in the ravines and gorges. . . . The material loss to the coffee growers can as yet only be estimated, but the most conservative figures received place this year's crop at one-third of the normal. . . . Regard being had to the fact that five years must elapse before the coffee trees and their shade can be replanted and reach a normal bearing condition, the total loss can not be safely placed below 25,000,000 pesos for Puerto Rico on account of this hurricane."—Gen. George W. Davis, *Report* (*Message and Documents: Abridgment*, 1899–1900, *v.* 2, *pp.* 1343–4).

A. D. 1899 (October).—Census of the Island taken under the direction of the War Department of the United States.—"The population of Porto Rico shown by the schedules of the present census taken with reference to the date of October 16, 1899, was 953,243. This was about nine-tenths of the population of Maryland in 1890, the State whose population is nearest to that of Porto Rico. . . . If the figures for . . . earlier censuses may be accepted, it appears that the population of Porto Rico has been growing through the last twelve years with greater rapidity than before since 1860. Its present rate of increase is about the same as that of Ohio, Tennessee, or the Carolinas during the decade between 1880 and 1890. . . . It appears that the average increase of population in the interior has been more rapid than that on the coast. If the figures for the coast cities of San Juan, Ponce, and Mayaguez had been excluded, the difference would be yet more marked. The depressed condition of sugar-cane growing in the West Indies of recent years may have played an important part in producing this difference, for the growing of sugar cane is prevalent in the coast plains of Porto Rico.

"The area of Porto Rico, including the adjacent and dependent islands of Vieques, Culebra,

Mona, and Muertos, has been measured in connection with this census and found to be 3,606 square miles. But owing to the imperfect surveys on which all maps of Porto Rico are based there must be a considerable and indeterminate margin of possible error in any such measurement. The island is about three times the size of Long Island, which was in 1890 perhaps the largest insular division of the United States. It is also slightly greater than the eastern shore of Maryland (3,461 square miles). . . . Porto Rico has 264 persons to a square mile. This density of population is about the same as in Massachusetts, twice that in New York State, and thrice that in Ohio. It is more than seven times that of Cuba and not much less than twice that of Habana province. . . .

"The people of Porto Rico are, in the main, a rural community. There are no large cities in the island, the two largest being San Juan, which, regarding the entire municipal district as a city, had a population of 32,048, and Ponce, which with its port constituted practically one city, with a population of 27,952. These are the only two cities exceeding 25,000 inhabitants. The next city of magnitude is Mayaguez, on the west coast, with a population of 15,187. The only other city exceeding 8,000 inhabitants is Arecibo, with a population of 8,008. The total urban population of the island contained in cities exceeding 8,000 inhabitants each is 83,195, or only 8.7 per cent of the population of the island. This is a much smaller proportion than in Cuba, where the corresponding figures are 32.3 per cent, or in the United States, where the corresponding proportion in 1890 was 29 2 per cent. There are in Porto Rico 57 cities, each having a population of 1,000 or more. The total urban population of the island, under this definition, numbers 203,792, or 21.4 per cent of the total number of inhabitants of the island. Similar figures for Cuba show 47.1 per cent of the population of that island."—*Census of Porto Rico, Bulletin No.* 1.

A. D. 1899-1900.—The question of the tariff treatment of its new Territory by the United States Government.—Writing in "The Forum," November, 1899, Mr. H. K. Carroll, who had investigated the conditions in Porto Rico as a Special Commissioner of the United States government, described the obligation which, in his view, they imposed on the latter as follows: "The only free market the Puertorican has for his products is the island market. All the rest of the world is closed to him. He cannot even buy in a free market; everything he buys as well as everything he sells being subject to duties. This is the penalty of independence; but Puerto Rico is not, and does not want to be, independent. She wants such commercial relations with us as Alaska, New Mexico, and Arizona have, and desires a territorial form of government. I am of the opinion that we cannot refuse these reasonable requests without doing great injustice to Puerto Rico. It must be remembered that we sought Puerto Rico; for Puerto Rico did not seek us. We wrested her from the sovereignty of Spain, without asking her if she desired to change her allegiance. We were of the opinion that she was not justly treated by Spain; that she was governed in the interests of the mother country solely; that she was oppressed and overtaxed and denied a proper measure of home rule; and that in consequence we were serving the cause of humanity in breaking the chains that bound her. This was what the Puertoricans thought also. They welcomed our troops and our control. They were glad to turn their backs on the history of the past, and begin under the glorious Republic of the North a new and more prosperous career. They are disappointed, perhaps unreasonably, that their new life has not already begun; they are eagerly expectant. They look to the President to recommend, and to Congress to adopt, a system of government which will make the island a Territory, equal in rank and rights and privileges to existing Territories. They ought not to be disappointed without the best and strongest of reasons. Three reasons are mentioned in opposition to the granting of territorial government to Puerto Rico. First, admission as a Territory implies ultimate admission to statehood; and statehood for islands separated as Hawaii and Puerto Rico are by from 1,200 to 2,500 miles from the United States is not to be thought of for a moment. Second, territorial organization involves the relinquishment of customs duties; and the cane- and tobacco-growers of our West India possession would have free access to the markets of the United States, and thus come into injurious competition with our own farmers. Third, the people of Puerto Rico are not competent for the measure of self-government which the territorial system provides."

This most reasonable and just view of the duty of the American people to their new fellow citizens received strong endorsement from higher official authority in the subsequent annual report of the Secretary of War, who said: "It is plain that it is essential to the prosperity of the island that she should receive substantially the same treatment at our hands as she received from Spain while a Spanish colony, and that the markets of the United States should be opened to her as were the markets of Spain and Cuba before the transfer of allegiance. Congress has the legal right to regulate the customs duties between the United States and Porto Rico as it pleases; but the highest considerations of justice and good faith demand that we should not disappoint the confident expectation of sharing in our prosperity with which the people of Porto Rico so gladly transferred their allegiance to the United States, and that we should treat the interests of this people as our own; and I wish most strongly to urge that the customs duties between Porto Rico and the United States be removed."—*Message and Documents: Abridgment*, 1899–1900, *v.* 2, *p.* 757.

And, finally, the President of the United States, in his Message to Congress, December 5, 1899, gave his high authority to the declaration that this duty of his government to Porto Rico was "plain": "It must be borne in mind," he said, "that since the cession Porto Rico has been denied the principal markets she had long enjoyed and our tariffs have been continued against her products as when she was under Spanish sovereignty. The markets of Spain are closed to her products except upon terms to which the commerce of all nations is subjected. The island of Cuba, which used to buy her cattle and tobacco without customs duties, now imposes the same duties upon these products as from any other country entering her ports. She has there-

fore lost her free intercourse with Spain and Cuba, without any compensating benefits in this market. Her coffee was little known and not in use by our people, and therefore there was no demand here for this, one of her chief products. The markets of the United States should be opened up to her products. Our plain duty is to abolish all customs tariffs between the United States and Porto Rico and give her products free access to our markets."—*Message and Documents: Abridgment, v. 1, p. 53.*

Notwithstanding all which high official acknowledgments and declarations of obligation and duty, on the part of the Republic of the United States to the people of the island which it had wrested from Spain, certain interests in the former that objected to competition from the latter were able to secure legislation which deferred the performance of the "plain duty" required. An Act of Congress which the President approved on the 12th of April, 1900, "temporarily to provide revenues and a civil government for Porto Rico and for other purposes," enacted as follows:

"SEC. 3. That on and after the passage of this Act all merchandise coming into the United States from Porto Rico and coming into Porto Rico from the United States shall be entered at the several ports of entry upon payment of fifteen per centum of the duties which are required to be levied, collected, and paid upon like articles of merchandise imported from foreign countries; and in addition thereto upon articles of merchandise of Porto Rican manufacture coming into the United States and withdrawn for consumption or sale upon payment of a tax equal to the internal-revenue tax imposed in the United States upon the like articles of merchandise of domestic manufacture; such tax to be paid by internal-revenue stamp or stamps to be purchased and provided by the Commissioner of Internal Revenue and to be procured from the collector of internal revenue at or most convenient to the port of entry of said merchandise in the United States, and to be affixed under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe; and on all articles of merchandise of United States manufacture coming into Porto Rico in addition to the duty above provided upon payment of a tax equal in rate and amount to the internal-revenue tax imposed in Porto Rico upon the like articles of Porto Rican manufacture: Provided, That on and after the date when this Act shall take effect, all merchandise and articles, except coffee, not dutiable under the tariff laws of the United States, and all merchandise and articles entered in Porto Rico free of duty under orders heretofore made by the Secretary of War, shall be admitted into the several ports thereof, when imported from the United States, free of duty, all laws or parts of laws to the contrary notwithstanding; and whenever the legislative assembly of Porto Rico shall have enacted and put into operation a system of local taxation to meet the necessities of the government of Porto Rico, by this Act established, and shall by resolution duly passed so notify the President, he shall make proclamation thereof, and thereupon all tariff duties on merchandise and articles going into Porto Rico from the United States or coming into the United States from Porto Rico shall cease, and from and after such date all such merchandise and articles shall be entered at the several ports of entry free of duty; and in no event shall any duties be collected after the first day of March, nineteen hundred and two, on merchandise and articles going into Porto Rico from the United States or coming into the United States from Porto Rico.

"SEC. 4. That the duties and taxes collected in Porto Rico in pursuance of this Act, less the cost of collecting the same, and the gross amount of all collections of duties and taxes in the United States upon articles of merchandise coming from Porto Rico, shall not be covered into the general fund of the Treasury, but shall be held as a separate fund, and shall be placed at the disposal of the President to be used for the government and benefit of Porto Rico until the government of Porto Rico herein provided for shall have been organized, when all moneys theretofore collected under the provisions hereof, then unexpended, shall be transferred to the local treasury of Porto Rico, and the Secretary of the Treasury shall designate the several ports and sub-ports of entry in Porto Rico, and shall make such rules and regulations and appoint such agents as may be necessary to collect the duties and taxes authorized to be levied, collected, and paid in Porto Rico by the provisions of this Act, and he shall fix the compensation and provide for the payment thereof of all such officers, agents, and assistants as he may find it necessary to employ to carry out the provisions hereof: Provided, however, That as soon as a civil government for Porto Rico shall have been organized in accordance with the provisions of this Act and notice thereof shall have been given to the President he shall make proclamation thereof, and thereafter all collections of duties and taxes in Porto Rico under the provisions of this Act shall be paid into the treasury of Porto Rico, to be expended as required by law for the government and benefit thereof instead of being paid into the Treasury of the United States."

A. D. 1900 (April).—Act to provide temporarily for the civil government of the Island.—The fundamental provisions of the act of the Congress of the United States to provide temporarily for the civil government of Porto Rico, which the President approved April 12, 1900, are the following:

"SEC. 6. That the capital of Porto Rico shall be at the city of San Juan and the seat of government shall be maintained there.

"SEC. 7. That all inhabitants continuing to reside therein who were Spanish subjects on the eleventh day of April, eighteen hundred and ninety-nine, and then resided in Porto Rico, and their children born subsequent thereto, shall be deemed and held to be citizens of Porto Rico, and as such entitled to the protection of the United States, except such as shall have elected to preserve their allegiance to the Crown of Spain on or before the eleventh day of April, nineteen hundred, in accordance with the provisions of the treaty of peace between the United States and Spain entered into on the eleventh day of April, eighteen hundred and ninety-nine; and they, together with such citizens of the United States as may reside in Porto Rico, shall constitute a body politic under the name of The People of Porto Rico, with governmental powers as hereinafter conferred, and with power to sue and be sued as such.

"SEC. 8. That the laws and ordinances of Porto Rico now in force shall continue in full force and effect, except as altered, amended, or modified hereinafter, or as altered or modified by military orders and decrees in force when this Act shall take effect, and so far as the same are not inconsistent or in conflict with the statutory laws of the United States not locally inapplicable, or the provisions hereof, until altered, amended, or repealed by the legislative authority hereinafter provided for Porto Rico or by Act of Congress of the United States: Provided, That so much of the law which was in force at the time of cession, April eleventh, eighteen hundred and ninety-nine, forbidding the marriage of priests, ministers, or followers of any faith because of vows they may have taken, being paragraph four, article eighty-three, chapter three, civil code, and which was continued by the order of the secretary of justice of Porto Rico, dated March seventeenth, eighteen hundred and ninety-nine, and promulgated by Major-General Guy V. Henry, United States Volunteers, is hereby repealed and annulled, and all persons lawfully married in Porto Rico shall have all the rights and remedies conferred by law upon parties to either civil or religious marriages: And provided further, That paragraph one, article one hundred and five, section four, divorce, civil code, and paragraph two, section nineteen, of the order of the minister of justice of Porto Rico, dated March seventeenth, eighteen hundred and ninety-nine, and promulgated by Major-General Guy V. Henry, United States Volunteers, be, and the same hereby are, so amended as to read: 'Adultery on the part of either the husband or the wife.' . . .

"SEC. 14. That the statutory laws of the United States not locally inapplicable, except as hereinbefore or hereinafter otherwise provided, shall have the same force and effect in Porto Rico as in the United States, except the internal-revenue laws, which, in view of the provisions of section three, shall not have force and effect in Porto Rico.

"SEC. 15. That the legislative authority hereinafter provided shall have power by due enactment to amend, alter, modify, or repeal any law or ordinance, civil or criminal, continued in force by this Act, as it may from time to time see fit.

"SEC. 16. That all judicial process shall run in the name of 'United States of America, ss: the President of the United States,' and all criminal or penal prosecutions in the local courts shall be conducted in the name and by the authority of 'The People of Porto Rico'; and all officials authorized by this Act shall before entering upon the duties of their respective offices take an oath to support the Constitution of the United States and the laws of Porto Rico.

"SEC. 17. That the official title of the chief executive officer shall be 'The Governor of Porto Rico.' He shall be appointed by the President, by and with the advice and consent of the Senate; he shall hold his office for a term of four years and until his successor is chosen and qualified unless sooner removed by the President; he shall reside in Porto Rico during his official incumbency, and shall maintain his office at the seat of government; he may grant pardons and reprieves, and remit fines and forfeitures for offenses against the laws of Porto Rico, and respites for offenses against the laws of the United States, until the decision of the President can be ascertained; he shall commission all officers that he may be authorized to appoint, and may veto any legislation enacted, as hereinafter provided; he shall be the commander in chief of the militia, and shall at all times faithfully execute the laws, and he shall in that behalf have all the powers of governors of the Territories of the United States that are not locally inapplicable; and he shall annually, and at such other times as he may be required, make official report of the transactions of the government in Porto Rico, through the Secretary of State, to the President of the United States: Provided, That the President may, in his discretion, delegate and assign to him such executive duties and functions as may in pursuance with law be so delegated and assigned.

"SEC. 18. That there shall be appointed by the President, by and with the advice and consent of the Senate, for the period of four years, unless sooner removed by the President, a secretary, an attorney-general, a treasurer, an auditor, a commissioner of the interior, and a commissioner of education, each of whom shall reside in Porto Rico during his official incumbency and have the powers and duties hereinafter provided for them, respectively, and who, together with five other persons of good repute, to be also appointed by the President for a like term of four years, by and with the advice and consent of the Senate, shall constitute an executive council, at least five of whom shall be native inhabitants of Porto Rico, and, in addition to the legislative duties hereinafter imposed upon them as a body, shall exercise such powers and perform such duties as are hereinafter provided for them, respectively, and who shall have power to employ all necessary deputies and assistants for the proper discharge of their duties as such officials and as such executive council. . . .

"SEC. 27. That all local legislative powers hereby granted shall be vested in a legislative assembly which shall consist of two houses; one the executive council, as hereinbefore constituted, and the other a house of delegates, to consist of thirty-five members elected biennially by the qualified voters as hereinafter provided; and the two houses thus constituted shall be designated 'The legislative assembly of Porto Rico.'

"SEC. 28. That for the purposes of such elections Porto Rico shall be divided by the executive council into seven districts, composed of contiguous territory and as nearly equal as may be in population, and each district shall be entitled to five members of the house of delegates.

"SEC. 29. That the first election for delegates shall be held on such date and under such regulations as to ballots and voting as the executive council may prescribe. . . . At such elections all citizens of Porto Rico shall be allowed to vote who have been bona fide residents for one year and who possess the other qualifications of voters under the laws and military orders in force on the first day of March, 1900, subject to such modifications and additional qualifications and such regulations and restrictions as to registration as may be prescribed by the executive council. . . .

"SEC. 32. That the legislative authority herein provided shall extend to all matters of a legislative character not locally inapplicable, including power to create, consolidate, and reorganize the municipalities, so far as may be necessary, and to provide and repeal laws and ordinances there-

for; and also the power to alter, amend, modify, and repeal any and all laws and ordinances of every character now in force in Porto Rico, or any municipality or district thereof, not inconsistent with the provisions hereof: Provided, however, That all grants of franchises, rights, and privileges or concessions of a public or quasi-public nature shall be made by the executive council, with the approval of the governor, and all franchises granted in Porto Rico shall be reported to Congress, which hereby reserves the power to annul or modify the same.

"SEC. 33. That the judicial power shall be vested in the courts and tribunals of Porto Rico as already established and now in operation, including municipal courts. . . .

"SEC. 34. That Porto Rico shall constitute a judicial district to be called 'the district of Porto Rico.' The President, by and with the advice and consent of the Senate, shall appoint a district judge, a district attorney, and a marshal for said district, each for a term of four years, unless sooner removed by the President. The district court for said district shall be called the district court of the United States for Porto Rico.

"SEC. 35. That writs of error and appeals from the final decisions of the supreme court of Porto Rico and the district court of the United States shall be allowed and may be taken to the Supreme Court of the United States in the same manner and under the same regulations and in the same cases as from the supreme courts of the Territories of the United States. . . .

"SEC. 39. That the qualified voters of Porto Rico shall, on the first Tuesday after the first Monday of November, anno Domini nineteen hundred, and every two years thereafter, choose a resident commissioner to the United States, who shall be entitled to official recognition as such by all Departments, upon presentation to the Department of State of a certificate of election of the governor of Porto Rico, and who shall be entitled to a salary, payable monthly by the United States, at the rate of five thousand dollars per annum: Provided, That no person shall be eligible to such election who is not a bona fide citizen of Porto Rico, who is not thirty years of age, and who does not read and write the English language.

"SEC. 40. That a commission, to consist of three members, at least one of whom shall be a native citizen of Porto Rico, shall be appointed by the President, by and with the advice and consent of the Senate, to compile and revise the laws of Porto Rico; also the various codes of procedure and systems of municipal government now in force, and to frame and report such legislation as may be necessary to make a simple, harmonious, and economical government, establish justice and secure its prompt and efficient administration, inaugurate a general system of education and public instruction, provide buildings and funds therefor, equalize and simplify taxation and all the methods of raising revenue, and make all other provisions that may be necessary to secure and extend the benefits of a republican form of government to all the inhabitants of Porto Rico."

A. D. 1900 (May).—Organization of civil government.—Appointment of Governor Allen.—Under the Act to establish civil government in Porto Rico, Hon. Charles H. Allen, formerly a representative in Congress from Massachusetts, and lately Assistant-Secretary of the Navy, was appointed to the governorship of the island. Mr. J. H. Hollander, of Maryland, was appointed Treasurer, and Mr. John R. Garrison, of the District of Columbia, Auditor. Governor Allen was inducted into office with considerable ceremony, at San Juan, on the 1st of May.

A. D. 1900 (August—October).—First steps in the creation of a public school system.—"The report of M. G. Brumbaugh, commissioner of education, on education in Porto Rico, dated October 15, 1900, shows what has been accomplished in the short time that elapsed after the commissioner entered upon his duties on August 4, 1900. . . . The people want schools . . . and the pupils will attend them. In 1899, 616 schools were opened in Porto Rico. In 1900 the department will maintain at least 800 schools, an increase of 30 per cent, which will provide for nearly 9,000 additional pupils.

"In 1899 there were 67 Americans in the teaching force of the island. Since October 1, 1900, the number has increased to 100. The commissioner criticises one class of teachers who are 'seekers after novelty and new experiences, who imposed upon the administration and the children, and who used the salary and position of teacher solely to see a new country for a year and then return. . . . The people of Porto Rico have patiently borne with these adventurers, and quietly longed for their departure.' This class of teachers is now gone and the newly selected American teachers have some knowledge of Spanish and are graduates of universities, colleges, and normal schools in the States, and are for the most part young men and women of ability and discretion. The salaries of American teachers were fixed by law at $40 per month for nine months in cities of less than 5,000 population. In cities of larger population the salary was $50 per month for nine months and both are inadequate, although at the time the salaries were fixed the War Department provided free transportation from and to the United States. This transportation may now be withdrawn at any time, and the small inducement held out by the meager salary offered to teachers is not calculated to invite the best class of them to the island.

"The new normal and industrial school at Fajardo, which was to have been established by the joint efforts of the local municipality and the American Government, was only so far advanced that the land had been purchased by the end of September, 1900. The normal department was opened October 1, in a rented building, while the industrial department cannot be opened until suitable quarters are provided. The commissioner recommends that the United States make this place the site of an agricultural experiment station for which it is pre-eminently fitted. On account of the industries of the country—coffee, sugar, tobacco, and fruit—agriculture could be well studied here, and free boarding, lodging, and tuition would be given the students, who would be for the most part poor boys and girls.

"As to the school accommodation, the commissioner states that there are no public school buildings in Porto Rico. The schools are conducted in rented houses or rooms which are often unfit for the purpose, and the hygienic conditions are bad. There is a wide field, or rather a demand, for improvement in this direction, as well as in the school equipment and material.

In 1899, $33,000 was expended for school-books, and in 1900, $20,000 will be expended for books and supplies, which shall be free. In the United States 'free books' means usually their purchase by local boards and free use by the pupils. In Porto Rico the books and supplies will be free to the pupils without expense to the local boards. A pedagogical museum and library has been established for the benefit of teachers and others. About 300 volumes have been contributed to the library from friends in the States, and the Department will make the number up to 500 by purchase. A library of 5,000 volumes of standard Spanish and American literature was found in a building in San Juan, which has been installed in suitable rooms as a public library.

"Many of the leading institutions of the United States have responded cordially to the application of the Department of Education on behalf of young Porto Ricans who wish to prosecute their studies in colleges and universities. Some have offered free tuition, some have added free lodging, while others have offered even free living to all such students as wish to avail themselves of their instruction. Many young Porto Ricans have availed themselves of these generous offers.

"There are now 800 schools in Porto Rico, and 38,000 pupils attending them, while there are 300,000 children of school age for whom there are no accommodations. But the commissioner expresses the hope that gradually the great illiteracy in Porto Rico will be reduced, and the people prepared for the duties of citizenship in a democracy by means of the schools that shall be established. . . . The total expenditure for education in Porto Rico from the 1st of May to the end of September was $91,057.32."—*United States, Secretary of the Interior, Annual Report, Nov.* 28, 1900, *p.* 116.

A. D. 1900 (November—December).—The first election under U. S. law.—Meeting of the Legislative Assembly.—The first election in the Island under the provisions of the Act recited above occurred on the 6th of November simultaneously with the elections in the United States. It seems to have been almost entirely a one-sided vote. "About two weeks before election day," says a despatch from San Juan, November 7, "the Federal Party, which carried the island at the election of less than a year ago by a majority of 6,500 votes, suddenly withdrew from the electoral contest. The Federal leaders sent instruction to their followers not to appear at the polls, but the Federal Election Judges were instructed to appear and watch the proceedings until the elections were concluded in order to gather evidence of any unfairness in the registration and any irregularity in the voting. The Federal Party intends to institute court proceedings after the election in the hope of nullifying it, claiming that gross irregularities in the registration and voting will be shown, and alleging that the districting was not done according to law." Only about 200 Federals voted, it is stated, while some 60,000 votes were cast for the candidates of the Republicans. Governor Allen cabled the following announcement of the election to President McKinley: "I am gratified and delighted. The outcome in Porto Rico is a guarantee of the island's future. To bring people who had long been under different rules and conditions to their first general election, to have the election pass off as quietly and orderly as in any State of the North conducted by the people without let or hindrance, and without a soldier or armed force of any sort, and to have nearly 60,000 men march to the polls to deposit their first ballot for self-government in such a manner, are good reasons for congratulation, not only to the people of the island, but to the painstaking members of the Administration, who had worked diligently and patiently to this end. This overwhelming Republican victory also means legislation for the good of the island in line with the American Administration. It means stable government and the protection of property interests, with which prospective investors in Porto Rico are deeply concerned. It means education, public works, and all the beneficent works which follow legislation wisely and conscientiously undertaken. It is an emphatic declaration of unqualified loyalty to the United States."

The newly elected Legislative Assembly met and the House of Delegates was organized Dec. 3. A correspondent of the "New York Tribune," writing a week later, said: "Already nineteen bills have been introduced. To introduce nineteen bills in six days after organizing, as well as forming the regular committees, is not bad work when it is considered that not one of the members had the slightest idea of parliamentary procedure. During the session one of the members may be seen making frequent trips to the Executive Mansion, where he confers with Secretary Hunt in regard to some doubtful point. It is said by some that in a short time the lower house will be controlled entirely by the portfolio members of the Council. It is known that the five Porto Rican members of the Council, when considering the question of franchises, etc., often vote contrary to their own ideas in order that the Council may continue harmonious. But it is not likely that the heads of departments will be able to control the thirty-five members of the House. The House, although regularly elected, is not representative of the island; the Federals refraining from voting kept over half the natives from the polls. The Federal party, it is asserted, is made up of the richest and best element of Porto Rico. The Republicans, though in power, do not feel that they are able to run things alone, so the majority is willing to be dictated to by the Council. Nevertheless there is a certain element in the House which will not be dictated to. So soon as any really important bill comes up for debate it is predicted that the House will divide against itself. And a little later, when the House passes some pet bill and the Council rejects it, the House will probably resign in a body. It is a natural trait of the people."

After another fortnight had passed, the same correspondent wrote very discouragingly of the disposition shown by a majority of the members of the House of Delegates, and their conduct of business, and stated: "The popular opinion among the Americans, even among some of the higher officials, is that if the House continues as it is Congress will abolish it altogether, and govern the island through a Governor and Cabinet. Such irregular procedure has been followed that it is a question here whether any business has been legally done."

A. D. 1901 (January).—Close of the first session of the Legislative Assembly.—The first session of the first Legislative Assembly of

the island came to a close on the 31st of January, 1901, and the following remarks on its work were made in a newspaper despatch of that date from San Juan: "Over one hundred bills have been introduced in the House of Delegates, and dozens have been passed by both houses, and are awaiting the Governor's approval. . . . Committees have a hard day's work if they get together and agree to pass the bills on hand before midnight to-night. Ever since the House of Delegates resumed business after the new year, eight or nine members have been continually absent. There are only thirty-five members altogether, and the island is small, yet twenty-six has been the average attendance. A full attendance for even one day is not recorded. It was predicted that a number of the members would resign; they did not. They simply remained away, like truant schoolboys. A bill has been passed providing for the education of certain young Porto Rican men and women in the United States, about two hundred of them having petitioned the House of Delegates to be sent north at the island's expense. It is not known on what ground these petitions have been made. The island expends about $400,000 yearly on education, and excellent educational facilities are offered. But the people, in a way, seem to discredit the value of the opportunities at hand."

A. D. 1901 (April).—Distress of the workingmen of the Island.—Their appeal to the President of the United States.—The following petition, signed by 6,000 of the workingmen of Porto Rico, was brought to the United States by a delegate from the Federation of Labor in Porto Rico and presented to President McKinley on the 15th of April: "The undersigned, workers of Porto Rico, without distinction of color, political or religious creed, have the honor to bring to your attention the following facts: Misery, with all its horrible consequences, is spreading in our homes with wonderful rapidity. It has already reached such an extreme that many workers are starving to death while others, that have not the courage to see their mothers, wives, sisters and children perish of hunger, commit suicide by drowning themselves in the rivers or hanging themselves from branches of trees. All this, honorable sir, is due to the scarcity of work, which keeps us in enforced idleness, the mother of our misery. Our beautiful estates are idle; our lands are not being cultivated; our shops remain closed; and our Chambers do absolutely nothing to prevent our misery on this once so rich an island. The Government and municipality do not undertake any public works to keep us out of idleness. The emigration of workers, unknown in this island before, increases day by day, in proportion as misery increases. Under these trying conditions we are no longer a happy and contented people. We therefore, beg of you, honorable sir, to interest yourself in our cause, leading us, as the father of our country, in the path that will bring us work, and with it the means of subsistence. We want work; nothing but work. We want to earn the means of subsistence by the sweat of our brows; and nobody better than our Chief Magistrate can help us by lending ear to our appeals."

A. D. 1898.—Alleged Treaty with Great Britain.—There is said to be knowledge in diplomatic circles of a treaty between Great Britain and Portugal, concluded in 1898, which has never been made public, but which is understood to engage the former to assist the latter financially and to protect the kingdom as against dangers both external and internal. In return it is believed that England received the right to embark and disembark troops, stores and ammunitions at any point on Portuguese territory in Africa, to keep them there, or to convey them across Portuguese territory to any point she might see fit, irrespective as to whether she was at war with any third Power. Circumstances have given some support to this rumor, but it has no positive confirmation.

RAILWAY, The Anatolian.—Extension to the Persian Gulf. See (in this vol.) TURKEY: A. D. 1899 (NOVEMBER).

RAILWAY, Cape to Cairo.—"A line now [1899] runs northward from Cape Town to Bulawayo, in Rhodesia, a distance of 1,360 miles, and is being pushed still farther northward. From Bulawayo to Lake Tanganyika is about 1,000 miles; and this Mr. Rhodes hopes to reach by 1905. Lake Tanganyika is 410 miles long; and it is likely that its waters will be utilized for a time at least for transferring northwardly the freights and passengers reaching its southern end. Meantime the railroad from Cairo is being pushed southwardly to meet the line which is coming from the Cape northwardly. It has already been constructed to Atbara, where American contractors have just finished the steel bridge in a time which British bridge-builders considered impossible; and the line is being pushed forward to Khartoum from that point. Khartoum is 1,300 miles from Cairo; so that when work on the section from Atbara to Khartoum is completed, as it will be within a few months, the two gaps to be filled in will be from Khartoum to the north end of Lake Tanganyika, a distance of 1,700 miles, and the 950 miles from the south end of Lake Tanganyika to Bulawayo; i. e., 2,700 miles in all. Thus, of the necessary land length, assuming that at least the 410 miles length of Lake Tanganyika will be at first utilized, about one-half will be finished on the completion of the section from Atbara to Khartoum, within the next few months. The remaining 2,700 miles will, it is estimated, cost $60,000,000; and Mr. Rhodes confidently predicts its completion before the year 1910."—O. P. Austin, *Africa: Present and Future* (*Forum, Dec.*, 1899).—See, also (in this vol.), AFRICA: A. D. 1899.

Of course, the plans and calculations of Mr. Cecil Rhodes have been seriously interfered with by the South African War. He may have anticipated the war, but not the length nor the effects of it.

RAILWAY, Haifa to Damascus and Bagdad. See (in this vol.) JEWS: A. D. 1899.

RAILWAY, The Intercontinental, or "Three Americas."—"One of the important results of the International American Conference, held in Washington in 1889–90, was its recommendation that an International Commission be created to ascertain the feasibility, the cost, and the available location for a railroad connecting the countries of South and Central America with Mexico and the United States. This recommendation was cordially indorsed by Secretary Blaine in submitting the report to President Harrison, who transmitted it to Congress, asking that an appropriation be made to commence the surveys. In the same act which authorized the establishment of the Bureau of the American

Republics—the Diplomatic and Consular Appropriation Act of July 14, 1890—the Intercontinental Railway Commission was created. In this act it was provided that three Commissioners on the part of the United States should be appointed by the President, with the advice and consent of the Senate, who were to act with representatives of the other American Republics to devise plans for carrying out the objects recommended by the International American Conference. The Commission organized December 4, 1890, and at once set about the equipping of the surveying parties to make the necessary topographical examination. The United States representatives on the Commission were practical railroad men—A. J. Cassatt, Henry G. Davis, and R. C. Kerens, and eleven other Republics were represented on the Commission. The report just issued [March, 1899] is in four volumes, with four sets of maps and profiles, exhibiting the surveys and examination of the country that were made from Mexico through Central America to Colombia, Ecuador, and Peru, in South America. In addition to the personal observations in South America, the officers making the reports also gathered from the best obtainable sources geographical, railroad, and other information relating to Bolivia, Argentina, Brazil, Paraguay, Uruguay, Chile, and Venezuela. The report gives the proposed distances as follows: Central American division, from Ayutla, Guatemala, on the Mexican border, to Rio Golfito, Colombia, 1,043 miles; from Rio Golfito to Buenos Aires, Argentina, 5,446.76 miles; through the United States from New York to Laredo, Tex., 2,094 miles; and from that point, through Mexico to Ayutla, Guatemala, 1,644.3 miles; making a total of 10,228.06 miles, including the lines already in operation in the different countries. The extent of railway to be constructed is a little over one-half the total, being 5,456.13 miles. An estimate is given of the cost for grading, masonry, and bridges of that portion of the line which must be constructed to complete the connections, which amounts to $174,290,271.84." —*Bureau of American Republics, Bulletin, March,* 1899.

As now surveyed, from New York City to Buenos Ayres, it will be 10,221 miles long, and to finish and equip it will cost at least $200,000,000. This length and cost will also be increased when the line is extended through Patagonia to the southern limits of South America. The complete surveys . . . prove that a practicable route can be found and the road built within a reasonable time. The route of this road can be traced on the map, while the following table shows the distances, the miles built, and the gaps to be filled:

	Built.	Proposed.	Total.
United States	2,094	.....	2,094
Mexico	1,183	461	1,644
Total North America	3,277	461	3,738
Guatemala	43	126	169
San Salvador	64	166	230
Honduras	.....	71	71
Nicaragua	103	106	209
Costa Rica	.....	360	360
Total Central America	210	829	1,039
Colombia	.....	1,354	1,354
Ecuador	.....	658	658
Peru	151	1,633	1,784
Bolivia	195	392	587
Argentina	936	125	1,061
Total South America	1,282	4,769	5,444
Grand total	4,769	5,452	10,221

"The demands of trade may compel early construction of this railroad. It is doubtful if a remunerative commerce can be built up between North and South America by ship. The conformation of the eastern coast of South America compels a long detour to the east, and brings a ship almost as near to the ports of Europe as to the ports of the United States. The exports of South America, being mainly agricultural, will find a readier sale in Europe than in this country, and when they are exchanged for the cheap manufactured goods of that continent the conditions for trade are supplied. If, for these reasons, this country can not build up a commerce with South America by water, a quicker means of transit must be had, such as the Pan-American Railway would provide. The obstacles to be overcome are great. They surpass the difficulties in the way of the Siberian or the 'Cape to Cairo' road, but the results will be correspondingly greater.

"South America has greater undeveloped resources than any other continent. Its agricultural possibilities are boundless. It has the greatest rivers in the world; its soil can produce any crop grown on the earth, and its mines of gold, silver, and coal have been scarcely touched. A railroad which would traverse the coffee lands of the Central American States, pass through the mines of Peru, and penetrate the rich pampas of Brazil and Argentina, must have great possibilities before it. The products of the three great valleys of the Orinoco, the Amazon, and the Paraguay rivers would find a market by means of it, and the riches of the mines of the Incas be shown to surpass those of California and South Africa." —*Bureau of American Republics, Bulletin, Dec.,* 1899.

A. D. 1896 (May—June).—Coronation of the Tzar.—The Tzar Nicholas II., who succeeded his father, Alexander III., on the death of the latter, November 1, 1894, was not formally crowned until May 26, 1896. The splendid festivities of the occasion lasted from May 18 until June, and were attended by a brilliant assembly of princes and high officials from all parts of the world. They were saddened by a frightful calamity on the 31st of May, when an attempt was made to distribute gifts of food and drink to a vast multitude of nearly half a million people, on Khodynskoye plain. Adequate measures for controlling the pressure of the crowd had not been taken, and nearly 3,000 were suffocated or trampled to death.

A. D. 1897.—Relaxations of oppressive laws.—Several important relaxations of oppressive laws were commanded by the Tzar in the course of the year. By one, sons of the marriage of an orthodox Russian with one of another creed were allowed to be brought up in the religion of the father and daughters in that of the mother. By another, Jews having an university education were allowed freedom of residence in any part of the empire. By others, greater freedom was given to the Polish press, formerly forbidden to discuss political questions; local assemblies of Polish nobles were organized; permission was given to restore Roman Catholic churches in Poland, and certain special Polish taxes were removed.

A. D. 1897 (February).—Census of the Empire.—"For the first time in the history of the Hyperborean Empire, a general, and if I may use the expression, scientific, census has been taken of the various tongues and tribes, religions and sects, cultured races and nomadic hordes who acknowledge the sway of the Tsar. It was a Herculean labour, without precedent in history and without a formula in statistics. . . . On June 5, 1895, the reigning Tsar gave his sanction to a scheme which was both conformable to the exigencies of modern statistics and suitable to the various conditions peculiar to Russia. . . . The general plan of operations was simple, and calculated as far as possible to impose a large portion of the task upon officials of the Administration, and obviate the necessity of paying for it. Thus there was a Committee in every Government or Province of the Empire, presided over by the actual Governor; and there were sub-committees in every district under the direction of the Marshal of the Nobility. . . . The task undertaken by the Central Committee was in the highest degree formidable: rooted prejudices had to be overcome, inarticulate suspicions removed—the half-civilised nomads have an insuperable dislike to answer questions of the 'Tshinovniks'—the confidence of the people gained, languages mastered, routes studied, badges prepared for the officials, millions upon millions of census papers printed and distributed over the length and breadth of the Empire, &c. &c. . . .

"In order that the work might be finished as early as possible at the same time, the cantonal sections were split up into divisions, which had to be more or less equal. In country places the division was not usually allowed to exceed 400 households, or say, 2,000 souls; in cities 150 flats, or about 750 souls. The registrars, who were answerable for the census in these districts, were chosen from all classes of society, the only condition being that they must be persons of some education, and calculated to inspire the population with confidence—a very important consideration in Russia. Thus, there were priests, officers, school-teachers, students, merchants, landowners, and in some cases peasants. The remuneration fixed for the work, which was sometimes attended with danger and in almost every case with very disagreeable experiences, was 12 roubles, or about £1 4s. 6d., in rural districts,

and 7 roubles in towns. Labour is still cheap in Russia, but even there this modest sum was found insufficient to tempt the competent persons, who in out-of-the-way districts were few and far between. When this had become painfully evident, it was too late to set the clumsy machinery in motion through which alone it might have been possible to obtain a higher rate of remuneration. As the registrars were, in many places, not to be had, it seemed likely that the census would prove a lamentable failure. Then the Tsar appeared as a 'deus ex machinâ,' and instituted a special medal for all those who should agree to undertake the work gratis. Like most Continental peoples, Russians have a hankering after 'ribbons to stick in their coats,' and the moment the medal was promised for gratuitous services there was no lack of willing workmen. Thousands of volunteers presented themselves, and the authorities selected the most competent. . . . On January 28 [Old Style, being, N. S. February 9, 1897], . . . at break of day an army of 150,000 individuals left their homes to count the number of people inhabiting an empire which occupies one-sixth of the globe. . . .

"The first Russian census . . . may be considered to have proved a brilliant success. The results may be summed up very briefly as follows: The population of the Russian Empire and the Grand Duchy of Finland numbers 129,211,114 souls, of whom

94,188,750	inhabit the 50 Governments of European Russia
9,442,590	inhabit the 10 Governments of Poland
9,723,553	inhabit the 11 Governments of the Caucasus
5,731,732	inhabit the 9 Governments of Siberia
3,415,174	inhabit the 5 Governments of the Steppe regions
4,175,101	inhabit the Provinces of Transcaspia and of Turkestan
6,413	inhabit Khiva and Boukhara
2,527,801	inhabit Finland
129,211,114	

"Compared with the figures of former years, as given by the partial official returns and in the tables of the statistician Köppen, we find that the population has increased since the year 1851 by 96·2 per cent; since 1858 by 73·2 per cent; since 1885 by 18·1 per cent. The average density of the population is 8·8 persons to the square verst [the verst equalling 1166.66 yards], but it naturally varies a good deal in the different districts and Provinces. Thus, in the 10 Governments of Poland it amounts to 84.6 to the sq. verst. In the 50 Governments of European Russia it amounts to 22·2 to the sq. verst. In the Governments of the Caucasus it amounts to 23·6 to the sq. verst. In Siberia it amounts to 0·5 to the sq. verst. In the Steppe region it amounts to 1·6 to the sq. verst.

"Even in the different Governments of European Russia the density varies considerably. . . .

"There are 19 cities in Russia, with a population of more than 100,000 souls each, and 35 which have from 50,000 to 100,000. In fifteen cities the number of females exceeds that of the males, whereas in all the others it is smaller. . . . The natural increase of the population is kept down to a relatively low figure by an abnormally large death-rate, which is mainly due to avoidable causes. Infectious diseases and insufficiency of medical help are among the most obvious. . . . In no country in the world are infectious diseases so frequently mortal as in Russia. Children especially suffer, and diphtheria, measles, scarlatina, smallpox, &c., literally decimate villages and country towns. It has been stated by the statistician Ekk, with the help of official figures, that about 1,900,000 persons, chiefly children, die every year who might, with a little care, be preserved to the Empire. The difference which this loss makes to the population in fifty years is enormous."—E. J. Dillon, *The First Russian Census* (*Contemporary Review, Dec.*, 1897).

A. D. 1899.—Famine.—A fearful famine in eastern Russia, within and beyond the valley of the Volga, was caused in 1899 by an almost unprecedented failure of crops. With the famine came typhus fever, and the tale of suffering and death was one of the most heart-rending of the century.

A. D. 1899 (February—June.)—Disorder among the students.—For some months, the universities and most of the higher schools of Russia were in a state of disorder, and in conflict with the police authorities. Many of the institutions were closed and a great number of the students were under arrest. The students complained of the statutes of the universities, and of the general treatment to which they were subjected, and were bitterly hostile to the police. The Tzar seems to have given personal attention to their grievances, which he appointed a commission to investigate. On the report of the commission he issued an imperial order severely censuring the administration of the universities, and also reproving the police, while, at the same time, he addressed some serious admonitions to the students.

ests in China. See (in this vol.) CHINA: A. D. 1899 (MARCH—APRIL).

A. D. 1899 (May).—Steps toward the abolition of transportation to Siberia.—On the 18th of May, the Tzar issued the following order: "A commission of the officers of the ministry of justice and representatives of the respective departments under the auspices of the minister of justice shall be formed. The commission is to work out the following: To replace transportation of criminals by punishment by courts; to abolish or limit administrative transportation by peasant boards; to reorganize penal servitude and the deportation which follows; to better the condition of the convicts now in Siberia; to improve prisons where criminals are confined awaiting transportation and deportation; to establish compulsory public labor and workhouses as penal measures; to provide means for carrying out the measures necessary for the reorganization of the transportation of criminals and of penal establishments. The minister of justice is to ask direct, and not through any department, for the imperial sanction of the committee's recommendations." The British Commercial Agent in Russia, reporting to the Foreign Office in June, 1900, stated in allusion to the above order: "The State Council is reported to have just decided, by a majority of votes, to introduce at once the necessary changes, as the Central Prisons Administration has declared that the gaol accommodation is sufficient. The number of exiles to Siberia from 1823 to 1898 is given as 908,266, mostly to Eastern Siberia."

A. D. 1900-1901.—Student outbreaks.—Serious demonstrations of discontent.—Severe measures of repression.—Action of the Tzar.—A fresh outbreak of revolt among the students in the Russian universities, more serious in its nature, apparently, than that of 1899 (see above: A. D. 1899, FEBRUARY—JUNE), was started at Kieff, in December, 1900, by a remonstrance on the part of the students against the retention of a professor whom they deemed incompetent. The rector of the university refused to dismiss the objectionable professor; whereupon the governor-general of the province intervened and forbade him to lecture. The rector and the council of the university could not resist the authority of the governor-general, but they are said to have revenged themselves on the students by requiring seven of the latter to choose between three days of imprisonment and three years of expulsion from the university. They chose the latter and were expelled. Then the students as a body began to be troublesome, especially after the rector had refused to meet them for a discussion of their grievances. Finally the police and the military authorities were called in; a large number of the students were arrested and brought to trial before a special court which had been created for dealing with the student troubles of the year before. According to subsequent reports, more than two hundred of them were condemned to be sent into the ranks of the army—which seems to be a punishment newly devised for such cases, and not likely to improve the loyal spirit of the army.

This hard treatment of the students at Kieff inflamed their sympathetic fellows in all the universities of the empire, and became the immediate cause of disorderly demonstrations, which began, in January or early in February, to be made at St. Petersburg, Moscow, Odessa, and elsewhere; but there cannot be a doubt that the disturbances since occurring represent an instigation deeper, more revolutionary, more serious, than the resentment of students misused by their teachers. The students persisted resolutely in attempts to hold meetings which were prohibited as seditious; to make appeals to the people; to circulate forbidden literature; while the authorities struck them, at every movement they made, with a relentless hand. As usual, the oppressive violence of government provoked desperate crime. On the 27th of February, the Minister of Public Instruction, Privy Councillor Bogoliepoff, was shot by an expelled student, who approached him, in his official apartments, under pretense of presenting a petition. He died of the wound on the 15th of March. Meantime, the conduct of students, at St. Petersburg and Moscow especially, became more and more riotous and revolutionary in spirit. There were signs, too, of an understanding between them and the discontented workingmen of the cities, which caused anxiety. A Vienna journal claims to have knowledge that, after the troubles at Kieff, a widespread movement of alliance between secret associations of students and workmen was set on foot, and that it threatened to be the most formidable revolutionary organization that the government had yet faced.

That the sympathy of literary circles in Russia is with the students appears to be proved by the following manifesto, which was published in Paris on the 22d of March, signed, it is said, by forty-five Russian men of letters: "We, the undersigned Russian men of letters, deprived of the possibility of freely expressing our ideas on the needs of our poor Fatherland, prevented by the censorship from speaking of what happens before our eyes or indicating an outlet from the terrible situation of our country, and conscious of our duty towards the people, resort to our foreign brethren for the purpose of informing the civilized world of the atrocities now being committed among us. On March 17, in the Kazan Square at St. Petersburg, the police fell on an inoffensive and unarmed crowd of several thousand persons, men, women, and children, and without any provocation showed unexampled brutality and ferocity. Cossacks, surrounding the crowd and preventing it from dispersing, charged without warning the compact mass,

RUSSIA, 1900–1901.

which had mostly been drawn together by curiosity. The police seized at random the people who fell into their hands, striking them without mercy with their fists or swords. Those of the public, even officers in uniform, who begged for a cessation of the carnage, were maltreated or even arrested. Such are the facts of which several of us have been eye-witnesses. Similar atrocities have recently been committed in other Russian towns. Full of terror and anguish at the future in store for our country, thus given up to the whips of Cossacks and the swords of the police, convinced that our indignation is shared by those of our Russian brethren whose signatures we have not had time to obtain, by all the intellectual society of Russia, and by all those from whom feelings of self-respect and humanity have not yet been eradicated, convinced also that our foreign brethren will not remain indifferent to what passes among us, we appeal to the Press of the world to give the utmost publicity to the attestation of the lamentable facts of which we have been witnesses." A despatch from St. Petersburg on the 26th reported that the Mutual Aid Association of Russian writers attached to the St. Petersburg Literary Society, from which this protest emanated, had been suppressed, as the consequence of its publication.

A more significant expression, and one from which a more definite idea of the nature and causes of the discontent among the students may be obtained, is the following petition, addressed to the Tzar by a number of Russian professors and Senators in March. The St. Petersburg correspondent of the "London Times," who sent a translation of the paper to that journal on the 18th of March, remarked that "it is very doubtful if it will have any real effect, and its contents may very possibly be regarded by the red-tape officials into whose hands it may fall, if not by the Emperor himself, as implying a request for something like a Constitution. Apart from that consideration a collective petition in Russia is illegal." The translation of the document is as follows:—"Your Imperial Majesty,—We, the undersigned loyal subjects, consider it our patriotic duty to address you, Sire, with the present humble petition on the subject of the recent agitation among the students. We desire to express in this paper the thoughts that have long been a matter of painful reflection to every Russian conscious of the life which he is living. This perturbation among the students, which has been of periodical recurrence for the last 40 years, has ruined the careers of thousands of young men and women animated by the most ardent aspirations for the good and happiness of their native country. It would undoubtedly be most unjust to lay all the blame for these disorders on the students themselves. The causes of this state of things lie much deeper. They are connected with many of the general conditions of the life of our State and society; they are to a great extent rooted in the want of organization of academical centres. This want of organization was explained by the special commission appointed by your Majesty's command two years ago. But the labours of that body failed to have the practical result which was apparently expected of it; public opinion was not permitted to take part in its deliberations, either by means of the Press or in any other way. The matter was treated according to the usual official routine, and in the Ministry of Public Instruction the magnanimous intentions of your Majesty were not only rendered colourless, but deprived of all their real significance. Instead of properly carrying out your Majesty's indications in regard to closer communion between the students and professors of the higher educational establishments, the Ministry dismissed those among the latter whose moral qualities and devotion to duty were calculated to exercise the most beneficial influence over their scholars.

"Those among the students who took part in the disturbances, and who should have been worked upon by moral persuasion, were expelled from the Universities, and the force of inspectors, otherwise the University police, was increased for the purpose of controlling those who remained. The temporary law of June 29, 1899, against further disorders threatened the agitators with the punishment of being drafted into the ranks of the army. This measure, which has now been enforced, will, of course, put down the movement at least for a time; but it is impossible to ignore its moral effect. It only represses, but does not thoroughly convince. By this means the more hot-headed among the students, inspired by the most respectable aspirations and feelings, will be weeded out of the scholastic ranks, and their parents will be suddenly deprived of all hope and consolation in their children perhaps for years; while on the rest this measure can only have the effect which is always produced by terror and fear for the future. It oppresses them, extinguishes their best impulses, and tends to bring the weaker ones beneath the influence of those petty egotistical motives which are already so powerful in our daily life. To bring up an entire generation in such conditions is to create and support an oppressive state of things in the life of the nation which must finally lead to downfall and decay.

"The oppressiveness of this environment is felt not only by the young, but also by their elders. Is it normal that in an autocratic State the voice of loyal subjects should be unable to reach their Sovereign? And yet at the present moment many persons regard the signature of this loyal petition as almost an act of the greatest civil courage. In order to loyally and honestly bring their wants and traditional desires to the notice of their Monarch (Lord), the subjects of your Majesty are obliged to act in the dark for fear that the police will seize hold on the petition and intercept it before it can reach your Majesty's hands. Many who fully agree with all that is here expressed will certainly be deterred from signing the petition because of the unpleasant consequences to themselves which they fear may follow. In such conditions life becomes intolerable. A deadening apathy spreads over every one, all interest in public activity is lost, and in all spheres of the Government and society there is a decided feeling of the want of men. Put an end, Sire, by your magnanimous initiative to this oppressive situation! Show confidence in your faithful subjects, and, while discontinuing repression, accord us the possibility of freely expressing the voice of public opinion, which is now stifled. The agitation among the students will cease of itself, and the young men will quietly turn to their studies as soon as their youthful minds are no longer excited by the disagreeable conditions which surround them,

when they see the prospect on finishing their education of being allowed to take a free and useful part in the affairs of their native land."

An attempt on the life of a Minister far more important and more obnoxious than M. Bogoliepoff was made on the 22d of March. This was M. Pobiedonostzeff, Procurator of the Holy Synod, who has long been credited with being the master-spirit of evil influence in Russian councils,—a Torquemada of the nineteenth century, responsible for all the mediævalism in Russian policy for the past twenty years. Three shots were fired at the Procurator from the street, through the windows of his study, and he was missed by them all. The would-be assassin, named Lagofsky, was promptly seized, and it is claimed to have been found that he was chosen by lot to execute an avenging decree. On the other hand, it is reported that he was moved to the deed by the excommunication of Count Tolstoi, which the Russian Church had lately pronounced.

If reports are to be credited, the Tzar, at length, took the direction of measures relating to the disturbances into his own hands, and began by putting a stop to the forcing of condemned students into the army. He then appointed to the Ministry of Public Education General Vannovsky, who had investigated the student disorders of 1899 for him, and who seems to have recognized that the disaffection of the students was not without grounds. It is rumored that unlimited powers for two years have been given to the new Minister, so that he cannot be interfered with by the powerful reactionaries who evidently stand between the best intentions of the Tzar and their execution. The obvious difficulty of the autocrat is to learn the truth of things and to know what is being done by those who ostensibly obey his commands. Apparently he is striving to be served faithfully and intelligently in this case, and it is to be hoped that he may have success. He addressed a rescript to General Vannovsky, in which he said: "The regular organization of popular education has always formed one of the chief cares of the Russian rulers, who have striven, surely but gradually, to perfect it in accordance with the fundamental principles of Russian life and the requirements of the times. The experiences of recent years, however, have shown the existence of defects so material in our scholastic system that I think that the time has come to undertake an immediate and thorough revision and improvement. Highly valuing your experience as a statesman and your enlightenment, I have chosen you to co-operate with me in the work of renovating and reorganizing Russian schools; and, in appointing you to the now specially important office of Minister of Public Instruction, I am firmly convinced that you will unswervingly endeavour to attain the goal indicated by me, and that you will bring into the work of educating the Russian youth your cordial sympathy and sagacity ripened by experience. May God bless our work, and may parents and families, who above all are bound to care for their children, help us in our work, and then the time will soon come when I with all my people shall see in the young generation, with pride and encouragement, the firm and sure hope of the Fatherland and its strong protection for the future."

The Russian "Official Messenger," St. Petersburg, announced on the 14th of April that "in consequence of the recent student disturbances many of the high schools were closed before the Easter holidays, and the young men were compelled either to lose a year of their studies or even to leave the college altogether. In view of the serious consequences which this measure involved for the career of the students, a special conference of the principals of the higher colleges was called to deliberate, under the presidency of the Minister of Public Instruction, upon the situation thus created. The conference decided that the following measures were indispensably necessary for the re-establishment of the regular course of study at the institutions concerned:—1. Lectures to be renewed in the higher colleges in the course of April and intermediate examinations under the direction of the scholastic authorities to be held under the usual regulations at the customary intervals. 2. The lectures and examinations to be continued during the summer vacation, should they not have been completed during the preceding term. 3. All those who without sufficient reason did not attend the examinations or failed to pass them to be liable to all the legal consequences thereof. 4. In particularly important cases autumn and supplementary examinations to be permitted in the higher schools exceptionally this year."

According to a later despatch from St. Petersburg to the Associated Press, April 23d, the students of the university at the capital were informed that day by the rector that "Gen. Vannoffsky, the Russian Minister of Public Instruction, had refused to defer the examinations until autumn or make further concessions to the students. Although the popular professor, M. Petrozicky, pleaded against an action which would make it difficult for a liberal minister to carry through his benevolent intentions, the students decided by a vote of 684 to 649 against participating in the examinations. They resolved, however, not to create obstruction and the minority agreed to submit to the will of the majority. The electro-technical, the civil engineering, the women's medical and the women's academic institutions also will decide against taking the examinations. The sincere friends of the students regret the step in this respect, believing the students should allow the recall of the absentees to come as an act of grace from the Government and should not attempt to force concessions."

A. D. 1901 (April).—Expulsion of Count Tolstoi.—His reply to the decree of excommunication.—A reply by Count Tolstoi to the decree of excommunication pronounced against him by the Russian Church, some weeks before, written at Moscow on the 13th of April, was published in Paris on the 30th. As reported to the Associated Press, he states in his reply that, in consequence of the decree, he has received letters from ignorant people menacing him with death. "He characterizes the decree as illegal or inten-

tionally equivocal, arbitrary, unjustified and full of falsehoods. Moreover, he says, it constitutes an instigation to evil sentiments and deeds. Count Tolstoi denounces the practices of the church, and says he is convinced that the teaching of the church, theoretically astute, is injurious, is a lie in practice and is a compound of vulgar superstitions and sorcery, under which entirely disappears the sense of Christian doctrine."

By Press despatch from Vienna, April 23, it was reported that a decree expelling Count Tolstoi from Russia had been signed by the Tzar, and carried into execution.

RUSSIA IN ASIA: A. D. 1891-1900.—The Trans-Siberian Railway.—Resources of Siberia and the Amur country.—The following account was reported to the British Foreign Office in June, 1900: "For over 30 years the question of constructing this line had been a theme of interminable discussions and reports. Finally, the following unmistakeably emphatic note of its Imperial founder, the Emperor Alexander III., appended to a report on the general condition of Siberia, moved the whole project definitely forward as a thing that was to be and at once: 'How many of these reports of the Governors-General of Siberia have I perused, and with sorrow and shame must own that the Government has hitherto hardly done anything to satisfy the demands of this rich but neglected region! It is time, indeed time!' A further equally emphatic and still briefer note, added to a report of the Minister of Ways with regard to the projected Ussuri route, is to form the appropriate inscription to the monument to be erected at Vladivostock, the terminus of his great work, to his late Imperial Majesty: 'The construction of this railway must be begun forthwith.' The first stone was laid at Vladivostock on May 19, 1891, by the then Grand Duke Nicholas, now the reigning Emperor. . . . A Siberian railway committee was formed under the presidency of the then Grand Duke Nicholas Alexandrovich, whose duties were (1) to construct the main and necessary feeding lines; (2) to take measures for the general commercial and industrial development of Siberia; and (3) to direct and control the colonisation movement.

"Taking the direction of the route, not as it was to have been, but as it is or will be, we see that with Moscow as the European centre point, and the Moscow-Samara-Cheliabinsk line as its principal feeder, the main road runs from Cheliabinsk, whence it really starts eastward, direct through mid-Siberia to Lake Baikal, and thence, viâ Chita, to Stretensk on the Shilka, a navigable tributary of the Amur. At present, the projected course of the railway viâ the Amur has been arrested, owing on the one hand to various technical difficulties, and on the other to the facilities, political and otherwise, conceded by China, and another direction, in the nature of a short cut through Manchuria, has been entered upon. The well-known agreement with China [see, in this vol., CHINA: A. D. 1895] and the formation of the Chinese Eastern Railway Company, rendering the original continuation of the line from Stretensk less urgent, it has been resolved, instead, to construct two direct lines to the Chinese frontiers, from Kaidalovo on the main Siberian route on the one side, and from the Ussuri or Habarovsk-Vladivostock line on the other. These two lines, traversing Manchuria from opposite directions, are to meet at Khulan-Chan (Khaorbin), thence running southwards to Dalni and Port Arthur. Thus, we see the three lines, the main Siberian road, which, except for the brief stoppage at Lake Baikal, will run in a practically straight and uninterrupted course from Cheliabinsk to Vladivostock; the Ussuri line running northward through Russian territory from Vladivostock to Habarovsk; and the branch section from Khulan-Chan (Khaorbin), on the main line, striking out southward through Eastern China to Dalni and Port Arthur.

"As far as Russia is concerned, it may be said that her portion of the work is practically ready, though much re-laying and reconstruction may at any time be necessary. The main line is open for regular traffic from Cheliabinsk to Lake Baikal, and for provisional traffic to Stretensk. According to the latest telegrams, regular traffic from Lake Baikal to Stretensk is to be commenced on July 1/14, 1900. Thus, there is now a direct run (excepting only the lake crossing of 60 versts (about 40 miles), from Moscow, viâ Samara, Cheliabinsk, Omsk, and Irkutch, to Kaidalovo (252 versts—168 miles—this side of Stretensk), whence the rail will turn off to Nagodan on the Chinese frontier. This latter stretch, a distance of 325 versts (216 miles), will complete the work as regards Russia. The Ussuri line, from Habarovsk to Vladivostock, has been open for traffic since 1897. The Circum-Baikal connecting line, round the southern bend of the lake, a distance of 292 versts (195 miles), remains to be laid, the lake being crossed at present by steam ferries or ice-breakers. A new ice-breaker, built in England, is now on its way in pieces to Lake Baikal. It is the Manchurian sections, therefore, that at present retard the consummation of the complete overland track to Vladivostock. Nor, from recent accounts, does it seem likely that the Chinese engaged in the work will bring it to a conclusion much before 1902, if then. Even now, however, goods can make their way through Siberia to Stretensk by rail, and thence down the Shilka and the Amur to Habarovsk, or further on, by the Ussuri line, to Vladivostock. As regards the railroad from Port Arthur northward, the latest news brings it to Telin, north of Mukden, trains with workmen running this distance, some 500 versts. The Chinese Eastern Railway Company promise to join Port Arthur to Vladivostock by October next, it is said, but, even on the route already temporarily in rough working order, dwellings, stations and permanent bridges have yet to be built. Thus, there is now direct communication between Moscow and Stretensk by rail, a distance of 6,471 versts (4,214 miles), and from Stretensk to Habarovsk and Nikolaieff by the Shilka and Amur rivers, a further distance to Habarovsk of about 2,000 versts (1,332 miles), and to Nikolaieff, the mouth of the Amur, of over 3,000 versts (2,000 miles). The Amur is navigable from May to September, but for shallow-draft vessels only.

"Various important European feeding lines have been constructed, and others, partaking more of the character of huge main thoroughfares are projected. Cheliabinsk, the starting-point eastwards, is connected with Moscow by the Zlatoust-Samara-Moscow Railway, which, touching the Volga at Samara, crosses it at Sisran. Two

northern branches, the Tiumen-Perm, and Kotlass-Viatka-Perm, meeting at Ekaterinburg, the capital of the rich Ural mineral district, run into the main Siberian line at Cheliabinsk. From this latter point, too, a new route has long been projected direct to St. Petersburg, viâ Viatka and Vologda. So that, while the future will connect Cheliabinsk, and with it the main Siberian railway, in a direct line with the Baltic, not as now viâ Moscow, the present joins it on the one side with that city, the business-centre of Russia, and on the other to the new northern through route, which, viâ Kotlass and Archangel, is this year to bring the cereals of Siberia to London."—*Great Britain, Parliamentary Publications* (*Papers by Command: Miscellaneous Series No.* 533, 1900, *pp.* 5–7).

"It may be a wild idea, but Russian engineers are actually talking of a railroad from Stryetensk to Bering Strait, over a comparatively easy route that does not enter the Arctic Circle. This imaginary line, they hope, would connect with the American line which is now being built to Dawson City, the distance from which to Stryetensk is about three thousand miles. If this road ever is completed they figure that New York will be placed in railroad connection with London, Calcutta and Cape Town."—A. H. Ford, *The Warfare of Railways in Asia* (*Century, March,* 1900).

"Siberia and the Amur lands are rich beyond belief. . . . This vast territory, long looked upon as a barren waste, is destined to be one of the world's richest and most productive sections. In northern France, wheat ripens in 137 days; in Siberia, in 107. Even heavy night frosts do not injure the young seed. Under such conditions, the possibilities of agriculture are practically unlimited. I may add that oats require, in Siberia and in the Amur country, only 96 days, and in the regions of the Yenisei only 107. The frost period lasts only 97 days in the Irkutsk country. Transbaikalia lies entirely within the agricultural regions; so, too, almost the entire territory traversed by the Amur as far north as it runs. Efforts are being made to obtain along the Amur at least 300,000 square kilometers (115,835 square miles) for the higher forms of northern agriculture. Climatically, the best of northern Asia's territory, for planting purposes, is the Usuri country, which, in spite of its vast tracts of wood and grazing lands, has 195,000 square kilometers (75,292 square miles) of arable ground. The building of the Trans-Siberian Railroad has already added to the Empire's wheat product.

"The mineral resources of western Siberia are vast. Between Tomsk and Kooznesk lie 60,000 square kilometers (23,167 square miles) of coal lands which have never been touched. The coal is said to be excellent. In eastern Siberia, with its 280,000 square kilometers (108,112 square miles) of fruitful soil, there are 400 places yielding gold. Rich mineral deposits — graphite, lapis lazuli; iron mines, particularly rich in quality (as high as 60 per cent); hard and soft coals, i. e., black and brown coals—await hands willing to work for them. To-day, thousands of colonists are hurrying to these promising lands. Russia's output in gold and silver is already very large, and is constantly increasing.

"The industries of Siberia are in their infancy; still, they are growing and are bound to grow, so rich are the rewards promised. Chemical, sugar, and paper mills have been put up in several places and are paying well. Even Manchuria, a province so vast that it might make an empire, is looking to Russia for its future development. The wealth of this province, like that of Siberia and all eastern Russia, is ripe for harvesting. The traffic in Siberia and eastern Russia is increasing faster than even the advocates of the great Trans-Siberian road anticipated. The Ob, one of the world's big rivers, emptying through the Gulf of Ob into the Arctic Ocean, has 102 steamers and 200 tugs running already. On the Yenisei, 10 steamers carry the mails regularly. The mouths of both these rivers were visited last summer by English and Russian ships. This proves the practicability of connecting eastern and western Siberia with Europe by water."—*U. S. Consular Reports, Nov.*, 1899, *p.* 411.

An official publication of the year 1900 from St. Petersburg, furnished to American journals by the Russian embassy at Washington, is the source of the following statements relative to the rapid development of the vast Siberian country along the line of the great railway: "When viewed with reference to colonization Siberia divides itself naturally into two zones, extending east and west, and differing essentially from one another. The first of these embraces the region traversed by the new Siberian railway, the more populous southern portion of Siberia, in which the conditions of climate and soil are favorable to the development of agriculture and colonization. The other zone occupies the extensive, deserted northern region, the land of tundras, or polar marshes, with a constantly frozen subsoil and a severe climate, a dreary tract of land totally unfit for agriculture. Between these two zones stretches a broad belt of forests of tall trees, partly primeval pine and fir, partly leafy trees. The wealth of these broad agricultural and timber areas is, moreover, augmented by mineral deposits of every conceivable nature, as abundant and diversified as those of America, and into this whole region immigration is pouring in volume unequalled except in the history of American colonization. Ever since the serfs were emancipated in 1861 they have formed the bulk of the emigrants from the thickly populated agricultural districts of European Russia, but the great tide of settlers in the new territory is only now assuming tremendous proportions. During the twenty years' period of 1860 to 1880 about 110,000 persons emigrated to Siberia, while for the thirteen years from 1880 to 1892 there were over 440,000, and for the succeeding years since the great railway has been building the number of immigrants of both sexes has been as follows: 1893, 65,000; 1894, 76,000; 1895, 109,000; 1896, 203,000; 1897, 87,000; 1898, 206,000; 1899, 225,000. Total, 971,000. According to the census of 1897, the population of Siberia had risen to 8,188,368 inhabitants, of which the Russian peasantry formed over 25 per cent."

A. D. 1900.—Russian railway building and railway projects in Persia and Afghanistan. —By several writers who seem to have knowledge of what is doing in those parts of the eastern world, it was reported in the spring of 1900 that an active projection, planning, and building (to some extent) of railroads in Persia and

Afghanistan was on foot among the Russians. From Tiflis, it was said, their plans contemplated a line of rail to Teheran; thence to be extended by one branch, southward, via Ispahan, to the Persian Gulf, and by another branch westward to Herat, in Afghanistan. From their Central Asian acquisitions they had advanced their railway to within 70 miles of Herat, and were said to be confidently expecting to push it on, through Kandahar and through Baluchistan, to the Arabian Sea. If these extensive plans could be carried out, and if Russian influence in Persia, said to be growing fast, should become actually controlling, the Muscovite Power would have made an enormous gain, by planting itself on the shores of the Indian Ocean. How far Russia can continue to press forward in this line of policy without collision with Great Britain and with Germany—which seems to have aims in the same direction, through Asiatic Turkey—is an interesting question for the future.

The following is from a despatch to the "London Times" from its correspondent at Vienna, Feb. 24, 1901: "According to trustworthy information from Teheran, Russia is particularly active just now in Persia and the Persian Gulf. . . . The road from Resht to Teheran, which has been built by a Russian company, is of no value for European trade in the absence of an agreement with Russia respecting the transit traffic through that country. European commerce is dependent upon the long and expensive caravan routes via Trebizond, Bushire, Baghdad, Mochamera, &c. These occupy from four to six months."

SAKHALIN.—"Of late years . . . its increasing importance as a place of exile for Russian political and criminal offenders has invested Sakhalin with a certain interest, derived, perhaps, more from penal associations than physical resources, which latter may, when fully developed, materially affect trade and commerce in the far East. The island of Sakhalin is 584 miles in length, its breadth varying from 18 to 94 miles. The southern extremity is separated from the island of Yezo, twenty miles distant, by the Straits of La Perouse, and its western coast by the shallow Gulf of Tartary (at one point barely five miles across) from the mainland of Siberia. Although Dutch explorers are said to have landed here in 1643, the first reliable survey of the island was probably obtained in the year 1787 by La Perouse. Russian fur traders followed in the early part of the present century, but it was only in 1853 that, disturbances having occurred with the natives, a score or so of Cossacks were stationed at Dui on the west coast. In 1867 negociations were entered into by the Russian and Japanese Governments for joint occupation of Sakhalin, but the subsequent discovery of coal, and consequent influx of Russian convicts, rendered this arrangement highly unsatisfactory. Further negotiations, therefore, ensued, with the result that, in 1875, the island was formally ceded to Russia, Japan receiving, in exchange, the entire Kurile Archipelago.

"Sakhalin is by no means easy of access. Even during the open season (from May to September) but very few vessels visit the island, and, with the exception of the monthly arrival of convict-ships from Europe, and a couple of small Russian trading steamers, there is no fixed service with Vladivostok, which, with the exception of Nikolaefsk, is the only Siberian port whence Sakhalin may, in three days, be reached. During the winter months the island is completely ice-bound and unapproachable by water. Communication with the mainland is then maintained by means of dog-sledges, and the mails for Europe are dispatched across the frozen Gulf of Tartary—a journey, under favourable circumstances, of about three months. . . .

"Sakhalin is, for administrative purposes, divided into three districts, viz.: Korsakovsky-Post in the south, Tymovsk in the north, and Alexandrovsky-Post on the western coast. The latter, which is situated in the centre of the coal district, is a picturesque, straggling town of about 7,000 inhabitants, consisting almost entirely of officials and convicts. This is the most important penal settlement on the island, contains the largest prison, and is, moreover, the residence of the Governor of Sakhalin, a subordinate of the Governor-General of Eastern Siberia. Alexandrovsky is garrisoned by about 1,500 men, and contains large foundries and workshops for convict labour, but most of the prisoners are employed in the adjacent coal mines of Dui. . . . Korsakovsky-Post, on the south coast, is the next largest settlement, containing about 5,000 convicts who are chiefly employed in agricultural pursuits. Although it may seem a paradox, the remaining prisons in the interior of the island, Derbynskaya, Rykovskaya, and Onor are not prisons at all, but huge wooden barracks, innocent of bolts and bars. Here, also, the work done is solely agricultural."—Harry de Windt, *The Island of Sakhalin* (*Fortnightly Review*, *May*, 1897).

SALVATION ARMY, The: Secession of the American Volunteers.—Late account of the Army's work.—Much feeling in the American branch of the Salvation Army, and among those who valued its work, was caused in January, 1896, by an order from the London headquarters of the Army recalling Mr. Ballington Booth, who had been its American Commander for nine years. Commander Booth and Mrs. Booth had been remarkably successful in their organization and direction of the Salvation Army work, and had won a high place in the esteem, not only of their own followers, but of the American public at large. A wide and strong movement of protest against their removal from the field failed to change the London order, which was said to be made in obedience to a necessary rule of the Army against long service in any one post. Miss Eva Booth, representing her father, General Booth, with Colonel Nicol, from London, and Commandant Herbert Booth, from Canada, came to New York as mediators, endeavoring to heal a threatened breach in the ranks; but their mission failed. Commander Ballington Booth resigned his office, and withdrew from the Salvation Army service, declining to return to London. After a time, he and Mrs. Booth became the heads of a new organization called the "Volunteers of America," for religious work, not in rivalry with that of the Salvation Army, but directed more towards the awakening of the interest of the working people, Mr. Ballington Booth was succeeded as Commander in America by a son-in-law of General Booth, Commissioner Frederick St. Clair Tucker. —For an account of the origin and growth of the Salvation Army see, under that heading, in the Supplement (vol. 5) of the original edition of this work, or in vol. 4 of the revised edition.

Of results accomplished in that part of the work of the Salvation Army known as the "Darkest England Scheme," General Booth wrote, early in 1900, an extended account in the "Sunday Strand." He stated that the public had subscribed altogether for his scheme about $1,300,000. "It is a debated point," he wrote, "with the intelligent admirers of the scheme and the careful observers of its progress whether the benefits bestowed on the wretched classes for whom it was originated have been greater within than without our borders. The copyists of our plan have been legion, both at home and abroad, in church and state. The representatives of the different governments specially charged with the responsibility for the outcast classes have been gradually coming to appreciate the principles and methods involved in the scheme, and to show willingness to coöperate in giving it a chance. They have done this in two ways: (1) In attempting similar tasks themselves; (2) in using and subsidizing the army for doing the work for them. Many governments make grants to our various institutions in varying amounts toward the cost of dealing with different classes of the submerged."

The following is a summary of the agencies which have been set at work by the general: "We have now 158 shelters and food depots for homeless men and women, 121 slum posts, each with its own slum sisters, 37 labor bureaus, 60 labor factories for the unemployed, 11 land colonies, 91 rescue homes for women, 11 labor homes for ex-criminals, several nursing institutions, 2 maternity hospitals for deserted women, an institution with branches in forty-five countries and colonies for finding lost and missing persons, together with a host of allied and minor agencies which I am not able here to enumerate. The total number of institutions named above is now 545, under the care of more than 2,000 trained officers and others wholly employed, all working in harmony with the principles I have laid down for helping the poorest and most unfortunate of their fellows, and all more or less experts at their work.

"Nearly 20,000 destitute men and women are in some way or other touched by the operations of the scheme every day. No less than 15,000 wretched and otherwise homeless people are housed under our roofs every night, having their needs met, at least in part, with sympathy and prayer and the opportunity for friendly counsel. More than 300 ex-criminals are to-day in our houses of reformation, having before them another chance for this life, and in many cases the first they have ever had for preparing for the life to come. More than 5,000 women taken from lives of darkness and shame are safely sheltered in our homes each year, on the way—as we have abundantly proved in the case of others, in respect of a large proportion of them—to a future of virtue, goodness, and religion. Over 1,000 men are employed on the land colonies. Many of them are working out their own deliverance, and at the same time helping to solve one of the most difficult problems of modern times, and proving that many of the helpless loafers of the great cities can be made useful producers on the soil. Over the gates of every one of these homes, elevators, labor factories, and colonies there might be written: 'No man or woman need starve, or beg, or pauperize, or steal, or commit suicide. If willing to work, apply within. Here there is hope for all.'" General Booth adds that he has always 2,000 women in the rescue homes of the army.

SAMOAN ISLANDS, The: Ending of the joint control of the Islands by Germany, England and the United States.—Partition between Germany and the United States.—Retirement of England.—Said President Cleveland, in his annual Message to the Congress of the United States, December 4, 1893: "Led by a desire to compose differences and contribute to the restoration of order in Samoa, which for some years previous had been the scene of conflicting foreign pretensions and native strife, the United States, departing from its policy consecrated by a century of observance, entered [in 1889] . . . into the treaty of Berlin [see, in vol. 4, SAMOA], thereby becoming jointly bound with England

and Germany to establish and maintain Malietoa Laupepa as King of Samoa. The treaty provided for a foreign court of justice; a municipal council for the district of Apia, with a foreign president thereof, authorized to advise the King; a tribunal for the settlement of native and foreign land titles, and a revenue system for the Kingdom. It entailed upon the three powers that part of the cost of the new Government not met by the revenue of the islands. Early in the life of this triple protectorate the native dissensions it was designed to quell revived. Rivals defied the authority of the new King, refusing to pay taxes and demanding the election of a ruler by native suffrage. Mataafa, an aspirant to the throne, and a large number of his native adherents were in open rebellion on one of the islands. Quite lately, at the request of the other powers and in fulfillment of its treaty obligation, this Government agreed to unite in a joint military movement of such dimensions as would probably secure the surrender of the insurgents without bloodshed. The war ship Philadelphia was accordingly put under orders for Samoa, but before she arrived the threatened conflict was precipitated by King Malietoa's attack upon the insurgent camp. Mataafa was defeated and a number of his men killed. The British and German naval vessels present subsequently secured the surrender of Mataafa and his adherents. The defeated chief and ten of his principal supporters were deported to a German island of the Marshall group, where they are held as prisoners under the joint responsibility and cost of the three powers. This incident and the events leading up to it signally illustrate the impolicy of entangling alliances with foreign powers."—*United States, Message and Documents* (*Abridgment*), 1893–4.

In his next annual Message, December 3, 1894, the President thus summarized the later situation in the islands: "The suppression of the Mataafa insurrection by the powers and the subsequent banishment of the leader and eleven other chiefs, as recited in my last message, did not bring lasting peace to the islands. Formidable uprisings continued, and finally a rebellion broke out in the capital island, Upolu, headed in Aana, the western district, by the younger Tamasese, and in Atua, the eastern district, by other leaders. The insurgents ravaged the country and fought the Government's troops up to the very doors of Apia. The King again appealed to the powers for help, and the combined British and German naval forces reduced the Atuans to apparent subjection, not, however, without considerable loss to the natives. A few days later Tamasese and his adherents, fearing the ships and the marines, professed submission. Reports received from our agents at Apia do not justify the belief that the peace thus brought about will be of long duration. It is their conviction that the natives are at heart hostile to the present Government, that such of them as profess loyalty to it do so from fear of the powers, and that it would speedily go to pieces if the war ships were withdrawn. . . . The present Government has utterly failed to correct, if indeed it has not aggravated, the very evils it was intended to prevent. It has not stimulated our commerce with the islands. Our participation in its establishment against the wishes of the natives was in plain defiance of the conservative teachings and warnings of the wise and patriotic men who laid the foundations of our free institutions, and I invite an expression of the judgment of Congress on the propriety of steps being taken by this Government looking to the withdrawal from its engagements with the other powers on some reasonable terms not prejudicial to any of our existing rights."—*United States, Message and Documents* (*Abridgment*, 1894–5).—In the Message of 1895 the subject was again pressed on the attention of Congress without result.

In August, 1898, Malietoa Laupepa died. By the Berlin Treaty of 1889 "it was provided that in case any question should arise in Samoa, respecting the rightful election of King, or of any other Chief claiming authority over the islands, or respecting the validity of the powers which the King or any Chief might claim in the exercise of his office, such question should not lead to war, but should be presented for decision to the Chief Justice of Samoa, who should decide it in writing, conformably to the provisions of the Act, and to the laws and customs of Samoa not in conflict therewith, and that the Signatory Governments would accept and abide by such decision. After the death of Malietoa an exchange of views took place between the Powers, and it was agreed that there should be no interference with the right of the Samoans to elect a King, and that the election should proceed strictly in accordance with the provisions of the Final Act. Some time elapsed before any action was taken, pending the completion of certain ceremonial usages customary in Samoa on the death of a High Chief. . . . As soon as the funeral ceremonies were at an end, deliberation and discussion among the Chiefs ensued. There were in the first instance several candidates for the succession. Their number was eventually reduced to two: 1. Malietoa Tanu, the son of the late King. 2. The High Chief Mataafa. This Chief had been in rebellion against Malietoa Laupepa, but had suffered defeat, and with other Chiefs had been deported, by agreement between the three Powers, to the Marshall Islands. On the recommendation of the Consular officers at Apia, the Powers, in July 1898, consented to his return. . . . On the 19th September, Mataafa and the other exiled Chiefs landed in Samoa. It does not appear that he took any overt steps to claim the vacant throne, but a section of the natives pronounced in his favour and announced on the 12th November to the Consuls and to the Chief Justice that he had been duly elected King. On the 13th November the opposing faction declared that the real election of a King had not taken place, and on the following day announced that their choice had fallen upon Malietoa Tanu. Both parties appealed to Mr. Chambers, the Chief Justice, who considered himself then in a position to take cognisance of the matter, according to the provisions of the Final Act, a question having arisen 'in Samoa respecting the rightful election or appointment of King.'"—*Great Britain, Parliamentary Publications* (*Papers by Command: Samoa, No.* 1, 1899).

The decision of the Chief Justice was in favor of Malietoa Tanu, and the adherents of Mataafa took up arms, defeating those of the favored candidate and driving many of them to take refuge on British and German ships of war. Subsequent events were related by the President of the United States in his Message to Congress, Dec. 5, 1899, as follows: "In this emergency a

joint commission of representatives of the United States, Germany, and Great Britain was sent to Samoa to investigate the situation and provide a temporary remedy. By its active efforts a peaceful solution was reached for the time being, the kingship being abolished and a provisional government established. Recommendations unanimously made by the commission for a permanent adjustment of the Samoan question were taken under consideration by the three powers parties to the General Act. But the more they were examined the more evident it became that a radical change was necessary in the relations of the powers to Samoa. The inconveniences and possible perils of the tripartite scheme of supervision and control in the Samoan group by powers having little interest in common in that quarter beyond commercial rivalry had been once more emphasized by the recent events. The suggested remedy of the Joint Commission, like the scheme it aimed to replace, amounted to what has been styled a 'tridominium,' being the exercise of the functions of sovereignty by an unanimous agreement of three powers. The situation had become far more intricate and embarrassing from every point of view than it was when my predecessor, in 1894, summed up its perplexities and condemned the participation in it of the United States. The arrangement under which Samoa was administered had proved impracticable and unacceptable to all the powers concerned. To withdraw from the agreement and abandon the islands to Germany and Great Britain would not be compatible with our interests in the archipelago. To relinquish our rights in the harbor of Pago Pago, the best anchorage in the Pacific, the occupancy of which had been leased to the United States in 1878 by the first foreign treaty ever concluded by Samoa, was not to be thought of either as regards the needs of our Navy or the interests of our growing commerce with the East. We could not have considered any proposition for the abrogation of the tripartite control which did not confirm us in all our rights and safeguard all our national interests in the islands. Our views commended themselves to the other powers. A satisfactory arrangement was concluded between the Governments of Germany and of England, by virtue of which England retired from Samoa in view of compensations in other directions, and both powers renounced in favor of the United States all their rights and claims over and in respect to that portion of the group lying to the east of the one hundred and seventy-first degree of west longitude, embracing the islands of Tutuila, Ofoo, Olosenga, and Manua."—*United States, Message and Documents (Abridgment)*, 1899–1900, *v.* 1.

The compensations to England "in other directions" were given by Germany, in the following provisions of a treaty signed at London, November 14, 1899:

"ART. II. Germany renounces in favour of Great Britain all her rights over the Tonga Islands, including Vavau, and over Savage Island, including the right of establishing a naval station and coaling station, and the right of extra-territoriality in the said islands. . . . She recognizes as falling to Great Britain those of the Solomon Islands, at present belonging to Germany, which are situated to the east and southeast of the Island of Bougainville, which latter shall continue to belong to Germany, together with the Island of Buka, which forms part of it. The western portion of the neutral zone in West Africa, as defined in Article V of the present Convention, shall also fall to the share of Great Britain. . . .

"ART. IV. The arrangement at present existing between Germany and Great Britain and concerning the right of Germany to freely engage labourers in the Solomon Islands belonging to Great Britain shall be equally extended to those of the Solomon Islands mentioned in Article II, which fall to the share of Great Britain.

"ART. V. In the neutral zone the frontier between the German and English territories shall be formed by the River Daka as far as the point of its intersection with the 9th degree of north latitude, thence the frontier shall continue to the north, leaving Morozugu to Great Britain, and shall be fixed on the spot by a Mixed Commission of the two Powers, in such manner that Gambaga and all the territories of Mamprusi shall fall to Great Britain, and that Yendi and all the territories of Chakosi shall fall to Germany.

"ART. VI. Germany is prepared to take into consideration, as much and as far as possible, the wishes which the Government of Great Britain may express with regard to the development of the reciprocal Tariffs in the territories of Togo and of the Gold Coast.

"ART. VII. Germany renounces her rights of extra-territoriality in Zanzibar, but it is at the same time understood that this renunciation shall not effectively come into force till such time as the rights of extra-territoriality enjoyed there by other nations shall be abolished."

To the treaty was appended the following "Declaration": "It is clearly understood that by Article II of the Convention signed to-day, Germany consents that the whole group of the Howe Islands, which forms part of the Solomon Islands, shall fall to Great Britain. It is also understood that the stipulations of the Declaration between the two Governments signed at Berlin on the 10th April, 1886, respecting freedom of commerce in the Western Pacific, apply to the islands mentioned in the aforesaid Convention. It is similarly understood that the arrangement at present in force as to the engagement of labourers by Germans in the Solomon Islands permits Germans to engage those labourers on the same conditions as those which are or which shall be imposed on British subjects nonresident in those islands."—*Great Britain, Parliamentary Publications (Papers by Command: Treaty Series, No.* 7, 1900).

Article III of the general treaty between the United States, Germany and Great Britain stipulated: "It is understood and agreed that each of the three signatory Powers shall continue to enjoy, in respect to their commerce and commercial vessels, in all the islands of the Samoan group, privileges and conditions equal to those enjoyed by the sovereign Power, in all ports which may be open to the commerce of either of them."—*United States, 56th Cong., 1st Sess., Senate Doc. No.* 157.

On the 17th of April, 1900, an "instrument of cession" was signed by the marks of twenty-two chiefs, conveying to the United States the islands of the Samoan group lying east of the 171st degree of west longitude, and the American flag was raised over the naval station at Pago-Pago.

From Pago-Pago, March 27, 1901, a Press despatch announced: "The natives under the United States Government number 5,800, according to a census just taken, while the natives in the other islands under German rule number 32,000. The population has increased very slightly in the last thirty years, and the main cause of this failure to increase is the infant mortality, due to the violation of the simplest health principles in the care and diet of children. . . . Reports from the six islands under United States control show that the natives are improving in general conditions, and that they show a desire to keep their houses neat and to educate their children. Not a single native has been arrested for drunkenness since the Americans assumed control of Tutuila island."

SAN FRANCISCO: A. D. 1898.—New city charter.—A city charter of a quite new and experimental character was adopted by popular vote in May, to go into effect at the beginning of the year 1900. Its main features were described at the time by the "New York Tribune," as follows: "The formation of this charter is an advanced example of the exercise of municipal home rule. The constitution of California gives the cities of the state the uncommon privilege of framing their own charters subject simply to the veto power of the legislature. Exercising that right, the people, acting through fifteen freeholders, elected for that purpose, have drawn up the new charter. . . . If the legislature approves, it will become the local constitution. The charter provides for its own amendment by the people without appeal to the legislature. So the present provisions of that instrument may be only a form to be entirely remodeled by the city at its own pleasure until it has no resemblance to the laws to which the state authorities gave approval. That is an extreme delegation of powers, such as we think has never before been made in an American state. The mayor has large powers of appointment and removal. He can suspend all elected officers except the supervisors—the city legislators—who may remove those whom he suspends, and he may remove at any time for cause all appointive officers. The elective list is large, for, though there are only eighteen supervisors, the number of places filled by election each year is thirty. This is a great departure from the charter-making practice recently prevalent, which has tended to the election of only a few administrative officers who are responsible for the selection of agents in different departments. Attempt is made to centre responsibility in the mayor, but the supervisors and the people both can pass ordinances likely to interfere with that responsibility. So the charter is as far as possible from inaugurating the one-man power, which has been much advocated as the cure for the ills which spring from a municipal administration animated by no uniform purpose or intelligence."

Chemistry and Physics: Acetylene Gas.—Acetylene gas has been known since 1832, when it was discovered by Edmund Davy; but it remained a mere laboratory product until 1892, when two experimenters, in America and France, stumbled accidentally on the production, in an electric furnace, of calcium carbide, which water decomposes, readily yielding the gas in question. The American discoverer was Mr. Thomas Willson, a Canadian electrician, residing at Spray, North Carolina; his French rival was Professor Henry Moisson, of Paris. The priority of Mr. Willson in the discovery, or in the announcement of it, is most generally recognized, and he secured patents in the United States and elsewhere. Electrical developments since 1892 have economized the manufacture of calcium carbide, by electric heat acting on a mixture of lime and coke, and it has become an important commercial product, at Niagara Falls and other seats of electric power, bringing acetylene gas into extensive use as an illuminant. There have been dangers and difficulties in the use, however, not easily overcome.

Chemistry and Physics: Discovery of Argon and Helium. "After Lord Rayleigh, in 1892, had proved that nitrogen obtained from chemical combinations was about one-half per cent lighter than that obtained from the atmosphere, a determination that was again verified in 1894, Lord Rayleigh and Professor Ramsay separated from atmospheric nitrogen an elementary gas of great density which, by reason of its chemical indifference, they called argon. They proved that this gas formed about 0.8 or 0.9 per cent of the volume of nitrogen, from which it could be separated either by incandescent magnesium or by the continued action of the electric spark. It was established beyond doubt that Cavendish produced this gas a hundred years ago by the use of the electric spark. Argon, either alone or accompanied by helium, has also been found in natural waters as well as in minerals. Its discovery in a meteorite of Augusta County, Virginia, United States of America, may perhaps lead us to ascribe to it an extra-terrestrial origin.

"The physical properties of argon are very distinct, and its characteristic spectrum enables us to at once distinguish it with certainty from any other substance, but from a chemical point of view this gas is most extraordinarily inactive, and we have not yet succeeded in making it form combinations as the other elements do. This peculiarity, and also the impossibility of finding a place in the periodic system for a simple body having the molecular weight of argon (39.88), have given rise to all sorts of hypotheses relative to the nature of this gas. . . .

"Another most interesting discovery was that of helium, made by Professor Ramsay. In 1891 Hillebrand showed that uranium ore and ores of the same family when dissolved in acids or fused with alkaline carbonates, or even merely heated in a vacuum, may give off as much as 3 per cent of nitrogen. Professor Ramsay obtained this gas from cleveite and by means of spectroscopic examination demonstrated the presence of argon; and in the course of his experiments — in March, 1895 — he observed beside the spectrum of argon another bright, yellow line that did not belong to that spectrum, and which Crookes recognized as identical with the line D that Lockyer had already observed in 1868 in the spectrum of the solar chromosphere, and which he had attributed to an element as yet unknown upon the earth—helium. The same line had also been distinguished in the spectra of other fixed stars, particularly in the spectrum of Orion, so that it may be admitted that helium exists in large quantities extra-terrestrially. . . . On our planet it appears, on the contrary, to be very rare, and may be ranked among the rarest of elements. . . .

"Helium is the lightest of all the gases except hydrogen; Stoney deduces from this fact an explanation of the existence of these two elements in but very small quantities in a free state upon the face of the earth, while they are distributed in enormous masses throughout the universe. The comparatively small force of the earth's gravitation does not form a sufficient counterpoise to the velocity of their molecules, which therefore escape from the terrestrial atmosphere unless restrained by chemical combination. They then proceed to reunite around great centres of attraction, such as the fixed stars, in whose atmospheres these elements exist in large quantities."—*C. Winkler, The Discovery of new Elements within the last twenty-five years (Annual Report of Smithsonian Institution,* 1897, p. 237, *trans. from Revue Scientifique, 4th ser., vol.* 8).

Chemistry and Physics: Liquefaction of Oxygen, Hydrogen and Air.—"The most remarkable recent work in refrigeration is that of Professor James Dewar, of the Royal Institution in London. The feat of liquefying oxygen by a succession of approaches to its critical temperature has been thus described by him, in an interview which appeared in 'McClure's Magazine,' November, 1893: 'The process of liquefying oxygen, briefly speaking, is this: Into the outer chamber of that double compressor I introduce, through a pipe, liquid nitrous oxide gas, under a pressure of about 1,400 pounds to the square inch. I then allow it to evaporate rapidly, and thus obtain a temperature around the inner chamber of —90° C. Into this cooled inner chamber I introduce liquid ethylene, which is a gas at ordinary temperatures, under a pressure of 1,800 pounds to the square inch. When the inner chamber is full of ethylene, its rapid evaporation under exhaustion reduces the temperature to —135° C. Running through this inner chamber is a tube containing oxygen gas under a pressure of 750 pounds to the square inch. The critical point of oxygen gas—that is, the point above which no amount of pressure will reduce it to a liquid—is —115° C., but this pressure, at the temperature of —145° C., is amply sufficient to cause it to liquefy rapidly.'

"In May, 1898, Professor Dewar, by the use of liquid oxygen, succeeded in liquefying hydrogen, producing a liquid having but one-fourteenth the specific gravity of water; this exploit brought him within 21° of the absolute zero of

centigrade. He afterward reduced the liquid to solid form, attaining a temperature estimated at four to five degrees lower. Faraday and other investigators of an earlier day surmised that hydrogen, when solidified, would prove to be a metal; now that the feat of solidification has been accomplished, hydrogen astonishes the physicist by displaying itself as non-metallic. . . .

"For some years the plan was to employ a series of chemical compounds, each with a lower boiling-point than its predecessor in the process, and all troublesome and hazardous in manipulation. A better method has been developed by keeping to simple air from first to last, as in the apparatus of Dr. Linde, of Dr. Hampson, and of Mr. Charles E. Tripler.

"As the Tripler machine does its work on a bolder scale than either of the others, let its operation be briefly outlined: Air is first compressed to 65 pounds pressure to the square inch; through a second pump this pressure is exalted to 400 pounds, and with a third pump the pressure is carried to 2,500 pounds. After each compression the air flows through jacketed pipes, where it is cooled by a stream of water. At the third condensation a valve, the secret of whose construction Mr. Tripler keeps to himself, permits part of the compressed air to flow into a pipe surrounding the tube through which the remainder is flowing. This act of expansion severely chills the imprisoned air, which at last discharges itself in liquid form—much as water does from an ordinary city faucet."—G. Iles, *Flame, Electricity and the Camera, ch.* 6 (*N. Y.: Doubleday, Page & Co.*).

Chemistry and Physics: Smokeless Powders.—"In recent years smokeless powders have largely superseded all others. These contain usually nitro-cellulose (gun cotton), or nitro-glycerine, or both, made up into a plastic, coherent, and homogeneous compound of a gluey nature, and fashioned into horn-like sticks or rods by being forced under pressure, through a die plate having small holes, through which the plastic material is strained into strings like macaroni, or else is molded into tablets, pellets, or grains of cubical shape. Prominent among those who have contributed to this art are the names of Turpin, Abel and Dewar, Nobel, Maxim, Munroe, Du Pont, Bernadou and others. In the recent years of the Nineteenth Century great activity has been manifest in this field of invention. In the United States more than 600 different patents have been granted for explosives, the larger portion of them being for nitro-compounds which partake in a greater or less degree of the qualities of gun cotton or nitro-glycerine."—E. W. Byrn, *Progress of Invention in the* 19*th Century, p.* 419.

Chemistry and Physics: X Rays.—The Discovery of Professor Rontgen.—"Fresh proofs await us of the supreme rank of both electricity and photography as resources of art and science as we observe the transcendent powers evoked by their union. From this union no issue is more extraordinary, more weighty with meaning and promise, than the X-ray pictures due to Professor Wilhelm Konrad Röntgen. In these pictures he has but crowned labours which began when Sir John Herschel noticed that a peculiar blue light was diffused from a perfectly colourless solution of quinine sulphate. Professor (now Sir) George Stokes explained the phenomenon by showing that this blue light consists of vibrations originally too rapid to be visible, which are slowed down within the limits of perceptibility as they pass through the liquid. . . .

"One path of approach to the achievement of Professor Röntgen was opened by Sir John Herschel; another, as important, was blazed and broadened by Professor (now Sir) William Crookes. In 1874 and 1875 he was engaged upon the researches which gave the world the radiometer, the tiny mill whose vanes rotate with rays of light or heat. The action of this mill depends upon its being placed in a glass bulb almost vacuous. When such a bulb incloses rubies, bits of phenakite, or other suitable objects, and electrical discharges are directed upon them, they glow with the most brilliant luminescence known to art. Excited by a cathode ray, that is, a ray from the negative pole of an electrical machine, a Crookes bulb itself shines with a vivid golden green ray which reminds the onlooker of the fluorescence of earlier experiments. . . .

"Year by year the list of substances excitable to luminosity in a Crookes bulb has been lengthened, and in 1894 it was the good fortune of Professor Philipp Lenard to discover a wonderful power of such a bulb. Emerging from it was a cathode ray which passed nearly as freely through a thin plate of aluminium as common sunshine does through a pane of glass. Hertz had, a few years previously, discovered that metals in very thin sheets were virtually transparent (or, to use Mr. Hyndman's term, transradiable) to his electric waves. This property was found by Professor Lenard to extend to the cathode ray and in a much higher degree. . . . The ultra-violet ray of ordinary light has the singular power of causing the gases which it may traverse to become conductors of electricity, with the effect of discharging an electrified metallic plate; this property is shared by cathode rays. Associated with them are the rays of still more extraordinary powers, discovered by Professor Röntgen. In his own words let his achievement be recounted, as published in 'McClure's Magazine,' April, 1896.

"'I have been for a long time interested in the problem of the cathode rays from a vacuum tube as studied by Hertz and Lenard. I had followed their and other researches with great interest, and determined, as soon as I had the time, to make some researches of my own. This time I found at the close of last October. I had been at work for some days when I discovered something new.' 'What was the date?' 'The 8th of November.' 'And what was the discovery?' 'I was working with a Crookes tube covered by a shield of black cardboard. A piece of barium platino-cyanide paper lay on the bench there. I had been passing a current through the tube, and I noticed a peculiar black line across the paper.' 'What of that?' 'The effect was one which could only be produced, in ordinary parlance, by the passage of light. No light could come from the tube, because the shield which covered it was impervious to any light known, even that of the electric arc.' 'And what did you think?' 'I did not think; I investigated. I assumed that the effect must have come from the tube, since its character indicated that it could come from nowhere else. I tested it. In a few minutes there was no doubt about it. Rays were coming from the tube which had a luminescent effect upon the paper. I tried it

successfully at greater and greater distances, even at two metres. It seemed at first a new kind of invisible light. It was clearly something new, something unrecorded.' 'Is it light?' 'No.' 'Is it electricity?' 'Not in any known form.' 'What is it?' 'I don't know.' And the discoverer of the X rays thus stated as calmly his ignorance of their essence as has everybody else who has written on the phenomena thus far.

"'Having discovered the existence of a new kind of rays, I of course began to investigate what they would do.' He took up a series of cabinet-sized photographs. 'It soon appeared from tests that the rays had penetrative power to a degree hitherto unknown. They penetrated paper, wood, and cloth with ease; and the thickness of the substance made no perceptible difference, within reasonable limits.' He showed photographs of a box of laboratory weights of platinum, aluminium, and brass, they and the brass hinges all having been photographed from a closed box, without any indication of the box. Also a photograph of a coil of fine wire, wound on a wooden spool, the wire having been photographed and the wood omitted.

"'The rays,' he continued, 'passed through all the metals tested, with a facility varying, roughly speaking, with the density of the metal. These phenomena I have discussed carefully in my report to the Würzburg Society, and you will find all the technical results therein stated.' He showed a photograph of a small sheet of zinc. This was composed of smaller plates soldered laterally with solders of different metallic proportions. The differing lines of shadow caused by the difference in the solders were visible evidence that a new means of detecting flaws and chemical variations in metals had been found. A photograph of a compass showed the needle and dial taken through the closed brass cover. The markings of the dial were in red metallic paint, and thus interfered with the rays, and were reproduced. 'Since the rays had this great penetrative power, it seemed natural that they should penetrate flesh, and so it proved in photographing the hand, as I showed you.'" . . .

"Provided with a Röntgen bulb, the photographer passes from the exterior to the interior of an object, almost as if he were a sorcerer with power to transmute all things to glass. Equipped with a simple X-ray apparatus, dislocations and fractures are detected by the surgeon, diseases of bones are studied, and shot, needles, and bits of glass or corroding wire within the muscles of a patient are located with exactitude. Thanks to the work of Mr. Mackenzie Davidson, the like detection of renal calculi can be looked forward to with a fair degree of certainty. The same means of exploration offers equal aid to medicine: it demonstrates the calcification of arteries, and aneurisms of the heart or of the first part of the aorta; with improved methods it may be possible to study fatty degenerations of the arteries and larger blood-vessels. Dr. C. M. Mouillin, addressing the Röntgen Society of London as its president, states that the fluorescent screen has now reached such a degree of perfection that the minutest movement of the heart and lungs, and the least change in the action of the diaphragm, can be watched and studied at leisure in the living subject. He considers it probable that the examination of a patient's chest with this screen may become as much a matter of common routine as with the stethoscope to-day. . . .

"Manifestly, the unseen universe which enfolds us is steadily being brought to the light of day. The investigations of Hertz established that the light-waves which affect the eye are but one octave in a gamut which sweeps indefinitely far both above and below them. In his hands, as in those of Joseph Henry long before, electric waves found their way through the walls and floors of a house; in the Marconi telegraph these waves pass through the earth or a fog, a mist or a rain-storm, with little or no hindrance. What does all this mean? Nothing less than that, given its accordant ray, any substance whatever is permeable, and that, therefore, to communicate between any two places in the universe is simply a question of providing the right means." —G. Iles, *Flame, Electricity and the Camera, ch.* 24 (*N. Y.: Doubleday, Page & Co.*).

In an article made public in the "New York Tribune" of January 6, 1901, Professor John Trowbridge, of Harvard University, expressed his anticipations from the further improvement of the use of the X rays, as follows: "At present all of the great hospitals of the world examine injuries of the extremities of the human body by means of these rays. In some cases the thicker portions of the body can be studied by their means. There is, however, much to be desired in the method, for in general the rays exhibit only the shadows of the bones of the extremities, or reveal at most the regions of greatest density in the body. If the muscles and tendons or the veins and arteries could be studied by means of these rays, an immense aid to surgery would result. Some experiments I have conducted with currents of great strength, lead me to believe that much can be done in this direction, for I have in certain cases obtained unmistakable traces of muscles and tendons, and the direction in which to advance is becoming clearer. The use of the X rays is not confined to the examination of the body. Together with the ultra violet rays, the X rays are used to cure cutaneous disorders. We are realizing that electricity is an important factor in health and disease. The investigations which have resulted from the discovery of these rays have opened wide vistas in the molecular world."

Electrical Science: Power.—Lighting.—Electro-chemical and Electro-metallurgical works.—The development at Niagara Falls.—"There were perhaps not more than twenty trolley cars in actual service in 1887, and these were of doubtful success. There were no regularly constituted electric railways worthy of the name. The telephone and electric-lighting wires were largely overhead, and frequently the construction was of the most imperfect and temporary character. . . . Within the past eight or ten years much has been done in the perfection of thoroughly practical forms of meters and other instruments for the measurement of electric forces and quantities. While such work resembles in its delicacy that demanded by watch mechanism, on the other hand the large station dynamos are examples of the heaviest machine construction. . . . A few years ago a dynamo was large if it demanded 100 or 200 horsepower to drive it, while now such machines are diminutive when compared with those of 2,000 horsepower commonly constructed. Dynamos are in

use at Niagara of 5,000 horsepower capacity. A single one of these would supply more than 50,000 incandescent lights such as are ordinarily used, or would give motion to 500 trolley cars. The period since 1887 has been marked by great extension in electric lighting by both arc and incandescent lamps. . . . One of the chief factors in this great extension has been the application of alternating electric currents, or currents of wave-like nature, reversing their direction many times in each second. The direct or continuous current had previously occupied the field alone. But the alternating current possessed the advantage of readily permitting the sending out over a long distance of a high pressure current with but little loss and by means of comparatively small and inexpensive lines. This current, relatively dangerous, could then be exchanged for a safe low-pressure current on the house mains for working the lights. The device which makes the exchange is called a transformer. It is in reality a modified induction coil—a simple structure of copper wire, sheet-iron, and insulating materials, with no moving parts to need attention or to get out of order. The properties and use of the transformer in an alternating-current system were comparatively unknown before 1887, but since that time it has played a part in electric development the importance of which cannot easily be overestimated. It has been, furthermore, brought to a high degree of perfection by the persistent and painstaking effort of numerous workers. In transforming a current of high pressure to one of lower pressure, or the reverse, only a very slight loss of power or energy is suffered. On a large scale, this loss is barely 3 per cent of the energy of the transformed current. The larger sizes of transformers now in use have capacities equivalent to considerably over 1,000 horsepower. Some of these structures are employed at Niagara and others at Buffalo. As in the case of the apparatus just mentioned, the effort spent in the perfection of the huge dynamo-electric generators used in lighting and power stations has resulted in machines so perfect as to leave but little chance of further increase of effectiveness. They waste only a small percentage in converting mechanical power into electrical energy, and run for years with but little attention or need of repairs. Along with all this improvement has gone a like betterment in the thousand and one details and minor devices which go to make up an electric system. . . .

"Perhaps . . . no better example of the varied application of electric energy exists than at Niagara. Certainly no grander exemplification of the way in which electric forces may be called into play, to replace other and unlike agencies, can be cited. Here at Niagara we may forcibly realize the importance of cheap and unfailing power developed from water in its fall. We find the power of huge water wheels delivered to the massive dynamos for giving out electric energy. This energy is variously employed. The electric lighting of the city of Niagara and surroundings and the electric railways naturally depend upon the water power. Besides these, which may be termed the ordinary applications of electricity, there are clustered at Niagara a number of unique industrial establishments, the importance of which will undoubtedly increase rapidly. In the carborundum factory we find huge furnaces heated by the passage of electric current, and attaining temperatures far beyond those of the ordinary combustion of fuel. These electric furnaces produce carborundum, a new abrasive nearly as hard as the diamond, which is a combination of carbon and silicon, unknown before the electric furnace gave it birth. Sand and coke are the raw substances for its production, and these are acted upon by the excessively high heat necessary to form the new product, already in extensive use for grinding hard materials. The metal aluminum, which not many years ago cost $2 an ounce, is now produced on a large scale at Niagara, and sold at a price which makes it, bulk for bulk, cheaper than brass. Here, again, electricity is the agent; but in this case its power of electrolyzing or breaking up strong chemical unions is employed. . . . Works for the production of metallic sodium and other metals similarly depend upon the decompositions effected by the electric current. Solutions of ordinary salt or brine are electrolyzed on a large scale in extensive works established for the purpose. . . . The very high temperature which exists in an electric arc, or between the carbons of an arc lamp, has in recent years found application in the manufacture of another important compound, which was formerly but slightly known as a chemical difficult to prepare. Carbide of calcium is the compound referred to, and large works for its production exist at Niagara. Here again, as in the carborundum works, raw materials of the simplest and cheapest kind are acted upon in what may be termed an electric-arc furnace. Coke, or carbon, and lime are mixed and charged into a furnace in which an enormous electric arc is kept going. . . . The importance of carbide of calcium rests in the fact that, by contact with water, it produces acetylene gas. The illuminating power of this gas, when burned, is its remarkable property.

"It will be seen that the metallurgical and chemical developments at Niagara are the direct outgrowth of electrical utilization of water power. With many water powers, however, the outlet for the application of the electrical energy exists many miles away from the place at which the water power is found. Even at Niagara there is an example of the beginning of long-distance transmission, by a high-pressure line extending to Buffalo and delivering electric energy to an electric station there. In this case 'step-up' transformers, as they are called, are employed at the Niagara power plant to step up or raise the electrical pressure or potential from that given by the dynamos to that required for the transmission to Buffalo. This transformation is from about 2,500 up to 10,000 volts. At the Buffalo end the reverse process is carried on by 'step-down' transformers, and the energy is delivered to the trolley lines at about 500 volts. . . . The whole Niagara plant has grown into existence within the past five years, and as a consequence of the technical advances within the period of the past ten years. There are, however, in active operation, besides the Niagara power plant, several other water-power transmissions, some of them far exceeding in distance that between Niagara and Buffalo, and some in which the amount of power conveyed, as well as the pressure of the current used upon the line, is much greater than is yet to be found at Niagara. . . . No limit can as yet be definitely set

as to the distance which can be covered in an electrical transmission. . . . It may be said that at present the range of distances is between 30 and 100 miles. . . .

"Electricity seems destined at no distant day to play an important part in revolutionizing passenger traffic between large centers of population. The facility with which electric service may be superposed on ordinary steam roads will greatly further this development. The work with the third-rail system, undertaken by one of our prominent railway organizations, has abundantly demonstrated the practicability of such superposition. The future will witness the growing substitution of either single motor cars or two or three coupled cars for long, heavy trains drawn by locomotives, and a more frequent service will result. There is an eventual possibility of higher average speeds, since stops will not consume much time, and the time required to recover the speed after a stop will be much less than at present. . . . The heating power of the electric current is now utilized in a variety of ways. Electric welding machinery has been put into service either for accomplishing results which were not possible to be obtained before its development, or to improve the work and lessen the cost."—Elihu Thomson, *Electrical Advance in Ten Years* (*Forum, Jan.*, 1898).

Electrical Science: Development of Power at Niagara Falls.—The following description of the engineering work by which Niagara was harnessed to turbines and dynamos, for an enormous development of electrical power, is taken from a paper read by Mr. Thomas Commerford Martin, of New York, at a meeting of the Royal Institution of Great Britain, June 19, 1896, and printed in the Proceedings of the Institution, Vol. 15; reprinted in the Annual Report of the Smithsonian Institution, 1896, p. 223: "Niagara is the point at which are discharged, through two narrowing precipitous channels only 3,800 feet wide and 160 feet high, the contents of 6,000 cubic miles of water, with a reservoir area of 90,000 square miles, draining 300,000 square miles of territory. The ordinary overspill of this Atlantic set on edge has been determined to be equal to about 75,000 cubic feet per second, and the quantity passing is estimated as high as 100,000,000 tons of water per hour. The drifting of a ship over the Horse Shoe Fall has proved it to have a thickness at the center of the crescent of over 16 feet. Between Lake Erie and Lake Ontario there is a total difference of level of 300 feet, and the amount of power represented by the water at the falls has been estimated on different bases from 6,750,000 horsepower up to not less than 16,800,000 horsepower, the latter being a rough calculation of Sir William Siemens, who, in 1877, was the first to suggest the use of electricity as the modern and feasible agent of converting into useful power some of this majestic but squandered energy. . . .

"It was Mr. Thomas Evershed, an American civil engineer, who unfolded the plan of diverting part of the stream at a considerable distance above the falls, so that no natural beauty would be interfered with, while an enormous amount of power would be obtained with a very slight reduction in the volume of the stream at the crest of the falls. Essentially scientific and correct as the plan now shows itself to be, it found prompt criticism and condemnation, but not less quickly did it rally the able and influential support of Messrs. W. B. Rankine, Francis Lynde Stetson, Edward A. Wickes, and Edward D. Adams, who organized the corporate interests that, with an expenditure of £1,000,000 in five years, have carried out the present work. So many engineering problems arose early in the enterprise that after the survey of the property in 1890 an International Niagara Commission was established in London, with power to investigate the best existing methods of power development and transmission, and to select from among them, as well as to award prizes of an aggregate of £4,400. This body included men like Lord Kelvin, Mascart, Coleman Sellers, Turrettini, and Dr. Unwin, and its work was of the utmost value. Besides this the Niagara Company and the allied Cataract Construction Company enjoyed the direct aid of other experts, such as Prof. George Forbes, in a consultative capacity; while it was a necessary consequence that the manufacturers of the apparatus to be used threw upon their work the highest inventive and constructive talent at their command.

"The time-honored plan in water-power utilization has been to string factories along a canal of considerable length, with but a short tail race. At Niagara the plan now brought under notice is that of a short canal with a very long tail race. The use of electricity for distributing the power allows the factories to be placed away from the canal, and in any location that may appear specially desirable or advantageous. The perfected and concentrated Evershed scheme comprises a short surface canal 250 feet wide at its mouth, 1¼ miles above the falls, far beyond the outlying Three Sisters Islands, with an intake inclined obliquely to the Niagara River. This canal extends inwardly 1,700 feet, and has an average depth of some 12 feet, thus holding water adequate to the development of about 100,000 horsepower. The mouth of the canal is 600 feet from the shore line proper, and considerable work was necessary in its protection and excavation. The bed is now of clay, and the side walls are of solid masonry 17 feet high, 8 feet at the base, and 3 feet at the top. The northeastern side of the canal is occupied by a power house, and is pierced by ten inlets guarded by sentinel gates, each being the separate entrance to a wheel pit in the power house, where the water is used and the power is secured. The water as quickly as used is carried off by a tunnel to the Niagara River again. . . .

"The wheel pit, over which the power house is situated, is a long, deep, cavernous slot at one side, under the floor, cut in the rock, parallel with the canal outside. Here the water gets a fall of about 140 feet before it smites the turbines. The arrangement of the dynamos generating the current up in the power house is such that each of them may be regarded as the screw at the end of a long shaft, just as we might see it if we stood an ocean steamer on its nose with its heel in the air. At the lower end of the dynamo shaft is the turbine in the wheel pit bottom, just as in the case of the steamer shaft we find attached to it the big triple or quadruple expansion marine steam engine. . . . The wheel pit which contains the turbines is 178 feet in depth, and connects by a lateral tunnel

with the main tunnel running at right angles. This main tunnel is no less than 7,000 feet in length, with an average hydraulic slope of 6 feet in 1,000. It has a maximum height of 21 feet, and a width of 18 feet 10 inches, its net section being 386 square feet. The water rushes through it and out of its mouth of stone and iron at a velocity of 26½ feet per second, or nearly 20 miles an hour. More than 1,000 men were employed continuously for more than three years in the construction of this tunnel. . . .

"The American Company has also pre-empted the great utilization of the Canadian share of Niagara's energy. The plan for this work proposes the erection of two power houses of a total ultimate capacity of 125,000 horsepower. . . . With both the Canadian and American plants fully developed, no less than 350,000 horsepower will be available."

"Within the last five years," said the "Electrical Review," in a "historical number" issued at the beginning of 1901, "there have been built in many parts of the world electrical installations of great magnitude, transmitting the power of cataracts for considerable distances. The longest of these, in California, operates over a distance of 115 miles. Perhaps the largest of them is that at Niagara, where 105,000 horse power is developed, and much of it transmitted . . . to the city of Buffalo"—20 miles.

The first transmission of power from Niagara Falls to Buffalo was made at midnight, November 15–16, 1896, when 1,000 horsepower was sent over the wires to the power-house of the Buffalo Railway Company. The important event was signalled to the citizens by the firing of cannon, the ringing of bells and sounding of steam whistles.

Electrical Science: The rotary magnetic field.—Polyphased currents.—Nikola Tesla's inventions.—"At about the same time [1888], Galileo Ferraris, in Italy, and Nikola Tesla, in the United States, brought out motors operating by systems of alternating currents displaced from one another in phase by definite amounts and producing what is known as the rotating magnetic field. This invention seems destined to be one of the most important that has been made in the history of electricity. The result of the introduction of polyphase systems has been the ability to transmit power economically for considerable distances, and, as this directly operated to make possible the utilization of water-power in remote places and the distribution of power over large areas, the immediate outcome of the polyphase system was power transmission; and the outcome of power transmission almost surely will be the gradual supersession of coal and the harnessing of the waste forces of Nature to do useful work."—*Electrical Review, Jan.* 12, 1901.

The following description of Tesla's invention was given by N. W. Perry in the "Engineering Magazine": "If the north and south poles of a small horseshoe magnet be suspended over a bar of soft iron free to revolve in a horizontal plane, or be placed over an ordinary compass-needle, the latter will be attracted at either end by the poles of the magnet and take up a position parallel to a straight line drawn between the two poles of the magnet. Now if the latter be revolved through any angle the soft iron or needle will follow, being dragged around by the magnet, and if the magnet be caused to revolve regularly the iron will also revolve, being pulled around by the full force of the magnet. It was not feasible, however, to cause the magnet to revolve in this way, and Tesla's invention consisted in obviating this trouble and, in fact, greatly simplifying the problem. He conceived the idea that if he took an iron ring and used two alternating currents, one of which had its maximum value at the instant that the other had a zero value—or, in other words, two currents whose periods were such that one waned as the other increased—he could produce in that iron ring by winding these circuits in alternate coils surfaces that without any mechanical movement of the parts would travel around that ring with a rapidity equal to the number of changes of direction of the currents employed. He thus had a ring, the north and south poles of which were rapidly revolving just as would the poles of the horseshoe magnet were it tied at its middle to a twisted string and allowed to revolve. A piece of iron pivoted at its middle placed concentric with this ring would therefore be dragged around by the changing poles of the ring. He had thus discovered what is somewhat awkwardly expressed by the expression, 'the rotary magnetic field,' and also the use of what have been termed 'polyphased currents'—the one referring to the magnetism and the other to the combination of currents by which this changing magnetism was produced. This discovery is undoubtedly one of the most important that has ever been made within the domain of alternating currents."—*Engineering Magazine, v.* 7, *p.* 780.

Another of Tesla's inventions or discoveries which excited greater popular interest was that which produced what were called "high frequency effects," first publicly shown in connection with a lecture at Columbia College, in the spring of 1890. "Mr. Tesla started with the idea of setting matter into vibration at a rate approximating that of light (some two and a half millions a second), with the expectation that under such violent molecular agitation it would emit light. He has not as yet succeeded in obtaining so high a rate, but a much lower one produced some very surprising luminous effects. . . . The dynamo method for getting very high frequencies was soon abandoned as inadequate, and the oscillatory discharge of a Leyden jar or plate condensers was substituted. . . . Perhaps the most surprising of the new facts elicited from his investigations is that the shock due to these very high voltage and high frequency currents can be supported by a person without any serious inconvenience. He passes a current of two hundred thousand volts through his body with perfect impunity."—F. J. Patten, *New Science Review, v.* 1, *p.* 84.

Electrical Science: Development of the Telephone System.—The annual report of the American Telephone and Telegraph Company (by which the property and business of the American Bell Telephone Company were taken over at the close of the year 1899) for the year ending December 31, 1900, contains the following brief review of the development and growth of the telephone system, especially in the United States: "The year just passed rounds out the quarter century, within which is compassed the discovery and application of the art of transmitting speech by telephone. A brief review of the development and growth of this new industry,

which has become so important a factor in commercial and social life, seems appropriate at this time. Twenty-five years ago the wonderful invention of Professor Bell was made known to the world. Twenty-three years ago the first telephone exchange in the world was established in the United States, and from that beginning has been built up the great system of exchanges, and the network of connecting lines over which conversation can be held between points over a thousand miles apart. Twenty years ago there were 47,880 telephone subscribers in the United States, and 29,714 miles of wire in use for telephonic purposes. At the end of last year, there were 800,880 exchange stations equipped with our instruments, and 1,961,801 miles of wire were employed for exchange and toll line service. The United States has, from the beginning, held the leading place among nations in respect not only of the extensive development of the business, but in the employment of modern and improved appliances, tending to greater efficiency of service.

"In connection with the record of development of telephone service in this country, some comparison of the systems of foreign countries is of interest. The latest reports that can be obtained, part of which are for the year 1899, others to the close of 1900, show the countries next in order to the United States, as respects the development of telephone service, to be the German Empire, having 229,391 stations; Great Britain, 171,660; Sweden, 73,500; France, 59,927; Switzerland, 38,864; Austria, 32,255; Russia, 31,376; Norway, 29,446.

"As before stated, there were, at the close of last year, more than 800,000 stations connected with the exchanges of our licensee companies, which exceeds the aggregate number of subscribers in all the countries of Continental Europe. In addition to this, there were over 40,000 private line stations equipped with our telephones. The number of exchange and toll line connections in the United States now reaches almost two thousand millions yearly."

More detailed and precise statistics of the telephone service in the United States are given in the report as follows:

	Jan. 1, 1892.	Jan. 1, 1901.
Exchanges	788	1,348
Branch offices	509	1,427
Miles of wire on poles	180,139	627,897
Miles of wire on buildings	14,954	16,833
Miles of wire underground	70,334	705,269
Miles of wire submarine	1,029	4,203
Total miles of wire	266,456	1,354,202
Total circuits	186,462	508,262
Total employés	8,376	32,837
Total stations	216,017	800,880

The estimated number of exchange connections daily in the United States, made up from actual count in most of the exchanges, is 5,668,986. Or a total per year of about 1,825,000,000. The number of daily calls per station varies in different exchanges from 1 to $15\frac{5}{10}$, the average throughout the United States being $7\frac{1}{10}$. The average cost to the subscriber varies according to the size of the exchange and character of the service, from less than 1 to 9 cents per connection.

Electrical Science: Dr. Pupin's revolutionary improvement in long-distance Telephony.—The most important advance in telephonic science that has been made since the invention of the Bell instrument was announced at about the beginning of the new century, as the result of studies pursued by Dr. Michael I. Pupin, of Columbia University, New York. Mathematical and experimental investigations which Dr. Pupin had been carrying on, for several years, led him to a determination of the precise intervals at which, if inductance coils are inserted in a long conductor, an electric current in traversing it may be made to travel far without much loss of force. He is said to have taken a hint from seeing how waves of vibration in a cord are strengthened by lightly "loading" it at certain exact points, determined by the wave lengths. It is probably correct to describe his invention as being a scientific ascertainment of the points in a long telephonic circuit at which to load the electric current in it, and the precise loading to be applied.

In a paper published in the "Western Electrician," describing his investigations mathematically, Dr. Pupin wrote: "If an increase in efficiency of wave transmission over a cord thus loaded is to be obtained, it is evident that the load must be properly subdivided and the fractional parts of the total load must be placed at proper distances apart along the cord, otherwise the detrimental effects due to reflections resulting from the discontinuities thus introduced will more than neutralize the beneficial effects derived from the increased mass. . . . The insertion of inductance coils at periodically recurring points along the wave conductor produces the same effect upon electrical wave transmission as the distribution of the small loads along the stretched cord . . . produces upon mechanical wave transmission along the cord."

The result is said to be that conversation by telephone over a distance of 3,000 miles is made not only practicable but easy, and that it is believed to be as practicable through submarine cables as through overland wires. If it does not make the telephone a common instrument of communication from continent to continent, it will, at least, improve oceanic telegraphy beyond measure. According to newspaper report, Dr. Pupin's invention has been sold to the Bell Telephone Company for a very large sum.

Electrical Science: Wireless Telegraphy.—"In 1864 Maxwell observed that electricity and light have the same velocity, 186,400 miles a second, and he formulated the theory that electricity propagates itself in waves which differ from those of light only in being longer. This was proved to be true by Hertz, in 1888, who showed that where alternating currents of very high frequency were set up in an open circuit, the energy might be conveyed entirely away from the circuit into the surrounding space as electric waves. . . . He demonstrated that electric waves move with the speed of light, and that they can be reflected and refracted precisely as if they formed a visible beam. At a certain intensity of strain the air insulation broke down, and the air became a conductor. This phenomenon of passing quite suddenly from a non-conductive to a conductive state is . . . also to be noted when air or other gases are exposed to the X ray.

"Now for the effect of electric waves such as Hertz produced, when they impinge upon substances reduced to powder or filings. Conductors, such as the metals, are of inestimable service to the electrician; of equal value are non-

conductors, such as glass and gutta-percha, as they strictly fence in an electric stream. A third and remarkable vista opens to experiment when it deals with substances which, in their normal state, are non-conductive, but which, agitated by an electric wave, instantly become conductive in a high degree. As long ago as 1866 Mr. S. A. Varley noticed that black lead, reduced to a loose dust, effectually intercepted a current from fifty Daniell cells, although the battery poles were very near each other. When he increased the electric tension four- to sixfold, the black-lead particles at once compacted themselves so as to form a bridge of excellent conductivity. On this principle he invented a lightning-protector for electrical instruments, the incoming flash causing a tiny heap of carbon dust to provide it with a path through which it could safely pass to the earth. Professor Temistocle Calzecchi Onesti of Fermo, in 1885, in an independent series of researches, discovered that a mass of powdered copper is a non-conductor until an electric wave beats upon it; then, in an instant, the mass resolves itself into a conductor almost as efficient as if it were a stout, unbroken wire. Professor Edouard Branly of Paris, in 1891, on this principle devised a coherer, which passed from resistance to invitation when subjected to an electric impulse from afar. He enhanced the value of his device by the vital discovery that the conductivity bestowed upon filings by electric discharges could be destroyed by simply shaking or tapping them apart. . . .

"The coherer, as improved by Marconi, is a glass tube about $1\frac{1}{2}$ inches long and about $\frac{1}{12}$ of an inch in internal diameter. The electrodes are inserted in this tube so as almost to touch; between them is about $\frac{1}{30}$ of an inch filled with a pinch of the responsive mixture which forms the pivot of the whole contrivance. This mixture is 90 per cent. nickel filings, 10 per cent. hard silver filings, and a mere trace of mercury; the tube is exhausted of air to within $\frac{1}{10000}$ part. . . . The coherer, when unexcited, forms a link which obstructs the flow of a current eager to leap across. The instant that an electric wave from the sending-station impinges upon the coherer it becomes conductive; the current instantly glides through it, and at the same time a current, by means of a relay, is sent through [a] powerful voltaic battery, so as to announce the signal through an ordinary telegraphic receiver.

"An electric impulse, almost too attenuated for computation, is here able to effect such a change in a pinch of dust that it becomes a free avenue instead of a barricade. Through that avenue a powerful blow from a local store of energy makes itself heard and felt. No device of the trigger class is comparable with this in delicacy. An instant after a signal has taken its way through the coherer a small hammer strikes the tiny tube, jarring its particles asunder, so that they resume their normal state of high resistance. We may well be astonished at the sensitiveness of the metallic filings to an electric wave originating many miles away, but let us remember how clearly the eye can see a bright lamp at the same distance as it sheds a sister beam. Thus far no substance has been discovered with a mechanical responsiveness to so feeble a ray of light; in the world of nature and art the coherer stands alone. . . .

"An essential feature of this method of etheric telegraphy, due to Marconi himself, is the suspension of a perpendicular wire at each terminus, its length twenty feet for stations a mile apart, forty feet for four miles, and so on, the telegraphic distance increasing as the square of the length of suspended wire. In the Kingstown regatta, July, 1898, Marconi sent from a yacht under full steam a report to the shore without the loss of a moment from start to finish. This feat was repeated during the protracted contest between the 'Columbia' and the 'Shamrock' yachts in New York Bay, October, 1899. On March 28, 1899, Marconi signals put Wimereux, two miles north of Boulogne, in communication with the South Foreland Lighthouse, thirty-two miles off. In August, 1899, during the manœuvres of the British navy, similar messages were sent as far as eighty miles. . . .

"A weak point in the first Marconi apparatus was that anybody within the working radius of the sending-instrument could read its message. To modify this objection secret codes were at times employed, as in commerce and diplomacy. A complete deliverance from this difficulty is promised in attuning a transmitter and a receiver to the same note, so that one receiver, and no other, shall respond to a particular frequency of impulses. The experiments which indicate success in this vital particular have been conducted by Professor Lodge."—G. Iles, *Flame, Electricity and the Camera, ch.* 16 (*N. Y.: Doubleday, Page & Co.*).

"Shall we not," said Professor John Trowbridge, in an article published in the "New York Tribune," January 6, 1901, "in the next hundred years dispense with the limitations of wires and speak boldly through space, reaching some expectant human ear hundreds of miles away with the same ease that we now converse in a room? It is already possible to send messages by dots and dashes sixty to seventy miles without the use of wires. In the early days of the telephone this was the practical limit of that instrument, and we are all familiar with the immense extension which has taken place. Shall we not see a similar extension in the field of wireless telegraphy? Some late experiments which I have made lead me to be optimistic in regard to a possible great extension of the methods of wireless telegraphy.

"In the first place, I believe that these experiments prove that wireless telegraphy is not necessarily or merely accomplished through the air, but, on the contrary, that the earth plays the controlling part, and that the message flows, so to speak, through the earth or over its surface rather than through the air. The most striking experiment was as follows: The poles of a storage battery of twenty thousand cells were connected with the ground at the Jefferson Laboratory, and I was enabled to receive the message in a room three quarters of a mile from the laboratory without the use of masts or wires of any sort. The earth was the medium of communication, and it seems possible, by arranging the sending and receiving apparatus suitably in connection with the electrical capacity of the earth, that we may dispense with lofty masts and overcome in this way the curvature of the earth."

Extensive experiments in wireless telegraphy are being conducted by the United States Weather Bureau, of which the following is a recent report: "Recognizing the advantage that would result to commerce and navigation by the establishment

of wireless electrical communication between vessels at sea and exposed points on our lake and sea coasts, and also between islands along said coasts and the mainland, the Weather Bureau was directed to systematically investigate the various methods of electrical communication without wires. The progress made is eminently satisfactory. New appliances have been devised for the transmission of signals, and receivers have been constructed that probably are more delicate than any heretofore made. Messages already have been successfully transmitted and received over 50 miles of land, which presented a rough and irregular surface, conditions most unfavorable for the transmission of electro-magnetic waves. It is believed that the efficiency indicated by such transmission overland is sufficient to operate successfully over several hundred miles of water. The apparatus used is capable of further improvement. I hope the time is near at hand when the great number of craft employed in the coastwise commerce of the United States and over its great inland seas will be placed in instantaneous communication with the numerous stations of our Weather Bureau, which are located at all important ports. The matter is one of such great importance to our commerce that I have authorized extensive experimentation, which, from the success so far attending our efforts, will be vigorously prosecuted."—*United States, Annual Report of the Secretary of Agriculture, Nov.* 24, 1900, *p.* 12.

On the 12th of March, 1901, the chief of the Weather Bureau, Professor Moore, gave to the Press the following statement as to experiments in progress along the Virginia and North Carolina coast: "The most efficient method of long distance transmission has been found to be from wire cylinders. The new coast stations are being equipped with cylinders of sixteen wires each and 140 feet in length. From these cylinders it is expected to cover a magnetic field of not less than five hundred miles. The stations now in operation are at Hatteras and at Roanoke Island, in Pamlico Sound, North Carolina. Workmen are beginning the construction of a station at Cape Henry, which will be the third station. When this is finished the two remote stations will be 127 miles apart."

Mechanics: Steam turbines.—"The latest form of steam-engine recalls the first. The steam-turbines of De Laval and of Parsons turn on the same principle as the æolipile of Hero. That simple contrivance was a metallic globe mounted on axes, and furnished through one of its trunnions with steam from a boiler near by. As steam rushed out from two nozzles diametrically opposite to each other, and at tangents to the globe, there resulted from the relieved pressure a swift rotation which might have done useful work. . . . Before the steam-turbine could be invented, metallurgists and mechanics had to become skilful enough to provide machinery which may with safety rotate 10,000 times in a minute; Watt had to invent the separate condenser; means had to be devised for the thorough expansion of high-pressure steam; and the crude device of Hero had to be supplanted by wheels suggested by the water-turbine.

"The feature which gives the Parsons steam-turbine its distinction is the ingenious method by which its steam is used expansively. In a piston-engine the cylinder is filled to one-twelfth or one-fifteenth of its capacity with high-pressure steam, when communication with the boiler is cut off; during the remainder of its stroke the piston is urged solely by the steam's elasticity. In the Parsons turbine, by arranging what is practically a series of wheels on the same shaft, the steam passes from one wheel to the next, and at each wheel parts with only a fraction of its pressure and velocity. . . .

"The 'Turbinia,' a torpedo-boat of 44½ tons displacement, 100 feet in length, and 9 feet in beam, driven by this turbine, has consumed but 14½ pounds of steam an hour per indicated horse-power. The 'Viper,' a torpedo-boat destroyer of 325 tons, and provided with a turbine capable of developing as much as 12,000 horse-power, ran at the rate of 37 knots in a rough sea during her trial trip in November, 1899."—G. Iles, *Flame, Electricity and the Camera, ch.* 5 (*N. Y.: Doubleday, Page & Co.*).

Medical and Surgical: The determination of germ diseases.—"Since 1880 it has been proved that anthrax, Asiatic cholera, cerebro-spinal meningitis, diphtheria, one form of dysentery, erysipelas, glanders, gonorrhœa, influenza, certain epidemics of meat poisoning, pyæmia and suppuration in general, pneumonia, tetanus, relapsing fever, tuberculosis, bubonic plague, and typhoid fever are due to minute vegetable organisms known as bacteria; that malarial fevers, Texas cattle fever, and certain forms of dysentery are due to forms of microscopic animal organisms known as microzoa; and for most of these diseases the mode of development and means of introduction of the micro-organism into the body are fairly well understood. To the information thus obtained we owe the triumphs of antiseptic and aseptic surgery, a great increase of precision in diagnosis, the use of specific antitoxins as remedies and as preventives, and some of the best practical work in public hygiene."—Dr. John S. Billings, *Progress of Medicine in the Nineteenth Century* (*N. Y. Evening Post, Jan.* 12, 1901).

Medical and Surgical: Antitoxine.—Treatment of diphtheria.—"In the early study of germs and their relation to disease it was supposed that the symptoms of the disease depended directly upon the germs themselves. This, however, has been proven to be false with reference to most of the infectious diseases studied. Thus, in diphtheria, the bacilli were found, as a rule, only in the throat or upper air passages, while the effects of the disease were far-reaching, involving the heart, the nerves, and other distant parts of the body. This, and other like observations, led to the careful study of the products produced by the growth of bacteria. As the result of the work of Roux in Paris, and Brieger in Berlin, the exact nature of the toxic products of the diphtheria bacillus was discovered. It was found that this bacillus produces in its growth a poison which is known as the diphtheria 'toxine.' This was isolated and injected into animals with the reproduction of all the symptons of diphtheria excepting the membrane in the throat. . . .

"In his early work upon splenic fever and chicken-cholera Pasteur, having established the causes of these diseases, set himself the task of discovering means of preventing them. After very many experiments he found that animals inoculated with the germs of splenic fever, when these germs had been cultivated at a relatively

high temperature, were protected against the disease itself, while these inoculations themselves were harmless. . . . These methods of producing immunity have been extensively used in Europe for the past twenty years and have been of immense practical value.

"With the discovery that it was not the bacteria themselves which produced most of the symptoms, but their poisonous products or toxines, new experiments in immunity were made by injecting these toxines into animals. It was found that if the quantity of the diphtheria toxine introduced was at first so small as not to kill the animal, the dose could gradually be increased until finally such a tolerance was established that the animal could resist enormous doses of it. Many theories were advanced as to the manner in which this tolerance was established. The conclusion was finally reached that it was due to the gradual production in the blood of larger and larger quantities of some substance which neutralized the toxine, i. e., an 'antitoxine.' . . . Later experiments showed that if some of the blood of an animal, which in this way had been made insusceptible to diphtheria, was injected into another animal, the latter likewise became to a certain degree and for a certain time insusceptible; that is to say, became 'immunized.' . . .

"The present plan of producing antitoxine is somewhat as follows. Large animals, such as the horse or cow, are usually employed for purposes of injection. In the beginning as large a quantity of the toxine of diphtheria is injected as the animal will bear without danger to life. . . . It is found that the dose of the toxine can gradually be increased with each injection until enormous quantities can be tolerated. When this point is reached at which the injection of large amounts of the toxine produces no reaction, the animal is said to possess a high degree of immunity. At this time the blood-serum contains a very large amount of the antitoxine. A long time is required for the production of this condition, the period being from three to twelve months, according to the size of the animal, its susceptibility, and many other conditions. . . . The antitoxine is obtained from the blood of the animal, generally by bleeding from the jugular vein. . . . After standing for a few hours this blood separates into a clot and a clear portion above which is known as the serum. The antitoxine is contained in the blood-serum."—L. E. Holt, *The Antitoxine Treatment of Diphtheria* (*Forum, March*, 1895).—See, also (in this vol.), PLAGUE.

Medical and Surgical: Discovery of the secret of malaria.—Detection of the mosquito as a carrier of disease.—"Twenty-five years ago the best-informed physicians entertained erroneous ideas with reference to the nature of malaria and the etiology of the malarial fevers. Observation had taught them that there was something in the air in the vicinity of marshes in tropical regions, and during the summer and autumn in semi-tropical and temperate regions, which gave rise to periodic fevers in those exposed in such localities, and the usual inference was that this something was of gaseous form—that it was a special kind of bad air generated in swampy localities under favorable meteorological conditions. It was recognized at the same time that there are other kinds of bad air, such as the offensive emanations from sewers and the products of respiration of man and animals, but the term malaria was reserved especially for the kind of bad air which was supposed to give rise to the so-called malarial fevers. In the light of our present knowledge it is evident that this term is a misnomer. There is no good reason for believing that the air of swamps is any more deleterious to those who breathe it than the air of the sea coast or that in the vicinity of inland lakes and ponds. Moreover, the stagnant pools, which are covered with a 'green scum' and from which bubbles of gas are given off, have lost all terrors for the well-informed man, except in so far as they serve as breeding places for mosquitoes of the genus Anopheles. The green scum is made up of harmless algæ such as Spirogyra, Zygnema Protococcus, Euglena, etc.; and the gas which is given off from the mud at the bottom of such stagnant pools is for the most part a well-known and comparatively harmless compound of hydrogen and carbon-methane or 'marsh-gas.'

"In short, we now know that the air in the vicinity of marshes is not deleterious because of any special kind of bad air present in such localities, but because it contains mosquitoes infected with a parasite known to be the specific cause of the so-called malarial fevers. This parasite was discovered in the blood of patients suffering from intermittent fevers by Laveran, a surgeon in the French army, whose investigations were conducted in Algiers. This famous discovery was made toward the end of the year 1880; but it was several years later before the profession generally began to attach much importance to the alleged discovery."—G. M. Sternberg, *Malaria* (*Popular Science Monthly, Feb.*, 1901).

"It was the French doctor Laveran who, after a stay in a deadly malarial region of Algeria, discovered the malaria parasite in 1880. True, that pigment-cells, which we should now describe as malaria-parasites, were observed in human blood as early as 1835, among others by Virchow; but their relation to the disease was not known. In 1881, Laveran embodied his researches in a book, but its importance was overlooked. Bacteria attracted then general attention, and Laveran's parasite, not being a bacterium, was little thought of. He stuck, nevertheless, to his discovery, and was soon joined in his researches by Golgi (the Italian professor to whom we owe the method that led to the discovery of the neurons), as also by Marchiafava, Celli, Councilman, Sternberg, and the Viennese doctor Mannaberg who published in 1893 a full compendium of these researches. Dr. Mannaberg proved in this book that the real cause of malaria is Laveran's parasite, and he told its most interesting life-history so far as it was then known.

"The parasite of malaria is not a bacterium. It is one of the protozoa—namely, as it appeared later on, a coccidium, which, like all other members of that family, undergoes in its development a series of transformations. . . . Laveran saw that some parasites ('corps à flagelles') would send out thin and long flagella which soon parted company with the mother body, and, owing to a proper helicoidal movement, disappeared in the plasm of the blood. This never happened, however, in the body of man, but only when a drop of his infected blood was drawn and placed on the glass plate under the

microscope. Laveran noticed, moreover, minute 'crescent-shaped bodies' which adhered to the red corpuscles and looked very much like cysts, protected by a harder envelope. From fifteen to twenty minutes after these bodies had been placed under the microscope, they also gave origin to a great number of 'flagella'; and this evolution, too, he remarked, seemed to be accomplished only when the cysts were taken out of the human body.

"It was only natural to conclude from these observations that the further development of the flagella may take place in the body of some other animal than man, and this consideration brought Laveran, in a book which he published in 1884, to the idea that, taking into consideration the quantities of mosquitoes in malarial countries, they may be the agents of transition of malaria. This remark passed, however, unperceived. Many had the suspicion that gnats may play some part in the inoculation of malaria: the Italian peasants always thought so, and in the medical literature an American doctor, Mr. King, had advocated the same idea. But the complete life-history of the malaria parasite being not yet known fifteen years ago, the necessity of the mosquito or of some other living being serving as a host for the completion of the reproduction-cycle was not understood."—P. Kropotkin, *Recent Science* (*Nineteenth Century Rev., Dec.*, 1900).

Dr. Patrick Manson, of London, is credited with the final formulation of the mosquito-malarial theory; but the proofs by which it has been established have come from a number of investigators, who have patiently traced the singular life-history of the parasite, throughout its passage from man to the mosquito and from the mosquito back to man, as a vehicle of disease. Among the latter, prominence is given to Major Ronald Ross, who lectured on the subject in London in September, 1900, and was reported in "The Times" as follows:

"They first carried on their life in man—the intermediary host—and later in the mosquito, the definitive host. These Hæmamœbidæ began as spores which entered a blood corpuscle, grew and became amœbæ. The nuclear matter divided, the corpuscle containing it burst, the spores scattered, and each spore then attached itself to a fresh corpuscle. The access of the typical fever began with this scattering of the spores, and thus the periodicity of the fever was accounted for. Besides this neutral proliferation there was proliferation by gametes. The blood of a fever patient exhibited the first forms of the gametocytes. The spore grew inside the blood corpuscle, and in that species which caused malignant fever it grew until it had almost eaten the whole of the host. It was then technically called a crescent. If this crescent were examined under the microscope a wonderful development might be observed to take place in a few moments. The crescent swelled and became first oval, then spherical, and in about 15 minutes after the drawing of the blood the microgametes made their escape and were to be seen wriggling about in the 'liquor sanguinis.' Ultimately they entered the macrogametocytes and produced zygotes, which was nothing but a perfect example of the sperm and the ovum process.

"The whole process could be watched under the microscope. The mosquito, having bitten a person in whose blood these gametocytes were present, would take perhaps 100 of them into its own system, where the zygotes acquired a power of movement, edging towards the wall of the mosquito's stomach. About 12 hours afterwards they would be found adhering to the walls of the stomach, through which they passed and to which they finally attached themselves on the outside. This process was accomplished in about 36 hours. The zygotes then grew until they had increased to about eight times their original diameter and were almost visible to the naked eye. As the zygote increased it divided into meres containing nuclear matter, which went to the surface. The process here seemed to be closely similar to spermato-genesis, and Professor Ray Lankester declared that the process was the first known example of audrocratic parthenogenesis. When the final development was reached the cells burst and the blasts escaped and were immediately carried into all parts of the insect. They made their way to the salivary gland, with the evident purpose of seeking the blood of a fresh human host; and the injection of the secretion of the mosquito's salivary gland caused the bump which marked the mosquito's bite. A very large series of experiments had shown conclusively that malarial infection was caused by the bite of the mosquito.

"The parasites which infested human blood were carried only by one genus of mosquito—'Anopheles'; the genus 'Culex' was harmless. The two genera could be readily distinguished. For example, 'Anopheles' rested on walls with their tails stuck out perpendicular to the wall; 'Culex' attached themselves with tails hanging downwards. 'Culex' bred in the water in pots and tubs; 'Anopheles' in pools. The larvæ of 'Culex,' if disturbed, sank to the bottom; the larvæ of 'Anopheles' skimmed along the surface. It was doubtful whether the eggs of 'Anopheles' would live for more than a few days after desiccation. The eggs were laid in an equilateral triangular pattern; they were soon hatched, and the larvæ then began to feed on the green scum in the water. A still evening, just before or after rain, was the time most favourable for the hatching out from the pupæ. As to the adults, he believed that they could live for a year; at any rate, they had been kept alive in tubes for more than a month; and it was certain that in England and Italy they hibernated. The female of 'Anopheles' alone was the biter, and though the favourite feeding time was at night, in West Africa the insects had been found to bite all day. While 'Culex' could be detected by its humming, 'Anopheles' was silent, and it was possible to be bitten without knowing of it at the moment. He had found that a blood diet was always necessary to the maturing of the eggs. He had kept many thousands of mosquitoes under observation and had never known one to lay eggs except after a meal of blood. Malarial infection was derived chiefly from the native children, who swarmed everywhere, and whose blood was full of the infecting parasites."

An expedition sent out to West Africa by the Liverpool School of Tropical Medicine, to pursue investigations there, reported in December, 1900, that its observations confirm the conclusion "that the blood parasite which gives rise to malarial fever in man is carried by the mosquito from the native to the European—and more especially

from the native children. The examination of the blood of hundreds of native children revealed the interesting fact that between 50 and 80 per cent. of those under five years, between 20 and 30 per cent. of ages between five and ten years, and a small percentage over ten years contained malarial parasites, often in very large numbers. The breeding places of the 'Anopheles' were found to be chiefly the dug-out native canoes in the regions of the mangrove swamps, claypits and puddles in the forested district, and at Lokoja puddles and ditches on and alongside the roads and footpaths. It was particularly noticed everywhere how carelessness in the construction of roads and footpaths, and more especially in the laying out of the areas surrounding the factories of the European traders, was accountable for the production of a large number of breeding places for mosquitoes, which could easily have been avoided. In fact, it is certain that in West Africa such conditions are far more dangerous and more common than the proximity of a marsh or swamp, which is often noted as a cause of fever. . . . The two methods upon which alone any reliance can be placed as measures for prevention are—(1) segregation of Europeans from natives of all sorts, at a distance of about half a mile; and (2) complete and efficient surface drainage of the whole district in the immediate neighbourhood of European quarters."

The detection of the mosquito as a carrier of one disease drew suspicion on the pestilent insect of other kindred crimes, and strong evidence of its agency in propagating yellow fever has been gathered already. A board of medical officers, which went from the United States to Cuba in the summer of 1900 to study the matter, reported in October that their investigations tended quite positively to that conclusion. The board was composed of Dr. Walter Reed, surgeon, United States Army, and Dr. James Carroll, Dr. A. Agramonte, and Dr. Jesse W. Lazear, all acting assistant surgeons of the United States Army. Two months later, so much confirmation had been obtained that Major-General Wood, Military-Governor of Cuba (himself a medical man) was reported, on the 29th of December, to have issued a general order directed to his post commanders, "reciting that the chief surgeon of the Department of Cuba has reported that it is now well-established that malaria, yellow fever and filarial infection are transmitted by the bites of mosquitoes. Therefore the troops are enjoined to observe carefully two precautions: First—they are to use mosquito bars in all barracks, hospitals and field service whenever practicable. Second—They are to destroy the 'wigglers,' or young mosquitoes, by the use of petroleum on the water where they breed. Permanent pools or puddles are to be filled up. To the others is to be applied one ounce of kerosene to each fifteen square feet of water twice a month, which will destroy not only the young but the old mosquitoes. This does not injure drinking water if drawn from below and not dipped out. Protection is thus secured, according to the order, because the mosquito does not fly far, but seeks shelter when the wind blows, and thus each community breeds its own mosquitoes."

This was followed in April, 1901, by an order from the chief surgeon at Havana, approved by Surgeon-General Sternberg, U. S. A., which says: "The recent experiments made in Havana by the Medical Department of the Army having proved that yellow fever, like malarial fever, is conveyed chiefly, and probably exclusively, by the bite of infected mosquitoes, important changes in the measures used for the prevention and treatment of this disease have become necessary. So far as yellow fever is concerned, infection of a room or building simply means that it contains infected mosquitoes, that is mosquitoes which have fed on yellow fever patients. Disinfection, therefore, means the employment of measures aimed at the destruction of these mosquitoes. The most effective of these measures is fumigation, either with sulphur, formaldehyds or insect powder. The fumes of sulphur are the quickest and the most effective insecticide, but are otherwise objectionable. Formaldehyde gas is quite effective if the infected rooms are kept closed and sealed for two or three hours. The smoke of insect powder has also been proved useful; it readily stupefies mosquitoes, which drop to the floor and can then be easily destroyed. The washing of walls, floors, ceilings and furniture with disinfectants is unnecessary."

Medical and Surgical: Recent advances in surgery.—"In no department of surgery has greater progress been made than in the treatment of diseases of the abdominal organs. . . .At the present time no abdominal organ is sacred from the surgeon's knife. Bowels riddled with bullet-holes are stitched up successfully; large pieces of gangrenous or cancerous intestine are cut out, the ends of the severed tube being brought into continuity by means of ingenious appliances; the stomach is opened for the removal of a foreign body, for the excision of a cancer, or for the administration of nourishment to a patient unable to swallow; stones are extracted from the substance of the kidneys, and these organs when hopelessly diseased are extirpated; the spleen, when enlarged or otherwise diseased, is removed bodily; gall-stones are cut out, and even tumours of the liver are excised. The kidney, the spleen, and the liver, when they cause trouble by unnatural mobility, are anchored by stitches to the abdominal wall; and the stomach has been dealt with successfully in the same way for the cure of indigestion. Besides all this, many cases of obstruction of the bowels, which in days not very long gone by would have been doomed to inevitable death, are now cured by a touch of the surgeon's knife. The perforation of the intestine, which is one of the most formidable complications of typhoid fever, has in a few cases been successfully closed by operation; and inflammation of the peritoneum, caused by the growth of tuberculous masses upon it, has been apparently cured by opening the abdominal cavity. Among the most useful advances of this department of surgery must be accounted the treatment of the condition known as 'appendicitis,' which has been to a large extent rescued from the physician, with his policy of 'laissez faire,' and placed under the more resolute and more efficient government of the surgeon. A New York surgeon not long ago reported a series of 100 cases of operation for appendicitis, with only two deaths. . . .

"That surgery could ever deal with the abdominal organs in the manner just described would have seemed to our predecessors in the earlier part of the Queen's reign the baseless fabric of a vision. But the modern surgeon, clad in antisepsis, as the Lady in 'Comus' was 'clothed

round with chastity,' defies the 'rabble rout' of microbes and dares things which only a short time ago were looked upon as beyond the wildest dreams of scientific enthusiasm. It is scarcely twenty years since the late Sir John Erichsen declared in a public address that operative surgery had nearly reached its furthest possible limits of development. He pointed out that there were certain regions of the body into which the surgeon's knife could never penetrate, naming the brain, the heart, and the lung as the most obvious examples of such inviolable sanctuaries of life. Within the last fifteen years the surgeon has brought each of these organs, which constitute what Bichat called the 'tripod of life,' within his sphere of conquest. . . . It must, however, be admitted that the results of brain surgery, though brilliant from the operative point of view, have so far been somewhat disappointing as regards the ultimate cure of the disease. In certain forms of epilepsy, in particular, which at first seemed to be curable by removal of the 'cortical discharging centre' in the brain which is the source of the mischief, the tendency to fits has been found to return after a time, and the last state of the patient has been worse than the first. Still, the mere fact that the brain has been proved to be capable of being dealt with surgically with perfect safety is in itself a very distinct progress. . . .

"Other parts of the nervous system have been brought within the range of surgical art. The vertebral column has been successfully trephined, and fragments of bone pressing on the cord have been taken away in cases of fractured spine; tumours have also been removed from the spinal cord by Mr. Horsley and others. There is a steadily increasing record of cures of intractable neuralgia, especially of the face, by division or removal of the affected nerve trunks. . . .The ends of cut nerves have also been re-united, and solutions of their continuity have been filled up with portions of nerve taken from animals. . . . The heart naturally cannot be made so free with, even by the most enterprising surgeon, as the brain or the lung. Yet within the past twelve months a Norwegian practitioner has reported a case which encourages a hope that even wounds of the heart may not be beyond surgical treatment. . . . Tuberculous and inflammatory diseases of bones and joints, formerly intractable except by the 'ultima ratio' of the amputating knife, are now cured without mutilation. Deformities are corrected by division of tendons, the excision of portions of bone, and the physiological exercise of muscles, without complicated apparatus. The healing of large wounds is assisted by the grafting of healthy skin on the raw surface; wide gaps in bones and tendons are filled up with portions of similar structures obtained from animals." . . . Malcolm Morris, *The Progress of Medicine during the Queen's Reign* (*Nineteenth Century, May,* 1897).—See, also, X Rays, below.

Scientific Literature: International cataloguing.—On the 22d of March, 1894, the Secretaries of the Royal Society of London addressed the following communication to various institutions and societies: "The Royal Society of London, as you are probably aware, has published nine quarto volumes of 'The catalogue of scientific papers,' the first volume of the decade 1874–83 having been issued last year. This catalogue is limited to periodical scientific literature, i. e., to papers published in the transactions, etc., of societies, and in journals; it takes no account whatever of monographs and independent books, however important. The titles, moreover, are arranged solely according to authors' names; and though the Society has long had under consideration the preparation of, and it is hoped may eventually issue, as a key to the volumes already published, a list in which the titles are arranged according to subject-matter, the catalogue is still being prepared according to authors' names. Further, though the Society has endeavored to include the titles of all the scientific papers published in periodicals of acknowledged standing, the catalogue is, even as regards periodical literature, confessedly incomplete, owing to the omission of the titles of papers published in periodicals of little importance, or not easy of access.

"Owing to the great development of scientific literature, the task of the Society in continuing the catalogue, even in its present form, is rapidly increasing in difficulty. At the same time it is clear that the progress of science would be greatly helped by, indeed, almost demands, the compilation of a catalogue which should aim at completeness, and should contain the titles of scientific publications, whether appearing in periodicals or independently. In such a catalogue the titles should be arranged not only according to authors' names, but also according to subject-matter, the text of each paper and not the title only being consulted for the latter purpose. And the value of the catalogue would be greatly enhanced by a rapid periodical issue, and by publication in such a form that the portion which pertains to any particular branch of science might be obtained separately. It is needless to say that the preparation and publication of such a complete catalogue is far beyond the power and means of any single society.

"Led by the above considerations, the president and council of the Royal Society have appointed a committee to inquire into and report upon the feasibility of such a catalogue being compiled through international co-operation."—*Library Journal, March,* 1895.

The movement thus initiated received cordial support and led to the convening of an International Conference in London, in 1896. The Conference was opened on Tuesday, July 14, at Burlington House. "The 42 delegates, representing nearly all the governments of civilized countries and most of the leading scientific societies of the world, were welcomed by Sir John Gorst, as provisional president. . . . It was decided that English, German and French should be the official languages of the conference. . . . The conference closed on Friday, July 17, the need of an international catalogue having been fully recognized, and a plan for its preparation mapped out. It was decided 'That it is desirable to compile and publish by means of some international organization a complete catalogue of scientific literature, arranged according both to subject-matter and to authors' names. That in preparing such a catalogue regard shall, in the first instance, be had to the requirements of scientific investigators, to the end that these may, by means of the catalogue, find out most easily what has been published concerning any particular subject of inquiry.'

"The preparation of the catalogue is to be in charge of an international council, to be appointed, and the final editing and publication shall be conducted by a central international bureau, under the direction of the international council. Any country that is willing to do so shall be entrusted with the task of collecting, provisionally classifying, and transmitting to the central bureau, in accordance with rules laid down by the international council, all the entries belonging to the scientific literature of that country. 'In indexing according to subject-matter regard shall be had, not only to the title (of a paper or book), but also to the nature of the contents.' The catalogue shall comprise all published original contributions—periodical articles, pamphlets, memoirs, etc.—to the mathematical, physical, or natural sciences, . . . 'to the exclusion of what are sometimes called the applied sciences—the limits of the several sciences to be determined hereafter.'. . .

"The central bureau shall issue the catalogue in the form of 'slips' or 'cards,' the details of the cards to be hereafter determined, and the issue to take place as promptly as possible. . . . It was also decided that the central bureau shall be located in London, and that the Royal Society appoint a committee to study all undecided questions relating to the catalogue and to report later. . . . No system of classification was adopted and the subject was turned over for consideration to the committee of organization, which should also suggest 'such details as will render the catalogue of the greatest possible use to those unfamiliar with English.' January 1, 1900, is fixed as the date for the beginning of the catalogue."—*Library Journal, August*, 1896.

A second international conference, to consider further the plans previously outlined, was held Oct. 11–13, 1898, at Burlington House, London. "The attendance was a representative one, including delegates from Austria, Belgium, France, Germany, Hungary, Japan, Mexico, Netherlands, Norway, Sweden, Switzerland, the United Kingdom, the United States (represented by Dr. Cyrus Adler), Cape Colony, India, Natal, New Zealand, and Queensland. Russia, Spain and Italy were the only large continental countries unrepresented. . . .

"Professor Forster having formally presented the report of the Committee of the Royal Society, copies of which were forwarded in April last to the several governments represented at the conference, the discussion of the recommendations was opened, and it was resolved: 'That the conference confirms the principle that the catalog be published in the double form of cards and books. That schedules of classification shall be authorized for the several branches of science which it is decided to include in the catalog. That geography be defined as limited to mathematical and physical geography, and that political and general geography be excluded. That anatomy be entered on the list as a separate subject. That a separate schedule be provided for each of the following branches of science: Mathematics, Astronomy, Meteorology, Physics, Crystallography, Chemistry, Mineralogy, Geology (including Petrology), Geography, mathematical and physical, Paleontology, Anatomy, Zoölogy, Botany, Physiology (including Pharmacology and Experimental Pathology), Bacteriology, Psychology, Anthropology. That each of the sciences for which a separate schedule is provided shall be indicated by a symbol.'" Resolutions were then adopted providing for the regulations to be observed in the preparation of cards or slips, and for the organization of the work through Regional Bureaus.

"The following recommendations of the Royal Society providing for international conventions in connection with the catalog were adopted: 'Each region in which a Regional Bureau is established, charged with the duty of preparing and transmitting slips to the Central Bureau for the compilation of the catalog, shall be called a constituent region. In 1905, in 1910, and every tenth year afterwards, an international convention shall be held in London (in July) to reconsider, and, if necessary, revise the regulations for carrying out the work of the catalog authorized by the international convention of 1898. Such an international convention shall consist of delegates appointed by the respective governments to represent the constituent regions, but no region shall be represented by more than three delegates. The rules of procedure of each international convention shall be the same as those of the international convention of 1898. The decisions of an international convention shall remain in force until the next convention meets.'

"The following recommendations of the Royal Society relating to the constitution of an International Council, which shall be the governing body of the catalog, were adopted: 'Each Regional Bureau shall appoint one person to serve as a member of a body to be called The International Council. The International Council shall, within the regulations laid down by the international convention, be the governing body of the catalog. The International Council shall appoint its own chairman and secretary. It shall meet in London once in three years at least, and at such other times as the chairman, with the concurrence of five other members, may specially appoint. It shall, subject to the regulations laid down by the convention, be the supreme authority for the consideration of and decision concerning all matters belonging to the Central Bureau. It shall make a report of its doings, and submit a balance sheet, copies of which shall be distributed to the several Regional Bureaus, and published in some recognized periodical or periodicals in each of the constituent regions.'"—*Library Journal, December*, 1898.

The third international conference on a catalog of scientific literature was held in London, June 12, 1900, under the auspices of the Royal Society. "Unfortunately the United States finds no place in the list [of delegates]. This was owing to the failure to secure from Congress the necessary appropriation enabling the United States to join in the enterprise; and as the call to the conference required that delegates be charged with full powers, it was impossible for any representative of the United States to be in attendance. . . .

"The general results of the conference are reviewed by Prof. Henry E. Armstrong, in 'Nature,' as follows: 'There can be little doubt that the ultimate execution of this important enterprise is now assured. . . . Every one was of opinion that if a fair beginning can once be made, the importance of the work is so great; it

will be of such use to scientific workers at large; that it will rapidly grow in favor and soon secure that wide support which is not yet given to it simply because its character and value are but imperfectly understood. Therefore, all were anxious that a beginning should be made.

"'It has been estimated that if 300 sets or the equivalent are sold the expenses of publication will be fully met. As the purchase of more than half this number was guaranteed by France, Germany, Italy, Norway, Switzerland, and the United Kingdom, the conference came to the conclusion that the number likely to be taken by other countries would be such that the subscriptions necessary to cover the cost of the catalog would be obtained. The resolution arrived at after this opinion had been formed, That the catalog include both an author's and a subject index, according to the schemes of the Provisional International Committee, must, in fact, be read as a resolution to establish the catalog.

"'Of the countries represented at the various conferences, excepting Belgium, not one has expressed any unwillingness eventually to co-operate in the work. Unfortunately, neither the United States nor Russia was officially represented on the present occasion. The attempts that have been made to induce the government in the United States to directly subsidise the catalog have not been successful: but that the United States will contribute its fair share, both of material and pecuniary support, cannot be doubted. There as here private or corporate enterprise must undertake much that is done under government auspices in Europe. As to Russia, the organization of scientific workers there has been so little developed that it is very difficult to secure their attention, and probably our Russian colleagues are as yet but very imperfectly aware of what is proposed. . . . A Provisional International Committee has been appointed, which will take the steps now necessary to secure the adhesion and co-operation of countries not yet pledged to support the scheme.

"'Originally it was proposed to issue a card as well as a book catalog, but on account of the great additional expense this would involve, and as the Americans in particular have not expressed themselves in favor of a card issue, it is resolved to publish the catalog, for the present, only in the form of annual volumes.

"'From the outset great stress has been laid on the preparation of subject indexes which go behind the titles of papers and give fairly full information as to the nature of their contents. Both at the first and the second International Conference this view met with the fullest approval. Meanwhile, the action of the German government has made it necessary to somewhat modify the original plan. In Germany, a regional bureau will be established, supported by a government subvention, and it is intended that the whole German scientific literature shall be cataloged in this office; no assistance will be asked from authors or editors or corporate bodies. In such an office it will for the present be impossible to go behind titles; consequently, only the titles of German papers will be quoted in the catalog. In the first instance, some other countries may prefer to adopt this course on the ground of economy. But in this country, at least, the attempt will be made to deal fully with the literature, and the co-operation of authors and editors will be specially invited. . . .

"'The catalog is to be published annually in seventeen distinct volumes. The collection of material is to commence from January 1, 1901. As it will be impossible to print and issue so many volumes at once, it is proposed to publish them in sets of four or five at quarterly intervals.'"—*Library Journal, September*, 1900.

The fourth Conference was held at London, December 12–13, 1900, when "all arrangements were completed for the definitive commencement of the work on January 1. . . . The responsibility for publication and for the initial expenditure is undertaken by the Royal Society. . . . A comprehensive and elaborate system of classification has been devised with the assent of all the countries interested. This uniformity in a region where diversity of a perplexing kind has hitherto ruled is in itself a great boon to scientific workers everywhere. It may be anticipated that the scheme will by degrees be adopted in all collections of scientific works. As to the nothing aspects of this important undertaking, larger more need be said at present than that the scientific cataloguing of all scientific work most appropriately celebrates the opening of the twentieth century."—*London Times, Dec.* 14, 1900.

SCOTLAND: A. D. 1900.—Union of the Free and United Presbyterian Churches.—"In the ecclesiastical world only one event of the first importance has happened [in Scotland, in 1900], the consummation of the union between the Free and United Presbyterian Churches, which has been the subject of negotiation for six years past. The May meetings of the leading representative courts of the two denominations were occupied almost exclusively with the final arrangements for the formal act of union, which was fixed to take place on October 31. An attempt by a number of lay office-bearers of the Free Church to postpone the final step, on the ground that the congregations had not been directly and fairly consulted, failed of its object. On October 30 the General Assembly of the Free Church and the Synod of the United Presbyterian Church held their last meetings in Edinburgh as independent bodies. On the following day they formally constituted themselves the United Free Church of Scotland in the Waverley Market, the largest public hall in Scotland, in presence of an audience computed to number 6,000 persons. The union has, as is the rule in Scotland, been accompanied by a 'disruption.' The minority of the Free Church, which on October 30 resolved to remain outside the United Free Church, is very small in number and is financially weak, but it claims to be the true Free Church of Scotland, it is asserting itself vigorously in the Highlands and islands, where Free Church 'constitutionalism' has always been strongest, and it has taken the first step in a process of litigation for the purpose of discovering whether it or the United Free Church is legally entitled to the property of the original Free Church founded in 1843. But for this secession, the strength of which is not accurately estimable, the new denomination would, accord-

ing to the latest official returns, have opposed about 1,680 congregations and about 530,000 members to the 1,450 congregations and 650,000 members of the Church of Scotland."—*London Times, Dec.* 27, 1900.

A. D. 1901 (April).—Promulgation of a new constitution.—A new constitution for Servia was promulgated by King Alexander, at Belgrade, on the 19th of April, 1901. Of the character of the instrument, the King had previously given intimations in an interview conceded to the editor of the "Revue d'Orient," the account of which, translated for the "London Times," is partly as follows: "Our three Constitutions of 1869, 1888, and 1901 differ from each other in important matters of principle. That of 1869 practically amounted to absolutism, if I may thus qualify any Constitution. It is true that the executive power retained but few prerogatives, but that was deceptive, as the rights of the Legislature were surrounded by exceptions and restrictions which made it easy to paralyse and annihilate them at any moment. The Constitution of 1888 had the contrary defects. It subordinated the executive power to that of the Legislature, only leaving to the former an altogether insufficient sphere of action. It had another great fault. It was excessively doctrinaire and theoretical, affecting to foresee everything and to regulate everything, so that the legislative power was bound hand and foot and could not legislate freely. The Constitution which will be promulgated on April 19, the anniversary of the day when the fortress of Belgrade was finally evacuated by the Turks in 1867, is a charter similar to those which organize the public powers in several countries of Europe, as, for instance, in England and in France. It settles the form of government, the powers of the King and of the State, the rights of subjects, the working of the national representation, &c. But it leaves to the Legislature the settlement of all details. What more particularly distinguishes the Constitution of 1901 from that of 1869 is that it prevents the use and abuse of ordinances by the Executive, which will be obliged to frame special laws in every case—that is to say, laws accepted and approved of by the King, the Senate, and the Chamber of Deputies. Thus legality will henceforth be the regulating wheel in the machinery of government. The Chamber of Deputies will be much better organized, as the enlightened classes will be much more numerously represented. The Constitution of 1901 will also present great advantages over that of 1888. The Legislature will control the acts of the Government as far as can possibly be desired. At the same time the constitutional régime as established in the new Constitution will give the King all the power that he ought to retain in a country that is still new, like Servia, without diminishing any of the inviolable liberties of the nation.

"I attach very great importance to the new political institution with which I am going to endow Servia—namely, an Upper Chamber. Considering that it already exists, not only in monarchical countries, but also in most Republics, as, for instance, in France and the United States, I cannot admit that it should be regarded as involving the slightest aristocratic tendency or idea. I know my country well enough to be sure that I shall find a sufficient number of high-class politicians to recruit the Senate, and that enough will remain for the Chamber of Deputies. I am likewise fully persuaded that the legislative task of the Parliament will be much better performed when the Chamber of Deputies is conscious that above it there exists a Senate whose business it is to revise and improve the laws which it has elaborated, of course for the greater benefit of the nation. Then, again, the Senate will form a moderating element which was much wanting in our Legislature. What Servia is suffering from is not any lack of legislation, but from the circumstances that the existing laws were hastily framed or were the outcome of party rancour. If we had formerly had a Senate composed of men of experience and good patriots, they would never have consented to the conclusion of so many onerous loans, to the application of so many iniquitous measures, nor to the convocation of the special tribunal, 'le tribunal extraordinaire,' of 1899.

"At first the Radical party was not favourable to the institution of an Upper Chamber, but it now recognizes the great advantages it will offer, and has rallied to my project. The Progressist party has always been favourable to it. The majority of the Liberal party has also adhered to it. I therefore believe that this new institution will be of the greatest service to the country. All that is required, and with a little good will it can be easily done, is that the members of the two Chambers should endeavour honestly, sincerely, and loyally to work for the good of the State and of the nation. If I have not thought right to raise the qualification for the suffrage, as desired by some people, it is because I did not wish to disfranchise any of those who have enjoyed the right of voting during the last 35 years. I do not wish to restrict any of the rights of the nation.

"The application of the new Constitution will be the great task of my Government, in which I have every confidence. The Prime Minister, Dr. Vuitch, has the sympathy and support not only of his own party but of all who would like to see the country governed in a liberal spirit.

His presence at the head of the Ministry is a pledge for the active and sincere co-operation of all elements of order and progress. . . . As soon as the new Constitution has been promulgated, the Government will invite the co-operation of all those which admit its necessity and fitness. A large Conservative party will thus be formed which will have the requisite power and authority for all purposes of government, for the application of the Constitution, and for the elaboration of financial and economic laws necessary for the progress of the country.

"As regards the question of the succession to the Throne, I wanted to settle it finally, as the members of the reigning dynasty are not numerous unless the remote collateral lines be included, which is not possible. Moreover, everybody wished me to take in this matter such decisions as I might think proper in view of securing the continuation of the Servian Monarchy. The first thing to be done was to safeguard the rights of the direct line without seeking to bind ourselves by the Salic Law, which there is really no reason to apply in our country. I should add here that there are no anti-dynastic elements in Servia, with the exception, perhaps, of a few hare-brained individuals who really do not enter into account. My people are profoundly attached to the reigning dynasty, and never lose an opportunity of showing me their loyalty. It is the same with all the political parties.

"Before promulgating the Constitution I decided to consult the most influential members of the parties in office. They agreed with me, and promised me to assist harmoniously in the work. I have also consulted the leading members of the Liberal party, and with two or three exceptions they have given me the same assurances. Such being the case, I may say that the Constitution of 1901 is not a production of my will or of my good pleasure, but that it is the result of an understanding between the Sovereign and the leaders of the three political parties. I consequently reckon upon their sincere and active co-operation, and I trust they will not fail me. I am firmly convinced that the new Constitution will act as a fresh and vigorous stimulus to my country, and that it will bring it that calm and stability which it sorely needs. I sincerely regard it as a source of prosperity and welfare for Servia."

SHANGHAI.—"Shanghai is the New York of China. It occupies a position on the coast quite similar to that of New York on our own eastern coast, and its percentage of importations into China is about the same as that which New York enjoys in the United States. The large share of the foreign trade of China which Shanghai controls is due largely to its position at the mouth of the great artery through which trade flows to and from China—the Yangtze-Kiang. Transportation in bulk in China up to the present time having been almost exclusively by water, and the Yangtze being navigable by steamers and junks for more than 2,000 miles, thus reaching the most populous, productive, and wealthy sections of the country, naturally a very large share of the foreign commerce entering or leaving that country passes through Shanghai, where foreign merchants, bankers, trade representatives, trade facilities, and excellent docking and steamship conveniences exist. The lines of no less than eight great steamship companies center at Shanghai, where they land freight and passengers from their fleets of vessels which are counted by hundreds, while the smaller vessels, for river and coastwise service, and the native junks are counted literally by thousands. The Yangtze from Shanghai westward to Hankow, a distance of 582 miles, is navigable for very large steamships that are capable of coasting as well as river service. Hankow, which with its suburbs has nearly a million people, is the most important of the interior cities, being a great distributing center for trade to all parts of central and western China and thus the river trade between Shanghai and Hankow is of itself enormous, while the coastwise trade from Shanghai, both to the north and south, and that by the Grand Canal to Tientsin, the most important city of northern China, is also very large."—*United States, Bureau of Statistics, Monthly Summary, March*, 1899, *p.* 2191.

"When the English chose this position, in 1842, for their mercantile settlement, it seemed difficult to believe that they would ever succeed in making the place a rival of Canton or of Amoy. It is true that Shanghai possessed important commercial relations already, and the great geographical advantage of commanding the entrance to the navigable river which traverses the whole empire from west to east; but the builders of the city there had to struggle with enormous difficulties of soil and climate. They had to solidify and drain the land, dig canals, dry up marshes, cleanse the air of its miasms, besides incessantly dredging and clearing the channel, to keep it open for their ships. The first European merchants established at Shanghai were favored in fortune by the national disasters of China. The Taiping war drove fugitives in multitudes to the territory conceded to foreigners, and when the town of Soutcheou was destroyed, in 1860, Shanghai succeeded it as the great city of the country."—É. Reclus, *Nouvelle géographie universelle, v.* 7, *p.* 455.

SIAM: A. D. 1896-1899.—Declaration between Great Britain and France with regard to Siam.—A declaration of agreement, in part as follows, between Great Britain and France, was signed at London, January 15, 1896: "I. The Governments of Great Britain and France engage to one another that neither of them will, without the consent of the other, in any case, or under any pretext, advance their armed forces into the region which is comprised in the basins of the Petcha Bouri, Meiklong, Menam, and Bang Pa Kong (Petriou) Rivers and their respective tributaries, together with the extent of coast from Muong Bang Tapan to Muong Pase, the basins of the rivers on which those two places are situated, and the basins of the other rivers, the estuaries of which are included in that coast; and including also the territory lying to the north of the basin of the Menam, and situated between the Anglo-Siamese frontier, the Mekong River, and the eastern watershed of the Me Ing. They further engage not to acquire within this region any special privilege or advantage which shall not be enjoyed in common by, or equally open to, Great Britain and France, and their nationals and dependents. These stipulations, however, shall not be interpreted as derogating from the special clauses which, in virtue of the Treaty concluded on the 3rd October, 1893, between France and Siam, apply to a zone of 25 kilom. on the right bank of the Mekong and to the navigation of that river. II. Nothing in the foregoing clause shall hinder any action on which the two Powers

may agree, and which they shall think necessary in order to uphold the independence of the Kingdom of Siam. But they engage not to enter into any separate Agreement permitting a third Power to take any action from which they are bound by the present Declaration themselves to abstain. III. From the mouth of the Nam Huok northwards as far as the Chinese frontier the thalweg of the Mekong shall form the limit of the possessions or spheres of influence of Great Britain and France. It is agreed that the nationals and dependents of each of the two countries shall not exercise any jurisdiction or authority within the possessions or sphere of influence of the other."

In a despatch to the British Ambassador at Paris, written on the same day, Lord Salisbury explained the intent and purpose of the agreement as follows: "It might be thought that because we have engaged ourselves, and have received the engagement of France, not under any circumstances to invade this territory, that therefore we are throwing doubt upon the complete title and rights of the Siamese to the remainder of their kingdom, or, at all events, treating those rights with disregard. Any such interpretation would entirely misrepresent the intention with which this arrangement has been signed. We have selected a particular area for the application of the stipulations of this Treaty, not because the title of the King of Siam to other portions of his dominions is less valid, but because it is the area which affects our interests as a commercial nation. The valley of the Menam is eminently fitted to receive a high industrial development. Possibly in course of time it may be the site of lines of communication which will be of considerable importance to neighbouring portions of the British Empire. There seems every prospect that capital will flow into this region if reasonable security is offered for its investment, and great advantage would result to the commerce and industry of the world, and especially of Great Britain, if capitalists could be induced to make such an application of the force which they command. But the history of the region in which Siam is situated has not in recent years been favourable to the extension of industrial enterprise, or to the growth of that confidence which is the first condition of material improvement. A large territory to the north has passed from the hands of the Burmese Government to those of Great Britain. A large territory to the east has passed from the hands of its former possessors to those of France. The events of this recent history certainly have a tendency to encourage doubts of the stability of the Siamese dominion; and without in any degree sharing in those doubts, or admitting the possibility, within any future with which we have to deal, of the Siamese independence being compromised, Her Majesty's Government could not but feel that there would be an advantage in giving some security to the commercial world that, in regard to the region where the most active development is likely to take place, no further disturbances of territorial ownership are to be apprehended." —*Great Britain, Parliamentary Publications* (*Papers by Command: France, No.* 2, 1896, *pp.* 1–3).

Perhaps the above explanation can be better understood after reading the following: "In the early eighties France commenced the subjugation of Tonquin. . . . It was not until 1893 that France openly attacked Siam. The demand was subtly formulated—on behalf, not of the Government of the French Republic, but of 'the Empire of Annam.' But even so the French had been in Annam for perhaps a quarter of a century, whereas Siam could show an undisturbed, undisputed tenure of the Mekong River's 'rive gauche' for at least ninety years. . . . The cession to France of territory amounting to rather more than one-third of the entire kingdom was insisted upon; and in March 1893 that Power sent the ship-of-war Lutin to Bangkok, where she remained for months a standing menace. A rigorous blockade of the Siamese seaboard followed, resulting in a few short days in complete surrender of the disputed territory to France and the payment of a heavy war indemnity. . . . By the Anglo-French Convention of last year [as given above] the King of Siam's position became, to say the least, slightly anomalous. That agreement practically amounted to the fair division, between France and England, of the whole of Siam save that portion situate in the fertile valley of the Meinam, whose autonomy they still guarantee to preserve. . . . France holds, in addition to the long-coveted port of Chantabûn, that part of the province of Luang Phrabang which is situate upon the right bank of the Mekong. . . . The Siamese king is 'nulli secundus' among Oriental monarchs as a progressive ruler. And fate has been unkind to him indeed! He has encouraged English customs and the English language by all the means in his power—has taken the kindliest possible interest in the introduction of electric light, electric tramways, &c., into his capital—has endeavoured to model his army and navy, his prison and other systems, upon the English method—and has in person opened the first railway (that connecting Bangkok with Pâknam) in Siam. It is, indeed, one of the strangest and most interesting sights, as you stroll through the streets of the capital, to witness the 'riksha and gharry of comparative barbarism travelling in juxtaposition to the electric tramcar and the bicycle! And for his broad and enlightened views the King of Siam has been requited by the wholesale and utterly unjustifiable plunder of his most fertile lands."—Percy Cross Standing, *The Significance of the Siamese Visit* (*Nineteenth Century, June*, 1897).

Frequent collisions between French and Siamese in the so-called "neutral zone" on the right bank of the Mekong continued, until a new convention was agreed upon in May, 1899. This gave to France the province of Luang-Phrabang, in return for which she agreed to withdraw entirely from the neutral territory and from the port of Chantabûn.

SIERRA LEONE PROTECTORATE.—Extension of British authority over the Hinterland of the Colony of Sierra Leone.—The hut tax.—Insurrection of natives.—"Immediately adjoining the Colony of Sierra Leone, lying to the northward and eastward, is the Hinterland, the boundaries of which were defined by the Agreement between Great Britain and France which was concluded 21st January 1895. The extreme depth from south to north is about 210 miles, lying between 7° and 10° north latitude, and 180 miles from east to west, lying between 10° 40′ and 13° 20′ of west longitude. The estimated area is rather more than 30,000 square miles—about the size of Ireland. . . . Unlike many regions on the west coast of Africa, the country is, for the most part, well watered by rivers and running streams. The population of the Hinterland has not been ascertained. It has been variously estimated, before the present troubles, at from about 750,000 up to about 2,000,000. The trade and revenue of the Colony depend almost entirely on the Hinterland. A very large proportion of the goods imported into the Colony are carried into and consumed in the Hinterland. These goods are paid for by means of the products of the Hinterland, which are exported, and the profits derived from the exchange enable the merchants to pay the Customs duties, which constitute the bulk of the Colonial revenue. The territories forming the Hinterland are, according to the native organisation, ruled over by a large number of Chiefs (or Kings, as they used to be, and still in native parlance are, called). The portions of country under each Chief are well ascertained, and recognised by the various Chiefs and their subjects. . . .

"The relations between the English Government and the Chiefs at the time of the conclusion of the Agreement between France and England in 1895 was . . . that some of the Chiefs whose territories lay most adjacent to the Colony of Sierra Leone had contracted with the English Crown certain treaties of cession, and treaties directed to definite objects of amity and good offices. In addition there had sprung up by usage a limited consensual and advisory jurisdiction, under which Chiefs as well as persons not Chiefs would bring their differences (mainly as to territorial boundaries) before the Governor of Sierra Leone as a sort of arbitrator, and implicitly follow his awards. This jurisdiction was exercised over an area of no defined limits, so far as any rules were concerned. As a fact, it was limited by conditions of distance and facility of travel, so that whilst the usage was most established in the countries nearest to Freetown, there was none in the more distant regions, or if there was any it was at most so rudimentary as to be jurally of no account. . . . I have not been able to trace any instance in which, either under treaty or any other form of consent, or without consent, the English Government has imposed, or endeavoured to impose any direct taxation upon the Chiefs or people of the Hinterland prior to 1896.

"The agreement between France and Great Britain delimited the respective spheres of interest of the two countries south and west of the Middle or Upper Niger, and thus defined for England in the Hinterland of Sierra Leone a territory within which, so far as concerned any question between France and England, England was at liberty to exercise whatever species or extent of jurisdiction she might consider proper. It made, of course, no alteration on the existing native organisation, nor upon the existing relations between England and the native Chiefs, who were not parties to the agreement in any sense. . . . On 31st August 1896 a Proclamation was published setting forth that Her Majesty had assumed a Protectorate over the territories adjacent to the Colony of Sierra Leone in which Her Majesty had acquired power and jurisdiction. For purposes of administration the Hinterland was divided into five districts, intended to be of about equal size, avoiding severance as far as possible by the district boundary of the territories of Paramount Chiefs. These districts have been named as the Karene, Ronietta, Bandajuma, Panguma, and Koinadugu districts. In anticipation of the arrangements that might become necessary for the government of the Protectorate, an Order of the Queen in Council had been made on 24th August 1895, . . . whereby, . . . Her Majesty was pleased, by and with the advice of her Privy Council, to order that it shall be lawful for the Legislative Council, for the time being, of the Colony of Sierra Leone, by Ordinance or Ordinances, to exercise and provide for giving effect to all such jurisdiction as Her Majesty may at any time, before or after the passing of the Order in Council, have acquired in the said territories adjacent to the Colony of Sierra Leone. . . . Following upon the Order of the Queen in Council, an Ordinance, entitled 'An Ordinance to Determine the mode of exercising Her Majesty's Jurisdiction in the Territories adjacent to the Colony of Sierra Leone,' was passed by the Legislative Council and Governor of Sierra Leone for the Government of the Protectorate, on 16th September 1896."—*Great Britain, Report and Correspondence on Insurrection in the Sierra Leone Protectorate* (*Parliamentary Publications: Papers by Command*, 1899, *C.* 9388, *pp.* 10–17).

The Ordinance above mentioned, which was reenacted, with some changes, in September, 1897, provided, among other things, for the imposition of a house tax, or hut tax, upon the natives, and this proved to be the main cause of a serious native revolt in the Protectorate. "By way of asserting the Crown's ownership of all lands, whether in use and occupation or not—and also of attempting to make the people defray the cost of governing them by methods they resent—the Protectorate Ordinance imposes a 'house tax' of five shillings a year, and, in the case of 'houses with four rooms or more,' of ten shillings a year, on every 'householder'; the same to be paid in 'sterling coin' on or after the 1st January in each year, or, in default of payment on demand, to be distrained for with so much addition as will defray the cost of removing the property and disposing of it for 'the price current at the nearest market.' The absurdity of thus importing the mechanism of civilisation into 'house tax' levying among these ignorant savages matches the injustice of the tax itself. The mud hovels to be taxed are rarely worth more than the equivalent of two or three shillings apiece, and shillings or other 'sterling coin' are rarely seen or handled by the natives, such wages as they earn being generally paid in kind, and such trade as they carry on being nearly always in the way of

barter. Few who are not chiefs or headmen own property worth as much as five shillings, and property for which five shillings could be obtained 'at the nearest market' might be worth the equivalent of five pounds to them. There was no attempt to raise the proposed house or hut tax before last January [1898], and perhaps none of the natives have even yet any understanding of the clauses of the Protectorate Ordinance providing them with new-fangled 'courts of justice,' and taking from them all proprietary rights in their land. But as soon as a proclamation was issued on 21st August, 1896, notifying the contemplated changes, all who heard of them were reasonably alarmed, and wherever the news spread seeds of fresh discontent were sown. . . .

"There were burning of huts, buffeting of chiefs, and so forth, in the south and east, as well as in the north, where, owing to the alleged recalcitrancy of Bai Bureh and the zeal of Captain Sharpe, the District Commissioner, the havoc was greatest. Early in February several chiefs and headmen were brought to Freetown from Port Lokko in manacles, to be tried, or punished without trial, on a charge of 'refusing to comply with the provisions of the Protectorate Ordinance, and inciting their subjects to resist the law.' 'The most affecting part of the matter,' says the newspaper report, 'is that the natives all loudly affirm their unswerving loyalty to the Government, and say that they do not refuse to pay the hut tax because they do not wish to, but because they really cannot pay.' Their apologies were not listened to. Instead, a detachment of the West India Regiment was sent up to assist Captain Sharpe in the little war on which he had already embarked. A futile attempt to arrest Bai Bureh on 18th February led to a general uprising, and the first battle was fought on 3rd March, when the town of Karina was recovered from the 'insurgents' who had occupied it, and over sixty of them were killed. Another fight occurred at Port Lokko, on 5th March, when the 'insurgents' lost about forty more. These victories being insufficient, fresh troops were sent up in batches, until the entire force of conquerors numbered 800 or upwards. They found it easier to cow than to conquer the people, and the unequal struggle went on for three months. At the end of May operations had to be suspended during the rainy season, and before they can be renewed it may be hoped that peace will be patched up. Already, indeed, the 'rebellion' appears to be practically crushed, and with it all the civilisation and all the commerce that had been planted in the Karina district. Hundreds of natives have been shot down, many more hundreds have died of starvation. Nearly all the huts that it was proposed to tax have been destroyed, either by the owners themselves, or by the policemen and soldiers."—H. R. Fox Bourne, *Sierra Leone Troubles* (*Fortnightly Review*, *Aug.*, 1898).

SOUTH AFRICA.

Cape Colony: A. D. 1881-1888.—Organization of the "Afrikander Bund."—The "Afrikander Bund" or National Party was formed in Cape Colony in 1881, but held its first Congress, or convention, in 1888, at which meeting the following platform, or formal statement of objects, was adopted: "1. The Afrikander National party acknowledge the guidance of Providence in the affairs both of lands and peoples. 2. They include, under the guidance of Providence, the formation of a pure nationality and the preparation of our people for the establishment of a 'United South Africa.' 3. To this they consider belong: (a) The establishment of a firm union between all the different European nationalities in South Africa, and (b) The promotion of South Africa's independence. 4. They consider that the union mentioned in Art. 3 (a) depends upon the clear and plain understanding of each other's general interest in politics, agriculture, stock-breeding, trade, and industry, and the acknowledgment of every one's special rights in the matter of religion, education, and language; so that all national jealousy between the different elements of the people may be removed, and room be made for an unmistakable South African national sentiment. 5. To the advancement of the independence mentioned in Art. 3 (b) belong: (a) That the sentiment of national self-respect and of patriotism toward South Africa should above all be developed and exhibited in schools, and in families, and in the public press. (b) That a system of voting should be applied which not only acknowledges the right of numbers, but also that of ownership and the development of intelligence, and that is opposed, as far as possible, to bribery and compulsion at the poll. (c) That our agriculture, stock-breeding, commerce, and industries should be supported in every lawful manner, such as by a conclusive law as regards masters and servants, and also by the appointment of a prudent and advantageous system of Protection. (d) That the South African Colonies and States, either each for itself or in conjunction with one another, shall regulate their own native affairs, employing thereto the forces of the land by means of a satisfactory burgher law; and (e) That outside interference with the domestic concerns of South Africa shall be opposed. 6. While they acknowledge the existing Governments holding rule in South Africa, and intend faithfully to fulfil their obligations in regard to the same, they consider that the duty rests upon those Governments to advance the interests of South Africa in the spirit of the foregoing articles; and whilst, on the one side, they watch against any unnecessary or frivolous interference with the domestic or other private matters of the burgher, against any direct meddling with the spiritual development of the nation, and against laws which might hinder the free influence of the Gospel upon the national life, on the other hand they should accomplish all the positive duties of a good Government, among which must be reckoned: (a) In all their actions to take account of the Christian character of the people. (b) The maintenance of freedom of religion for every one, so long as the public order and honor are not injured thereby. (c) The acknowledgment and expression of religious, social, and bodily needs of the people, in the observance of the present weekly day of rest. (d) The application of an equal and judicious system of taxation. (e) The bringing into practice of an impartial and, as far as possible, economical administration of justice. (f) The watching over the public honor, and against the adulteration of the necessaries of life, and the defiling of ground, water, or air, as well as against the spreading of infectious diseases. 7. In order to secure the influence of these principles, they stand forward as an independent party, and accept the coöperation of other parties only if the same can be obtained with the uninjured maintenance of these principles.

The Transvaal: A. D. 1884-1894.—The restored independence of the Boers and their dissatisfaction with its terms.—Frustration of their desire for extended territory.—The London Convention of 1884.—After the British-Boer War of 1880–81 (see, in vol. 4, SOUTH AFRICA: A. D. 1806–1881), which had been caused by an arbitrary annexation of the Transvaal State to the dominions of the British crown, the sense of justice in Mr. Gladstone led him to restore to the Transvaal Boers (by the Convention or Treaty of Pretoria, 1881) their right of internal self-government, with a reservation of "the suzerainty of Her Majesty," supposably relative to nothing but foreign affairs. The Boers were not satisfied with that concession, and began at once to strive for the complete independence they had previously possessed, under a Convention agreed upon and signed at Sand River, 1852, which guaranteed (quoting its precise terms) "in the fullest manner, on the part of the British Government, to the emigrant farmers (boers) beyond the Vaal River, the right to manage their own affairs and to govern themselves, without any interference on the part of Her Majesty the Queen's Government." To regain that status of complete independence became the first object of the Boers. They went far towards success in this endeavor, as early as 1884, when the British Colonial Secretary, Lord Derby, was induced to agree to a new Convention with the South African Republic (as it was then styled) which superseded the Convention of 1881. The terms of the later instrument are given below.

The second aim of the Boers appears to have been the widening of their territory, by advances, in the first instance, southward into Zululand and westward into Bechuanaland. In the former movement they had success; in the latter they were thwarted. English missionaries complained of their treatment of the natives, and stirred up the British government to take the Bechuana tribes under its protection. Their eastern frontier they succeeded, after long controversies with Great Britain, in stretching beyond Swaziland, but they were not allowed to push it to the sea. Northward, they would probably have gone far, had it not been for the appearance, at this time, of Mr. Cecil Rhodes, who came upon the scene of South African politics with imperial ambitions, with great energies and capabilities, with few apparent hesitations, and with a vast fortune acquired in the Kimberley diamond mines. He organized the British South Africa Company, under a royal charter, got some settlers into the country north of the Limpopo and set up a government there, in 1890, just in time, it appears,

to forestall the Boers (see, in vol. 4, SOUTH AFRICA: A. D. 1885–1893).

Of the effect of the two conventions, of 1881 and 1884, on the relations of the British government to the South African Republic, the following is an English view, by a well-known publicist: "In the Treaty of Pretoria, bearing date the 5th of April, 1881, it is stated that Great Britain guarantees 'complete self-government, subject to the Suzerainty of Her Majesty, to the inhabitants of the Transvaal.' . . . Article 15 declares that 'the Resident will report to the High Commissioner, as representative of the Suzerain, as to the working and observance of the provisions of this Convention.' . . . On the 31st of March, 1881, Lord Kimberley, who was then Secretary of State for the Colonies, used these words in the House of Lords with reference to the terms of the Convention, upon which the Treaty of Pretoria was afterwards based: 'I believe the word Suzerainty expresses very correctly the relation which we intend to exist between this country and the Transvaal. Our intention is that the Transvaal shall have independent power as regards its internal government; and we shall only reserve certain powers to be exercised by the Queen. . . . With respect to our control over the relations of the Transvaal with foreign Powers, . . . it is quite clear there ought to be, as regards foreign relations, only one Government in South Africa; that there ought to be no communication with foreign Powers upon any subject except through the representatives of the Queen.'

"On the 25th of June, 1881, Mr. Gladstone, while defending in the House of Commons an assertion he had made during the Midlothian Campaign about the blood-guiltiness of the war with the Transvaal, referred to our Suzerainty in the following words: 'I apprehend that the term which has been adopted, the Suzerainty of the Queen, is intended to signify that certain portions of Sovereignty are reserved. . . . What are these portions of Sovereignty? The portions of Sovereignty we desire to reserve are, first, the relations between the Transvaal community and foreign governments, the whole care of the foreign relations of the Boers. The whole of these relations will remain in the hands of the Queen.'

"From these quotations it is obvious that when we agreed to restore the independence of the Transvaal, the British public were led to believe, both by the then Premier and the then Colonial Minister, that this restoration left the control of all relations between the Transvaal and foreign Powers absolutely and entirely in the hands of Her Majesty's Government. . . . It is possible, or even probable, that at the time the Treaty of Pretoria was concluded, Mr. Gladstone, or at any rate several of his colleagues, imagined that our Suzerainty would really be made effective. But, when once the treaty had been signed and sealed, and the South African Republic had been granted absolute internal independence, it became evident that our Suzerainty could only be rendered efficacious, as against the sullen resistance of the Boers, by the exercise of force—that is, by the threat of war in the event of Boer non-compliance with the demands of the Suzerain Power. . . .

"For the first two years which succeeded our surrender the Boers were too much occupied in the reorganisation of the Republic to trouble themselves greatly about their relations to the Suzerain Power. . . . Disputes were mainly connected with the treatment of the native chiefs, residing either within, or on the borders of, the territory of the Republic, who asserted, with or without reason, that they were the objects of Boer hostility on account of the support they had given to the British authorities during the period of British rule.

"In May 1883 Mr. Gladstone stated in Parliament, in answer to certain protests about the proceedings of the Boers, that the British Government had decided to send a Commissioner to the Transvaal to investigate the working of the Convention concluded at Pretoria in 1881. This intention, however, was not carried out owing to the opposition of the South African Republic. In lieu of the despatch of a British Commissioner to the Transvaal, it was suggested at Pretoria that a Boer deputation should be sent to London. The suggestion, as usual, was accepted; and thereupon the Africander Bond in the Cape Colony forwarded a petition to the Queen, praying Her Majesty to entertain favourably the proposals of the Boer delegates for the modification of the Treaty of Pretoria. The deputation, consisting of President Kruger and Messieurs Du Toit and Smit, arrived in London in October, and submitted to the late Lord Derby, who had succeeded Lord Kimberley as Minister for the Colonies, a statement of the modifications they were instructed to demand. The memorandum in question distinctly declared that the alleged impracticability of the Treaty of Pretoria related, amongst other matters, 'to the extent of the Suzerain rights reserved to Her Majesty by Articles 2 and 18 of the Treaty of Pretoria, and to the vague and indefinite terms in which the powers reserved to Her Majesty's Government by the Convention are indicated.'

"To this memorandum Lord Derby replied, on the 20th of November, 1883, admitting that the 'expediency of substituting a new agreement for that of 1881 might be matter for discussion, but asking for information, in what sense it is wished that in such new agreement some connection with England should be maintained, and, if it is the desire of the Transvaal people that their State should hereafter stand in any special relation to this country, what is the form of connection which is proposed?' In reply to this request the Boer delegates answered as follows in the somewhat evasive fashion: 'In the new agreement any connection by which we are now bound to England should not be broken; but that the relation of a dependency "publici juris" in which our country now stands to the British Crown be replaced by that of two contractive Powers.'

"The above documents were submitted to the Governor of Cape Colony, the then Sir Hercules Robinson. Characteristically enough, Sir Hercules recommended the surrender of our Suzerainty on the ground that 'The Transvaal burghers obviously do not intend to observe any condition in it (the Convention of 1881) distasteful to themselves, which Her Majesty's Government are not prepared to insist on, if necessary, by the employment of force. Her Majesty's Government, I understand, do not feel justified in proceeding to this extremity; and no provision, therefore, of the Convention which is not agreeable to the Transvaal will be carried out.'

SOUTH AFRICA, 1884–1894.

"A few days later the delegates submitted a draft treaty, in which the following clause stands first: 'It is agreed that Her Britannic Majesty recognises and guarantees by this treaty the full independence of the South African Republic, with the right to manage its own affairs according to its own laws, without any interference on the part of the British Government; it being understood that this system of non-interference is binding on both parties.' To the letter enclosing this draft treaty Lord Derby replied that the proposed treaty was 'neither in form nor in substance such as Her Majesty's Government could adopt.' Meanwhile the discussion between the British Government and the Boer delegates seems to have turned mainly upon the extension of the territories of the Transvaal and the relations between the Republic and the native chiefs, subjects which had only an indirect bearing on the question of Suzerainty. It was only on the 25th of January, 1884, that the Colonial Office wrote to the delegates stating that if a certain compromise with regard to the frontier line were accepted, the British Government would be prepared 'to proceed at once with the consideration of the other proposals for the modification of the Treaty of Pretoria.' The delegates replied on the next day virtually accepting the proposed frontier compromise, and requested the British Government to proceed at once with the substitution of a new Convention. . . . The draft treaty was signed on the 27th of February, 1884. . . .

"The Convention of London did not repeat the preamble of the original Convention in which the words 'subject to the Suzerainty of Her Majesty' are to be found. Nor is the word Suzerainty mentioned in the Convention of 1884, which declares that the articles contained therein, if endorsed by the Volksraad, 'shall be substituted for those of the Convention of 1881.' No formal withdrawal, however, of the Queen's Suzerainty is to be found in the Convention of 1884. On the contrary, it is distinctly affirmed in Article 4 of the modified Convention that 'the South African Republic will conclude no treaty or engagement with any State or nation, other than the Orange Free State, until the same has been approved by Her Majesty the Queen.'"—Edward Dicey, *British Suzerainty in the Transvaal* (*Nineteenth Century, Oct.*, 1897).

In its preamble, the Convention of 1884 recites that—"Whereas the Government of the Transvaal State, through its Delegates, consisting of [Kruger, Du Toit and Smit], have represented that the Convention signed at Pretoria on the 3rd day of August, 1881, and ratified by the Volksraad of the said State on the 25th of October, 1881, contains certain provisions which are inconvenient, and imposes burdens and obligations from which the said State is desirous to be relieved, and that the south-western boundaries fixed by the said Convention should be amended with a view to promote the peace and good order of the said State, . . . now, therefore, Her Majesty has been pleased to direct," &c.—substituting the articles of a new Convention for those signed and ratified in 1881.

Article I. of the new Convention describes the lines of boundary as amended. Article II. binds the two governments, respectively, to guard said boundaries against all trespassing. Article III. provides for the reception and protection, at Pretoria, of a resident British officer, "to discharge functions analogous to those of a consular officer."

Article IV. reads as follows: "The South African Republic will conclude no Treaty or engagement with any State or nation other than the Orange Free State, nor with any native tribe to the eastward or westward of the Republic, until the same has been approved by Her Majesty the Queen. Such approval shall be considered to have been granted if Her Majesty's Government shall not, within six months after receiving a copy of such Treaty (which shall be delivered to them immediately upon its completion), have notified that the conclusion of such Treaty is in conflict with the interests of Great Britain, or of any of Her Majesty's possessions in South Africa."

Articles V. and VI. relate to public debts. Article VII. guarantees the non-molestation of persons in the South African Republic who "remained loyal to Her Majesty during the late hostilities." Article VIII. is a declaration against slavery in the Republic. Article IX. is in language as follows: "There will continue to be complete freedom of religion and protection from molestation for all denominations, provided the same be not inconsistent with morality and good order; and no disability shall attach to any person in regard to rights of property by reason of the religious opinions which he holds." Article X. relates to graves of British soldiers; XI. to former grants of land which the present arrangement of boundary places outside of the Republic; XII. to the independence of the Swazis; XIII. to non-discrimination in import duties on both sides.

Articles XIV. and XV. read thus: Article XIV. "All persons, other than natives, conforming themselves to the laws of the South African Republic, (a) will have full liberty, with their families, to enter, travel or reside in any part of the South African Republic; (b) they will be entitled to hire or possess houses, manufactories, warehouses, shops and premises; (c) they may carry on their commerce either in person or by any agents whom they may think fit to employ; (d) they will not be subject, in respect of their persons or property, or in respect of their commerce or industry, to any taxes, whether general or local, other than those which are or may be imposed upon citizens of the said Republic." Article XV. "All persons, other than natives, who establish their domicile in the Transvaal between the 12th day of April, 1877, and the 8th day of August, 1881, and who within twelve months after such last mentioned date have had their names registered by the British resident, shall be exempt from all compulsory military service whatever." Article XVI. provides for a future extradition treaty; XVII. for the payment of debts in the same currency in which they were contracted; XVIII. establishes the validity of certain land grants; XIX. secures certain rights to the natives; XX. nullifies the Convention if not ratified by the Volksraad within six months from the date of its signature—February 27, 1884.

With considerable reluctance, the Convention was ratified by the Volksraad of the South African Republic in the following terms: "The Volksraad having considered the new Convention concluded between its deputation and the British

Government at London on 27th February 1884, as likewise the negotiations between the contracting parties, which resulted in the said Convention, approves of the standpoint taken by its deputation that a settlement based upon the principle of the Sand River Convention can alone fully satisfy the burghers of the Republic. It also shares the objections set forth by the deputation against the Convention of Pretoria, as likewise their objections against the Convention of London on the following points:—1st. The settlement of the boundary, especially on the western border of the Republic, in which the deputation eventually acquiesced only under the express conditions with which the Raad agree. 2nd. The right of veto reserved to the British Crown upon treaties to be concluded by the Republic with foreign powers; and 3rd. The settlement of the debt. Seeing, however, that in the said Convention of London considerable advantages are secured to the Republic, especially in the restoration of the country's independence, Resolves, With acknowledgment of the generosity of Her Britannic Majesty, to ratify, as it hereby does, the said Convention of London."—*Selected Official Documents of the South African Republic and Great Britain* (*Supplement to the Annals of the Am. Academy of Pol. and Soc. Science, July*, 1900).

The Transvaal: A. D. 1885-1890.—The gold discoveries on the Rand and the influx of Uitlanders (Outlanders or Foreigners).—"It was not until 1884 that England heard of the presence of gold in South Africa. A man named Fred Stuben, who had spent several years in the country, spread such marvellous reports of the underground wealth of the Transvaal that only a short time elapsed before hundreds of prospectors and miners left England for South Africa. When the first prospectors discovered auriferous veins of wonderful quality on a farm called Sterkfontein, the gold boom had its birth. It required the lapse of only a short time for the news to reach Europe, America, and Australia, and immediately thereafter that vast and widely scattered army of men and women which constantly awaits the announcement of new discoveries of gold was set in motion toward the Randt [the Witwatersrand or Whitewatersridge]. . . . In December, 1885, the first stamp mill was erected for the purpose of crushing the gneiss rock in which the gold lay hidden. This enterprise marks the real beginning of the gold fields of the Randt, which now yield one third of the world's total product of the precious metal. The advent of thousands of foreigners was a boon to the Boers, who owned the large farms on which the auriferous veins were located. Options on farms that were of little value a short time before were sold at incredible figures, and the prices paid for small claims would have purchased farms of thousands of acres two years before. In July, 1886, the Government opened nine farms to the miners, and all have since become the best properties on the Randt. . . . On the Randt the California scenes of '49 were being re-enacted. Tents and houses of sheet iron were erected with picturesque lack of beauty and uniformity, and during the latter part of 1886 the community had reached such proportions that the Government marked off a township and called it Johannesburg. The Government, which owned the greater part of the land, held three sales of building lots, or 'stands,' as they are called in the Transvaal, and realized more than $300,000 from the sales. . . . Millions were secured in England and Europe for the development of the mines, and the individual miner sold his claims to companies with unlimited capital. The incredibly large dividends that were realized by some of the investors led to too heavy investments in the Stock Exchange in 1889, and a panic resulted. Investors lost thousands of pounds, and for several months the future of the gold fields appeared to be most gloomy. The opening of the railway to Johannesburg and the re-establishment of stock values caused a renewal of confidence, and the growth and development of the Randt was imbued with renewed vigour. Owing to the Boers' lack of training and consequent inability to share in the development of the gold fields, the new industry remained almost entirely in the hands of the newcomers, the Uitlanders [so called in the language of the Boers], and two totally different communities were created in the republic. The Uitlanders, who, in 1890, numbered about 100,000, lived almost exclusively in Johannesburg and the suburbs along the Randt. The Boers, having disposed of their farms and lands on the Randt, were obliged to occupy the other parts of the republic, where they could follow their pastoral and agricultural pursuits. The natural contempt which the Englishmen, who composed the majority of the Uitlander population, always have for persons and races not their intellectual or social equals, soon created a gulf between the Boers and the newcomers."—H. C. Hillegas, *Oom Paul's People, ch.* 3 (*with permission of D. Appleton & Co., copyright*, 1899).

As the influx of newcomers increased and advanced, "the Boers realized that the world and civilisation were once more upon them. In spite of all the opposition that patriarchal prejudice could muster, railways usurped the place of the slow moving ox-waggon, and in the heart of their solitude a city had arisen; while to the north and to the east between them and the sea were drawn the thin red lines of British boundary. . . . A primitive pastoral people, they found themselves isolated, surrounded—'shut in a kraal for ever,' as Kruger is reported to have said,—while the stranger was growing in wealth and numbers within their gates. Expansion of territory, once the dream of the Transvaal Boers, as their incursions into Bechuanaland, into Zululand, and the attempted trek into Rhodesia, all testify, was becoming daily less practicable. One thing remained,—to accept their isolation and strengthen it. Wealth, population, a position among the new States of the world had been brought to them, almost in spite of themselves, by the newcomer, the stranger, the Uitlander. What was to be the attitude towards him politically? Materially he had made the State—he developed its resources, paid nine-tenths of its revenue. Would he be a strength or a weakness as a citizen—as a member of the body politic? Let us consider this new element in a new State—how was it constituted, what were its component parts? Was it the right material for a new State to assimilate? Cosmopolitan to a degree—recruited from all the corners of the earth—there was in it a strong South

African element, consisting of young colonists from the Cape Colony and Natal—members of families well known in South Africa—and many of them old schoolfellows or in some other way known to each other. Then the British contingent, self-reliant, full of enterprise and energy—Americans, for the most part skilled engineers, miners and mechanics—French, Germans, and Hollanders. A band of emigrants, of adventurers, and constituted, as I think all emigrants are, of two great classes—the one who, lacking neither ability nor courage, are filled with an ambition, characteristic particularly of the British race, to raise their status in the world, who find the conditions of their native environment too arduous, the competition too keen, to offer them much prospect, and who seek a new and more rapidly developing country elsewhere; and another, a smaller class who sometimes through misfortune, sometimes through their own fault, or perhaps through both, have failed elsewhere.

"Adventurers all, one must admit; but it is the adventurers of the world who have founded States and Kingdoms. Such a class as this has been assimilated by the United States and absorbed into their huge fabric, of which to-day they form a large and substantial portion. What should the Transvaal Boers have done with this new element so full of enterprise and vigour? This had been for the last ten years the great question for them to solve. . . . Enfranchisement, participation in the political life of the State by the Uitlander,—this means, they said, a transference of all political power from our hands to those of men whom we do not trust. 'I have taken a man into my coach,' said President Kruger, 'and as a passenger he is welcome; but now he says, Give me the reins; and that I cannot do, for I know not where he will drive me.' To the Boer it is all or nothing; he knows no mean, no compromise. Yet in that very mean lies the vital spirit of republicanism. What is the position of the Boers in the Cape Colony? Are they without their share, their influence, their Africander bond in the political affairs of the country? And so it is throughout the world to-day,—in the United States, in England, in France, in the British Colonies, wherever the individual thrives and the State is prosperous—the compromise of divided political power among all classes, all factions, is the great guarantee of their well being. . . . That the enfranchisement of the Uitlander would mean a complete transference of political power into his hands involves two assumptions: the first is that the Uitlanders would form a united body in politics; the second is that their representatives would dominate the Volksraad. The most superficial acquaintance with the action of the inhabitants of the Witwatersrand district on any public matter will serve to refute the first of these. . . . The second of these assumptions—though it is continually put forward—almost answers itself. The number of representatives from the Uitlander districts under any scheme of redistribution of seats which the Boer could reasonably be expected to make would fall considerably short of those returned from the Boer constituencies. Such was the attitude of the Boers on this vital question which led to the Reform Movement of 1895; and I have stated what I believe to be the injustice of it as regards the Uitlanders and the unwisdom of it in the true interests of the Boers."—A. P. Hillier, *Raid and Reform, pp.* 24–29 (*London: Macmillan & Co.*).

Portuguese Possessions: A. D. 1891.—Delagoa Bay Railway question. See (in this vol.) Delagoa Bay Arbitration.

The Transvaal: A. D. 1894.—Estimated population.—In October, 1894, the British agent at Pretoria, J. A. de Wet, estimated the population of the Transvaal (on the basis of a census taken in 1890) as follows: "Transvaalers and Orange Free Staters, 70,861; British subjects, 62,509; other foreigners, 15,558;" total, 148,928.

The Transvaal: A. D. 1894.—The "Commandeering" question.—Visit of the British High Commissioner to Pretoria.—Demonstration of British residents.—The first question which came to a sharp issue between the government of the South African Republic and the British subjects resident in the gold fields related to the claim which the former made on the latter for military service in the wars of the Republic with neighboring native tribes. The demand for such service was made, in each case, by what was called a "commando," the commando being defined in the military law of the Boers as follows: "By commando is understood a number of armed burghers and subjects of the state called together to suppress rebellion amongst the natives, or disturbances amongst the white population." British residents protested against the requirement of this service from them; and the British government, in 1894, opened negotiations with that of the Boer Republic to obtain their exemption from it. It was acknowledged that there is "nothing contrary to international comity in the application of such a law as the commando law to a foreigner"; but, said the British Colonial Secretary, in a despatch (June 8, 1894) giving instructions to the British High Commissioner in South Africa, "Her Majesty's Government consider that a special reason for now claiming exemption for our people is afforded by the fact that treaties have been concluded by the South African Republic under which, as they understand, the subjects of no less than seven Powers—Portugal, Holland, Belgium, Germany, France, Italy, and Switzerland—are now exempt from this liability; and they consider that they can hardly be expected to acquiesce in a state of things under which Her Majesty's subjects, whose interests in the South African Republic are greater and more intimate than those of any other Power, should remain in a position of such marked disadvantage. I have therefore to instruct you to address, in moderate and courteous terms, a friendly representation to the Government of the South African Republic on the subject."

Negotiations on the subject were then opened, which led to a visit to the Boer capital by the British High Commissioner, Sir H. B. Loch, on invitation from President Kruger. His arrival at Pretoria (June 25) gave occasion for a demonstration on the part of British residents which showed the state of feeling existing more plainly, no doubt, than it had appeared before. The circumstances were reported a few days later by the High Commissioner, as follows: "When I entered the carriage with President Kruger, two men got on to the box with a Union Jack, and the crowd, notwithstanding the President's remonstrances, took the horses out and dragged the carriage to the hotel, a distance of nearly a mile,

singing all the way 'God save the Queen,' and 'Rule Britannia.' On arrival at the hotel, the address was presented, to which I briefly replied, and then called for three cheers for the President, which were heartily given. He was then dragged in his carriage to the Government Office. I am satisfied that no personal insult was intended, by this demonstration, to the President, and any annoyance with which he viewed the occurrence seemed to be caused from the fact of the arrangements for keeping order having been so defective. The political atmosphere, however, was charged with such an amount of electricity that every moment an explosion was imminent. The Legislative and Executive enactments which press heavily on the great industry which contributes upwards of £1,000,000 annually out of a total revenue of little more than a million and a quarter, without the population that produces this wealth possessing any franchise rights, or voice in the government of the country, has created a deep-seated feeling of dissatisfaction, shared alike by the English, American, German, and other foreign residents in the country. The compulsory commandeering was the last straw that broke down the patience they had hitherto exhibited. . . . The Transvaal Government were, before my arrival, seriously alarmed at the state of feeling at Johannesburg, but when they came to consider the real meaning of the demonstration on my arrival at Pretoria, which showed to them how general the dissatisfaction was amongst all classes of British subjects, who formed the majority of the whole population of the Republic, they, for the first time, realised the imminent danger of the situation, and told me of their dread of a collision that at any moment might occur between the Boer burghers, who were in considerable numbers in the town, and the English and foreign residents."

To avoid any further excitement of feeling, the Commissioner declined to visit Johannesburg, which he had intended to do. During his stay at Pretoria, he submitted to President Kruger the draft of a Convention stipulating that "the subjects of Her Majesty the Queen whilst residing within the limits of the South African Republic, and the citizens of the South African Republic whilst residing within the dominions of Her Majesty the Queen, shall enjoy the same rights and privileges as the subjects of the most favoured nation with regard to military service and all obligations of a like nature"; and he received from President Kruger a counter proposition, for the negotiation of a new agreement, to take the place of the London Convention of 1884, embodying the desired provision concerning military service, along with other amendments of the old Convention. To this proposal, President Kruger added: "In order, however, to meet the request of Her Majesty's Government, the Government will, in the meantime, provisionally, no more commandeer British subjects for personal military service." Practically, this assurance disposed of the commandeering grievance; but no Convention on the subject was attained.—*Great Britain, Parliamentary Publications* (*Papers by Command, C.* 8159).

"A great mass meeting was held at Johannesburg (July 14) for the purpose of demanding that the franchise should be extended to all aliens, and insisting that the Constitution should be amended and made more genuinely democratic. In consequence of this meeting the Volksraad passed at one sitting two readings of a bill restricting severely the right of public meeting. No outdoor meetings or addresses were to be allowed, and an assemblage of six persons would be considered a public meeting. The police were given power by this bill to order those present to disperse, and every one attending was made liable to imprisonment for two years, while the callers of any meeting that the police might consider to be against the public peace might be fined £500 or sentenced to two years hard labour. . . . On the return of the 'commandeered' men from the war [with the rebellious chief Malaboch] President Kruger welcomed them, and said that no doubt the Volksraad would bestow on them the rights of full citizenship. The effect of the Franchise Act passed in June, however, was in general to prevent any citizen from obtaining the franchise unless his father was born in the State or had been naturalized. The formation of committees by aliens for the support of political candidates was rendered penal. . . . The Volksraad postponed for one year the consideration of the Government proposal to grant the franchise to the foreign residents who had recently served in the various 'commandos' against the Kaffir rebels." —*Annual Register*, 1894, *p.* 369.

British South Africa Company: A. D. 1894–1895.—Extended charter and enlarged powers of the Company.—Its master spirit, Mr. Cecil J. Rhodes.—Attitude towards the South African Republic.—The British South Africa Company, royally chartered in 1889 for the promotion of "trade, commerce, civilization and good government" in "the region of South Africa lying immediately to the north of British Bechuanaland, and to the north and west of the South African Republic, and to the west of the Portuguese dominions," was now in full possession, both politically and commercially, not only of the great domain of the Matabeles and the Mashonas, stretching to the Zambesi River, but likewise of a vast territory beyond that stream. Its charter had been extended in 1891, to cover the whole sphere of British influence north of the Zambesi, except the strip of country called Nyassaland, which borders the western shore of Nyassa Lake. It had subjugated the Matabeles, extinguished their kingdom, driven its native sovereign, Lo Bengula, to exile and death (see in vol. 4, South Africa: A. D. 1885–1893). By a new agreement with the British Government, signed on the 23d of May, 1894, it had received political authority over this imperial domain, in addition to the powers and privileges which its broad charter gave.

The administration of the government of the region was to be conducted by the Company, under an Administrator and a Council of four members composed of a Judge and three other members. The Administrator to be appointed by the Company, with the approval of the Colonial Secretary, and to be removed either by the Secretary or by the Company, with the approval of the Secretary. The Judge, appointed by the Company, with the approval of the Colonial Secretary, and removable only by the Secretary, was to be a member of the Council ex officio. The members of the Council, other than the Judge, to be appointed by the Company, with the approval of

the Secretary, and to be removable by the Company. . . . The Administrator should, as representative of the Company, administer the government, but must take the advice of his Council on all questions of importance. In cases of emergency, when he found it impracticable to assemble a quorum, the Administrator might take action alone, but must report such action to the Council at its next meeting. Moreover, he might overrule the Council, but must, in that case, report the matter forthwith to the Company, with the reasons for his action; and the Company might rescind the decision of the Administrator, whether made with, or without, or against, the advice of the Council. With the concurrence of at least two members of the Council, and with the approval of the British High Commissioner for South Africa, the Administrator was empowered to frame and issue regulations, which should have the force of law; but the Colonial Secretary or the Company could veto any such regulation at any time within twelve months of the date of approval by the High Commissioner. This power of making ordinances included the power to impose such taxes as might be necessary, and the right to impose and to collect customs duties. The armed forces of the Company were expressly forbidden to act outside the defined limits of its territory without the permission of Her Majesty's Government.

The master spirit of the Company which exercised these imperial powers of government over so great a dominion in Africa was Mr. Cecil J. Rhodes, Premier of Cape Colony, organizer and chief of the De Beers Consolidated Mining Co. in the diamond fields,—millionaire projector and manager of everything stupendous in the enterprises of the African world. He seemed, in fact, to be more than a master spirit in the Company. Apparently he had created it as an instrument of his ambitions, and it moved in his shadow throughout. Its Administrator, Dr. Leander S. Jameson, was his closely confidential friend. Presently it stamped his name on the broad empire which bore already the stamp of his personality and will, by proclaiming (May 1, 1895): "The territories now or hereafter placed under the control of the British South Africa Company shall be named collectively Rhodesia. The provinces at the present time included in the territory of Rhodesia are Mashonaland, Matabeleland, and Northern Zambesia." Great ambitions—imperial ambitions—had thus come to be powerfully embodied in a corporation which practically served the will of one remarkably able man. They were ambitions which had been in conflict from the beginning with the interests as well as the ambitions of the Boers of the South African Republic, and the conflict was not to be ended by the triumph which the Rhodesians had won. Naturally the Boer was jealous and distrustful of the energetic men who had seized lands which he desired and hemmed his republic in. Naturally, too, the bold adventurers of Rhodesia, arrogant in their success and as little scrupulous as "empire-builders" are apt to be, looked with contempt and impatience at the plodding Boer, as an obstacle to their booming development in Africa of a civilization "up to date." Between the two incongruous neighbors rose the cry of the angry Uitlanders at Johannesburg, threatening the one and appealing to the sympathy of the other. The consequences soon appeared.

The Transvaal: A. D. 1895 (July).—Opening of Delagoa Bay Railway.—The opening of the railway to Delagoa Bay was celebrated with much ceremony at Pretoria on the 8th of July.

The Transvaal: A. D. 1895 (September—December).—Closing of Vaal River "drifts" (fords) as ports of entry.—Anger in Cape Colony.—A threatening situation.—In September, the government of the South African Republic adopted a measure, for the benefit of its new railway, connecting Delagoa Bay with Pretoria, and for the development of foreign trade via Delagoa Bay rather than through Cape Colony, which raised a storm of indignation at the Cape, giving birth to a grievance there which became for a time more threatening than the grievances of the Uitlanders of the Rand. The measure in question was one that closed the "drifts" or fords of the Vaal River, between Cape Colony and the Transvaal, as ports of entry for the importation of over-sea goods. As stated by the British High Commissioner, in a despatch (October 7) to Mr. Chamberlain, the British Colonial Secretary, the history of the case is as follows:

"In the year 1891 the Cape Government came to an agreement with the Transvaal Government and the Netherlands Railway Company to advance the latter £600,000 towards the construction of the railway from the Vaal river to Johannesburg, receiving in exchange for such advance Netherlands Railway Company 4 per cent. bonds at £93, guaranteed by the Transvaal Government. It was stipulated in the agreement that the Cape Government might fix the traffic rates on the Transvaal extension until the close of 1894, or until the completion of the railway from Delagoa Bay to Pretoria, if such completion should take place before that date. The railway extension from the Vaal river so provided for was opened in September, 1892, and the Cape Government secured thereby, during the continuance of the agreement, practically the monopoly of the Johannesburg traffic. The agreement terminated on the 31st December, 1894, the Delagoa Bay to Pretoria Railway having shortly before been completed and commenced working. Up to the close of the agreement the through-traffic rates from the coast to Johannesburg had been fixed by the Cape at the average rate of about 2.4d. per ton per mile. After the close of the agreement the Netherlands Railway Company raised the rates on its 52 miles of railway, from the Vaal river to Johannesburg, to an average of nearly 8d. per ton per mile. Upon this importers began to remove a portion of their goods from the railway at the Vaal river, and to send them on by road and bullock-waggon to their destination in the Transvaal, instead of by the Netherlands Railway to Johannesburg and elsewhere as before. This move has recently been met by the Transvaal Government issuing a Proclamation closing the drifts on the Vaal river alongside the railway as ports of entry for over-sea goods, leaving them open for other goods, the produce of South Africa. Importers of over-sea goods have thus only the choice between making use of the Netherlands line from the Vaal to Johannesburg at the enhanced traffic rates imposed on that line, or of importing via Delagoa Bay or Durban."

Vigorous remonstrances against this measure were made instantly by the government of Cape

Colony, not only on the ground of its unfriendliness to the Colony, but also as being an infraction of the 13th article of the London Convention of 1884 (see above: A. D. 1884–1894), and the British government was appealed to for its interference. To this appeal the British Colonial Secretary replied with much caution, on the 1st of November, in a communication cabled to the High Commissioner, as follows: "Subject to the conditions stated further on, I am prepared to authorize you to send to the Government of the South African Republic a message to the following effect:—'I am advised by the Law Officers of the Crown (who, it is hardly necessary to state, have examined the question from a purely legal standpoint) that the recent action of the South African Republic is a breach of Article XIII. of the London Convention. I am further advised that the Government of the South African Republic cannot now set itself right by making general the prohibition of entry by the drifts, so as to include Colonial goods, if and when they reissue their Proclamation, which, I am surprised to observe, they appear to have some intention of doing. Her Majesty's Government accept the legal advice which they have received; but independently of their Conventional rights they are of opinion that the closing of the drifts, and especially the extension of that measure to Colonial goods, is so unfriendly an action as to call for the gravest remonstrance on their part. While anxious for an amicable settlement of the question, they must therefore protest against what they regard as an attempt to force the hand of the Cape Government in Conference by a proceeding which almost partakes of the nature of an act of hostility.' You will communicate this message confidentially to your Ministers in writing, pointing out that when once it is sent Her Majesty's Government cannot allow the matter to drop until they have obtained a compliance with their demands, even if it should be necessary to undertake an expedition for that purpose. Her Majesty's Government do not intend that such an expedition should, like most previous Colonial wars, be conducted at the entire cost of this country; and you should explain to your Ministers that you are therefore instructed to require from them a most explicit undertaking in writing that, if it becomes necessary to send an expedition, the Cape Parliament will bear half the gross expense, and that the Local Government will furnish a fair contingent of the fighting force, so far as its resources in men may suffice, besides giving the full and free use of its railways and rolling stock for military purposes. If your Ministers cannot give you such assurances you will report fully by telegraph, and defer action pending further instructions from me; but if you obtain these assurances in writing, explicitly and without qualification, you may send the above message to the Government of the South African Republic."

This was followed by a further cautionary message, November 3, in these words: "Referring to my telegrams of the 1st November, although willing to support your Ministers on the conditions already stated, I should think it would be well, in their own interests, and those of South African commerce generally, if they will be as moderate as they can find it consistent with their duty to be in their demands as to their share of railway business. I have no doubt that you have availed yourself of any chances you may have had of impressing such a view on them, and if you think it expedient you may tell them, confidentially, that such is my view." On the 4th, Sir Hercules Robinson replied: "My Ministers, including Schreiner and Faure, the two Dutch Members, were unanimous in their decision to accept your conditions. I am assured by Mr. Rhodes that he can count on the support of the majority in the Cape Parliament, and there are no facts before me which would lead me to a different view; but I do not think that the question will arise, as the Government of the South African Republic will not hold out against the united action of the Cape and Her Majesty's Government." On the same day he transmitted to President Kruger the message contained (as above) in Secretary Chamberlain's despatch of November 1. On the 21st of November the reply of the Transvaal Government was given, as follows:

"This Government most deeply regrets that the Cape Colony has by its own acts created a condition of things, in consequence of which it afterwards found itself compelled to invoke the intervention of the British Government, and it still more deeply regrets that Her Majesty's Government, on the 'ex parte' representations of the Cape Colony, felt itself constrained to telegraph to this Government in the terms of the communication of the 3rd instant. From the reply of this Government, it will be evident to your Excellency that it wishes to contribute in every possible way to preserve the good understanding in South Africa, and it therefore considers a passage such as occurs in your Excellency's telegram of the 3rd instant, 'An attempt to force the hand of the Cape Government at the Conference by a measure which almost resembles the nature of a hostile act,' not justified as regards this Republic. This Government adheres to its opinion and view that it has an undoubted right to regulate the ports of entrance on the borders of the Republic, and if Her Majesty's Government calls this an unfriendly act, this Government can only say that it was the consequence of an unfriendly act of the Cape Colony. In order not to be the cause of disturbance in South Africa, this Government is prepared to submit the regulating of the ports of entrance on the borders to arbitration, it being convinced of the justice of its assertion that the regulating of the ports of entrance on its borders by it is no infringement of Article 13 of the Convention of London."—*Great Britain, Papers by Command:* 1897, *C.* 8474, *pp.* 11–21.

The Transvaal: A. D. 1895 (November).—The state of discontent among the Uitlanders, and its causes.—The franchise question.—Growth of British Imperialistic designs.—The suspension of commandeering went a very little way towards removing the grievances of the British residents in the Transvaal. Underlying that and all other causes of discontent was the evident determination of the Boer inhabitants of the Republic to keep in their own hands the whole power of government, both state and municipal, and to deal with the increasing multitude of incomers from the outside world (whom they called Uitlanders, or Outlanders) permanently as aliens, excluded from citizenship by as many bars as a jealous legislature could raise. Until 1882, a foreigner,

settling in the Transvaal, could become a citizen and a voter after a residence of two years. The required residence was then raised to five years, and in 1887 it was carried up to fifteen. By this time the immigrant population was growing numerous, and its complaints of disfranchisement and nonrepresentation in the Volksraad, or Legislature, soon took on angry tones. In 1890 a nominal concession was made to the discontented Uitlanders, by the creation of a Second Volksraad (see, in this vol., CONSTITUTION OF THE SOUTH AFRICAN REPUBLIC—the bracketed amendments or added articles following Article 29), to which they could elect representatives. The suffrage in elections to this new chamber was given after two years residence, on the taking of an oath of allegiance to the Republic, and qualification for sitting in it was acquired after a residence of four years. But the Second Volksraad had no independent power. It could act only on certain specified subjects, taxation not included, and all that it did was subject to overruling by the First Volksraad, while the enactments of the latter were entirely valid without its consent. The Second Volksraad, in fact, was no actual branch of the national legislature, but a powerless appendage to it, where an appearance of representation in the government could be given to the Uitlander population without the reality.

Naturally, this aggravated rather than pacified the discontent of the new comers. They were a rapidly increasing multitude, congregated, for the most part, in one district, where it was easy for them to feel and act in combination. By 1895 there was said to be 100,000 of them in the Witwatersrand, and some 60,000 natives were working in their mines. They were being heavily taxed, and they complained that they could get nothing adequate in return for the taxation,—neither an efficient police, nor decent sanitary regulations, nor a proper water supply, nor a safe restraint upon the sale of liquors to their native work people. At the same time it was charged that corruption prevailed in the omnipotent First Volksraad, and among public officials, and that, on the whole, the Republic was in bad as well as in ignorant hands. This was not alone the view of the complaining foreign residents, but was shared more or less by unprejudiced visitors to the country, including Mr. James Bryce, who travelled in the Transvaal in 1895, and who wrote of the grievances of the Uitlanders in quite a sympathetic vein.

Until the gold-seekers came into it, the Republic had been poor and its revenues small. Their coming gave it a full treasury. They were the principal consumers of the imported goods on which its tariff was laid. Their large use of dynamite and other explosives in mining gave the government an opportunity to make a highly profitable monopoly of the manufacture, afterwards exchanged for an equally profitable concession to a monopolistic company. Their mines were the proper subject of a tax which yielded large returns. In fact, the Republic was taking much to itself from the Uitlanders,—no more, perhaps, than it had a fair right to take,—but, according to what seems to be trustworthy testimony, it was giving them far less in return for it than they had a just right to demand, and it was offering them no prospect of anything better in time to come.

It seems to be certain that responsibility for whatever was hostile and unjust in the treatment of the foreign population rested largely upon the President of the Republic, Mr. Paul Kruger, who had been at the head of the government for many years. He exercised an influence and authority that had scarcely any limit. The Volksraad was obedient to his will, and most of its legislation was understood to emanate from him and from those whose council he took. There can be little doubt that he practically shaped the whole policy of the Boer Republic in its dealing with the Uitlanders, and that it expressed the attitude of his mind toward foreigners in general and Englishmen in particular. He distrusted even the Dutch of Cape Colony, and sought Hollanders for the public service when he needed qualifications which his own people did not possess.

"While within the Transvaal there was growing discontent, matters were so shaping themselves without as to still further complicate the situation. The idea of a Confederation of British South Africa and the extension of the British sphere to the Zambesi, had long been the dream of imperialists, and the ruling classes at the Cape had persistently urged this upon the home government. . . . After the consolidation of the diamond companies, Mr. Cecil Rhodes became the imperialist leader in South Africa and marshaled behind him all the corporate interests and combined influence of his many associates. The Boer Republics stood in the way of the success of imperialistic enterprise. Then too the 'scramble for Africa,' which began with the efforts of the King of Belgium to consolidate the native tribes of central Africa under Belgian rule and which resulted in the carving out of the Congo Free State, the assertion of German protection over Damaraland and Namaqueland, and the joint effort of European powers to check the British sphere, all lent zest to ambition and brought the English popular mind into temper for concerted action. Under such circumstances the 'little England' party lost its standing and an imperial policy gained fullest support. With such an atmosphere surrounding the Transvaal the grievances of the 'aliens' within could not long be disregarded without serious trouble."—F. A. Cleveland, *The South African Conflict* (*The American Academy of Political and Social Science, No.* 265), *pp.* 19–22.

The Transvaal: A. D. 1895-1896.—Revolutionary conspiracy of disaffected Uitlanders at Johannesburg with Rhodesians.—The Jameson Raid and its results.—In the fall of 1895, certain of the disaffected Uitlanders at Johannesburg, leaders of an organization called the Transvaal National Union, abandoned attempts to obtain what they sought from the President and the Volksraad by petition and agitation, and either invited or accepted proposals of assistance from the armed forces of the British South Africa Company, with a view to some kind of a revolutionary undertaking. The story of the plot has been told with great frankness by one of the actors in it, Mr. Alfred P. Hillier, who writes: "Mr. Cecil Rhodes, . . . accustomed as he was to success, quick movement and rapid developments, in his great career, had . . . watched with impatient eyes the setting back of the clock within the South African Republic. His chief lieutenant, Dr. Jameson, who

had shared with him the labour of reclaiming from barbarism and developing Rhodesia, and whose ambition was no less than his superior's, discussed with him the desirability of some active outside pressure; and between them was evolved what is known as the Jameson plan. Mr. Beit, the capitalist most largely interested in the mines of the Rand, an old financial colleague of Mr. Rhodes, both in the De Beers amalgamation and in the establishment of the Chartered Company, promised both his influence and his purse in support of the plan. Overtures were then made to Mr. Lionel Phillips, who was at the head of the Chamber of Mines, and Mr. Charles Leonard, the Chairman of the National Union. . . . The plan at this early stage was presented in a very attractive form. A force under Dr. Jameson was to be quietly gathered on the border. The Johannesburg agitation, reinforced with capitalist support, was to be steadily pushed forward. Rifles and ammunition were to be smuggled into Johannesburg. Both the High Commissioner and the Colonial Office might be counted on, it was said, to support a vigorous forward movement for reform. Mr. Phillips and Mr. Leonard, sick and weary of the hopelessness of unsupported constitutional action, and of the continual set back in Boer politics, already casting round in their minds for some new departure, accepted and from that time forth co-operated with Mr. Rhodes and Dr. Jameson in the development of the Jameson plan.

"In October, 1895, a meeting took place at Groote Schuur, Mr. Rhodes' residence near Cape Town, at which were present, in addition to Mr. Cecil Rhodes, Mr. Lionel Phillips, Mr. Hammond, Mr. Charles Leonard, and Colonel Frank Rhodes. At this meeting the plan was more fully discussed and matured; and in November, 1895, when Dr. Jameson visited Johannesburg, the details were finally settled. The letter of invitation was written, signed and handed to Dr. Jameson, and the date of combined action provisionally fixed for the end of December. Dr. Jameson's force was to be about 1,000 strong, and the start to be made when finally summoned by the signatories of the letter. In the meantime the Johannesburg leaders were to have sent in to them 4,500 rifles and 1,000,000 rounds of ammunition, and were, if possible, to arrange for an attack on the Pretoria Arsenal simultaneously with the move from outside. With regard to the letter of invitation which was subsequently used by Dr. Jameson as a justification for his start, . . . Mr. Leonard, Colonel Rhodes, and Mr. Phillips have all distinctly stated that this letter was never intended as an authority to Dr. Jameson to enter the Transvaal, unless and until he received a further summons from them. Such was in brief the history of the Jameson plan as far as concerned Johannesburg. And it is necessary here to refer to the position with regard to it of the bulk of the men who subsequently constituted the Reform Committee. They at this time, with the exception of a few of their number, of which I personally was one, were entirely ignorant of what was going on. . . . The Johannesburg leaders, relying on the general sentiment of the community, assumed the responsibility of arranging a basis of operations. So that the plan when it was gradually revealed to various men had either to be accepted by them in its entirety or rejected. . . . Men demanded and received assurance that the movement was to be a republican one, and in no way to be an attempt on the independence of the country. A sufficient number of rifles were also to be forthcoming, and the High Commissioner was to be on the spot to expedite the adjustment of matters immediately disturbances arose."—A. P. Hillier, *Raid and Reform*, *pp.* 47–53.

The practical working of the conspiracy proved less easy than the planning of it. Arms and ammunition were smuggled into Johannesburg, but not in sufficient quantities. The time of action had been fixed for the 28th of December. When it came near there were found to be only 2,500 rifles at hand, instead of the 10,000 that were wanted. A scheme for the surprising of the Boer arsenal at Pretoria was pronounced at the last moment impracticable. Still more disconcerting to many was a report which came from Cape Town, that Jameson would require the rising to be made under and in favor of the British flag. "The movement within the Transvaal," says Mr. Hillier, "had from its outset been one in favour, not of a British Colony, but of a sound Republic. . . . Many Americans and South Africans had accorded their support only on this understanding." Until a clearer arrangement with the Rhodesians on this point could be reached, the leaders in Johannesburg determined not to act. Accordingly, on the 26th of December, two days before the appointed date of insurrection, they telegraphed to Jameson, in covert language which he understood, that it was "absolutely necessary to postpone the flotation." On the following day they issued a lengthy manifesto, setting forth all their grievances, and deferring until the 6th of January a general meeting of the National Union which had been called for the 27th of December—the eve of the intended rising. The manifesto concluded as follows: "We have now only two questions to consider: (a) What do we want? (b) how shall we get it? I have stated plainly what our grievances are, and I shall answer with equal directness the question, 'What do we want?' We want: (1) the establishment of this Republic as a true republic: (2) a Grondwet or Constitution which shall be framed by competent persons selected by representatives of the whole people and framed on lines laid down by them—a constitution which shall be safeguarded against hasty alteration; (3) an equitable franchise law, and fair representation; (4) equality of the Dutch and English languages; (5) responsibility of the Legislature to the heads of the great departments; (6) removal of religious disabilities; (7) independence of the courts of justice, with adequate and secured remuneration of the judges; (8) liberal and comprehensive education; (9) efficient civil service, with adequate provision for pay and pension; (10) free trade in South African products. That is what we want. There now remains the question which is to be put before you at the meeting of the 6th January, viz., How shall we get it?"—*Great Britain: Papers by Command*, 1896, *C.*—7933.

Acting, as appears, on his own responsibility, Dr. Jameson refused to be stopped by the postponement at Johannesburg, and, on the evening of December 29, he entered the Transvaal territory, from Pitsani-Pitlogo, in Bechuanaland, with a force of about 500 men. His movement

created consternation in all the circles of the conspiracy, and received no effectual support. It was promptly disavowed and condemned by the British authorities, and by the home officials of the British South Africa Company. Cecil Rhodes could do nothing but tacitly acknowledge his responsibility for what his lieutenant had done (though the precipitation of the raid was evidently a surprise and a trouble to him) by resigning the premiership of Cape Colony. Meantime, the invaders had learned that the Boers were not to be ridden over in the easy fashion they supposed. Hasty levies had intercepted their march, had repulsed them at Krugersdorp, with a heavy loss in killed and wounded, surrounded them at Doornkop, and forced them to surrender on New Year's day. A few days later, the Uitlanders at Johannesburg, some of whom had made a confused and ineffectual attempt to take arms, proclaiming a provisional government, and around whose town the excited Boers had gathered in large force, were persuaded by the British High Commissioner to submit to the Transvaal authorities, and more than fifty of the leaders were placed under arrest.

With great difficulty, President Kruger overcame the desire of his people that Jameson and his officers should be brought to trial and punished in the country they had outraged by their invasion, and they were handed over to the British government for removal to England and trial by an English court. The trial took place in July (20–28), before the Lord Chief Justice (Lord Russell of Killowen), Baron Pollock, and Justice Hawkins, with a special jury. The charge on which the prisoners were tried was that of having fitted out a warlike expedition against a friendly state, in violation of the Foreign Enlistment Act. The charge of the Lord Chief Justice gave the following questions to the jury: Were preparations for a raid made by the defendants? Did they aid, abet, counsel, or procure such preparation? Were they employed in the actual expedition? Did the Queen exercise dominion and sovereignty in Pitsani-Pitlogo? The jury returned affirmative answers, which were held to constitute a verdict of "guilty," and sentence was pronounced,—fifteen months of imprisonment for Dr. Jameson, and terms varying from five to ten months for his four subordinate officers. During the trial and after there were many demonstrations of popular sympathy with the prisoners. Meantime, in April, the Transvaal authorities had brought the imprisoned leaders of the Johannesburg "reform committee" to trial at Pretoria on charges of treason and had convicted them all. Four, namely, Colonel Rhodes (brother of Cecil), Lionel Phillips, George Farrar, and John Hays Hammond (an American), were sentenced to death; the remainder to a payment of heavy fines. The death sentences were soon commuted, first to imprisonment for fifteen years, and subsequently to fines of $125,000 on each of four prisoners.

The Transvaal: A. D. 1896 (January).—Message of the German Emperor to President Kruger, relative to the Jameson Raid.—The critical situation of affairs produced by the Jameson raid was dangerously complicated at the beginning by the publication of the following telegram, sent to President Kruger, on the 3d of January, by the German Emperor: "I express my sincere congratulations that, supported by your people and without appealing for help to friendly powers, you have succeeded by your own energetic action against the armed bands which invaded your country as disturbers of the peace, and have thus been enabled to restore peace, and safeguard the independence of your country against attacks from without." President Kruger replied: "I testify to Your Majesty my very deep and heartfelt thanks for Your Majesty's sincere congratulations. With God's help we hope to do everything further that is possible for the holding of our dearly bought independence and the stability of our beloved republic." This kindled a white heat of indignation in England. It was supposed to signify a disposition on the part of the German Emperor to recognize the absolute independence which the South African Republic claimed, and to threaten interference as between Great Britain and the Boers. A powerful "flying squadron" was instantly put in commission, and several ships were ordered to Delagoa Bay. For some time the relations between Great Britain and Germany were seriously strained; but various influences gradually cooled the excited feeling in England, though not a little distrust of German intentions has remained.

The Transvaal: A. D. 1896 (January—April).—Urgency of the British Colonial Secretary for redress of Uitlander grievances.—Invitation to President Kruger to visit England.—His requirement that Article IV. of the London Convention shall be discussed.—Deadlock of the parties.—The complaints of the Uitlanders, effectually silenced for the time being at Johannesburg by the vigorous action of the Boers, were now taken up by the British Secretary of State for the Colonies, Mr. Chamberlain, and pressed in strenuous despatches to the High Commissioner in South Africa, Sir Hercules Robinson. On the 4th of January, 1896, four days after the surrender of Jameson and four days before the insurgent Uitlanders at Johannesburg had laid down their arms, a long despatch was cabled by Mr. Chamberlain to the High Commissioner, instructing him to make "friendly representations" to President Kruger on the subject of those complaints. "I am aware," wrote the Colonial Secretary, "that victory of Transvaal Government over Administrator of Mashonaland may possibly find them not willing to make any concessions. If this is the attitude they adopt, they will, in my opinion, make a great mistake; for danger from which they have just escaped was real, and one which, if the causes which led up to it are not removed, may recur, although in a different form. I have done everything in my power to undo and to minimise the evil caused by late unwarrantable raid by British subjects into the territory of the South African Republic, and it is not likely that such action will be ever repeated; but the state of things of which complaint has been made cannot continue forever. If those who are now a majority of inhabitants of the Transvaal, but are excluded from all participation in its government, were, of their own initiative, and without any interference from without, to attempt to reverse that state of things, they would, without doubt, attract much sympathy from all civilised communities who themselves live under a free Government, and I cannot regard the present state of things in the South African Republic as

free from danger to the stability of its institutions. The Government of the South African Republic cannot be indifferent to these considerations, and President of South African Republic himself has on more than one occasion, expressed his willingness to inquire into and to deal with just reasons for discontent; and the Volksraad have now the opportunity to show magnanimity in the hour of their success and to settle all differences by moderate concessions. They must fully admit the entire loyalty of yourself and of Her Majesty's Government to the terms of London Convention, as shown by their recent intervention, and they must recognise that their authority in crisis through which they have passed could not have been so promptly and effectively asserted without that intervention. If they will recognise this by making concessions in accordance with our friendly advice, no one will be able to suggest that they are acting under pressure, and their voluntary moderation will produce best effect among all who are interested in well-being of the Transvaal and in future of South Africa."

On the 13th of January the Colonial Secretary pursued the subject in another despatch to Sir Hercules Robinson, as follows: "Now that Her Majesty's Government have fulfilled their obligations to the South African Republic, and have engaged to bring the leaders in the recent invasion to trial, they are anxious that the negotiations which are being conducted by you should result in a permanent settlement by which the possibility of further internal troubles will be prevented. The majority of the population is composed of Uitlanders, and their complete exclusion from any share in the government of the country is an admitted grievance which is publicly recognised as such by the friends of the Republic as well as by the opinion of civilised Europe. There will always be a danger of internal disturbance so long as this grievance exists, and I desire that you will earnestly impress on President Kruger the wisdom of making concessions in the interests alike of the South African Republic and of South Africa as a whole. There is a possibility that the President might be induced to rely on the support of some foreign Power in resisting the grant of reforms or in making demands upon Her Majesty's Government; and in view of this I think it well to inform you that Great Britain will resist at all costs the interference of any foreign Power in the affairs of the South African Republic. The suggestion that such interference was contemplated by Germany was met in this country by an unprecedented and unanimous outburst of public feeling. In order to be prepared for all eventualities, it has been thought desirable by Her Majesty's Government to commission a Flying Squadron of powerful men-of-war, with twelve torpedo-ships; and many other vessels are held in reserve. Her Majesty's Government have no reason, at the present moment, to anticipate any conflict of interest with foreign Powers; but I think it right for you to know that Great Britain will not tolerate any change in her relations with the Republic, and that, while loyally respecting its internal independence, subject to the Conventions, she will maintain her position as the Paramount Power in South Africa, and especially the provisions of Article IV. of the Convention of 1884. It is my sincere hope that President Kruger, who has hitherto shown so much wisdom in dealing with the situation, will now take the opportunity afforded to him of making of his own free will such reasonable concessions to the Uitlanders as will remove the last excuse for disloyalty, and will establish the free institutions of the Republic on a firm and lasting basis."

To this Sir Hercules replied with a remonstrance, saying: "Your telegram 13 January No. 1 only reached me last night after I had left Pretoria. I could, if you consider it desirable, communicate purport to President of South African Republic by letter, but I myself think such action would be inopportune. . . . Nearly all leading Johannesburg men are now in gaol, charged with treason against the State, and it is rumoured that Government has written evidence of a long-standing and wide-spread conspiracy to seize Government of country on the plea of denial of political privileges, and to incorporate the country with that of British South Africa Company. The truth of these reports will be tested in the trials to take place shortly in the High Court, and meanwhile to urge claim for extended political privileges for the very men so charged would be ineffectual and impolitic. President of South African Republic has already promised municipal government to Johannesburg, and has stated in a Proclamation that all grievances advanced in a constitutional manner will be carefully considered and brought before the Volksraad without loss of time; but until result of trials is known nothing, of course, will now be done." Mr. Chamberlain saw force in the High Commissioner's objections, and assented to a momentary suspension of pressure on the Transvaal President, but not for long. "I recognise," he telegraphed on the 15th, "that the actual moment is not opportune for a settlement of the Uitlanders' grievances, and that the position of the President of the South African Republic may be an embarrassing one, but I do not consider that the arrest of a few score individuals out of a population of 70,000 or more, or the supposed existence of a plot among that small minority, is a reason for denying to the overwhelming majority of innocent persons reforms which are just in themselves and expedient in the interests of the Republic. Whatever may be said about the conduct of a few individuals, nothing can be plainer than that the sober and industrious majority refused to countenance any resort to violence, and proved their readiness to obey the law and your authority. I hope, therefore, to hear at an early date that you propose to resume the discussion with President of South African Republic on lines laid down in my previous telegrams. I do not see that the matter need wait until the conclusion of the trial of the supposed plotters."

On the 28th of January the High Commissioner, under instructions from London, addressed to President Kruger the following invitation: "I am directed by Her Majesty's Government to tender to your Honour a cordial invitation to visit England, with a view to discussing with them all those questions which relate to the security of the South African Republic and the general welfare of South Africa. I am to add that, although Her Majesty's Government cannot consent to modify Article 4 of the London Convention [see above; A. D. 1884–1894], other

matters are open to friendly discussion. Her Majesty's Government hope that your Honour will come as the guest of the British Government." While this invitation was being considered, and before a reply to it had been made, the British Colonial Secretary reopened his own discussion of the questions at issue, February 4, in a despatch of great length, reviewing the whole history of the relations of the Uitlanders to the government of the South African Republic, and of the recent occurrences which had been consequent upon their discontent. It praised "the spirit of wisdom and moderation" shown by President Kruger, who "kept within bounds the natural exasperation of his burghers," and it gave especial attention to a proclamation which President Kruger had addressed to the inhabitants of Johannesburg, on the 10th of January, in which he had said: "It is my intention to submit a draft Law at the first ordinary session of the Volksraad, whereby a Municipality with a Mayor at its head will be appointed for Johannesburg, to whom the whole municipal government of this town will be entrusted."

On this the Secretary made the following suggestions: "Basing myself upon the expressed desire of President Kruger to grant municipal government to Johannesburg, I suggest, for his consideration, as one way of meeting the difficulty, that the whole of the Rand district, from end to end, should be erected into something more than a municipality as that word is ordinarily understood; that, in fact, it should have a modified local autonomy, with powers of legislation on purely local questions, and subject to the veto of the President and Executive Council; and that this power of legislation should include the power of assessing and levying its own taxation, subject to the payment to the Republican Government of an annual tribute of an amount to be fixed at once and revised at intervals, so as to meet the case of a diminution or increase in the mining industry. As regards judicial matters in such a scheme, the Rand, like the Eastern Provinces and the Kimberley District of the Cape Colony, might have a superior court of its own. It would, of course, be a feature of this scheme that the autonomous body should have the control of its civil police, its public education, its mine management, and all other matters affecting its internal economy and well-being. The central Government would be entitled to maintain all reasonable safeguards against the fomenting of a revolutionary movement, or the storage of arms for treasonable purposes within the district. Those living in, and there enjoying a share in the government of, the autonomous district, would not, in my view, be entitled to a voice in the general Legislature or the Central Executive, or the presidential election. The burghers would thus be relieved of what is evidently a haunting fear to many of them—although I believe an unfounded one—that the first use which the enfranchised newcomers would make of their privileges would be to upset the republican form of government. Relieved of this apprehension, I should suppose that there would not be many of them who would refuse to deal with the grievances of the comparatively few Uitlanders outside the Rand on those liberal principles which characterized the earlier legislation of the Republic. The President may rest assured that in making the above suggestions I am only actuated by friendly feeling towards himself and the South African Republic. They are not offered in derogation of his authority, but as the sincere and friendly contribution of Her Majesty's Government towards the settlement of a question which continues to threaten the tranquillity of the Republic and the welfare and progress of the whole of South Africa. A proper settlement of the questions at issue involves so many matters of detail which could be more easily and satisfactorily settled by personal conference, that I should be glad to have the opportunity of discussing the subject with the President, if it suited his convenience, and were agreeable to him, to come to this country for the purpose. Should this be impracticable, I rely upon you to make my views known to him and to carry on the negotiations."

This despatch, as soon as it had been forwarded from the Colonial Office, was published in the "London Gazette," so that a telegraphed summary of its contents reached President Kruger before it came to him officially,—which naturally added something to the irritations existing at Pretoria. However, the President, on the 8th of February, by telegram to the High Commissioner, and more fully on the 25th by letter, responded to the invitation to visit England. In his telegram he said: "In order to give me the liberty to let the Honourable Volksraad judge whether permission and power to act will be given me to go out of the country, an understanding must, of course, first be come to as to what points will be discussed or not, so that I may lay those points before the Volksraad for deliberation and resolution." In his letter he wrote:

"At the commencement, I wish to observe that the object of this letter is to pave the way for a friendly discussion of the matters herein mentioned, in order to arrive at a satisfactory solution, and further that, although as yet I desire no positive and direct assent to the desires expressed herein, I would, nevertheless, to prevent a misunderstanding, desire to have an assurance that they will be taken into the most mature consideration with the earnest endeavour and the sincere desire to comply with my wishes. The desire to receive this assurance will be respected by your Excellency and Her Majesty's Government as reasonable, when I say that, considering especially my advanced age and the unavoidable delay, owing to my absence, in the transaction of matters affecting the highest State interests, I would, with difficulty, be able to make the sacrifice in going only to discuss matters without arriving at the desired result, and it is evident that if the assurance referred to by me cannot be given by Her Majesty's Government, in all probability the Honourable Volksraad would not grant its consent and commission. . . . Although, as already said, the Government could tolerate no interference in its internal relations and the official discussion of affairs with the object of requiring changes therein will have to be avoided, on the other hand I wish it to be understood that private hints given by statesmen of experience in the true interest of the country and its independence will always be warmly appreciated by me, from whatever side they may come.

"Going over to a summing up of the points which, in my opinion, should be brought under discussion, I wish to mention in the first place:—1. The superseding of the Convention of London

with the eye, amongst others, on the violation of the territory of the South African Republic: because in several respects it has already virtually ceased to exist; because in other respects it has no more cause for existence; because it is injurious to the dignity of an independent Republic; because the very name and the continual arguments on the question of suzerainty, which since the conclusion of this Convention no longer exists, are used as a pretext, especially by a libellous press, for wilfully inciting both white and coloured people against the lawful authority of the Republic; for intentionally bringing about misunderstanding and false relations between England and the Republic, whereby in this manner the interests of both countries and of their citizens and subjects are prejudiced and the peaceful development of the Republic is opposed. In the discussion of the withdrawal of the Convention as a whole, Article IV. should naturally not be kept back. I have reason to believe that the British Government has come to the decision to make no alteration in this on account of false representations made to it and lying reports spread by the press and otherwise with a certain object, to the effect that the Government of the Republic has called in, or sought, the protection of other Powers. While I thankfully acknowledge and will ever acknowledge the sympathy of other Powers or their subjects, and the conduct of the last named has, in the light of the trials recently passed through, on the whole offered a favourable contrast to that of British subjects, there is nevertheless nothing further from my thoughts than to strive for the protection of a foreign power, which I will never even seek. Neither I nor the people of the Republic will tolerate an interference with the internal relations from any power whatever, and I am prepared, if the course proposed by me be adopted, to give the necessary assurances for this, in order that Her British Majesty's Government need have no fear that Her interests in South Africa should be injured. 2. Further should be discussed the superseding of the Convention by a treaty of peace, commerce and friendship, by which the existing privileges of England in the dominion of commerce and intercourse and the interests of British subjects in the Republic will be satisfactorily guaranteed on the footing of the most-favoured nation, and herein I would be prepared to go to the utmost of what can reasonably be asked. 3. Then the necessary guarantees will have to be given against a repetition of the violation of territory out of the territory of the Chartered Company or the Cape Colony, and of disturbing military operations and unlawful military or police or even private movements on the borders of the Republic. 4. Further should be discussed the compensation for direct and indirect injury to be given or caused to be given by England for and by reason of the incursion that recently took place. The reasons for this are evident and need no argument. The amount to be demanded it is impossible as yet to determine, but, if required, it can still be given before my departure to England. 5. I would, although in the following respects I would not insist beforehand on an assurance such as that intended with regard to the above-mentioned points, nevertheless wish to request the earnest consideration of a final settlement of the Swaziland question, in this sense, that that country shall henceforth become a part of the Republic. . . . 6. Further, I would very much like to have discussed the revocation of the charter of the Chartered Company, which, if this does not take place, will continue to be a threatening danger to the quiet and peace of the Republic and thereby also to the whole South Africa. I am of opinion that all the above desires are fair and just. . . . I will be pleased to receive the views of Her Majesty's Government on the points herein brought forward, in order that I may be enabled to bring the matter for decision before the Honourable Volksraad."

Mr. Chamberlain's reply to this communication was, in part, as follows: "Her Majesty's Government regret that President has given no definite reply to invitation to visit England which was sent to him on 28th January. This invitation was the result of private information conveyed to Her Majesty's Government that the President was desirous of arranging with them a settlement of all differences, and of placing on a permanent and friendly basis the relations between the United Kingdom and the South African Republic. Before forwarding the invitation, Her Majesty's Government knew that his Honour was in full possession of their opinion, that no arrangement can be satisfactory or complete which does not include a fair settlement of those grievances of the Uitlander population which have been recognized by the general public opinion of South Africa, and which have been the cause of discontent and agitation in the past, and are likely—unless remedied—to lead to further disturbances in future. Her Majesty's Government also took care to satisfy themselves that the President had been made aware that they were not prepared to modify in any way the provisions of Article IV. of the Convention of 1884, and this was again made clear in the formal invitation to visit England. Under these circumstances, it was with great surprise that Her Majesty's Government learnt from the Despatch of the President of 25th February that his Honour objected to discuss the question of the reforms asked for by the Uitlanders, and that he desired to propose withdrawal of Article IV. of the Convention, and Her Majesty's Government regret that they were not informed of his Honour's views on the subject at an earlier date, as they would not have felt justified in inviting the President to encounter the fatigue of a journey to this country if they had not been led to believe that he was in agreement with them as to the general object of such a visit.

"In their view, Her Majesty's Government were able to offer a complete guarantee in the future to the South African Republic against any attack upon its independence, either from within any part of Her Majesty's dominions or from the territory of a foreign Power. In return, they assumed that the President would make known to them the measures which he proposed to take to remedy the acknowledged grievances of the Uitlanders, and to consider any suggestions which Her Majesty's Government might wish to offer as to the adequacy of these measures for the removal of all cause of internal disturbances. . . . Such a discussion as they contemplate would not involve any acknowledgment on the part of the President of a right of interference in the internal concerns of the Republic, but would only at the most amount to a

recognition of the friendly interest of Her Majesty's Government in its security, and in the general welfare of South Africa. The President would be, of course, at liberty to accept or to reject any advice that might be tendered to him by Her Majesty's Government, but in the latter case the responsibility for the result would naturally rest wholly with him. Her Majesty's Government have already expressed a willingness to give full consideration to any representations which his Honour may wish to make on the other points named in his letter, although some of them are matters wholly in jurisdiction of Her Majesty's Government. But unless the President is satisfied with the explanations I have now given, Her Majesty's Government are reluctantly obliged to come to the conclusion that no good purpose can be served by the proposed visit."

In return to this despatch, President Kruger, on 17th of March, expressed his "deep disappointment" at its contents, by reason of which, he said, "it is not possible for me to proceed to convene a special session of the Volksraad at once" for the purpose of action upon the invitation of the British Government. Thereupon (April 27), the Colonial Secretary cabled to the High Commissioner in South Africa: "Her Majesty's Government have no alternative but to withdraw the invitation, which it appears from the President's message was given under a misapprehension of the facts." Thus the two parties were at a deadlock.—*Great Britain, Papers by Command:* 1896, *C.* 7933, *pp.* 19–91; *and C.* 8063, *pp.* 11–17.

Rhodesia: A. D. 1896 (March—September). —Matabele revolt.—Taking advantage of the confusion in affairs which followed the Jameson raid, and its removal of part of the police force from the country, the Matabele rose in revolt. The main provocation of the rising appears to have been from severe measures that were adopted for stamping out rinderpest in the country. Many whites were killed in the regions of scattered settlement, and Buluwayo and Gwelo, where considerable numbers had taken refuge, were in much danger for a time. But prompt and vigorous measures were taken by the colonial and imperial authorities, as well as by the officers of the South Africa Company. Troops were sent from Cape Colony, Natal, and England, and Major-General Sir Frederick Carrington was ordered from Gibraltar to take command. Cecil Rhodes hastened to Salisbury on the first news of the outbreak and organized a force of volunteers for the relief of the beleaguered towns. The Transvaal government offered help. By June, when General Carrington arrived, and Lord Grey had succeeded Dr. Jameson as Administrator, the insurgent natives had been put on the defensive and had nearly ceased their attacks. They were driven into the Matoppo hills, where their position was formidably strong. At length, in August, Mr. Rhodes opened negotiations with some of the chiefs, and went, with three companions, unarmed, into their stronghold. He there made an agreement with them, which the British military authorities and many of the Matabele warriors refused to be bound by. But the revolt had been practically broken and soon came to an end.

British South Africa Company: A. D. 1896 (June).—Resignation of Mr. Rhodes.—On the 26th of June the resignations of Cecil J. Rhodes and Mr. Beit from the Board of Directors of the British South Africa Company, and of Mr. Rutherford Harris as its Secretary, were accepted by the Board.

Cape Colony: A. D. 1896 (July).—Investigation of the Jameson Raid.—Responsibility of Cecil J. Rhodes.—On the 17th of July a Select Committee of the Cape Colony House of Assembly, appointed in the previous May "to inquire into the circumstances, as affecting this colony, in connexion with the preparations for and carrying out of the recent armed inroad into the territory of the South African Republic," made its report, rehearsing at length the facts ascertained, with evidence in full, and submitting a number of "conclusions," among them the following: "Your Committee are of opinion that no member of the then Colonial Government with the exception of the then Prime Minister [Mr. Cecil J. Rhodes], had any knowledge whatever or suspicion of the intention to send an armed force across the border of the South African Republic. . . . Your Committee is convinced that the stores and workshops of the De Beers Consolidated Mines were for some time previous to the inroad used for the storage and for the unlawful exportation of arms destined for the South African Republic, in connexion with this inroad, and also that 11 men were sent from De Beers to Johannesburg, who were afterwards allowed to resume their positions. The evidence is clear, and leaves no room for doubt on this point. The local directors give an emphatic denial to any guilty knowledge on their part, and your Committee must acquit them of anything beyond negligence, which, looking to the magnitude of the transactions and the length of time over which they extended, must have been very marked. It is not conceivable that such proceedings could have been permitted without the knowledge and approval of the Chairman and Life Governor, Mr. C. J. Rhodes. With regard to the Chartered Company, your Committee find that the principal officials in Cape Town either knew, or were in a position to have known, the existence of this plot. Two at least of the directors, Mr. Beit and the Right Hon. C. J. Rhodes, were, together with the Administrator, Dr. Jameson, and Dr. Harris, the South African Secretary of the Company, active as promoters and moving spirits throughout, and they were from time to time kept informed of the preparations. . . . The whole movement was largely financed and engineered from outside, and in both cases certain directors and officials of the Chartered Company of British South Africa were active throughout. As regards the Right Hon. C. J. Rhodes, your Committee can come to no other conclusion than that he was thoroughly acquainted with the preparations that led to the inroad. That in his capacity as controller of the three great joint-stock companies, the British South Africa Company, the De Beers Consolidated Mines, and the Gold Fields of South Africa, he directed and controlled the combination which rendered such a proceeding as the Jameson raid possible. . . . It would appear that Mr. Rhodes did not direct or approve of Dr. Jameson's entering the territory of the South African Republic at the precise time when he did do so, but your Committee cannot find that that fact relieves Mr. Rhodes from responsibility for the unfortunate occurrences which took place. Even if Dr.

Jameson be primarily responsible for the last fatal step, Mr. Rhodes cannot escape the responsibility of a movement which had been arranged, with his concurrence, to take place at the precise time it did, if circumstances had been favourable at Johannesburg."—*Great Britain, Papers by Command:* 1897, *C.* 8380, *pp.* 7–9.

British South Africa Company: A. D. 1896 (July).—Parliamentary movement to investigate its administration.—In the British House of Commons, on the 30th of July, Mr. Chamberlain, Secretary of State for the Colonies, made a motion for the appointment of a select committee of fifteen to conduct an inquiry into the administration of the British South Africa Company, and the motion was adopted.

The Transvaal: A. D. 1896-1897 (May—April).—Continued controversies between the British Colonial Secretary, Mr. Chamberlain, and the Government of the South African Republic.—Complaints and counter complaints.—Aliens Immigration Law, etc.—For a time after the abandonment of the proposed visit of President Kruger to England, the older questions at issue between Great Britain and the Transvaal fell into the background; but new ones were constantly rising. Each party watched the other with suspicious and critical eyes, sharply questioning things that would hardly have been noticed in ordinary times. The Boer authorities, on their side, were naturally disturbed and made inquisitive by every movement of troops or arms in the surrounding British territory, both of which movements were being somewhat increased by the revolt of the Matabeles. They were impatient, too, for some action on the part of the British government against the chief authors of the recent invasion,—the officials of the British South Africa Company,—and against the Company itself. On the 11th of May, 1896, the State Secretary of the Transvaal government telegraphed to the British High Commissioner as follows: "The newspapers of the last few days state that Her Majesty's Government still continue to take the part of the Directors of British South Africa Company, especially Mr. Rhodes. This Government will not believe the accuracy of these reports, but it is of opinion that the Chartered Company as administering the Government up to now is a source of danger to whole of South Africa. The inroad into this Republic was made by officers, troops, and arms of that Chartered Company, and even the explicit prohibition of Her Majesty's Government was unable to restrain them, notwithstanding the Chartered Company had taken upon itself the international obligations of Great Britain. The behaviour of the persons who knew of the scheme of the inroad beforehand and supported it is, as we see, defended by saying that they acted thus in the interests of and for the extension of Imperialism in South Africa. This Government does not believe that the end justifies the means, and is convinced that Her Majesty's Government does not wish to be served by misdeed."

When this had been communicated to the British Colonial Secretary, Mr. Chamberlain, he replied (May 13) that the President of the South African Republic "has been misinformed if he supposes that Her Majesty's Government have taken the part of any of British South Africa Company Directors, including Mr. Rhodes, with regard to any connexion which they may be hereafter proved to have had with the recent raid. . . . On the contrary, while appreciating Mr. Rhodes's services in the past, Her Majesty's Government have condemned the raid, and the conduct of all the parties implicated by the telegrams recently published. Her Majesty's Government have promised a full Parliamentary inquiry, as soon as legal proceedings against Dr. Jameson and his officers have been concluded, to examine the Charter granted to British South Africa Company and the operation of its provisions, and to consider whether any improvements in it are desirable. Such an inquiry will go into the whole subject, not only of recent events, but of the whole administration. Her Majesty's Government cannot be expected to announce any decision as to the future of the Company until the Parliamentary Committee has made its recommendations."

On the 15th President Kruger replied: "This Government is very pleased at receiving the assurance that a searching inquiry is being instituted against British South Africa Company and its Directors, and will follow its course with interest." But the following month found the authorities at Pretoria still unsatisfied as to the intention of the British government to bring Mr. Rhodes and the South Africa Company to account for what they had done. On the 19th of June, the then Acting High Commissioner (Sir Hercules Robinson having gone to England on leave) transmitted to Mr. Chamberlain two telegrams just received by him from the government of the South African Republic. The first was as follows: "Acting under instructions, I have the honour to acquaint your Excellency, for the information of Her Majesty's Government, that, with a view to the welfare and peace of South Africa, this Government is convinced that the proofs in the possession and at the disposal of Her Majesty's Government now completely justify and compel the bringing to trial of Messrs. Cecil Rhodes, Alfred Beit, and Doctor Rutherford Harris, as has already been done with Doctor Jameson and his accomplices. In the interests of all South Africa, this Government feels itself obliged to press the taking of this step upon Her Majesty's Government. I have also the honour to request your Excellency to communicate this despatch by cable to Her Majesty's Government in London."

The second was in this language: "This Government regards with great regret the delay in the matter of the inquiry with respect to the complicity and responsibility of British South Africa Company in connexion with the raid of Doctor Jameson and his band within the territory of this Republic. This Government considers it its right and duty to press for the speedy holding of the inquiry, not merely because it is the injured party but also because of its interest and share in the well-being of South Africa, whose interests, as repeatedly intimated, are also dear to Her Majesty the Queen. This Government is also convinced that it is urgently necessary that the entire control and administration, as well civil as military, be taken out of hands of British South Africa Company and transferred to Her Majesty's Government, and I am instructed to press this point on behalf of this Government. I have further the honour to request your Excellency to cable this despatch to Her Majesty's Government in London."

To these communications Mr. Chamberlain made a somewhat haughty response. "Inform the Government of the South African Republic," he cabled on the 25th of June, "that Her Majesty's Government have received their telegrams of the 19th June, which were published in London almost simultaneously with their receipt by me. Her Majesty's Government do not require to be reminded of their duty in regard to the recent invasion of the South African Republic, and they cannot admit the claim of the Government of the Republic to dictate the time and manner in which they shall fulfil their obligations. I am unable to understand the reasons which have suddenly influenced the Government of the South African Republic to make representations which are inconsistent with their previous statements. On 18th April and on 15th May the Government of the Republic appeared to be satisfied with the assurances given them by Her Majesty's Government, from which there has never been any intention of departing. It would not be in accordance with English ideas of justice to condemn the British South Africa Company and deal with its powers as proposed in the telegrams before an enquiry had been made, and before the Company had been heard in its own defence. With regard to the demand of the Government of the South African Republic that the three gentlemen specifically named shall now be placed on their trial, you will remind them that Her Majesty's Government can only act in this matter upon the advice of the Law Officers of the Crown, and in accordance with the principles of English law."

But Mr. Secretary Chamberlain, on his side, was equally—perhaps more than equally—watchful and critical of the doings and omissions of the government of the South African Republic. He kept an eye upon them that was especially alert for the detection of infractions of the London Convention of 1884 (see above: A. D. 1884–1894), with its provisions very strictly construed. He found treaties negotiated with foreign powers in contravention of Article IV. of that Convention, and laws passed which he deemed an infringement of its Article XIV. He arraigned the government of the Republic upon each as it came to his knowledge, and then, on the 6th of March, 1897, went back over the record of his complaints and summed them up, as follows: "It will be convenient if I recapitulate briefly the occasions for such complaint, beginning with the cases relating to Article IV. of the Convention. . . .

"1.—Netherlands Treaty. On the 9th November 1895, an Extradition Treaty between the South African Republic and the Netherlands was signed at the Hague, and the ratifications were exchanged on the 19th June last, without the Treaty being submitted for the approval of Her Majesty. The case was therefore one of a clear infraction of the Convention, inasmuch as the Treaty had not been submitted to Her Majesty's Government on its completion, and had been concluded by the exchange of ratifications without obtaining the previous approval of the Queen. The Government of the South African Republic, on their attention being called to the infraction, did not deny that there had been a departure from the general practice, but urged that they had made no publication of the Treaty in anticipation of the approval of Her Majesty. The Treaty had, however, been published in the 'Netherlands Gazette' of the 3rd July, and I observed that when the Treaty was published in the 'Staats Courant' of the South African Republic after Her Majesty's approval had been given, the official notice merely stated that the Treaty was signed and ratified on certain dates, no reference being made to that approval.

"2.—The Accession of the South African Republic to the Geneva Convention. After Dr. Jameson's raid, owing to a report made by the St. John's Ambulance Association, Her Majesty's Government determined to invite the South African Republic to accede to the Geneva Convention, and the necessary instructions were sent to Sir J. de Wet, who, however, omitted to carry them out. The South African Republic, on the 30th September, formally communicated to the Swiss Government, through their Representative at the Hague, their act of accession to the Geneva Convention. Her Majesty's Government, in the circumstances, did not hesitate to convey the Queen's approval, but the action of the Government of the Republic none the less constituted a breach of the London Convention.

"3.—Portuguese Treaty. An Extradition Treaty between the South African Republic and Portugal was signed on the 3rd November 1893, but, contrary to the usual practice, has not yet been submitted for the Queen's approval, although two years have elapsed since Lord Ripon, in his Despatch of the 25th February 1895, requested your predecessor to call the attention of the President to the omission to communicate this Convention to Her Majesty's Government under the provisions of Article IV. of the London Convention. . . . I now pass to the consideration of some of the recent legislation of the Volksraad in its relation to Article XIV. It will be found that it involves in more than one case actual or possible breaches of the Convention. Article XIV. runs as follows:—'All persons, other than natives, conforming themselves to the laws of the South African Republic (a) will have full liberty, with their families, to enter, travel, or reside in any part of the South African Republic; (b) they will be entitled to hire or possess houses, manufactories, warehouses, shops, and premises; (c) they may carry on their commerce either in person or by any agents whom they may think fit to employ; (d) they will not be subject, in respect of their persons or property, or in respect of their commerce or industry, to any taxes, whether general or local, other than those which are or may be imposed upon citizens of the said Republic.'

"4.—The Aliens Immigration Law. This law imposes upon aliens conditions of a new and burthensome character in excess of the simple requirement that they must conform themselves to the laws of the Republic. . . . 2. The Aliens Expulsion Law. This law empowers the President, with the advice and consent of the Executive Council, after consulting the State Attorney, to expel, without an appeal to the Court, any foreigner who, by word or writing, excites to disobedience or transgression of the law, or takes any steps dangerous to public peace and order. . . . Her Majesty's Government . . . do not admit that the Government of the Republic have a right to expel foreigners who are not shown to have failed to conform to the laws of the Republic, and they reserve the right to object to

proceedings under the Act which may amount to a breach of the Convention. 3. The Press Law. This law empowers the State President, on the advice and with the consent of the Executive, to prohibit entirely or for a time the circulation of printed or published matter the contents of which are, in his judgment, contrary to good morals or a danger to the peace and order in the Republic. The suppression of the 'Critic' newspaper, the property of a British subject, under this law, is a matter which may raise a serious question as to whether the action of the Government of the Republic has been consistent with the Convention, but as Her Majesty's Government have not yet received the explanation of the Government of the Republic in that case, it is only necessary for me to make a passing allusion to it in this Despatch.

"In several of the cases above cited, the strict letter of the Convention could apparently have been observed without any difficulty, while in others the objects which the Government of the South African Republic had in view could have been attained without any infringement of the Convention by a previous understanding with Her Majesty's Government. Her Majesty's Government therefore cannot conceal from themselves that the Government of the South African Republic have in these cases failed to give effect in practice to the intention, so frequently expressed in public and official utterances, of upholding the Convention on the part of the Republic, and of maintaining that good understanding with Her Majesty's Government which is so necessary in the interests of South Africa."

Of the laws complained of by Mr. Chamberlain, that relating to immigrant aliens had raised the most protest, because of its requirement that all such aliens who were permitted to enter and remain in the country must carry "travelling and residential passes," to be shown on demand. The Transvaal Government had met Mr. Chamberlain's first remonstrance on this subject, in January, by saying: "It is an evident fact that, especially during the last time, the immigration of aliens of the lowest class and without any means of subsistence has been increasing in a disquieting manner. These persons are dangerous to the peace of the inhabitants and of the State itself, and, in the opinion of this Government, no country whatever can be obliged to admit such undesirable persons. The regulation of unrestricted entry, as it at present takes place, is thus, from the point of view of police requirement, not only necessary but also entirely justified and constitutes no infringement of Article 14 of the Convention. This Government does not desire as yet to express any opinion on the suggestion that under the circumstances mentioned it should have approached Her Britannic Majesty's Government with a view to arriving at an understanding. In case, however, the Government of Her Britannic Majesty has another practical measure to propose whereby its above-mentioned subjects, whose presence here is not desired for the reasons stated, can be prevented from seeking an outlet on the soil of the South African Republic, and that measure can be found to be applicable to the subjects of other Powers as well (since the law makes no distinction in that respect) it will be ready, with gratitude, to give its full consideration to such measure."—*Great Britain, Papers by Command:* 1897, *C.* 8423.

Cape Colony and Natal: A. D. 1897.—Conference of colonial premiers with the British Colonial Secretary. See (in this vol.) ENGLAND: A. D. 1897 (JUNE—JULY).

British South Africa Company: A. D. 1897 (January).—Compulsory labor in Rhodesia.—In January, 1897, the Deputy Commissioner of the British government in Rhodesia made a report to the High Commissioner on several subjects pertaining to the native administration of the British South Africa Company which he had been instructed to investigate. One question to be answered was "whether there exists a law or practice whereby compulsory labor is exacted from natives, either by the government of the British South Africa Company, or by private persons with consent of the government, or by both?" From his lengthy report on this subject the High Commissioner deduced the following summary of conclusions, which he communicated to the colonial secretary: "(1.) That compulsory labour did undoubtedly exist in Matabeleland, if not in Mashonaland. (2.) That labour was procured by the various Native Commissioners for the various requirements of the Government, mining companies, and private persons. (3.) That the Native Commissioners, in the first instance, endeavoured to obtain labour through the indunas, but, failing in this, they procured it by force."—*Great Britain, Papers by Command:* 1897, *C.*— 8547.

The Transvaal: A. D. 1897 (January—March).—Conflict of the Judiciary with the Executive and the Volksraad.—The case of R. E. Brown.—In January, 1897, a decision was rendered by the High Court of the Republic which brought it into conflict with President Kruger and the Volksraad. This decision was given in connection with a suit brought against the government of the South African Republic by an American engineer, Mr. R. E. Brown, and the claim of Mr. Brown had arisen out of circumstances which were subsequently related by a speaker in the United States Senate, as follows: "Mr. R. E. Brown, a young American mining engineer, living and operating in the Cœur d'Alene district, in the State of Idaho, about eight years ago, at the invitation of English capitalists, left this country to go to the South African Republic for the purpose of assisting in the development of the gold mines of that country. It was about that time that Hammond, Clements, and other American engineers went there, and it is not too much to say that the genius and the energy of those young Americans more than anything else made that country a great gold producer and its mines the most valuable of any in the world. At that time most of the mines were held by English companies or Germans. The laws were very simple, but in some respects appear to have been drawn in the interest of the wealthy syndicates. Upon the discovery of new mines the President of the Republic by proclamation opened them to mining locations, fixing a day and hour at which they would be opened to such location. Thereafter persons desiring to stake out mines had to go to the office of the responsible clerk of the district in which the mines were located to make application for licenses to locate the mines, and thereafter they were authorized, either in person or by deputy, to go on the ground and make mining locations. Under this system most of the

valuable mines of the country had been absorbed, as I said, by English and German syndicates. The mode in which they operated to absorb the mines was to place their men upon the newly opened ground and at the earliest possible moment apply for licenses to locate the mines, and then by means of couriers with swift horses, or by signals from mountain to mountain where that was possible, to convey information to their men and cause the mines to be located before their rivals could get on the ground. Mr. Brown had not been in the country very long before he learned of this antiquated system, and he determined on the next opening of mines to apply to their location some of the snap and go of American methods.

"In June, 1895, President Kruger by proclamation opened the mines on the Witfontein farm, district of Potchefstroom, the responsible clerk for which resided at Doornkop, in that district. Mr. Brown determined that he would acquire some of these mines, at least, and as large a number of them as possible. Witfontein was only 30 miles from Doornkop. The mines were known to be very valuable, because they had been prospected on each side and it was found that valuable gold-bearing reefs ran through them from end to end. Accordingly he purchased heliographic instruments and employed expert heliographic operators, and without the knowledge of his rivals established heliographic communication between Doornkop and Witfontein. Then he placed his men upon the ground, and on the 19th day of July, 1895, the earliest period at which he was permitted to do so, he appeared at the office of the responsible clerk and sought licenses to locate 1,200 mines upon this ground. However, on the day before the opening of the mines his rivals had found out about the heliographic communication, but they were beaten in the race. In that extremity they communicated with President Kruger by wire and induced him on the night of the 18th to issue a second proclamation, withdrawing the mines of Witfontein from the privilege of mining locations, and when Mr. Brown appeared at the office of the responsible clerk and tendered his money he was met with the information of this action on the part of the President of the South African Republic, and his application was refused. But nothing daunted he caused his agents on the ground to locate the mines the same as if the licenses had been granted to him, and then he brought suit before the high court of justice of the South African Republic against the Republic, alleging the facts substantially as I have stated them and praying that the authorities be compelled to issue to him licenses for the mines located, or in lieu thereof that compensation be made to him in the sum of £372,400, amounting to about $1,850,000. While this suit was pending it was sought to re-enforce the action of the President in withdrawing these lands, and the Volksraad [passed a resolution approving the withdrawal and declaring that no person should be entitled to compensation on account of it]."—*U. S. Congressional Record, Jan.* 21, 1901, *p.* 1370.

On Mr. Brown's suit, the High Court of the Republic decided that the claimant's right to the land was good, and could not be set aside by ex post facto measures of the Executive or the Legislature. The President and the Volksraad refused to submit to this decision, and passed a law to overrule it, on the ground that, under the Grondwet (constitution), the Volksraad is the highest power in the state. In a subsequent public statement of the matter, Justice Kotze, the Chief Justice, explained the issue that was thus raised between his court and the President, and also related the circumstances of a compromise by which it was settled temporarily, as follows: "This so-called Law No. 1 of 1897 seeks to deprive the judges of the testing right, authorizes the President to put a certain question to the members of the bench that they would not arrogate to themselves the so-called testing power, and empowers him to instantly dismiss the judge or judges from whom he receives no answer, or, in his opinion, an unsatisfactory answer. The judges for the future are also subjected to a humiliating form of oath. This measure, it seems almost superfluous to observe, is no law. It alters the constitution of the country without any previous reference to the people, and for the reasons given in the Brown case it is devoid of all legal validity. The five judges, on March 1, 1897, unanimously issued a declaration, stating that by this so-called Law No. 1 of 1897 a vital violation of the independence of the bench had taken place, and that the judges were exposed in future to the suspicion of bribery. In fact, the nature and tendency of this measure are so immoral that one of the judges openly said that no honorable man can occupy a seat on the bench while Law No. 1 of 1897 remains on the statute book.

"The question above referred to was duly put by the President to the judges, who had unanimously signed a letter to the effect that they did not feel themselves at liberty to give any answer, when the chief justice of the Cape Colony arrived in Pretoria, and through his mediation a written understanding was proposed by the judges on March 19, and accepted without any qualification by the President on March 22, 1897. By the terms of this compact the judges undertook not to test laws and resolutions of the Volksraad on the distinct understanding that the President would as soon as possible submit a draft Grondwet to the Volksraad providing how alone the Grondwet can be altered by special legislation in a manner analogous to the provisions contained in the constitution of the Orange Free State on the subject, and incorporating the guaranties for the independence of the judiciary. By these means the judges intended to protect both the constitution and the bench against sudden surprises and attacks, such as, for instance, the oft-quoted measure known as Law No. 1, of 1897. They did this to avert a crisis, and, in order to help the Government and Volksraad out of a difficulty of their own creation, placed themselves under a temporary obligation upon the faith of the President as speedily as possible complying with his portion of the understanding."—*United States, 56th Congress, 1st Sess., House Doc. No.* 618.

The promised amendment of the Grondwet was not made, and the issue concerning it was brought to a crisis in the next year. See below : A. D. 1898 (JANUARY—FEBRUARY).

A. D. 1897 (February) : Appointment of Sir Alfred Milner.—In February, Sir Alfred Milner was appointed High Commissioner for South Africa and Governor of Cape Colony, to succeed

Sir Hercules Robinson, retired, and raised to the peerage as Lord Rosmead.

The Transvaal: A. D. 1897 (February).—The franchise.—The government of the Transvaal extended the full franchise to 862 Uitlanders who supported it at the time of the Jameson raid.

The Transvaal: A. D. 1897 (February.)—Indemnity claimed by the South African Republic for the Jameson Raid.—On the 16th of February, 1897, the State Secretary of the South African Republic, Dr. W. J. Leyds, presented to the British High Commissioner the following "specification of the compensation to which the Government of the South African Republic lays claim for and in connexion with the incursion into the Territory of the South African Republic by Dr. Jameson and the Troops of the Chartered Company at the end of December 1895 and the beginning of January 1896.

	£	s.	d.
1. Expenditure for military and commando services in connexion with the incursion, the sum of	136,733	4	3
2. Compensation to the Netherlands South African Railway Company for making use, in accordance with the concession granted to that Company, of the railway worked by it during the commando on account of the incursion of Dr. Jameson	9,500	0	0
3. Disbursements to surviving relatives of slain and wounded	234	19	6
4. For annuities, pensions, and disbursements to widows and children of slain burghers and to relatives of unmarried slain burghers, as also to wounded burghers, a total sum of	28,243	0	0
5. Expenses of the telegraph department, for more overtime, more telegrams on service in South African communication, more cablegrams, &c.	4,692	11	9
6. Hospital expenses for the care of the wounded and sick men, &c. of Dr. Jameson	225	0	0
7. For support of members of the families of commandeered burghers during the commando	177	8	8
8. Compensation to be paid to the commandeered burghers for their services and the troubles and cares brought upon them	462,120	0	0
9. Account of expenses of the Orange Free State	36,011	19	1
	677,938	3	3

"Moral or intellectual compensation to which the Government of the South African Republic lays claim for and in connexion with the incursion into the Territory of the South African Republic by Dr. Jameson and the Troops of the Chartered Company at the end of December 1895 and the beginning of January 1896. One million pounds sterling (£1,000,000)."

To this claim the British colonial secretary, Mr. Chamberlain, replied on the 10th of April, saying, with reference to the specification under the second head, "for moral or intellectual damage," that "Her Majesty's Government . . . regret that they do not feel justified in presenting it to the British South Africa Company"; and adding: "Her Majesty's Government fear that they may be compelled to take similar exception to certain of the items composing the first head, especially in view of the very short period which elapsed between the crossing of the frontier by Dr. Jameson's force and its surrender; but as it is apparent from the nature of the figures that the Government of the South African Republic have proceeded on very precise data in arriving at the various sums to which they lay claim, Her Majesty's Government, before offering any observations on this part of the claim, would ask his Honour to be so good as to furnish them with full particulars of the way in which the different items comprised in the first head have been arrived at."—*Great Britain, Papers by Command: C.*—8404, 1897; *and C.*—8721, 1898.

The Transvaal: A. D. 1897 (February—July).—British parliamentary investigation of the Jameson Raid.—A Committee of the British House of Commons, appointed "to inquire into the origin and circumstances of the incursion into the South African Republic by an armed force, and into the administration of the British South Africa Company," began its sittings on the 16th of February, 1897. Among the members of the Committee were the Chancellor of the Exchequer, the Attorney-General, Mr. Chamberlain, the Secretary of State for the Colonies, Sir William Harcourt, Sir John Lubbock, Sir H. Campbell-Bannerman, Mr. Labouchere, Mr. John Ellis, Mr. Buxton, Mr. Blake, and others. Mr. Rhodes, who was first examined by the Committee, read a statement of the circumstances leading up to the raid, in which he said that, as one largely interested in the Transvaal, he felt that the unfriendly attitude of the Boer Government was the great obstacle to common action among the various states in South Africa, and that, therefore, he had assisted the movement in Johannesburg with his purse and influence. "Further," he said, "acting within my rights, in the autumn of 1895 I placed a body of troops under Dr. Jameson, prepared to act in the Transvaal in certain eventualities." Subsequently Mr. Rhodes declared: "With reference to the Jameson raid, I may state that Dr. Jameson went in without my authority." He concluded his statement by declaring that in what he did he was greatly influenced by his belief that the policy of the Boer Government was to "introduce the influence of another foreign Power into the already complicated system of South Africa." Mr. Rhodes was kept under examination before the Committee for four days, and then "almost the next thing heard of him was that he had started for South Africa on his way back to Rhodesia." Another witness examined was Sir Graham Bower, Secretary to the High Commissioner at the Cape. "His evidence was certainly most startling, and at the same time of great importance. He stated that late in October, 1895, Mr. Rhodes came into his office and said: 'I want you to give me your word of honour that you will not say a word to any one about what I am going to tell you.' Sir Graham Bower—who, as he said, had a great many Cape secrets in his possession—pledged his word, and soon found he was in possession of a secret which it was his official duty to disclose to the High Commissioner and his private duty not to disclose. Mr. Rhodes then said that he was negotiating about the Protectorate, that there was going to be a rising in Johannesburg, and that he wished to have a police force on the border. He added in substance: 'If trouble comes I am not going to sit still. You fellows are infernally slow.' It further transpired that on the fateful Sunday (Dec. 28) Mr. Rhodes had told him that Jameson had gone in, but that he hoped that the message he had sent would stop him." When Dr. Jameson was examined he fully acknowledged his conspiracy with the Johannesburg revolutionists, and stated that he had given information of it to Mr. Rhodes, adding: "He

agreed, and we arranged that when the rising took place he should go to Johannesburg or Pretoria with the High Commissioner and Mr. Hofmeyr to mediate between the Transvaal Government and the Uitlanders. With these matters settled, I left Cape Town and joined my camp at Pitsani. I required no orders or authority from Mr. Rhodes, and desired neither to receive nor to send any messages from or to Cape Town."

In the course of the inquiry, Mr. Chamberlain, the Colonial Secretary, desired to give testimony, and related that Dr. Harris, the Secretary in South Africa to the British South Africa Company, said to him, "I could tell you something in confidence," or "I could give you some confidential information"; but that he (Chamberlain) stopped him at once, saying, "I do not want to hear any confidential information. I am here in an official capacity, and I can only hear information of which I can make official use"; and adding: "I have Sir Hercules Robinson in South Africa. I have entire confidence in him, and I am quite convinced he will keep me informed of everything I ought to know." In concluding his testimony, Mr. Chamberlain said: "I desire to say, in the most explicit manner, that I did not then have, and that I never had, any knowledge or—until, I think it was, the day before the raid took place—the slightest suspicion of anything in the nature of a hostile or armed invasion of the Transvaal." The Committee having called upon Mr. Rhodes' solicitor, a Mr. Hawksley, to produce telegrams which had passed between Mr. Rhodes and himself, refused to do so.

"The proceedings which ensued were not to the credit of the Committee, for instead of reporting the matter to the House at once in a special report, they decided to refer to it in the interim report on the raid. Mr. Labouchere and Mr. Blake alone opposed this course, which was either a confession of unwillingness to reach the bottom of the business, or the suggestion that somebody was to be shielded. . . . Having devoted two days to hearing counsel on behalf of Mr. Rhodes, Mr. Beit and Dr. Harris, the Committee adjourned to consider its report. The general feeling was that the proceedings had been conducted with singular laxity or want of skill. Those interested in keeping secret the true history of the raid were entirely successful, and it was generally by the merest chance that any fact of importance was elicited from the witnesses. The representatives of the Opposition, Sir William Harcourt, Sir H. Campbell-Bannerman and Mr. Buxton, were, after Mr. Rhodes had been unaccountably permitted to quit England, willing to allow the breakdown of the proceedings; and what was even more surprising in so strict a parliamentarian as Sir William Harcourt, a witness was allowed to treat the Committee with defiance, and to pass unchecked. To a very great extent the inquiry had been obviously factitious, but in whose interest concealment was considered necessary remained undivulged. It was surmised that reasons of State had been found which outweighed party considerations, and that the leaders of the Opposition had been privately convinced that the alleged grounds were sufficient for the course adopted."

The report of the majority of the Committee, signed by all of its members except Mr. Labouchere and Mr. Blake (the former of whom submitted a minority report), was made public on the 13th of July. The results of its inquiry were summed up under the following heads: I. "Great discontent had, for some time previous to the incursion, existed in Johannesburg, arising from the grievances of the Uitlanders. II. Mr. Rhodes occupied a great position in South Africa; he was Prime Minister of the Cape Colony, and, beyond all other persons, should have been careful to abstain from such a course of action as that which he adopted. As managing director of the British South Africa Company, as director of the De Beers Consolidated Mines and the Gold Fields of South Africa, Mr. Rhodes controlled a great combination of interests; he used his position and those interests to promote and assist his policy. Whatever justification there might have been for action on the part of the people of Johannesburg, there was none for the conduct of a person in Mr. Rhodes' position in subsidising, organising, and stimulating an armed insurrection against the Government of the South African Republic, and employing the forces and resources of the Chartered Company to support such a revolution. He seriously embarrassed both the Imperial and Colonial Governments, and his proceedings resulted in the invasion of the territory of a State which was in friendly relations with her Majesty, in breach of the obligation to respect the right to self-government of the South African Republic under the conventions between her Majesty and that State. Although Dr. Jameson 'went in' without Mr. Rhodes' authority, it was always part of the plan that these forces should be used in the Transvaal in support of an insurrection. Nothing could justify such a use of such a force, and Mr. Rhodes' heavy responsibility remains, although Dr. Jameson at the last moment invaded the Transvaal without his direct sanction. III. Such a policy once embarked upon inevitably involved Mr. Rhodes in grave breaches of duty to those to whom he owed allegiance. He deceived the High Commissioner representing the Imperial Government, he concealed his views from his colleagues in the Colonial Ministry and from the board of the British South Africa Company, and led his subordinates to believe that his plans were approved by his superiors. IV. Your committee have heard the evidence of all the directors of the British South Africa Company, with the exception of Lord Grey. Of those who were examined, Mr. Beit and Mr. Maguire alone had cognisance of Mr. Rhodes' plans. Mr. Beit played a prominent part in the negotiations with the Reform Union; he contributed large sums of money to the revolutionary movement, and must share full responsibility for the consequences. V. There is not the slightest evidence that the late High Commissioner in South Africa, Lord Rosmead, was made acquainted with Mr. Rhodes' plans. The evidence, on the contrary, shows that there was a conspiracy to keep all information on the subject from him. The committee must, however, express a strong opinion upon the conduct of Sir Graham Bower, who was guilty of a grave dereliction of duty in not communicating to the High Commissioner the information which had come to his knowledge. Mr. Newton failed in his duty in a like manner. VI. Neither the Secretary of State for the Colonies nor any of the officials of the Colonial Office received any information which made them, or should have made them or any of them, aware of the plot during its development.

VII. Finally, your committee desire to put on record an absolute and unqualified condemnation of the raid and of the plans which made it possible."

"The result caused for the time being grave injury to British influence in South Africa. Public confidence was shaken, race feeling embittered, and serious difficulties were created with neighbouring States. The course of action subsequently taken by the Government increased the suspicions which were aroused by such an emasculated report. Two days after its publication (July 15), Mr. Balfour was asked to set apart a day for the formal discussion of so important a matter. To this request Mr. Balfour, with the tacit concurrence of the front Opposition bench, replied that he saw no useful purpose to be served by such a debate."

Those who were known as the "Forward Radicals," or "Forwards," in the House, were not to be silenced in this manner, and debate was forced upon a motion expressing regret at "the inconclusive action and report of the select committee on British South Africa," and summoning Mr. Hawksley to the bar of the House, to produce "then and there," the telegrams which he had refused to the committee. In the course of the discussion which followed, Mr. Chamberlain expressed his conviction that, "while the fault of Mr. Rhodes was about as great a fault as a politician or statesman could commit, there existed nothing which affected his personal character as a man of honour." When Sir Elliott Lees, a supporter of the government, rose to protest against such a doctrine, he was met by cries which silenced his speech. The House then divided, and the resolution was defeated by 304 to 77. "It was an open secret that throughout the debate one member, unconnected with either front bench, sat with the famous telegrams in his pocket, and with them certain correspondence relating thereto which he had been instructed to read in the event of Mr. Rhodes' character being aspersed."—*Annual Register*, 1897.

"The position . . . stands thus. The Colonial Office conceals its own documents. From none of its officials have we had any detailed or frank statement as to their relations to South African affairs during the critical period. The High Commissioner himself has not been examined. Mr. Rhodes has been allowed to go without any serious inquiry into this branch of the case. The most important cables are refused by Mr. Rhodes's order, and the Committee decline to exercise their power to compel the production of them. The story, in fact, so far as it concerns this question of the truth or falsity of the allegation that Mr. Chamberlain was 'in it,' is being smothered up, with an audacious disregard of the principles which guide all ordinary tribunals. The last steps in this proceeding have been taken with the direct assent of the leader of the Opposition. Everybody, therefore, is inquiring what reason can have induced Sir William Harcourt to execute this startling change of front. There is only one reason that can, with any probability, be assigned—that is, that some member of the Government has made a 'Front Bench communication' to the leader of the Opposition, indicating to him explicitly that there are 'reasons of State' for stopping the disclosures. There can be little doubt that this is what has happened, and conjecture, not only in this country but elsewhere, will naturally be keen to know what the nature of this momentous disclosure was.

"If Mr. Chamberlain was as absolutely free from knowledge of the Jameson plan as he has professed to be, it is hard to see how full disclosure could do any damage to the Empire, or could do anything but good to the Colonial Secretary himself. Mr. Chamberlain, of course, professes in words his private desire that everything should come out. He has not, however, assisted in the attainment of that result. The consequence is that a national and international question of very grave importance has arisen. It is said in circles usually well informed, that when the Raid occurred, it became necessary to give assurances to foreign Governments, and in particular to Germany, that the Queen's Government was in no way compromised. These assurances, it is said, were given. It is even said that they were given expressly in the name of the Queen. Something of this kind may well have happened; but it is hard to see how, if it did happen, and if the Colonial Office was as innocent as it claims to be, the disclosure of the facts can do anything but confirm the Queen's word. That documents exist which are supposed to be compromising, and which the very authors of them allege to be compromising, is a fact past hiding. It casts, unless it is cleared up, a damning doubt. Therefore it would appear to be the duty of all honest men, and, above all, of the Parliament of Great Britain, to see that an immediate end is put to a policy which may be aptly described as 'thimble-rigging,' and that the truth, whether it suits Mr. Rhodes or Mr. Chamberlain, or neither of them, must be told at last."—*Contemporary Review, July*, 1897.

Orange Free State and Transvaal: A. D. 1897 (April).—Treaty of alliance.—In April, the two republics entered into a treaty for mutual support and defense against attacks on the independence of either, each opening its political franchises to the citizens of the other on the taking of an oath of allegiance.

The Transvaal: A. D. 1897 (April).—Military expenditure by British and Boer Governments.—The budget of the British Chancellor of the Exchequer, submitted to the House of Commons in April, contained an item of £200,000 for increased military expenditure in South Africa. This was promptly attacked by the opposition, who accused the government of pursuing a war policy in its dealings with the Transvaal. Sir William Harcourt declared that Mr. Chamberlain had, "in every utterance of his during the last few months, been endeavouring to exasperate sentiment in South Africa, and to produce what, thank God! he had failed in producing—a racial war." Mr. Chamberlain retorted that Sir William Harcourt's attitude was unpatriotic and injurious to the cause of peace. He denied aggressiveness in the policy of the government, asserting that the South African Republic had been spending millions on armaments imported from abroad, in view of which the strengthening of the British garrison at the Cape by an additional regiment and three batteries was no unreasonable measure. Mr. Balfour, also, begged the House and the country to believe that the troops were sent only as a measure of precaution, to maintain admitted rights.

The Transvaal: A. D. 1897 (May—October).—The British assertion of suzerainty

and declination of proposal to arbitrate disagreements.—On the 7th of May, 1897, the Acting State Secretary of the South African Republic addressed to the British Agent at Pretoria a communication of great length, reviewing the positions taken by Mr. Chamberlain in his several arraignments of the government of the Republic for alleged violation of the London Convention of 1884, and proposing an arbitration of the questions involved. "The complaint," he wrote, "which Her British Majesty's Government has advanced in an unmistakably pronounced manner over an actual or possible breach of the Convention has deeply grieved this Government, as it thinks that it has fulfilled its obligations. It sees in the fulfilment of the mutual obligations under the Convention one of the best guarantees for the maintenance of a mutual good understanding and for the promotion of reciprocal confidence. To this good understanding and that confidence, however, severe shocks have been given by events which cannot be lightly forgotten. And if it were not that this Government wishes to guard itself against adopting a recriminating tone, it might put the question whether, for example, the incursion of Dr. Jameson, whether considered as a breach of the Convention or a grievance, is not of immeasurably greater importance than the various matters adduced by Her British Majesty's Government would be, even if the contention that they constitute breaches of the Convention could be accepted. There should, in the view of this Government, be a strong mutual endeavour to restore the shocked confidence and to calm the excited spirit which this Government with sincere regret sees reigning throughout almost the whole of South Africa. This Government is anxious to co-operate for this end, for the desire of the Republic, with the maintenance of its independence and rights, is for peace, and where for the reasons given it has been unable to entertain the proposal of Her British Majesty's Government in the matter of the Aliens Law,—and it appears very difficult to arrive at a solution of the question by means of correspondence,—it wishes to come to a permanent good understanding along a peaceful course, not only with respect to its undisturbed right to make an alien law, but also with regard to all points touching the Convention which are referred to in the two Despatches under reply by Her British Majesty's Government. While it respects the opinion of Her British Majesty's Government, it takes the liberty, with full confidence in the correctness of its own views, to propose to Her British Majesty's Government the principle of arbitration with which the honourable the First Volksraad agrees, in the hope that it will be taken in the conciliatory spirit in which it is made. . . .

"Although this Government is firmly convinced that a just and impartial decision might be obtained even better in South Africa than anywhere else, it wishes, in view of the conflicting elements, interests, and aspirations, which are now apparent in South Africa, and in order to avoid even the appearance that it would be able or desire to exercise influence in order to obtain a decision favourable to it, to propose that the President of the Swiss Bondstate, who may be reckoned upon as standing altogether outside the question, and to feel sympathy or antipathy neither for the one party nor for the other, be requested to point out a competent jurist, as has already oftener been done in respect of international disputes. The Government would have no objection that the arbitrator be subject to a limitation of time, and gives the assurance now already that it will willingly subject itself to any decision if such should, contrary to its expectation, be given against it. The Government repeats the well-meant wish that this proposal may find favour with Her British Majesty's Government, and inasmuch as the allegations of breaches of the Convention find entrance now even in South Africa, and bring and keep the feelings more and more in a state of suspense, this Government will be pleased if it can learn the decision of Her Majesty's Government as soon as possible."

Mr. Chamberlain's reply to this proposal was not written until the 16th of the following October, when he, in turn, reviewed, point by point, the matters dealt with in the despatch of Mr. Van Boeschoten. With reference to the Jameson raid he said: "Her Majesty's Government note with satisfaction that the Government of the South African Republic see in the fulfilment of the mutual obligations under the London Convention one of the best guarantees for the maintenance of a mutual understanding and for the promotion of reciprocal confidence. Her Majesty's Government have uniformly fulfilled these obligations on their part, and they must strongly protest against what appears to be an implication in the Note under consideration that the incursion of Dr. Jameson can be considered as either a breach of the Convention by Her Majesty's Government or a grievance against them. That incursion was the act of private individuals unauthorised by Her Majesty's Government, and was repudiated by them immediately it became known. The immense importance to the Government of the South African Republic of that repudiation, and of the proclamation issued by the High Commissioner under instructions from Her Majesty's Government, is recognised throughout South Africa. Her Majesty's Government maintain strongly that since the Convention of 1881 there has never been any breach or even any allegation of a breach on their part of that or the subsequent Convention, and, as the subject has been raised by the implied accusation contained in the Note under consideration, Her Majesty's Government feel constrained to contrast their loyal action in the case of the Jameson raid with the cases in which they have had cause to complain that the Government of the South African Republic failed to interfere with, if they did not countenance, invasions of the adjacent territories by its burghers in violation of the Convention, and they feel bound to remind the Government of the Republic that in one of these cases Her Majesty's Government were compelled to maintain their rights by an armed expedition at the cost of about one million sterling, for which no compensation has ever been received by them."

Concerning the proposal of arbitration, the reply of the British colonial secretary was as follows: "In making this proposal the Government of the South African Republic appear to have overlooked the distinction between the Conventions of 1881 and 1884 and an ordinary treaty between two independent Powers, questions arising upon which may properly be the

subject of arbitration. By the Pretoria Convention of 1881 Her Majesty, as Sovereign of the Transvaal Territory, accorded to the inhabitants of that territory complete self-government subject to the suzerainty of Her Majesty, her heirs and successors, upon certain terms and conditions and subject to certain reservations and limitations set forth in 33 articles, and by the London Convention of 1884 Her Majesty, while maintaining the preamble of the earlier instrument, directed and declared that certain other articles embodied therein should be substituted for the articles embodied in the Convention of 1881. The articles of the Convention of 1881 were accepted by the Volksraad of the Transvaal State, and those of the Convention of 1884 by the Volksraad of the South African Republic. Under these Conventions, therefore, Her Majesty holds towards the South African Republic the relation of a suzerain who has accorded to the people of that Republic self-government upon certain conditions, and it would be incompatible with that position to submit to arbitration the construction of the conditions on which she accorded self-government to the Republic. One of the main objects which Her Majesty's Government had in view was the prevention of the interference of any foreign Power between Her Majesty and the South African Republic, a matter which they then held, and which Her Majesty's present Government hold, to be essential to British interests, and this object would be defeated by the course now proposed. The clear intention of Her Majesty's Government at the time of the London Convention, that questions in relation to it should not be submitted to arbitration, is shown by the fact that when the delegates of the South African Republic, in the negotiations which preceded that Convention, submitted to Her Majesty's Government in the first instance (in a letter of the 26th of November, 1883, which will be found on page 9 of the Parliamentary Paper C. 3947 of 1884) the draft of a treaty or convention containing an arbitration clause, they were informed by the Earl of Derby that it was neither in form nor in substance such as Her Majesty's Government could adopt."—*Great Britain, Papers by Command: C.*—8721, 1898.

Natal: A. D. 1897 (December).—Annexation of Zululand. See (in this vol.) AFRICA: A. D. 1897 (ZULULAND).

Cape Colony: A. D. 1898.—The position of political parties.—The Progressives and the Afrikander Bund.—"The present position of parties at the Cape is as unfortunate and as unwarranted as any that the severest critic of Parliamentary institutions could have conjured up. . . . The Cape has always had the curse of race prejudice to contend with. Time might have done much to soften, if not to expunge it, if home-made stupidities had not always been forthcoming to goad to fresh rancour. The facts are too well known to need repetition. It is true not only of the Transvaalers that 'the trek has eaten into their souls,' and up to the time of emancipation and since, every conceivable mistake has been committed by those in authority. Thus, when the breach was, to all appearances, partly healed, the fatal winter of 1895 put back the hands of the clock to the old point of departure. As Englishmen, our sympathies are naturally with the party that is prevalently English, and against the party that is prevalently Dutch; but to find a real line of political difference between them other than national sentiment requires fine drawing. . . . According to our lines of cleavage both Bondsmen [Afrikander Bund] and Progressives are Conservatives of a decided type. Practically they are agreed in advocating protective duties on sea-borne trade, although in degree they differ, for whilst the Bond would have imposts as they are, the Progressives wish to reduce the duties on food stuffs to meet the grievance of the urban constituencies, and might be induced to accord preferential treatment to British goods. On the native question neither party adopts what would in England be considered an 'advanced' programme, for education is not made a cardinal point, and they would equally like, if possible, to extend the application of the Glen Grey Act, which, by levying a tax on the young Kaffirs who have not a labour certificate, forces them to do some service to the community before exercising their right of 'putting the spoon,' as the phrase is, 'into the family pot.' Neither party wishes to interfere with the rights of property or the absolute tenure of land under the Roman-Dutch law. A tax on the output of diamonds at Kimberley has been advocated by some members of the Bond as a financial expedient, but it is understood to have been put forward rather as a threat against Mr. Rhodes personally than as a measure of practical politics. Questions of franchise are tacitly left as they are, for no responsible politicians wish to go back upon the enactment which restricted the Kaffir vote to safe and inconsiderable limits. The redistribution of seats was the subject of a Bill upon which the last House was dissolved, after the rebuff that the Ministry received upon a crucial division, but it has been dealt with rather for practical than theoretical reasons. Two schemes of redistribution have been formulated, and each has been proposed and opposed with arguments directed to show the party advantage to be derived. For political reform, in the abstract, with or without an extension of the suffrage, there is no sort of enthusiasm in any quarter. Railway administration furnishes, no doubt, an occasional battle-field for the two sides of the House. Roughly, the Progressives favour the northern extension, and are willing to make concessions in rates and charges to help on the new trade with Rhodesia; whilst the Bond declare themselves against special treatment of the new interests, and would spend all the money that could be devoted to railway construction in the farming districts of the colony itself. Mr. Rhodes, however, has warned the Cape that any hostile action will be counteracted by a diversion of traffic to the East, and it is unlikely that any line of policy will be pursued that is likely to injure the carrying trade of the southern ports. Between the followers of Mr. Rhodes and the followers of Mr. Hofmeyr there is no wide divergence of principle on public affairs of the near future, so far as they have been or are to be the subject of legislation; where the difference comes in is in the attitude they severally assume towards the two republics and the territories of the north, but when talk has to yield to action it is improbable that there will be much in their disagreement."—N. L. W. Lawson, *Cape Politics and Colonial Policy* (*Fortnightly Rev., Nov.*, 1898).

The Transvaal: A. D. 1898 (January—Feb-

ruary).—**Re-election of President Kruger.—Renewed conflict of the Executive with the Judiciary.—Dismissal of Chief-Justice Kotze.**—The Presidential election in the South African Republic was held in January and February, the polls being open from the 3d of the former month until the 4th of the latter. President Kruger was re-elected for a fourth term of five years, by nearly 13,000 votes against less than 6,000 divided between Mr. Schalk Burger and General Joubert, who were opposing candidates. Soon afterwards, the conflict of 1897 between the Judiciary and the Executive (see above: A. D. 1897, JANUARY—MARCH), was reopened by a communication in which Chief-Justice Kotze, of the High Court, called the attention of the President to the fact that nothing had been done in fulfilment of the agreement that the independence of the Court and the stability of the Grondwet should both be protected by law against arbitrary interference, and giving notice that he considered the compromise then arranged to be ended. Thereupon (February 16) President Kruger removed the judge from his office and placed the State Attorney in his seat. Justice Kotze denied the legality of the removal, and adjourned his court sine die. In a speech at Johannesburg, some weeks afterwards, he denounced the action of President Kruger with great severity, saying: "I charge the President, as head of the State, with having violated both the constitution and the ordinary laws of the land; with having interfered with the independence of the High Court; and invaded and imperilled the rights and liberties of every one in the country. The guarantees provided by the constitution for the protection of real and personal rights have disappeared, and these are now dependent on the 'arbitrium' of President Kruger."

Rhodesia and the British South Africa Company: A. D. 1898 (February).—Reorganization.—In February, the British government announced the adoption of plans for a reorganization of the British South Africa Company and of the administration of its territories. The Company, already deprived of military powers, was to give up, in great part, but not wholly, its political functions. It was still to appoint an Administrator for Rhodesia south of the Zambesi, and to name the majority of members in a council assisting him, so long as it remained responsible for the expenses of administration; but, by the side of the Administrator was to be placed a Resident Commissioner, appointed by the Crown, and over both was the authority of the High Commissioner for South Africa, to whom the Resident Commissioner made reports. At home the status of the Board of Directors was to be considerably altered. The life directorships were to be abolished, and the whole Board of Directors in future to be elected by the shareholders,—any official or director removed by the Secretary of State not being eligible without his consent. The Board of Directors was to communicate all minutes, etc., to the Secretary of State, and he to have the power of veto or suspension. Finally, the Secretary of State was to have full powers to inspect and examine all documents; Colonial Office officials named by him were, in effect, to exercise powers like those of the old Indian Board of Control.

Cape Colony: A. D. 1898 (March—October).—Election in favor of the Afrikander Bund.—Change in the government.—Elections to the Upper House of the Cape Parliament, in March, gave the party called the Progressives, headed by Mr. Rhodes, a small majority over the Afrikander Bund—more commonly called the Bond. The Parliament opened in May, and the Progressive Ministry, under Sir Gordon Sprigg, was defeated in the Lower House in the following month, on a bill to create new electoral divisions. The Ministry dissolved Parliament and appealed to the constituencies, with the result of a defeat on that appeal. The Bond party won in the elections by a majority of two, which barely enabled it to carry a resolution of want of confidence in the government when Parliament was reassembled, in October. The Ministry of Sir Gordon Sprigg resigned, and a new one was formed with Mr. Schreiner at its head.

The Transvaal: A. D. 1898-1899.—Continued dispute with the British Government concerning Suzerainty.—During 1898 and half of 1899, a new dispute, raised by Mr. Chamberlain's emphatic assertion of the suzerainty of Great Britain over the South African Republic, went on between the British Colonial Office and the government at Pretoria. Essentially, the question at issue seemed to lie between a word and a fact, and the difference between the disputants was the difference between the meanings they had severally drawn from the omission of the word "suzerainty" from the London Convention of 1884. On one side could be quoted the report which the Transvaal deputation to London, in 1884, had made to their Volksraad, when they brought the treaty back, and recommended that it be approved. The treaty, they reported, "is entirely bilateral [meaning that there were two sides in the making of it] whereby your representatives were not placed in the humiliating position of merely having to accept from a Suzerain Government a one-sided document as rule and regulation, but whereby they were recognized as a free contracting party. It makes, then, also an end of the British suzerainty, and, with the official recognition of her name, also restores her full self-government to the South African Republic, excepting one single limitation regarding the conclusion of treaties with foreign powers (Article 4). With the suzerainty the various provisions and limitations of the Pretoria Convention which Her Majesty's Government as suzerain had retained have also, of course, lapsed."

On the other side, Mr. Chamberlain could quote with effect from a speech which Lord Derby, then the British Colonial Secretary, who negotiated the Convention of 1884 with the Boer envoys, made on the 17th of March, that year, in the House of Lords. As reported in Hansard, Lord Derby had then dealt with the very question of suzerainty, as involved in the new convention, and had set forth his own understanding of the effect of the latter in the following words: "Then the noble Earl (Earl Cadogan) said that the object of the Convention had been to abolish the suzerainty of the British Crown. The word 'suzerainty' is a very vague word, and I do not think it is capable of any precise legal definition. Whatever we may understand by it, I think it is not very easy to define. But I apprehend, whether you call it a protectorate, or a suzerainty, or the recognition of England as a paramount Power, the fact is that a certain con-

trolling power is retained when the State which exercises this suzerainty has a right to veto any negotiations into which the dependent State may enter with foreign Powers. Whatever suzerainty meant in the Convention of Pretoria, the condition of things which it implied still remains; although the word is not actually employed, we have kept the substance. We have abstained from using the word because it was not capable of legal definition, and because it seemed to be a word which was likely to lead to misconception and misunderstanding."—*Great Britain, Papers by Command: C.* 9507, 1899, *pp.* 24 *and* 34).

The Transvaal: A. D. 1899 (March).—Petition of British subjects to the Queen.—A fresh excitement of discontent in the Rand, due especially to the shooting of an Englishman by a Boer policeman, whom the Boer authorities seemed disposed to punish lightly or not at all, led to the preparation of a petition to the British Queen, from her subjects in the South African Republic, purporting to be signed in the first instance by 21,684, and finally by 23,000. The genuineness of many of the signatures was disputed by the Boers, but strenuously affirmed by those who conducted the circulation of the petition. It set forth the grievances of the memorialists at length, and prayed Her Majesty to cause them to be investigated, and to direct her representative in South Africa to take measures for securing from the South African Republic a recognition of their rights. The petition was forwarded to the Colonial Office on the 28th of March.—*Great Britain, Papers by Command:* 1899, *C.* 9345.

The Transvaal: A. D. 1899 (May—June).—The Bloemfontein Conference between President Kruger and the British High Commissioner, Sir Alfred Milner.—There seems to be no mode in which the questions at issue between the British and the Boers, and the attitude of the two parties, respectively, in their contention with each other, can be represented more accurately than by quoting essential parts of the official report of a formal conference between President Kruger and the British High Commissioner in South Africa, Sir Alfred Milner, which was held at Bloemfontein, the capital of the Orange Free State, during five days, May 31—June 5, 1899. The meeting was arranged by President Steyn, of the Orange Free State, with a view to bringing about an adjustment of differences by a free and full discussion of them, face to face. In the official report of the conversations that occurred, from which we shall quote, the remarks of President Kruger are given as being made by the "President," and those of the High Commissioner as by "His Excellency."

The latter, invited by the President to speak first, said:

"There are a considerable number of open questions between Her Majesty's Government and the Government of the South African Republic on which there is at present no sign of agreement. On the contrary, disagreements seem to increase as time goes on. . . . In my personal opinion the cause of many of the points of difference, and the most serious ones, arises out of the policy pursued by the Government of the South African Republic towards the Uitlander population of that Republic among whom many thousands are British subjects. This policy, the bitter feeling it engenders between the Government and a section of Uitlanders, and the effect of the resulting tension in South Africa, and the feeling of sympathy in Great Britain, and even throughout the British Empire generally, with the Uitlander population, creates an irritated state of public opinion on both sides, which renders it much more difficult for the two Governments to settle their differences amicably. It is my strong conviction that if the Government of the South African Republic could now, before things get worse, of its own motion change its policy towards the Uitlanders, and take measures calculated to content the reasonable people among them, who, after all, are a great majority, such a course would not only strengthen the independence of the Republic but it would make such a better state of feeling all round that it would become far easier to settle outstanding questions between the two Governments. . . . The President, in coming here, has made a reservation as to the independence of the Republic. I cannot see that it is in any way impairing the independence of the Republic for Her Majesty's Government to support the cause of the Uitlanders as far as it is reasonable. A vast number of them are British subjects. If we had an equal number of British subjects and equally large interests in any part of the world, even in a country which was not under any conventional obligations to Her Majesty's Government we should be bound to make representations to the Government in the interests of Her Majesty's subjects, and to point out that the intense discontent of those subjects stood in the way of the cordial relations which we desire to exist between us. I know that the citizens of the South African Republic are intensely jealous of British interference in their internal affairs. What I want to impress upon the President is that if the Government of the South African Republic of its own accord, from its own sense of policy and justice, would afford a more liberal treatment to the Uitlander population, this would not increase British interference, but enormously diminish it. If the Uitlanders were in a position to help themselves they would not always be appealing to us under the Convention. . . .

"President.—I shall be brief. I have come with my commission, in the trust that Your Excellency is a man capable of conviction, to go into all points of difference. . . . I should like His Excellency to go point by point in this discussion, so that we can discuss each point that he thinks requires attention, not with a view to at once coming to a decision, but to hear each side, and we can go back on any point if necessary, and see if we can arrive at an understanding. I would like to give concessions as far as is possible and practicable, but I want to speak openly, so that His Excellency may be able to understand. I should like to say that the memorials placed before Her Majesty's Government came from those who do not speak the truth. I mean to convey that we do give concessions wherever we think it practicable to do so, and after we have discussed it in a friendly way Your Excellency will be able to judge whether I or the memorialists are right. I have said that if there are any mistakes on our side, we are willing to discuss them. Even in any matter concerning internal affairs I would be willing to listen to his advice if he said it could be removed

in this way or that way. But when I show him that by the point we may be discussing our independence may be touched, I trust he will be open to conviction on that subject. . . .

"His Excellency.—I think the point which it would be best to take first, if the President agrees, . . . would be the Franchise. . . . There are a number of questions more or less resting upon that. . . . I should like to know a little more about the President's views. I want to know more because if I were to begin and say I want this, that, and the other, I know I should be told this was dictation. I do not want to formulate a scheme of my own, but I can, if necessary.

"President.—As long as I understand that it is meant in a friendly manner, and you mean to give hints, I won't take it that they are commands. It has already been arranged that you give me friendly hints and advice, and I will not take it as dictation, even though it should be on points on which I should consider you have no right to interfere. . . . I would like you to bear one point in view, namely, that all kinds of nations and languages, of nearly all powers, have rushed in at the point where the gold is to be found. In other countries . . . there are millions of old burghers, and the few that come in cannot out-vote the old burghers, but with us, those who rushed in to the gold fields are in large numbers and of all kinds, and the number of old burghers is still insignificant; therefore we are compelled to make the franchise so that they cannot all rush into it at once, and as soon as we can assure ourselves by a gradual increase of our burghers that we can safely do it, our plan was to reduce the time for anyone there to take up the franchise, and that is also my plan. . . . As His Excellency doubtless knows, I have proposed to the Volksraad that the time should be reduced by five years, and gradually as more trusted burghers join our numbers, we can, perhaps, go further. There are a number who really do not want the franchise, but they use it as pretext to egg on people with Her Majesty. . . . You must remember, also, on this subject, that the burghers in our Republic are our soldiers, who must protect the land, and that we have told these men to come and fight when we have had difficulties with the Kaffirs. They wanted the vote, but they would not come and fight. Those who were willing to help obtained the franchise, but it appears that many do not want to have it.

"His Excellency.—They did not want to take the obligations without the rights of citizenship, and in that I sympathize with them. If they should obtain that right, then naturally they would have to take those burdens upon them.

"President.—Those who want the franchise should bear the burdens.

"His Excellency.—Yes. Immediately they get the franchise they take upon themselves the obligations connected therewith."

[From this the talk wandered to the subject of commandeering, until the High Commissioner brought it back to the franchise question.]

"His Excellency.—If I made a proposal to admit strangers under such conditions as to swamp the old burghers it would be unreasonable. But the newcomers have, at present, no influence on the legislation of the Republic, which makes an enormous difference. They have n't got a single representative. The First Volksraad consists of 28 members, and not one member represents the feelings of the large Uitlander population.

"President.—Men from any country could after two years vote for the Second Volksraad, and after two years more sit in the Second Raad. There are Englishmen who have obtained the full franchise in that way, and are eligible for the Volksraad. And now I have proposed to shorten the last ten years of the period required for the full franchise and make it five years.

"His Excellency.—There are a great many objections of the gravest kind to the process by which men may now obtain burgher rights. First of all, before he can begin the process of gradually securing burgher rights—which will be completed in 14 years at present, and in 9 years according to the President—he has to forswear his own allegiance. Take the case of a British subject, which interests me most. He takes the oath, and ceases to be a British subject by the mere fact of taking that oath; he loses all the rights of a British subject, and he would still have to wait for 12 years, and under the new plan 7 years, before he can become a full citizen of the Republic. British subjects are discouraged by such a law from attempting to get the franchise. Even if they wanted to become citizens, they would not give up their British citizenship on the chance of becoming in 12 years citizens of the Republic.

"President.—The people are the cause of that themselves. In 1870 anyone being in the land for one year had the full franchise.

"His Excellency.—That was very liberal.

"President.—In 1881, after the war of independence, some of our officials and even members of our Raad then said that they were still British subjects, although they had taken the oath of allegiance, and I had to pay back, out of the £250,000, what I had commandeered from them. That was the reason the oath had to be altered. . . .

"His Excellency.—In 1882, after all this had happened, there was a franchise law in the Transvaal, which demanded five years' residence, but it did not require the oath that is now taken. It required a simple declaration of allegiance to the State, though all this that the President refers to happened before. Why was not it necessary to introduce this alteration then?

"President.—The people who, before the annexation, had taken that oath, but had not forsworn their nationality, 1887, sent a lying memorial, as they are sending lying memorials now, to say that everybody was satisfied, as they now say that everybody is dissatisfied.

"His Excellency.—I think I must just explain a little more clearly my views on the point we are now discussing. . . . I think it is unreasonable to ask a man to forswear one citizenship unless in the very act of giving up one he gets another, and I think it is also unnecessary to ask him to do more than take an oath of fealty to the new State, of willingness to obey its laws and to defend its independence, when it is known and certain that the taking of that oath deprives him of his existing citizenship. I think the oath should be a simple oath of allegiance, and that it should not be required of a man until the moment he can get full rights in a new State. Now that was the position under the law of 1882, and all these reasons which the President has been

giving are based on what happened before that. Why were they not considered and acted upon when the law of 1882 was made? . . . As for the period required to qualify for the full franchise, I do not see why the length of time should be longer in the South African Republic than in any other South African State. They are all new countries. In the new country which is springing up in the north, and which is getting a new Constitution this year, the period is one year. The people who have conquered that country for the white race may find that the newcomers are more numerous than they are. But I do not expect that anything like that will be done in the South African Republic; something far short of that would be reasonable. What I do think and desire, and that is the object of my suggestion, is this: that the numerous foreign population engaged in commerce and industry—to which the country, after all, owes its present great position in wealth and influence—should have a real share in the government of the Republic, not to over-rule the old burghers—not at all—but to share the work of Government with them, to give them the benefit of their knowledge and experience, which is in many cases greater than that of the old burghers, so that through their gradual co-operation a time may come when, instead of being divided into two separate communities they will all be burghers of the same State. It is not enough that a few people should be let in. It is obvious, however, that you could not let in the whole crowd, without character or anything—I do not ask it—but you want such a substantial measure that in elections of members of the Volksraad the desires of the new industrial population should have reasonable consideration. They have not got it now, and when the questions that interest them come before the Volksraad it is too evident that they are discussed from an outside point of view. The industrial population are regarded as strangers. . . . I do not want to swamp the old population, but it is perfectly possible to give the new population an immediate voice in the legislation, and yet to leave the old burghers in such a position that they cannot possibly be swamped.

"President.—I hope you will be open to conviction on that point. I would like to convince you on the subject, and to show you that it would be virtually to give up the independence of my burghers. In the Republic the majority of the enfranchised burghers consider they are the masters. Our enfranchised burghers are probably about 30,000, and the newcomers may be from 60,000 to 70,000, and if we give them the franchise to-morrow we may as well give up the Republic. I hope you will clearly see that I shall not get it through with my people. We can still consult about the form of oath, but we cannot make the time too short, because we would never get it through with the people—they have had bitter experience. I hope His Excellency will think about what I have said, and weigh it well.

"His Excellency.—I see your point, and want to meet it.

"President.—I will think over what has been said, and will try and meet every difficulty.

At the opening of the Conference on the second day the President spoke of reports of an increase of British forces in South Africa, which the High Commissioner assured him were untrue. The latter in turn referred to accounts that had appeared of an extensive purchase of arms in the Transvaal; and was assured by the President that the armament of the burghers was only for their proper preparation to deal with the surrounding natives. The President then produced a memorial purporting to be signed by 21,000 Uitlanders, contradictory of the representations contained in the memorial sent to the Queen in March (see above). After discussion upon this, the conversation returned to the question of the franchise.

"His Excellency.—What makes this whole discussion so difficult is the intense prejudice on the side of the present burghers, and their intense suspicion of us. They think Her Majesty's Government wants to get their country back in one way or another. Her Majesty's Government does not; but what it does desire is that it should have such a state of rest in the country as will remove causes of friction and difficulty between the Republic and Her Majesty's possessions in South Africa, and the whole of the British Empire, and my suggestions here are directed to that end. I do not want to say it over and over again, I say it once for all. . . .

"President.—I should like to make a slight explanation to His Excellency. His Excellency yesterday mentioned that in some States those going in from outside speedily got burgher rights, but he must not forget, as I said before, they are glad of the people who come in. But, here we have all nations and all kinds, and if they were to get burgher rights quickly then that would be the end of our independence, and then they could send us away where they liked. I would like His Excellency to bear that in mind.

"His Excellency.—I do not see how the old burghers can have it both ways. They cannot have a very large population streaming in to develop the resources of the country, and giving it a much higher position in the world than it would otherwise have, and at the same time exclude these people from participation in the Government of the country.

"President.—Your Excellency must bear this in mind. There is no Gold Law in the world that is so liberal as that of the Republic."

The President then recurred to the right which the Uitlanders might obtain, of voting for the Second Volksraad after two years, and becoming eligible to seats in it after four years, and said that it was in the Second Volksraad that their own interests were dealt with—not in the First. The High Commissioner asked if the Second Raad could act without consent of the First. The President acknowledged that the latter could alter any law which "appears to be against the general welfare," but contended that it had no wish to go into gold field matters, though it has the power, and that it had interfered with action of the Second Raad in but three or four instances. The High Commissioner remarked that Uitlanders who abandoned their own nationality to wait years for full citizenship in the Republic might have the latter prospect taken away from them at any moment by a single resolution of the First Raad. The President replied: "They haven't done it yet. The legislatures of all the world have the same power." To which the High Commissioner

made answer: "This power existing, the new comers cannot be expected—I should not recommend one of them—to give up his present citizenship for the mere chance of becoming a citizen of the new country."

"His Excellency.—If the President thinks we are asking too much . . . I must report to Her Majesty's Government that the President rejects our friendly suggestions.

"The President.—I would be misleading you if I should tell you that I can give all the strangers the franchise in a very short time. I would consider that our independence was sacrificed thereby: but I say this, let His Excellency keep impartially in view my points of difficulty, and let him make his proposals and submit them to us, so that we can consider them and judge about them. . . . I have already said that perhaps means may be found to alter the form of oath. . . . I would now like His Excellency to propose a scheme.

"His Excellency.— . . . What I suggest is this: That every foreigner who can prove satisfactorily that he has been resident in the country for five years, and that he desires to make it his permanent place of residence, that he is prepared to take the oath to obey the laws, to undertake all the obligations of citizenship, and to defend the independence of the country, should be allowed to become a citizen on taking that oath. This should be confined to persons possessing a certain amount of property, or a certain amount of yearly wages, and who have good characters. In order to make that proposal of any real use for the new citizens who mostly live in one district in the Republic, and a district which only returns one member in 28 to the First Raad, and one in 28 to the Second Raad, I propose that there should be a certain number of new constituencies created, the number of which is a detail upon the discussion of which I will not now enter. But what is vital from my point of view is that the number of these districts should not be so small as to leave the representatives of the new population in a contemptible minority.

"President.—With us the majority of the enfranchised burghers constitutes the ruling voice, and must be listened to in the Volksraad. If the 60,000 came in immediately, they would swamp the 30,000. . . . I mean this: that if they are all enfranchised then they would at once form the majority of the whole population, and the majority of enfranchised burghers, according to our law, must be listened to by the Volksraad; since in a Republic we cannot leave the sovereign voice out of account.

"His Excellency.—This is pure theory, that the Volksraad have to do what the majority of the people desire. The Volksraad does what it considers right in its own eyes; it is elected by the people, and does what it thinks right, and the President has made it quite clear during the last year or two that anything the Volksraad does is law."

At an afternoon meeting on the same day, there was a long discussion of the dynamite grievance of the Uitlanders, and the President wished to bring up other points; but the High Commissioner objected:

"His Excellency.—I think the discussion will be of interminable length if we are to proceed in this way, and if we cannot approach one another on the point on which I have made my suggestions, and which lies outside all the pending questions between the two Governments, these other controversies may as well be allowed to go on in the usual course. If the President to-morrow will give me an answer on the first subject I raised, and then wishes to bring forward his grievances, I will consider them to-morrow. I do not want to go on with a long list of my own until I understand what is the basis on which I stand in regard to what I consider the most important question of all.

"President.—I think it would be as well if we returned in a little while to discuss our points, but I would like to give His Excellency some things to think over. The first point I would like to mention is my wish that Swaziland should now be handed over to me as a portion of my land. . . . Secondly, the demand made with regard to the damages for the Jameson Raid, Mr. Chamberlain said he was against paying the million, but he is not against paying the expenses incurred. Thirdly, that differences such as those now existing between us, should be settled by arbitration, and then no war or quarrel could arise between us. . . . These are some of the questions I wish His Excellency to think about."

At the opening of the Conference on the third day, the President sought to commit the High Commissioner to an "understanding," that "if we came," he said, "to some agreement on the franchise Her Majesty's Government then would engage not in any way to concern itself with internal affairs in the Republic any longer, and that in future questions that then may arise, whether out of the Convention or otherwise, Her Majesty would agree to have such questions referred to arbitration." The High Commissionre declined to deal with the subject of the franchise as a matter of "bargain." It was a subject of grievances and discontent, dangerous to the Republic and dangerous to the relations between the Republic and Great Britain, which ought to be dealt with on its merits alone. Nevertheless, after some controversy, he said:

"His Excellency.— . . . As far as the Jameson Indemnity is concerned I know that a despatch is on the way to me at this present moment, which forwards a statement from the British South Africa Company examining the details of the claim which has been sent in, and asking that the question of the amount payable in respect of the Raid may be submitted to arbitration. I have received a telegram that that despatch is coming. The position is this—the British Government have admitted in principle that the Company must pay what is fairly due on account of that raid; but the question of the amount is still under discussion, and I hope that this proposal will lead to a settlement. As to the question of arbitration, which I think is the matter that interests the President most, I am in so far entirely with him that I want if possible to have in future as few questions to discuss with the Government of the South African Republic, as I now have with the Government of the Orange Free State. I feel that the President will need, if he accepts my scheme of franchise, or any other similar proposal, to have some assurance that there shall not be perpetual controversies between him and England, and that if there are controversies, some regular way of dealing with them should be devised. The President once proposed that some

question, or a number of questions, should be submitted to the President of the Swiss Republic. The British Government refused that on the general principle—from which I am sure they will not depart—that they will not have any foreign Government, or any foreign interference at all, between them and the South African Republic. But if some other method can be devised of submitting to an impartial tribunal questions that may in future arise between us, and perhaps even some questions which exist at present—but in any case to provide for the future—if such a plan can be devised and suggested to me, I will lay it before Her Majesty's Government and do what I can personally to assist in a satisfactory solution of the matter. The President must understand that I cannot pledge Her Majesty's Government in any way on this subject. The question has taken me by surprise; I did n't come here contemplating a discussion on it, but I must say if it could be satisfactorily arranged while excluding the interference of the foreigner, it would seem to me to open a way out of many difficulties. But all the same, I adhere firmly to my proposal that we should first try and settle on the scheme which the President would accept as regards the matter which I put forward."

At the close of the morning interview, both parties expressed hopelessness of agreement. On meeting again in the afternoon, the President submitted in writing the following proposals concerning the franchise: "As the purpose I had in view at this Conference principally consists in the removal of existing grounds of disagreement and further to provide for the friendly regulation of the way of settling future disputes by means of arbitration, the following proposals with regard to the franchise must be considered as conditional and dependent on the satisfactory settlement of the first mentioned points, and on the request that my request to incorporate Swaziland in the South African Republic shall be submitted by the High Commissioner to Her Majesty's Government. Subject to the foregoing I undertake to submit without delay to the approval of the Volksraad and the people the following proposals about the franchise:

"I. Every person who fixes his residence in the South African Republic has to get himself registered on the Field-cornets' books within fourteen days after his arrival according to the existing law; will be able after complying with the conditions mentioned under 'A.,' and after the lapse of two years to get himself naturalised; and will five years after naturalisation, on complying with the conditions mentioned under 'B.,' obtain the full franchise.

"A.—1. Six months' notice of intention to apply for naturalisation; 2. Two years' continued registration; 3. Residence in the South African Republic during that period; 4. No dishonouring sentence; 5. Proof of obedience to the laws; no act against Government or independence; 6. Proof of full State citizenship and franchise or title thereto in former country; 7. Possession of unmortgaged fixed property to the value of £150 approximately, or occupation of house to the rental of £50 per annum, or yearly income of at least £200. Nothing, however, shall prevent the Government from granting naturalisation to persons who have not satisfied this condition; 8. Taking of an oath similar to that of the Orange Free State.

"B.—1. Continuous registration five years after naturalisation; 2. Continuous residence during that period; 3. No dishonouring sentence; 4. Proof of obedience to the laws, &c.; 5. Proof that applicant still complies with the condition A (7).

"II. Furthermore, the full franchise shall be obtained in the following manner: — (a.) Those who have fixed their residence in the South African Republic before the taking effect of Act 4, 1890, and who get themselves naturalised within six months after the taking effect of this Act on complying with the conditions under 1A, shall obtain the full franchise two years after such naturalisation on proof of compliance with the conditions mentioned under 1B (altering the five into two years). Those who do not get themselves naturalised within six months under Article 1, (b.) Those who have been resident in the South African Republic for two years or more can get themselves immediately naturalised on compliance with the conditions under 1A., and shall five years after naturalisation obtain the full franchise on compliance with the conditions under 1B. (c.) Those who have been already naturalised shall five years after naturalisation obtain the full franchise on compliance with the conditions under 1B."

At the meeting next day, the High Commissioner presented to the President a written memorandum in reply to the proposals of the latter. He admitted that "the scheme proposed is a considerable advance upon the existing provisions as to franchise," but said that he could not recommend its acceptance as adequate to the needs of the case. "Under this plan," he continued, "no man who is not already naturalised, even if he has been in the country 13 or 14 years, will get a vote for the First Volksraad in less than 2½ years from the passing of the new law. There will be no considerable number of people obtaining that vote in less than five years, that is if they come in and naturalise. But I fear the majority of them will not come in, because the scheme retains that unfortunate provision, first introduced in 1890, by which, owing to the two stages—first, naturalisation with a partial franchise, and then, after five years, full franchise—a man has to abandon his old citizenship before he becomes a full-fledged citizen of his new country. My plan avoided this. My doctrine is that, however long a period of residence you fix before a man becomes a citizen of your State, you should admit him, once for all, to full rights on taking the oath of allegiance. And this is especially important in the South African Republic, because, owing to the facility and frequency with which laws—even fundamental laws—are altered, the man who takes the oath and thereby loses his old country will never feel quite sure that something may not happen in the interval, when he is only half a citizen, to prevent his becoming a whole one. The vote for the First Volksraad is the essential point. According to the present constitution of the Transvaal, the First Volksraad and the President really are the State. But under this scheme it will be a considerable time before any number of Uitlanders worth mentioning can vote for the First Volksraad, and even then they will only command one or two seats. My point was to give them at once a few representatives. They might be a minority, even a small minority. I have said over and

over again I do not want to swamp the old burghers. But as long as the representatives of the new comers are entirely excluded from the supreme legislative council, they will, as a body, remain an inferior caste. The co-operation and gradual blending of the two sections of the population will not take place, The old separation and hostility will continue. I see no prospect here of that concord to which I had looked both to bring about a more progressive system of government, and to remove causes of friction between the Government of the South African Republic and Great Britain. For these reasons I regret to say the scheme seems to me so inadequate that I think it would be wasting the time of the Conference to discuss its details."

The President rejoined in another memorandum, which added one more to his former proposals, namely this: "I am ready to propose and to recommend to the First Volksraad to increase the number of members of the First Volksraad, whereby the Gold Fields will be represented by five, instead of as now by two, members."

The response to this by the High Commissioner was a review, at length, of all that had been proposed, leading to the conclusion which he expressed as follows: "If I am asked whether I think they will satisfy the Uitlander community, and are calculated to relieve the British Government from further solicitude on the score of its Uitlander subjects, I cannot answer in the affirmative. Still less can I encourage the idea that the British Government can be asked to give something in exchange for such legislation as the President proposes. My own proposal was put forward in no bargaining spirit. I asked myself, in advancing it, what is the smallest measure of reform that will really be of any use, that is to say, which will allay the present unrest and enable the Uitlanders to exercise within a reasonable time an appreciable influence on the Government of the country. It was in that spirit that I suggested the outline of a scheme, intentionally not working it out in detail (for I was ready to listen as to details), but indicating a certain minimum from which I am not prepared to depart. . . . When I came here I came in the hope that I might be able to report to Her Majesty's Government that measures were about to be adopted which would lead to such an improvement in the situation as to relieve Her Majesty's Government from pressing for the redress of particular grievances on the ground that the most serious causes of complaint would now gradually be removed from within. I do not feel that what His Honour has seen his way to propose in the matter of franchise or what he indicates as the extreme length to which he might, at some future time, be willing to go in the extension of local government is sufficient to justify me in reporting in that sense."

The Conference was ended by a last memorandum from the President, in which he said: "As it is my earnest wish that this Conference should not be fruitless, I wish to make the following proposal to His Excellency, viz.:—As according to his own admission my proposal about franchise is an important step in the right direction, I shall be prepared to lay my proposal before the Volksraad and to recommend it, even though His Excellency does not fully agree with it. From his side I shall then expect that His Excellency will lay before and recommend to Her Majesty's Government my request about arbitration on future matters of difference under the Convention. His Excellency will, however, readily understand that if Her Majesty's Government should not meet me so far, so as to grant my acknowledged fair request for arbitration, it could be with difficulty expected that the people of the South African Republic would approve of my comprehensive proposal with regard to franchise."—*Great Britain, Papers by Command:* 1899, *C.* 9404.

The Transvaal: A. D. 1899 (May—August). —Advice to President Kruger from Cape Afrikanders, and from Holland and Germany.—Several private letters written at the time of these occurrences by Sir J. H. De Villiers, a leading Afrikander, Chief Justice of Cape Colony, and one of the Commissioners who negotiated the Convention of 1881, addressed to persons who might have influence with President Kruger, were made public a year later. In the first of these letters, written to President Steyn of the Orange Free State, on the 21st of May, 1899, Justice De Villiers used strong expressions, as follows: "On my recent visit to Pretoria I did not visit the President as I considered it hopeless to think of making any impression on him, but I saw Reitz, Smuts, and Schalk Burger, who, I thought, would be amenable to argument, but I fear that either my advice had no effect on them, or else their opinion had no weight with the President. I urged upon them to advise the President to open the Volksraad with promises of a liberal franchise and drastic reforms. It would have been so much better if these had come voluntarily from the Government instead of being gradually forced from them. In the former case they would rally the greater number of the malcontents around them, in the latter case no gratitnde will be felt to the Republic for any concessions made by it. Besides, there can be no doubt that as the alien population increases, as it undoubtedly will, their demands will increase with their discontent, and ultimately a great deal more will have to be conceded than will now satisfy them. The franchise proposal made by the President seems to be simply ridiculous. I am quite certain that if in 1881 it had been known to my fellow Commissioners that the President would adopt his retrogressive policy, neither President Brand nor I would ever have induced them to consent to sign the Convention. They would have advised the Secretary of State to let matters revert to the condition in which they were before peace was concluded; in other words, to recommence the war. . . . If I had any influence with the President I would advise him no longer to sit on the boiler to prevent it from bursting. Some safety-valves are required for the activities of the new population. In their irritation they abuse the Government, often unjustly, in the press, and send petitions to the Queen; but that was only to be expected. Let the Transvaal Legislature give them a liberal franchise and allow them local self-government for their towns, and some portion of the discontent will be allayed. The enemies of the Transvaal will not be satisfied; on the contrary, the worst service that can be done to them is the redress of the grievance, but it is the friends of the country who should be considered."

On the 31st of July, the Justice wrote still more urgently and impatiently to a Mr. Fischer,

who was in close relations with the Transvaal President: "I do not think that President Kruger and his friends realize the gravity of the situation. Even now the State Secretary is doing things which would be almost farcical if the times were not so serious. Some time ago I begged of him to drop the censorship of telegrams because it serves no useful purpose and only delays the publication of lies by a few days. His answer was that the Government should not disseminate lies by its own wires. He might as well have said Government should not disseminate lies by its own post-office. To crown all, I see that he has now gone so far as to stop a private telegram (which had been paid for) because it contained a lie. I really do not know where he is going to stop or whether he intends to guarantee that all telegrams allowed to pass contain the truth and nothing but the truth. Could you not induce him to stop such childish nonsense? The Transvaal will soon not have a single friend left among the cultivated classes. Then there is the Franchise Bill, which is so obscure that the State Attorney had to issue an explanatory memorandum to remove the obscurities. But surely a law should be clear enough to speak for itself, and no Government or Court of Law will be bound by the State Attorney's explanations. I do not know what those explanations are, but the very fact that they are required condemns the Bill. That Bill certainly does not seem quite to carry out the promises made to you, Mr. Hofmeyr, and Mr. Herholdt. The time really has come when the friends of the Transvaal must induce President Kruger to become perfectly frank and take the newcomers into his confidence. It may be a bitter pill to have to swallow in yielding to further demands, but it is quite clear to the world that he would not have done as much as he has done if pressure had not been applied. What one fears is that he will do things in such a way as to take away all grace from his concessions. Try to induce him to meet Mr. Chamberlain in a friendly manner and at once remove all the causes of unrest which have disturbed this unhappy country for so many years. As one who signed the Convention in 1881, I can assure you that my fellow Commissioners would not have signed it if they had not been led to believe that President Kruger's policy towards the Uitlanders would have been very different from what it has been."

Three confidential despatches sent to President Kruger, in the same period, by the Minister for Foreign Affairs in the Netherlands government were laid before the States General at The Hague, October 25, 1900, and made public through Reuter's press agency, as follows: "In the first despatch, which is dated May 13, 1899, the Minister states that news received from different capitals leads him to believe in the imminence of the danger of a violent solution of the problem in South Africa. As a faithful friend he counsels Mr. Kruger in the true interests of the Republic to show himself as conciliatory and moderate as possible, and adds that he learns from a trustworthy source that the German Government fully shares that opinion. Mr. Kruger replied that he had always been conciliatory and did not desire war, but that he could not sacrifice the independence of the Republic. He was willing enough to grant the suffrage, but he could not tolerate Englishmen remaining subjects of the Queen while receiving at the same time the right to vote in the Republic. In the second despatch, dated August 4, 1899, the Netherlands Minister for Foreign Affairs advised President Kruger, in the interests of the country, not to refuse peremptorily the British proposal for an international commission. Mr. Kruger replied that the commission would not be international, but an Anglo-Transvaal commission. He intended to ask for further information from Great Britain as to the scope and composition of the commission, and did not mean to give a decided refusal. Finally, the Netherlands Minister, in a telegram dated August 15, 1899, stated that the German Government entirely shared his opinion as to the inadvisability of declining the English proposal, adding that the German Government, like himself, was convinced that any request to one of the Great Powers at such a critical moment would be barren of result and highly dangerous to the Republic. To this Mr. Kruger replied that the British proposal would result in very direct interference by the English in the internal affairs of the Republic. He added that he had no intention of appealing to a Great Power."

Speaking in the German Reichsrath, on the 10th of December, 1900, the Imperial Chancellor, Count von Bülow, referred to the above publications by the Dutch government, and confirmed them, saying that it was in accordance with the views of the German Government that the Dutch Foreign Minister "strongly advised Mr. Kruger to maintain a moderate attitude. In June, 1899, Mr. Kruger was advised by Germany through the Dutch Government to invite mediation, but Dr. Leyds informed the Dutch Minister in Paris that Mr. Kruger did not consider 'that the moment had yet come for applying for the mediation of America.' Some time afterwards Mr. Kruger made the attempt to obtain arbitration, but 'feeling had become too heated,' and in August Mr. Kruger complained to the Dutch Government that arbitration could not be arranged. The answer to this complaint is given in the Dutch Yellow-book under the date of August 15, 1899, and points out that the German Government would at that date have regarded any appeal to a Great Power as hopeless and as very dangerous for the Republics. The German Government also shared the Dutch view that Mr. Kruger ought not to reject the English proposal then before him."

The Transvaal: A. D. 1899 (July—September).—Amendment of the Franchise Law.—After much discussion and many changes, an amended Franchise Law was adopted by the First Volksraad of the Republic and published on the 26th of July. It conceded to foreigners who had already been resident in the Republic for seven years a possibility of obtaining full burgher rights simultaneously with the taking of the oath of allegiance, but subjected the proceeding to conditions which would make it, in Uitlander opinion, of service to very few. The judgment of Sir Alfred Milner, the High Commissioner, as expressed to Secretary Chamberlain, was to the effect that "the bill, as it stands, leaves it practically in the hands of the Government of the South African Republic to enfranchise or not enfranchise the Uitlanders as it chooses. If worked in a liberal spirit, its clumsy and unreasonable provisions may be got over.

But if it is to be enforced rigidly, there will be practically unlimited opportunities of excluding persons whom the Government may consider undesirable, nor does the tone of the debate in the Raad leave much doubt as to the spirit in which some at least of the authors of the Bill would like to see it worked." His criticism applied especially to the certificate required from every applicant. "The certificate," he said, "which every applicant must obtain from three different officials, as to (a) continuous registration and domicile, (b) obedience to the laws, (c) committing no crime against the independence of the country, is one which these officials, even if well disposed, would be able in hardly any case to give. None of them can have any such knowledge of the Uitlander population as would enable them to give this comprehensive certificate; it is acknowledged that some of the Johannesburg lists have been lost; and the Fieldcornet has, I believe, held his present office for less than four years." Moreover, a requirement of "continuous" registration "may mean," said the High Commissioner, "(and I cannot understand what else it could mean) registration for seven years in one ward and district; so that a person having resided and been registered in one district and subsequently removed to another would forfeit the benefit of his first period of residence. Even if this were not so, he would doubtless have to get a double set of certificates."

Simultaneously with the publication of the new Franchise Law it was announced that the Executive Council had decided to give the Witwatersrand Gold Fields a representation of five members (out of 31) in the First Volksraad, as well as representation by the same number in the Second Volksraad. To the British Agent at Pretoria, Mr. Conyngham Greene, this seemed to be "so wholly inadequate as not to be worthy of serious consideration."

In view of the complexities and uncertainties involved in the new Franchise Law, the High Commissioner addressed the following communication to the government of the South African Republic, August 1: "Her Majesty's Government authorize me to invite President South African Republic to appoint delegates to discuss with delegates to be appointed by me on behalf of Her Majesty's Government, whether Uitlander population will be given immediate and substantial representation by franchise law recently passed by Volksraad, together with other measures connected with it, such as increase of seats, and, if not, what additions or alterations may be necessary to secure that result. In this discussion it should be understood that the delegates of Her Majesty's Government would be free to make any suggestions calculated to improve measures in question and secure their attaining the end desired."

The reply to this proposal was given by the Boer government to the British Agent at Pretoria in two notes, the first, dated August 19, as follows: "With reference to your proposal for a joint enquiry contained in your despatches of the 2nd and 3rd August, Government of South African Republic have the honour to suggest the following alternative proposal for consideration of Her Majesty's Government, which this Government trusts may lead to a final settlement. (1.) The Government are willing to recommend to the Volksraad and the people a 5 years' retrospective franchise, as proposed by His Excellency the High Commissioner on the 1st June, 1899. (2.) The Government are further willing to recommend to the Volksraad that 8 new seats in the First Volksraad, and, if necessary, also in the Second Volksraad, be given to the population of the Witwatersrand, thus with the 2 sitting members for the Goldfields giving to the population thereof 10 representatives in a Raad of 36, and in future the representation of the Goldfields of this Republic shall not fall below the proportion of one-fourth of the total. (3.) The new Burghers shall equally with the old Burghers be entitled to vote at the election for State President and Commandant-General. (4.) This Government will always be prepared to take into consideration such friendly suggestions regarding the details of the Franchise Law as Her Majesty's Government, through the British Agent, may wish to convey to it. (5.) In putting forward the above proposals Government of South African Republic assumes: (a) That Her Majesty's Government will agree that the present intervention shall not form a precedent for future similar action and that in the future no interference in the internal affairs of the Republic will take place. (b) That Her Majesty's Government will not further insist on the assertion of the suzerainty, the controversy on the subject being allowed tacitly to drop. (c) That arbitration (from which foreign element other than Orange Free State is to be excluded) will be conceded as soon as the franchise scheme has become law. (6.) Immediately on Her Majesty's Government accepting this proposal for a settlement, the Government will ask the Volksraad to adjourn for the purpose of consulting the people about it, and the whole scheme might become law say within a few weeks. (7.) In the meantime the form and scope of the proposed Tribunal are also to be discussed and provisionally agreed upon, while the franchise scheme is being referred to the people, so that no time may be lost in putting an end to the present state of affairs. The Government trust that Her Majesty's Government will clearly understand that in the opinion of this Government the existing Franchise Law of this Republic is both fair and liberal to the new population, and that the consideration that induces them to go further, as they do in the above proposals, is their strong desire to get the controversies between the two Governments settled, and further to put an end to present strained relations between the two Governments and the incalculable harm and loss it has already occasioned in South Africa, and to prevent a racial war from the effects of which South Africa may not recover for many generations, perhaps never at all, and therefore this Government, having regard to all these circumstances would highly appreciate it if Her Majesty's Government, seeing the necessity of preventing the present crisis from developing still further and the urgency of an early termination of the present state of affairs, would expedite the acceptance or refusal of the settlement here offered. (Signed) F. W. Reitz."—The second note, which followed on the 21st of August, was in these terms: "In continuation of my despatch of the 19th instant and with reference to the communication to you of the State Attorney this morning, I wish to forward to you the following

in explanation thereof, with the request that the same may be telegraphed to His Excellency the High Commissioner for South Africa, as forming part of the proposals of this Government embodied in the above-named despatch. (1.) The proposals of this Government regarding question of franchise and representation contained in that despatch must be regarded as expressly conditional on Her Majesty's Government consenting to the points set forth in paragraph 5 of the despatch, viz.: (a) In future not to interfere in internal affairs of the South African Republic. (b) Not to insist further on its assertion of existence of suzerainty. (c) To agree to arbitration. (2.) Referring to paragraph 6 of the despatch, this Government trusts that it is clear to Her Majesty's Government that this Government has not consulted the Volksraad as to this question and will only do so when an affirmative reply to its proposals has been received from Her Majesty's Government. (Signed) F. W. Reitz."

The above notes were repeated by cable, in full, to the Colonial Secretary, at London, and, on the 28th of August, he returned by the same medium his reply, as follows: "Her Majesty's Government have considered the proposals which the South African Republic Government in their notes to the British Agent of 19th and 21st August have put forward as an alternative to those contained in my telegram of 31st July. Her Majesty's Government assume that the adoption in principle of the franchise proposals made by you at Bloemfontein will not be hampered by any conditions which would impair their effect, and that by proposed increase of seats for the Goldfields and by other provisions the South African Republic Government intend to grant immediate and substantial representation of the Uitlanders. That being so, Her Majesty's Government are unable to appreciate the objections entertained by the Government of the South African Republic to a Joint Commission of Inquiry into the complicated details and technical questions upon which the practical effect of the proposals depends. Her Majesty's Government, however, will be ready to agree that the British Agent, assisted by such other persons as you may appoint, shall make the investigation necessary to satisfy them that the result desired will be achieved and, failing this, to enable them to make those suggestions which the Government of the South African Republic state that they will be prepared to take into consideration. Her Majesty's Government assume that every facility will be given to the British Agent by the Government of the South African Republic, and they would point out that the inquiry will be both easier and shorter if the Government of the South African Republic will omit in any future Law the complicated conditions of registration, qualification and behaviour which accompanied previous proposals, and would have entirely nullified their beneficial effect. Her Majesty's Government hope that the Government of the South African Republic will wait to receive their suggestions founded on the report of the British Agent's investigation before submitting a new Franchise Law to the Volksraad and the Burghers. With regard to the conditions of the Government of the South African Republic: First, as regards intervention; Her Majesty's Government hope that the fulfilment of the promises made and the just treatment of the Uitlanders in future will render unnecessary any further intervention on their behalf, but Her Majesty's Government cannot of course debar themselves from their rights under the Conventions nor divest themselves of the ordinary obligations of a civilized Power to protect its subjects in a foreign country from injustice. Secondly, with regard to suzerainty Her Majesty's Government would refer the Government of the South African Republic to the second paragraph of my despatch of 13th July. Thirdly, Her Majesty's Government agree to a discussion of the form and scope of a Tribunal of Arbitration from which foreigners and foreign influence are excluded. Such a discussion, which will be of the highest importance to the future relations of the two countries, should be carried on between the President and yourself, and for this purpose it appears to be necessary that a further Conference, which Her Majesty's Government suggest should be held at Cape Town, should be at once arranged. Her Majesty's Government also desire to remind the Government of the South African Republic that there are other matters of difference between the two Governments which will not be settled by the grant of political representation to the Uitlanders, and which are not proper subjects for reference to arbitration. It is necessary that these should be settled concurrently with the questions now under discussion, and they will form, with the question of arbitration, proper subjects for consideration at the proposed Conference."

On the 2d of September the Boer government replied to this at length, stating that it considered the proposal made in its note of August 19 to have lapsed; again objecting to a joint inquiry relative to the practical working of the Franchise Law, but adding: "If they [the Government] can be of assistance to Her Majesty's Government with any information or explanation they are always ready to furnish this; though it appears to it that the findings of a unilateral Commission, especially when arrived at before the working of the law has been duly tested, would be premature and thus probably of little value."

Meantime, on the 31st of August, Sir Alfred Milner had telegraphed to Mr. Chamberlain: "I am receiving representations from many quarters to urge Her Majesty's Government to terminate the state of suspense. Hitherto I have hesitated to address you on the subject, lest Her Majesty's Government should think me impatient. But I feel bound to let you know that I am satisfied, from inquiries made in various reliable quarters that the distress is now really serious. The most severe suffering is at Johannesburg. Business there is at a standstill; many traders have become insolvent; and others are only kept on their legs by the leniency of their creditors. Even the mines, which have been less affected hitherto, are now suffering owing to the withdrawal of workmen, both European and native. The crisis also affects the trading centres in the Colony. In spite of this, the purport of all the representations made to me is to urge prompt and decided action; not to deprecate further interference on the part of Her Majesty's Government. British South Africa is prepared for extreme measures, and is ready to suffer much in order to see the vindication of British authority. It is prolongation of the negotia-

tions, endless and indecisive of result, that is dreaded."

On the 8th of September, the High Commissioner was instructed by Mr. Chamberlain to communicate the following to the government of the Transvaal: "Her Majesty's Government are still prepared to accept the offer made in paragraphs 1, 2, and 3 of the note of the 19th August taken by themselves, provided that the inquiry which Her Majesty's Government have proposed, whether joint—as Her Majesty's Government originally suggested—or unilateral, shows that the new scheme of representation will not be encumbered by conditions which will nullify the intention to give substantial and immediate representation to the Uitlanders. In this connection Her Majesty's Government assume that, as stated to the British Agent, the new members of the Raad will be permitted to use their own language. The acceptance of these terms by the Government of the South African Republic would at once remove the tension between the two Governments, and would in all probability render unnecessary any further intervention on the part of Her Majesty's Government to secure the redress of grievances which the Uitlanders would themselves be able to bring to the notice of the Executive and the Raad."

In a lengthy response to this by State Secretary Reitz, September 16, the following are the essential paragraphs: "However earnestly this Government also desires to find an immediate and satisfactory course by which existing tension should be brought to an end, it feels itself quite unable, as desired, to recommend or propose to South African Republic Volksraad and people the part of its proposal contained in paragraphs 1, 2, and 3 of its note 19th August, omitting the conditions on the acceptance of which alone the offer was based, but declares itself always still prepared to abide by its acceptance of the invitation [of] Her Majesty's Government to get a Joint Commission composed as intimated in its note of 2nd September. It considers that if conditions are contained in the existing franchise law which has been passed, and in the scheme of representation, which might tend to frustrate object contemplated, that it will attract the attention of the Commission, and thus be brought to the knowledge of this Government. This Government has noticed with surprise the assertion that it had intimated to British Agent that the new members to be chosen for South African Republic Volksraad should be allowed to use their own language. If it is thereby intended that this Government would have agreed that any other than the language of the country would have been used in the deliberations of the Volksraad, it wishes to deny same in the strongest manner."

Practically the discussion was ended by a despatch from the British Colonial Secretary, September 22d, in which he said: "Her Majesty's Government have on more than one occasion repeated their assurances that they have no desire to interfere in any way with independence of South African Republic, provided that the conditions on which it was granted are honourably observed in the spirit and in the letter, and they have offered as part of a general settlement to give a complete guarantee against any attack upon that independence, either from within any part of the British dominions or from the territory of a foreign State. They have not asserted any rights of interference in the internal affairs of the Republic other than those which are derived from the Conventions between the two countries or which belong to every neighbouring Government (and especially to one which has a largely predominant interest in the adjacent territories) for the protection of its subjects and of its adjoining possessions." Referring to his despatch of September 8, the Secretary concluded: "The refusal of the Government of the South African Republic to entertain the offer thus made, coming as it does at the end of nearly four months of protracted negotiations, themselves the climax of an agitation extending over a period of more than five years, makes it useless to further pursue a discussion on the lines hitherto followed, and Her Majesty's Government are now compelled to consider the situation afresh, and to formulate their own proposals for a final settlement of the issues which have been created in South Africa by the policy constantly followed for many years by the Government of the South African Republic. They will communicate to you the result of their deliberations in a later despatch."—*Great Britain, Papers by Command:* 1899, *C.* 9518, 9521, 9530.

Orange Free State: A. D. 1899 (September—October).—The Free State makes common cause with the South African Republic.—On the 27th of September, President Steyn communicated to the British High Commissioner a resolution adopted that day by the Orange Free State Volksraad, instructing the government to continue efforts for peaceful settlement of differences between the South African Republic and Great Britain, but concluding with the declaration that "if a war is now begun or occasioned by Her Majesty's Government against South African Republic, this would morally be a war against the whole of white population of South Africa and would in its results be calamitous and criminal, and further, that Orange Free State will honestly and faithfully observe its obligations towards South African Republic arising out of the political alliance between the two Republics whatever may happen."

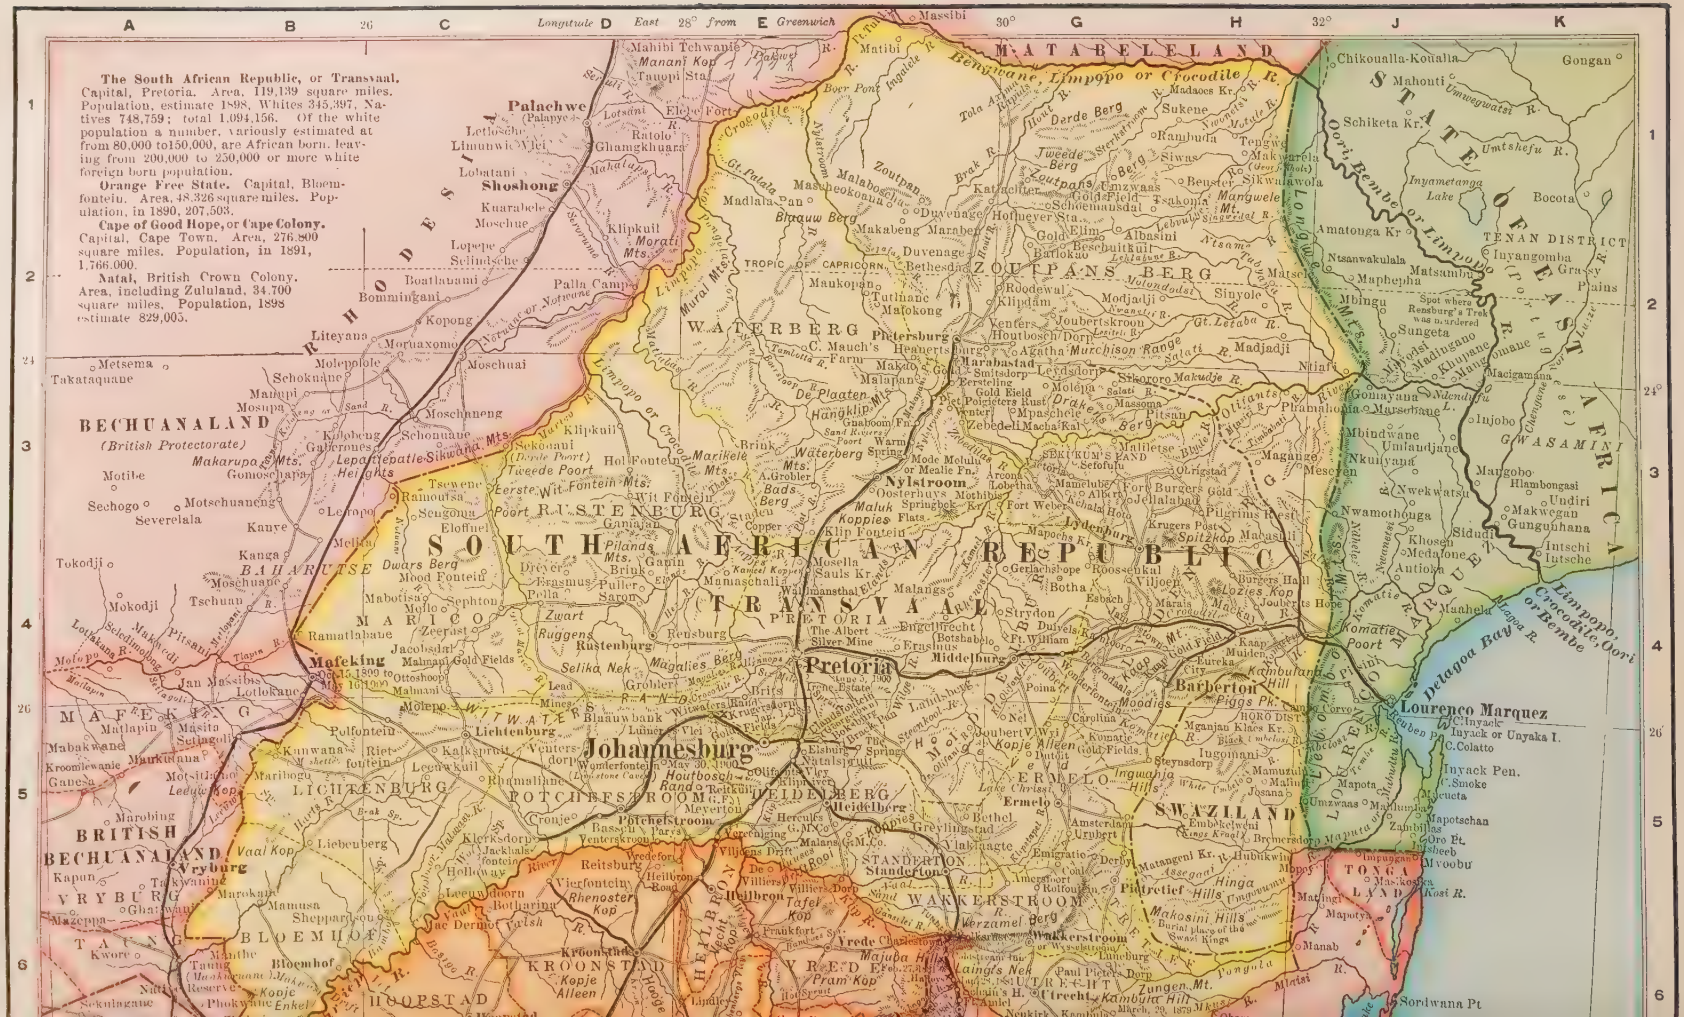
On the 11th of October, the High Commissioner communicated to President Steyn the ultimatum that he received from the South African Republic, and asked: "In view of Resolution of Volksraad of Orange Free State communicated to me in Your Honour's telegram of 27th September I have the honour to request that I may be informed at Your Honour's earliest possible convenience whether this action on the part of the South African Republic has Your Honour's concurrence and support." The reply of the Orange Free State President was as follows: "The high handed and unjustifiable policy and conduct of Her Majesty's Government in interfering in and dictating in the purely internal affairs of South African Republic, constituting a flagrant breach of the Convention of London, 1884, accompanied at first by preparations, and latterly followed by active commencement of hostilities against that Republic, which no friendly and well-intentioned efforts on our part could induce Her Majesty's Government to abandon, constitute such an undoubted and unjust attack on the independence of the South African Republic that no other course is left to this State than honourably to abide by its Conventional Agreements entered

into with that Republic. On behalf of this Government, therefore, I beg to notify that, compelled thereto by the action of Her Majesty's Government, they intend to carry out the instructions of the Volksraad as set forth in the last part of the Resolution referred to by Your Excellency."—*Great Britain, Papers by Command:* 1899, *C.*—9530, *pp.* 38 *and* 67.

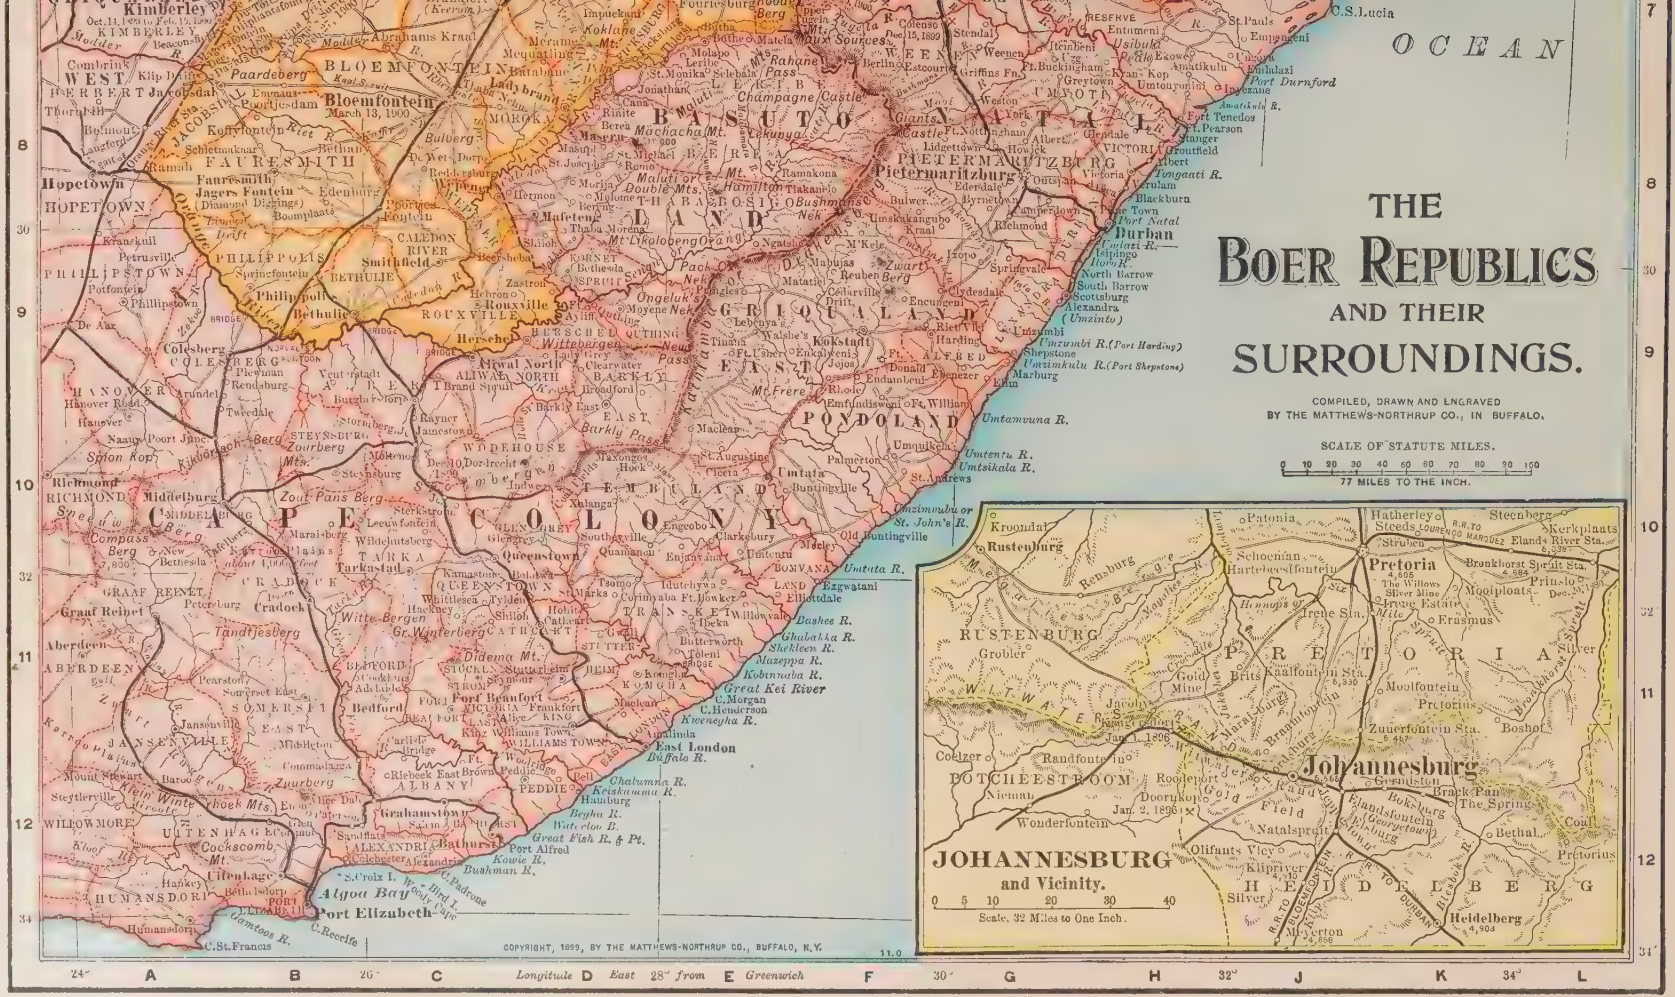
The Transvaal and Orange Free State: A. D. 1899 (September—October).—Preparations for war.—Troops massed on both sides of the frontiers.—Remonstrances of Orange Free State.—The Boer Ultimatum.—Before the controversy between Boer and Briton had reached the stage represented above, both sides were facing the prospect of war, both were bringing forces to the frontier, and each was declaring that the other had been first to take that threatening step. Which of them did first begin movements that bore a look of menace seems difficult to learn from official reports. On the 19th of September, the British High Commissioner gave notice to the President of the Orange Free State that "it has been deemed advisable by the Imperial military authorities to send detachments of the troops ordinarily stationed at Cape Town to assist in securing the line of communication between the Colony and the British territories lying to the north of it"; and "as this force, or a portion of it, may be stationed near the borders of the Orange Free State," he wished the burghers of that State to understand that the movement was in no way directed against them. Eight days later, President Steyn, of the Orange Free State, addressed a long despatch to the High Commissioner, remonstrating against the whole procedure of the British government in its dealing with the South African Republic, and alluding to the "enormous and ever increasing military preparations of the British government." On the 2d of October he announced to the Commissioner that he had "deemed it advisable, in order to allay the intense excitement and unrest amongst our burghers, arising from the totally undefended state of our border, in the presence of a continued increase and movement of troops on two sides of this State, to call up our burghers, to satisfy them that due precaution had been taken." The High Commissioner replied on the 3d: "Your Honour must be perfectly well aware that all the movements of British troops which have taken place in this country since the beginning of present troubles, which have been necessitated by the natural alarm of the inhabitants in exposed districts, are not comparable in magnitude with the massing of armed forces by government of South African Republic on the borders of Natal." Some days previous to this, on the 29th of September, Secretary Chamberlain had cabled from London to Sir Alfred Milner: "Inform President of Orange Free State that what he describes as the enormous and ever-increasing military preparations of Great Britain have been forced upon Her Majesty's Government by the policy of the South African Republic, which has transformed the Transvaal into a permanent armed camp, threatening the peace of the whole of South Africa and the position of Great Britain as the paramount State."

On the 9th of October the High Commissioner received another telegram from the President of the Orange Free State, of which he cabled the substance to London as follows: "He demurs to statement that military preparations of Her Majesty's Government have been necessitated by conversion of South African Republic into an armed camp. Her Majesty's Government must be entirely misinformed and it would be regrettable if, through such misunderstanding, present state of extreme tension were allowed to continue. Though Her Majesty's Government may regard precautions taken by South African Republic after Jameson Raid as excessive, Government of South African Republic cannot be blamed for adopting them, in view of large Uitlander population constantly being stirred up, through hostile press, to treason and rebellion by persons and organizations financially or politically interested in overthrowing the Government. Arming of Burghers not intended for any purpose of aggression against Her Majesty's dominions. People of South African Republic have, since shortly after Jameson Raid, been practically as fully armed as now, yet have never committed any act of aggression. It was not till Her Majesty's Government, with evident intention of enforcing their views on South African Republic in purely internal matters, had greatly augmented their forces and moved them nearer to borders that a single Burgher was called up for the purpose, as he firmly believed, of defending country and independence. If this natural assumption erroneous, not too late to rectify misunderstanding by mutual agreement to withdraw forces on both sides and undertaking by Her Majesty's Government to stop further increase of troops."

But, in reality, it was already too late; for, on the same day on which the above message was telegraphed from Bloemfontein, the government of the South African Republic had presented to the British Agent at Pretoria a note which ended the possibility of peace. After reviewing the issue between the two governments, the note concluded with a peremptory ultimatum, as follows:



"Her Majesty's unlawful intervention in the internal affairs of this Republic in conflict with the Convention of London, 1884, caused by the extraordinary strengthening of troops in the neighbourhood of the borders of this Republic, has thus caused an intolerable condition of things to arise whereto this Government feels itself obliged, in the interest not only of this Republic but also [?] of all South Africa, to make an end as soon as possible, and feels itself called upon and obliged to press earnestly and with emphasis for an immediate termination of this state of things and to request Her Majesty's Government to give it the assurance (a) That all points of mutual difference shall be regulated by the friendly course of arbitration or by whatever amicable way may be agreed upon by this Government with Her Majesty's Government. (b) That the troops on the borders of this Republic shall be instantly withdrawn. (c) That all reinforcements of troops which have arrived in South Africa since the 1st June, 1899, shall be removed from South Africa within a reasonable time, to be agreed upon with this Government, and with a mutual assurance and guarantee on the part of this Government that no attack upon or hostilities against any portion of the possessions of the British Government shall be made by the Republic during further negotiations within a period of time to be subsequently agreed upon between the Governments, and this Government will, on compliance therewith, be prepared to



withdraw the armed Burghers of this Republic from the borders. (d) That Her Majesty's troops which are now on the high seas shall not be landed in any port of South Africa. This Government must press for an immediate and affirmative answer to these four questions, and earnestly requests Her Majesty's Government to return such an answer before or upon Wednesday the 11th October, 1899, not later than 5 o'clock p. m., and it desires further to add that in the event of unexpectedly no satisfactory answer being received by it within that interval [it] will with great regret be compelled to regard the action of Her Majesty's Government as a formal declaration of war, and will not hold itself responsible for the consequences thereof, and that in the event of any further movements of troops taking place within the above-mentioned time in the nearer directions of our borders this Government will be compelled to regard that also as a formal declaration of war."

To this ultimatum the British government gave its reply, in a despatch from Mr. Chamberlain to Sir Alfred Milner, October 10, as follows: "Her Majesty's Government have received with great regret the peremptory demands of the Government of the South African Republic conveyed in your telegram of 9th October, No. 3. You will inform the Government of the South African Republic, in reply, that the conditions demanded by the Government of the South African Republic are such as Her Majesty's Government deem it impossible to discuss."—*Great Britain, Papers by Command:* 1899, *C.*—9530.—Efforts which were being made at the time in Holland to assist the Boer Republic in pacific negotiations with Great Britain were suddenly frustrated by this action. A year later (in November, 1900) it was stated in the States General at The Hague that "in the autumn of 1899 the Netherlands Government offered in London its good offices for the resumption of negotiations with the Transvaal, but these efforts had no result in consequence of the sudden ultimatum of the Transvaal and the commencement of hostilities by the armies of the Republics, actions which surprised the Netherlands Government. When once the war had broken out any effort in the direction of intervention would have been useless, as was shown by the peremptory refusal given by Great Britain to the offer of the United States."

An Englishman who was in the country at the time gives the following account of the Boer preparation for war: "In the towns the feeling was strongly against war; in the country districts war was popular, as the farmers had not the slightest doubt they would be able to carry out their threat of 'driving the English into the sea.' . . . Skilled artillerymen were finding their way into the country towards the end of August last [1899]. The Boers themselves did not put much faith in their artillery, but they were reassured by the officers who told them that they would yet learn to respect its usefulness and efficiency—a prophecy which to our cost has been more than fulfilled. . . . General Joubert was always ready and willing, at any time, to inspect and test new guns or military necessaries, and no expense was spared to make the Transvaal burgher army a first-class fighting-machine. . . . Surprise has been expressed at the inaccurate statements made by colonials as to the fighting strength of the Boers. They had not allowed for the enormous increase of population. From an absolutely reliable source the writer ascertained in September last that they could put in the field between 50 and 60 thousand men, made up as follows: Transvaal burghers, 22,000; resident foreigners, etc., 10,000; Free Staters, 16,000; colonists who would cross the border and join, 6,000; total, 54,000. . . . As soon as war seemed likely, no time was lost in perfecting the military arrangements. Before Great Britain had thought of mobilizing a soldier, the Boer emissaries were again scouring the colonies of Natal and the Cape, sounding the farmers as to what part they were prepared to take in the coming conflict. . . . While people at home were wondering what the next move would be, the Boers were ready to answer the question. Towards the middle of September all preparations were completed, the Government had laid in large quantities of supplies (mainly of flour, Boer meal, and tinned foods), which they anticipated would tide them over twelve to eighteen months, and by that time, if they had not beaten the British, they relied on foreign intervention. They had also received large sums of money from Europe, and some additional supplies of arms and ammunition. Ammunition was distributed in large quantities throughout the country, each burgher receiving a sealed packet in addition to his ordinary supply. The last batch of the Mauser rifles was distributed, and the mobilization scheme finally arranged, by which, on a given word being telegraphed to the different centres, the first Republican army corps would be mobilized within twenty-four hours. This actually took place. . . . The British Government could hardly fail to be aware of the fact that the Transvaal was in earnest this time. A visit to the country districts towards the end of August, about the time when the Boer Executive themselves sounded the country through their private agencies, would have revealed the fact that the people were not only perfectly willing to go to war, but that they absolutely wished for it. As one Boer put it to the writer: 'We look on fighting the English as a picnic. In some of the Kaffir wars we had a little trouble, but in the Vryheids Oorlog (the Boer War of 1881) we simply potted the Rooineks as they streamed across the veld in their red jackets, without the slightest danger to ourselves.' They had the utmost contempt for Tommy Atkins and his leaders, many of them bragging that the only thing that deterred them from advocating war instanter was the thought that they would have to kill so many of the soldiers, with whom individually they said there was no quarrel. With such a state of things, which should have been perfectly clear to the Intelligence Department (and through it to the War Office) in London—because no resident with eyes to see could be deceived in the matter—we allowed the present war to find us unprepared!"—J. Scoble and H. R. Abercrombie, *The Rise and Fall of Krugerism, ch.* 16 (*N. Y.: F. A. Stokes Co.*).

The Field of War: A. D. 1899 (October—November).—The Boer advance.—Invasion of Cape Colony and Natal.—The invaders joined by Dutch farmers of the colony.—The British unprepared.—Investment of Kimberley and Mafeking.—In a despatch dated January 16, 1900, Sir Alfred Milner gave particulars of the

The South African Republic, or Transvaal. Capital, Pretoria. Area, 119,139 square miles. Population, estimate 1898, Whites 345,397, Natives 748,759; total 1,094,156. Of the white population a number, variously estimated at from 80,000 to 150,000, are African born, leaving from 200,000 to 250,000 or more white foreign born population.
Orange Free State. Capital, Bloemfontein. Area, 48,326 square miles. Population, in 1890, 207,503.
Cape of Good Hope, or Cape Colony. Capital, Cape Town. Area, 276,800 square miles. Population, in 1891, 1,766,000.
Natal, British Crown Colony. Area, including Zululand, 34,700 square miles. Population, 1898 estimate 829,005.

first advance of the Boer forces from the Orange Free State into Cape Colony, and of the extent to which they were joined by Dutch farmers in districts south of Orange River. He wrote: "The portion of the Colony with which I propose to deal is that which lies south of the Orange River. The districts north of that river have been so completely cut off, and our accounts of what has been, and is, going on there are so scanty and imperfect, that the history of their defection cannot yet be written. I shall content myself with quoting an extract from a report upon the state of affairs in that region by a gentleman lately resident in Vryburg, which undoubtedly fairly expresses the truth so far as he has been in a position to observe it:—'All the farmers in the Vryburg, Kuruman, and Taungs districts,' he says, 'have joined the Boers, and I do not believe that you will find ten loyal British subjects among the Dutch community in the whole of Bechuanaland.' . . . The districts invaded by the enemy south of the Orange River are:—Colesberg, Albert, Aliwal North, Wodehouse, and Barkly East. It was on the 12th October that the enemy committed the first act of war and of invasion near Vryburg, on the western border, but it was not till more than a month later, namely, the 14th November, that they occupied Colesberg. Apparently they were waiting for reinforcements, for when they actually did cross the frontier they were 1,100 strong. Whatever the cause of their delay, it was not due to any discouragement from the people of Colesberg. The small British garrison then in the country being engaged elsewhere, and the district being entirely unguarded save by a few policemen, people from there continually visited the river to communicate with the enemy. The Chief Constable reports that when he left the town 300 Colesberg farmers had already joined the enemy, and that 400 more were expected from the adjoining district of Philipstown. . . . On the 16th November General Grobler, the Boer Commandant, addressed the following telegram to Bloemfontein:—'Colesberg was occupied by me without opposition. . . . I was very well pleased with the conduct of the Afrikanders. We were everywhere welcomed.' . . . Eastwards along the border the tide of insurrection ran strong. In the closing days of October a Boer force assembled at Bethulie Bridge, which was guarded only by a handful of police. As the days passed and the alarm grew, the Cape police force was withdrawn from Burghersdorp, which lies south of Bethulie, down the line to Stormberg, while, in their turn, the Imperial forces abandoned the important position of Stormberg, and retired on Queenstown, thus leaving the district clear for the invaders. That they did not immediately advance was certainly not owing to any fear of resistance at Burghersdorp, the inhabitants of which fraternised with the commando stationed on the river, continually passing to and fro. Finally, on the 14th November, the date of the occupation of Colesberg, the advance was made, and on the following morning a body of 500 Boers occupied the town. . . . According to the despatch of the Boer Commandant, dated 16th November, Burghersdorp was occupied 'amidst cheers from the Afrikanders,' and 'the Colonial burghers are very glad to meet us.' Commandeering at once began throughout the district of Albert, and a Burghersdorp resident estimated that about 1,000 farmers were prepared to join at the date of his leaving the place. . . .

"Within a space of less than three weeks from the occupation of Colesberg, no less than five great districts—those of Colesberg, Albert, Aliwal North, Barkly East, and Wodehouse—had gone over without hesitation, and, so to speak, bodily, to the enemy. Throughout that region the Landdrosts of the Orange Free State had established their authority, and everywhere, in the expressive words of a Magistrate, British loyalists were 'being hunted out of town after town like sheep.' In the invaded districts, as will be seen from the above, the method of occupation has always been more or less the same. The procedure is as follows:—A commando enters, the Orange Free State flag is hoisted, a meeting is held in the Court-house or market-place, and a Proclamation is read, annexing the district. The Commandant then makes a speech, in which he explains that the people must now obey the Free State laws generally, though they are at present under martial law. A local Landdrost is appointed, and loyal subjects are given a few days or hours in which to quit, or be compelled to serve against their country. . . . The number of rebels who have actually taken up arms and joined the enemy during their progress throughout the five annexed districts can for the present only be matter of conjecture. I shall, however, be on the safe side in reckoning that during November it was a number not less than the total of the invading commandos, that is, 2,000, while it is probable that of the invading commandos themselves a certain proportion were colonists who had crossed the border before the invasion took place. And the number, whatever it was, which joined the enemy before and during November has been increased since. A well-informed refugee from the Albert district has estimated the total number of Colonial Boers who have joined the enemy in the invaded districts south of the Orange River at 3,000 to 4,000. In the districts north of that river, to which I referred at the beginning of this despatch, the number can hardly be less. Adding to these the men who became burghers of the Transvaal immediately before, or just after, the outbreak of war, with the view of taking up arms in the struggle, I am forced to the conclusion that, in round figures, not less than 10,000 of those now fighting against us in South Africa, and probably somewhat more, either are, or till quite recently were, subjects of the Queen."—*Great Britain, Papers by Command: Cd.* 264, 1900, *pp.* 1–5.

The above relates to movements from the Orange Free State into Cape Colony, where the most of reinforcement from Afrikander inhabitants of British soil was to be got. From the Transvaal, the movement of Boer forces across the frontiers, both eastward and westward, was equally prompt. Early on the morning of the 12th they were in Natal, advancing in three strong columns, under General Joubert, upon Newcastle, threatening the advance posts of the British at Dundee and Glencoe (some 40 miles northeast of Ladysmith), where valuable coal mines claimed defence. At the same time, another Boer army, under General Cronje, had passed the western border and was moving upon Mafeking, where Colonel (afterwards General)

Baden-Powell, with an irregular force of about 1,200 men, was preparing for a siege. The inhabitants of the town, including refugees, numbered about 2,000 whites and 7,000 blacks. A few days later Boer forces were skirmishing with the defenders of the diamond mines at Kimberley, where Colonel Kekewich commanded about 1,000 men, and where Cecil Rhodes was among the beleaguered citizens. The population of Kimberley was 33,000, more than half blacks.

It is plain that the British were wholly unprepared for so vigorous an opening of hostilities on the part of the Boers. A military writer in the "London Times," discussing the "Lessons of the War," at the end of a year after its beginning, made the following statements and comment:—"There was no difficulty in obtaining the fullest information as to the resources of the Transvaal and the Free State, and we have been officially informed that 'the armed strength of the Boers, the number of their guns, with their character and calibre,' as laid down in the report of the Director of Intelligence, 'corresponds exactly with our recently-ascertained knowledge of what the enemy has put into the field.' Whether or not these reports ever travel from Queen Anne's-gate to Pall-mall seems uncertain, since the Commander-in-Chief publicly stated that 'We have found that the enemy . . . are much more powerful and numerous than we expected.' The report of the Intelligence Department seems, therefore, to have been as valueless for practical purposes as were those transmitted to Paris by Colonel Stoffel prior to the outbreak of the Franco-German war, and Lord Wolseley was apparently as little aware of the fighting resources of the Boers as was Marshal Leboeuf of those of the Germans. When, early in September, 1899 it became a pressing necessity to reinforce the troops in South Africa, it was painfully realized that not a single unit at home was ready to take the field. One weak battalion and three field batteries hastily compounded by wholesale drafting from others, represented the available contribution from a standing army at home whose nominal effectives considerably exceed 100,000. The reinforcements, totally inadequate to meet the crisis, were made up by drawing upon India and the colonial garrisons."—*London Times, Nov. 2, 1900.*

Another writer in "The Times," reviewing, at nearly the same time, the previous year of the war, gave this account of its opening circumstances:—"If the organization of the British Army had permitted the despatch at short notice of all our troops from Great Britain, the whole issues of the war would have been different. It was a prevailing illusion that Mr. Kruger would yield to diplomatic pressure not backed by available force, and political expediency, over-riding military considerations, led to a compromise. It was hardly doubted we could bring the forces in South Africa up to a total of about 22,000 by drawing on India and the colonial garrisons; mobilization was delayed till October 7. Thus the first reinforcements arrived barely in time to prevent Natal from being overrun by the Boers, and the second division did not begin to reach Durban [the port of Natal] till after Ladysmith had been closely invested. . . . There were advisers of the Cabinet who held that the military strength of the Boers was a bubble easily pricked. Thus it was widely believed that a severe repulse in Northern Natal would suffice to break up the Boer forces, and, knowing only that a body of 4,000 British troops was assembled at Dundee and another somewhat larger at Ladysmith, we hastily assumed that these places were naturally well suited and had been specially prepared for defence. When, on the 26th, the concentration at Ladysmith was accomplished, after a painful and a hazardous march, it was imagined that our forces occupied an intrenched camp, which, if necessary, could be held with ease. Later it became clear that Ladysmith was exceedingly ill-adapted for defence, that it was practically unfortified when invested, and finally that, if the attacking force had been composed of trained troops, it must have fallen, in spite of every effort on the part of the garrison. The occupation of Dundee, it was discovered, was maintained against the military judgment of Sir G. White. . . .

"When at length the army corps and the cavalry division began, early in November, to arrive in South Africa, we believed that the bulk of this large force, which was apparently ready to take the field, would invade the Orange Free State and strike for Bloemfontein, clearing Cape Colony and inevitably drawing Boer forces away from the investments of Kimberley and of Ladysmith. This was another illusion. At least one-half of the expeditionary force was despatched to Durban and the rest was frittered away between three separate lines of advance. There were thus four separate groupings of British troops, spread over an immense front, and incapable of affording each other mutual support. Moreover, the Commander-in-Chief being involved in a difficult campaign in Natal, there was no responsible head in Cape Colony, where partial chaos soon supervened. . . . Faulty as was the strategy which substituted scattered efforts with insufficient force for a primary object, that of the Boers was happily even more ill-conceived. In place of attempting to occupy our troops in Natal and throwing their main strength into Cape Colony, where a Dutch rising on a large scale would inevitably have occurred, they also preferred to fritter away their strength, devoting their main efforts against Ladysmith, Kimberley, and Mafeking, and contenting themselves with the occupation of Colesberg and Stormberg in small force, which, however, was quickly swelled by local rebels."—*London Times, Nov. 5, 1900.*

The Field of War: A. D. 1899 (October—December).—The early battles.—British reverses.—Siege of Ladysmith.—The serious fighting of the war began in Natal, as early as the 20th of October, when three columns of the Boer forces closed in on the British advance post at Glencoe. The first of the Boer columns to arrive opened a precipitate attack, and in the hard battle which ensued (at Talana Hill) the British could claim the final advantage, though at very heavy cost. Their commander, General Sir W. Penn Symons, received a mortal wound and died three days afterwards, kindly cared for and buried by the enemy, his successor in the command, General Yule, having found it necessary to retreat from Glencoe and Dundee to Ladysmith. The Boers were already striking at the railroad between Glencoe and Ladysmith, and sharp fighting had taken place on the 21st at Elandslaagte, a station on the line only seventeen miles from the latter town. The Boers, in that encounter, had been driven from the neighboring

hills, but the British had again suffered greatly, and began to realize the quality of the foe with which they had to deal. A graphic account of the battle at Elandslaagte was written by the famous newspaper correspondent, G. W. Steevens, who died shortly afterwards at Ladysmith. Two days after Elandslaagte there was another engagement at Reitfontein, still nearer to Ladysmith, fought for the purpose of keeping the Boers from intercepting the retreat of General Yule. The British forces defending Natal were now concentrated at Ladysmith, which they had chosen for their main position, and in which they had been collecting large quantities of military stores. General Sir George White was there in general command. The Boers, with General Joubert in chief command, were rapidly closing in upon the town, and, on the 29th, they had a Creusot (French) six-inch gun on a neighboring hill, within range, ready to drop shells into its streets. That night General White made an attempt to break their lines which ended in sore disaster. One column, which marched far out, to a hill called Nicholson's Nek, for a flanking attack on the enemy, lost most of its ammunition and its battery, by a stampede of mules, and then was caught in so helpless a position that it had to lay down its arms. "The cursed white flag," wrote Mr. Steevens, "was up again over a British force in South Africa. The best part of a thousand British soldiers, with all their arms and equipment and four mountain guns, were captured by the enemy. The Boers had their revenge for Dundee and Elandslaagte in war; now they took it full measure in kindness. As Atkins had tended their wounded and succoured their prisoners there, so they tended and succoured him here. One commandant wished to send the wounded to Pretoria; the others, more prudent as well as more humane, decided to send them back into Ladysmith. They gave the whole men the water out of their own bottles; they gave the wounded the blankets off their own saddles and slept themselves on the naked veldt. They were short of transport, and they were mostly armed with Martinis; yet they gave captured mules for the hospital panniers and captured Lee-Metfords for splints." It is consoling to come on a bit of incident like this in the generally horrid story of war.

A few days later the communications of Ladysmith southward were cut off, and the forces commanded by General White, about 10,000 in number, were hemmed in by superior numbers of the Boers. British reinforcements were now beginning to arrive in South Africa, and great numbers were at sea, not only imperial troops, coming from England, India, Ceylon and elsewhere, but colonial troops, offered by Canada, New Zealand and the Australian colonies, and accepted by the imperial government. The first operations of the British campaign were planned with three objects, more or less distinct, namely, to rescue General White's army, at Ladysmith, to relieve Kimberley, and to expel the Boers from northern Cape Colony. They were conducted on three lines, from the Natal port of Durban, towards Ladysmith, under General Clery at the beginning; from Cape Town towards Kimberley, under General Lord Methuen; from Port Elizabeth and East London to Queenstown and the Cape districts occupied by the Boers, under General Gatacre.

In the early battles of General Methuen's campaign, fought at Belmont, November 23d, at Enslin, or Graspan, on the 25th, and at Modder River, only 25 miles from Kimberley, on the 28th, he carried his point, and kept up his advance, but at a heavy sacrifice of men. The battle with Cronje's forces at Modder River was a desperate struggle of ten hours duration, in which the British lost nearly 500 men and gained little. The Boers withdrew to an equally strong position, behind fortified lines which extended, some six miles in length, on hills between two points which bore the names of Spytfontein and Majesfontein. There General Methuen attacked them again, December 11, and met with a terrible repulse. His Highland Brigade, advancing in the darkness, before daybreak, was in the midst of the enemy's intrenchments before it knew them to be near, and was horribly cut to pieces, losing 53 officers, including its commander, General Wauchope, and 650 men. The British fell back to Modder River, leaving not less than 1,000 men behind. Just one day before this catastrophe, on the 10th, another of like nature, but little less serious, was sustained by General Gatacre's column, moving from Queenstown. He, too, attemped a night march and an early morning attack on the Boers in a fortified position at Stormberg, was misled by guides, miscalculated the distance, neglected to send scouts ahead, and so took his men to the very muzzles of waiting guns. From the storm which then opened on them there were more than 500 who did not escape. Besides the dead and wounded, many went as prisoners to Pretoria. Before the week of these defeats reached its end, another, far worse, had been added in the Natal campaign. General Sir Redvers Buller, appointed to the chief command in South Africa, had arrived at Cape Town on the last day of October, and, after some general study of the field at large, had taken personal direction of the operations in Natal, for the relief of Ladysmith. His movements were undoubtedly hurried by urgent appeals from General White. On the 15th of December he felt prepared to attempt the passage of the Tugela River, near Colenso, and did so with his full force, at two drifts, or fords, some two miles apart. Like Methuen and Gatacre, he seems to have been strangely misinformed as to the location and strength of the intrenchments of the Boers. The latter had succeeded again and again in concealing lines of deadly rifle-pits and batteries until their assailants fairly stumbled against them, within fatally close range. This happened at Colenso, as at Stormberg and Majesfontein, and the ill-managed attempt to begin an advance upon Ladysmith cost 165 men and officers killed, 670 wounded, 337 prisoners and missing, besides 11 guns.

The Field of War: A. D. 1900.—Fighting qualities of the Boers.—"Take a community of Dutchmen of the type of those who defended themselves for fifty years against all the power of Spain at a time when Spain was the greatest power in the world. Intermix with them a strain of those inflexible French Huguenots who gave up home and fortune and left their country forever at the time of the revocation of the Edict of Nantes. The product must obviously be one of the most rugged, virile, unconquerable races ever seen upon earth. Take this formidable people and train them for seven generations in

constant warfare against savage men and ferocious beasts, in circumstances under which no weakling could survive, place them so that they acquire exceptional skill with weapons and in horsemanship, give them a country which is eminently suited to the tactics of the huntsman, the marksman, and the rider. Then, finally, put a finer temper upon their military qualities by a dour fatalistic Old Testament religion and an ardent and consuming patriotism. Combine all these qualities and all these impulses in one individual, and you have the modern Boer—the most formidable antagonist who ever crossed the path of Imperial Britain."—A. C. Doyle, *The Great Boer War, ch.* 1.—Count Adalbert von Sternberg, a German officer who served with the Boers, and who has since related his experiences in a book, writes to the same effect. "The Boers," he remarks, "were mounted, whilst the English were on foot, a matter of considerable importance in these hot countries. Given the same or even slightly superior forces, no Continental army would have played its part better than the English, and I even doubt whether, in regard to practical equipment and technical smartness and efficiency the Continent would have done as well. The fact is the Boer is an enemy of quite exceptional a character, such as never has been met before, or is likely to be met again. Mounted sharpshooters, armed with the very best of weapons, acclimatized, fanatical, and accustomed to habits of war, are terrible opponents, and cannot be dealt with off hand as if they were hordes of savages. One must not forget that the Boers have the keenest eyes imaginable, and that they understand better than any one else how to get the fullest advantage of cover. All these are advantages which go far towards compensating defective leading and the weakening of moral due to being always on the defensive. . . . The Boers would have had much greater successes if they had not abandoned all idea of taking the offensive. They could not be brought to that, for that they lacked courage, and to that lack of courage they owe their destruction."

The Field of War: A. D. 1900 (January—February).—Continued British disasters on the Tugela.—Lord Roberts and Lord Kitchener in the field.—Invasion of Orange Free State. — Capture of General Cronje and army.—Relief of Kimberley and Ladysmith.—The dark and heavy clouds of disaster which overhung the British in South Africa at the close of the year shadowed England with anxiety and gloom. For the first time, the seriousness of the task of war in which the country had become engaged was understood, and energies corresponding to it were roused. Field-Marshal Lord Roberts, of Indian and Afghan renown, was sent out to take supreme command, with the equally famous Lord Kitchener, subjugator of the Egyptian Sudan, for his chief of staff. Immense reinforcements of troops were provided for with haste. On the 1st of January it was estimated that 30,000 fresh troops were afloat or on the point of embarkation, and that Lord Roberts would have 200,000 men at command when all then assigned to South Africa should have reached Natal and the Cape. Lord Roberts landed at the Cape on the 10th of January, and was occupied for a month in organizing and preparing for new movements in the field.

Meantime, General Buller had made a second attempt to turn the strongly fortified position of his opponent on the Tugela, between his own army and the beleaguered force at Ladysmith, and had failed more discouragingly than before. Crossing the Tugela, some miles west of Colenso, on the 17th, he pressed a hard-fought, uphill advance, from one to another of the rocky hills (called kopjes) of the region, for several days. On the 23d his troops stormed the fortifications of the Boers on Spion Kop, a spur of the Drakenberg mountains, and carried them with heavy loss, only to find that they were commanded from other heights and could not be held. Again he drew back to the southern bank of the Tugela, on the 29th; but only for a few days. On the 5th of February his army was once more pushed beyond the river, and entrenched in a position among the hills, which it held until the 9th, and was then, for the third time, withdrawn. This third movement is supposed to have been a feint, intended to detain the Boer forces in his front, either from some assault feared at Ladysmith or from interference with the campaign which Lord Roberts was about to open. The besieged at Ladysmith were holding out with grim resolution, but they were known to be in sore straits. Occasional messages by the heliograph told of much sickness and fast approaching starvation in the town. Fever was killing more than the shells from the bombarding guns; and the chances of relief seemed to have almost disappeared.

But a sudden change in the whole military situation was about to be made. Lord Roberts and Lord Kitchener had organized arrangements of transportation and supplies for handling the immense force now at their command, and were ready to execute their plans. The former arrived at Modder River on the 9th of February; two days later his columns were set in motion, and the Boer forces, under General Cronje, were too greatly outnumbered to withstand the avalanche which fell upon them. General French led a cavalry expedition to Kimberley, reaching the town on the 15th and raising the siege. The next day General Cronje was in retreat towards Bloemfontein, the Free State capital, harassed by British cavalry, and with the main army of Lord Roberts straining every nerve to strike him before he reached it. On the 18th he was brought to bay, at a point on the Modder River, near Paardeberg, where he defended himself for nine days, in a situation that was impregnable to assault, but terribly exposed to artillery fire from surrounding heights. He was expecting help from the forces in Natal and elsewhere, and several attempts were made by his associates to reach him; but the British were too strong to be driven from their prey. After suffering to such a degree that his men would endure no more, the brave and stubborn Boer surrendered on the 27th, his army, reduced to about 4,000, laying down their arms. Some 500 had been taken in the previous fighting, and considerable numbers in the last days of the siege, are said to have deserted and found means to slip through the enemy's lines. The prisoners were sent, for convenience of custody, to the island of St. Helena, the general being accompanied by his whole family, and treated with much respect.

While these operations were being carried to

success by Lord Roberts, General Buller was again attacking the formidable fortifications of the enemy in his front. From the 14th of February until the 23d he sacrificed great numbers of men in assaults which failed to break a passage through the kopjes defended by Boer guns. But Lord Roberts's invasion of the Free State had, by this time, caused large withdrawals of Boers from the line of the Tugela, and they were preparing to raise the siege of Ladysmith. Consequently, when the British attack was renewed, on the 27th, it achieved success, at last. The Boers were driven from their main position and abandoned their whole line. Ladysmith was reached by a swift advance of cavalry the next day, and the half-starved garrison and citizens were soon receiving supplies.

The Field of War: A. D. 1900 (March).—Overtures of peace from Presidents Kruger and Steyn.—The reply of Lord Salisbury.—Death of General Joubert.—On the 5th of March, the Presidents of the South African Republic and the Orange Free State addressed the following telegram, jointly, to Lord Salisbury: "The blood and tears of the thousands who have suffered by this war, and the prospect of all the moral and economic ruin with which South Africa is now threatened, make it necessary for both belligerents to ask themselves dispassionately, and as in the sight of the Triune God, for what they are fighting, and whether the aim of each justifies all this devouring misery and devastation. With this object, and in view of the assertions of various members of the British Parliament to the effect that this war was begun and is being carried on with the set purpose of undermining Her Majesty's authority in South Africa, and of setting up an Administration over all South Africa independent of Her Majesty's Government, we consider it our duty solemnly to declare that this war was undertaken solely as a defensive measure for securing the threatened independence of the South African Republic, and is only continued in order to secure the incontestable independence of both Republics as sovereign international States, and to ensure that those of Her Majesty's subjects who have taken part with us in this war shall suffer no harm whatever in person or property. On these conditions, but on these conditions alone, are we now, as in the past, desirous of seeing peace reëstablished in South Africa, and of putting an end to the evil now reigning over South Africa; while, if Her Majesty's Government is determined to destroy the independence of the Republics, there is nothing left to us and our people but to persevere to the end in the course already begun, in spite of the overwhelming pre-eminence of the British Empire, confident that the God who lighted the unextinguishable fire of the love of freedom in the hearts of our fathers will not forsake us, but will accomplish His work in us and in our descendants. We hesitated to make this declaration earlier to Your Excellency, as we feared that as long as the advantage was always on our side, and as long as our forces held defensive positions far in Her Majesty's Colonies, such a declaration might hurt the feelings of honour of the British people; but now that the prestige of the British Empire may be considered to be assured by the capture of one of our forces by Her Majesty's troops, and that we are thereby forced to evacuate other positions which our forces had occupied, that difficulty is over, and we no longer hesitate clearly to inform your Government and people in the sight of the whole civilised world why we are fighting, and on what conditions we are ready to restore peace."

On the 11th Lord Salisbury replied as follows: "I have the honour to acknowledge Your Honours' telegram, dated the 5th of March, from Bloemfontein, of which the purport is principally to demand that Her Majesty's Government shall recognise the 'incontestable independence' of the South African Republic and Orange Free State 'as sovereign international States,' and to offer, on those terms, to bring the war to a conclusion. In the beginning of October last peace existed between Her Majesty and the two Republics under the Conventions which then were in existence. A discussion had been proceeding for some months between Her Majesty's Government and the South African Republic, of which the object was to obtain redress for certain very serious grievances under which British residents in the South African Republic were suffering. In the course of those negotiations, the South African Republic had, to the knowledge of Her Majesty's Government, made considerable armaments, and the latter had, consequently, taken steps to provide corresponding reinforcements to the British garrisons of Cape Town and Natal. No infringement of the rights guaranteed by the Conventions had, up to that point, taken place on the British side. Suddenly, at two days' notice, the South African Republic, after issuing an insulting ultimatum, declared war upon Her Majesty; and the Orange Free State, with whom there had not even been any discussion, took a similar step. Her Majesty's dominions were immediately invaded by the two Republics, siege was laid to three towns within the British frontier, a large portion of the two Colonies was overrun, with great destruction to property and life, and the Republics claimed to treat the inhabitants of extensive portions of Her Majesty's dominions as if those dominions had been annexed to one or other of them. In anticipation of these operations the South African Republic had been accumulating for many years past military stores on an enormous scale, which by their character could only have been intended for use against Great Britain. Your Honours make some observations of a negative character upon the object with which these preparations were made. I do not think it necessary to discuss the questions you have raised. But the result of these preparations, carried on with great secrecy, has been that the British Empire has been compelled to confront an invasion which has entailed upon the Empire a costly war and the loss of thousands of precious lives. This great calamity has been the penalty which Great Britain has suffered for having in recent years acquiesced in the existence of the two Republics. In view of the use to which the two Republics have put the position which was given to them, and the calamities which their unprovoked attack has inflicted upon Her Majesty's dominions, Her Majesty's Government can only answer Your Honours' telegram by saying that they are not prepared to assent to the independence either of the South African Republic or of the Orange Free State." —*Great Britain, Papers by Command: Africa, No.* 2, 1900.

On the 27th of March, the Boer cause experienced a great loss, in the sudden death, from peritonitis, of General Joubert, the Commandant-General and Vice President of the South African Republic.

Orange Free State: A. D. 1900 (March).—Proclamation to the burghers by the British commander.—Soon after entering the Orange Free State, Lord Roberts issued a proclamation addressed to the burghers, assuring them that the British government did not believe them to be responsible for the aggressive act of war committed by the government of the Orange Free State, and bore them no ill-will. "I, therefore," his proclamation continued, "warn all Burghers to desist from any further hostility towards Her Majesty's Government and the troops under my command, and I undertake that any of them, who may so desist and who are found staying in their homes and quietly pursuing their ordinary occupations, will not be made to suffer in their persons or property on account of their having taken up arms in obedience to the order of their Government. Those, however, who oppose the forces under my command, or furnish the enemy with supplies or information, will be dealt with according to the customs of war. Requisitions for food, forage, fuel, or shelter, made on the authority of the officers in command of Her Majesty's troops, must be at once complied with; but everything will be paid for on the spot, prices being regulated by the local market rates. If the inhabitants of any district refuse to comply with the demands made on them, the supplies will be taken by force, a full receipt being given. Should any inhabitant of the country consider that he or any member of his household has been unjustly treated by any officer, soldier or civilian attached to the British Army, he should submit his complaint, either personally or in writing, to my Headquarters or to the Headquarters of the nearest General Officer. Should the complaint on enquiry be substantiated, redress will be given. Orders have been issued by me, prohibiting soldiers from entering private houses, or molesting the civil population on any pretext whatever, and every precaution has been taken against injury to property on the part of any person belonging to, or connected with, the Army."

After the occupation of Bloemfontein, Lord Roberts issued a second proclamation, announcing that he had received authority from his government to offer the following terms to those "who have been engaged in the present war": "All Burghers who have not taken a prominent part in the policy which has led to the war between Her Majesty and the Orange Free State, or commanded any forces of the Republic, or commandeered or used violence to any British subjects, and who are willing to lay down their arms at once, and to bind themselves by an oath to abstain from further participation in the war, will be given passes to allow them to return to their homes and will not be made prisoners of war, nor will their property be taken from them."—*Great Britain, Papers by Command: Cd.* 261, 1900, *pp.* 62–3.

The Transvaal and the Free State: A. D. 1900 (March).—Boer Peace Commissioners to Europe and America.—In March, three commissioners, Messrs. Fischer, Wolmeraans and Wessels were sent to Europe and America by the two Boer governments to solicit intervention in their behalf. They visited several European countries and proceeded thence to the United States, in May. There were many demonstrations of popular sympathy in their reception, on both sides of the ocean, but they failed to obtain official recognition.

The Field of War: A. D. 1900 (March—May).—The British in Bloemfontein and Kroonstad.—The relief of Mafeking.—From the scene of the surrender of General Cronje Lord Roberts moved quickly on the Free State capital. His advance was resisted by considerable forces of the Boers, but he was able to turn most of their positions, and fought only one severe battle, at Driefontein, on the 10th of March. On the 12th his cavalry was in possession of Bloemfontein, and the Field-Marshal entered the city on the following day, receiving from the municipal officers a formal surrender of the keys of the public buildings, and being welcomed by some part of the population with demonstrations of joy. President Steyn and most of the members of the government of the Republic had retired to Kroonstad and established the seat of authority there. The fighting and the forced marches of a single month, since he began his advance, had now exhausted the mobility of Lord Roberts's army, worn out the means of transportation which Lord Kitchener had hastily organized for it,—while his troops were being stricken with fever,—and he was compelled to suspend his campaign for some weeks. The situation at that time was probably described with accuracy by a military contributor to "Blackwood's Magazine" for June, 1900, who wrote: "Lord Roberts found himself at Bloemfontein with the wreck of an army and a single narrrow-gauge line of railway between himself and his base, upwards of 700 miles distant. It was very soon known in Boer headquarters at Kroonstad that he could not move beyond Bloemfontein for some weeks. The triumphal march of Generals Gatacre and Clements through the recently captured territory, accepting submissions, hoisting union-jacks and picking up rifles of antique date, afforded much amusement to the Boers, who saw their opportunity and streamed down in large numbers on the small British posts which were scattered east and south of the railway."

There was a good deal of raiding and fighting on a minor scale, with a number of mortifying mishaps to the British arms; but little of importance occurred in the military field until near the end of April, when Lord Roberts had reinforced and mobilized his army sufficiently to move forward again, towards Pretoria. On the 12th of May he entered Kroonstad, and the Free State government was again in flight. He paused at Kroonstad for some days, and while he paused there came news of the relief of Mafeking, which caused a wilder joy in England than any other event of the war. There had been painful anxiety on account of the besieged in that remote town, in the far corner of Bechuanaland, on the border of the Transvaal,—so far from help, and so stoutly defended for seven weary months by a very small force. From a point near Kimberley, a flying column of mounted men, mostly colonial troops, commanded by Colonel Mahon, had been started northward on the 4th of May, taking a route east of the railway, to avoid, as

much as possible, the Boers. On the 15th they were 20 miles west of Mafeking, and there they were joined by another detachment, under Colonel Plumer, which had been operating in the northern region for some weeks without being able to break up the siege. The two advanced on the works of the besiegers, drove them out by hard fighting, and entered the town on the 18th of May. Meantime, another column, under General Hunter, had been securing and opening the railway, to bring up the sorely needed supplies for the famished and worn-out garrison and people of the town. The defense of Mafeking was one of the finest performances of the war, and gave distinction to Colonel Baden-Powell.

Cape Colony: A. D. 1900 (April—June).—The question of the treatment of Cape Colonists who had taken part with the Boers in the war.—Resignation of Premier Schreiner.—On the 28th of April, the Ministers of Cape Colony addressed to the Governor, Sir Alfred Milner, a Minute upon the subject of the treatment of those inhabitants of the Colony who had joined or given aid to the Boers in the war, and who had thus made themselves liable to the pains and penalties of high treason. "Ministers submit," they said, "that the ends of justice would be served by the selection of a certain limited number of the principal offenders, whose trials would mark the magnitude of their offence, and whose punishment, if found guilty, would act as a deterrent. For the remainder, Ministers believe that the interests both of sound policy and of public morality would be served if Her Gracious Majesty were moved to issue, as an act of grace, a Proclamation of amnesty under which, upon giving proper security for their good behaviour, all persons chargeable with high treason, except those held for trial, might be enlarged and allowed to return to their avocations. Ministers urge such a course not only on the ground of that natural desire for clemency towards her erring subjects which they feel sure would spring from Her Gracious Majesty, but from a deep sense of the importance of such a step upon the future well-being of this country."

The substance of the Minute was transmitted by cable to Mr. Chamberlain, and he replied to it on the 5th of May, objecting to the proposed proclamation of a broad amnesty, saying: "Clemency to rebels is a policy which has the hearty sympathy of Her Majesty's Government, but justice to loyalists is an obligation of duty and honour. The question is how can these two policies be harmonized. It is clear that in the interest of future peace it is necessary to show that rebellion cannot be indulged in with impunity, and above all that if unsuccessful it is not a profitable business for the rebel. Otherwise the State would be offering a premium to rebellion. The present moment, therefore, while the war is still proceeding, and while efforts may still be made to tempt British subjects into rebellious courses, is in any case not appropriate for announcing that such action may be indulged in with absolute impunity. And if, as has been suggested, a great many of the Queen's rebellious subjects are the mere tools of those who have deceived them, it is important that these should be made aware individually that whatever their leaders may tell them rebellion is a punishable offence." This attitude of the Imperial Government on the subject of amnesty occasioned differences in the Ministry of Cape Colony which led to the resignation of the Premier, Mr. W. P. Schreiner, on the 13th of June, and the appointment of a new Ministry, under Sir Gordon Sprigg.—*Great Britain, Papers by Command: July*, 1900, *Cape Colony, Cd.* 264.

The Field of War: A. D. 1900 (May).—The British army stricken with fever.—The losses of the British army in battle during this campaign of Lord Roberts had not been severe; but it had encountered a worse enemy than the Boers, and was being terribly thinned and shattered by the ravages of enteric or typhoid fever. The sanitary condition of the army in May, and the lack of due provision for dealing with the dreadful epidemic, have been graphically described by the writer already quoted, in "Blackwood's Magazine." Referring to the outset of the campaign, in February, he wrote:

"The movement of men and cattle depends on flesh and muscle—it cannot go on for ever; the strain of incessant marching on insufficient food and forage will find out the weak spot even in the most willing. General French started on his memorable ride with 4,800 horses, of which 990 dropped by the way, though the loss in the ranks, exclusive of Paardeberg, was only fifty men,—the brunt of the battle for life lay with the horses. But not for long. The men with worn-out boots, tattered clothes, hurrying through scorching days and frosty nights, with half a biscuit and water tainted with dead Boers, to satisfy an appetite and thirst compelled by hard work at an altitude of 4,000 feet, who marched in as soldiers, proud of the victory they had won, staggered and fell out, victims to the curse that creeps in, unnoticed, wherever camps are crowded—enteric. . . . Of all things on which we prided ourselves was the care and the money we had lavished to provide comforts for our sick soldiers. The foremost surgeons of the day had volunteered; military hospitals had been arranged on the latest plan; private benevolence had provided as many more; ladies of every rank in life had gone out to nurse; the soldiers, at all events, would be looked after. Letters from the front had come from patients to say how well they had been treated. Mr. Treves at the Reform Club made a speech eulogizing the perfection of the hospitals in Natal, and Sir W. MacCormac spoke of the medical arrangements as admirable—our minds rested content. All this was so long ago as the 10th March, but what happened in March, for all we knew, was happening in May. Then Mr. Burdett-Coutts told us that hundreds of men were lying in the worst stages of typhoid, with only a blanket to cover them, a thin water-proof sheet (not even that for many) between them and the ground; no milk and hardly any medicines; without beds, stretchers, or mattresses; without pillows, without linen of any kind, without a single nurse amongst them, with a few private soldiers as orderlies, and only three doctors to attend on 350 patients; their faces covered with flies in black clusters, the men too weak to brush them off, trying in vain to dislodge them by painful twitching of the features—there was no one to do it for them. And this a mile from Bloemfontein, where the army had been for six weeks. It is true that a terrible epidemic had followed it from Paardeberg, to break out when it halted. Lord Roberts tells us that before he left on May 3rd the sick gradually increased to

2,000, reaching on June 4th the appalling number, in Bloemfontein, of over 5,000 suffering from typhoid alone. Such were the bare facts as stated on either side—a sudden and devastating epidemic with totally inadequate hospital arrangements to meet it. . . . Yet typhoid has always been the scourge of armies in the field,—in South Africa the water-supply, invariably surface drainage fouled by dead animals, is proverbial—that at least was known. The medical authorities on the spot were repeatedly warned by local medical men that from February onwards ten men would be down with typhoid for one with wounds. Ladysmith is in evidence of the persistent presence of typhoid—every one who has visited South Africa bears witness to the same—it can hardly be urged that an outbreak was unreasonable to expect; yet when it did occur it seems to have been taken by the medical administration at the base as an unwarrantable intrusion."—*The War Operations in South Africa* (*Blackwood's Magazine, Aug.*, 1900).

The Transvaal: A. D. 1900 (May).—Speech of President Kruger to the Volksraads.—The following translation of a speech addressed to both Volksraads by President Kruger, in May, 1900, was published in England some months later: "It is known to you," said the President, "how, before the war started, pressure was brought to bear to obtain the franchise. It is known to you that the Government conceded, after the Raad had consented, although this body saw the difficulty in the matter, till even the burghers made petitions to the effect that we had parted with all our rights. The Government had in view the prevention of shedding blood. The Raad then consented to a seven years' franchise, and also to grant immediately the franchise to people resident here longer than seven years. There were then nearly 30,000 who would obtain the franchise immediately, and so much was conceded that when these had obtained the franchise they would have been able to out-vote the old burghers. We consented to this solely to prevent the shedding of blood. Yet they were not satisfied and they wanted the franchise after five years' residence. Our burghers were against this, and there were also members of the Raad who would not agree to this, yet, nevertheless, the Government made a proposition about it, because they had discovered that it was not about the franchise, but that it was a pretence full of Pharisaic hypocrisy, because documents had been found that in 1896 it was decided that the two independent Republics should not be allowed to exist any more. I cannot express myself otherwise than to call it a devilish fraud. Peace was spoken of while a resolution had already been passed to annihilate us. Even if we had conceded more, yea, even if we had said that the franchise could be obtained after one year, then that would not have been accepted. It was proved by documents that, as this nation could not be allowed to be a free nation, as was pointed out in the address, the Government, to prevent the further shedding of blood, made a proposition to Chamberlain and Salisbury about this matter, and what was the reply? You have, doubtless, read the paper, and, although I cannot verbally repeat the contents of the said document, it amounts to this. That they were annoyed ever to have acknowledged us as an independent nation, and that, notwithstanding all conventions made, they would never acknowledge this nation as self-supporting. Hon. gentlemen, I had to express that which was in my mind. Psalm 83 speaks of the assault of the evil one on the Kingdom of Christ. That must not exist. The self-same words of Salisbury also appear, because he says 'this nation must not exist,' and God says, 'this nation shall exist.' Who will be victorious? Certainly the Lord. You see therein the deceit which they then already practised, even they, for though our nation did not wish to part with any rights, the Executive Council conceded so far that we nearly lost the country. The intention was not to obtain these rights. They wanted our country not to be independent any longer. Every other proposition was unsatisfactory to them.

"Let us look this matter in the face and see the cunning deceit enveloped therein. They wrote to the Orange Free State that they had nothing against them, but that they had some grievance against this Republic. Their intention was to tear the two Republics asunder, and it has been proved by documentary evidence that neither of them would be allowed to remain. You see the deception which lies therein. The documents prove that this was already decided in 1896, from the time of Jameson's invasion, and yet they maintain that if the Orange Free State had laid down their weapons that that country would remain in existence. The Orange Free State decided not to lay down their arms, and we started together. We were 40,000 men, but everywhere we had to watch the Kaffirs, and even the commander of Mafeking informed us that certain Kaffir chiefs would assist him. We know that these numbered 30,000 able-bodied men. The number of Kaffirs nearly equalled the number of our forces. Besides them, more than 200,000 English troops arrived, and against these we have to fight. Now, gentlemen, look on God's government. Is it not wonderful that 40,000 men having to fight these thousands, besides the coloured people, still live? Acknowledge therein the hand of God. The matter I wish to impress is this. It is remarkable that when we meet the enemy we stand in the proportion of 10 to 100. Yet the Lord hath spared us thus far. I do not wish to prophesy, but I wish to point out that our guidance is in the word of God. It is extraordinary, but this war is a sign of the times. What it amounts to is this. That the power of the Beast is an obstinate power to persecute the Church and will continue this until the Lord says, 'Thus far and no further,' and why? Because the Church must be tried and purified as there is so much iniquity among us. That is why the war is extraordinary and is a sign of the times. Every one will be convinced that the word of God can be plainly traced in this matter. They say that the people 'shall not exist,' but God says, 'it shall exist and be purified.' In my mind it lies clear and discernable that the day of grace is not far off. The Lord will prove to be ruler, and nothing shall take place without His will. When He allows chastisement to come upon us we must bend ourselves and humble ourselves, confess our sins and turn again to the Lord. When the whole nation has been humbled, and it is seen that we can do nothing ourselves, the Lord will help us and we shall have peace immediately. This

humility has not grasped our hearts sufficiently at present, and we must perform our earnest duty as Peter says in 1 Peter, chapter v., v. 7 and 8: —'Casting all your care upon Him; for He careth for you'; but in the eighth verse it states: —'Be sober, be vigilant; because your adversary the Devil, as a roaring lion, walketh about, seeking whom he may devour.' That is the point on which we must be careful. If we fall into disbelief then we lower ourselves.

"I ask you, brothers, what is their behaviour? In an open letter Kaffirs are called up by them as at Derdepoort, and women and children are murdered. The English assert that no Kaffirs were utilized against us but only coloured people, but it is a fact that Montsioa with his Kaffirs are in Mafeking, and are employed to fight against us. Now, gentlemen, you must not come to the conclusion that every one who fights against us belongs to the Beast (vide Revelations, chap. 13). There are certainly hundreds of God's children with them who, however, through fear are the Beast's, and are forced to act with them, but God knows all hearts. We did not seek to spill the blood which lies strewn upon the earth, as we conceded nearly all our rights; but when they wanted to murder us, we could not give way any more. How did it fare with Ahab? The mighty foe came on to the walls of the city, and they lost heart. Then the prophet of God came and said, Fear nothing. Then God arose, and in that God we must put our trust, because He is the same God. Let us not, therefore, live as if no God existed; He reigns. In the beginning was the Word, and the Word was God, and the Word became flesh and lived amongst us. Look at history, it must be an example to us. He is still the same God who led out Israel and hardened the heart of Pharaoh to the end, until finally all the first-born of the Egyptians died, whereupon Pharaoh allowed the Israelites to go. He is still the same God who calmed the winds and storms on the sea, and His arm is not shortened. Some ask, 'Does not this only have reference to the Church in the two Republics?' No. See the three youths in the burning oven. Did these rejoice alone? No; but God's people of the whole earth. Was it solitary for Daniel in the lions' den? No, but all Christians on the whole earth rejoiced. So the Lord often chooses a small body to whom He shows His miracles as an example for the whole Christian world. Look upon the blood which has been spilt upon this earth. Who is the cause of it? We have wanted peace and our freedom since 1836, and the Lord has given it us, and will the Lord ever give anything and then withdraw? No. But let us humble ourselves before the Lord. There is no doubt about it that eventually the Lord will lead us to victory. The day of grace is not far from His people. Do not let us doubt but remain true to God's word and fight in His name. When the cup of humiliation is brought to our lips and we earnestly humble ourselves before the Lord, then the day of grace has arrived. Let each one then acknowledge that it is the hand of God which makes us free and nothing else, then we shall not boast. Yet He uses man as His instrument.

"I have laid my address before you, and I hope that the Raad will not sit over it longer than to-morrow morning. There are several members of the Raad who are burghers or military officers in the field, so there will be no time to treat ordinary subjects. I trust that you will only treat such subjects as I lay before you. I have appointed an acting Commandant General since I have lost my right-hand man, although I do not infer that I have not more such men. The late most noble Commandant General, Messrs. Kock and Wolmarans, members of the executive council, are lost to me. The State Secretary is a newly appointed one, and I am the only one remaining of the old members of the executive council, yet I have experienced much assistance and support from the present members, and God will also support us. The Lord is still our Commander-in-Chief; He gives orders and He knows when to say, 'Thus far and no further.' It is surprising how other Powers are unanimously with us and how the whole of Europe prays for us, and will the Lord lend a deaf ear to these prayers? Oh, no! Trust in the Lord and let us stand by Him, and He will perform miracles. Even if I have to go to St. Helena, the Lord will bring His people back and make them free, and the same judgment will fall on the present Babylon, the cause of all the spilt blood. We fight for the freedom which God granted to us. I say again, should any brothers from this Raad and private persons fall by the sword, they fought in the name of the Lord and believed, and they, so says the word of the Lord, are sacrificed on the altar for the glorification of His name and of the glorious Church, which, at this time, is to be revealed. The Church must be tried and purified, and that is why I cannot see that this extraordinary war will be allowed to destroy us. This war will be continued until the Lord says, 'Thus far and no further,' remain at that, abide by that, and fight with me. I give myself in the hands of the Lord, whatever He has destined for me, I shall kiss His rod with which He chastizes me because I am also guilty. Let every one humble himself before the Lord, I have said."

Orange Free State: A. D. 1900 (May).—Annexation by proclamation of Lord Roberts to the Dominions of the Queen.—"In view of Lord Robert's opinion that early annexation would tend towards the pacification of the country, by removing a feeling of uncertainty as to the return of President Steyn's government," the following commission by the Queen to Lord Roberts was issued on the 21st of May: "Victoria R. I., by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith, Empress of India: To Our Right Trusty and Well-beloved Councillor Frederick Sleigh, Baron Roberts of Kandahar, Field Marshal of Our Forces, Knight of Our Most Illustrious Order of Saint Patrick, Knight Grand Cross of Our Most Honourable Order of the Bath, Knight Grand Commander of Our Most Exalted Order of the Star of India, Knight Grand Commander of Our Most Eminent Order of the Indian Empire, upon whom We have conferred the Decoration of the Victoria Cross. Greeting: Whereas the territories in South Africa heretofore known as the Orange Free State have been conquered by Our forces, And whereas it is expedient that such territories should be annexed to and should henceforth form part of Our Dominions: Now know you that We, reposing especial trust and confidence in you the said Frederick Sleigh, Baron Roberts of Kandahar,

do hereby authorize and empower you in Our name to annex the said territories and to declare that the said territories shall henceforth form part of Our Dominions. And We do hereby constitute and appoint you to be thereupon Administrator of the said territories provisionally and until Our pleasure is more fully known. And We do authorize and empower you as such Administrator to take all such measures, and to make and enforce such laws as you may deem necessary for the peace, order, and good government of the said territories. And we do strictly charge and command all Our officers, civil and military, and all other Our faithful subjects, that in their several places, and according to their respective opportunities, they do aid and assist you in the execution of this Our Commission, and for so doing this shall be your Warrant. Given at Our Court at St. James's, this 21st day of May, One thousand nine hundred, in the Sixty-third Year of Our Reign." The commission was executed by a public reading of the proclamation of Lord Roberts at Bloemfontein on the 24th of May.—*Great Britain, Papers by Command:* 1900, *Cd.* 261, *pp.* 136, 144.

A counter-proclamation, referring to that of the British commander, was issued by President Steyn, from Reitz, on the 11th of June, declaring: "Whereas an unjust war was forced on the people of the Orange Free State and of the South African Republic by Great Britain in the month of October 1899, and whereas these two small Republics have maintained the unequal struggle with the powerful British Empire for more than eight months and still maintain it; . . . Whereas the forces of the Orange Free State are still in the field and the Orange Free State has not been conquered and whereas the aforesaid proclamation is thus in contradiction with International Law; Whereas the independence of the Orange Free State has been acknowledged by nearly all the civilised Powers; Whereas it is notorious that the British authorities have lately recognised that the Orange Free State is governed in an exemplary manner, and that it is both a violation of the laws of civilization and a denial of the fundamental rights of such people to rob it on what a pretence soever, of its freedom, and whereas I consider it desirable to make known to all whom it may concern that the aforesaid Proclamation is not recognised by the Government and the people of the Orange Free State; So, therefore, I, M. T. Steyn, State President of the Orange Free State, in consultation with the Executive Council, and in the name of the independent people of the Orange Free State, do hereby proclaim that the aforesaid annexation is not recognised and is hereby declared to be null and of no avail. The people of the Orange Free State is and remains a free and independent people, and refuses to submit to British rule."—*Great Britain, Papers by Command: Cd.* 261, 1900, *p.* 155.

Cape Colony: A. D. 1900 (May).—Opposition of Cape Colony Afrikanders to the annexation of the Republics.—A "People's Congress" of the Afrikanders, or Bondmen, of Cape Colony, was held at Graaff-Reinet, on the 30th of May, to protest against the annexation of the Boer Republics. The following resolution was adopted by acclamation: "Whereas, were the Republics to be annexed the majority of Cape Colonists would feel themselves bound morally to work unceasingly by every right and lawful means for the restoration of independence to the Republics, and to make that end their first political object; And whereas from our knowledge of the history and character of the Republics we are convinced they would never become the willing subjects of the Empire, but would seize any and every opportunity which might offer itself to recover their independence, possibly by force of arms, once they were to be deprived of it; And whereas instead of the annexation of the Republics tending to promote the welfare of their people, as has been claimed, it would, if successfully maintained for any long period, tend to degrade those people and their offsprings, seeing that the servitude of a self-governing State is as demoralising to its people as the more direct form of personal slavery; And whereas, as the annexation of the Republics by Great Britain would be as great a wrong morally as the theft by a rich man of a poor man's hard-earned savings; On that general ground alone it is not believable that permanent good could result from such a policy. Therefore be it resolved now that we, on behalf of the majority of Cape Colonists, do hereby declare our solemn and profound conviction that the annexation of the two South African Republics would be disastrous to the peace and welfare of South Africa and of the Empire as a whole." Also the following: "Be it resolved that it is the opinion of the people in Congress here assembled that a settlement of the South African question on the following basis would prove a blessing to South Africa and the Empire, namely, that the two Republics should have their unqualified independence; that the Colonies should have the right to enter into treaties of obligatory arbitration with the Republics for the settlement of all disputes affecting the internal affairs of the South African Continent, and that this colony, and any other colony so deserving it, should have a voice in the selection of its Governors. Be it further resolved that a settlement on the above basis would make the majority of the people who have made South Africa their home the warm friends and staunch allies of the British Empire, and that in no other way known to us can that end now be attained."

In transmitting a report of this meeting to Secretary Chamberlain, the High Commissioner, Sir Alfred Milner, wrote: "I do not myself take a very gloomy view of the prospect of racial relations in the Colony, much less in South Africa generally. If it is true, as the conciliators are never tired of threatening us, that race hatred will be eternal, why should they make such furious efforts to keep it up at the present moment? The very vehemence of their declarations that the Africanders will never forgive, nor forget, nor acquiesce, seems to me to indicate a considerable and well-justified anxiety on their part lest these terrible things should after all happen."—*Great Britain, Papers by Command: July,* 1900, *South Africa, Cd.* 261, *pp.* 182–88.

The Field of War: A. D. 1900 (May—June).—The British invasion of the Transvaal.—Occupation of Johannesburg and Pretoria.—Expulsion of the Boers from Natal.—Discussion of terms of surrender.—On the 22d of May, Lord Roberts resumed his forward movement from Kroonstad, with a strong column of cavalry, under General French, in advance on the west, and another, of mounted infantry, under General

Ian Hamilton, on the east. The Boers, under General Botha, had prepared defensive works on the Rhenoster River, but were too much endangered by the flanking column of General Hamilton to make a stand there, and fell back. Again at the Vaal River, their fortifications were untenable, as against an invasion of such numbers, with so large a mounted force. With little resistance the British army crossed the Vaal on the 26th and 27th and entered the territory of the South African Republic. On the 30th it was before Johannesburg, and the town was surrendered on the following day. Thence the invading force moved upon Pretoria, meeting some opposition, but evidently none that was hopefully made, and the capital was surrendered unconditionally to Lord Roberts on the 5th of June. President Kruger and the officials of his government had left the town, with their archives and their treasure, and movable offices had been prepared for them in railway cars, which were transferred for the time being to Machadodorp, at some distance eastward. Most of the armed burghers had escaped from the town, and they had been able to remove about 900 of their British prisoners; but a large number of the latter were set free. General Botha gathered up his broken and discouraged forces and intrenched them in a strong position on the Lorenzo Marquez railway, only 15 miles eastward from Pretoria. Lord Roberts moved against him on the 11th and compelled him to retreat, after hard fighting for five hours. This ended important operations in that part of the field.

In Natal, General Buller, since early in May, had been pushing his army northward, in a movement co-operative with that of Lord Roberts. He had turned the flank of the Boer forces in the positions they had fortified against his advance, regained Glencoe and Dundee, and moved on to Newcastle. Then, with more serious fighting, he forced Botha's Pass through the mountains, compelled the Boers to evacuate their strongholds on Laing's Nek and Majuba Hill, and was substantially in possession of Natal.

On the 30th of May, General Buller sent word to General Chris Botha that Lord Roberts had crossed the Vaal, and suggested surrender, further resistance appearing useless. This led to a meeting of the opposed commanders, at which Botha asked what terms Lord Roberts would offer. Buller immediately referred the question to Lord Roberts, saying: "Can you let me know your terms of peace for individual and separate commandos? . . . I think they are inclined to give in, and that I have in front of me about half the Transvaal forces now in the field. If you think it worth while please let me know if I may mention any terms of peace to them. I think, even if assisted from the Orange Free State, it will cost me about 500 men killed and wounded to get out of Natal." The reply of Lord Roberts, dated June 3, 1900, was as follows: "Your telegram of yesterday. My terms with the Transvaal Government are unconditional surrender. With regard to troops, those who deliver up their arms and riding animals are allowed to go to their homes on signing pledge that they will not fight again during present war. The exceptions to this rule are those who have commanded portions of the Republican forces, or who have taken an active part in the policy which brought about the war, or who have been guilty of or been parties to wanton destruction of property, or guilty of acts contrary to the usages of civilized warfare. Principal officers should remain with you on parole until you receive instructions regarding their disposal." General Botha declined the terms.

Nine days later (June 12) Lord Roberts opened correspondence on the same subject with General Louis Botha, Acting Commandant-General of the Boer forces, endeavoring to persuade him, "in the cause of humanity, to refrain from further resistance." The Commandant-General wrote in return: "For the purpose of arriving at a decision, it is not only absolutely necessary for me to call a General Council of War of my Officers and to consult them, but above all it is necessary for me to consider the subject with my Government. I trust that for the sake of humanity your Excellency will give me the opportunity for such consideration and consultation. As some of my Officers are near the Natal Border, and I am also a long way separate from my Government, this will require some time. I ask your Excellency kindly, therefore, for an armistice for six days, beginning from to-morrow morning at sunrise, during which time no forward movement will be made on either side within the territory of the South African Republic."

Lord Roberts replied: "I am anxious to meet your wishes and to enable your Honour to communicate with the Government of the South African Republic, but as the movement of my troops in that Republic are intimately connected with operations in progress in other parts of South Africa, it is impossible for me to accede to your Honour's request that there should be an armistice for 6 days, during which time no forward movement will be made on either side within the territory of the South African Republic. I am willing, however, to refrain from making further movements in the district to the east of the Elands River Railway Station, our present most advanced post in that direction, and also in the district north of the Volksrust and Johannesburg Railway, for a period of five (5) days, commencing at dawn on the 15th June, on the condition that no movement westward or southward is made by the Army of the South African Republic during that same period. This will, I trust, give your Honour the opportunity you desire of consulting your Officers and conferring with your Government, and I sincerely hope that the result will be of such a satisfactory nature as to prevent further unnecessary loss of life."

The proposal was declined by General Botha, in the following note (June 15): "In answer to your letter, dated 14th June, just received by me, wherein your Excellency consents to an armistice for five days, but with the reservation of the right to your Excellency to move your Army in all directions within the South African Republic, except east of Elands River Station and north of the Volksrust-Johannesburg Railway line, I must, to my great regret, inform your Excellency that this reservation makes it impossible for me to accept this armistice, which I have so much desired."

The Field of War: A. D. 1900 (June—December).—Continued resistance of the Boers in guerilla warfare.—An outline of the events of seven months.—A British view of the later situation.—"After the occupation of Pretoria,

exhaustion of the mounted forces and of the transport again supervened and Lord Roberts was preoccupied with the double task of bringing up large numbers of horses and masses of stores by a railway exposed to attack along a distance of 290 miles, and at the same time of dealing, as best he could, with scattered bodies of the enemy, nowhere formidable in a military sense, but capable of much mischief. The period beginning with the occupation of Bloemfontein, during which the Boers developed and maintained warfare of guerilla type, imposed highly responsible duties upon British officers in charge of scattered posts and convoys. In some cases those duties were not adequately discharged, and for a time the defences of the important line of communications appeared to be somewhat imperfectly organized and supervised. There were signs of the tendency to relax precautions after a conspicuous success, which has been shown by British armies on other occasions. It was clear that the main centre of Boer activity was in the Bethlehem district, and at the end of June Lord Roberts despatched a strong column south under Lieutenant-General Hunter to co-operate with Major-Generals MacDonald, Clements, and Paget from the west. Bethlehem was captured on July 7, and by the end of the month Commandant Prinsloo, caught in the Brandwater Basin between the forces of Lieutenant-Generals Hunter and Rundle, surrendered with more than 4,000 men and a large number of horses and wagons. . . . Meanwhile, Lord Roberts, who had driven back the Boers along the Lorenzo Marques line, in two actions near Eerste Fabrieken, on June 11 and 12, began an advance eastward on July 23, and on August 7 Sir R. Buller moved northwards from Paarde Kop. On August 25 the Commander-in-Chief met Sir R. Buller and Generals French and Pole-Carew at Belfast, and after the fighting of the 27th the resistance of the Boers in this district practically collapsed. Starting from Machadodorp on September 1, Sir R. Buller moved slowly towards Spitzkop, driving the enemy before him through a difficult mountainous region, and General French pressed on to Barberton, which was occupied on the 13th without opposition. On the 24th the Guards reached Komati Poort. The rugged hill country east of Belfast offered great opportunities for the tactics in which the Boers appeared to excel; but the 'natural fortress surrounded by a glacis of about 1,500 yards absolutely without cover' near Bergendal Farm was not defended with the tenacity shown on previous occasions, and the subsequent British advance led to a wholesale destruction of artillery material and to the surrender of some 3,000 men to the Portuguese. This, the third great disaster which has befallen the Boers, left them without any centre of resistance or any considerable gathering of fighting men.

"Before the outbreak of war we estimated their available strength at about 45,000, to which must be added some 10,000 colonial rebels and perhaps 5,000 mercenaries. It is doubtful whether the force actually in the field at any one time reached 45,000, and the total loss in killed, wounded and prisoners, cannot be much less than 30,000. . . . Exhaustion of supplies and of ammunition must soon begin to tell heavily upon the Boers; but it cannot be said that they have at present given evidence of personal demoralization. Comparatively small bodies, lightly equipped, still hold the field and show much activity over a wide area. It is impossible to provide British garrisons for every town and village, and wherever the roving bands of the enemy appear there is are crudescence of local hostility, even in districts which have been apparently tranquil for months. Large mobile columns are employed in pursuit, but the Boers carefully avoid general engagements and attack only when there appears to be a chance of surprising and overpowering small detachments. . . . Mounted forces, marching as light as possible and capably commanded, are the principal requirements of the situation. It is necessary to give the roving commandos no rest and to make every effort to capture their leaders. The work is not easy, and it requires great energy and sound military judgment; but it will be successfully accomplished, and the scale of the operations will steadily dwindle into measures of police. Meanwhile a gradual withdrawal of troops from South Africa is taking place, and progress is doubtless being made with the new organization under Lieutenant-General Baden-Powell, which will be specially fitted for the work that now lies before us. . . .

"The total casualties of the war up to the 31st ult. are estimated at about 46,000, and 'the reduction of the military forces' due to a campaign of more than a year is returned at 12,769, of which total 11,739 are accounted for by death, including 6,482 victims to disease. It is impossible to rank the Boer war among the great campaigns of the British Army; but the peculiar difficulties must never be forgotten. The closest parallel is probably that of the American Civil war, in which an armed people long resisted far superior forces and carried invasion into the territory of the stronger Power. The military potentiality of the Southern States was at first as little realized in Washington as was that of the Boers in London, and disasters therefore resulted. In both cases the issue was certain as soon as adequate force in strong hands was available. The Southern leaders, like the Boers, hoped and strove for foreign intervention in vain; but the former were far less prepared for war than the latter. On the other hand the Boers, though ably led in a limited sense, have produced no commanders with a genius for war comparable to that of Lee and of Jackson, nor have they shown the discipline and the cohesion which characterized the Southern armies when at their best. Desultory and irregular warfare may still be prolonged for a time; great activity and ample vigilance will still be required."—*London Times, Nov.* 5, 1900.

At the end of the year the "Times" summed up the later features of the situation as follows: "The spirit of the Boers remained unbroken, and small mobile commandos, scattered over the vast area of the countries which we had undertaken to occupy, perfectly familiar with the ground, and in close touch with the civil population, have succeeded up to the present time in making the task of the British Generals one of extreme difficulty. The Boer resistance has centered chiefly in three men, Commandants Louis Botha in the north-east, Delarey to the west of Pretoria, and De Wet in the Orange Free State. The first, who since the death of General Joubert was in chief command in Natal, and afterwards in the Eastern Transvaal, has not been conspicuously

SOUTH AFRICA, 1900.

active since September, but the other two have achieved a great deal with their very limited resources, and have earned enduring fame as guerrilla chieftains. De Wet, especially, after having been 'routed' and 'surrounded' times without number, has succeeded in giving occupation to several British Generals and their forces up to the present time, has kept the eastern part of the Orange Colony in a continual ferment, and till now has defied the energetic efforts of General Charles Knox to capture him. Delarey, after remaining fairly quiescent for several weeks, suddenly advanced through the Magaliesburg in the middle of the present month with a force variously estimated at 1,500 or 3,000 men, surrounded and captured a position held by four companies of the Northumberlands, and compelled the retreat of General Clements and the evacuation of his camp. It is true that these things are but the episodes of the later stages of a war in which there will be no more great battles, but they are exhausting, costly, and sometimes humiliating." —*London Times, Dec.* 31, 1900.

The Field of War: A. D. 1900 (August—December).—Farm-burning by the British troops.—Under proclamations issued by Lord Roberts in August and September, aimed at the suppression of irregular warfare, a punitive policy was adopted, which included the burning of farmhouses where guerrilla bands were sheltered, or whose inmates acted with such bands, and which soon came to be denounced as one of shameful barbarity. Such different representations have been made, as to the manner in which the orders of Lord Roberts were carried out, and as to the measure of devastation and suffering produced, that it seems to be impossible to judge whether the British farm-burning in the Transvaal and Orange Free State has or has not gone beyond the usual brutalities that belong to the very nature of war. Mr. Kruger, in speeches made after he went to Europe, represented it as monstrous beyond example. "The war waged against us," he said, on landing at Marseilles, "is a war of barbarians. I have witnessed wars of barbarians and never have I seen committed barbarities so monstrous as those committed daily among us. Our farms, which we had had so much difficulty to construct, are burned. The women whose husbands are at the war are hunted down and brutally separated from their children, who are deprived of bread and necessaries." The Afrikanders of Cape Colony held similar language. Men of conscience and heart in England were troubled by such accusations. Mr. Trevelyan, M. P., wrote to "The Times," on the 24th of November: "What so many of us feel, in the first place, is that we are not in a position to form a fair judgment from sheer lack of the most elementary reliable information of what has been done and is still doing. An officer returned from the war about two months told me the other day that he supposed only about 40 farms had been burnt. I read in the 'Westminster Gazette' from an equally honourable gentleman that it would not be an exaggeration to say that one-third of the farms in the Orange River Colony were in ashes. Clearly it is impossible for the nation to make out the truth when such contradictory statements are universally current. . . . One thing we do know for certain—that on September 2 Lord Roberts, regarding the war as having degenerated into guerrilla fighting, proclaimed that all farms would be burnt within a radius of ten miles of any point upon the railway raided by the Boers. It is now November 24. We know that many people innocent of any dealing with De Wet have lost all they possess owing to his misguided energy. Has it diminished sensibly the Boer forces in the field? If not, what is its utility? . . . If the resistance of the Boers is being lessened by these destructions, let us at least have the poor consolation of knowing it. Again, we want to know what really happens to the women and children whom our soldiers conduct, I believe, generally to the nearest town after their homes have been burned. People whose property has been totally destroyed in a country where war has stopped all industry obviously cannot keep themselves."

When Parliament met in December the subject was brought up there, by Mr. Trevelyan and others, and debated at length, without much clearer light on it being found. The government could give no definite information as to what was being done, but stoutly upheld the course which the military leaders had taken. Mr. Balfour said: "The ordinary laws of war as practised by civilized countries depend essentially upon drawing a sharp distinction between combatant and non-combatant. The combatant has his particular privileges, the non-combatant has his particular privileges. What has been universally found intolerable is that a man should oscillate, according to his convenience, from one category to the other—be a peaceful agriculturist when it suits him and an effective combatant when circumstances seem to be favourable. That practice is so intolerable that I believe all nations have laid down the severest rules for repressing it. I have in my hands the instructions to the army of the United States in the field, dated 1898. I should like to read to the House two extracts from this document. Rule 52 says:— 'If a people of a country, or any portion of same already occupied by the army, rises against it, they are violators of the laws of war, and are not entitled to their protection.' The 82nd Rule is to the effect that men, or squads of men, who take part in raids of any kind without permission, and without being part or portion of an organized hostile army, are not public enemies, and therefore if captured are not entitled to be treated as prisoners of war, but shall be treated as highway robbers or pirates."

Mr. Chamberlain said: "Lord Roberts's proclamation was to the effect that, in the first instance, general officers were authorized to burn down farmhouses as a punishment in cases in which they were used as fortified places or places for the concealment of arms, or in which the white flag had been improperly used, or where they had been the scenes of gross treachery and of acts contrary to the laws of war. As a matter of right and morality, the Government are prepared to sustain Lord Roberts absolutely. . . . Lord Roberts was placed in the most difficult position in which a general could possibly be placed. He had his base 1,500 miles away at least from his front, through a most difficult country, and he was served only by a single line of railway, and any catastrophe to the railway might have meant a catastrophe to the whole army. It is all very well to talk of humanity, but you must take first account of our

own people. Now, Sir, it was of the first importance, it was the clear duty of Lord Roberts, to take any steps in his power to prevent the cutting of the line and the danger which would thereby accrue to his force, and he accordingly issued a proclamation that in the case of the destruction of the line persons in the vicinity would be held responsible, and that farmhouses in the vicinity might be destroyed. We understood his proclamation to mean that he would require evidence of some complicity on the part of the persons whose farmhouses were destroyed. . . . We inquired the other day, when the matter assumed greater importance, whether the construction we placed upon the proclamation was true, and we have a reply from Lord Kitchener, who has now taken the place of Lord Roberts, that we are perfectly right in that assumption. . . . According to the proclamation of Lord Roberts, whose humanity is proverbial, and who therefore could not under any circumstances be accused of unnecessary cruelty, cattle are always to be paid for by the troops, or a receipt given, which is as good as payment, except in those cases in which the owner of the cattle has been guilty of acts of war or of outrages which are punishable by all civilized nations who are at war. Therefore the taking of cattle does not mean necessarily that the owner of the cattle is placed in the impossibility of continuing his occupation. If he has not got the cattle he has got the money for them except in the cases in which destruction has taken place as a punitive measure. In all other cases the instructions are precise, and I believe from all the information we have obtained from the reports of the generals in the field they have been strictly carried out. Never in the history of war has war been carried out with so much humanity on the part of the officers and of the soldiers concerned as in the present war. The hon. member also spoke of the deportation of women. That sounds like something serious, but I believe it will be found that it is only for their own protection. If we are unable in this vast country to occupy and garrison every bit of it, when our troops are removed, if women and children are left alone they remain there in some danger—in danger from those marauding bands of which I have spoken and also from the vast native population. And, Sir, this native population is answerable, I believe, for every case of proved outrage either upon women or children. I believe, and the last reports we have received confirm that belief, that in no case has a British soldier been justly accused of such an outrage."

The following proclamation, issued by Lord Roberts, November 18, seems to indicate that there had been practices in farm-burning, before that time, which he could not approve: "As there appears to be some misunderstanding with reference to burning of farms and breaking of dams, Commander-in-Chief wishes following to be lines on which General Officers Commanding are to act:—No farm is to be burnt except for act of treachery, or when troops have been fired on from premises, or as punishment for breaking of telegraph or railway line, or when they have been used as bases of operations for raids, and then only with direct consent of General Officer Commanding, which is to be given in writing, the mere fact of a burgher being absent on commando is on no account to be used as reason for burning the house. All cattle, wagons, and foodstuffs are to be removed from all farms; if that is found to be impossible, they are to be destroyed, whether owner be present or not."—*Great Britain, Papers by Command: Cd.* 426, 1900, *p.* 23.

Rhodesia: A. D. 1900 (September).—Protectorate over Barotsiland.—The "Cape Times" of September 19, 1900, stated that a "Government Gazette Extraordinary" had been issued containing an Order in Council proclaiming a protectorate over Barotsiland—North-Western Rhodesia. "The limits of the country included in the protectorate are the parts of Africa bounded by the River Zambesi, the German South-West African Protectorate, the Portuguese possessions, the Congo Free State, and the Kafukwe or Loengi River. The Order provides that the British South Africa Company may nominate officials to govern the territory, and that these are to be confirmed by the High Commissioner. The High Commissioner may, amongst other things, from time to time by proclamation provide for the administration of justice, the raising of revenue by the imposition of taxes (which may include a tax in respect of the occupation of native huts), and Customs duties or otherwise, and generally for the peace, order, and good government of all persons within the limits of the order, including the prohibition and punishment of acts tending to disturb the public peace. The expenses of the administration of this country, if not entirely borne by the revenues of the country, will be borne by the British South Africa Company, and if the revenue more than meet the expenses, the excess will be paid to the Chartered Company."

The Transvaal: A. D. 1900 (September).—Leave of absence to President Kruger.—His departure for Europe.—Proclamation of Lord Roberts.—The following proclamation by the Executive Council of the Boer government was issued from Nelspruit on the 10th of September, 1900: "Whereas the advanced age of His Honour the State President makes it impossible for His Honour further to accompany the Commandos; and whereas the Executive Council is convinced that the highly-valued services of His Honour can still be usefully applied in the interest of Land and People, the Executive Council hereby determines to grant His Honour leave of absence to Europe for the period of six months, in order still to advance our cause there, and Mr. S. W. Burger, Vice-President, takes his place according to law. [Signed] S. W. Burger, Vice President. F. W. Reitz, State Secretary."

Lord Roberts seems to have regarded the acceptance of this "leave of absence" by President Kruger as equivalent to a resignation of his office; for he published, on the 14th of September, a proclamation in the following words: "The late President, Mr. Kruger, and Mr. Reitz, with the archives of the South African Republic, have crossed the Portuguese frontier, and arrived at Lourenço Marques with a view to sailing for Europe at an early date. Mr. Kruger has formally resigned the position he held as President of the South African Republic, thus severing his official connection with the Transvaal. Mr. Kruger's action shows how hopeless in his opinion is the war which has now been carried on for nearly a year, and his desertion of the Boer cause should make it clear to his fellow burghers that

it is useless for them to continue the struggle any longer.

"It is probably unknown to the inhabitants of the Transvaal and Orange River Colony that nearly 15,000 of their fellow-subjects are now prisoners of war, not one of whom will be released until those now in arms against us surrender unconditionally. The burghers must by this time be cognisant of the fact that no intervention on their behalf can come from any of the Great Powers, and, further, that the British Empire is determined to complete the work which has already cost her so many valuable lives, and to carry to its conclusion the war declared against her by the late Governments of the South African Republic and Orange Free State, a war to which there can be but one ending. If any further doubts remain in the minds of the burghers as to Her Britannic Majesty's intentions, they should be dispelled by the permanent manner in which the country is gradually being occupied by Her Majesty's Forces, and by the issue of the Proclamations signed by me on the 24th May and 1st September 1900, annexing the Orange Free State and the South African Republic respectively, in the name of Her Majesty.

"I take this opportunity of pointing out that, except in the small area occupied by the Boer army under the personal command of Commandant-General Botha, the war is degenerating, and has degenerated, into operations carried on in an irregular and irresponsible manner by small, and in very many cases, insignificant bodies of men. I should be failing in my duty to Her Majesty's Government and to Her Majesty's Army in South Africa if I neglected to use every means in my power to bring such irregular warfare to an early conclusion. The means which I am compelled to adopt are those which the customs of war prescribe as being applicable to such cases. They are ruinous to the country, and, entail endless suffering on the burghers and their families, and the longer this guerrilla warfare continues the more vigorously must they be enforced."—*Great Britain, Papers by Command:* 1900, *Cd.* 420, *p.* 78, *and Cd.* 426, *p.* 17.

The Transvaal: A. D. 1900 (October).—Proclamation of annexation to the British Dominions.—In terms similar to those used in proclaiming the annexation of the Orange Free State (see above: MAY) the annexation of the Transvaal to the Dominions of Her British Majesty was proclaimed with great ceremony at Pretoria on the 25th of October.

The Field of War: A. D. 1900 (November).—Return of Lord Roberts to England, leaving Lord Kitchener in command.—Having been appointed Commander-in-Chief of the British Army, in the place of Lord Wolseley, Field-Marshal Lord Roberts, on the 29th of November, delivered the command in South Africa to Lord Kitchener, and returned to England. At the same time, Lord Kitchener was raised to the rank of Lieutenant-General.

Cape Colony and the Transvaal: A. D. 1900 (December).—Afrikander Congress.—Lord Kitchener to the burghers of Pretoria.—From 6,000 to 8,000 persons were reported to be in attendance at an "Afrikander Congress," held at Worcester, in Cape Colony, December 6, which adopted the following resolutions: "1. We men and women of South Africa assembled and represented here, having heard the report of the people's deputation to England, and having taken into earnest consideration the deplorable condition into which the people of South Africa have been plunged, and the grave danger threatening our civilization, record our solemn conviction that the highest interests of South Africa demand, first, the termination of the war now raging with untold misery and horror, such as the burning of houses, the devastation of the country, the extermination of the white nationality, and the treatment to which women and children are subjected, which will leave a lasting heritage of bitterness and hatred, while seriously endangering further relations between civilization and barbarism in South Africa; secondly, the retention by the Republics of their independence, whereby alone the peace of South Africa can be maintained. 2. The congress desires full recognition of the right of the people of this colony under its Constitution to settle and manage their own affairs and to express grave disapproval of the policy pursued and the attitude adopted in this matter by the Governor and High Commissioner, his Excellency Sir Alfred Milner. 3. The congress solemnly pledges itself to labour in a constitutional way unceasingly for the above resolutions, and resolves to send a deputation to his Excellency Sir Alfred Milner, asking him to bring the resolutions officially to the notice of her Majesty's Government."

On the 21st of December Lord Kitchener addressed a meeting, at Pretoria, of burghers who had surrendered to the British and who desired to bring about peace. In his remarks he was reported to have said: "The Boers had fought a good fight, but they were overpowered. There would be no dishonour in the leaders recognizing this fact. The proclamations that had been issued were of little use, as means were adopted to prevent them from reaching the burghers. He trusted that the committee would endeavour to acquaint the Boers in the field with the true position. He desired to give them every chance to surrender voluntarily, and to finish the war by the most humane means possible. If the conciliatory methods now being adopted failed he had other means which he would be obliged to exercise. He would give the committee notice if the time arrived to consider conciliation as a failure. The principal difficulties were that burghers desirous of surrendering were afraid they would not be allowed to remain in their own districts or that they would be punished for violating their oath of neutrality. Gen. Kitchener declared that he had issued instructions that burghers who surrendered would, with their families and stock, be protected in their own districts. Those who had broken the oath of neutrality under compulsion would be accorded the same treatment. Deserted women and children would be kept in laagers, where their friends could freely join them. It was essential to clear the country. While food remained the commandos were enabled to continue in the field. Gen. Kitchener added that it must be understood that the British would not be responsible for stock unless it was brought in and kept within protected limits. In conclusion Gen. Kitchener said that he had come to speak to the burghers personally in order that they might be able to tell their friends what they had heard from his own lips."

The Field of War: A. D. 1900 (December).—Numbers of British troops employed in the war from the beginning, and their losses. See (in this vol.) ENGLAND: A. D. 1900 (DEC.).

British Colonies: A. D. 1901 (January).—New heads of the Colonial Governments.—The following appointments were announced by the British Colonial Office on the 4th of January, 1901: Sir Alfred Milner to be Governor of the Transvaal and British High Commissioner. The Hon. Sir Walter Francis Hely-Hutchinson (Governor of Natal and Zululand since 1893) to be Governor of Cape Colony. Lieutenant-Colonel Sir Henry C. McCallum (Governor of Newfoundland since 1898, and aide-de-camp to the Queen since 1900) to be Governor of Natal. Major Hamilton John Goold-Adams (Resident Commissioner of the Bechuanaland Protectorate) to be Lieutenant-Governor of the Orange River Colony.

Cape Colony: A. D. 1901 (January).—Boer invasion.—Declaration of martial law.—On New Year's Day, 1901, the Cape Town correspondent of the "London Times" was compelled to write: "The immediate aspect of affairs in Cape Colony at the opening of the new year is scarcely less gloomy than at the beginning of 1900. The number of Boers invading the country to-day may be less than it was a year ago, but they have penetrated further south, and their presence near such centres of hostile Dutch feeling as Graaf Reinet constitutes an element of danger which was not present last January. The proclamation issued this morning by the High Commissioner calling for volunteers to defend the lines of communication proves that the military authorities are at last alive to the critical nature of the situation, but the measure comes very late in the day."

On the 17th of January a cable message from Cape Town announced: "An extraordinary gazette issued this afternoon contains a proclamation placing the whole of the Cape Colony under martial law, with the exception of the Cape Town, Wynberg, Simonstown, Port Elizabeth and East London districts and the territories of the Transkei, Tembuland, Griqualand and East Pondoland. The gazette also states that the peace-preservation act will be enforced in the Cape Colony, Wynberg and Simonstown districts. Under this act all the civil population will be called upon to deliver up their arms."

Orange Free State: A. D. 1901 (January).—Peace movement.—Condition of country described.—Defiant proclamation of Steyn and De Wet.—Early in January, a "Central Peace Committee," formed at Kroonstad, addressed an open letter to their fellow citizens, appealing for submission and peace, saying: "The country is literally one vast wilderness. The farmers are obliged to go to the towns for protection, and huge refugee camps have been formed by the British for them and their families. These people have lost everything, and ruin and starvation stare them in the face. All this misery is caused by a small and obstinate minority, who will not bow to the inevitable and who make the majority suffer. Any encouragement to the men still on commando to continue the hopeless struggle can only injure us and cause us further misery. We have done our best and fought to get Africa under one flag, and we have lost. Let there be no mistake about this. England has spent millions and sacrificed thousands of lives, and no reasonable being can believe for one moment that she will now give up the fruits of victory. It is, therefore, a duty for us, her beaten foe, to accept the terms offered by our conqueror. . . . We appeal to you and ask you to appoint another congress, and nominate men of influence out of your midst to visit Mr. Steyn and General De Wet, and try to persuade them to accept the terms offered by England. These two men are the only obstacles to peace. We ask you to believe us when we say that Mr. Kruger and the late Transvaal Government have been willing twice already to accept British terms, but Mr. Steyn refused to have anything to do with surrender. He continued the war and encouraged the burghers in the hope that we should get European assistance. To-day he is cut off from all communication with the outside world. You know and we know how unfounded that hope is and it is your duty to assist us to make him understand this. We appeal to you to help us to make an end to this unhappy state of affairs, which is plunging everybody into poverty and despair."

As if in response to this cry for peace, Steyn and De Wet issued the following proclamation a few days later: "Be it known to all that the war which was forced on the Republics by the British Government still rages in the Orange Free State and in the South African Republic; and that the customs of civilized warfare and also the Conventions of Geneva and The Hague have not been observed by the enemy, who has not scrupled, contrary to the Geneva Convention, to capture doctors and ambulances and to deport them, in order to prevent our wounded from getting medical assistance. He has seized ambulances and material appertaining thereto, and has not hesitated, contrary to the recognized primitive rules of warfare, and contrary to his solemn agreement at The Hague, to arrest neutrals and deport them, and to send out marauding bands to plunder, burn, and damage the burghers' private property. He has armed Kaffirs and natives and made use of them against us in war. He has been continually busy capturing women and children, old and sickly men. Many women's deaths have been occasioned because the so-called Christian enemy had no consideration for women on a sick bed or for those whose state of health should have protected them against rough treatment. Honourable women and tender children have not only been treated roughly, but also in an insulting manner by the soldiers, by order of their officers. Moreover, old mothers and women have been raped, even wives and children. The property of prisoners of war, and even of killed burghers, has not been respected. In many instances the mother and father have been taken from the house, which was thus left unprotected, and all have been left to their fate, an easy prey to the savage. The world has been untruthfully informed by the enemy that he was obliged to carry out this destruction because the burghers blew up the line and cut the wires, or misused the white flag. Nearly all the houses in the two Republics have been destroyed, whether in the neighbourhood of the railway line or not; while with regard to the misuse of the white flag, that is simply a continuance of the everlasting calumny against which the Afrikander has had to strive since God brought him into contact with Englishmen. Robbing his opponent of his goods

has not satisfied him; he will not be satisfied till he has robbed him of his good name also.

"Then he wishes to inform the world that the Republics are conquered and the war ended, and that only here and there small plundering bands are to be found who continue the strife in an irresponsible manner. It is an untruth. The Republics are not yet conquered. The war is not finished. The burgher forces of the two Republics are still led by responsible leaders, as from the commencement of the war, under the supervision of the Governments of both Republics. The fact that Lord Roberts and Lord Kitchener choose to term the burgher forces marauding bands does not make them such. Similarly, saying that the war is over does not put an end to it while fighting still continues. When was this war over? After the battle of Spion Kop or after Paardeberg? After the occupation of Bloemfontein or Pretoria? Or perhaps after the battles of Dewetsdorp or Commando Nek, in both of which irregulars were captured and the enemy totally vanquished. The burghers would be less than men if they allowed the enemy to go unpunished after ill-treating their wives and destroying their homes from sheer lust of destruction. Therefore a portion of our burghers have again been sent into Cape Colony, not only to wage war, but to be in a position to make reprisals as they have already done in the case of the ambulances. Therefore we again warn the officers of her Majesty's troops that unless they cease the destruction of property in the Republics, we shall wreak vengeance by destroying the property of her Majesty's subjects who are unkindly disposed to us; but at the same time, to avoid being misunderstood, we hereby openly declare that the women and children will always remain unmolested, despite anything done to ours by her Majesty's troops. We ask for nothing from our brothers in Cape Colony, but we call upon them, as well as upon the civilized world, to assist on behalf of civilization and Christianity in putting an end to the barbarous manner of the enemy's warfare. Our prayer will always be that the God of our fathers will not desert us in this unrighteous strife. STEYN.

"On the field, January 14. DE WET."

The Field of War: A. D. 1901 (February).—Report of British military forces in South Africa from the beginning of the war, with the number of killed and wounded and the deaths from wounds and disease.—A Parliamentary paper issued on the 26th of February, 1901, contained the following table, showing the strength of the garrison in South Africa on the 1st of August, 1899, before the beginning of the war, with the subsequent reinforcements and casualties, and the total strength of forces on the 1st of February, 1901:

	Officers.	Non-Commissioned Officers and Men.					Total Officers and Men.
		Cavalry.	Artillery.	Infantry and Mounted Infantry.	Others.	Total.	
I. Garrison on Aug. 1, 1899	318	1,127	1,035	6,428	1,032	9,622	9,940
II. Reinforcements, Aug. 1, 1899, to Oct. 11, 1899 (outbreak of war)—							
(1.) From Home	280	.....	743	5,620	.....	6,363	6,643
(2.) From India (some of these did not reach South Africa until after the outbreak of hostilities)	259	1,564	653	3,427	.....	5,644	5,903
	539	1,564	1,396	9,047	.....	12,007	12,546
III. Further reinforcements from Oct. 11, 1899, to end of July, 1900—							
Regulars—							
(1.) From Home and Colonies	5,748	11,003	14,145	110,292	14,347	149,787	155,535
(2.) From India	132	713	376	670	.....	1,759	1,891
	5,880	11,716	14,521	110,962	14,347	151,546	157,426
Colonials—							
(1.) From Colonies other than South African	550	287	692	9,788	267	11,034	11,584
(2.) Raised in South Africa	1,387	.....	.....	.....	.....	28,932	30,319
	1,937	.....	.....	.....	.....	39,966	41,903
Imperial Yeomanry	536	.....	.....	.....	.....	10,195	10,731
Volunteers from United Kingdom.	342	.....	358	9,995	434	10,787	11,129
Militia	831	.....	617	19,753	256	20,626	21,457
Total all arms sent to, and raised in, South Africa up to Aug. 1, 1900, including garrison on Aug. 1, 1899	10,383	.....	.....	.....	.....	254,749	265,132
IV. Further reinforcements from Aug. 1, 1900, to Jan. 31, 1901—							
(1.) Regulars	820	3,213	652	10,439	975	15,279	16,099
(2.) Militia	7	.....	.....	1,141	.....	1,141	1,148
	11,210	.....	.....	.....	.....	271,169	282,379

	Officers.	Non-Commissioned Officers and Men.					Total Officers and Men.
		Cavalry.	Artillery.	Infantry and Mounted Infantry.	Others.	Total.	
V. Numbers —							
(1.) Killed to Jan. 31, 1901	334	.....	.....	.....	.....	3,346	3,680
(2.) Wounded to Jan 31, 1901	1,242	.....	.....	.....	.....	14,914	16,156
(3.) Died of disease or wounds or accidentally killed in South Africa to Jan. 31, 1901	301	.....	.....	.....	.....	9,008	9,309
(4.) Disbanded and discharged in South Africa	299	.....	.....	.....	.....	5,231	5,530
(5.) In hospital in South Africa on Dec. 28, 1900 (latest returns)	415	.....	.....	.....	.....	13,716	14,131
VI. Numbers left South Africa —							
(1.) For England — not invalids	1,214	.....	.....	.....	.....	11,109	12,323
(2.) For England — sick, wounded, and died on passage	1,703	.....	.....	.....	.....	39,095	40,798
(3.) Returned to India direct from South Africa	20	.....	.....	.....	.....	70	90
(4.) Returned to Colonies direct from South Africa —

* Exclusive of recently raised Colonials whose numbers have not yet been reported.

On the 9th of February the following announcement was issued officially from the British War Office: "In view of recent Boer activity in various directions his Majesty's Government have decided, in addition to the large forces recently equipped locally in South Africa, to reinforce Lord Kitchener by 30,000 mounted troops beyond those already landed in Cape Colony. The recruiting for Imperial Yeomanry has proceeded so rapidly that it is anticipated not less than 10,000 will be shortly available. The South African Mounted Constabulary, including those enlisted in the colonies, may be relied upon to the extent of 8,000. The new colonial contingents to replace those withdrawn will probably reach 5,000. The remainder of the force will be made up by cavalry and mounted infantry from the home establishment. The enlistment of Volunteer companies to replace those who have served a year in South Africa is also being proceeded with. Arrangements have been made for the prompt equipment and transportation of the force."

In reply to a question in Parliament the 18th of February, 1901, Mr. Brodrick, the Secretary of State for War, stated that the total number of cases of typhoid or enteric fever in the British army, from the beginning of the war to the end of December, 1900, had been 19,101; deaths 4,233; invalided and sent home, 10,975.

The Field of War: A. D. 1901 (February). —The declared policy of the British Government.—Speaking in the House of Commons on the 18th of February, 1901, the Colonial Secretary, Mr. Chamberlain, declared the government policy of dealing with the Boers, with strong emphasis, in the following words: "From the moment when the invasion took place, and the first shot was fired by the Boers, from that moment we declared our policy, that not one shred of the independence which the Boers had abused should ever again be conceded to them. That was the policy stated by the Prime Minister in his answer to the representations which were made to him by the Presidents of the two Republics. That was the policy, is the policy, and will be the policy of His Majesty's Government to the end. Let there be no mistake about that. It is no use arguing with us on the subject of independence. That, as far as we are concerned, is a closed question. Raise it, if you like to raise it, not in speeches, but by amendments. We are quite ready. We challenged you at the last election. You have never ceased to complain of the challenge. We challenge you in the House of Commons. If you believe the annexation we have announced ought to be repudiated; if you think, with the hon. and learned gentleman who has just spoken, that we ought to restore the independence of these two Republics, in any form, it is for you to say so in a definite amendment. It is for you to put the issue before the House of Commons and the country and we are perfectly prepared to meet you. Assuming that we are all agreed that annexation cannot be undone, then the policy of the Government is to establish equality and protection and justice for the native population and to grant the fuller liberties involved in our definition of self-government as soon as that can safely be conceded. . . . The Boers know perfectly well, they have been told again and again, directly and indirectly, and it has been repeatedly stated in this House that at the earliest possible moment they will be granted self-government."

The Liberal leader interrupted the speaker to

intimate that he understood a Crown colony government to be in contemplation, and that his objection was to that. On which Mr. Chamberlain proceeded to say: "Either the right hon. gentleman does not know what Crown colony government is or else he is quibbling about words. Will he be satisfied if I call it a civil government, with Ministers and a Governor appointed by his Majesty and a council to advise him? That is civil government, and it has this about it—that the Imperial Government has control in the last resort. That is what we mean. . . . We are quite ready to establish the civil government of which I have spoken, we are ready to maintain equality, we are ready to secure justice to all the inhabitants of the Transvaal and the Orange River Colony, but we are not prepared to put into their hands the whole control of the administration and civil government until we know it will be safe to do so. It is said that our views have not been communicated to the Boers and that a proclamation which I promised I would endeavour to have circulated has not yet been so distributed. I wish to say that, so far as the leaders are concerned, I am convinced they know perfectly well what terms we are willing to offer. There is no excuse on their part. It is possible that many of their followers, being ignorant people—when they come to us we find they have been deceived as to what is going on—do not know the terms we are willing to offer. We have by various means endeavoured to get to the rank and file a knowledge of the terms which are being offered, and we know what the result has been. The emissaries have been sent—emissaries not sent by us, permitted by us to go, who volunteered themselves in what they believed to be the interests of their countrymen, to make these representations—these emissaries have been apparently, as far as our information goes, brutally ill-used, tortured before execution, shot as spies after having been flogged."

The Field of War: A. D. 1901 (February).—Attitude of the English Liberal party towards the war. See (in this vol.) ENGLAND: A. D. 1901 (FEBRUARY).

The Field of War: A. D. 1901 (February—March).—Unsuccessful peace parley between Lord Kitchener and Commandant Botha.—By the intermediation of the wife of the Boer Commandant Louis Botha, an interview between that officer and Lord Kitchener was brought about, on the last day of February, for discussion "as to means of bringing the war to an end." The questions raised in the conversation were reported by Lord Kitchener to Mr. Brodrick, the British Secretary for War, in a telegram from Pretoria, March 1, as follows: "I have had a long interview with Botha, who showed very good feeling and seemed anxious to bring about peace. He asked for information on a number of subjects which he said that he should submit to his Government and people, and if they agreed he should visit Orange River Colony and get them to agree. They should all then hand in their arms and finish the war. He told me that they could go on for some time, and that he was not sure of being able to bring about peace without independence. He tried very hard for some kind of independence, but I declined to discuss such a point, and said that a modified form of independence would be most dangerous and likely to lead to war in the future. Subject was then dropped, and—

"Firstly.—The nature of future government of Colonies asked about. He wanted more details than were given by Colonial Secretary, and I said that, subject to correction from home, I understood that when hostilities ceased military guard would be replaced by Crown Colony administration, consisting of nominated Executive, with elected assembly to advise administration, to be followed after a period by representative government. He would have liked representative government at once, but seemed satisfied with above.

"Secondly.—Whether a Boer would be able to have a rifle to protect him from native? I said I thought he would be by a licence and on registration.

"Thirdly.—He asked whether Dutch language would be allowed? I said that English and Dutch would, I thought, have equal rights. He expressed hope that officials dealing with farmers would know Dutch.

"Fourthly.—The Kaffir question. This turned at once on franchise of Kaffirs, and a solution seemed to be that franchise should not be given to Kaffirs until after representative government was granted to Colonies. Orange Free State laws for Kaffirs were considered good.

"Fifthly.—That Dutch Church property should remain untouched.

"Sixthly.—Public trusts and orphan funds to be left intact. He asked whether British Government, in taking over the assets of Republics, would also take over legal debts. This he made rather a strong point of, and he intended it to include debts legally contracted since the war began. He referred to notes issued amounting to less than a million.

"Seventhly.—He asked if any war tax would be imposed on farmers? I said I thought not.

"Eighthly.—When would prisoners of war return?

"Ninthly.—He referred to pecuniary assistance to repair burnt farms, and enable farmers to start afresh. I said I thought some assistance would be given.

"Tenthly.—Amnesty to all at end of war. We spoke of Colonials who joined Republics, and he seemed not adverse to their being disfranchised.

"I arranged with him that I should write and let him know the view of the Government on these points. All I said during the interview was qualified by being subject to confirmation from home. He was anxious to get an answer soon."

Two days later, General Kitchener drafted and submitted to High Commissioner Sir A. Milner the reply which he wished to be authorized to make to the questions of Commandant Botha. This was transmitted, in turn, by the High Commissioner to Colonial Secretary Chamberlain, with approval of all the suggestions of Lord Kitchener, except on the subject of amnesty to the rebel "Afrikanders" of Cape Colony and Natal, who had joined the ranks of the Boers. Lord Kitchener wished to say that "on the cessation of hostilities and the complete surrender of arms, ammunition, cannon, and other munitions of war now in the hands of the burghers in the field or in Government depôts or elsewhere, His Majesty's Government is prepared at once to grant an amnesty in the Transvaal and Orange River Colony

for all bona fide acts of war committed during the recent hostilities; as well as to move the Governments of Cape Colony and Natal to take similar action but qualified by the disfranchisement of any British subjects implicated in the recent war." Sir Alfred Milner proposed to amend the latter clause as follows: "British subjects of Cape Colony or Natal, though they will not be compelled to return to those Colonies, will, if they do so, be liable to be dealt with under the laws of those Colonies specifically passed to meet the circumstances arising out of the present war and which greatly mitigate the ordinary penalties of rebellion." "While willing," he said, "to concede much in order to strengthen Botha in inducing his people to submit, the amnesty of rebels is not, in my opinion, a point which His Majesty's Government can afford to concede. I think it would have a deplorable effect in Cape Colony and Natal to obtain peace by such a concession." Mr. Chamberlain agreed with the High Commissioner, writing in reply: "His Majesty's Government feel that they cannot promise to ask for complete amnesty to Cape and Natal rebels who are in totally different position to burghers without injustice to those who have remained loyal under great provocation, and they are prepared substantially to adopt your words, but you must consider whether your last line is strictly applicable to Natal." Mr. Chamberlain made numerous other criticisms of Lord Kitchener's suggested letter, and amended it in many particulars, the most important of which related to the form of government under which the late republics would be placed. Lord Kitchener would have said: "Military law will cease and be at once replaced by civil administration, which will at first consist of a Governor and a nominated Executive with or without an advisory elected Assembly, but it is the desire of His Majesty's Government, as soon as circumstances permit, to establish representative Government in the Transvaal and Orange River Colony." His political superior instructed him to change the statement as follows: "For 'military law will cease' say 'military administration will cease.' It is possible that there may be disturbed districts for some time after terms have been accepted, and Governor of Colonies cannot abandon right of proclaiming martial law where necessary. In the same sentence omit the words 'at the same time' and 'at once' and substitute at the beginning the words 'at the earliest practicable date.' For 'consist of a Governor' down to 'Assembly' read 'consist of a Governor and an Executive Council composed of the principal officials with a Legislative Council consisting of a certain number of official members to whom a nominated unofficial element will from the first be added.' In place of the words 'to establish representative government' substitute 'to introduce a representative element, and ultimately to concede to the new Colonies the privilege of self-government.' It is desirable at this stage to be quite precise in order to avoid any charge of breach of faith afterwards."

Out of the instructions he received, Lord Kitchener finally framed the following letter to Commandant Botha, sent to him on the 7th of March: "With reference to our conversation at Middelburg on 28th February, I have the honour to inform you that in the event of a general and complete cessation of hostilities and the surrender of all rifles, ammunition, cannon, and other munitions of war in the hands of the burghers or in Government depôts or elsewhere, His Majesty's Government is prepared to adopt the following measures:

"His Majesty's Government will at once grant an amnesty in the Transvaal and Orange River Colonies for all bona fide acts of war committed during the recent hostilities. British subjects belonging to Natal and Cape Colony, while they will not be compelled to return to those Colonies, will, if they do so, be liable to be dealt with by the law of those Colonies specially passed to meet the circumstances arising out of the present war. As you are doubtless aware, the special law in the Cape Colony has greatly mitigated the ordinary penalties for high treason in the present cases.

"All prisoners of war now in St. Helena, Ceylon, or elsewhere will, on the completion of the surrender, be brought back to their country as quickly as arrangements can be made for their transport.

"At the earliest practicable date military administration will cease and will be replaced by civil administration in the form of Crown Colony Government. There will therefore be, in the first instance, in each of the new Colonies a Governor and an Executive Council, consisting of a certain number of official members, to whom a nominated unofficial element will be added. But it is the desire of His Majesty's Government, as soon as circumstances permit, to introduce a representative element and ultimately to concede to the new Colonies the privilege of self-government Moreover, on the cessation of hostilities a High Court will be established in each of the new Colonies to administer the law of the land, and this Court will be independent of the Executive.

"Church property, public trusts, and orphans funds will be respected.

"Both the English and Dutch languages will be used and taught in public schools where parents of the children desire it, and allowed in Courts of Law.

"As regards the debts of the late Republican Governments, His Majesty's Government cannot undertake any liability. It is, however, prepared, as an act of grace, to set aside a sum not exceeding £1,000,000 to repay inhabitants of the Transvaal and Orange River Colonies for goods requisitioned from them by the late Republican Governments, or, subsequent to annexation, by Commandants in the field being in a position to enforce such requisitions. But such claims will have to be established to the satisfaction of a Judge or Judicial Commission appointed by the Government to investigate and assess them, and if exceeding in the aggregate £1,000,000, they will be liable to reduction pro rata.

"I also beg to inform your Honour that the new Government will take into immediate consideration the possibility of assisting by loan the occupants of farms who will take the oath of allegiance to repair any injury sustained by destruction of buildings or loss of stock during the war, and that no special war tax will be imposed on farmers to defray the expense of the war.

"When burghers require the protection of fire-arms such will be allowed to them by licence and on due registration, provided they take the oath of allegiance. Licences also will be issued

for sporting rifles, guns, &c., but military firearms will only be allowed for means of protection.

"As regards the extension of the franchise to Kaffirs in the Transvaal and Orange River Colony, it is not the intention of His Majesty's Government to give such franchise before representative government is granted to these Colonies, and if then given it will be so limited as to secure the just predominance of the white races. The legal position of coloured persons will, however, be similar to that which they hold in Cape Colony.

"In conclusion, I must inform your Honour that if the terms now offered are not accepted after a reasonable delay for consideration they must be regarded as cancelled."

On the 16th of March the following reply came from the Boer Commandant: "I have the honour to acknowledge receipt of your Excellency's letter stating what steps your Excellency's Government is prepared to take in the event of a general and total cessation of hostilities. I have advised my Government of your Excellency's said letter; but, after the mutual exchange of views at our interview at Middelburg on 28th February last, it will certainly not surprise your Excellency to know that I do not feel disposed to recommend that the terms of the said letter shall have the earnest consideration of my Government. I may add also that my Government and my chief officers here entirely agree to my views." This ended the negotiations.

A discussion of the negotiations in Parliament occurred on the 28th of March, when Mr. Bryce (Liberal) said "they were agreed that the Government took an onward step when they allowed the peace negotiations to be entered into, and it was important to observe that, not only Lord Kitchener, but Sir Alfred Milner was persuaded that General Botha meant business. It was possible there were causes at work with which the House were not acquainted which caused the negotiations to be broken off. General Botha wrote to Lord Kitchener: —'You will not be surprised to hear that my answer is in the negative.' One of two things must have happened—either Lord Kitchener heard from General Botha something that the House had not heard of, or else General Botha was so much struck by the difference between the terms which Lord Kitchener had discussed and the terms contained in the letter that he conceived a distrust of us altogether and believed that the Government would not accept what Lord Kitchener had offered. He thought the Government were right in asking that the oath of allegiance should be taken, that they were entitled to insist upon the provision that all hostilities must cease, and that they could not pledge themselves as to the precise time when they would bring back the prisoners. But there were three points on which there were substantial differences between the terms Lord Kitchener appeared to have offered and the terms in the final letter. The first is the question of amnesty for the Cape rebels. Lord Kitchener and General Botha appeared to have come to an agreement on that subject. General Botha did not object to the disfranchisement of the Cape rebels, and Lord Kitchener did not appear to have conveyed any suggestion whatever of anything except disfranchisement. He could conceive nothing more likely to turn back the pacific desires of the Boers than the fact that they found that, instead of the Cape rebels having nothing but disfranchisement to fear, they were to be held subject to the Cape laws as to treason. He was not arguing whether that was right or wrong. The question was what the Boers would think, and he put it to the House that it was the most natural thing that they should be struck by the contrast between the terms which Lord Kitchener appeared to offer and the terms which were offered when the final letter came, and that that was just the point upon which brave men, feeling for their comrades, would be inclined to stand out. They would be told that they would displease the loyalists at the Cape if they did not exact all the penalties for treason. He hoped they would never in that House consider it any part of their business to satisfy the vindictive feeling of the colonists at the Cape."

As to the difference between the terms of future government for the inhabitants of the late republics proposed by Lord Kitchener and those laid down by the Colonial Secretary, Mr. Bryce said: "He should like to have known what the proposals were that General Botha made with regard to a modified independence, for he thought it was quite possible that it might turn out in the long run that some kind of what was called modified independence, protection, would be a great deal easier for this country to work than a system of Crown colony government. He thought the contrast between the elective assembly which Lord Kitchener offered and the purely arbitrary and despotic system which the final letter conveyed must at once have struck the Boers as indicating the difference between the views which the military man on the spot entertained and the proposal which they might expect from the Government. Of course there were objections to the immediate grant of self-government. So also there were objections to any course, and that course should be chosen which was open to the fewest objections. But the proposal of Crown colony government was, of all courses, the worst that could be suggested. It had been suggested that members of the Liberal party had asked for full-grown representative and responsible government, but they never had suggested that. What they had objected to was Crown colony government. They admitted that when the war ended there must be an intermediate period of administration, military or civil, but there was all the difference in the world between an admittedly provisional administration understood to be provisional and the creation of the whole apparatus of Crown colony government. The Boer population had an aversion to Crown colony administration, associated in their minds with the days of Sir Owen Lanyon, and an arbitrary form of government it was known to be. Of course it was arbitrary; hon. members who questioned that could not know what Crown colony administration was. The existence of a nominated council did not prevent it being arbitrary inasmuch as the members were obliged to vote as they were directed by the Governor. He could not help thinking that Lord Kitchener might, if he were asked to do so, throw some light on a remarkable expression in the letter from General Botha in which he said, after the

mutual interchange of views at their meeting, Lord Kitchener would not be surprised to learn that he was not disposed to recommend the terms proposed."

The radical Mr. Labouchere was sharper in his criticism: "He held that it was nonsense to call the terms offered to the Boers liberal and lenient; they were neither. We had burnt their farms and desolated their country, and then we offered them a small gift of money to put them back on their farms while we took away their independence and their flag. He honoured the men who resisted, no matter at what cost, when the question was the independence of their native land. How right General Botha was in distrusting the alterations made by the Secretary for the Colonies in the matter of the gift was shown by the right hon. gentleman himself, when he said that, whereas the gift was to be limited to a certain sum, the loyalists were to be paid first. In that case what would remain to the burghers of the two colonies? The position of the Boers in the Empire under the terms of the Colonial Secretary would be little better than that of Kaffirs. As far as ultimate self-government was concerned, they were to put their faith in the Colonial Secretary. If he might offer them a word of advice it would be—Put no faith in the Colonial Secretary; get it in black and white. We had lost a great opportunity of ending the war and settling South Africa. Peace won by the sword would create a dependency in which racial feuds would go on and the minority would be maintained over the majority by a huge British garrison. The Dutch majority was certain to increase every decade. The Transvaal farmers lived in a poor, rude manner which English people would not accept. . . .

"He did not particularly admire the Boers. To his mind they had too much of the conservative element in them; but, judging between the Afrikanders and the English who went to South Africa, whilst fully recognizing that among the latter there were many respectable men, he thought, taking them collectively, the Boers were the better men. If we wanted to maintain our rule in South Africa the Boers were the safest men with whom to be on good terms. What were the Boers ready to do? As he read the correspondence, they were ready to enter the area of the British Empire, but only upon terms. Surely our problem was to find terms honourable to us and to them, which would lead to South Africa becoming one of those great commonwealths connected with the Empire such as existed in Australia and Canada. He suggested that, in the first place, we should offer a full and absolute amnesty. He urged that the Orange State and the Transvaal should as soon as possible be made self-governing colonies. The Orange State was regarded by every Englishman who had written about it as a model State. As to the Transvaal, he admitted there was a difficulty, but he would suggest that the main area of the country should be separated from the Rand. The Rand might be administered by a governor, a military governor if they liked, while in the rest of the country the Dutch would have a majority. If this course were adopted, instead of our giving some sort of pecuniary aid to the Transvaalers, they might be paid a reasonable rent for the Rand district, of which they would be deprived. . . . They on that side of the House would be perfectly ready to agree to the establishment of a provisional government, military or civil—he should himself prefer Lord Kitchener to Sir Alfred Milner—to carry on the country while they were arranging for the colony to be self-governing. They were accustomed to be told that Sir Alfred Milner was a sort of divine pro-consul. He believed Sir Alfred Milner to be a most honourable man, and very intelligent in many walks of life; but the truth was that he began life as an Oxford don and then became an official in the Treasury, facts which militated against his success in practical politics. He believed that a man like Lord Dufferin would do more for the cause of peace in South Africa than all our soldiers."

The Field of War: A. D. 1901 (February—April).—The High Commissioner, Sir Alfred Milner, on the situation and prospects.—Leave of absence obtained by Sir Alfred.—A British Blue Book, made public in London on the 18th of April, contains an interesting despatch from Sir Alfred Milner, frankly reviewing the general situation in South Africa, as it appeared to him on the 6th of February, when he wrote, from Cape Town, and giving his forecast of future prospects. The following are the more important passages of the communication:

"A long time has elapsed since I have attempted to send to you any general review of South African affairs. The reason is twofold. In the first place, I am occupied every day that passes from morning till night by business, all of which is urgent, and the amount and variety of which you are doubtless able to judge from the communications on a great variety of subjects, which are constantly passing between us. In the next place, I have always hoped that some definite point would be reached at which it might be possible to sum up that chapter of our history which contained the war, and to forecast the work of administrative reconstruction which must succeed it. But I am reluctantly forced to the conclusion that there will be no such dividing line. I have not the slightest doubt of the ultimate result, but I foresee that the work will be slower, more difficult, more harassing, and more expensive than was at one time anticipated. At any rate, it is idle to wait much longer in the hope of being able to describe a clear and clean-cut situation. Despite the many other calls upon my time, and despite the confused character of the present position, I think it better to attempt to describe, however roughly and inadequately, the state of things as it exists to-day.

"It is no use denying that the last half-year has been one of retrogression. Seven months ago this Colony was perfectly quiet, at least as far as the Orange River. The southern half of the Orange River Colony was rapidly settling down, and even a considerable portion of the Transvaal, notably the south-western districts, seemed to have definitely accepted British authority, and to rejoice at the opportunity of a return to orderly government, and the pursuits of peace. To-day the scene is completely altered. It would be superfluous to dwell on the increased losses to the country caused by the prolongation of the struggle, and by the form which it has recently assumed. The fact that the enemy are now broken up into a great number of small forces, raiding in every direction, and that our troops are similarly broken up in

pursuit of them, makes the area of actual fighting, and consequently of destruction, much wider than it would be in the case of a conflict between equal numbers operating in large masses. Moreover, the fight is now mainly over supplies. The Boers live entirely on the country through which they pass, not only taking all the food they can lay hands upon on the farms, grain, forage, horses, cattle, &c., but looting the small village stores for clothes, boots, coffee, sugar, &c., of all which they are in great need. Our forces, on their side, are compelled to denude the country of everything moveable, in order to frustrate these tactics of the enemy. No doubt a considerable amount of the stock taken by us is not wholly lost, but simply removed to the refugee camps, which are now being established at many points along the railway lines. But even under these circumstances, the loss is great, through animals dying on the route, or failing to find sufficient grass to live upon when collected in large numbers at the camps. Indeed, the loss of crops and stock is a far more serious matter than the destruction of farm buildings, of which so much has been heard. I say this not at all as an advocate of such destruction. I am glad to think that the measure is now seldom if ever resorted to. At the same time, the destruction of even a considerable number of farms, having regard to the very rough and inexpensive character of the majority of these structures in the Orange River Colony and Transvaal, is a comparatively small item in the total damage caused by the war to the agricultural community.

"To the losses incidental to the actual course of the campaign, there has recently been added destruction of a wholly wanton and malicious character. I refer to the injury done to the head-gear, stamps, and other apparatus of some of the outlying mines by Boer raiders, whose sole object was injury. For this destruction there is, of course, no possible excuse. . . . Fortunately the damage done to the mines has not been large, relatively to the vast total amount of the fixed capital sunk in them. The mining area is excessively difficult to guard against purely predatory attacks having no military purpose, because it is, so to speak, 'all length and no breadth'—one long thin line, stretching across the country from east to west for many miles. Still, garrisoned as Johannesburg now is, it is only possible successfully to attack a few points in it. Of the raids hitherto made, and they have been fairly numerous, only one has resulted in any serious damage. In that instance the injury done to the single mine attacked amounted to £200,000, and it is estimated that the mine is put out of working for two years. This mine is only one out of a hundred, and is not by any means one of the most important. These facts may afford some indication of the ruin which might have been inflicted, not only on the Transvaal and all South Africa, but on many European interests, if that general destruction of mine works which was contemplated just before our occupation of Johannesburg had been carried out. However serious in some respects may have been the military consequences of our rapid advance to Johannesburg, South Africa owes more than is commonly recognized to that brilliant dash forward, by which the vast mining apparatus, the foundation of all her wealth, was saved from the ruin threatening it.

SOUTH AFRICA, 1901.

"The events of the last six or seven months will involve a greater amount of repair and a longer period of recuperation, especially for agriculture, than anybody could have anticipated when the war commenced. Yet, for all that, having regard to the fact that both the Rand and Kimberley are virtually undamaged, and that the main engines of prosperity, when once set going again, will not take very long to get into working order, the economic consequences of the war, though grave, do not appear by any means appalling. The country population will need a good deal of help, first to preserve it from starvation, and then, probably, to supply it with a certain amount of capital to make a fresh start. And the great industry of the country will need some little time before it is able to render any assistance. But, in a young country with great recuperative powers, it will not take many years before the economic ravages of the war are effaced.

"What is more serious to my mind than the mere material destruction of the last six months is the moral effect of the recrudescence of the war. I am thinking especially of the Orange River Colony, and of that portion of the Transvaal which fell so easily into our hands after the relief of Mafeking, that is to say, the country lying between Johannesburg and Pretoria, and the border of Bechuanaland. Throughout this large area the feeling in the middle of last year was undoubtedly pacific. The inhabitants were sick of the war. They were greatly astonished, after all that had been dinned into them, by the fair and generous treatment they received on our first occupation, and it would have taken very little to make them acquiesce readily in the new régime. At that time too, the feeling in the Colony was better than I have ever known it. The rebellious element had blown off steam in an abortive insurrection, and was glad to settle down again. If it had been possible for us to screen those portions of the conquered territory, which were fast returning to peaceful pursuits, from the incursions of the enemy still in the field, a great deal of what is now most deplorable in the condition of South Africa would never have been experienced. The vast extent of the country, the necessity of concentrating our forces for the long advance, first to Pretoria and then to Komati Poort, resulted in the country already occupied being left open to raids, constantly growing in audacity, and fed by small successes, on the part of a few bold and skilful guerrilla leaders who had nailed their colours to the mast. The reappearance of these disturbers of the peace, first in the south-east of the Orange River Colony, then in the south-west of the Transvaal, and finally in every portion of the conquered territory, placed those of the inhabitants who wanted to settle down in a position of great difficulty. Instead of being made prisoners of war, they had been allowed to remain on their farms on taking the oath of neutrality, and many of them were really anxious to keep it. But they had not the strength of mind, nor, from want of education, a sufficient appreciation of the sacredness of the obligation which they had undertaken, to resist the pressure of their old companions in arms when these reappeared among them appealing to their patriotism and to their fears. . . .

"As the guerrilla warfare swept back over the

whole of the western Transvaal, and practically the whole of the Orange River Colony, its effect upon the Cape Colony also became very marked. There was a time, about the middle of last year, when the bulk of the Dutch population in the Cape Colony, even those who had been most bitter against us at the outset, seemed disposed to accept the 'fait accompli,' and were prepared to acquiesce in the union of all South Africa under the British flag. Some of them even began to see certain advantages in such a consummation. The irreconcilable line taken in the Cape Parliament, during its recent Session from July to October, was a desperate effort to counteract this tendency. But I doubt whether it would have succeeded to the moderate extent to which it has, had it not been for the recrudescence of the war on the borders of the Colony, and the embittered character which it assumed. Every act of harshness, however necessary, on the part of our troops, was exaggerated and made the most of, though what principally inflamed the minds of the people were alleged instances of needless cruelty which never occurred. Never in my life have I read of, much less experienced, such a carnival of mendacity as that which accompanied the pro-Boer agitation in this Colony at the end of last year. And these libels still continue to make themselves felt. . . .

"The present position of affairs, alike in the new territories and in a large portion of the Cape Colony, if by no means the most critical, is possibly the most puzzling that we have had to confront since the beginning of the war. Naturally enough the public are impatient, and those who are responsible for the government of the country are bombarded with most conflicting advice. On the one hand, there is the outcry for greater severity and for a stricter administration of Martial Law. On the other hand, there is the expression of the fear that strict measures would only exasperate the people. Personally, I am of the opinion, which I have always held, that reasonable strictness is the proper attitude in the presence of a grave national danger, and that exceptional regulations for a time of invasion, the necessity of which every man of sense can understand, if clearly explained and firmly adhered to, are not only not incompatible with, but actually conducive to, the avoidance of injustice and cruelty. I am satisfied by experience that the majority of those Dutch inhabitants of the Colony who sympathize with the Republics, however little they may be able to resist giving active expression to that sympathy, when the enemy actually appear amongst them, do not desire to see their own districts invaded, or to find themselves personally placed in the awkward dilemma of choosing between high treason and an unfriendly attitude to the men of their own race from beyond the border. There are extremists who would like to see the whole of the Cape Colony overrun. But the bulk of the farmers, especially the substantial ones, are not of this mind. . . .

"The inherent vice, if I may say so, of almost all public discussion of our South African difficulties is the tendency to concentrate attention too exclusively upon the Boers. Say what we will, the controversy always seems to relapse into the old ruts—it is the British Government on the one hand, and the Boers on the other. The question how a particular policy will affect, not merely our enemies, but our now equally numerous friends, seems seldom to be adequately considered. And yet it would seem that justice and policy alike should lead us to be as eager to consider the feelings and interests, and to retain the loyalty, of those who are fighting on our side, as to disarm the present enmity and win the future confidence of those who are fighting against us. And this principle would seem all the easier to adhere to because there is really nothing which the great body of the South African loyalists desire which it is not for the honour and advantage of the Mother Country to insist upon. Of vindictiveness, or desire to oppress the Afrikanders, there is, except in hasty utterances, inevitable in the heat of the conflict, which have no permanent significance, or in tirades which are wholly devoid of influence, no sign whatever. The attitude of almost all leading and representative men, and the general trend of public feeling among the loyalists, even in the intensity of the struggle, is dead against anything like racial exclusiveness or domination. If this were not so, it would be impossible for a section of pure bred Afrikanders, small no doubt in numbers but weighty in character and position, to take the strong line which they do in opposition to the views of the majority of their own people, based as these are, and as they know them to be, upon a misconception of our policy and intentions. These men are among the most devoted adherents to the Imperial cause, and would regard with more disfavour and alarm than any one the failure of the British nation to carry out its avowed policy in the most complete manner. They are absolutely convinced that the unquestioned establishment of the British supremacy, and the creation of one political system from Cape Town to the Zambesi, is, after all that has happened, the only salvation for men of their own race, as well as for others. Of the terms already offered, a great majority, I believe, of the South Africans at present in arms on our side entirely approve. There is, no doubt, an extreme section who would advocate a sterner attitude on our part, but they are not numerous, and their feelings are not lasting. The terms offered by Lord Kitchener, which are, in substance, identical with repeated declarations of policy on the part of His Majesty's Government, are generally regarded as a generous and statesmanlike offer, as one which, if firmly adhered to, will ultimately be accepted, but as an offer which we cannot afford to enlarge. On the other hand, there is a very general desire that no effort should be spared to make the generous character of our intentions widely known, and to encourage any disposition on the part of the enemy to parley, with the object of making them better acquainted with the terms on which we are prepared to accept their submission.

"If I might sum up the predominant, indeed, the almost unanimous feeling of those South Africans who sympathise with the Imperial Government, I should describe it as follows:—They are sick to death of the war, which has brought ruin to many of them, and imposed considerable sacrifices on almost all. But they would rather see the war continue for an indefinite time than run the risk of any compromise which would leave even the remotest chance of the recurrence of so terrible a scourge in the future. They are prepared to fight and suffer on, in order to make South Africa, indisputably and for ever, one country under one flag, with one system of gov-

ernment, and that system the British, which they believe to ensure the highest possible degree of justice and freedom to men of all races. But, with that object accomplished, they are willing, and, indeed, ready, to bury racial animosities. They have fought against the principle of race oligarchy in one form, and they do not wish to re-establish it in another. For the attainment of that object, they would rely for the present on the vigorous prosecution of the war in which they are prepared themselves to take the most active part, coupled with every inducement to the enemy to come in on the terms already offered, and for the future, as soon as public security is assured and the circumstances permit, on the extension to the newly acquired territories of a system of Colonial self-government. For my own part, I have no doubt that this attitude is a wise one, and that it only requires persistence in it, in spite of the discouraging circumstances of the moment, to lead us to ultimate success."—*Great Britain, Papers by Command, Cd.* 547.

The same Blue Book made known the fact that, on the 3d of April, Sir Alfred Milner applied for and obtained leave of absence for three months from his duties in South Africa.

The Field of War: A. D. 1901 (April).—The situation.—Early in April it was announced that the seat of government of the South African Republic had been transferred from Pietersburg to Leydsdorp in the Zoutpansberg by the Vice-President, General Schalk-Burger, which seems to indicate the beginning of another stage of the South African war. The Boers are said to have been for some time past collecting great quantities of cattle and sheep in the fastnesses of the Zoutpansberg, where also they have ample supplies of ammunition, and intend making it a point of ultimate resistance as well as a base of present operations.

The Field of War: A. D. 1901 (April).—The cost of the war to Great Britain as stated by the Chancellor of the Exchequer.—In his speech (April 18), on introducing the budget for 1901, in the House of Commons, the Chancellor of the Exchequer, Sir Michael Hicks-Beach, made the following statements of the cost of the war to Great Britain: "I would remind the Committee that so far we have borrowed towards the cost of the war £67,000,000—£13,000,000 Treasury bills, £10,000,000 Exchequer Bonds maturing rather less than three years hence, £14,000,000 Exchequer Bonds maturing about five years hence, and £30,000,000 War Loan maturing in 1910. Now, Sir, in what mode may we fairly borrow such a large sum as we now require? This can no longer be considered a small war. In cost it is a great war. Let me just make a statement to the Committee as to what, so far, the estimated cost of this war has been. In 1899–1900 the Estimates were £23,217,000. Last year they were £68,620,000, and this year's Estimates amount to £60,230,000, including in each case the interest on the sums borrowed. That amounts to over £152,000,000. I must ask the Committee to remember that in those figures I include the cost of both the South African and Chinese wars. Then I have to add a million and a quarter for this year's borrowing, making in all over £153,000,000. That is double the cost of the Crimean War, and when I look back at the Peninsular War I find the two most expensive years were 1813 and 1814. The forces engaged, of course, were very much smaller than those engaged now; but in those two years the total cost of our Army and Navy amounted to £144,581,000. This amount is less than the charges of the South African and Chinese wars. Therefore, I think I am justified in saying that in cost this has been a great war. I think, then, it is clear we can no longer, in borrowing towards the cost of it, rely upon temporary borrowing. We have already £67,000,000 of unfunded debt borrowed for this purpose and maturing within the next ten years. We have also some £36,000,000 of 2¾ and 2½ per cent., redeemable in 1905. Therefore, whatever may be the prosperity of the country, whatever may be the condition of our finances, it is perfectly obvious to my mind that the stanchest advocate of the redemption of the debt will have ample scope for his energies in the years that are now before us. For this reason I propose to ask the Committee to extend the powers of borrowing which they gave me in previous Acts, to Consols."

SOUTH CAROLINA: A. D. 1892-1899.—The Dispensary Law.—In 1892 the Legislature of South Carolina passed an Act, commonly called the Dispensary Law, which caused turbulent agitations in the State, and excited much interest in the country at large. It was based upon the principle of what is known as the Gothenburg system of regulation for the sale of intoxicating liquors, making the traffic a State monopoly, carried on by officials, under rigorous restrictions, with profit to the public treasury, and none else. It provided for the creation of a State Board of Control, under the direction of which a Commissioner, appointed by the Governor, should purchase all intoxicating liquors allowed to be sold in the State, and should furnish the same to such agents (called "dispensers") in the several counties as might be appointed by county boards to sell them, in accordance with the regulations prescribed. It required all liquors purchased by the Commissioner to be tested by an official chemist and declared to be pure and unadulterated. It allowed nobody but the official "dispensers" to deal in any manner with any kinds of intoxicating liquors after the 1st of July, 1893. It forbade the selling of such drinks by the authorized salesmen to minors and drunkards, and it required all who bought to sign and date a printed or written request, stating their residence and age.

The law was fiercely resisted in many parts of the State by mobs, and powerfully assailed in the courts; but Governor (afterwards Senator) Tillman, who then occupied the executive chair, gave it resolute enforcement and support. The attack in the courts had momentary success in 1894, the Supreme Court of the State rendering a decision adverse to the constitutionality of the law; but, meantime, the Legislature, in 1893, had made changes in the Act, and its new enactment was held to be untouched by the judgment

of the court. Before a new case could be brought to issue, the retirement of one of the justices of the Supreme Court brought about a change of opinion in that tribunal, and the law in its new form was sustained. Disorderly resistance to the enforcement of the law was long kept up; but in the end such resistance seems to have been mostly overcome.

In January, 1897, however, one provision of the Act, which forbade all importation of liquors into the State by private persons, even for their own use, was declared by the Supreme Court of the United States to be an interference with inter-state commerce, and therefore unconstitutional. This breaks down the Dispensary Law, so far as concerns citizens who are able to import liquors for themselves. Otherwise the law seems to be now stoutly entrenched, and other States are being sufficiently satisfied with its success in South Carolina to adopt it. The following testimony as to its success is from the pen of a North Carolinian, who became instrumental in carrying the system into his own State.

"The familiar features of the dispensary were its closing promptly at sundown; no drinking on the premises; the sale of liquor to those only who were of age, who were not in the habit of drinking to excess, who were sober at the time of the sale, and who signed an application for what they bought on a public book; and the fact that the dispenser was a salaried officer, and thus free from pecuniary interest in stimulating sales. To this was added in South Carolina a force of constables whose special business it was to arrest those who sold liquor contrary to law.

"The fact that the dispensary law was a substitute for Prohibition made the law odious at first to those who had fought most ardently for the Prohibition cause. And the political faction over which Mr. Tillman had triumphed, containing a good proportion of the best blood and brains of the State, opposed the dispensary on personal grounds. The spy system, as it was called, and the resistance to the constables, sometimes resulting in bloodshed, set many of the more peaceable and conservative citizens against the law. Added to this, the constitutionality of the law as a whole and of important provisions separately was strenuously contested in the United States Courts, with varying success until the Supreme Court settled the matter forever in favor of the law. These difficulties are mentioned to show what the system has had to face in South Carolina, and for the purpose of remarking that the system has triumphed over all opposition. The amended Constitution of the State decrees against the re-establishment of the saloon. The Dispensary candidate for Governor in the last election defeated the Prohibition candidate. And the testimony of sober, conservative citizens of every rank and profession is now practically unanimous to the effect that drunkenness and the crimes resulting therefrom have decreased beyond expectation."—A. J. McKelway, *The Dispensary in North Carolina* (*Outlook, April* 8, 1899).

A. D. 1896.—New constitution.—Introduction of a qualified suffrage.—Practical disfranchisement of the greater part of the negroes.—On the 1st of January, 1896, a new constitution, promulgated by a constitutional convention the previous month, without submission to popular vote, came into effect. It was framed especially to accomplish a practical disfranchisement of the larger part of the negro population, which it did by the operation of an educational qualification with peculiar conditions attached. Until the first of January, 1898, it permitted the enrollment of voters who could read, or who could explain to the satisfaction of the registering officer a section of the constitution read to them; and all citizens registered before that date were to be qualified voters thereafter. But subsequent to the date specified, none could be registered except those able to read and write any required part of the constitution, or else to prove themselves owners of property and taxpayers on not less than $300. Registration to be conducted by county boards appointed by the governor.—See, also (in this vol.), MISSISSIPPI.

Speaking in the United States Senate in justification of this measure, Senator Tillman, of South Carolina, said: "We took the government away. We stuffed ballot boxes. We shot them. We are not ashamed of it. The Senator from Wisconsin would have done the same thing. I see it in his eye right now. He would have done it. With that system—force, tissue ballots, etc. —we got tired ourselves. So we called a constitutional convention, and we eliminated, as I said, all of the colored people whom we could under the fourteenth and fifteenth amendments. . . . I want to call your attention to the remarkable change that has come over the spirit of the dream of the Republicans; to remind you gentlemen from the North that your slogans of the past—brotherhood of man and the fatherhood of God—have gone glimmering down the ages. The brotherhood of man exists no longer, because you shoot negroes in Illinois, when they come in competition with your labor, as we shoot them in South Carolina when they come in competition with us in the matter of elections. You do not love them any better than we do. You used to pretend that you did, but you no longer pretend it except to get their votes. . . . You deal with the Filipinos just as we deal with the negroes, only you treat them a heap worse."—*Congressional Record, 56th Congress, 1st Sess., pp.* 2347, 2349.

SOUTH DAKOTA: A. D. 1898.—Constitutional amendment introducing the Initiative and the Referendum.—A constitutional amendment, adopted by popular vote at the November election, introduces the principle of the Swiss Initiative and Referendum, providing that the Legislature must render obedience to petitions signed by 5 per cent. of the voters of the State, which call for the enactment and submission to popular vote of any stipulated law, or which require the submission to a popular vote of any Act which the Legislature may have passed.

A. D. 1899.—Adoption of the Dispensary System.—A constitutional amendment, providing for a dispensary system of regulation for the liquor traffic (see, in this vol., SOUTH CAROLINA: A. D. 1892–1899), was adopted in 1899 by a majority of 1,613 votes. The newly adopted clause reads as follows: "The manufacture and sale of intoxicating liquors shall be under exclusive State control, and shall be conducted by duly authorized agents of the State, who shall be paid by salary and not by commission."

A. D. 1895-1896.—Conflict between army and Press.—Change of Ministry.—Renewed insurrection in Cuba.—A violent conflict between the military authorities and the newspaper Press arose in consequence of an attack made by officers of the army on a Republican editor who had sharply criticised certain details of army administration. They not only assaulted him in person, but broke up his presses and type. This military mob outrage was resented and denounced by the whole Press, of every party; whereupon the military authorities began prosecutions in the military courts, and making arrests of publishers and editors, with a contempt for law which seemed to be ominous of some revolutionary intent. The Liberal Ministry, under Señor Sagasta, not able, apparently, to control these proceedings, resigned office, and a Conservative Cabinet was formed by Señor Canovas del Castillo. The new Ministry had many difficulties to face, the fresh outbreak of revolt in Cuba (see, in this vol., CUBA: A. D. 1895) being the most serious. But student rioting at Barcelona, caused by the dismissal of a professor whose writings were condemned at Rome, became grave enough to require the sending of the redoubtable General Weyler to the scene; and popular excitements in Madrid, growing out of exposures of corruption in the municipal council, drove two of the colleagues of Canovas from their posts. In January, 1896, Weyler was sent to Cuba, to pursue in that unhappy island a policy which produced conditions that horrified the world—see (in this vol.) CUBA: A. D. 1896–1897, and 1897–1898 (DECEMBER—MARCH). Elections held in April, 1896, gave the government of Canovas an overwhelming majority in the Cortes.

A. D. 1897 (August—October).—Assassination of the Prime Minister, Canovas del Castillo.—Return of Sagasta to power.—Condition of the country.—On the 8th of August, the Spanish Prime Minister, Señor Canovas del Castillo, was shot by an Italian anarchist, a Neapolitan, named Angiolillo, while sojourning for a few days, with his wife, at the baths of Santa Aguada. He lived but two hours after receiving his wounds. General Azcarraga, Minister of War, was called by the Queen to take temporary charge of the government; but before the end of September he and his cabinet were forced to resign, and the Liberals, under the lead of Señor Sagasta, returned to power. "Canovas was the strong man of Spain. He was not the educator of the people, or the worker of the popular inclination. His vigorous understanding was their muscular master. The police were on his side; a useful portion of the press, hired judiciously for the purpose; the army; and the brains to set them all in motion; and, so equipped, Antonio Canovas del Castillo confronted the Spanish people and said, 'Come on.' It was a resolute and daring attitude, and kept the crowd triumphantly at bay for thirty years. But of late a change had taken place. A good deal of the old fire had burned out. Fifteen years of colonial revolt, again, impress even the thickest-headed Spanish peasant into conceiving that the trouble has no business to last so long, and that his rulers, if hard and exigent towards himself, are weak, extravagant, and undexterous elsewhere. And this suspicion ripens into certainty when he sees his sons torn from his side and packed over sea, and when his taxes swell and swell, and the price of bread goes up and up, and still no alteration for the better. This cumulative truth is what the Spanish plebs have learned at last, within a year ago, and if Canovas had had the foresight of the true statesman, instead of the blind egoism of the autocrat, he would have thrown up his losing cards while there was time and said, 'The Cuban War is a mistake. Forgive me.' But his unflagging obstinacy held him to his desperate and aimless course. Although his complicity with his emissary, Weyler, in sending and publishing one lying telegram after another, was manifest as day, he smiled and rubbed his hands, and vowed the war was all but over; and behind that smile he half despised and half defied the victims he invited to believe him. He made no claim to be a patriot. He knew he was unpopular. He knew that for every cottage whence a son had been torn away to that disastrous strife in Cuba the Conservative Government of the nation may count upon one bitter foe—the Republicans or the Duke of Madrid upon one sure ally. What would have happened in Spain, had he lived longer, is quite beyond the average power to say. The prospect was too horrible for words. However, he died, and his ministry, after feebly mimicking the stubborn temper of their chief, succumbed also, leaving to the Liberal Party a legacy which may be likened to a bomb with time-fuse well alight and sputtering into the explosive. In plainer words what faces Señor Sagasta is the following: Spain is a beggar. Her credit is gone. Her army, always of late years behindhand in discipline, instruction, commissariat, and the thousand and one minutiæ other nations are solicitous to attend to, is decimated by disease, dispirited, and utterly incompetent to engage in war with any civilised power. Her navy is rotten. Her people are discontented and divided into various creeds. Some are for the existing régime, some for Don Carlos, and some for the Republic."—L. Williams, *Can Sagasta save Spain?* (*Fortnightly Rev., Dec.*, 1897).

A. D. 1899.—Abolition of the Ministry of the Colonies.—Resignation of the Sagasta Cabinet.—Ratification of the Treaty of Peace.—The new conditions in Spanish government resulting from the loss of Cuba, Porto Rico, and the Philippines were promptly acknowledged, in January, by the abolition of the Ministry of Colonies, for which no sufficient duties remained. On the 20th of February the Cortes was summoned, and on the same day the "state of siege," declared during the war, which had practically suspended constitutional rights, was removed by proclamation. The Treaty of Peace with the United States was laid before the Cortes; but the military party, led by General Weyler, opposed the approval of the Treaty, evidently for the purpose of embarrassing and weakening the government. They were so far successful that Señor Sagasta and his cabinet were forced to resign, on the 28th of February, and a Conservative Ministry, under Señor Silvela, was formed. But the Cortes, which declined to support the government in accepting the Treaty of Peace, was dismissed a few days later by the Queen-Regent, who signed the Treaty on her own responsibility, March 11. The Silvela Ministry proved inharmonious, made so especially by the Minister of War, General Polavieja, and in September it was reconstructed, with Polavieja dropped out.

A. D. 1900 (October—November).—Weyler appointed Captain-General of Madrid.—Resignation of the Silvela Ministry.—The army in control.—The army won control of the government in October, when General Linares, Minister of War, without consulting his colleagues of the cabinet—if report be true—appointed General Weyler to be Captain-General of Madrid. Several members of the cabinet resigned in protest, and the Premier, Señor Silvela, found it necessary to place the resignation of the Ministry as a whole in the hands of the Queen-Regent (October 21). A new cabinet

was formed, with General Azcarraga for its chief, General Linares retaining the portfolio of the War Office, and Weyler holding the military command in Madrid. The military party appears to be fully in power, and a token of the spirit it has carried into the government was given within ten days after the formation of the new Ministry, by the promulgation of a decree suspending the guarantees of the constitution and establishing martial law throughout the kingdom. Some movements of Carlist agitation and insurrection furnished a pretext for this measure, but they appear to have had no serious character.

It is probable that the military reaction at Madrid will stimulate a revival of the old independent aspirations of the Catalonians, which have been showing of late many signs of new life. The desire for separation from Spain has never died out in Catalonia, and a resolute new effort to accomplish it may easily appear among the incidents of the near future.

A. D. 1900 (November).—Spanish-American Congress.—At the instance of the "Sociedad Union Ibero-Americana," an unofficial organization which has been in existence for more than 15 years, a congress was held in Madrid in November, 1900, with the object of strengthening the relations between Spain and those American peoples who are of Spanish origin. The proposal of the "Union Ibero-Americana" met with the approval of the Spanish Government, and on April 16 a Royal decree was issued appointing Señor Silvela, the Prime Minister, to be president of a congress to be held in Madrid. The Government of Spain then issued invitations to the Spanish-American Republics, asking them to send representatives, which invitations were accepted by the governments of Mexico, the Argentine Republic, Chile, Uruguay, Peru, and other States. The list of subjects for discussion included proposals of treaties of commerce, international arbitration, the harmonizing of the civil, penal, and administrative legal codes of the various countries represented, emigration, the international validity of professional diplomas, the establishment of Ibero-American banks, and others. The most important result of the Congress was the voting of a plan of compulsory arbitration by the South American republics. The motion was introduced by Peru, which has the most to gain by arbitration. Chile's was the sole dissenting voice. "This," remarks "The Nation," of New York, "recalls the fact that Chile consented to take part in the Pan-American Congress at the City of Mexico, only on condition that any arbitration there provided for should not concern her own disputed boundaries."

A. D. 1901.—Anti-clerical agitation, directed especially against the Jesuits.—Marriage of the Princess of the Asturias.—A case arising in Madrid in February produced excitements of feeling against the Jesuits which spread to all parts of the country, and were the cause of serious political demonstrations and rioting in many cities. A wealthy young lady, Señorita Ubao, had been persuaded by her confessor, a priest of the Jesuit order, to enter a convent, against the wish of her family. The family applied to the High Court for a mandate to secure her release. The prominence of the parties drew universal attention to the case, and it was dis-

cussed with passion throughout Spain, stirring up, as appears to be evident, a latent anti-clerical feeling which only waited to be moved. It seems, moreover, to have served as an occasion for demonstrations of the republicanism that continues to be strong in Spain. Students of the universities were active promoters of the excitement, and set examples of disorder which were followed by rougher mobs. In Madrid, Zaragoza, Valencia, Valladolid, Santandar, Granada, Malaga, Barcelona, and other towns the excitement ran high, and was not quieted by a decision of the High Court on the 19th of February, restoring Señorita Ubao to her friends. At Barcelona, on the last day of March, a meeting of 9,000 citizens, held in the bull-ring, is reported to have passed resolutions in favor of the separation of Church and State, advocating the prohibition of religious orders, and expressing a desire that their property should be taken possession of by the State. The meeting voted messages congratulating France and Portugal on their Anti-Clerical attitude. The meeting was followed by a riotous attack on the Jesuit convent, and by a conflict of the mob with the civil guard, in which blood was shed. From various parts of the country, demands for the expulsion of the religious orders were reported, in April, to be reaching the government.

A royal wedding which occurred in the early days of this anti-clerical agitation added something to the disturbance of the public mind. Doña Maria de las Mercedes, eldest of the children of the late King Alphonso XII. and his second wife, was married on the 14th of February to Prince Charles, of the Neapolitan Bourbon family, son of the Count of Caserta. The Princess was Queen of Spain, in her infancy, for a few months after her father's death, until the posthumous birth of her brother, in 1886, and presumptively she may again inherit the crown. In itself, the marriage does not seem to have been unpopular; but, for some reason, the Count of Caserta was odious to the public of Madrid, and became the object of unpleasant attentions from the mob, while the bride and bridegroom, and other members of the family of the latter, were treated with respect.

STONEHENGE: Fall of two stones.—"The last night of the nineteenth century was marked, as a correspondent pointed out in our issue of yesterday, by a serious injury to what remains of the majestic monument of Stonehenge. One of the great uprights of the outer circle of stones, as well as the cross-piece mortised to it on the top, fell to the ground, thus destroying still further the most striking effect of this gigantic temple or sepulchre. The fall was probably caused by the torrents of rain and the violent winds that closed the troubled record of the year 1900. One of the uprights was brought to the ground, where it lies like so many other of the stones that formed this vast megalithic structure, and the capstone has been broken in pieces. The continuous exterior circle of which these formed a part was originally about one hundred feet in diameter, and though the masses were less imposing individually than those of the great trilithons around the centre, the effect of the mighty round of uprights, sixteen feet high, with huge capstones resting on them, must have been wonderful in its noble simplicity . . .

"The solicitude of the present age has placed Stonehenge, like other great national monuments, under the permissive protection of the law, but the law itself cannot prevent the ravages of weather and the gradual subsidence of the foundations on which these masses stand. Little, we fear, can be done to keep the remaining uprights standing. They will fall when their time comes and will lie where they fall like those that have already succumbed to their fate. It is better, perhaps, for the dignity of this venerable monument that it is in no serious danger of that restoration which is at work on so many later structures, more splendid as triumphs of art, but less stubborn in their strength."—*London Times, Jan.* 4, 1901.

SUGAR BOUNTIES.—An extremely complicated and irrational state of things, connected with the production and consumption of sugar throughout the world, has been experienced for many years, as a consequence of the system of bounties on exportation, by which a number of European countries have stimulated the production of beet-sugar, in competition with the sugar produced from cane. The system was carried to its extreme development in 1896–7, in consequence of action taken in Germany, for an account of which see (in this vol.) GERMANY: A. D. 1896 (MAY). The legislation in other countries which followed the German measure of 1896 was set forth briefly in a memorial from the Belgian beet-root sugar makers, in February, 1897, to the Belgian Chamber of Representatives, a translation of which was transmitted at the time to the State Department at Washington by the United States Consul at Ghent. Said that memorial: "The fiscal system applied to sugar factories in force [previously] in the various countries mentioned [was] chiefly established by the following laws: Germany, law of May 31, 1891; Austria, law of May 20, 1888; France, law of July 29, 1884; Russia, law of July 13, 1891; Belgium, law of April 16, 1887; Holland, law of April 15, 1891, and preceding legislation. Since the dates above mentioned, the basis established in these various countries had undergone only secondary modifications, rather local than international, and, generally, of a nature to diminish the fiscal favors instead of increasing them. From the point of view of competition among the countries of Europe, a sort of peaceful stability was thus acquired, resulting in a corresponding equilibrium in the interior relations of each country between the rural and industrial systems, as well as between the cultivator and owner. This situation, slowly established, has, during the last year, suffered the most serious disturbances. Important modifications have been adopted by all our competitors, Russia excepted; the latter, enjoying a special system, suffices almost entirely for itself without having much to export, it is, therefore, not necessary to give it special consideration.

"The modifications to which we allude are the following: In Germany, the law of May 27, 1896, increased the export bounties in the following proportions: (1) For raw sugar, from 30 cents to 60 cents per 220 pounds; (2) for white sugar, from 41 cents to 72 cents; (3) for refined sugar, from 48 cents to 89 cents. This is not meant to interfere with other measures, notably the imposition of supplementary taxes, and the provision by which a factory, under the penalty of having its proportion of export bounties reduced, is, so to speak, obliged to increase its output or at least to maintain it at the same level, even under the most unfavorable circumstances. Immediately afterwards, Austria, by the law of July 7, 1896, took corresponding protective and defensive measures, especially increasing from about $2,000,000 to $3,600,000 the amount of public funds destined for export bounties. In France, the Chamber of Deputies has just voted export bounties even more important than those of other countries, amounting to—(1) raw sugar, 68 cents per 220 pounds; (2) white sugar, 77 cents; (3) refined sugar, 87 cents. All these export bounties are independent of the interior advantages accorded in Germany and Austria, in various forms less tangible, although not less real, and in France in the form of bonuses upon the manufacture, which, in the official French statistics, appear for sums varying from $1.16 to $1.54½ per 220 pounds, and which may be normally fixed at $1.35 per 220 pounds. Holland, in turn, has just revised its system, giving from the beginning to its producers a bounty of $1.06½ per 220 pounds on raw sugars. It is an economic war to the finish between rival nations, each desiring the ruin of the others, which these measures unchain on the sugar interests of Europe."—*U. S. Consular Reports, June*, 1897, *p.* 304.

The effect of bounty-payments is to enable the

SUGAR BOUNTIES.

sugars-makers of the country which pays them to sell sugar to foreign buyers at a lower price than to buyers at home. Consumers in such a country as England, where no sugar is produced, and where no duties on imported sugar are levied, reap an enormous gain from them, at the expense of the sugar consumers of the bounty-paying countries. At the same time, the cane-sugar growing colonies of England, especially those in the West Indies, suffer from the competition which is made unnatural by this method of governmental support. England, therefore, has conflicting interests in the matter. The mass of her home population, who are great consumers of "sweets," delight in the continental bounties, which give them cheap sugar; while her West India colonists, and the English sugar refiners, are groaning under the hard competition they maintain.

In the bounty-paying countries the same conflict of interest exists between beet-growers and sugar consumers, and governmental attitudes on the question of adhering to the bounties seem to depend on the relative strength, or political weight, of the two bodies. Repeated attempts have been made to come to an international agreement for their abolition or modification. A general conference on the subject was held without result in London, 1887; and another was undertaken in June, 1898, at Brussels, on the invitation of the Belgian government. The latter made manifest a strong desire to be rid of the bounty-paying system, on the part of Germany, Austria-Hungary, Belgium and the Netherlands. France was willing to withdraw her direct bounties on the exportation of sugar, but insisted on maintaining an internal system of taxes which was said to have the real effect of a bounty. Russia, likewise, would adhere to a domestic system of regulations which had that effect. Great Britain declined to engage herself to impose a duty on what was called "bounty-fed" sugar, for the purpose of neutralizing the bounty, and so placing that commodity on a footing of equality with its rivals in her markets. Hence no agreement of common action could be reached, and the Conference adjourned without result. Continental consumers of sugar continue to pay a high price for the prosperity of their beet-growers and sugar-makers; but Englishmen, who have reveled in cheap "jams" at foreign expense, are probably to lose that privilege, since the exigencies of their Boer war expenditure have forced the Chancellor of the Exchequer, at last, to introduce a duty of 4s. 2d. per cwt. on refined sugar in his budget for 1901. But in his speech on introducing the budget, in the House of Commons (April 18, 1901), the Chancellor expressed hopefulness that the foreign sugar bounty might save England from a rise in price for sugar, notwithstanding the tax. His remarks were as follows: "What is likely to be the effect on the price of sugar of the imposition of a duty? In my opinion that is a very doubtful question, because the price of sugar is not governed solely by the ordinary conditions, but it is governed largely by the bounty system. The great bulk of our imports of sugar come from bounty-giving countries; and what is that system? Why, Sir, it amounts to this, that the country giving the bounty encourages the production of sugar within its borders, and at the same time does its best to restrict the consumption of sugar by its own people by every possible means, so that the result is that there is an enormous surplus of sugar produced which must find a foreign market, and which under present circumstances can only find a market here. Therefore, it is quite conceivable, unless, of course, a bounty-giving country either reduced the area of their sugar production or lowered their own excise duties on sugar for the benefit of their own population—both of which would mean the abolition of the bounty system—it is quite conceivable that the result of the imposition of a tax on sugar here might be that, though at first the price might go up and the consumption of sugar might be consequently decreased, there would be such an influx into this country of bounty-paid sugar that could not go anywhere else that the price might be brought down. I merely put the hypothesis to the Committee, because I think it is one that ought to be considered by any one who looks into this question."—*London Times, April* 19, 1901.

"The geographical poles of the sugar trade are now Great Britain and the United States, and the two great areas of production are the beet-sugar countries of the continent of Europe and the cane-growing countries of the American and the Asiatic tropics. These two areas of production have been in active rivalry for the past thirty years, and out of this rivalry have come some striking results. The first is, that beet sugar controls the world's sugar market; for of the 8,000,000 tons that constitute the commercial supply of sugar, about 5,000,000 are produced from the beet, and the price of this portion of the supply practically determines the price of the 3,000,000 tons of cane sugar also. Still more significant results are the removal of Great Britain from her once dominant position in tropical sugar production and the elimination of France and Spain from the struggle for leadership in the same line of enterprise, as economic conditions have centered the cane-sugar trade and industry in America. To-day the continental beet-sugar countries supply the United Kingdom with seventy-five per cent. of its annual sugar imports (2,500,000 tons), leaving only one-quarter to come from the tropics. The United States, on the other hand, has become the chief market for tropical sugar. . . .

"India and the United States exclude bounty fed beet sugar; and the reciprocity treaties with the United States, by favoring tropical sugar with a minimum duty, put a narrower limit to beet-sugar development, now prospering under a protective tariff and state bounties. The general effect of these positive aids to trade, as well as of the negative restraints, has been to encourage tropical enterprise in which sugar plays a leading role. . . .

"As things stand now, Germany continues to control the world's sugar situation—not because of any superiority over the tropics in machinery, nor because of the advantages of fiscal bounties over tropical resources of the soil, but because all the natural advantages under the prevailing slipshod methods of tropical cane cultivation are more than counterbalanced by the scientific methods of European agriculture applied to beet farming. When the tropics apply to the cultivation of canes (which covers half of the cost of producing sugar) the same degree of scientific

attention that has been given to the methods of manufacturing the canes into sugar, then—and not until then—need the beet-sugar interests of Europe look to their laurels, under the present conditions of the trade."—J. F. Crowell, *The Sugar Situation in the Tropics* (*Pol. Science Quarterly, Dec.*, 1899).

In the United States, the Dingley Tariff law of 1897 required the Secretary of the Treasury to levy a special countervailing duty on all bounty-fed sugar equal to the benefit derived by the manufacturers of it from the bounty systems under which it was produced. German and French sugars have had to bear such countervailing duty, and it was exacted on Russian sugar for a time after the passage of the Dingley Act; but the Russian government succeeded in bringing about a suspension of it, pending negotiations for a commercial treaty, which came to nothing. It was the Russian contention, that the system operating in that country for the benefit of the sugar producers, by means of internal taxes which are not collected on exported sugar, and by paternal regulations which control prices in the domestic market, is not a bounty system, within the meaning of the American law. (The full text of the Russian law on the subject may be found translated in the "Congressional Record," February 26, 1901, p. 3335.) By these arguments and by protracted negotiations the Russians succeeded in keeping the door of the American market open to their sugar, with no extra levy of duties, until February, 1901, when the Secretary of the Treasury of the United States arrived at the decision that he is required by the law to levy and collect a countervailing duty or tax of 32 cents on each pood (about 36 pounds) of Russian sugar imported into the United States. The order to that effect, issued on the 12th of February, gave great satisfaction to the American sugar-trust, and more than equal dissatisfaction to other important interests in the country, which are threatened by the danger of retaliatory tariffs on the Russian side. The situation produced is thus described in a Washington letter to the "Tribune" of New York: "The iron and steel manufacturers have been clamoring for the continued suspension of the countervailing duty on Russian sugars. They have begun, they say, to build up a market in Russia for American steel products, and that market will be lost to them if Russia in retaliation imposes maximum instead of minimum duties on steel and iron manufactures. The steel industry all over the world is threatened with a glut in production, and the American manufacturers especially are keenly looking about for every possible opportunity to dispose of an increasing surplus. They deplore, therefore, the reimposition of the sugar duty, and will help to fight for a reversal of Secretary Gage's action by the Board of General Appraisers or by the courts. The Secretary contends that the Russian scheme of encouraging the sugar interest should be submitted for judgment to some legal tribunal, and that in such an evident case of doubt it is his duty to favor the Government to the extent of reimposing the disputed duty. The case will go to the Board of General Appraisers in New York, and then to the Federal courts, and a final decision is, perhaps, two years off. Meanwhile the German, French and other Continental governments have been somewhat appeased, and the Sugar Trust has won a substantial victory at the expense of the iron and steel consolidation. Russia is disposed to resort to retaliatory decrees, and the whole horizon is more or less clouded with threats of commercial warfare."

The immediate consequence of the order of the United States Treasury Department was a retaliatory order by M. De Witte, the Russian Minister of Finance, issued four days later (February 16), directing the collection of an additional tariff of 30 per cent net upon American hardware, iron, steel, boilers, pipes, forgings, castings, tools, gas and water meters, dynamos, sewing machines, when such articles are of American manufacture. This includes motors and machinery of all kinds.

SWEDEN AND NORWAY: Norwegian discontent with the union.—"The question of representation in foreign countries has now convulsed Scandinavia for some years. A race of democratic tendencies usually thinks more of its Consular than of its Diplomatic Service, and Norway, in demanding immediate permission to appoint her own Consuls, announces

that she is willing to leave for future consideration the subject of separate Ambassadors for the two countries. Professor Harald Hjärne crystallizes the reply of Sweden in the words : 'By granting such a request we run the risk of our foreign policy, and with it also our satisfactory relations with foreign Powers, in fact, the whole external safety of our country, becoming a mere ball for the Norwegian parties during their contests for power.' However, the King, who is ever ready to grant privileges to his Norwegian subjects, even when acting against his better judgment, declared himself willing to accede to the petition as to the Consuls, and to allow the sister country to have the direct voice in the regulation of foreign affairs which she has so long demanded, but only on condition that she would contribute to the defence of the two Kingdoms in proportion to her population. . . . Many leading Norwegians declare that those who shout so loudly for a revision of the Constitution are, after all, in the minority. They argue that claims on Sweden are, for the most part, merely advanced as a party cry, and that if a general appeal were made to the country, the majority would pronounce, without hesitation, in favor of a continuation of the Union to the State which has given Norway, for the first time in her history, a period of nearly a century of peace and uninterrupted prosperity. . . .

"The Left support their plea for separate Consuls by pointing out that the mercantile navy of Norway is far larger than that of Sweden; they claim for it, in fact, that it is the third largest in the world. A reply to this is that a large proportion of this navy consists of old wooden sailing-boats, unfit for any purpose but that of carrying timber, that Norway has increased her mercantile navy at the expense of her warships, and that in time of war she would have to depend exclusively on the splendid modern battleships of Sweden for the defence both of her harbours and her shipping, since she is not now herself the owner of one single modern ironclad. It may be mentioned, in connection with this matter, that the exports and imports of Sweden are nearly treble those of Norway, the timber trade of the former country alone being the largest in Europe, and that it is in consequence of Sweden leaving so much of her carrying trade in the hands of the sister country, thereby contributing no little to her prosperity, that she has been encouraged and enabled to increase her merchant navy to such an extent. Sweden has throughout the century made enormous sacrifices for her navy, and especially has this been the case since King Oscar came to the throne. She is, therefore, so far as can be foreseen, in a position to defend both her own ports and her merchant vessels. She does not, however, profess to be equal to the task of protecting the long coast-line of Norway and that vast fleet of merchant vessels, of which the land last named is justly proud, without any aid whatever from the sister country, and statistics prove that, however willing in an emergency Norway might be, she would be unable to offer for this purpose help that would be of any practical use. . . .

"In March, 1895, during the Consular crisis, King Oscar went over to Christiania and did his utmost to effect a compromise. Demands were made on him by the Extreme Left, to which he could not consent, and he referred the Storthing to the Act of Union proving that should he agree to the claim, he would himself be guilty of a violation of the Constitution. Some painful scenes ensued, and the King left Norway almost at once. On his arrival in Stockholm he received an ovation such as few Swedish monarchs can ever have had before. Every distinguished man in the country seemed to have assembled at the railway-station to greet him ; each public body was represented by its leading member, the whole of the Swedish Parliament was present, and the fervour and enthusiasm with which he was saluted is beyond description. The Press, without a single exception, took the King's side, praising His Majesty's action in most lavish terms ; this produced more effect than anything in Norway, where the Left had counted on the support of the Radical Press in Sweden, not realising that, when once there was a question of attacks on the Union and the Constitution, all parties were equally prepared to rally round the King. . . .

"In view of the strained relations between Sweden and Norway, it may be said that Russia's encroachment on the liberties of Finland is extremely ill-timed if, as is probable, she contemplates offering her protection to Norway as she did to the neighbouring country at the beginning of the century. Even if no such extreme step on the part of Russia be in view, should those among Norway's two million inhabitants who demand separation, have their way, the country would be able to offer the Imperial Government a splendid bribe as the price of its non-intervention, for to the north of the territory of Norrland lies the Varanger Fjord, an inlet including several fine harbours, which is practically free from ice throughout the year. This bay, so much coveted by the greater power, is only separated from the Czar's dominions by a narrow strip of Norwegian soil, which has already been crossed by a railway constructed by Russia with the permission of Norway. The value of this fjord to the Empire in time of war would be incalculable, and to have this magnificent gift at its disposal is a perpetual temptation to Norway to win the suffrages of the only European Power she has reason to fear should she ever hoist the flag of revolt she has so long held half-unfurled in her hand."—Constance Sutcliffe, *Scandinavia and her King* (*Fortnightly Review, Oct.*, 1897).

In 1899, an Act directing the removal of the emblem of union from the flag of Norway was passed by the Norwegian Storthing for the third time over the veto of the King, and became law, under the provisions of the Constitution.

A. D. 1899 (May—July).—Representation in the Peace Conference at The Hague. See (in this vol.) PEACE CONFERENCE.

SWITZERLAND : A. D. 1894-1898.—The Initiative and the Referendum in practice.—Three times during the year 1894, with a conservative result in each instance, important questions of legislation were submitted to the vote of the Swiss people. In one instance they were asked to demand that a portion of the federal customs dues should be assigned to the cantons for cantonal use, the avowed aim of the proposition being to weaken the Confederation. They rejected the scheme by a vote of 347,491 against

145,270. A still heavier majority was given against Socialist proposals for a constitutional article guaranteeing the right of every Swiss citizen to remunerated work. This was supported by only 75,880 votes, against 308,289. For another Socialist proposal, of gratuitous medical attendance, the necessary petition (with 50,000 signatures) in order to bring it to a popular vote, could not be obtained. A third, for extending factory regulations to all shops in which manual work is done, and for establishing obligatory trade syndicates, to fix salaries, prices, number of apprentices, was lost by a vote of 135,713 against 158,492.

Again, in 1895, the result of appeals made to the Referendum seemed to show that the disposition of the people was more conservative than that of the government. An Army Reform Bill, which enlarged the federal control of military administration, was rejected by 270,000 votes, against 195,000. Two or three other proposals of less moment were voted down by considerable majorities, and it appeared unmistakably that changes dependent on the popular will were not to be easily made.

In 1896 a proposal from the Federal Council to make the head of the War Office commander-in-chief of the army in time of peace was voted down, on a referendum, by 310,992 against 77,169. During that year there was much agitation of a project for the establishment of a State Bank, which the Chambers had sanctioned; but, on being submitted to the people, early in 1897, it was defeated by a majority of about 60,000.

Another measure, supported by the Federal Council and adopted in the Chambers, for the purchase of the five principal railways of the republic, was submitted to the decision of the Referendum in February, 1898, and carried by 384,272 votes against 176,002. Accordingly, the five railways known as the Swiss Central, the Union, the Northeastern, the St. Gothard, and the Jura Simplon, about 1,650 miles in total length, became the property of the state. The general plan of the government was to purchase the railways at twenty-five times the average net annual earnings for the past ten years, providing this was not less than the actual cost. The companies to have the privilege of deducting surplus capital, but to turn over the roads in first-class condition.

A. D. 1897.—Constitutional amendments.—Consul Germain wrote from Zurich, July, 1897: "Constitutional amendments were voted on and adopted by the Swiss people on Sunday last, July 11. The first amendment relates to forestry and gives the Federal Government control over and power to enact uniform laws to regulate Swiss forests. The second amendment puts the manufacture, sale, and importation of food products under federal control. These two amendments will relieve the cantons from vexatious legislation, heretofore differing in each of the twenty cantons and four half cantons, and give the whole of Switzerland uniform laws on forestry and the manufacture, sale, and importation of food products."—*U. S. Consular Reports, Oct.*, 1897, *p.* 296.

A. D. 1899 (May—July).—Representation in the Peace Conference at The Hague. See (in this vol.) PEACE CONFERENCE.

A. D. 1900.—Rejection of new electoral proposals.—On the 4th of November the Swiss nation gave its decision regarding two important proposals which under the name of the "double initiative" had been causing great excitement among the population of the Confederation. One of these proposals had for its object the election of members of the National Council on the system of proportional representation, the other the election of the Federal Council by the people. Both proposals were rejected, the first by 242,004 popular votes to 163,548, and by 11½ cantonal votes to 10½, and the second by 264,087 popular votes to 134,167 and by 14 cantonal votes to 8.

TELEGRAPH, Cape to Cairo.—For the projected line of telegraph from the southern to the northern extremity of Africa, Mr. Cecil Rhodes has undertaken to find most of the needed money. He began construction from the northern terminus of the Cape telegraphic service. In 1899 it was reported: "He has pushed the line northward through Rhodesia to Umtali, in Mashonaland, which is 1,800 miles from the Cape, and is pushing it on through Nyassaland to the southern end of Lake Tanganyika, another 700 miles farther north. The total distance to be covered is 6,600 miles. At the same time the Egyptian government, under British auspices, was pushing its telegraph system southward from Wady Halfa. Its advance was intermittent, the erection of the telegraph poles being necessarily dependent upon the pushing back of the outposts of the Dervishes. Last autumn, however, the destruction of the power of the Khalifa at Omdurman enabled the Anglo-Egyptian authorities to reopen the long-closed telegraph office at Khartoum. Khartoum being 1,300 miles from Cairo, this reduces the distance to be spanned by the telegraph wire to 3,500 miles; or, if we reckon Abercorn, on Lake Tanganyika, as its northern terminus, only 2,800 miles. It is being rapidly eaten into at both ends, more rapidly in the south than in the north. Still nearly one-half of the continent, and that the most difficult part, remains to be crossed."—W. T. Stead (*in McClure's Magazine, August*, 1899).—Soon after this was written, the South African War stopped the progress of the work.

TELEGRAPHS, Submarine.—"The submarine telegraphs of the world number 1,500. Their aggregate length is 170,000 miles; their total cost is estimated at $250,000,000, and the number of messages annually transmitted over them 6,000,000. All the grand divisions of the earth are now connected by their wires, and from country to country and island to island the thoughts and words of mankind are instantaneously transmitted. . . . Adding to the submarine lines the land-telegraph systems by which they are connected and through which they bring interior points of the various continents into instantaneous communication, the total length of telegraph lines of the world is 835,000 miles, the length of their single wires or conductors 3,500,000 miles, and the total number of messages annually sent over them 365,000,000, or an average of 1,000,000 messages each day. In the short half century since the practicability of submarine telegraphy was demonstrated, the electric wires have invaded every ocean except the Pacific. Nearly a score of wires have been laid across the Atlantic, of which no less than thirteen now successfully operate between the United States and Europe, while three others span the comparatively short distance between South America and the African and south European coast lines. Throughout the Indian Ocean, lines connect the far East with Europe and America by way of the Red Sea, the Mediterranean, the western coast of Europe, and the great trans-Atlantic lines. The Mediterranean is crossed and recrossed in its entire length and breadth by numerous cable lines, and the 'Mediterranean of America,' the Gulf of Mexico and the Caribbean Sea, is traversed in all directions by lines which bring its islands and colonies into speaking relations with each other and with South America, Central America, the United States, and thence with Europe, Africa, Asia—the whole world. Along the eastern coast of Asia, cable lines loop from port to port and island to island, receiving messages overland from eastern Europe by way of the Russia-Siberian land lines and forwarding them to Japan, China, Australia, New Zealand, the Straits Settlements, Hongkong, and the Philippines, and receiving others in return. South America is skirted with cable lines along its entire border save the extreme south, where they are brought into inter-communication by land lines. Along the entire coast of Africa, cables loop from place to place and from colony to colony, stretching along the entire circumference and penetrating the interior by land lines at various points. Every body of water lying between the inhabited portions of the earth, with the single exception of the Pacific Ocean, has been crossed and recrossed by submarine telegraph lines. Even that vast expanse of water has been invaded along its margin, submarine wires stretching along its western border from Siberia to Australia, while its eastern borders are skirted with lines which stretch along the western coasts of the two Americas. Several adventurous pioneers in Pacific telegraphy have ventured to considerable distances and depths in that great ocean, one cable line running from Australia to New Zealand, a distance of over 1,000 miles, and another extending from Australia to the French colony of New Caledonia, 800 miles seaward."—*U. S. Bureau of Statistics, Monthly Summary, Jan.*, 1899.

TIENTSIN.—"Tientsin is the most important city of northern China, being located at the head of the Gulf of Pechili and but 80 miles from the capital, Pekin, with which it is connected by water and by a railway line. Another completed railway line runs northeastwardly to Shanhaikwan, and an elaborate railway system is projected southward from this point through the populous provinces of Shantung and Kiangsu to connect Tientsin with Shanghai. In addition to these, the Grand Canal, the most important of the great artificial waterways of China, has for centuries connected Tientsin with the Yangtze-Kiang and Shanghai. Its population is in round numbers 1,000,000."—*United States, Bureau of Statistics, Monthly Summary, March*, 1899, *p.* 2194.

"Tientsin is situated at the junction of the Huei River (sometimes called the Grand Canal) with the Peiho River, in latitude 39° 3′ 55″ north and longtitude 117° 3′ 55″ east. It is distant from Pekin by road about 80 miles. Formerly, it was a military station only, but towards the end of the seventeenth century became a city of great importance. To-day, it is the home of 1,000,000 people, with an annual import and export trade aggregating 65,000,000 taels* ($42,250,000). . . . The growth of Tientsin within the past few years is most astonishing. The mud holes and swamps of a few years ago have been filled in; one, two, three, and even four story brick buildings erected; streets macadamized, trees planted, gas works constructed, and now pipes (from New York) for a very elaborate and perfect water system are being laid—all due to foreign enterprise. On the other hand, the Chinese authorities have been seized with the spirit of progress, and to them is due the building and furnishing of the Imperial Military College, the Imperial University, arsenals for the manufacture of guns and ammunition, a mint for the coinage of silver, and, last but not least, 320 miles of a splendid railway. . . .

"The Imperial University was established in 1895 by its president, Mr. C. D. Tenney (former United States vice-consul at Tientsin), at the request of His Excellency Sheng Hsuan, with the advice and approval of the Emperor. His Excellency Wu Ting-fang, present Chinese minister at Washington, and Mr. Ts-ai Shao-chin, member of Viceroy Wang's staff, were the first directors. The university is divided into three departments, viz, collegiate, preparatory, and railway. The preparatory course covers four years, after which the students enter the collegiate department, where they remain another four years. At the end of the first year in the collegiate department, the students are drafted into special classes—civil, mining, and mechanical engineering, and law. Each special branch is in charge of foreign professors, assisted by Chinese professors. The railway department was organized for the purpose of providing men for subordinate positions in the railway service—draftsmen, engineers, station masters, etc. The students are admitted to the various departments by competitive examinations. The government of the university is solely in the hands of the president and directors, the former being responsible for the educational work of the institution. Thirty students in each class are supported by the Government and are bound to Government service after their graduation. The present number of students is 250, and the annual expenses are 60,000 taels ($39,000), entirely borne by the Government. The president and four of the five professors are citizens of the United States.

"The Imperial Military College was established by His Excellency Li Hung-Chang, the viceroy of Chihli, in the year 1884. At the beginning, it was simply intended to give employment to the German officers under contract with the Government, but the necessity of training men in the arts of war led the viceroy to memorialize the Throne in behalf of a permanent military college. A suitable building was erected, at a cost of 50,000 taels ($32,500), and the annual expense of maintenance is about the same amount. The students are drafted from the different military camps, and they are supported by the generals under whom they were serving. After a two years' course, they return to their respective commands as instructors. The school is under the directorship of Taotai Yint Chang, a Manchu, who received his military education in Germany, and held a commission of lieutenancy in the Austrian army. All the principal instructors are Germans, most of them being noncommissioned officers."—*U. S. Consular Reports, Dec.*, 1898, *pp.* 550–52.

TOLEDO, O.: A. D. 1899-1901.—The election of Mayor Jones.—Importance was given to the municipal election of April, 1899, in Toledo, Ohio, by the character of the chosen Mayor, Samuel M. Jones. He had first made himself known as a manufacturer in the city, by his dealings with his employees. The Golden Rule was posted in his shops, as the law by which he expected his own conduct and that of the men who served him to be governed, and it was found that he consistently obeyed the rule. In 1897, the Republican party, needing a candidate for Mayor, put him forward and elected him. In office, he served the people so well and the politicians and the monopoly interests so little to their satisfaction, that his party, obedient to the latter, cast him aside and nominated to the Mayor's office a more "practical" man. Mr. Jones, thereupon, was induced to present himself as an independent candidate, on a platform denounced as "socialistic," and was elected by more than double the total vote cast against him, for the regular candidates of the Republican and Democratic parties. In the following November, Mr. Jones was put forward as an independent candidate for Governor of Ohio, and was not elected, but received something over 106,000 votes.

On the 1st of April, 1901, Mr. Jones was re-elected Mayor of Toledo for a third term, again as an Independent, and as a champion of municipal ownership for all public utilities.

TRIPLE ALLIANCE, The.—The treaty of the Triple Alliance, or Dreibund, of Germany, Austria-Hungary and Italy, formed in 1882 and renewed in 1887 (see, in vol. 5, TRIPLE ALLIANCE), for common defense against France and Russia, expires in 1903. Rumors of an intention on the part of Italy to withdraw from the Alliance arose in the spring of 1901, and received some color from a marked exchange of friendly courtesies between Italy and France in April, when an Italian squadron was entertained at Toulon, on the occasion of a visit from the President of the French Republic to that city. But there seems to be little reason to believe that any such action has been determined by the Italian government.

Industrial combinations in the United States.—An "Industrial Commission," created by Act of Congress in June, 1898—see (in this vol.) UNITED STATES OF AM.: A. D. 1898 (JUNE)—submitted a preliminary report on the 1st of March, 1900, on the subject of "Trusts and Industrial Combinations," from which the following historical information is taken:

"The form of organization that has given them [industrial combinations] their name 'trusts' was the one started by the Standard Oil Trust in 1882, afterwards followed by the Whisky combination—the Distillers and Cattle Feeders' Trust—and by the Sugar Trust—the American Sugar Refineries Company. The plan of that organization was as follows: The stockholders of the different corporations entering the combination assigned their stock in trust to a board of trustees without the power of revocation. That board of trustees then held the voting power of the stocks of the different companies, and was thus enabled, through the election of directors, to control them absolutely. In place of the stock thus received the trustees issued trust certificates upon which the former holders of the stock drew their dividends, these being paid upon the certificates regardless of what disposition was made of the plants of the different corporations. Owing largely to hostile legislation and to the bitter feeling against the trusts above named, these

trusts, after some adverse decisions of the courts, went out of existence, reorganizing as single corporations in most cases, and none at the present time remain. A somewhat similar form of organization, however—the voting trust—is found at times. In this form of trust the holders of at least a majority of stock of a single corporation put their stock into the hands of trustees for the purpose of voting it, retaining for themselves all the privileges of drawing dividends and making transfers. Such a voting trust has been formed, it is claimed, in the case of the Pure Oil Company —an organization of the independent oil interests —for the sake of protecting a majority of the stock against purchase by the Standard Oil Company. . . . As a form of corporate combination for the sake of securing monopolistic control, the voting trust does not seem to be now in vogue.

"The form of organization that seems most common at the present time is that of the single large corporation, which owns outright the different plants. A combination of this kind is formed by the purchase of all of the plants of the different corporations or individuals who enter into it, the corporations then dissolving as separate corporations. Often payments for the plants are made largely in stock of the new corporation, so that many of the former owners maintain their interest in the business. The affairs are then managed entirely by the stockholders of the one corporation through their board of directors, elected in the ordinary way. It is usual for these larger corporations to choose a very liberal form of charter.

"A third form of organization, which is in many particulars quite like the original trust form, is that which has been taken by the Federal Steel Company, by the Distilling Company of America, and others. In this form the central company, instead of purchasing the plants of the different corporations which it is proposed to unite, simply buys a majority of the stock, or possibly the entire stock of each one of the corporations. The separate corporations keep in separate corporate existence, but a majority of the stock being held by the one larger corporation, its officers, of course, elect the boards of directors of all of the separate corporations, and in this way hold ultimately complete control. It is usually true that the separate corporations manage their own affairs practically independently, although they are furnished information regarding the workings of the other establishments in the combination through the central officers, and are doubtless largely directed in their policy in this way.

"In the case of the Standard Oil Company, when the original trust was dissolved, there were issued to the holders of trust certificates proportional amounts of stocks of each of the constituent companies, and since the trustees themselves had held a majority of the certificates, they retained as individuals a majority of the stock in each one of the companies that had formerly been in the trust. The separate corporations were named as separate corporations, but the majority of the stock of all being held in the same hands, the directors of the different companies were largely the same men, and their affairs were managed in unison in substantially the same way as had been the case before. The new Standard Oil Company of New Jersey has recently been formed with the intention of transferring the stocks of the different corporations into the stock of the new company, so that when the transfer has been finally made, one single corporation, the Standard Oil Company of New Jersey, will own outright the property now owned by the separate companies which are commonly known and mentioned together under the name of the Standard Oil Company. This combination at present has no formal unity. It has a practical unity as great as it will have probably after the complete change into the New Jersey company is effected.

"As most of the larger corporations have, within the last few years, been organized in New Jersey, it will be worth while to note the special advantages given by the corporation laws of that State. The advantages that seem to be brought out most clearly are: First, taxation. The organization tax is considerably lower than that of most of the States, while the annual tax is fixed upon the amount of capital paid in, so that it is an absolutely certain quantity and can be determined by anyone, thus leaving no opportunity for corruption on the part of either the corporation itself or of State officials. The rate of the tax is moderate, and decreases as the amount of capital increases. Second. Perhaps a greater advantage is to be found in the liberal form of the New Jersey charter. The amount of capital is unlimited, the period of organization is unlimited, the amount of indebtedness is not limited, the powers that are granted to corporations are also practically unlimited, with the exception that an ordinary business corporation is forbidden to engage in banking. The Federal Steel Company would have found it impossible to organize for the purpose of engaging in the various enterprises which it has undertaken had it incorporated in the State of Illinois or of Pennsylvania. The same thing holds also with reference to the American Steel and Wire Company. Third. There is less liability on the part of the stockholders than in several other States. Fourth. The directors have also less liability. In case of issuance of stock for property the judgment of the directors is conclusive as to the value of the property taken, unless there is evidence of fraud. Stock issued thus for property is considered fully paid up, and the stockholders can not be held further liable in case the property proves to have been taken at less than its cash value. The directors are not personally liable for the debts of the corporation if they fail to file reports or to conform with certain other requirements. . . .

"During the past few years the total capitalization of the new industrial combinations has reached an enormous sum, well into the billions, and in many cases at least the nominal capitalization of the corporations far exceeds the cash value of their property. . . . Regarding most of the combinations concerning which testimony has been taken the facts appear quite clear. None of the witnesses believe that the Standard Oil Company is on the whole over-capitalized, as compared with the present value of the plants. Its opponents believe that its profits are enormous on the capitalization. The witnesses representing the Standard Oil Company itself, while admitting very large profits and presenting no very definite facts regarding the capitalization, still give the same impression from their testimony. The American Sugar Refining Company seems to be, beyond question, capitalized at a sum twice as large at least as the cost of reconstruction of the

plants themselves. The capitalization was shown to be several times the original capitalization of its constituent members. . . .

"Perhaps the clearest testimony on this subject of capitalization came from the witnesses connected with some of the iron and steel companies. The witnesses regarding the tin-plate combination were in substantial agreement in stating that the owners of most of the plants gave an option on their plants at what they considered was the fair cash value, although, owing to the good times and to the fact that, in many cases, the industries were quite prosperous, the prices were high. They were then given, by the promoter, the option of taking this valuation of their property in cash, or of taking instead the same amount in preferred stock with a like amount of common stock added as bonus. . . . One of the witnesses, at least, conceded that the total amount of stock thus paid for the plants, since the cash option was taken in prosperous times and included not merely the value of the plant but also the good will of the running business, probably amounted in some instances to three or four or even five times the cash cost of the plants at that time. . . . Exactly the same system seems to have been followed in the capitalization of the National Biscuit Company, the National Steel Company, and the American Steel Hoop Company. In all these cases there was a clear understanding that the common stock represented simply bonus or anticipated profits. . . .

"In the case of the American Tin Plate Company there was also added ten millions of common stock, which was issued to the promoter for his services and for the cost of organization. It is presumed, of course, that not a little of this ten millions had to be paid out in commissions etc. to those who aided in securing the required amount of capital, including cash furnished for working capital. The amount of extra common stock issued for purposes of promotion in the American Steel Hoop Company and in the National Steel Company was $5,000,000 in each case."—*U. S. Industrial Commission, Preliminary Report* (*56th Cong., 1st Sess., House Doc. No.* 476, *pt.* 1), *pp.* 10–15.

Standard Oil Company.—As the rise of the Standard Oil Company seems to have marked the beginning of the movement towards combination in productive industries, on the great scale of recent times, the following passages from testimony concerning the history of the Company and of the oil business is especially interesting. The first is from the examination of Mr. John D. Rockefeller:

"Q. What was the first combination in which you were interested of different establishments in the oil industry?—A. The first combination of different establishments in the oil industry in which I was interested was the union of William Rockefeller & Co., Rockefeller & Andrews, Rockefeller & Co., S. V. Harkness, and H. M. Flagler, about the year 1867.

"Q. What were the causes leading to its formation?—A. The cause leading to its formation was the desire to unite our skill and capital in order to carry on a business of some magnitude and importance in place of the small business that each separately had theretofore carried on. As time elapsed and the possibilities of the business became apparent, we found further capital to be necessary, obtained the required persons and capital, and organized the Standard Oil Company with a capital of $1,000,000. Later we found more capital could be utilized and found persons with capital to interest themselves with us, and increased our capital to $3,500,000. As the business grew, and markets were obtained at home and abroad, more persons and capital were added to the business, and new corporate agencies were obtained or organized, the object being always the same, to extend our business by furnishing the best and cheapest products.

"Q. Did the Standard Oil Company or other affiliated interests at any time before 1887 receive from the railroads rebates on freight shipped, or other special advantages?—A. The Standard Oil Company of Ohio, of which I was president, did receive rebates from the railroads prior to 1880, but received no special advantages for which it did not give full compensation. The reason for rebates was that such was the railroads' method of business. A public rate was made and collected by the railway companies, but, so far as my knowledge extends, was never really retained in full, a portion of it was repaid to the shippers as a rebate. . . . The Standard Oil Company of Ohio, being situated at Cleveland, had the advantage of different carrying lines, as well as of water transportation in the summer, and taking advantage of those facilities made the best bargains possible for its freights. All other companies did the same, their success depending largely upon whether they had the choice of more than one route. The Standard sought also to offer advantages to the railways for the purpose of lessening rates of freight. It offered freights in large quantity, car-loads and train loads. It furnished loading facilities and discharging facilities. It exempted railways from liability for fire. For these services it obtained contracts for special allowances on freights. These never exceeded, to the best of my present recollections, 10 per cent. But in almost every instance it was discovered subsequently that our competitors had been obtaining as good, and, in some instances, better rates of freight than ourselves. . . .

"Q. About what percentage of the profits of the Standard Oil Company came from special advantages given by the railroads when these were greatest?—A. No percentage of the profits of the Standard Oil Company came from advantages given by railroads at any time. Whatever advantage it received in its constant efforts to reduce rates of freight was deducted from the price of oil. The advantages to the Standard from low freight rates consisted solely in the increased volume of its business arising from the low price of its products. . . .

"Q. To what advantages, or favors, or methods of management do you ascribe chiefly the success of the Standard Oil Company?—A. I ascribe the success of the Standard to its consistent policy to make the volume of its business large through the merits and cheapness of its products. It has spared no expense in finding, securing, and utilizing the best and cheapest methods of manufacture. It has sought for the best superintendents and workmen and paid the best wages. It has not hesitated to sacrifice old machinery and old plants for new and better ones. It has placed its manufactories at the points where they could supply markets at the least expense. It has not

only sought markets for its principal products, but for all possible by-products, sparing no expense in introducing them to the public. It has not hesitated to invest millions of dollars in methods for cheapening the gathering and distribution of oils by pipe lines, special cars, tank steamers, and tank wagons. It has erected tank stations at every important railroad station to cheapen the storage and delivery of its products. It has spared no expense in forcing its products into the markets of the world among people civilized and uncivilized. It has had faith in American oil, and has brought together millions of money for the purpose of making it what it is, and holding its markets against the competition of Russia and all the many countries which are producers of oil and competitors against American oil."—*The same, pt.* 2, *p.* 794.

Against the testimony of Mr. Rockefeller that the Standard Oil Company obtained no exclusive advantages from railway companies, other witnesses contended that such advantages were given to it. On this point, the Commission say in their report: "It was charged by most of the leading opponents of the Standard Oil Company that the chief reason for the rapid growth of the Standard, and its apparent great success in underselling rivals and winning markets, was the special advantages that it had received from the railroads. It was claimed that the company not merely received discriminating rates on its own shipments, but that it was frequently paid rebates on the shipments of its competitors. It was conceded by representatives of the Standard Oil Company that before the passage of the interstate-commerce act special freight rates and rebates were frequently received. It was asserted, however, that this was the usual custom on the part of all railroads with all large shippers, and that competitors of the Standard had received similar favors. . . .

"Much greater differences of opinion exist with reference to the condition of affairs since the passage of the interstate-commerce act. It has been charged as a matter of general belief on the part of almost all of the opponents of the Standard Oil Company that these discriminations in various forms have been continually received even up to date. On the other hand, these charges have been denied in toto and most emphatically by every representative of the Standard Oil Company with reference to all cases excepting one, which they claim was a mistake, the amount of freight due being promptly paid on discovery of the error. . . . Certain opponents of the company claimed that the Standard Oil Company received commissions for shipping freight over railroads, which commissions amounted to rebates. This charge is emphatically denied by the Standard Oil Company and no positive proof on the subject has been offered."—*The same, pt.* 1, *p.* 25.

Of testimony on the subject of pipe-line consolidations in the oil business, the report says: "Mr. Boyle [publisher of the 'Oil City Derrick'] gives a somewhat detailed history of the development of pipe-line transportation in the oil business. The first successful pipe lines were established in 1864 from Pithole to the Miller farm. Others were soon constructed in the same district. These were usually short, scarcely over 5 miles in length, and at first did not even connect directly with the wells themselves, although this practice was soon established. Numerous lines soon grew up in different parts of the oil region, but the first more extended systems date from 1869, when the Mutual Pipe Line was laid more or less throughout Clarion County. Vandergrift and Forman later established a system through Butler County which became the nucleus of what is now known as the United Pipe Line System. The original pipe lines were only transporters of oil, but the nature of their work soon led them to purchase oil, although at first it was not in the name of the company itself. . . .

"Mr. Emery [of Bradford] also makes a brief statement of the early history of pipe lines. He states that the first attempt to combine separate pipe lines into a more complex system was made by William H. Abbott and Henry Harley, beginning about 1866. By 1869 they had a capital of nearly $2,000,000, and 500 miles of pipe centering in the Miller farm. The concern was then known as the Pennsylvania Transportation Company.

"Several witnesses describe the process by which the Standard Oil Company gradually secured control of the various pipe lines throughout the oil regions. The opponents of the trust attribute the success of the Standard Oil Company in this movement to the railway discriminations upon oil received from pipe lines controlled by that company. It appears that for a considerable period a rebate of 22 cents per barrel was allowed on oil from pipe lines maintaining the agreed rates of pipage. . . . Other opponents of the combination ascribe its success in driving out competing pipe lines largely to the practice of paying premiums upon oil in the territory of such competing lines.

"Mr. Boyle gives the fullest statement of the growth of the pipe-line consolidation during the seventies and attributes it to the natural advantages arising from large capital and from skill in organizing. He testifies that during the early part of that decade very numerous pipe lines had been established. These were at first constructed on a small scale by separate oil producers, but, having entered the business, many producers were inclined to extend their lines and form a system. There thus arose an excessive number of competing lines, and the solvency and integrity of some of them became a matter of doubt. This excessive competition was the cause of driving the pipe lines into a more complete organization. As early as 1873 or 1874 a pooling arrangement was made by some of the pipe lines, and rebates were paid by railways on oil received from such lines. The United Pipe Line Company was established in 1877, with a capital at first of $3,000,000, and acquired by purchase a large number of lines. The new company included many producers and stockholders of the smaller companies, but it is estimated that the persons controlling the Standard Oil Company had somewhat more than a one-half interest in the United Pipe Lines. The National Transit Company is the present owner of the United Pipe Lines System, and the Standard Oil Company controls the National Transit Company. . . .

"It was pointed out by several witnesses that the almost complete control of the pipe-line system by the Standard Oil Company gives it great power in fixing the prices of crude oil,

since producers can dispose of their product only through the pipe lines, especially in view of the further fact, which is alleged, that railway rates on crude oil are by agreement kept at least as high as, if not higher than, the pipe-line charges. The pipe-line system also gives the combination great advantage over other refiners, who must pay the rates of pipage fixed by the Standard, which are claimed to be excessively high, or the high rates of freight."—*The same, pt.* 1, *p.* 100.

Sugar Trust.—The following is from the testimony of Mr. Henry O. Havemeyer:

"Q. The history and organization of the Sugar Refining Company has been gone over so many times in testimony before that it is not worth while to dwell on it at length, but in order that we may have the record somewhat complete, will you give a brief sketch of its development, going back to the conditions of the old sugar trust? [1887]—A. There were about twenty-five different firms or corporations in the sugar business. I think the evidence before some one of the Congressional committees was that for a period of 5 or 6 years before the formation of the trust, 18 of those failed or went out of business.

"Q. Eighteen out of 25?—A. Not out of 25; 18 out of about 40. It occurred to some one to consolidate the others, and 18 out of 21, I believe, went into the trust, leaving 3 or 4 outside, who represented, I think, 30 per cent. Then Spreckles built a refinery in Philadelphia, and, 2 or 3 years after the formation of the trust, the trust or its successor bought the Philadelphia refineries.

"Q. Will you explain in a word or two the difference between the trust and its successor and the reason for its going into this other form?—A. The trust was attacked, and the courts decided it was illegal, and a company was organized in New Jersey which bought outright and paid for the different companies, which were the constituent companies of the trust. They then represented, I think, over 90 per cent of the output; then other refineries began to be constructed, until now I think they would represent 50 per cent of the consumption. . . .

"Q. The condition before the formation of the trust was about this: When these 18 different companies failed, business was in such a condition, as a whole, that it was considered unprofitable?—A. Very unprofitable—ruinous.

"Q. Now, can you tell what special advantages—if you can give this in some detail I shall be glad—come from this organization, and in what way you make your savings?—A. The greatest advantage is in working the refinery full and uninterruptedly. Of course, if you have a capacity of 140,000,000 and can only melt 100,000,000 somebody has got to cut down materially. The moment you cut down you increase the cost; by buying up all the refineries . . . and concentrating the meltings in four refineries and working them full, you work at a minimum cost. That enables us to pay a dividend on the common stock.

"Q. So the chief advantage in the combination was in concentrating the production and destroying the poor refineries?—A. Precisely."—*The same, pt.* 2, *p.* 109.—See, also (in this vol.), UNITED STATES OF AM.: A. D. 1897 (MARCH—JULY).

The earlier combinations in steel production.—Mr. Reis, president of the National Steel Company, states that that company was organized in February, 1899, under the laws of New Jersey, with a capital of $59,000,000, $27,000,000 of 7 per cent cumulative preferred stock and $32,000,000 of common stock. The company includes six steel plants, located at New Castle, Youngstown, Sharon, Mingo Junction, Bellaire, and Columbus. These plants are engaged in producing steel billets and slabs, which are the raw materials for making tin plates and various other products. The plants include 15 blast furnaces. The company also owns iron mines in northern Michigan at Iron Mountain and Ishpeming. These are expected to produce from 1,250,000 to 1,400,000 tons of ore annually, the total amount required for the use of the steel plants in the combination being about 3,000,000 tons. The National Steel Company also owns nine lake boats for transporting ore, capable of carrying about 1,000,000 tons annually. . . . Mr. Reis testifies that the National Steel Company is not a 'trust' in the ordinary sense, since it makes no attempt to secure control of a large proportion of the output of steel. Its economies are sought in the combination of steel plants with sources of raw materials. The National Steel Company produces only about 18 per cent of the Bessemer steel made in this country. The other chief concerns engaged in steel production are the Carnegie Steel Company; Federal Steel Company; the Maryland; Jones & Laughlin Steel Company; Wheeling Steel and Iron Company, and the Lorain Steel Company. . . .

"Mr. Reis states that the tariff, so far as it is placed upon steel billets, bars, and sheets, is no longer necessary for the protection of the industry. No steel is imported, and during the past 8 or 10 years the tariff has cut no figure. But if the tariff should be removed from tin plate or from certain other branches of the iron and steel industry there would be an indirect effect upon the making of steel. . . .

"Mr. Gary states that the Federal Steel Company owns all the capital of the Minnesota Iron Company, the Illinois Steel Company, the Lorain Steel Company, and the Elgin, Joliet and Eastern Railroad Company. The Minnesota Iron Company is the owner of 150,000 acres of iron ore property on the Vermilion and Mesaba ranges. It owns the Duluth and Iron Range Railroad Company, connecting its mines with Lake Superior at Two Harbors and Duluth. It owns large ore docks and also 22 steel lake vessels capable of carrying 2,000,000 tons per annum. The product of the Minnesota Iron Company will probably be 3,500,000 tons in 1900. The Lorain Steel Company manufactures chiefly steel rails for street railways, and to some extent steel billets. It produces about 500,000 tons of pig iron per year. The Illinois Steel Company has plants at North Chicago, West Chicago, South Chicago, Milwaukee, and Joliet. It produces about 1,500,000 tons of pig iron per year, and also manufactures steel rails, billets, plates, etc. It owns the Chicago, Lake Shore and Eastern Railway, which connects its plants in the neighborhood of Chicago. It also owns large tracts of coal property in Pennsylvania and West Virginia, and makes there about 1,500,000 tons of coke per year. This company also owns iron mines in Wisconsin and Michigan. . . .

"Mr. Stetson, a lawyer, who drafted the charter and conducted the legal arrangements in the

organization of the Federal Steel Company, testified that it was organized in September, 1898, with an authorized capital of $100,000,000 6 per cent noncumulative preferred stock and $100,000,000 common stock. Of this, $98,000,000 in all was originally issued. . . . Mr. Gary states that the Federal Steel Company is not a trust in any sense. It has not sought to restrict competition and has not brought together companies which were competing with one another, as is the case with most so-called trusts. The company has bought the stocks of companies doing different lines of business, just as an individual might do. . . .

"The American Steel and Wire Company operates iron mines in the Lake Superior region. It controls, perhaps, one-sixth or one-seventh of the output of that region. It owns and operates coal mines and burns coke. It operates 8 or 9 blast furnaces, 17 open-hearth furnaces, from 22 to 25 rod rolling mills, and from 20 to 30 wire mills. Its finished product is plain wire, barbed wire, wire fencing, rope, etc., wire nails, and all kindred articles. . . . Mr. Gates, chairman of the American Steel and Wire Company of New Jersey, testified concerning the formation of that company. It was organized on January 12, 1899. A gradual process of consolidating wire plants had been going on previously. As early as 1890 companies in which Mr. Gates was interested practically controlled the manufacture of barbed wire in this country. In December, 1897, and January, 1898, J. P. Morgan & Co. investigated the value of the various wire plants throughout the country with a view to further consolidation. The American Steel and Wire Company of Illinois, formed in March, 1898, seems to have resulted from this effort. . . . The combination into the American Steel and Wire Company was not rendered necessary by excessive competition and consequent losses among the wire companies. The Consolidated Steel and Wire Company, for example, made between 27 and 28 per cent during the last three years of its existence. It was believed, however, that more profit would be made through better management under consolidation."—*The same, pt.* 1, *p.* 190.

Tin Plate Industry.—"The American Tin Plate Company was incorporated under the laws of New Jersey on January 6, 1899. Its authorized capital is $20,000,000 of 7 per cent cumulative preferred stock and $30,000,000 of common stock. Of this, $18,000,000 of preferred and $28,000,000 of common stock has been issued. . . . It is made clear by the evidence of all the witnesses that the tin-plate industry in the United States has been built up practically since the McKinley tariff of 1890, which raised the duty on tin plates from 1 to 2.2 cents per pound. Without the protection, all the witnesses agree, the industry could not have been profitably established. Having once been established, it was able to submit to the reduction of the duty to 1.2 cents by the Wilson tariff of 1894, and is now sufficiently protected by the duty of 1.5 cents under the Dingley tariff of 1897."—*The same, pt.* 1, *pp.* 174 *and* 187.

The climax of consolidation in steel industries.—Formation of the United States Steel Corporation.—In February, 1901, the climax was reached in movements of industrial combination, so far as concerns the production and greater uses of iron and steel, by the formation of one gigantic corporation, to embrace not only the companies named above, but to purchase the enormous interests of the Carnegie Company outright, and to take in several organizations of more than considerable magnitude besides. The combination was effected by the firm of J. P. Morgan & Co., New York, as "syndicate managers," and an official statement of its essential terms was published in a circular from that firm, on the 2d of March, addressed to the stockholders of the Federal Steel Company, National Steel Company, National Tube Company, American Steel and Wire Company of New Jersey, American Tin Plate Company, American Steel Hoop Company, American Sheet Steel Company, to whom the following announcement was made: "The United States Steel Corporation has been organized under the laws of the State of New Jersey, with power, among other things, to acquire the outstanding preferred stocks and common stocks of the companies above named, and the outstanding bonds and stock of the Carnegie Company. A syndicate, comprising leading financial interests throughout the United States and Europe, of which the undersigned are managers, has been formed by subscribers to the amount of $200,000,000, (including among such subscribers the undersigned and many large stockholders of the several companies,) to carry out the arrangement hereinafter stated, and to provide the sum in cash and the financial support required for that purpose. Such syndicate, through the undersigned, has made a contract with the United States Steel Corporation, under which the latter is to issue and deliver its preferred stock and its common stock and its five per cent. gold bonds, in consideration for stocks of the above named companies and bonds and stock of the Carnegie Company and the sum of $25,000,000 in cash.

"The syndicate has already arranged for the acquisition of substantially all the bonds and stock of the Carnegie Company, including Mr. Carnegie's holdings. The bonds of the United States Steel Corporation are to be used only to acquire bonds and 60 per cent. of the stock of the Carnegie Company. The undersigned, in behalf of the syndicate, and on the terms and conditions hereinafter stated, offer, in exchange for the preferred stocks and common stocks of the companies above named, respectively, certificates for preferred stock and common stock of the United States Steel Corporation, upon the basis stated."

Details relating to the terms and the procedure of exchange are then given, and several statements of public interest are made, among them these: "The authorized issue of capital stock of the United States Steel Corporation presently provided for in said contract is $850,000,000, of which one-half is to be seven per cent. cumulative preferred stock and one-half is to be common stock. The company will also issue its five per cent. gold bonds to an aggregate amount not exceeding $304,000,000. In case less than all of the bonds and stock of the Carnegie Company or less than all of the stocks of the other companies above referred to shall be acquired, the amounts of bonds and stocks to be issued will be reduced as provided in said contract. The forms of the new bonds and of the indenture securing the same, and of the certificates for the new preferred and common shares, and the entire plan

of organization and management of the United States Steel Corporation, shall be determined by J. P. Morgan & Co. Every depositor shall accept in full payment and exchange for his deposited stock the shares of the capital stock of the United States Steel Corporation, to be delivered at the rates above specified, in respect of the stock by him so deposited; and no depositor or holder of any receipt issued hereunder shall have any interest in the disposition of any other of the shares of stock, or of the bonds of the United States Steel Corporation, by it to be issued and delivered to or for account of the syndicate or of any proceeds thereof. All shares of the United States Steel Corporation deliverable to or for account of the syndicate, which shall not be required for the acquisition of the stock of the Carnegie Company or for delivery to depositors under the terms of this circular, are to be retained by and belong to the syndicate. . . . It is proper to state that J. P. Morgan & Co. are to receive no compensation for their services as syndicate managers beyond a share in any sum which ultimately may be realized by the syndicate."

Subsequently the American Bridge Company and the Lake Superior Consolidated Iron Mines were taken into the consolidation, and, on the 1st of April, 1901, the United States Steel Corporation filed with the Secretary of State at Trenton, N. J., amended articles of incorporation increasing its authorized capital stock to $1,100,000,000. The stock is equally divided into 7 per cent. cumulative preferred stock and common stock. The total is greater by $250,000,000 than the amount stated in the circular issued by J. P. Morgan & Co., on March 2, as "presently provided for," and with the 5 per cent. gold bonds, not exceeding $304,000,000, brings the security issues of the great steel combination up to $1,404,000,000.

Industrial combinations in European countries.—"Trusts of the magnitude and influence of those now so numerous in the United States are as yet rare in the Old World. . . . It is in Germany, . . . of all European countries, that trusts have spread most extensively and have been most successful. . . . The German technical journals for 1897 enumerate about 180 trusts, of which, it is true, only a few would correspond to American ideas, but all of which demonstrate a capacity for wider combination and fuller development. . . . As regards great industrial combinations, the most striking advance has been made in the German coal industry; the most prominent organization in this department being the Rheinisch-Westfälische Kohlensyndikat, which is distinguished by the characteristics of a genuine trust, exercising within its sphere of activity almost unlimited power. Like the American Standard Oil Company, it directly controls the sales, leaving the matter of production entirely to the separate companies. Under the innocent title of 'eines Vereins zum Ankauf und Verkauf von Kohlen' (a society for the buying and selling of coal), this trust has, for the past five years, completely controlled the West German coal industry, and dictated prices. . . .

"In Austria and Hungary trusts have not yet extended so rapidly. Nevertheless, on various occasions several of them have given rise to such unfavorable comment that the sentiment in favor of a legislative restriction of the movement is to-day much more pronounced in the Austrian than in the German Parliament. . . .

"As far as England is concerned, it must be admitted that, notwithstanding her great industrial activity and a competitive warfare not less pronounced than that of other states, the Trust system has as yet found but tardy acceptance in that country. This is doubtless due in some degree to the thorough application of the principle of Free Trade; for it is well known that the largest trusts are powerless unless their interests are secured by a protective tariff excluding from the home market the products of foreign countries. Furthermore, we should remember that in England the principle of individual freedom is regarded as inviolable. There, it still obtains more widely than in most other countries; and the majority of British merchants consider the principle involved in the formation of trusts as a serious menace to the freedom of the individual. . . .

"France is a country in which the Trust system has long flourished and assumed extensive proportions. In the iron trade, great trust companies—local in their character, it is true—have existed for the last twenty years; and the most powerful of these, like those of Germany, limit their activity to the establishment of sales-depots. The chemical industry of France, like that of Germany, is now controlled almost exclusively by combinations. . . . Several international trusts, such as the Zinc Trust, also have their headquarters at Paris. Belgium, like France, is interested in most of the international trusts; and there, as in France, the Trust system has been successful largely in those enterprises which, in other industrial countries, have hitherto maintained a stubborn resistance to the inroads of the Trust. . . .

"In respect to the economic value of trusts in Europe, it may be said that the influence exerted by them, both for good and for evil, is, in its essential features, similar to that exerted by the trusts of America."—W. Berdrow, *Trusts in Europe* (*Forum, May*, 1899).

Industrial combinations in England.—"England no longer enjoys that immunity from monopoly which was the boast of its own economists and the object-lesson of American free-traders. While the position of trusts has not greatly changed in the United States during the past ten years, except to develop on the same lines, a commercial revolution is taking place in England. The country is becoming honeycombed with combinations and trusts; and, what is more and perhaps worse, there is no agitation against the system. No effort is made to check trusts or control them. . . . There are a large number of informal combines in England which give some advantages of monopoly without unity of control or financial association. Thus, the railroad corporations have long ceased to compete as regards rates. It is perfectly well understood, and has been admitted over and over again by railroad men before Parliamentary committees, that the railroad companies combine. They agree in their rates, but compete in facilities, speed, etc. If it were not that the railroad companies are strictly regulated by the Board of Trade, this system of concerted action would be a very serious factor. As it is, the railroads represent the most powerful interest in Parliament. . . . Similarly, the leading

shipping companies have fixed rates for freight, to stop under-cutting, competing only in speed and facilities. . . . There are various understandings and agreements in the coal-trade. . . .

"Until a few years ago, England was not ripe for trusts. The early efforts failed either through the overcapitalization of the concerns, opposition from outsiders, or defective management. . . . The monopoly that has been most prejudicial to public interests—the National Telephone Company—is now being undermined. . . . The agitation against this monopoly on the part of municipalities became so strong that in 1898 the House of Commons appointed a committee to investigate the question. The result was that last year an act was passed giving municipalities the right to establish telephones, and authorizing the post-office to spend $10,000,000 in creating a competitive system in London. . . .

"During the last three years, there has been a prolific crop of amalgamations—half-way houses to trusts. . . . There is one kind of amalgamation taking place that deserves special note. Great mining, iron, engineering, and shipbuilding firms have come together. Instead of having between the raw material and the completed ship or engineering work the intermediary profits of the iron-ore miner, the coal-miner, the iron-master, the steel-maker, the iron-founder, the forger, the marine-engine builder, and so forth,—all these middlemen are got rid of, and the whole business placed, as it were, under one roof. . . .

"Consumers in England have not so much to fear from combines regulated by the Companies' Act, and held in check by free trade, as consumers in the United States."—R. Donald, *Trusts in England* (*Review of Reviews, Nov.*, 1900).

TUNIS: A. D. 1881-1898.—During the French Protectorate.—In 1881, under pretexts which were much condemned at the time, the government of France compelled the Bey of Tunis to sign a treaty by which he submitted himself and country to the Protectorate of France (see, in vol. 2, FRANCE: A. D. 1875-1889). This action gave bitter offense to the Italians, who had been intending to lay their own hands on Tunis, and it is to be counted among the causes of the entrance of Italy into the Dreibund or Triple Alliance with Germany and Austria-Hungary in 1882. But time had so far worn away the grievance that the Tunisian protectorate was practically recognized by the Italian government in a treaty with France, signed in September, 1896. In 1898, the general results produced in Tunis by seventeen years of French control were described in an elaborate report to the British government by its representative in the Protectorate, or Regency, Sir H. Johnston. The following is quoted from that report: "The protectorate of Tunis is nominally an Arab Kingdom, ruled by a prince of Turkish descent under the guidance and control of a French Minister Resident-General and a staff of French officials. The present Bey of Tunis, Sidi Ali Pasha-Bey, is, I believe, the most aged ruler living, having been born in the year 1817. He was Heir Apparent at the time of the French treaty of protection, concluded with his elder brother, Sidi Sadok Bey. Sidi Ali at his accession to the throne in 1882 accepted the inevitable with a good grace, and has from the very first lent himself unreservedly to the French efforts for the regeneration of his country. Two of his ministers are Arabs (the Prime Minister and the Minister of the Pen), the remainder of the Council are French officials. M. René Millet, the Resident-General of France, is at the same time Minister for the Foreign Affairs of the Tunisian Government and President of the Council. . . . The personal staff of the Resident-General consists of about nine members. In addition, the French Government is more or less directly represented throughout the Regency by officials corresponding almost exactly to our vice-consuls, collectors and assistant-collectors in our African Protectorates, with this difference, that the collectors are called 'contrôleurs.' . . .

"The whole of Tunisia is now under civil administration, except the Sahara district to the south of Gabes, which still remains under military control. . . . In the districts which I visited, the natives, talking to me freely, said that they would sooner be under the rule of any Frenchman than under that of their own kaids. The French are face to face here with the same problem that we find so difficult in other oriental countries—that of creating amongst the natives a body of public officials who will keep their hands from picking and stealing, and their tongues from evil speaking, lying and slandering. No tyrant is so cruel to an Arab as an Arab; no one is harder on Muhammadans than their co-religionists. Justice is administered to Europeans, and to the protected subjects of European powers, by French tribunals, which equally deal with cases arising between Europeans and Tunisians. . . . Justice is administered to natives, in cases where natives alone are concerned, by Arab courts depending directly on the Tunisian Government, but with a Frenchman at the head of each principal department. At all the centres of population there are Arab courts of justice. The Court of Appeal for the French courts in Tunis is the Supreme Court of Algiers; the appeal from the Arab courts is to the Bey. . . . Public works are entirely under French control, though Tunisians are employed in minor posts. . . .

"Public education is under French and Arab direction. The schools and colleges more or less directly supported by the Government in the city of Tunis are the following:—The Lycée Carnot, the Collége Sadiki, the secondary school for girls, the Alawi College, two lay schools for boys, a school for Jewish children of the Israelite Alliance, a Jewish agricultural school, two schools for Jewish girls, three schools for boys under the direction of friars, and a primary

school for little girls. There is a Muhammadan university at the Great Mosque in Tunis, and there are 113 primary Muhammadan schools in the same town. In the interior there are about 98 primary schools for boys and girls, supported by the Government, and mainly under French direction. There are also about 500 Muhammadan schools in the interior, either private or assisted by Government funds. In addition to Government-supported schools, a large number of private establishments have sprung up at Tunis and at Sfax, wherein surprisingly good teaching is given, even in such subjects as music. . . . The progress of education is having very marked results on the indigenous population of the coming generation—good results in the dissipation of Muhammadan fanaticism and prejudice, results less pleasing, however, when the recipient of this education is turned out a creature with no particular religion, with no principles, and a contempt for manly labour. . . .

"In 1880 life and property were thoroughly insecure. The property of Europeans, perhaps, was safe, provided they were the subjects of a Power able to coerce the Government of Tunis, and their lives were not in any great danger in the principal towns; but it would have been impossible for any European to have travelled about many parts of the Regency without a considerable escort; impossible, indeed, to penetrate some parts of the Regency at all unless at the head of an army. . . . It was as difficult, and dangerous, and expensive to travel about the Regency 18 years ago as it is now to visit the far interior of Morocco. I spent eight months in Tunisia at that time, but never succeeded in visiting Kairwan, the Holy City. . . . Now, I can go from Tunis to Kairwan in a few hours by railway, see all the sights unhindered, enter the mosques without offence, dine and sleep at an excellent hotel, and be back again at my work in Tunis the next day. I may further add that I have just traversed much of the Tunisian Sahara and a good deal of the Jerid country with no other escort than my servant, and a native cavalryman to act as guide. I should have been equally safe had I been alone. The whole Regency of Tunis is now as safe for tourists as France."—*Great Britain, Parliamentary Publications* (*Papers by Command*, 1898, *C.* 8649–18, *pp.* 10–15, *and* 2–3).

TURKEY.

A. D. 1895.—Revolt and massacres in Armenia.—Atrocities on both sides.—A horrible condition of things in Armenia was beginning to cause excitement throughout the world. On one hand, the Armenians were in revolt against the foul Turkish government, and avenging themselves savagely upon their oppressors whenever they found the opportunity; on the other hand the Turks were making the revolt an excuse for the atrocities that are habitual to them in every such case. A special correspondent sent in January by Reuter's news agency to investigate the situation reported his conviction "that both Turk and Armenian are in the wrong, and that, as very often happens, it is the innocent who have suffered for the wrong-doings of the guilty. When it is asserted on behalf of the Turks that they are engaged in suppressing a revolutionary movement in Armenia, the statement is fully justified by the facts of the case. There does exist in Armenia an extremely vigorous revolutionary movement, and it is equally beyond question that the methods of some of the leaders of this movement are no less shocking than the barbarity of the Turk in suppressing it. At every step," he added, "I became more and more convinced that the inhuman ferocity displayed in this terrible struggle for the mastery has not been in the least exaggerated in the reports of the massacres already published in England. At Bitlis I heard the story of a Turkish soldier who boasted, as one who had achieved a glorious feat, that he had taken part in the disembowelling of thirty pregnant women. 'Two lives in one,' was the rallying cry of the armed men who perpetrated this butchery. Another soldier, who had taken part in a massacre in a church, described, gloating upon every ghastly detail, how he had slipped and slid along the blood-washed floor while the inhuman work proceeded. Unfortunately, something very like a counterpart of these atrocities is presented by the methods of some of the leaders of the Armenian revolutionary movement. I believe there is no doubt of the fact that certain of these Armenian conspirators arranged to murder the Rev. Dr. Edward Riggs and two other American missionaries at Marsovan, and fasten the blame upon the Turks, in order that, as they imagined, the United States might inflict summary punishment upon the Turkish Government, thereby rendering Armenian independence possible. The missionaries only escaped through a timely warning which they received from an Armenian friend. Dr. Riggs has devoted his life to the education of the Armenian youth in the missionary schools, but the conspirators, in their blind fanaticism, gave this fact little heed."

There could be no denial however, that the treatment of Armenia and the Armenians by their Turkish political masters was horribly bad. In May, the governments of Great Britain, France and Russia united in proposing certain reforms for Armenia, over which there were evasive and dilatory negotiations carried on by the Porte for several months. Meantime, the Armenians became more aggressive and threatening, and a secret society called the "Hintchak," which had been in existence among them since 1887, assumed great activity. Connected with the Hintchak there was said to be an organization of spies and "executioners," the latter of whom carried out decrees of assassination, arson, and bomb-explosion which the society had pronounced. Finally, on the 17th of October, an imperial irade (edict, or decree) was issued, approving and adopting the project of reform which the British, French and Russian ambassadors had submitted to the Porte. But the appearance of the sultan's ineffectual irade was

speedily followed by fresh reports of frightful massacres of Armenians, at Trebizond, Erzeroum, Bitlis, Zeitoun, and elsewhere, with outraging of women and destruction of property, which increased rather than diminished as time went on. There was no sign that anything had been done towards carrying out the promised reforms; though the sultan wrote personally to Lord Salisbury to remonstrate against an expression of skepticism concerning them, which the latter had let fall in a speech, and to say to the British Premier: "I will execute the reforms. . . . This is my earnest determination, as to which I give my word of honour." But nothing came of it all, and the Powers which had received the Sultan's promises could agree on no steps further, except to demand and obtain permission to bring, each, an additional gunboat into the Bosphorus. —*Annual Register*, 1895, *pp.* 284–94 *and* 190–93.

In response to a resolution of the Senate of the United States asking for information relative to the treatment of the Armenian subjects of the Turkish government, the Secretary of State, Mr. Olney, on the 19th of December, 1895, communicated the following, among other statements of fact: Of the massacres at Sassoun, which occurred in August, 1894, "the Department of State has little trustworthy information. . . . Since that time appalling outbreaks against the Armenians have occurred in many other parts of Asia Minor, where these unfortunate people form but a small minority of the population. At first they were scarcely more than local riots, as at Tokat, in the vilayet of Sivas, in March last, where one Armenian was killed outright and more than 30 wounded by the Turkish soldiery. In June last an attempted rising of Armenians in the province of Aleppo in the mountains of Kozar-Dagh and Zeitoun was thwarted without bloodshed by the arrest of the alleged conspirators. . . . In July a band of armed Armenians crossing into the vilayet of Erzerum from Russia was dispersed, several being killed or captured. By August the Moslem feeling against Armenians had become so far aroused that rumors of intended massacres came from several independent quarters, Harpoot, Marsovan, and Bitlis among them, which led to urgent demands by the United States minister for adequate measures looking to the due protection of American citizens in those places.

"On the 30th of September grave disturbances began at Constantinople itself. Several hundred Armenians, who had gathered for the purpose of going in a body to the Sultan's palace and demanding redress for the grievances of their countrymen, were dispersed by the police after a severe conflict in which a number of Turks and Armenians were killed and wounded. Mob violence followed, the Armenians resident in various quarters of the capital being assailed by an excited Turkish rabble, and over 50 were slain. The rioting continued the next day, October 1, in Constantinople and its suburbs. Some 800 or 1,000 Armenians were captured or arrested, many of them being armed with new revolvers of a uniform pattern. By the third day order was restored, and the Armenians who had sought refuge in their churches returned to their homes. The effect of this outbreak at the national capital was most disastrous in the provinces. The danger of a general massacre of Christians in the vilayets of Adana and Aleppo seemed so imminent, that renewed orders for the effective protection of American citizens in those quarters were demanded and obtained. Fears for their safety at Hadjin, Mersine, and Marash were especially felt, and the cruiser Marblehead was promptly ordered to Iskanderoun (Alexandretta), the nearest seaport.

"On October 8 a Turkish uprising occurred at Trebizond, due, it is reported, to an attempt to assassinate the late Vali of Van as he was about to leave for Constantinople, the Turks claiming that the act was done by an Armenian and that they were in danger of a general Armenian attack. On the 9th the disturbance was renewed, many Armenians being killed and their homes and shops looted by the mob. The authorities attempted to quell the riot, but having only some 400 soldiers and policemen at command, were powerless, and murder and pillage ran their course as long as an Armenian was in sight. The official Turkish reports give the number of Armenians slain as 182, of Turks 11, but the general estimate places the total number at some 500. Reinforcements of troops soon arrived, and quiet was restored. No injury to American citizens or property occurred.

"From this time the reports of conflicts between Turks and Armenians, with great loss of life, become frequent and confused. At Akhissar, some 60 miles from Smyrna, 50 Armenians were killed October 9. Koordish raids terrorized many parts of the Armenian provinces. At Bitlis over 500 were reported killed, the Turkish accounts alleging that the Armenians attacked the Moslem mosques during the hour of prayer. At Diarbekir 5,000 are said to have lost their lives, of which 2,300 were Mussulmans—but the Turkish authorities pronounce this estimate exaggerated. From Malatia comes the report of a 'great massacre' early in November, when every adult male Christian is said to have perished. Another sanguinary outbreak, with great slaughter, is reported from Sivas on November 12; some 800 Armenians and 10 Koords are said to have been killed. At Hadjin and Ourfa loss of life is reported, the American missionaries at those places being protected by Turkish guards under orders from the Porte.

"The Kaimakam of Hadjin is credibly said to have announced that he would destroy the town and sow barley on its site. There being an American school at that place, directed by American teachers, the United States minister thereupon notified the Porte that if one of those American ladies received injury from the riotous conduct of the populace, he would demand, in the name of the United States, 'the head of that Kaimakam.' That officer has since been removed. Later reports allege massacres at Marsovan and Amasia. The consular agent at Aleppo telegraphs that a severe conflict had occurred at Aintab, and that great fear prevailed at Aleppo. The burning of the American buildings at Harpoot took place during a bloody riot, and many persons are said to have perished in the province of that name. At Kurun 400 deaths are reported. Particulars of the recent outbreak at Marash, on November 19, in which American missionary property was destroyed, have not yet been received.

"These scattered notices, for the most part received by telegraph, are given, not as official averment of the facts stated, but as showing the

alarming degree to which racial prejudices and fanatical passions have been roused throughout Asia Minor. As above said, the Department of State has and can have official knowledge regarding but few of these reported massacres, and though up to the early part of December the United States minister estimated the number of the killed as exceeding 30,000, it is more than likely that the figures are greatly exaggerated. At latest advices mob violence and slaughter appear to have been checked, or at least to have partially subsided. The Turkish Government has been emphatic in assurances of its purpose and ability to restore order in the affected localities; new governors have been appointed in many of the provinces, troops have been sent to the scene of recent or apprehended disorders, and forces have been massed to subdue the Armenians who had gained the ascendant in Zeitoun."

Of the American missionary establishments in Turkey, and of the extent to which they suffered harm during the outbreaks, the same report gave the following account:

"The number of citizens of the United States resident in the Turkish Empire is not accurately known. According to latest advices there are 172 American missionaries, dependents of various mission boards in the United States, scattered over Asia Minor. There are also numbers of our citizens engaged in business or practicing professions in different parts of the Empire. Besides these, more or less persons, originally subjects of Turkey and since naturalized in the United States, have returned to the country of their birth and are temporarily residing there. The whole number of persons comprising these several classes can not be accurately estimated, but, the families of such citizens being considered, can hardly be less than five or six hundred, and may possibly exceed that total.

"Outside of the capital and a few commercial seaport towns, the bulk of this large American element is found in the interior of Asia Minor and Syria, remote from the few consular establishments maintained by this Government in that quarter, inaccessible except by difficult journeys, and isolated from each other by the broken character of the mountain country and the absence of roads. Under these circumstances and in the midst of the alarming agitation which for more than a year past has existed in Asia Minor, it has been no slight task for the representative of the United States to follow the interests of those whose defense necessarily falls to his care, to demand and obtain the measures indispensable to their safety, and to act instantly upon every appeal for help in view of real or apprehended peril. It is, however, gratifying to bear testimony to the energy and promptness of the minister in dealing with every grievance brought to his notice, and his foresight in anticipating complaints and securing timely protection in advance of actual need. The efforts of the minister have had the moral support of the presence of naval vessels of the United States on the Syrian and Adanan coasts from time to time as occasion required. . . .

"While the physical safety of all citizens of the United States appears up to the present date to have been secured, their property has, on at least two recent occasions, been destroyed in the course of local outbursts at Harpoot and Marash. The details of the Harpoot destruction have so far been only meagerly reported, although it took place about the middle of November. It is stated that the buildings at that place were set on fire separately by Kurds and citizens, in the presence of the Turkish soldiery, during an Armenian riot. Besides the chapel, girls' theological school and seminary building, the ladies' house, boarding house, and residences of three American missionaries were burned, the aggregate loss on the buildings, personal property, stock, fixtures, and apparatus being estimated in the neighborhood of $100,000. The United States minister has notified the Porte that the Turkish Government will be held responsible for the immediate and full satisfaction of all injuries on that score. The American Missionary School of Science at Marash was burned during a sanguinary outbreak on November 19. The value of the property destroyed has not been ascertained, but after prompt investigation the minister will make like demand for adequate indemnity."—*United States, 54th Congress, 1st Session, Senate Document, No.* 33.

"On November 9 one of the Foreign Consuls arrived at Constantinople from Erzeroum on leave, and he reported the scene on his journey as heartrending. 'The whole country between Trebizond and Erzeroum was devastated. He counted 100 dead bodies lying by the road near one town. Nearly all the villages were burnt, and in many cases the male population entirely wiped out.' At last, on December 13, 1895, Lord Salisbury received the following telegraphic despatch from Sir Philip Currie: 'It may be roughly stated that the recent disturbances have devastated, as far as the Armenians are concerned, the whole of the provinces to which the scheme of reforms was intended to apply; that over an extent of territory considerably larger than Great Britain all the large towns, with the exception of Van, Sassun, and Moush, have been the scene of massacres of the Armenian population, while the Armenian villages have been almost entirely destroyed. A modest estimate puts the loss of life at 30,000. The survivors are in a state of absolute destitution, and in many places they are being forced to turn Mussulmans. The charge against the Armenians of having been the first to offer provocation cannot be sustained. Non-Armenian Christians were spared, and the comparatively few Turks who fell were killed in self-defence. The participation of the soldiers in the massacres is in many places established beyond doubt.'

"Of the appalling horror of this account I wish it were needless to speak. . . . [It] would be none the less horrible if the whole of the people massacred and outraged, ruined, and starved, and driven to the snowy mountains in the middle of winter, had been all the rudest villagers of the most rustic village communities. But when we know that many thousands of the victims have been people educated at Christian schools and colleges, and who had acquired there, in addition to the ineradicable virtues of their native and ancient faith, much also of the refinements and activities of civilised life, we may reach some true conception of the agonies which have been inflicted on such a people in the face of Europe and of the world by the cruelty and brutality of the Turks. It is, indeed, right that our first indignation should be directed against the

infamous Government of Turkey. . . . Let us remember that this is not a Government with which we have had nothing to do, or for which we have had no responsibility, but a Government which the European Powers, and we especially, have been protecting and nursing for half a century. . . . Then we may indeed begin to think, with remorse and shame, of our handiwork, and of its results. In this particular case, indeed, the immediate blame lies almost alone with Russia. By a complete departure from all her previous great traditions she deliberately refused to join the other Powers of Europe for the purpose of compelling the Sultan to act with decent humanity to those of whom she had been the declared defender. She had the physical power and the geographical opportunity which others had not; and there can be no doubt whatever that a joint occupation of the waters of Constantinople by the fleets of the European Powers would have secured the very moderate demands that Europe made upon the Porte."—The Duke of Argyle, *Our Responsibilities for Turkey, pp.* 116–122.

A. D. 1896.—Conflict in Crete between Christians and Mussulmans, and its preceding causes.—In 1868, the Cretans, for the second time, were thrust under the Turkish yoke. "By way of solace the Powers exerted themselves feebly in inducing the Porte to concede the so-called 'Organic Statute' [or 'Organic Regulation,'—see (in vol. 3) GREECE: A. D. 1862–1881]. . . . As the Charter remained a dead letter, the Cretans seized the next favourable opportunity to rise in 1877. Their case was brought before the Congress of Berlin; but the only relief the Powers could extend to them was a fresh promise on the part of the Porte, recorded in the XXIII Article of the Treaty, to observe scrupulously that Organic Statute, which had been proved to be unworkable. Meanwhile, the Cretans had remained under arms during the whole of 1878, the island being again almost completely devastated by the half-naked and famishing troops which had survived the Russo-Turkish War. Ultimately, through the mediation of England, the Porte was induced, in November of that year, to concede the Pact of Halepa, so named after the village near Canea where it was negotiated, and signed under the supervision of the British Consul, Mr. T. B. Sandwith—this fact being expressly recorded in the preamble of the document. The arrangement was accepted by the Cretans as a compromise, in spite of its many and manifest drawbacks. Nevertheless, it brought about, at the outset, certain beneficial results. Political parties were formed in which the Mohammedan Cretans blended, irrespective of religious differences, with their Christian countrymen; and the unprecedented phenomenon of a Christian Vali completing his four years' tenure of governorship was witnessed in the person of Photiades Pasha.

"But this tendency to conciliation of the conflicting elements in the island was by no means to the liking of the Porte. The presence of a Mussulman military governor was therefore discovered to be necessary; and as his grade was usually superior to that of the Vali, and the Mussulman sub-governor was the official whose recommendations were of weight with the Porte, nothing was easier than to create insuperable difficulties for the Christian Vali. Thus successive Valis were compelled—often by private wire from Constantinople—to tender their resignation; while, at the same time, the Porte took care not to fulfil the financial engagements prescribed by the Pact. By these means an acute crisis was brought about under the Governorship of Sartinski Pasha, a Pole, in 1889, when a preconcerted plan of deception and treachery was carried out by the Porte with consummate skill.

"The Cretans, as it is but natural, are guided in critical contingencies by the advice they seek at Athens. The Porte therefore promised to the Greek Government, as soon as things began to assume a threatening aspect in Crete, to satisfy the demands of the islanders, provided they were prevailed upon to abstain from occupying certain important positions. In spite of the transparent perfidy of the proposal, M. Tricoupis, the then Greek Premier, fell into the snare. While the Cretans were held back, troops were poured into the island, and the strategical points having been seized, the Greek Government and the Cretans were defied. An Imperial firman, issued in November of that year, abrogated the Pact of Halepa and the British Government, under whose auspices it was concluded, was now powerless to exact respect for what was virtually an international arrangement. There was no longer any question of a Christian Vali with a fixed tenure of office, or of an Assembly of Cretan representatives. Shakir Pasha, the commander of the Turkish troops, was invested with absolute civil and military authority; Mussulman Albanians occupied the Christian villages as gendarmes, and Crete continued to submit to this kind of martial law up to 1894. When, however, Mahmoud Djelaleddin Pasha, the then Mussulman Vali, surpassed even his predecessors in arbitrariness, and actually dictated to the tribunals decisions in favour of Mohammedan litigants, the Cretans began to lose patience and another outbreak appeared imminent. It was only then that the Great Powers moved in the matter and prevailed upon the Porte to revert partly to the pre-existing order of things, by appointing Alexander Karatheodory Pasha, a Christian and a Greek, as Governor. Beyond this, however, the Pact of Halepa was not observed. True to its traditional tactics, the Porte took with one hand what it had given with the other. The Mussulman Deputy Governor and the military commander frustrated every effort of the Vali, the very funds necessary for the maintenance of the gendarmerie being denied him. Karatheodory was consequently forced to resign. Complete anarchy now reigned in the island."—Ypsiloritis, *The Situation in Crete* (*Contemporary Review, Sept.*, 1896).

"Occasional skirmishes between the Christian inhabitants and the soldiers kept the excitement simmering and ushered in the sanguinary scenes that finally followed. Turkhan Pasha, taking time by the forelock, armed the Cretan Moslems for the combat with the approval of the commander of the troops, and the city of Canea prepared for a blood bath. The Mohammedan Lent (Ramazan) was drawing to a close, and the three days of rejoicing which invariably follow (Bairam) were supposed to be fixed for the attack on the Christians. These anticipations were duly realised, and on the 24th May, 1896, at 1 o'clock P. M., the Turks fired the first shots, blowing out the brains of several Christians to make that Moslem holiday. Forearmed, however, is fore-

warned, and the Christians defended themselves to the best of their ability on that day and the 25th and 26th, during which every house in Canea was barricaded, and neighbours living on opposite sides of the absurdly narrow streets fired at each other from behind stone heaps piled up in the windows of their bedrooms. The streets were deserted, all traffic suspended, and it was not until the 27th that the thirty Christian corpses (including two women and four children) and the twenty lifeless Turks were removed for burial.

"These events provoked a new administrative change of scene: Turkhan Pasha was recalled, and Abdullah Pasha, at the head of four battalions from Salonica, came to take his place. These troops laid waste the villages and fields of the provinces of Apokorona, Cydonia, and Kissamo, burning houses, huts, and churches on the way. The best soldiers in the world, however, run terrible risks in the interior of Crete, and Abdullah was repulsed with the loss of two hundred men at the town of Vamos. The foreign consuls at Canea, having verified these facts, strongly blamed his conduct in a joint verbal note, and the Porte shortly afterwards recalled him, and appointed Berovitch Pasha [Prince of Samos] in his place. This was the beginning of the end. The Christians of the island meanwhile met, and through their delegates formulated certain demands, which the foreign consuls referred to their ambassadors at Constantinople, and the famous 'Modifications of the Convention of Halepa' were framed in consequence. The sultan, too, yielding to tardy pressure, graciously conceded the nomination of a Christian governor-general in the person of Berovitch, the summoning of the National Assembly, and other demands. . . . The questions of the tribunals and the gendarmerie [for the enforcement of peace and order in the island] were to be arranged by international commissions; but weeks and months passed away before they were even appointed. . . . At last the commissions arrived and began their work in December [1896]."—E. J. Dillon, *Crete and the Cretans* (*Fortnightly Rev., May*, 1897).

A. D. 1896 (January—March).—Turkish opposition to English and American measures for relief to Armenian sufferers.—Work of Miss Clara Barton and the Red Cross Society.—For some time the distribution of supplies from England and America to the sufferers in Armenia was forbidden by the Turkish government, for reasons stated by the Turkish minister at Washington as follows: "The collections are made on the strength of speeches delivered in public meetings by irreconcilable enemies of the Turkish race and religion, and on the basis of false accusations that Turkey repudiates. Besides, the Sublime Porte is mindful of the true interests of its subjects, and, distinguishing between the real state of things and the calumnies and wild exaggerations of interested or fanatical parties, will under its own legitimate control alleviate the wants of all Turkish subjects, irrespective of creed or race." The Red Cross Society, of which the American branch had prepared to send its President, Miss Clara Barton, with a small corps of assistants, to the scene of the suffering, was especially excluded, by the order of the Porte. Miss Barton and her staff sailed, however, from New York, in January, and Mr. Terrell, the American minister at Constantinople, succeeded in obtaining permission for them to do their humane work as private individuals, not in the name of the obnoxious society, and without displaying its insignia. The single-mindedness, the prudence, the patient energy with which Miss Barton pursued the one object of giving relief to the suffering, overcame all opposition and all obstructions, so that, in April, she was able to report:

"The way is all made clear for sending supplies. The suitable agents all along the route are now known, and have been arranged with for service, so that heavy supplies can be sent at any and all times as they are needed. I feel my breath come lighter as I think of these poor scourged and fever-stricken towns without even one doctor, when our sixteen strong, skilled men, with twenty-five camels' burden of supplies, shall carry some light of hope and help into their night of hopeless woe. I am happy to be able to say for the comfort of contributors, that I hold the written word of the Porte, officially given through the minister of foreign affairs from the grand vizier, that not the slightest interference with any distribution within the province will be had. This official document was addressed and delivered to Sir Philip Currie, the British ambassador, and by him passed to me. The decision is general and final, without question or reservation, and settles all doubt."

In September Miss Barton returned home for rest, and to bear her testimony to America of the immensity of the need still existing in the Armenian provinces and calling for help. Her departure from Constantinople was reported by the newspapers to have been the occasion of a remarkable demonstration, by cheers, flags and salutes, from ship and shore, of the estimate put upon the work she had done.

A. D. 1896 (August).—Attack of Armenian revolutionists on the Ottoman Bank at Constantinople.—Turkish massacre of Armenians in the city.—In the spring of 1896, the Armenian revolutionists, encouraged by the outbreak in Crete, made fresh appeals for attention to the sufferings of their country, with threats of some desperate action if no heed was given. In August, the desperate act was undertaken, at Constantinople, by 30 or 40 madly devoted men. This reckless little band of misguided patriots made a sudden attack on the Ottoman Bank, a British institution which controls finance in the Turkish empire, gained possession of the building, made prisoners and hostages of two of its directors and some 80 of its clerks, and were fully prepared with dynamite to destroy everything within its walls, including themselves, if certain reforms which they set forth were not instantly decreed. Their theory was, that "the Ambasssadors would force the Sultan to grant the reasonable reforms which they demanded for the Armenians, rather than permit the destruction of the Bank and its staff. It was a scheme borrowed from the theatre, absurd in itself, and made ridiculous by the way in which they failed to carry it out. They went in bravely, and nothing hindered their destroying the Bank, but they allowed themselves to be talked out of it by Mr. Maximoff, the Russian dragoman, and would have been the laughing stock of the world if its attention had not been absorbed by the massacre which followed.

"The real heroism of that day was displayed

in another quarter of the city, by another small party of Russian Armenians, men and women, who took possession of two stone houses and fought the Turkish troops to the death, the survivors killing themselves when they could fight no longer. There was no serious fighting anywhere else, although dynamite bombs were thrown from the windows of houses and khans upon the troops in a number of places, showing that some preparation had been made for a more extended outbreak. There is nothing to be said in justification of this attempt of the revolutionists. They had provocation enough to justify anything in reason, but there was nothing reasonable in this plan, nothing in it to attract the sympathy of the Powers or to conciliate public opinion; and if the statements are true which have been made by Armenians as to certain unexecuted parts of the plan, it was diabolical. This only can be said on behalf of these revolutionary committees. They are the natural outcome of the treatment of the Armenians by the Turkish Government during the last twenty years. When oppression passes a certain limit and men become desperate, such revolutionary organisation always appears. They are the fruit and not the cause of the existing state of things in Turkey, and if we can judge by the experience of other countries, the worse things become here, the more violent will be the action of these committees, whether Europe enjoys it or not.

"Revolutionists are the same all the world over, but the Turkish Government is unique, and it is not the attack on the Bank which interests us but the action of the Government which followed it. As we have said, the authorities had full information of what was to be attempted and did nothing to prevent it, but they made every preparation for carrying out their own plan. Bands of ruffians were gathered in Stamboul, Galata, and Pera, made up of Kurds, Lazes, and the lower class of Turks, armed with clubs, knives or firearms; and care was taken that no one should kill or plunder in the quarter to which he belonged, lest he should be recognised and complaint made afterwards by the Embassies, with a demand for punishment. A large number of carts were in readiness to carry off the dead. The troops and police were in great force to prevent any resistance, and to assist the mob if necessary. It was a beautiful day, the streets were crowded, and few had any idea of what had happened at the Bank, when suddenly, without any warning, the work of slaughter and plunder began, everywhere at once. European ladies on the way to the Bosphorus steamers suddenly found themselves surrounded by assassins, and saw men beaten to death at their feet. Foreign merchants saw their own employés cut to pieces at their doors. The streets in some places literally ran with blood. Every man who was recognised as an Armenian was killed without mercy. In general, the soldiers took no part in the slaughter and behaved well, and this somewhat reassured those in the streets who were not Armenians; but in a few moments the shops were closed and a wild panic spread through the city. The one idea of every one was to get home; and as the foreigners and better classes live out of the city in summer they had to go to the Galata bridge to take the steamers, which ran as usual all through the three days of massacre. This took them through the streets where the slaughter was going on, and consequently we have the testimony of hundreds of eye-witnesses as to what took place. The work of death and plunder continued unchecked for two days. On Friday there were isolated outbreaks, and occasional assassinations occurred up to Tuesday.

"The number killed will never be known. The Ambassadors put it at 5,000 or 6,000; the official report to the palace at 8,750, besides those thrown into the sea. Thousands of houses, shops and offices were plundered, including a number belonging to Greeks and foreigners. Everything was done in the most systematic way, and there was not a moment of anarchy, not a moment when the army and police had not perfect control of the city during all these days. . . . The majority of those massacred belonged to the working class—especially the hamals (porters)—but a large number of gentlemen, merchants and other wealthy men, were killed, together with about fifty women and children. The savage brutality of the Moslem mob was something beyond all imagination, and in many cases the police joined in beating men to death and hacking others to death with knives, in the very face of Europeans. . . . In may cases European officials appealed to the officers in command of the troops, who were looking on at the slaughter of helpless, unarmed men, to interfere and put a stop to it. The reply was 'We have orders.' It was an officer who killed the clerk of the British Post-office on the steps. And some of the most cold-blooded and horrible murders took place in front of the guard house, at the Galata end of the bridge, in the presence of officers of the Sultan's household of the highest rank. They also had their orders.

"Happily for the honour of the Turkish people, there is another side to the story. It was the Government and not the people that conducted this massacre. And although the vile instruments employed were told that they were acting in the name of the Prophet, and freely used his name, and are boasting to-day of what they did for Islam, the Sheik-ul-Islam forbad the Softas taking any part in the slaughter, and many a pious Turk did what he could to protect his neighbours. . . . It is not the people, not even the mob, who are responsible for this great crime. It was deliberately committed by the Government. The Ambassadors of the six Powers have declared this to be an unquestionable fact in the Joint Note addressed to the Porte.

"Since the massacre this same Government has been carrying on a warfare against the Armenians which is hardly less inhuman than beating out their brains with clubs. There were from 150,000 to 200,000 Armenians in Constantinople. They were merchants, shopkeepers, confidential clerks, employés in banks and offices of every kind—the chief business men of the city. They were the bakers of the city, they had charge of the khans and bazaars and the wealth of the city; they were the porters, house-servants, and navvies. . . . Now the Government has undertaken to ruin this whole population. They are hunted about the city and over the hills, like wild beasts. . . . Thousands have been sent off at once to the Black Sea ports, to find their way as best they can without money or food to their desolated villages in the interior. . . . Thousands

have fled to foreign countries."—*The Constantinople Massacre* (*Contemporary Review, Oct.*, 1896).

A. D. 1897 (January—February).—Fresh conflicts in Crete.—Attitude of Christians and Mussulmans towards each other.—Reports of the British Consul-General and others.—Early in January, 1897, while proceedings for the organization of the new gendarmerie were under way, and while the discussion of candidates for the National Assembly, to be elected in March, was rife, fresh hostilities between Christians and Mussulmans broke out, and there seems to be good evidence in the following report, by Sir Alfred Biliotti, the British Consul-General at Canea, that responsibility for the state of things in Crete should be charged upon one party hardly more than upon the other. The despatch of the Consul-General to Lord Salisbury, written January 9, 1897, is partly as follows:

"In the afternoon of the 3rd instant a great panic occurred in the town owing to a wounded Christian having been conveyed to the hospital, where he died of his wounds in the night, and to a rumour that two Mussulmans had been killed or wounded at the same time on the road between Canea and Suda Bay. All the shops were shut up as usual, but there was no general 'sauve qui peut,' Christians especially having congregated in the square near the hospital in the hope of finding out further information. Happening to be in the town, I took a carriage and drove towards Suda. When at about a mile distant from Canea I came upon a number of Mussulmans, who told me that four Christians going to Apokorona had, without any provocation whatever, discharged their revolvers on three Mussulmans, two of whom had been severely wounded. I saw one of them in his cottage hard by the road with a bullet wound in the abdomen; the other had been conveyed on horseback to the village of Tsikalaria (south-east of Suda Bay), 2 miles from where he had been wounded, of which he was a native. The four Christians fled across the fields, leaving on the road a horse and an overcoat, and took to the mountains.

"Between half and a quarter of an-hour after this incident another Christian, a native, like the Turk, of Tsikalaria, was passing on the road when he was fired upon by Mussulmans in retaliation for the wounding of their two co-religionists. Not having been hit, the Christian jumped from his mule and ran for his life along the Suda road, being pursued by armed Turks. He was overtaken by three of them about half-a-mile farther down, and was shot at and mortally wounded at 20 paces in front of Commander Shortland, of Her Majesty's ship 'Nile,' who was coming on foot from Suda Bay to Canea. The wounded Christian was taken charge of by the Albanian corporal stationed in a Christian monastery close by, and was subsequently put in a carriage by the Russian Consul, who was returning from Suda Bay at that moment, and sent to the town hospital, where he died. While I was making inquiries on the road a brisk fusillade was heard towards Tsikalaria, and as I was about to return to Halepa a young Turk was seen at a distance running towards us with a letter in his hand. It was a message sent by the Albanian corporal stationed at Tsikalaria asking for assistance. This messenger had hardly arrived when a gendarme was seen coming down in great haste. He said that the fight between Christians and Mussulmans having become general, and there being only another gendarme with the corporal, armed assistance was immediately required. I took both these messengers and conveyed them to the gate of the town, from whence I drove to Halepa to acquaint the Vali with what was taking place. It was getting dark when I met on the road his Excellency accompanied by the Italian Consul going on foot to Canea, having found no available carriage, and I drove back with them. The position was rather perplexing. There was no available gendarmerie, and no soldiers could be sent out, as they would have been fired upon by the Christians. . . .

"Early on the day following, that is, on the 4th instant, the Governor-General visited the village of Tsikalaria and the villages westward of it in order to ascertain the truth with regard to the numerous reports which were in circulation since the preceding evening. It would seem that on hearing of his son having been killed on the Canea-Suda road, the father of the wounded Mussulman opened fire on the Christians. Other Christians maintain that this wounded Mussulman, after having shot at the Christian on the road, hastened to Tsikalaria, and together with his father, began firing on the Christians. In a very short time all the Christians rushed towards the heights, and the Mussulmans towards the plain. During this evolution a Christian was killed, it is said, by the father of the wounded Mussulman, who had been arrested and is in prison. The same night the women and children took refuge in the villages on the mountains, while a contingent of 150 armed Christians came down from Campos and Keramia in order to assist the male population of Tsikalaria to defend their property. On the other hand, armed Mussulmans flocked from all parts of the plain to defend their co-religionists. The Mussulmans at Perivolia, where they are of nearly equal numerical force, tried to surround the Christians in order to keep them as hostages for the safety of their co-religionists in other villages where the Christians are more numerous. In so doing they shot down a Christian, on whom they also inflicted numerous knife stabs, finally cutting his throat. This was followed by an emigration to, and armed assistance from, the mountain villages as at Tsikalaria.

"In the village of Varipetro the Mayor, assisted by the corporal of gendarmerie, a Mussulman Albanian, was doing his utmost to prevent a conflict between its Christian and Mussulman inhabitants, when a Christian from Lakkos, whose brother had been murdered two years ago by a native Mussulman, stealing behind the corporal, shot him dead. The Christians of Varipetro, with whom the corporal was popular, having tried to arrest his murderer, the Lakkiotes, who had come there in order to defend their co-religionists, turned their arms against them, and prevented them from carrying out their intention. In consequence of this murder all the Christians of Varipetro emigrated to the mountains, and all the Mussulmans to the town of Canea. Nearly 1,000 Christians from the plains of Cydonia and Kissamo came to defend the inhabitants of Galata and Darazzo, and for a time blockaded the Turks in the village of Kirto-

mado, Aghia, &c. But the inhabitants of Galata, who are all Christians, have so much confidence in the Mussulman Albanian Lieutenant called Islam, who is stationed in their village, that they begged their co-religionists to withdraw, which they did. . . .

"As is always the case, each party claims to have been attacked by the other party, and the truth is not likely to be ever discovered. Be this as it may, both Christians and Mussulmans remain under the unshaken conviction that they are wronged by the other party; this increases the animosity of one sect against the other, and each member of the two races will act on this conviction. This is the inevitable consequence of the absolute want of confidence between the two elements, and there is not the least hope that this feeling will disappear, nor even slightly decrease, so long as they are left to themselves. In the present instance it may be that the Mussulmans, or some of them, may have considered themselves bound to retaliate for recent murders committed on their co-religionists by Christians. . . . The Christians are convinced, and all their proceedings are marked by that conviction, that all the incidents which trouble the public peace are devices of the native Mussulmans to prevent the execution of the promised reforms. I do not deny that the attitude of the authorities at Constantinople may have such an effect on the low class of Cretan Mussulmans; but it is far from being so with the educated class who are as, if not more, anxious than the Christians that the intended reforms should be carried out without delay. In fact, they know that they have nothing to hope from Constantinople, and that the only protection of the minority to which they belong lies in the promised reforms. On the other hand, I have observed with the greatest pleasure that the Christians laid down their arms at the first recommendation of the Consuls to do so, which proves a sincere desire on their part to live in peace. When the Christians were taking up arms in former times they used to remain for weeks, even for months, on the mountains in spite of the entreaties of the Consuls. Therefore, the Christians and the Mussulmans are respectively well disposed, but there is such an insuperable distrust on both sides, that they can never come to a mutual understanding. Whether the incidents which cause disturbances or disorders on the island are the work of the Turks or of the Christians or of both is quite immaterial to me. The important fact to be taken into consideration is that an exchange of a few shots between one or two Christians and as many Mussulmans is sufficient to cause several districts, four in the present instance (Canea, Apokorona, Sphakia, and Kissamo), to take up arms, and also that there can be no doubt that such scenes will be repeated on every recurrence of such incidents."

To the same effect, Captain Custance, of the British ship Barfleur, reported on the 15th to Admiral Hopkins: "The general situation, as I understand it, is, that the Cretan Christian leaders, urged on by certain interested people at Athens, have been preparing for some time to make an attempt to drive the Turkish authorities out of the island in the spring, if a favourable opportunity offers. The Mussulmans would not be sorry to see the last of the Turkish Government if they could only be sure that their lives and property would be safe under the new régime, which, owing to the bitter hatred existing between the Christians and Mussulmans, cannot be expected. The two parties are face to face, armed to the teeth, with long-standing feuds and wrongs, and with no force between them capable of maintaining order."

On the 27th of January the Consul-General reported by telegram to Lord Salisbury: "An outburst of terror, such as has not yet occurred in Candia, has been caused by the commencement of a fresh immigration of Mussulmans into the town, and by the murder, within a week, of two men of that faith, and a few minor outrages." The next day he reported: "Telegraphic news from Candia, dated to-day, reports murder of a Mussulman, and wounding of two others, and murder of seven Christians; murder of further Mussulmans is rumoured. The Mussulman Military Commissioner, and the Austrian Military Attaché, now in Candia, report that they met about 1,000 armed Mussulmans moving inland, and numbers of Mussulman families moving towards the town." Again, on the 2d of February: "Murder of four Mussulmans last night, following on wounding of Christian by Mussulman on the 31st January near Canea. Panic ensued in Canea and Suda Bay this morning. Shops all closed. Shots fired in town and Halepa, which resulted in death of two Mussulmans. Four mixed villages, one large Christian village, and several farms in environs are in flames." On the 4th, Colonel Chermside, of the gendarmerie commission, sent the following statement to Lord Salisbury: "The most that we have been able to attempt to-night is to get a cordon to separate Christian and Moslem quarters. Patrolling was tried, but the fire from the Christians was too heavy to maintain it. Several Turkish soldiers have been killed and wounded."—*Great Britain, Parliamentary Publications* (*Papers by Command: Turkey, No.* 10, 1897, *pp.* 15–45).

A. D. 1897 (February—March).—Greek interference in Crete.—Greek forces in the island.—Demands for annexation of Crete to Greece.—Action of the Powers in the "Concert of Europe."—Pacific blockade of Crete.—Early in February, the difficulties of the attempt which the leading European powers, acting in what was known as "the Concert of Europe," were making to settle affairs in Crete by reforming its Turkish government, were complicated by interference from Greece. The Greeks, in ardent sympathy with their Cretan kinsmen, were eager to take up the cause of the Christian inhabitants of the island, and their government was driven into independent action to that end, hoping that Christian sentiment in Europe would constrain the Powers to give it a free hand. A Greek squadron was sent to Crete, to bring away fugitives—women and children especially—and to prevent the landing of Turkish reinforcements. This was quickly followed by an expedition of 2,000 men, Colonel Vassos in command. An instant stimulation of the insurrection occurred, and declarations demanding the annexation of Crete to the kingdom of Greece began to appear; while the Greek government represented in a note to the Powers that no possible solution of the Cretan problem could be found without concession to that demand. The Greek troops, considerably increased

in number, were landed on the island, joining the insurgent Cretans, and beginning operations against the Turks.

On the 13th of February the admirals commanding the foreign naval forces at Canea joined in sending a warning to the Greek commodore, requiring him to "desist from all hostile acts and to conform with international law." On the 15th a mixed force of British, French, Russian, Italian and Austrian marines was landed for the protection of the town. On the same day, from Colombari, Colonel Vassos, the Greek commander, issued a proclamation, saying: "In the name of His Majesty, George I., King of the Greeks, I occupy the Island of Crete, and proclaim this to its inhabitants without distinction of sex or nationality. I promise in the name of His Majesty that I will protect the honour, life and property, and will respect the religious convictions, of its inhabitants, bringing them peace and equality rights." On the 17th, the Turkish forces at Canea were attacked by the Greeks and insurgents, and the attack was renewed on the 21st; whereupon, after warnings from the foreign admirals in the harbor, the Russian, German, Austrian and British ships opened fire on the attacking troops. In the meantime, considerable bodies of Mohammedans were being besieged by superior forces at other points in the island, with great danger of massacre if overcome.

On the 2d of March, the representatives of Great Britain, Austria-Hungary, France, Germany, Italy and Russia, at Constantinople, arrived at an agreement of action, and jointly addressed notes to the governments of Turkey and Greece. To the Porte they wrote: "The Great Powers, animated by the desire to assure the maintenance of peace and to see the integrity of the Ottoman Empire respected, have sought for the means of ending the disorders that have led to their armed intervention in Crete, as well as of putting an end to the presence of the Greek forces in the island. They have recognized that in consequence of the delay in applying them, the reforms contemplated in the Arrangement of August 25, 1896, no longer correspond to the requirements of the present situation, and they have agreed upon the following points:—1. Crete can in no case be annexed to Greece in the present circumstances. 2. The island will be endowed by the Powers with an autonomous administration ('régime'). In notifying these decisions to the Sublime Porte by order of their Governments, the Representatives of the Great Powers at Constantinople think it their duty to communicate the resolution which has been taken by their Governments to address to Greece a summons to withdraw her troops and naval forces from Crete."

To the Greek government the same announcement was made, that "Crete can in no case, in the present circumstances, be annexed to Greece," and the communication was more explicit in the further statements, as follows: "In view of the delays caused by Turkey in the application of the reforms agreed upon in concert with the Powers, and which now make it impossible to adapt those reforms to a changed condition of affairs, the Powers are resolved, while maintaining the integrity of the Ottoman Empire, to endow Crete with an absolutely effective autonomous administration (régime), intended to secure to it a separate government, under the high suzerainty of the Sultan. The Cabinets are convinced that these views can only be realized by the withdrawal of the Greek ships and troops now in the waters and on the territory of the island which is occupied by the Powers. We accordingly confidently expect this decision from the wisdom of His Majesty's Government, which cannot wish to persist in a course opposed to the decision of the Powers, who are determined to carry out an early pacification, which is as necessary for Crete as it is for the maintenance of general peace. I will not, however, conceal from your Excellency that I am instructed to warn you that, in case of a refusal of the Royal Government, the Great Powers have arrived at the irrevocable decision not to shrink from any measure of compulsion if, on the expiration of six days, the recall of the Greek ships and troops from Crete has not been effected."

The Turkish government replied on the 6th: "The Sublime Porte has had the honour to receive the note which the Ambassadors of the Great Powers were good enough to address to it on the 2nd of March relative to Crete. The Imperial Government takes note with satisfaction of the assurances which the Great Powers are good enough to give it as to their desire to respect the integrity of the Empire and of the decision which they have taken to obtain the withdrawal of the Greek ships of war and troops from Crete. Relying upon their friendly sentiments, and upon their firm resolve not to impair the Sultan's rights of sovereignty, the Sublime Porte, which is itself desirous of assuring the maintenance of peace, accepts the principle of an autonomy to be accorded to Crete, while reserving to itself liberty to discuss with the Ambassadors the form and the details of the administration ('régime') with which the island is to be endowed."

Two days later, the Greek government replied at greater length, imploring the Great Powers "not to insist upon the system of autonomy decided on, but to give back to Crete what it already possessed at the time of the liberation of the other provinces which form the Hellenic kingdom, and to restore it to Greece, to which it already belonged in the time of the Presidency of Capodistria," and appealing against the demand for the withdrawal of the Greek military forces from the island. "Since, in our opinion," wrote M. Skouses, the Greek minister, "the new autonomous administration ('régime') condition could not fulfil the noble object of the Powers, it is clear what would be the condition of the unfortunate island from now until the establishment of that administration, if the Great Powers decided to persist in their resolve.

"In this connection, and in the name of humanity, as also in the interest of the pacification of the island—a pacification which is the sole object of the solicitude of the Great Powers—we do not hesitate to appeal to them in regard to the other measure, relative to the withdrawal of our military forces. . . . The presence in the island of the Greek army is . . . demanded by the dictates of humanity, and is necessary in the interest of the definitive restoration of order. It is, above all, our duty not to leave the Cretan people at the mercy of Mussulman fanaticism, and of the Turkish army, which has always intentionally, and by connivance, been a party to

the acts of aggression of the populace against the Christians.

"Above all, if our troops in the island, who are worthy of the full confidence of the Great Powers, were intrusted with the mandate of pacifying the country, their wishes and intentions would at once be completely satisfied. It would then be possible, after order had been restored, to obtain a free expression of the wishes of the Cretan people, with a view to decide their lot. Not only are the horrors which during several decades have occurred periodically in Crete, not committed without profoundly agitating the Hellenic people, but they also interrupt the social activity, and seriously disturb the economy and finances of the State. Even if it were possible for us to forget for a moment that we are co-religionists of the Cretan people, that we are of the same race, and allied by blood, we cannot conceal from the Great Powers that the Hellenic State is unable to resist such shocks any longer. We therefore appeal to the generous sentiments which animate the Great Powers, and beg them to allow the Cretan people to declare how it desires to be governed."—*Great Britain, Parliamentary Publications* (*Papers by Command: Turkey, Nos.* 4 *and* 5, 1897).

The position taken by the Greek government in this reply was firmly maintained. Its troops were not withdrawn from Crete, and the Powers of "the Concert," thus practically defied, had difficulty in agreeing upon the next steps they would take. France, England, and Italy would not consent to strong measures of coercion proposed by Russia, Germany and Austria, and the decision reached finally was to establish what is known as a "pacific blockade" of the Cretan coast, to begin on the 21st of March. This was announced on the 18th by the admirals commanding on that coast, who gave notice: "The blockade will be general for all vessels flying the Greek flag. Vessels of the Six Powers or of neutral Powers will be allowed to enter the ports in the occupation of the Powers and land their merchandise there, but only if it is not intended for the Greek troops or for the interior of the island. The ships of the international fleets may visit these vessels." The Greek government was notified to recall its men-of-war still in Cretan waters, with the warning that "they will be retained there by force if they have not left by 8 A. M. on the 21st March."

On the day previous to this announcement of blockade the same admirals had published a proclamation as follows: "The undersigned, Commanders-in-chief of the naval forces of Germany, Austria-Hungary, France, Great Britain, Italy, and Russia, in Cretan waters, acting under instructions from their respective Governments, solemnly proclaim and announce to the people of the island that the Great Powers have arrived at the irrevocable decision to secure the complete autonomy of Crete, under the suzerainty of the Sultan. It is well understood that the Cretans are to be free from all control on the part of the Sublime Porte as regards their internal affairs. The principal aim of the Powers being to provide a remedy for the evils which have afflicted the country, and to prevent their recurrence, they are drawing up in concert a scheme of measures intended to regulate the working of the autonomous régime, to restore peace, to assure to every one, without distinction of race or religion, liberty and security of property, and to facilitate, by the resumption of agricultural work and trade, the progressive development of the resources of the country. Such is the aim of the Powers. They wish this to be understood by all. A new era is commencing for Crete; let all lay down their arms. The Powers desire peace and order. They will, if it be required, have the necessary authority to make their decisions respected. They count on the co-operation of all the inhabitants of the island, Christian and Mussulman, to assist them in accomplishing a work which promises to secure concord and prosperity to the Cretans."

To the promise of an autonomous government for Crete the insurgent Christians appear to have given no heed; but a great number of the Mohammedan inhabitants of the island united in sending telegrams to the British minister at Constantinople, which were all of the tenor of the following: "Your Excellency knows that the Christians of Crete, forming the numerical majority of the population, but incapable of properly administering the former privileges they enjoyed, have now again been emboldened to massacre, destroy, and ruin, in the same way that in the past they have always made ill-use of their liberties in the country by the treacherous destruction and ruin of their Moslem fellow-countrymen. Therefore, if the people are left irresponsible for the government of the country, which is the very breath of human life, it will facilitate the completion of their bloodthirsty designs, and hasten the ruin of the Mussulmans. We are quite sure that this state of things will not recommend itself to the sympathy of the Great Powers, the propagators of civilization.

"We therefore beg, in the name of the Mussulman population, that the internal affairs of the Christian inhabitants of Crete who have not yet reached even the first step on the path of civilization, and are led away by the seditious designs of Greece, may not be removed from the direction of the Sublime Porte; if this be impossible, we beg that the internal affairs of the island may be placed under the continual control of the Great Powers in conjunction with the Porte; and we finally beg that the necessary measures may be taken for the protection of the life, honour, and property, as well as the rights of the 20,000 Mussulman inhabitants now living in Turkey, whose interest in property is greater in value than that of the Christians, and who are occupied with commerce and other pursuits, besides those who live in the island, who, if necessary, are prepared to undergo a census, and who exceed 100,000."

The situation of the Moslem population of the island was represented a little later by Colonel Chermside, in a despatch to Lord Salisbury, as follows: "Over 49,000 Moslems are assembled in Candia and within cordon area, comprising 25 square miles, viz., about two-thirds of Moslem population of Crete. Of these, 29,000 are refugees from central and eastern districts of island. Doles of flour are issued to 39,000 persons; issue up to date 18 lb. per head; no other food issued. The mass of the people have no buying power and no work, but since arrival of British troops, armed individuals are rare in streets; distress is supported with great fortitude, in spite of insufficient food and ravages of small-pox. Population hopes for future for-

eign protection against Christian compatriots." —*Great Britain, Papers by Command: Turkey, No.* 10, 1897, *pp.* 153–178.

A. D. 1897 (March—September).—War with Greece.—Success of the Turkish arms. —Peace sought by the Greek Government.—Notwithstanding the opposition of the Great Powers, the Greeks were rashly bent upon war with the Turks, and, when balked in Crete, began hostile demonstrations along the Turkish frontier in their own peninsula. The events that followed have been thus described by an eye-witness, who wrote immediately afterwards: "When I arrived in Athens," says this writer, "early last March [1897], although the Cretan insurrection was being openly supported by Greek arms, war had not been declared against Turkey. It was what I think was once described in Parliament as 'a condition of war,' but not war. . . . King George and his advisers rashly decided to attempt to hasten matters in their own fashion. Agitation was begun without and within the Turkish frontier, and the Ethnike Hetairia manufactured alarms and disturbances in Macedonia and Epirus. Attempts were made in other directions, but though money and emissaries were sent, nothing came of it. Meanwhile the mobilisation of the Greek army was begun, and later on reserves were called out. Knowing a good deal about the relative condition of preparedness for war of both Turkey and Greece, I spoke without reserve on the subject to the King and, later on, to the Princes. I told them nearly every military intelligence department in Europe knew that Turkey had been getting her troops ready for a year past to deal with insurrection or invasion along the Macedonian frontier. Within the Salonica military district she had nearly 100,000 men under arms, all well trained and passably equipped. Besides infantry she had nearly 10,000 cavalry, and within a month could place a further force of 70,000 infantry in the field. Against these the Greeks could not bring more than 60,000 regulars. There no doubt might be mustered twice that number of men, but they would be untrained irregulars and volunteers who would take a month at least before they could be of much use, and Turkey would have her bands of irregulars out also to offset their value. It was notorious besides that the Greek army was indifferently organised, that it had no transport, no commissariat department, no medical department, and was without anything like a sufficiency of trained officers. . . .

"Prepared or not, the Greeks clamoured for war, never doubting latterly but that they would win. They protested that the Hellenes were aroused and would fight and die, if need be, to the last man. Greece would not waive an iota of her demands. We were told that the Greeks scattered throughout the Turkish Empire would spring to arms and paralyze the enemy's hands. There were to be fearful outbreaks in Macedonia, Epirus, and Albania, and tumults and burnings in all the chief cities under Turkish rule where Greeks dwelt—Smyrna, Constantinople, Salonica, and so on. I was informed that insurrectionary bands were being got ready to invade Macedonia and Epirus, and I was introduced to several of the leaders of these new expeditions. . . . I saw many of these Greek filibusters at Kalabaka and other places. By order from Athens the local commandants supplied them with stores, transport, and trenching tools, and sent guides to direct them, so that they should slip across into Macedonia at the most suitable points for conducting their operations. . . .

"The Greeks had a fairly long innings carrying on the war within Turkish territory, whilst disingenuously disclaiming responsibility for the acts of their own levies. Finally, in April, the Sultan declared war and set his forces in motion. Prior to that date the Greeks had moved up the whole of their available strength close to the Thessalian frontier. The army numbered nearer fifty than sixty thousand, of all ranks. . . . Before war was declared the Crown Prince Constantine arrived in Larissa, and took over the command of the Greek army in Thessaly. . . . He had no military experience; and, as events disclosed, was neither of a martial disposition nor of a firm temperament. He showed subsequently that he felt keenly his false position, and he tried to excuse the awful failures made in the conduct of the campaign of panic and flight. . . .

"Independence Day having passed without a general invasion of Macedonia by the Greeks, it is likely that the Turks had thought the danger over, when suddenly firing began in a night along the frontier from Nezeros to Ravenni. For a day or two the Greeks carried all before them, capturing many block-houses and taking a number of prisoners. They succeeded in penetrating Turkish territory in some places for two or three miles. . . . The Turks were in immediate danger of being outflanked in one part of the field of operations, and separated from their main force at Elassona. It was midday, the 19th of April, when at a critical moment for the safety of a portion of Edhem's forces an order arrived from the Crown Prince to cease firing and retire the whole Greek army back upon their own side of the frontier. . . . After an interval of three hours, during which there was little or no firing, a message arrived from headquarters that a blunder had been made and the army was to readvance and engage the enemy. It was a lost opportunity, for the Turks followed up the Greeks and reoccupied the lines from which they had been driven. . . . The cost of the blunder was a serious one to the Greeks, for in a futile attempt, on the following day, to retake Gresovala, General Mavromichali lost 2,000 men. . . .

"On the 21st of April, without any of the pictorial display or reputed hand-to-hand fighting, some 40,000 Turks, not less, accompanied by three cavalry regiments and half a score of batteries, quietly streamed down the zigzag paved way in the steep Melouna pass into Thessaly. They occupied the village of Legaria and positions among the lowest foot hills at the outlet of the pass. The Greeks were not able to embarrass them as they deployed, although an attempt was made to find the range with artillery. . . . For two days there was a fierce artillery duel, interspersed occasionally with sharp rifle fire as the infantry became engaged on the right and left of the line. . . . All had ended in favour of the Greeks when the sun set on the 22nd April, and the battle of Mati was over. . . . It was the same night that the Crown Prince ordered the army to retreat upon Larissa, twenty-five miles distant by road. About 8 P. M. the men were roused from their first sleep and commanded to fall in. They did so very orderly and quietly, thinking it was intended to deliver a surprise attack upon the

Turks. The whole army was on the march, and had got five or six miles from the battle-field, or close to Turnavos, when the unaccountable mad panic seized them. Some say it originated one way, some another. . . . The army broke into pieces and became a furious rabble, which fled by road and fields south as hard as most could run. Arms and ammunition and baggage were cast aside wholesale. The Greek officers, as a rule, behaved worse than the men, for they led the fleeing mob, and many of them never stopped until they reached Pharsala or Volo. . . . The whilom Greek army was a mob convinced that the Turkish cavalry was upon their heels, though it never was near them. It gave them the strength of despair, and so they covered afoot fifty to sixty miles within twenty-four hours. The inhabitants of Larissa and all the surrounding country, terrified at the sudden calamity, were left by the military and civic authorities, without hint or warning, to shift for themselves. . . . The women and children of Larissa had to carry what they wished to save upon their own backs. Thousands of these helpless creatures, together with sick and wounded soldiers, were left around the railway station, whilst officers rode off upon the early or later special trains, to fly, as some of them did, as far as Athens. The troops had gone hours before I left Larissa, and even then there were no signs of the enemy to be seen."—Bennet Burleigh, *The Greek War, as I saw it* (*Fortnightly Review, July*, 1897).

"Not until several hours after the departure of the last Greek, did a few Turkish cavalrymen cautiously enter the town [Larissa], some distance ahead of the Turkish army. . . . It was the design of the Greeks to save Volo, a wealthy town, and the haven of refuge of many of the peasants. Accordingly, a line was formed from two miles beyond Pharsala to the pass which was the doorway to Volo. About three miles from this pass was the village of Velestino; and on the hills back of it were the headquarters of Col. Smollenske, commander of this, the right wing of the Greek army. The Greek fleet, with decks cleared for action, was in the Bay of Volo; having gone there after the defeat of Mati, hoping that, in case the army failed, its heavy guns would protect the town. After four days, the Turks, having digested their victory with cigarettes and coffee, were ready to renew fighting. Meanwhile, the Greeks had put themselves in a sort of order. Evidently, the first intention of the Turks was to force their way through Smollenske's line and on to Volo. Accordingly, they attempted to storm Smollenske's rifle-pits; but they were driven back for the first time, and with the greatest loss that any such movement had yet encountered in the campaign. . . . The Turks, after a slight resistance, withdrew from the villages in front of Velestino, which they had taken, and were soon moving over to the left. Their plan of cutting the Greek line in two was executed with energy. On the morning of May 7, Edhem Pasha sent his fearless infantry, under heavy fire, up the hollows between the mountain-ridges which ran at right angles to the Turkish line across the plain. They intrepidly scaled the ridges, and forced the Greeks from the position. Smollenske's force was flanked and separated from the Crown Prince's force; and he retreated in an orderly manner to Almyro. The Crown Prince's force had been flanked on its left; at the same time it was being flanked on its right by the force that had flanked Smollenske. The Crown Prince, therefore, withdrew to the heights of Domoko.

"So apparent was now the hopelessness of the Greek cause that even the new ministry, which had been buoyed up into almost an aggressive spirit by the 'victory' of Velestino, begged for the intervention of the Powers. It was granted in the form of a demand on the Sultan for an armistice. As there are six Powers, each having a formal foreign office, this took some time. The Sultan, as usual, was more deliberate than the six tormentors, whom he in return tormented. Being truly Greek, the Greek Cabinet seemed to believe that articles of peace would be signed the moment the necessity of peace appealed to the ministerial mind. . . . Two days after Pharsala, the Turkish army appeared on the plain some ten miles from Domoko. There it rested quietly for more than a week, leisurely celebrating the important feast of Bairam. This confirmed the belief of the Greek generals that the war was at an end. The morning of May 17 found the Crown Prince's force more than ever convinced of an armistice, and quite unprepared for an attack. At nine o'clock the whole Turkish army began to advance upon the astounded Greeks—most astounded of them all were the Crown Prince and Gen. Macris—in such a manner as to leave no doubt as to its intention.

"The battle of Domoko which followed was the most sanguinary of the campaign. . . . For three hours, that is, until sundown,—the attack having begun at four o'clock,—the Greeks steadily returned the hot fire of the Turks, who soon ceased to advance, and doggedly hung on to the ground that they had gained. . . . During this attack in front the Turks were making a more important movement, strategically, on the right. . . . With amazing intrepidity, during the hot action on the centre, the Turks had fought their way over the mountains at the Greeks' far right. Some reserves were sent around at sunset—but too late. The Turkish left wing was already even with the town of Domoko. Military experts maintain that the Crown Prince, by readjusting his forces over night, could have given the phlegmatic enemy a surprise in the morning, and held him in check for several days. The retreat over the pass to Lamia began at ten o'clock in the evening; and the next morning the battalions covering the retreat were under heavy fire. The Greeks' next stand was to be at Thermopylæ. Should the Turks advance spiritedly, Smollenske's army would be cut off from that of the Crown Prince, and forced to surrender. But the Sultan, being somewhat appeased by more blood-letting, now bowed before a letter from him whom the Greeks called 'a vile enemy,'—the Czar,—who, for this act, saw his influence at Constantinople supplanted by that of Germany, though the fear of Russia was undiminished. At last the armistice came,—none too soon for the demoralized army of Greece. The war had lasted just thirty-one days."—F. Palmer, *How the Greeks were defeated* (*Forum, November*, 1897).

The preliminary treaty of peace, signed September 18, required Greece to pay to Turkey a war indemnity of nearly eighteen millions of dollars, arrangements for securing the payment of which were to be controlled by an interna-

tional commission composed of one representative of each of the mediating Powers. The same Powers were likewise to settle with Turkey a rectification of the Greek frontier. Greece, in fact, was helplessly in their hands.

A. D. 1897-1899.—Prolonged anarchy in Crete.—The inharmonious "Concert of Europe."—Final departure of Turkish troops and officials from the island.—Organization of government under Prince George of Greece.—"The autonomous régime promised to this unfortunate island — the Cuba of Europe — is still [at the end of 1897] apparently far from realization. In the meantime a most distressing condition, amounting to practical anarchy, prevails everywhere except at some ports where the international gendarmerie maintain a fair semblance of order. So completely have the houses and property of the Mahometan population been destroyed by the insurgents that the coming of winter has brought no prospect to the former but one of desolation and famine. Considerable pillaging of Christian houses by Mahometan refugees was also reported from Candia, Kydonia, and other points. In Candia the Turkish gendarmerie—recruited from the worst class of Bashi-Bazouks—have proved worse than useless for keeping order; they connive with the marauders and share in the pillage. The British occupation is said to be only nominal. . . .

"A strange satire upon the concert of Europe and the pretenses of Western civilization was the circular letter addressed by the Sultan to the powers, about mid-October, urging upon them 'in firm language' the necessity of promptness in restoring tranquillity to the disordered island, and warning them of the dangers of procrastination in this matter. . . . To accomplish the pacification of Crete, the Sultan, in the letter referred to, suggested that the entire population, Christian and Mahometan, should be disarmed; that the disarmament should be carried out by Ottoman troops; that the international troops should co-operate in the work if the powers so desired; that the entire force should be commanded by a European general in the Turkish service; that an Ottoman garrison should be permanently maintained; that the governor should be a Christian and an Ottoman subject; and that a corps of gendarmerie should be formed. . . . Toward the end of October it was announced that the powers had finally chosen for the post of governor-general of Crete Colonel Charles Schaeffer, a native of the grand duchy of Luxemburg, and a man of extended experience in the Turkish and Egyptian services, . . . related to several of the principal houses of the aristocracy at St. Petersburg, as well as to some of the most influential personages in the entourage of the Sultan. . . . The Porte, however, protested, with the support of Germany, against the appointment of Colonel Schaeffer, who appears to have been suspected of English sympathies. Russia, too, it was said, objected, insisting that the appointee must be of the Orthodox Greek faith. Thus, on the question of selecting a governor-general for Crete, the concert of the powers broke down as it did at other points during the long crisis. At the end of November the name of Prince Francis Joseph of Battenberg was prominently mentioned as a prospective candidate of favor. The Cretan assembly proposed, unless a suitable governor were speedily chosen by the powers, to offer the post to a candidate of its own selection."—*Current History*, 1897, *pp.* 865-6.

Months went on, while the Powers still discussed the Cretan situation and no agreement was reached. In January, 1898, the Turkish government appointed Edhem Pasha governor of Candia; but, in the face of the admirals of the blockading squadrons, who exercised an undefined authority, he seems to have had practically little power. Presently, a new attempt was made to select a Christian Governor-general. France and Russia proposed Prince George of Greece, but Austria and Turkey opposed. In April, Austria and Germany withdrew from the blockade and from the "Concert," leaving Great Britain, Russia, France and Italy to deal with Cretan affairs alone. The admirals of these Powers, acting under instructions, then divided the Cretan coast among themselves, each directing the administration of such government as could be conducted in his own part. The British admiral had Candia, the capital town, and there trouble arose which brought the whole Cretan business to a crisis. He attempted to take possession of the customs house (September 6), and landed for that purpose a small force of 60 men. They were attacked by a Turkish mob, with which they fought desperately for four hours, losing 12 killed and some 40 wounded, before they could make their retreat to the shore and regain their ship. At the same time a general massacre of Christians in the town was begun and some 800 perished before it was stopped. Edhem Pasha, with about 4,000 Turkish troops at his command, was said to have waited long for the mob to do its work before he interfered.

This outbreak brought the four Powers to a decisive agreement. They joined in imperatively demanding the withdrawal of Turkish troops and officials from the island, and enforced the demand. Guarantees for the safety of the Mohammedan population in life and property were given; it was conceded that the Sultan's suzerainty over Crete should be maintained, and he was allowed to hold one military post in the island for a sign of the fact. On those terms the Turkish evacuation of Crete was carried out in November, and Prince George of Greece was appointed, not Governor-general, but High Commissioner of the four Powers, to organize an autonomous government in the island and administer it for a period of three years. The appointment was accepted, and Prince George was received with rejoicing in Crete on the 21st of December. The blockade had been raised on the 5th, and on the 26th the admirals departed.

During the following two years (1899-1900) there seems to have been a generally good condition of order restored and preserved. A constitution was framed by a national assembly, which conferred the executive authority on Prince George, as High Commissioner, with responsible councillors, and created a Chamber of Deputies, elected for the most part by the people, but containing ten members appointed by the High Commissioner. Equal rights for all religious beliefs was made a principle of the constitution.

A. D. 1899 (May—July).—Representation in the Peace Conference at The Hague. See (in this vol.) PEACE CONFERENCE.

A. D. 1899 (October).—Concessions to the Armenians.—In October an irade was published

by the Sultan which withdrew restrictions on the movements of Armenians in the provinces, except in the case of suspects; granted pardon or commutation of sentence to a number of Armenian prisoners; ordered payment of sums due to Armenian government officials who had been killed or expelled at the time of the massacres; directed assistance to be given in the repairing and rebuilding of churches, schools, and monasteries which had been injured or destroyed, and also gave direction for the building of an orphanage near Constantinople.

A. D. 1899 (November).—Railway to the Persian Gulf.—A German Bank Syndicate obtained from the Sultan, in November, 1899, a concession for the extension of the Anatolian Railway from Konieh in Asia Minor, to Basra, or Bassorah, on the Persian Gulf. The line, which will pass through Bagdad, and along the valleys of the Tigris and Euphrates, is to be completed within eight years from the date of the grant. "The concession is regarded as a startling proof of German influence in Constantinople, and a defeat both for Russian and British diplomacy. It is certainly a defeat for the former, and will greatly increase suspicion at St. Petersburg as to the ultimate ends of Germany in Turkey; but we suspect that Indian statesmen will perceive considerable compensations in the arrangement. Not to mention that all railways which approach India develop Indian trade, the railway may secure us a strong ally in Asia. It is not of much use for Russia to be running a line from the Caspian to Bushire if when she gets there she finds Britain and Germany allied in the Persian Gulf, and able by a railway through Gedrosia to Sind to throw themselves right across her path."—*Spectator* (*London*), *Dec.* 2, 1899.

"The opposition of the French company owning the Smyrna-Kassaba road, which extends east as far as Afion Karahissar, was removed by granting this company 40 per cent of the shares in the extension, and the local objection was obviated by a provision in the concession giving the Turkish Government the right to purchase the line at any time. Few railroad lines can be of greater prospective importance than this 2,000 miles of railroad uniting the Persian Gulf with Europe, forming a rapid transit to and from the East, opening up large tracts of agricultural country, and paving the way for German commercial supremacy in Asia Minor and Mesopotamia. It is not difficult to see how Germany, with preferential rates for goods on German lines, will be able to control the chief markets of Asia Minor and invade the East. . . . Germans purchased the Constantinople-Ismid Railroad from an English company and extended it to Angora. They also checkmated the French and English by extending their line from Eski-Sher to Konieh, thus preventing extension of both the Smyrna-Afion Karahissar and the Smyrna-Aidin-Dinair roads. The two great distributing points —Constantinople and Smyrna—are thus controlled by Germans, and German goods may enter the interior of Asia Minor and the great valley of the Tigris and Euphrates on German-controlled roads at a decided advantage. Germans have obtained the right to build docks and warehouses at Haida Pasha, the terminus of the Anatolian railroads; and with through rates for German goods on German lines, German freight cars may be sent across the Bosphorus and travel to Mesopotamia and the confines of India and Persia without change."—*United States Consular Reports, April*, 1900, *p.* 497.

Professor Hilprecht has remarked, in the "Sunday School Times" that" a new era for Babylonian archeology will begin when the railroad from Koniah to Baghdad and Bassorah has been constructed. It will then take about a week from London to the ruins of Babylon, where, doubtless, a railway station (Hillah) will be established. At present the traveler needs at the best six weeks to cover this route. This railroad," says the Professor, "has now become a certainty."

A. D. 1899-1901.—Impending outbreak in Macedonia.—The state of things in Macedonia, where the people have long been on the brink of revolt against Turkish rule, excited to it from Bulgaria and encouraged from Greece, but warned otherwise by Russia and Austria, is thus described by the "Economist," in an article quoted in "Littell's Living Age," March, 1899: "It is improbable, for reasons stated below, that Macedonia will rise in insurrection this year [1899], but, nevertheless, there is great danger in that quarter, which is evidently disturbing both Vienna and St. Petersburg, and exciting apprehensions in Constantinople. The Austrian and Russian Foreign Offices are both issuing intimations that if a revolt occurs Turkey will be allowed to put it down by Turkish methods, and the Sultan is raising more troops, sending Asiatic levies to Macedonia, and despatching some of his ablest officers to control the hill districts. Severe warnings have also been sent both to Belgrade and Sofia, and the Greeks are warned that if their active party moves the Government of Athens will not again be saved by Europe from the worst consequences. All these symptoms imply that there is grave fear, among those who watch Macedonia, that the patience of her sorely oppressed people has given way, and that they have resolved to risk everything rather than remain longer under the rule of Pashas from whom no man's life and no woman's honor is safe for twelve hours together. It is known, moreover, that the course of events in Crete and the appearance of the Tsar's Rescript have greatly stirred the population. The former is held by them to show that if a Christian population in Turkey will risk massacre, Europe will not allow them to be exterminated, while the latter has made submission more difficult by putting an end to hope for the next five years. . . .

"Turkish subjects must be driven to despair before they will rise against the Turks, and if they can even hope to be left alone, the Macedonians will wait, rather than encounter so dreadful a risk. They have, it is true, the example of the Cretans to encourage them, but their country is not an island, and they have the fate both of the Armenians and the Thessalians to warn them that on the mainland the Turks cannot be resisted by half-drilled forces.

"It seems almost a truism to say that Europe is foolish to allow such a source of danger as Macedonia presents to continue without a cure; but there is something to be said on the other side. The Powers sincerely desire peace, and the Macedonian magazine cannot be flooded without a war, if it be only a war between Russia and the Sultan. Nobody knows to what such

a war would lead, or in what condition Eastern Europe might emerge from it. Moreover, however much the Macedonians may excite the sympathies of philanthropists, they have done a good deal to alienate those of politicians. They decline to be either Austrian or Russian. They asked for years to be aided by Greece, and when Greece declared war on Turkey they refused to rise behind Edhem Pasha, whom they could have cut away from his supports. They now ask aid from Bulgaria, but they are most unwilling to submit to Sofia, and so make of Bulgaria a fairly strong State. They wish, they say, to make of Macedonia a Principality, but if it were so made the Slavo-Macedonians would begin fighting the Græco-Macedonians, until both had been nearly ruined. They must join one party or the other if they wish to be free, and stick to the one they join, and fight for it with a coherence which they have never yet displayed."

On the 7th of January, 1901, a correspondent of the "London Times" wrote on the same subject from Vienna, as follows: "The situation in Macedonia, as described in trustworthy accounts coming from different directions, testifies to the increasing danger of trouble. Things have gone so far that an outbreak may occur this year. In diplomatic circles it is considered impossible that in any case it can be delayed for longer than a twelvemonth. In Constantinople, Athens, and all the capitals of the Balkan States the eventuality of a Macedonian rising has been expected for several years past, and in more than one instance preparations have been made accordingly. To what extent the Macedonia committees have received official patronage in Bulgaria is now of secondary interest. The mischief has been done, and the agitation in Macedonia is at present beyond the control of the Bulgarian authorities, even if they wished to keep it in check, which is not certain. All that can be said with confidence is that last summer Austria and Russia made a vigorous and successful effort to put an end to the almost open encouragement extended to the Macedonian committees at Sofia, which was within an ace of involving the Principality in a war with Rumania. The Austro-Russian 'entente' [an understanding or agreement between Russia and Austria, in 1897, to act together in keeping peace in the Balkan peninsula] has, in fact, done excellent service wherever diplomatic pressure can be brought to bear. But, unfortunately, that does not include Macedonia. If the revolutionary element in that province of the Ottoman Empire sets at defiance the imposing Turkish forces concentrated on the spot, it is not likely that it will be influenced by what is probably regarded as the remote contingency of the direct armed intervention of Austria and Russia. All the warnings and scoldings in the world will not suffice to preserve peace in Macedonia.

"It is difficult to say what foundation there may be for the statement that the Sultan himself seeks to take advantage of the disturbed condition of Macedonia for purposes of his own. It is alleged that he wishes to prevent any change in the existing régime in Crete by exciting the apprehension in Athens and elsewhere that an attempt to modify the status quo in that island would cause a massacre of the Hellenic population in Macedonia. This view of the case finds expression in the following extracts from a letter addressed to the 'Roumanie,' one of the leading organs of Bukharest:—'The thoroughly bad policy pursued by the Sublime Porte in Macedonia, which consists in allowing that unhappy province to remain a prey to Bulgarian agitators so as in case of need to terrify diplomacy by the spectre of a revolution, has contributed to open the eyes of the Powers. On the other hand, the irresistible attraction exercised by the Kingdom of Greece, not only on the Cretans themselves, but also on all the rayahs of the Ottoman Empire, is an indisputable fact.'"—See, also (in this vol.), BALKAN AND DANUBIAN STATES.

A. D. 1901.—The Cretan question.—The provisional arrangement of government for Crete, administered by Prince George, of Greece, as High Commissioner for the Powers, expires by limitation in December, 1901. What shall then be done with the island is a question that was referred, by the several Powers of the Concert, in the early part of the year, to their ambassadors at Rome, in conference with the Italian Minister of Foreign Affairs. The administration of Prince George appears to have been quite remarkably satisfactory to all concerned, and its continuation was evidently desired, as much by the Cretans as by the protecting Powers; but the former sought to have it placed on a basis of permanency, in some form that would be practically tantamount to the long craved annexation to Greece. Prince George naturally looks in the same direction, and he is said to have made it known that he would decline to hold his post provisionally beyond the term of three years for which he accepted it in 1898. The ambassadorial conference at Rome decided, however, that the time has not come for a permanent settlement of the Cretan question, and that the provisional arrangement for its government must be renewed. A Press despatch from Athens, on the 22d of March, 1901, announced the decision and indicated the circumstances of the situation, as follows:

"The Cretan Assembly meets at the end of next month, and its probable attitude towards the question of union with Greece is already the subject of speculation here. The decision of the conference of Ambassadors at Rome is embodied in a memorandum which has been handed to Prince George by the Consuls at Canea, while a copy of the document has been unofficially presented to King George 'à titre d'information.' The Ambassadors express their opinion that any manifestation on the part of the Cretans in favour of union with Greece would be inopportune at the present moment, and they propose a prolongation of the present provisional system of government without assigning any definite term to the High Commissioner's mandate.

"Whether Prince George, who is an enthusiastic advocate of union with Greece, will accept the new arrangement unconditionally remains to be seen. Meanwhile the islanders are occupied with preparations for the elections.

"It appears that at a recent sitting of the Prince's Council one of the most prominent of Cretan politicians advocated the institution of an autonomous Principality on the lines already

laid down by the existing Constitution. The proposal provoked a violent outburst on the part of the Athenian Press, which denounces its author as a traitor to the cause of Hellenism. The opinion apparently prevails here that the establishment of a Principality would finally preclude the union of the island with Greece."

A. D. 1897-1898.—Native insurrection and mutiny of Sudanese troops.—A train of serious troubles in the Uganda Protectorate began in May, 1897, with an insurrection of some of the chiefs, instigated by the king, Mwanga, who was restive under British control. The revolt was suppressed after some sharp fighting, especially at Kiango, on the 24th of July, and King Mwanga escaped into German territory. In August he was formally deposed by a council of chiefs, and his infant son, Chua, was elected king in his place, under a regency of three of the chiefs. But a more serious trouble followed, from the mutiny of a part of the Sudanese troops which had been serving in Uganda. These troops were being sent to join an expedition, under Major Macdonald, for the exploration of the districts adjacent to the Italian sphere of influence, and were not permitted to take their women with them. This seems to have been their chief grievance. They also complained of being overworked, underpaid, insufficiently fed, and commanded by young officers who would not listen to their complaints. They seized Fort Lubas, on the frontier between Uganda and Usoga, made prisoners of several of their officers, whom they finally murdered, and held the fort against repeated attacks until early in January, 1898, when they made their escape. They were pursued and attacked (February 24) at Kabagambe, on Lake Kioja, where they had built a fort. Many were killed, the remainder much scattered. A considerable party got away to the eastern side of the Nile and continued to give trouble there throughout the year.

Meantime, the deposed king, Mwanga, had escaped from the Germans and effected a new rising among his late subjects; and another deposed king, Kabarega, of Unyoro, had also reappeared, to make trouble in that region. After the suppression of the Sudanese mutiny these risings were overcome, with the help of some 1,100 troops brought from India for the emergency. In March, there was news of Kabarega's death, and the British Acting Commissioner and Consul General issued the following proclamation: "Whereas Kabarega, the deposed King of Unyoro, is reported to have deceased, and whereas the present disordered state of affairs in that country has proved that, for the maintenance of good government and good-will, it is expedient to provide for the succession to the kingdom of a member of the Royal House, it is hereby publicly proclaimed that Karukala, son of Kabarega, is now appointed King of Unyoro, under the protection of Her Britannic Majesty. The Kingdom of Unyoro comprises the provinces of—Busindi, Shifalu, Magungu, Kibero, Bugoma, Bugahiaobeire. This appointment is in accordance with the general conditions by which countries in British African Protectorates are guided and regulated, and it secures to the Kingdom of Unyoro all the advantages which accrue from its being an integral part of such a Protectorate. The local government of the country will be administered, under the guidance of Her Majesty's Representative, by a Council of Regency of either two or three Chiefs, to be appointed by Her Majesty's Commissioner. This Council of Regency will, subject to the approval of Her Majesty's Commissioner, select and appoint the Katikiro and the other Chiefs of the first rank required in accordance with local custom. These Chiefs, on their appointment being confirmed, will select and appoint in full Council the lesser grade Chiefs, until the system of local administration is complete."—*Great Britain, Parliamentary Publications* (*Papers by Command: Africa, No.* 7, 1898, *p.* 42).

UGANDA RAILWAY, The.—On the 30th of April, 1900, the British Parliament voted £1,930,000 for the completion of the railway under construction from Mombasa, on the Indian Ocean, to Lake Victoria-Nyanza, officially known as the Mombasa-Victoria Railway. Previous expenditure had been about £3,000,000. On the 30th of October it was reported that rails were laid down to the 452d mile from Mombasa, and that advance gangs were working about 40 miles beyond that point.

A. D. 1894.—Legislation to promote the reclamation of arid lands.—The following measure of legislation to promote the reclamation of arid lands was carried through Congress as an amendment to the appropriation bill for Sundry Civil Expenditures, and became law August 18, 1894:

"Sec. 4. That to aid the public land States in the reclamation of the desert lands therein, and the settlement, cultivation, and sale thereof in small tracts to actual settlers, the Secretary of the Interior with the approval of the President, be, and hereby is, authorized and empowered, upon proper application of the State to contract and agree, from time to time, with each of the States in which there may be situated desert lands as defined by the Act entitled 'An Act to provide for the sale of desert land in certain States and Territories,' approved March 3d, 1877, and the Act amendatory thereof, approved March 3d, 1891, binding the United States to donate, grant and patent to the State free of cost for survey or price such desert lands, not exceeding one million acres in each State, as the State may cause to be irrigated, reclaimed, occupied, and not less than twenty acres of each one hundred and sixty-acre tract cultivated by actual settlers, within ten years next after the passage of this Act, as thoroughly as is required of citizens who may enter under the said desert land law.

"Before the application of any State is allowed or any contract or agreement is executed or any segregation of any of the land from the public domain is ordered by the Secretary of the Interior, the State shall file a map of the said land proposed to be irrigated which shall exhibit a plan showing the mode of the contemplated irrigation and which plan shall be sufficient to thoroughly irrigate and reclaim said land and prepare it to raise ordinary agricultural crops and shall also show the source of the water to be used for irrigation and reclamation, and the Secretary of the Interior may make necessary regulations for the reservation of the lands applied for by the States to date from the date of the filing of the map and plan of irrigation, but such reservation shall be of no force whatever if such map and plan of irrigation shall not be approved. That any State contracting under this section is hereby authorized to make all necessary contracts to cause the said lands to be reclaimed, and to induce their settlement and cultivation in accordance with and subject to the provisions of this section; but the State shall not be authorized to lease any of said lands or to use or dispose of the same in any way whatever, except to secure their reclamation, cultivation and settlement.

"As fast as any State may furnish satisfactory proof according to such rules and regulations as may be prescribed by the Secretary of the Interior, that any of said lands are irrigated, reclaimed and occupied by actual settlers, patents shall be issued to the State or its assigns for said land so reclaimed and settled: Provided, That said States shall not sell or dispose of more than one hundred and sixty acres of said land to any one person, and any surplus of money derived by any State from the sale of said lands in excess of the cost of their reclamation, shall be held as a trust fund for and be applied to the reclamation of other desert lands in such State. That to enable the Secretary of the Interior to examine any of the lands that may be selected under the provisions of this section, there is hereby appropriated out of any moneys in the Treasury, not otherwise appropriated, one thousand dollars."—*Acts, 53d Cong., 2d Sess., ch.* 301.

A. D. 1895 (January—February).—The monetary situation.—Contract for replenishing the gold reserve in the Treasury.—The alarming situation of the Treasury of the United States at the beginning of the year 1895 was clearly described by the President in his special Message to Congress, January 28 (see in vol. 5, UNITED STATES OF AM.: A. D. 1895). By the operation of what had been aptly called "the endless chain" of the greenback currency issues of the government (paid out with one hand, to be redeemed with the other in gold, which the declining value of silver brought more and more into demand) the gold reserve in the Treasury was fast being exhausted, and the hour was approaching when, without some effective relief, the obligations of the nation would have to be paid in depreciated silver coin, and its credit lost. The appeal of the President to Congress had no effect. The Senate was controlled by a majority of men who desired precisely the result which he wished to avert. The state of things in that body was described by Senator Sherman, of the Committee on Finance, in the following words: "The Committee on Finance is utterly helpless to deal with this vast question. We are quite divided upon it. We are not allowed to propose a measure to this Senate which all can approve of, unless there is attached to it a provision for free coinage of silver." The attitude of the House was different, but almost equally hostile to the President's views. Its Republican majority was not favorable to the aims of the free silver parties, but held that the relief needed for the Treasury was to be sought in a return to higher import duties, as a means of obtaining increased revenue. Hence, a bill to carry out the recommendations of the President was rejected in the House, on the 7th of February, by a vote of 162 against 135.

On the following day, the Secretary of the Treasury, Mr. Carlisle, exercising authority which he possessed to sell certain four per cent. thirty year bonds, contracted with August Belmont & Co., who represented the Rothschilds of London, and with the house of J. P. Morgan & Co., of New York, on behalf of J. S. Morgan & Co., London, and themselves, for supplying 3,500,000 ounces of standard gold coin of the United States, at the rate of $17.80441 per ounce, in exchange for such bonds. It was a condition of the contract that one half of the coin supplied should be brought from Europe; also that the contracting syndicate should use its influence to protect the Treasury against withdrawals of gold. At the same time, the Secretary of the Treasury reserved the right to substitute three

per cent. gold bonds, if Congress would authorize such an issue, to be taken by the syndicate at par, in place of the four per cents to which his existing authority was restricted. It was shown that the consequent saving in interest would be $539,000 per annum, amounting to $16,174,770 in thirty years; but the proposal was rejected in the House of Representatives by 167 votes against 120. The contract was accordingly carried out in its original form, with success so far that the withdrawals of gold from the Treasury dropped for a considerable period to a low point. It appeared that when this emergency break was put upon the working of the "endless chain," the sub-treasury in New York was believed to be within twenty-four hours of a suspension of gold payments. But the contract was loudly condemned, nevertheless, by the opponents of the administration.

A. D. 1895 (February).—Renewed insurrection in Cuba. See (in this vol.) CUBA: A. D. 1895.

A. D. 1895 (April—May).—Decision of the Supreme Court against the constitutionality of the Income Tax.—Cases testing the constitutionality of the income tax which Congress had attached to the Tariff Act of 1894 (see, in vol. 4 of original edition, or in vol. 5 of revised edition, TARIFF LEGISLATION, UNITED STATES: A. D. 1894), were brought to a partial decision in the Supreme Court in April, and finally in May, 1895. The cases in question were "Pollock v. Farmers' Loan and Trust Company," and "Hyde v. Continental Trust Company." On the first hearing, the illness and absence of one of the justices, Mr. Jackson, of Tennessee, left but eight members in attendance, and they divided equally on several points which were vital to the decision of the question of constitutionality in the tax. The appellants accordingly filed a petition for a re-hearing, submitting, among other reasons, the following: "The question involved in these cases was as to the constitutionality of the provisions of the tariff act of August 15, 1894 (sections 27 to 37), purporting to impose a tax on incomes. The Court has held that the same are unconstitutional, so far as they purport to impose a tax upon the rent or income of real estate and income derived from municipal bonds. It has, however, announced that it was equally divided in opinion as to the following questions, and has expressed no opinion in regard to them: (1) Whether the void provisions invalidate the whole act. (2) Whether, as to the income from personal property as such, the act is unconstitutional as laying direct taxes. (3) Whether any part of the tax, if not considered as a direct tax, is invalid for want of uniformity.

"The court has reversed the decree of the Circuit Court and remanded the case, with directions to enter a decree in favor of complainant in respect only of the voluntary payment of the tax on the rents and income of defendant's real estate and that which it holds in trust, and on the income from the municipal bonds owned or so held by it. While, therefore, the two points above stated have been decided, there has been no decision of the remaining questions regarding the constitutionality of the act, and no judgment has been announced authoritatively establishing any principle for interpretation of the statute in those respects."

The re-hearing asked for was granted by the Court on the 6th of May, when Justice Jackson was able to take his seat on the bench, after which, on the 20th of May, by the opinion of five members of the Court against four, the law was pronounced null, so far as concerned the imposition of a tax on incomes. The opinion of the majority was delivered by Chief Justice Fuller, who said, in part:

"The Constitution divided Federal taxation into two great classes, the class of direct taxes, and the class of duties, imposts and excises; and prescribed two rules which qualified the grant of power as to each class. The power to lay direct taxes apportioned among the several States in proportion to their representation in the popular branch of Congress, a representation based on population as ascertained by the census, was plenary and absolute; but to lay direct taxes without apportionment was forbidden. The power to lay duties, imposts, and excises was subject to the qualification that the imposition must be uniform throughout the United States.

"Our previous decision was confined to the consideration of the validity of the tax on the income from real estate and on the income from municipal bonds. . . . We are now permitted to broaden the field of inquiry, and to determine to which of the two great classes a tax upon a person's entire income, whether derived from rents, or products, or otherwise, of real estate, or from bonds, stocks, or other forms of personal property, belongs; and we are unable to conclude that the enforced subtraction from the yield of all the owner's real or personal property, in the manner prescribed, is so different from a tax upon the property itself, that it is not a direct, but an indirect tax in the meaning of the Constitution.

"The words of the Constitution are to be taken in their obvious sense, and to have a reasonable construction. In Gibbons v. Ogden, Mr. Chief Justice Marshall, with his usual felicity, said: 'As men, whose intentions require no concealment, generally employ the words which most directly and aptly express the ideas they intend to convey, the enlightened patriots who framed our Constitution, and the people who adopted it must be understood to have employed words in their natural sense, and to have intended what they have said.' 9 Wheat. 1, 188. And in Rhode Island v. Massachusetts, where the question was whether a controversy between two States over the boundary between them was within the grant of judicial power, Mr. Justice Baldwin, speaking for the Court, observed: 'The solution of this question must necessarily depend on the words of the Constitution; the meaning and intention of the convention which framed and proposed it for adoption and ratification to the conventions of the people of and in the several States; together with a reference to such sources of judicial information as are resorted to by all courts in construing statutes, and to which this court has always resorted in construing the Constitution.' 12 Pet. 657, 721. We know of no reason for holding otherwise than that the words 'direct taxes,' on the one hand, and 'duties, imposts and excises,' on the other, were used in the Constitution in their natural and obvious sense. Nor in arriving at what those terms embrace do we perceive any ground for enlarging them beyond or narrowing them

within their natural and obvious import at the time the Constitution was framed and ratified.

"And passing from the text, we regard the conclusion reached as inevitable, when the circumstances which surrounded the convention and controlled its action and the views of those who framed and those who adopted the Constitution are considered. . . . In the light of the struggle in the convention as to whether or not the new Nation should be empowered to levy taxes directly on the individual until after the States had failed to respond to requisitions—a struggle which did not terminate until the amendment to that effect, proposed by Massachusetts and concurred in by South Carolina, New Hampshire, New York, and Rhode Island, had been rejected—it would seem beyond reasonable question that direct taxation, taking the place as it did of requisitions, was purposely restrained to apportionment according to representation, in order that the former system as to ratio might be retained while the mode of collection was changed. This is forcibly illustrated by a letter of Mr. Madison of January 29, 1789, recently published, written after the ratification of the Constitution, but before the organization of the government and the submission of the proposed amendment to Congress, which, while opposing the amendment as calculated to impair the power only to be exercised in extraordinary emergencies, assigns adequate ground for its rejection as substantially unnecessary, since, he says, 'every State which chooses to collect its own quota may always prevent a Federal collection, by keeping a little beforehand in its finances and making its payment at once into the Federal treasury.'

"The reasons for the clauses of the Constitution in respect of direct taxation are not far to seek. The States, respectively, possessed plenary powers of taxation. They could tax the property of their citizens in such manner and to such extent as they saw fit; they had unrestricted powers to impose duties or imposts on imports from abroad, and excises on manufactures, consumable commodities, or otherwise. They gave up the great sources of revenue derived from commerce; they retained the concurrent power of levying excises, and duties if covering anything other than excises; but in respect of them the range of taxation was narrowed by the power granted over interstate commerce, and by the danger of being put at disadvantage in dealing with excises on manufactures. They retained the power of direct taxation, and to that they looked as their chief resource; but even in respect of that, they granted the concurrent power, and if the tax were placed by both governments on the same subject, the claim of the United States had preference. Therefore, they did not grant the power of direct taxation without regard to their own condition and resources as States; but they granted the power of apportioned direct taxation, a power just as efficacious to serve the needs of the general government, but securing to the States the opportunity to pay the amount apportioned, and to recoup from their own citizens in the most feasible way, and in harmony with their systems of local self-government. If, in the changes of wealth and population in particular States, apportionment produced inequality, it was an inequality stipulated for, just as the equal representation of the States, however small, in the Senate, was stipulated for. . . .

"Moreover, whatever the reasons for the constitutional provisions, there they are, and they appear to us to speak in plain language. It is said that a tax on the whole income of property is not a direct tax in the meaning of the Constitution, but a duty, and, as a duty, leviable without apportionment, whether direct or indirect. We do not think so. Direct taxation was not restricted in one breath and the restriction blown to the winds in another. Cooley (On Taxation, p. 3) says that the word 'duty' ordinarily 'means an indirect tax imposed on the importation, exportation or consumption of goods'; having 'a broader meaning than "custom," which is a duty imposed on imports or exports'; that 'the term "impost" also signifies any tax, tribute or duty, but it is seldom applied to any but the indirect taxes. An excise duty is an inland impost, levied upon articles of manufacture or sale, and also upon licenses to pursue certain trades or to deal in certain commodities.' In the Constitution the words 'duties, imposts and excises' are put in antithesis to direct taxes. Gouverneur Morris recognized this in his remarks in modifying his celebrated motion, as did Wilson in approving of the motion as modified. . . .

"Our conclusions may therefore be summed up as follows:

"First. We adhere to the opinion already announced, that, taxes on real estate being indisputably direct taxes, taxes on the rents or income of real estate are equally direct taxes.

"Second. We are of opinion that taxes on personal property, or on the income of personal property, are likewise direct taxes.

"Third. The tax imposed by sections twenty-seven to thirty-seven, inclusive, of the act of 1894, so far as it falls on the income of real estate and of personal property, being a direct tax within the meaning of the Constitution, and, therefore, unconstitutional and void because not apportioned according to representation, all those sections, constituting one entire scheme of taxation, are necessarily invalid."

Four dissenting opinions were prepared, by Justices Harlan, Brown, Jackson and White. In that of Mr. Justice Harlan, he said: "What are 'direct taxes' within the meaning of the Constitution? In the convention of 1787, Rufus King asked what was the precise meaning of 'direct' taxation, and no one answered. Madison Papers, 5 Elliott's Debates, 451. The debates of that famous body do not show that any delegate attempted to give a clear, succinct definition of what, in his opinion, was a direct tax. Indeed the report of those debates, upon the question now before us, is very meagre and unsatisfactory. An illustration of this is found in the case of Gouverneur Morris. It is stated that on the 12th of July, 1787, he moved to add to a clause empowering Congress to vary representation according to the principles of 'wealth and numbers of inhabitants,' a proviso 'that taxation shall be in proportion to representation.' And he is reported to have remarked, on that occasion, that while some objections lay against his motion, he supposed 'they would be removed by restraining the rule to direct taxation.' Elliott's Debates, 302. But, on the 8th of August, 1787, the work of the Committee on Detail being before the convention, Mr. Morris is reported to

have remarked, 'let it not be said that direct taxation is to be proportioned to representation.' 5 Elliott's Debates, 393. If the question propounded by Rufus King had been answered in accordance with the interpretation now given, it is not at all certain that the Constitution, in its present form, would have been adopted by the convention, nor, if adopted, that it would have been accepted by the requisite number of States."

The following is from the dissenting opinion of Mr. Justice Brown: "In view of the fact that the great burden of taxation among the several States is assessed upon real estate at a valuation, and that a similar tax was apparently an important part of the revenue of such States at the time the Constitution was adopted, it is not unreasonable to suppose that this is the only undefined direct tax the framers of the Constitution had in view when they incorporated this clause into that instrument. The significance of the words 'direct taxes' was not so well understood then as it is now, and it is entirely probable that these words were used with reference to a generally accepted method of raising a revenue by tax upon real estate. . . . But, however this may be, I regard it as very clear that the clause requiring direct taxes to be apportioned to the population has no application to taxes which are not capable of apportionment according to population. It cannot be supposed that the convention could have contemplated a practical inhibition upon the power of Congress to tax in some way all taxable property within the jurisdiction of the Federal government, for the purposes of a national revenue. And if the proposed tax were such that in its nature it could not be apportioned according to population, it naturally follows that it could not have been considered a direct tax, within the meaning of the clause in question."

Mr. Justice Jackson concluded his dissenting opinion as follows: "The practical operation of the decision is not only to disregard the great principles of equality in taxation, but the further principle that in the imposition of taxes for the benefit of the government the burdens thereof should be imposed upon those having the most ability to bear them. This decision, in effect, works out a directly opposite result, in relieving the citizens having the greater ability, while the burdens of taxation are made to fall most heavily and oppressively upon those having the least ability. It lightens the burden upon the larger number in some States subject to the tax, and places it most unequally and disproportionately on the smaller number in other States. Considered in all its bearings, this decision is, in my judgment, the most disastrous blow ever struck at the constitutional power of Congress. It strikes down an important portion of the most vital and essential power of the government in practically excluding any recourse to incomes from real and personal estate for the purpose of raising needed revenue to meet the government's wants and necessities under any circumstances.

"I am therefore compelled to enter my dissent to the judgment of the court."

The opinion delivered by the majority of the Court was criticised with severity by Mr. Justice White, who said: "The injustice of the conclusion points to the error of adopting it. It takes invested wealth and reads it into the Constitution as a favored and protected class of property, which cannot be taxed without apportionment, whilst it leaves the occupation of the minister, the doctor, the professor, the lawyer, the inventor, the author, the merchant, the mechanic, and all other forms of industry upon which the prosperity of a people must depend, subject to taxation without that condition A rule which works out this result, which, it seems to me, stultifies the Constitution by making it an instrument of the most grievous wrong, should not be adopted, especially when, in order to do so, the decisions of this court, the opinions of the law writers and publicists, tradition, practice, and the settled policy of the government must be overthrown.

"To destroy the fixed interpretation of the Constitution, by which the rule of apportionment according to population, is confined to direct taxes on real estate so as to make that rule include indirect taxes on real estate and taxes, whether direct or indirect, on invested personal property, stocks, bonds, etc., reads into the Constitution the most flagrantly unjust, unequal, and wrongful system of taxation known to any civilized government. This strikes me as too clear for argument. I can conceive of no greater injustice than would result from imposing on one million of people in one State, having only ten millions of invested wealth, the same amount of tax as that imposed on the like number of people in another State having fifty times that amount of invested wealth. The application of the rule of apportionment by population to invested personal wealth would not only work out this wrong, but would ultimately prove a self-destructive process, from the facility with which such property changes its situs. If so taxed, all property of this character would soon be transferred to the States where the sum of accumulated wealth was greatest in proportion to population, and where therefore the burden of taxation would be lightest, and thus the mighty wrong resulting from the very nature of the extension of the rule would be aggravated. It is clear then, I think, that the admission of the power of taxation in regard to invested personal property, coupled with the restriction that the tax must be distributed by population and not by wealth, involves a substantial denial of the power itself, because the condition renders its exercise practically impossible. To say a thing can only be done in a way which must necessarily bring about the grossest wrong, is to delusively admit the existence of the power, while substantially denying it. And the grievous results sure to follow from any attempt to adopt such a system are so obvious that my mind cannot fail to see that if a tax on invested personal property were imposed by the rule of population, and there were no other means of preventing its enforcement, the red spectre of revolution would shake our institutions to their foundation. . . .

"It is, I submit, greatly to be deplored that, after more than one hundred years of our national existence, after the government has withstood the strain of foreign wars and the dread ordeal of civil strife, and its people have become united and powerful, this court should consider itself compelled to go back to a long repudiated and rejected theory of the Constitution, by which the government is deprived of an inherent

attribute of its being, a necessary power of taxation."—*U. S. Reports, v.* 158, *pp.* 601–715.

A. D. 1895 (July—November).—Correspondence with the Government of Great Britain on the Venezuela boundary question. See (in this vol.) VENEZUELA: A. D. 1895 (JULY), and (NOVEMBER).

A. D. 1895 (September).—Executive order for the improvement of the consular service.—In his annual Message to Congress, December 2, 1895, President Cleveland made the following statement of measures adopted for the improvement of the consular service of the country:

"In view of the growth of our interests in foreign countries and the encouraging prospects for a general expansion of our commerce, the question of an improvement in the consular service has increased in importance and urgency. Though there is no doubt that the great body of consular officers are rendering valuable services to the trade and industries of the country, the need of some plan of appointment and control which would tend to secure a higher average of efficiency can not be denied. The importance of the subject has led the Executive to consider what steps might properly be taken without additional legislation to answer the need of a better system of consular appointments. The matter having been committed to the consideration of the Secretary of State, in pursuance of his recommendations, an Executive order was issued on the 20th of September, 1895, by the terms of which it is provided that after that date any vacancy in a consular or commercial agency with an annual salary or compensation from official fees of not more than $2,500 or less than $1,000 should be filled either by transfer or promotion from some other position under the Department of State of a character tending to qualify the incumbent for the position to be filled, or by the appointment of a person not under the Department of State, but having previously served thereunder and shown his capacity and fitness for consular duty, or by the appointment of a person who, having been selected by the President and sent to a board for examination, is found, upon such examination, to be qualified for the position. Posts which pay less than $1,000 being usually, on account of their small compensation, filled by selection from residents of the locality, it was not deemed practicable to put them under the new system.

"The compensation of $2,500 was adopted as the maximum limit in the classification for the reason that consular officers receiving more than that sum are often charged with functions and duties scarcely inferior in dignity and importance to those of diplomatic agents, and it was therefore thought best to continue their selection in the discretion of the Executive without subjecting them to examination before a board. Excluding seventy-one places with compensation at present less than $1,000, and fifty-three places above the maximum in compensation, the number of positions remaining within the scope of the order is one hundred and ninety-six. This number will undoubtedly be increased by the inclusion of consular officers whose remuneration in fees, now less than $1,000, will be augmented with the growth of our foreign commerce and a return to more favorable business conditions. In execution of the Executive order referred to, the Secretary of State has designated as a board to conduct the prescribed examinations the Third Assistant Secretary of State, the Solicitor of the Department of State, and the Chief of the Consular Bureau, and has specified the subjects to which such examinations shall relate.

"It is not assumed that this system will prove a full measure of consular reform. It is quite probable that actual experience will show particulars in which the order already issued may be amended, and demonstrate that, for the best results, appropriate legislation by Congress is imperatively required. In any event these efforts to improve the consular service ought to be immediately supplemented by legislation providing for consular inspection. This has frequently been a subject of Executive recommendation, and I again urge such action by Congress as will permit the frequent and thorough inspection of consulates by officers appointed for that purpose or by persons already in the diplomatic or consular service. The expense attending such a plan would be insignificant compared with its usefulness, and I hope the legislation necessary to set it on foot will be speedily forthcoming.

"I am thoroughly convinced that in addition to their salaries our ambassadors and ministers at foreign courts should be provided by the Government with official residences. The salaries of these officers are comparatively small and in most cases insufficient to pay, with other necessary expenses, the cost of maintaining household establishments in keeping with their important and delicate functions. The usefulness of a nation's diplomatic representative undeniably depends upon the appropriateness of his surroundings, and a country like ours, while avoiding unnecessary glitter and show, should be certain that it does not suffer in its relations with foreign nations through parsimony and shabbiness in its diplomatic outfit. These considerations and the other advantages of having fixed and somewhat permanent locations for our embassies, would abundantly justify the moderate expenditure necessary to carry out this suggestion."—*Message of the President* (*54th Cong., 1st Sess., House Doc., v.* 1).

A. D. 1895 (December).—Message of President Cleveland on the boundary dispute between Great Britain and Venezuela.—Prompt response from Congress.—On the 17th of December, 1895, the country was startled and the world at large excited by a message from President Cleveland to Congress, relating to the disputed boundary between British Guiana and Venezuela, and the refusal of the British government to submit the dispute to arbitration—see, in this vol., VENEZUELA: A. D. 1895 (DECEMBER). The tone in which the President recommended the appointment of a commission to ascertain the "true divisional line" between Venezuela and British Guiana, with a view to determining the future action of the United States, was peremptory and threatening enough to awaken all the barbaric passions which wait and watch for signals of war; and Congress, in both branches, met the wishes of the President with the singular alacrity that so often appears in the action of legislative bodies when a question arises which carries the scent of war. The House refused to wait for any reference of the matter to its Committee on Foreign Relations, but framed and passed at once (December 18) without debate or division, an act authorizing

the suggested commission and appropriating $100,000 for the expenses of its work. In the Senate there were some voices raised against needless and unseemly haste in the treatment of so grave a proposition. Senator Teller, of Colorado, was one who spoke to that effect, saying:

"I do not understand that our great competitor in commerce and trade, our great English-speaking relative, has ever denied our right to assert and maintain the Monroe doctrine. What they claim is that the Monroe doctrine does not apply to this case. Whether it applies to this case depends upon the facts, which are unknown to us, it appears. If I knew what the facts were, as an international lawyer I would have no difficulty in applying the law. As a believer in the American doctrine of the right to say that no European power shall invade American soil, either of North or South America, I should have no trouble in coming to a conclusion. Is it an invasion of American soil? I do not know that. I repeat, I thought I did. I have found that I do not.

"If the President of the United States had said that in the Department of State they had determined what was the true line between the British possessions and Venezuela, and if he had said, 'We are confident that the British Government, instead of attempting to arrange a disputed line, is attempting to use this disputed line as a pretense for territorial acquisition,' no matter what may be the character of the Administration, whether Democratic or Republican, I would have stood by that declaration as an American Senator, because there is where we get our information upon these subjects, and not from our own judgment. We must stand by what the Department says upon these great questions when the facts are ascertained by it. The President says that he needs assistance to make this determination. We are going to give it to him. Nobody doubts that. The only question is, how shall we give it to him? I am as firm a believer in the Monroe doctrine as any man who lives. I am as firm a believer as anyone in the maintenance of the honor of the American people, and do not believe it can be maintained if we abandon the Monroe doctrine.

"Mr. President, there is no haste in this matter. The dispute is one of long standing. Great Britain is not now taking any extraordinary steps with reference to the control of the territory in dispute. They took, it is said, five months to answer our Secretary's letter of July 20. Mr. President, the time was not excessive. It is not unreasonable in diplomatic affairs that there should be months taken in replying to questions of so much importance. We may properly take months, if we choose, to consider it before we plant ourselves upon what we say are the facts in this case. I repeat, so far as the American people are concerned, the Monroe doctrine is not in dispute, is not in doubt, whatever may be the doubt about the facts in this case. If the facts are not ascertained, we must, before we proceed further, ascertain them.

"This is a very important question. It is not a question of party politics. It is not a question that any political party ought to take advantage of to get votes. The political party that attempts to make capital out of this question will find that it is a loser in the end. The American people will not be trifled with on a question of this kind. If the other side of the Chamber, or the Administration, or anybody, attempts to make capital out of it they will find that they will lose in the end, as we should lose on our side if we should be foolish enough, as I know we are not, to attempt to make capital out of it in any way. . . . This question is of so much importance that I do not care myself if the bill goes to the Committee on Foreign Relations and lies there a month. You will not impress the world with our solidarity and solidity on this question by any haste in this body. Let this proceeding be a dignified proceeding. Let the bill go to the committee. Let the committee take their time on it. Let them return it here and say what is the best way by which we can strengthen the hands of the President of the United States in his efforts to maintain this American doctrine.

"Mr. President, I am not one of those who want war. I do not believe in war. I believe in this case Great Britain made a great mistake when she said she would not arbitrate, and I have faith enough in the love of justice and right that pervades the people of Great Britain to believe that on second sober thought they will submit this question to arbitration, as many of their representative men have declared they are willing to submit all questions of this character. . . . Let this bill go to the committee. Let it be considered. If the committee wants a week, ten days, or two weeks, or a month, let the committee take it. Nothing will be lost. Great Britain will not misunderstand our attitude. She does not misunderstand it now. She knows just as well how we feel upon these subjects as she will when we pass this bill. She has had it dinned in her ears again and again from nearly every Secretary of State that we were not willing to abandon the Monroe doctrine, nor view with indifference the improper interference of any European power with any existing American Government, whether such interference is a violation of the Monroe doctrine or not."—*Congressional Record, Dec.* 19, 1895, *p.* 246.

Senator Call made a similar appeal, saying: "As to all this talk about war, in my opinion there is no possibility of war. There can be, and ought to be, no possibility of it. The enlightened sentiment of the nations of the world would forbid that there should be a war between this country and England upon this question. Nevertheless, it would be the duty of this country to maintain by force of arms the proposition that there shall be no forcible establishment of European institutions and European Governments over any portion of this territory. Who can entertain the idea that war can be made with Great Britain, and that the people of the British Empire will permit that Government to engage in war upon a question of boundaries which is not sustained by the facts of the case, but a mere aggression, and that the peace of mankind shall be disturbed by it. . . .

"I agree with the Senator from Ohio [Mr. Sherman] that there is no necessity for haste in this action and that it comports better with the dignity of Congress for the Senate of the United States and the House of Representatives to declare that this Government will firmly maintain, as a definite proposition, that Venezuela shall not be forced to cede any portion of her territory to Great Britain or to recognize a boundary

line which is not based upon the facts of history and upon clear and ascertained proof. It seems to me, Mr. President, that all this discussion about war should not have place here, but that we should make a bold and independent and firm declaration as to the proper policy of this Government, and vote the President of the United States the money necessary, in his judgment, to carry out that declaration so far as obtaining information which may be desired. . . .

"The possibility that war between these two nations will be the result of our defending the right of Venezuela to the integrity of her territory against its forced appropriation by England should not be entertained. These two nations, the United States and Great Britain, are the main pillars of the civilization of the world, neither can afford to demand of the other anything that is wrong or any injustice to the other. Great Britain recognizes the supremacy of the United States in the Western Hemisphere, and it is sufficient for them to know that we will maintain this with all the power of the Republic, and that this is not an idle menace.

"This is my view of the situation. The President has done his duty. He has recommended that the traditional policy of this country to protect all people who establish governments of their choice against forcible intervention by European powers, under whatever pretense, whether by claiming fictitious boundaries and enforcing their claim, or by any other means, and that we will be the judge of this, but that we are ready to submit the facts to the judgment of a fair arbitration. It is sufficient for us to sustain this declaration and for us to provide the means of obtaining the information necessary for an intelligent judgment on the question. It will suffice for the able statesman who represents the Government of Great Britain to know and to inform his Government that the people of the United States are united in the determination to maintain and defend this policy with all their power, and a peaceable settlement of the question will be made."—*Congressional Record, Dec.* 20, 1895, *p.* 264.

The Senate was persuaded to refer the House Bill to its Committee on Foreign Relations, but the Committee reported it on the following day (December 20), and it was passed without division.

A. D. 1895-1896 (December—January).—The feeling in England and America over the Venezuela boundary dispute.—Happily President Cleveland's Message did not provoke in England the angry and combative temper that is commonly roused by a demand from one nation upon another, made in any peremptory tone. The feeling produced there seemed to have in it more of surprise and regret than of wrath, revealing very plainly that friendliness had been growing of late, much warmer in English sentiment toward the American Republic than in American sentiment toward England. Within the past thirty years there had been what in France would be called a "rapprochement" in feeling going on between the two peoples; but the rate of approach had been greater on one side than on the other, and neither had understood the fact until it was brought home to them by this incident. There seems to be no doubt that the English people were astonished and shocked by the sudden prospect of a serious quarrel with the United States, and that Americans were generally surprised and moved by the discovery of that state of feeling in the English mind. The first response in the United States to the President's message came noisily from the more thoughtless part of the people, and seemed to show that the whole nation was fairly eager for war with its "kin beyond sea." But that was a short-lived demonstration. The voices that really speak for the country soon made themselves heard in a different tone,—anxious to avert war,—critical of the construction that had been given to the Monroe doctrine by President Cleveland and his Secretary of State,—earnestly responsive to the pacific temper of the English public,—and yet firm in upholding the essential justice of the ground on which their government had addressed itself to that of Great Britain. The feeling in the two countries, respectively, at the beginning of 1896, appears to have been described very accurately by two representative writers in the "North American Review" of February in that year. One was Mr. James Bryce, the well-known English student of American institutions—author of "The American Commonwealth"—who wrote:

"Those Englishmen who have travelled in America have of course been aware of the mischief your school-books do in teaching young people to regard the English as enemies because there was war in the days of George III.' Such Englishmen knew that as Britain is almost the only great power with which the United States has had diplomatic controversies, national feeling has sometimes been led to regard her as an adversary, and displays of national feeling often took the form of defiance. Even such travellers, however, were not prepared for the language of the President and its reception in many quarters, while as to Englishmen generally, they could scarcely credit their eyes and ears. 'Why,' they said, 'should we be regarded as enemies by our own kinsfolk? No territorial dispute is pending between us and them, like those we have or have lately had with France and Russia. No explosions of Jingoism have ever been directed against them, like those which Lord Beaconsfield evoked against Russia some twenty years ago. There is very little of that commercial, and none of that colonial, rivalry which we have with France and Germany, for the Americans are still chiefly occupied in developing their internal resources, and have ample occupation for their energy and their capital in doing so. Still less is there that incompatibility of character and temper which sometimes sets us wrong with Frenchmen, or Russians, or even Germans, for we and the Americans come of the same stock, speak the same language, read the same books, think upon similar lines, are connected by a thousand ties of family and friendship. No two nations could be better fitted to understand one another's ideas and institutions. English travellers and writers used no doubt formerly to assume airs of supercilious condescension which must have been offensive to Americans. But those airs were dropped twenty or thirty years ago, and the travellers who return now return full of gratitude for the kindness they have received and full of admiration for the marvellous progress they have witnessed. We know all about the Irish faction; but the Irish faction do not account for this. So we quite understand that resentment

was caused in the North and West of America by the attitude of our wealthy class during the Civil War. But that attitude was not the attitude of the British nation. . . . Our press, whose tone often exasperates Continental nations, is almost uniformly respectful and friendly to America. What can we have done to provoke in the United States feelings so unlike those which we ourselves cherish?'

"In thus summing up what one has been hearing on all sides in Britain during the last fortnight, I am not exaggerating either the amazement or the regret with which the news of a threatened breach between the two countries was received. The average Englishman likes America far better than any foreign nation; he admires the 'go,' as he calls it, of your people, and is soon at home among you. In fact, he does not regard you as a foreign nation, as any one will agree who has noticed how different has been the reception given on all public occasions to your last four envoys, Messrs. Welsh, Lowell, Phelps, and Lincoln (as well as your present ambassador) from that accorded to the ambassadors of any other power. The educated and thoughtful Englishman has looked upon your Republic as the champion of freedom and peace, has held you to be our natural ally, and has even indulged the hope of a permanent alliance with you, under which the citizens of each country should have the rights of citizenship in the other and be aided by the consuls and protected by the fleets of the other all over the world. The sentiments which the news from America evoked were, therefore, common to all classes in England. . . . Passion has not yet been aroused, and will not be, except by the language of menace."—J. Bryce, *British Feeling on the Venezuelan Question* (*North American Review, Feb.*, 1896).

The writer who described American feeling, or opinion, in the same magazine, was Mr. Andrew Carnegie, who said: "In the United States, East, West, North and South, from which divergent voices were at first heard, there is but one voice now. Public opinion has crystallized into one word—arbitration. In support of that mode of settlement we now know the nation is unanimous. The proofs of this should not fail to carry conviction into the hearts of Britons. The one representative and influential body in the United States which is most closely allied with Britain not only by the ties of trade, but by the friendships which these ties have created, is the Chamber of Commerce of New York. If that body were polled by ballot, probably a greater proportion of its members than of any other body of American citizens would register themselves as friendly to England. So far did the feeling extend in this body, that a movement was on foot to call a meeting to dissent from the President's Message. Fortunately, wiser counsels prevailed, and time was given for an examination of the question, and for members to make up their minds upon the facts. The result was that at the crowded meeting subsequently held, there was passed a resolution, with only one dissenting voice, in favor of a commission for arbitration. In the whole proceedings there was only one sentiment present in the minds of those assembled: 'this is a question for arbitration.' . . .

"Every nation has its 'Red Rag,' some nations have more than one, but what the 'Right of Asylum' is to Great Britain, the Monroe Doctrine is to the United States. Each lies very deep in the national heart. Few statesmen of Great Britain do not share the opinion of Lord Salisbury, which he has not feared to express, that the 'Right of Asylum' is abused and should be restricted, but there has not arisen one in Britain sufficiently powerful to deal with it. The United States never had, and has not now, a statesman who could restrain the American people from an outburst of passion and the extreme consequences that national passion is liable to bring, if any European power undertook to extend its territory upon this continent, or to decide in case of dispute just where the boundary of present possessions stand. Such differences must be arbitrated. . . .

"In his speech at Manchester Mr. Balfour said he 'trusted and believed the day would come when better statesmen in authority, and more fortunate than even Monroe, would assert a doctrine between the English-speaking peoples under which war would be impossible.' That day has not to come, it has arrived. The British Government has had for years in its archives an invitation from the United States to enter into a treaty of arbitration which realizes this hope, and Mr. Balfour is one of those who, from their great position, seem most responsible for the rejection of the end he so ardently longs for. It is time that the people of Great Britain understood that if war be still possible between the two countries, it is not the fault of the Republic but of their own country, not of President Cleveland and Secretary of State Olney, but of Prime Minister Salisbury, and the leader of the House of Commons, Mr. Balfour, who do not accept the offered treaty which would banish war forever between the two nations of our race. This invitation was sent by the same President Cleveland, who is now denounced as favoring war. . . . It was my office to introduce to Mr. Cleveland, then President of the United States, as he is now, the delegation from the British Parliament urging arbitration. In the conferences I had with him previous to his receiving the deputation, I found him as strong a supporter of that policy as I ever met. I do not wonder at his outburst, knowing how deeply this man feels upon that question; it is to him so precious, it constitutes so great an advance over arbitrament by war that—even if we have to fight, that any nation rejecting it may suffer—I believe he feels that it would be our duty to do so, believing that the nation which rejects arbitration in a boundary dispute deserves the execration of mankind."—A. Carnegie, *The Venezuelan Question* (*North American Review, Feb.*, 1896).

A. D. 1895-1896 (December—February).—The gold reserve in the Treasury again imperilled.—Refusal of any measures of relief by the Senate.—In his annual Message to Congress, December 2d, 1895, President Cleveland described at length the stress of circumstances under which in the previous February, the Secretary of the Treasury had contracted with certain bankers and financiers to replenish and protect the reserve of gold in the Treasury for redemption of United States notes (see above), and added: "The performance of this contract not only restored the reserve, but checked for a time the withdrawals of gold and brought on a period of restored confidence and such peace and

quiet in business circles as were of the greatest possible value to every interest that affects our people. I have never had the slightest misgiving concerning the wisdom or propriety of this arrangement, and am quite willing to answer for my full share of responsibility for its promotion. I believe it averted a disaster the imminence of which was, fortunately, not at the time generally understood by our people. Though the contract mentioned stayed for a time the tide of gold withdrawal, its good results could not be permanent. Recent withdrawals have reduced the reserve from $107,571,230 on the 8th day of July, 1895, to $79,333,966. How long it will remain large enough to render its increase unnecessary is only matter of conjecture, though quite large withdrawals for shipment in the immediate future are predicted in well-informed quarters. About $16,000,000 has been withdrawn during the month of November. The foregoing statement of events and conditions develops the fact that after increasing our interest-bearing bonded indebtedness more than $162,000,000 to save our gold reserve we are nearly where we started, having now in such reserve $79,333,966 as against $65,438,377 in February, 1894, when the first bonds were issued.

"Though the amount of gold drawn from the Treasury appears to be very large as gathered from the facts and figures herein presented, it actually was much larger, considerable sums having been acquired by the Treasury within the several periods stated without the issue of bonds. On the 28th of January, 1895, it was reported by the Secretary of the Treasury that more than $172,000,000 of gold had been withdrawn for hoarding or shipment during the year preceding. He now reports that from January 1, 1879, to July 14, 1890, a period of more than eleven years, only a little over $28,000,000 was withdrawn, and that between July 14, 1890, the date of the passage of the law for an increased purchase of silver, and the 1st day of December, 1895, or within less than five and a half years, there was withdrawn nearly $375,000,000, making a total of more than $403,000,000 drawn from the Treasury in gold since January 1, 1879, the date fixed in 1875 for the retirement of the United States notes.

"Nearly $327,000,000 of the gold thus withdrawn has been paid out, on these United States notes, and yet every one of the $346,000,000 is still uncanceled and ready to do service in future gold depletions. More than $76,000,000 in gold has since their creation in 1890 been paid out from the Treasury upon the notes given on the purchase of silver by the Government, and yet the whole, amounting to $155,000,000, except a little more than $16,000,000 which has been retired by exchanges for silver at the request of the holders, remains outstanding and prepared to join their older and more experienced allies in future raids upon the Treasury's gold reserve. In other words, the Government has paid in gold more than nine-tenths of its United States notes and still owes them all. It has paid in gold about one-half of its notes given for silver purchases without extinguishing by such payment one dollar of these notes.

"When, added to all this, we are reminded that to carry on this astounding financial scheme the Government has incurred a bonded indebtedness of $95,500,000 in establishing a gold reserve, and of $162,315,400 in efforts to maintain it; that the annual interest charge on such bonded indebtedness is more than $11,000,000; that a continuance of our present course may result in further bond issues, and that we have suffered or are threatened with all this for the sake of supplying gold for foreign shipment or facilitating its hoarding at home, a situation is exhibited which certainly ought to arrest attention and provoke immediate legislative relief.

"I am convinced the only thorough and practicable remedy for our troubles is found in the retirement and cancellation of our United States notes, commonly called greenbacks, and the outstanding Treasury notes issued by the Government in payment of silver purchases under the act of 1890. I believe this could be quite readily accomplished by the exchange of these notes for United States bonds, of small as well as large denominations, bearing a low rate of interest. They should be long-term bonds, thus increasing their desirability as investments, and because their payment could be well postponed to a period far removed from present financial burdens and perplexities, when with increased prosperity and resources they would be more easily met. . . .

"Whatever is attempted should be entered upon fully appreciating the fact that by careless easy descent we have reached a dangerous depth, and that our ascent will not be accomplished without laborious toil and struggle. We shall be wise if we realize that we are financially ill and that our restoration to health may require heroic treatment and unpleasant remedies.

"In the present stage of our difficulty it is not easy to understand how the amount of our revenue receipts directly affects it. The important question is not the quantity of money received in revenue payments, but the kind of money we maintain and our ability to continue in sound financial condition. We are considering the Government's holdings of gold as related to the soundness of our money and as affecting our national credit and monetary strength. If our gold reserve had never been impaired; if no bonds had ever been issued to replenish it; if there had been no fear and timidity concerning our ability to continue gold payments; if any part of our revenues were now paid in gold, and if we could look to our gold receipts as a means of maintaining a safe reserve, the amount of our revenues would be an influential factor in the problem. But unfortunately all the circumstances that might lend weight to this consideration are entirely lacking. In our present predicament no gold is received by the Government in payment of revenue charges, nor would there be if the revenues were increased. The receipts of the Treasury, when not in silver certificates, consist of United States notes and Treasury notes issued for silver purchases. These forms of money are only useful to the Government in paying its current ordinary expenses, and its quantity in Government possession does not in the least contribute toward giving us that kind of safe financial standing or condition which is built on gold alone.

"If it is said that these notes if held by the Government can be used to obtain gold for our reserve, the answer is easy. The people draw gold from the Treasury on demand upon United

States notes and Treasury notes, but the proposition that the Treasury can on demand draw gold from the people upon them would be regarded in these days with wonder and amusement; and even if this could be done there is nothing to prevent those thus parting with their gold from regaining it the next day or the next hour by the presentation of the notes they received in exchange for it. The Secretary of the Treasury might use such notes taken from a surplus revenue to buy gold in the market. Of course he could not do this without paying a premium. Private holders of gold, unlike the Government, having no parity to maintain, would not be restrained from making the best bargain possible when they furnished gold to the Treasury; but the moment the Secretary of the Treasury bought gold on any terms above par he would establish a general and universal premium upon it, thus breaking down the parity between gold and silver, which the Government is pledged to maintain, and opening the way to new and serious complications. In the meantime the premium would not remain stationary, and the absurd spectacle might be presented of a dealer selling gold to the Government and with United States notes or Treasury notes in his hand immediately clamoring for its return and a resale at a higher premium.

"It may be claimed that a large revenue and redundant receipts might favorably affect the situation under discussion by affording an opportunity of retaining these notes in the Treasury when received, and thus preventing their presentation for gold. Such retention to be useful ought to be at least measurably permanent; and this is precisely what is prohibited, so far as United States notes are concerned, by the law of 1878, forbidding their further retirement. That statute in so many words provides, that these notes when received into the Treasury and belonging to the United States shall be 'paid out again and kept in circulation.'"—*United States, Message and Documents (Abridgment)*, 1895–6, *p.* 27.

"The difficulty which had been anticipated in keeping gold in the treasury became acute as a result of the president's Venezuelan message of December 17. The 'war scare' which was caused by that document was attended by a panic on the London Exchange, which communicated itself to the Continental exchanges and produced at once serious consequences in New York. Prices fell heavily, some failures were reported, and the withdrawal of gold from the treasury assumed great proportions. On the 20th the reserve had gone down to $69,650,000, ten millions less than three weeks earlier, with future large reductions obviously near at hand. The president accordingly on that day sent to Congress a special message, stating the situation, alluding to the effect of his recently announced foreign policy, and declaring that the result conveyed a 'warning that even the patriotic sentiment of our people is not an adequate substitute for a sound financial policy.' He asked Congress to postpone its holiday recess until something had been done to reassure the apprehensive among the people, but declared that in any case he should use every means in the power of the executive to maintain the country's credit. The suggestion was acted upon. . . .

"On December 26 two bills were introduced in the House of Representatives by Chairman Dingley of the ways and means committee. Adopting the view maintained by the Republicans, that the chief cause of the difficulty in maintaining the gold reserve was the deficiency in the revenue, he proposed first a bill 'to temporarily increase the revenues.' This provided that until August 1, 1898, the customs duties on most varieties of wool and woolen goods and on lumber, should stand at 60 per cent of those imposed by the McKinley Act of 1890, and that the duties in all the other schedules of the tariff, except sugar, should, with slight exceptions, be increased by 15 per cent over those of the existing law. This bill passed the House on the 27th by a party vote of 205 to 81. On the following day the second bill, 'to maintain and protect the coin redemption fund,' was passed by 170 to 136,—47 Republicans in the minority. This bill authorized the secretary of the treasury to procure coin for redeeming legal-tenders by the sale of three-per-cent five-year bonds, and to provide for temporary deficiencies by the issue of three-year three-per-cent certificates of indebtedness in small denominations. The administration was as little satisfied with this bill as with that changing the tariff, and proceeded with the bond issue. . . .

"The failure of the bills in the Senate was foreseen, but the precise form in which it was manifested excited some surprise. On February 1, [1896], the bond bill was transformed by the adoption of a substitute providing for the free coinage of silver, and this was passed by a vote of 42 to 35. On the 14th the House refused, by 215 to 90, to concur in the Senate's amendment, and the whole subject was dropped. Meanwhile the Senate finance committee had reported a free-coinage substitute for the House tariff bill also. But after this further exhibition of their strength the silver senators refused to go further, and on February 25 joined with the Democrats in rejecting, by 33 to 22, a motion to take up the bill for consideration. This vote was recognized as finally disposing of the measure."—*Political Science Quarterly, June*, 1896.

A. D. 1895-1896 (December—December).—Plans for coast defense.—In his annual report to the President, 1895, the Secretary of War wrote as follows of pending plans for coast defense, and of the progress of work upon them: "In your annual message transmitted to Congress in December, 1886, attention was directed to the urgent necessity for seacoast defense in these words: 'The defenseless condition of our seacoast and lake frontier is perfectly palpable; the examinations made must convince us all that certain of our cities should be fortified and that work on the most important of these fortifications should be commenced at once.' . . . Since that time the condition of these defenses has been under grave consideration by the people and by this Department. Its inadequacy and impotency have been so evident that the intelligence of the country long since ceased to discuss that humiliating phase of the subject, but has addressed itself to the more practical undertaking of urging more rapid progress in the execution of the plan of defense devised by the Endicott Board in 1886, with subsequent slight modifications. That plan contemplated a system of fortifications at 27 ports (to which Puget Sound was subsequently added), requiring 677 guns and 824 mortars of modern

construction, at a cost of $97,782,800, excluding $28,595,000 for floating batteries. By an immediate appropriation at that time of $21,500,000 and an annual appropriation of $9,000,000 thereafter, as then recommended, the system of land defenses could have been completed in 1895.

"The original plan contemplated an expenditure of $97,782,800 by the end of the present year. The actual expenditures and appropriations for armament and emplacements have, however, been but $10,631,000. The first appropriation for guns was made only seven years ago and the first appropriation for emplacements was made only five years ago. The average annual appropriations for these two objects has been less than $1,500,000. The work has therefore been conducted at about one-seventh the rate proposed. If future appropriations for the manufacture of guns, mortars, and carriages be no larger than the average authorized for the purpose since 1888, it will require twenty-two years more to supply the armament of the eighteen important ports for which complete projects are approved. If the appropriations for the engineer work are to continue at the rate of the annual appropriations since 1890, it will require seventy years to complete the emplacements and platforms for this armament for the ports referred to."—*Report of the Secretary of War*, 1895, *p.* 19 (*54th Cong., 1st Sess., House Doc. v.* 1).

In his Message of the following year, the subject was touched upon by the President, as follows: "During the past year rapid progress has been made toward the completion of the scheme adopted for the erection and armament of fortifications along our seacoast, while equal progress has been made in providing the material for submarine defense in connection with these works. . . . We shall soon have complete about one-fifth of the comprehensive system, the first step in which was noted in my message to the Congress of December 4, 1893. When it is understood that a masonry emplacement not only furnishes a platform for the heavy modern high-power gun, but also in every particular serves the purpose and takes the place of the fort of former days, the importance of the work accomplished is better comprehended. In the hope that the work will be prosecuted with no less vigor in the future, the Secretary of War has submitted an estimate by which, if allowed, there will be provided and either built or building by the end of the next fiscal year such additional guns, mortars, gun carriages, and emplacements, as will represent not far from one-third of the total work to be done under the plan adopted for our coast defenses—thus affording a prospect that the entire work will be substantially completed within six years. In less time than that, however, we shall have attained a marked degree of security. The experience and results of the past year demonstrate that with a continuation of present careful methods the cost of the remaining work will be much less than the original estimate. We should always keep in mind that of all forms of military preparation coast defense alone is essentially pacific in its nature."—*Message of the President*, 1896 (*54th Cong., 2d Sess., House Doc., v.* 1).

A. D. 1896 (June—November.—The Presidential election.—The silver question at issue.—Party Platforms and Nominations.— A national conference held at Washington, in March, 1895, may be looked upon as the beginning of a widely and powerfully organized movement to force the demand for a free and unlimited coinage of silver, on equal terms, as legal tender money, with gold, into the front of the issues of the presidential canvass of 1896. The agitation then projected was carried on with extraordinary ardor and skill and had astonishing success. It was helped by the general depression of business in the country, and especially by the long continued ruling of low prices for the produce of the farms,—for all of which effects the gold standard of values was held to be the one relentless cause. In both political parties the free silver propaganda was pushed with startling effect, and there seemed to be doubt, for a time, whether the controlling politicians in either would take an opposing stand. Southern influences proved decisive of the result in the Democratic party; eastern influences in that of the Republicans. The ranks of the former were swept rapidly into the movement for free silver, and the party chiefs of the latter were driven to a conflict with it, not wholly by convictions or will of their own. During the spring and early summer of 1896, the Democratic Party in State after State became committed on the question, by declarations for the unlimited free coinage of silver, at the ratio of 16 to 1; until there was tolerable certainty, some weeks before the meeting of the national convention, that its nominee for President must be one who represented that demand. How positively the Republican Party would champion the gold monetary standard was somewhat less as-

sured, though its stand on that side had been taken in a general way.

Republican Platform and Nominations.—The Republican national convention was held at St. Louis, on the 16th, 17th and 18th of June. The "platform" reported by the committee on resolutions was adopted without amendment on the last named date. Its declarations were as follows:

"The Republicans of the United States, assembled by their representatives in National Convention, appealing for the popular and historical justification of their claims to the matchless achievements of the thirty years of Republican rule, earnestly and confidently address themselves to the awakened intelligence, experience, and conscience of their countrymen in the following declaration of facts and principles:

"For the first time since the civil war the American people have witnessed the calamitous consequences of full and unrestricted Democratic control of the Government. It has been a record of unparalleled incapacity, dishonor, and disaster. In administrative management it has ruthlessly sacrificed indispensable revenue, entailed an unceasing deficit, eked out ordinary current expenses with borrowed money, piled up the public debt by $262,000,000 in time of peace, forced an adverse balance of trade, kept a perpetual menace hanging over the redemption fund, pawned American credit to alien syndicates, and reversed all the measures and results of successful Republican rule.

"In the broad effect of its policy it has precipitated panic, blighted industry and trade with prolonged depression, closed factories, reduced work and wages, halted enterprise, and crippled American production while stimulating foreign production for the American market. Every consideration of public safety and individual interest demands that the Government shall be rescued from the hands of those who have shown themselves incapable to conduct it without disaster at home and dishonor abroad, and shall be restored to the party which for thirty years administered it with unequalled success and prosperity, and in this connection we heartily endorse the wisdom, patriotism, and the success of the administration of President Harrison.

"We renew and emphasize our allegiance to the policy of protection as the bulwark of American industrial independence and the foundation of American development and prosperity. This true American policy taxes foreign products and encourages home industry; it puts the burden of revenue on foreign goods; it secures the American market for the American producer; it upholds the American standard of wages for the American workingman; it puts the factory by the side of the farm, and makes the American farmer less dependent on foreign demand and price; it diffuses general thrift, and founds the strength of all on the strength of each. In its reasonable application it is just, fair, and impartial; equally opposed to foreign control and domestic monopoly, to sectional discrimination, and individual favoritism.

"We denounce the present Democratic tariff as sectional, injurious to the public credit, and destructive to business enterprise. We demand such an equitable tariff on foreign imports which come into competition with American products as will not only furnish adequate revenue for the necessary expenses of the Government, but will protect American labor from degradation to the wage level of other lands. We are not pledged to any particular schedules. The question of rates is a practical question, to be governed by the conditions of the time and of production; the ruling and uncompromising principle is the protection and development of American labor and industry. The country demands a right settlement, and then it wants rest.

"We believe the repeal of the reciprocity arrangements negotiated by the last Republican administration [see, in vol. 5, TARIFF LEGISLATION (UNITED STATES): A. D. 1890, and 1894] was a national calamity, and we demand their renewal and extension on such terms as will equalize our trade with other nations, remove the restrictions which now obstruct the sale of American products in the ports of other countries, and secure enlarged markets for the products of our farms, forests, and factories.

"Protection and reciprocity are twin measures of Republican policy and go hand in hand. Democratic rule has recklessly struck down both, and both must be re-established. Protection for what we produce; free admission for the necessaries of life which we do not produce; reciprocity agreements of mutual interests which again open markets for us in return for our open markets to others. Protection builds up domestic industry and trade and secures our own market for ourselves; reciprocity builds up foreign trade and finds an outlet for our surplus. We condemn the present administration for not keeping faith with the sugar producers of this country. The Republican party favors such protection as will lead to the production on American soil of all the sugar which the American people use, and for which they pay other countries more than $100,000,000 annually. To all our products—to those of the mine and the fields as well as to those of the shop and the factory—to hemp, to wool, the product of the great industry of sheep husbandry, as well as to the finished woollens of the mill—we promise the most ample protection.

"We favor restoring the early American policy of discriminating duties for the upbuilding of our merchant marine and the protection of our shipping in the foreign carrying trade, so that American ships—the product of American labor, employed in American shipyards, sailing under the Stars and Stripes, and manned, officered, and owned by Americans—may regain the carrying of our foreign commerce.

"The Republican party is unreservedly for sound money. It caused the enactment of the law providing for the resumption of specie payments in 1879; since then every dollar has been as good as gold. We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are, therefore, opposed to the free coinage of silver except by international agreement with the leading commercial nations of the world, which we pledge ourselves to promote, and until such agreement can be obtained the existing gold standard must be preserved. All our silver and paper currency must be maintained at parity with gold, and we favor all measures designed to maintain inviolably the obligations of the United States and all our money, whether coin or paper, at the present standard, the standard of the most enlightened nations of the earth.

"The veterans of the Union Army deserve and should receive fair treatment and generous recognition. Whenever practicable, they should be given the preference in the matter of employment, and they are entitled to the enactment of such laws as are best calculated to secure the fulfillment of the pledges made to them in the dark days of the country's peril. We denounce the practice in the Pension Bureau, so recklessly and unjustly carried on by the present administration, of reducing pensions and arbitrarily dropping names from the rolls as deserving the severest condemnation of the American people.

"Our foreign policy should be at all times firm, vigorous, and dignified, and all our interests in the Western Hemisphere carefully watched and guarded. The Hawaiian Islands should be controlled by the United States, and no foreign power should be permitted to interfere with them; the Nicaraguan Canal should be built, owned, and operated by the United States; and by the purchase of the Danish Islands we should secure a proper and much needed naval station in the West Indies.

"The massacres in Armenia have aroused the deep sympathy and just indignation of the American people, and we believe that the United States should exercise all the influence it can properly exert to bring these atrocities to an end. In Turkey American residents have been exposed to the gravest dangers and American property destroyed. There and everywhere American citizens and American property must be absolutely protected at all hazards and at any cost.

"We reassert the Monroe doctrine in its full extent, and we reaffirm the right of the United States to give the doctrine effect by responding to the appeal of any American State for friendly intervention in case of European encroachment. We have not interfered with and shall not interfere with the existing possessions of any European power in this hemisphere, but those possessions must not on any pretext be extended. We hopefully look forward to the eventual withdrawal of European powers from this hemisphere and to the ultimate union of all the English-speaking parts of the continent by the free consent of its inhabitants.

"From the hour of achieving their own independence the people of the United States have regarded with sympathy the struggles of other American people to free themselves from European domination. We watch with deep and abiding interest the heroic battle of the Cuban patriots against cruelty and oppression, and our best hopes go out for the full success of their determined contest for liberty. The Government of Spain having lost control of Cuba, and being unable to protect the property or lives of resident American citizens, or to comply with its treaty obligations, we believe that the Government of the United States should actively use its influence and good offices to restore peace and give independence to the island.

"The peace and security of the Republic and the maintenance of its rightful influence among the nations of the earth demand a naval power commensurate with its position and responsibility. We therefore favor the continued enlargement of the navy and a complete system of harbor and seacoast defenses.

"For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor, we demand that the immigration laws be thoroughly enforced and so extended as to exclude from entrance to the United States those who can neither read nor write.

"The civil-service law was placed on the statute book by the Republican party, which has always sustained it, and we renew our repeated declarations that it shall be thoroughly and honestly enforced and extended wherever practicable.

"We demand that every citizen of the United States shall be allowed to cast one free and unrestricted ballot, and that such ballot shall be counted and returned as cast.

"We proclaim our unqualified condemnation of the uncivilized and barbarous practice, well known as lynching or killing of human beings suspected or charged with crime, without process of law. We favor the creation of a National board of arbitration to settle and adjust differences which may arise between employers and employed engaged in interstate commerce.

"We believe in an immediate return to the free-homestead policy of the Republican party, and urge the passage by Congress of a satisfactory free-homestead measure such as has already passed the House and is now pending in the Senate.

"We favor the admission of the remaining Territories at the earliest practicable date, having due regard to the interests of the people of the Territories and of the United States. All the Federal officers appointed for the Territories should be selected from bona fide residents thereof, and the right of self-government should be accorded as far as practicable.

"We believe the citizens of Alaska should have representation in the Congress of the United States, to the end that needful legislation may be intelligently enacted.

"We sympathize with all wise and legitimate efforts to lessen and prevent the evils of intemperance and promote morality.

"The Republican party is mindful of the rights and interests of women. Protection of American industries includes equal opportunities, equal pay for equal work, and protection to the home. We favor the admission of women to wider spheres of usefulness, and welcome their co-operation in rescuing the country from Democratic and Populist mismanagement and misrule.

"Such are the principles and policies of the Republican party. By these principles we will abide and these policies we will put into execution. We ask for them the considerate judgment of the American people. Confident alike in the history of our great party and in the justice of our cause, we present our platform and our candidates in the full assurance that the election will bring victory to the Republican party and prosperity to the people of the United States."

Before the adoption of this platform, a motion to amend its currency "plank," by substituting a declaration in favor of "the use of both gold and silver as equal standard money," was laid on the table by a vote of 818½ to 105½. A protest from delegates representing Colorado, Idaho, Nevada, Utah, Montana and South Dakota was then read, and twenty-two withdrew from the convention, as a sign of secession from the party.

Immediately following the adoption of the

platform, the Hon. William McKinley, ex-Governor of Ohio, and of fame in his connection with the tariff act of 1890, was nominated on the first ballot for President of the United States, by 661½ votes against 240½ divided among several opposing candidates, and the nomination was then made unanimous. For Vice President, the Hon. Garret A. Hobart, of New Jersey, was named, and similarly by the first voting.

Democratic Platform and Nominations.—The Democratic national convention was held in Chicago, July 7–11. The delegates who came to it from the southern States, and from most of the States west of Ohio, were arrayed with a close approach to solid ranks for free silver; while those from New England and the Middle States opposed them in a phalanx almost equally firm. The "Gold Democrats" or "Sound Money Democrats," as the latter were called, ably led by ex-Governor Hill, of New York, fought hard to the end, but without avail. The financial resolution they strove to place in the platform was the following:

"We declare our belief that the experiment on the part of the United States alone of free-silver coinage, and a change in the existing standard of value independently of the action of other great nations, would not only imperil our finances, but would retard or entirely prevent the establishment of international bimetallism, to which the efforts of the government should be steadily directed. It would place this country at once upon a silver basis, impair contracts, disturb business, diminish the purchasing power of the wages of labor, and inflict irreparable evils upon our nation's commerce and industry.

"Until international co-operation among leading nations for the coinage of silver can be secured, we favor the rigid maintenance of the existing gold standard as essential to the preservation of our national credit, the redemption of our public pledges, and the keeping inviolate of our country's honor. We insist that all our paper currency shall be kept at a parity with gold. The democratic party is the party of hard money, and is opposed to legal-tender paper money as a part of our permanent financial system; and we therefore favor the gradual retirement and cancellation of all United States notes and treasury notes, under such legislative provisions as will prevent undue contraction. We demand that the national credit shall be resolutely maintained at all times and under all circumstances."

This resolution was rejected by 626 votes against 303. Another resolution from the same source, commending "the honesty, economy, courage and fidelity" of the "democratic national administration" of President Cleveland, was voted down by 564 to 357. Resolutions to protect existing contracts against a change of monetary standard, and to provide for a suspension of silver free coinage, at the ratio of 16 to 1, after trial for one year, if it failed to maintain parity between silver and gold, were similarly voted down. The declarations then adopted, for the "platform" of the party, were as follows:

"We, the Democrats of the United States, in National Convention assembled, do reaffirm our allegiance to those great essential principles of justice and liberty upon which our institutions are founded, and which the Democratic party has advocated from Jefferson's time to our own—freedom of speech, freedom of the press, freedom of conscience, the preservation of personal rights, the equality of all citizens before the law, and the faithful observance of constitutional limitations.

"During all these years the Democratic party has resisted the tendency of selfish interests to the centralization of governmental power, and steadfastly maintained the integrity of the dual scheme of government established by the founders of this Republic of republics. Under its guidance and teachings the great principle of local self-government has found its best expression in the maintenance of the rights of the States and in its assertion of the necessity of confining the General Government to the exercise of the powers granted by the Constitution of the United States.

"Recognizing that the money question is paramount to all others at this time, we invite attention to the fact that the Federal Constitution names silver and gold together as the money metals of the United States, and that the first coinage law passed by Congress under the Constitution made the silver dollar the monetary unit, and admitted gold to free coinage at a ratio based upon the silver-dollar unit.

"We declare that the act of 1873 demonetizing silver without the knowledge or approval of the American people has resulted in the appreciation of gold and a corresponding fall in the prices of commodities produced by the people; a heavy increase in the burden of taxation and of all debts, public and private; the enrichment of the money-lending class at home and abroad; prostration of industry and impoverishment of the people.

"We are unalterably opposed to gold monometallism, which has locked fast the prosperity of an industrial people in the paralysis of hard times. Gold monometallism is a British policy, and its adoption has brought other nations into financial servitude to London. It is not only un-American but anti-American, and it can be fastened on the United States only by the stifling of that spirit and love of liberty which proclaimed our political independence in 1776 and won it in the war of the Revolution.

"We demand the free and unlimited coinage of both gold and silver at the present legal ratio of sixteen to one, without waiting for the aid or consent of any other nation. We demand that the standard silver dollar shall be a full legal tender, equally with gold, for all debts, public and private, and we favor such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract.

"We are opposed to the policy and practice of surrendering to the holders of the obligations of the United States the option reserved by law to the Government of redeeming such obligations in either silver coin or gold coin.

"We are opposed to the issuing of interest-bearing bonds of the United States in time of peace, and condemn the trafficking with banking syndicates which, in exchange for bonds and at an enormous profit to themselves, supply the Federal Treasury with gold to maintain the policy of gold monometallism.

"Congress alone has the power to coin and issue money, and President Jackson declared

UNITED STATES, 1896.

that this power could not be delegated to corporations or individuals. We therefore demand that the power to issue notes to circulate as money be taken from the National banks, and that all paper money shall be issued directly by the Treasury Department, be redeemable in coin, and receivable for all debts, public and private.

"We hold that the tariff duties should be levied for purposes of revenue, such duties to be so adjusted as to operate equally throughout the country and not discriminate between class or section, and that taxation should be limited by the needs of the Government honestly and economically administered.

"We denounce, as disturbing to business, the Republican threat to restore the McKinley law, which has been twice condemned by the people in national elections, and which, enacted under the false plea of protection to home industry, proved a prolific breeder of trusts and monopolies, enriched the few at the expense of the many, restricted trade, and deprived the producers of the great American staples of access to their natural markets. Until the money question is settled we are opposed to any agitation for further changes in our tariff laws, except such as are necessary to make the deficit in revenue caused by the adverse decision of the Supreme Court on the income tax.

"There would be no deficit in the revenue but for the annulment by the Supreme Court of a law passed by a Democratic Congress in strict pursuance of the uniform decisions of that court for nearly 100 years, that court having sustained constitutional objections to its enactment which had been overruled by the ablest judges who have ever sat on that bench. We declare that it is the duty of Congress to use all the constitutional power which remains after that decision, or which may come by its reversal by the court, as it may hereafter be constituted, so that the burdens of taxation may be equally and impartially laid, to the end that wealth may bear its due proportion of the expenses of the Government.

"We hold that the most efficient way to protect American labor is to prevent the importation of foreign pauper labor to compete with it in the home market, and that the value of the home market to our American farmers and artisans is greatly reduced by a vicious monetary system, which depresses the prices of their products below the cost of production, and thus deprives them of the means of purchasing the products of our home manufacture.

"We denounce the profligate waste of the money wrung from the people by oppressive taxation and the lavish appropriations of recent Republican Congresses, which have kept taxes high, while the labor that pays them is unemployed, and the products of the people's toil are depressed in price till they no longer repay the cost of production. We demand a return to that simplicity and economy which best befit a Democratic Government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

"We denounce arbitrary interference by Federal authorities in local affairs as a violation of the Constitution of the United States and a crime against free institutions, and we especially object to government by injunction as a new and highly dangerous form of oppression, by which Federal judges, in contempt of the laws of the States and rights of citizens, become at once legislators, judges, and executioners, and we approve the bill passed at the last session of the United States Senate, and now pending in the House, relative to contempts in Federal courts, and providing for trials by jury in certain cases of contempt.

"No discrimination should be indulged by the Government of the United States in favor of any of its debtors. We approve of the refusal of the Fifty-third Congress to pass the Pacific Railroad funding bill, and denounce the effort of the present Republican Congress to enact a similar measure.

"Recognizing the just claims of deserving Union soldiers, we heartly endorse the rule of the present Commissioner of Pensions that no names shall be arbitrarily dropped from the pension roll, and the fact of an enlistment and service should be deemed conclusive evidence against disease or disability before enlistment.

"We extend our sympathy to the people of Cuba in their heroic struggle for liberty and independence.

"We are opposed to life tenure in the public service. We favor appointments based upon merit, fixed terms of office, and such an administration of the civil-service laws as will afford equal opportunities to all citizens of ascertained fitness.

"We declare it to be the unwritten law of this Republic, established by custom and usage of 100 years, and sanctioned by the examples of the greatest and wisest of those who founded and have maintained our Government, that no man should be eligible for a third term of the Presidential office.

"The absorption of wealth by the few, the consolidation of our leading railroad systems, and formation of trusts and pools require a stricter control by the Federal Government of those arteries of commerce. We demand the enlargement of the powers of the Inter-state Commerce Commission, and such restrictions and guarantees in the control of railroads as will protect the people from robbery and oppression.

"We favor the admission of the Territories of New Mexico and Arizona into the Union as States, and we favor the early admission of all the Territories giving the necessary population and resources to entitle them to Statehood; and while they remain Territories we hold that the officials appointed to administer the gov ernment of any Territory, together with the District of Columbia and Alaska, should be bona fide residents of the Territory or District in which their duties are to be performed. The Democratic party believes in home rule, and that all public lands of the United States should be appropriated to the establishment of free homes for American citizens.

"We recommend that the Territory of Alaska be granted a Delegate in Congress, and that the general land and timber laws of the United States be extended to said Territory.

"The Federal Government should care for and improve the Mississippi River and other great waterways of the Republic so as to secure for the interior people easy and cheap transportation to tidewater. When any waterway of the Republic is of sufficient importance to demand aid of the Government, such aid should

be extended upon a definite plan of continuous work until permanent improvement is secured.

"Confiding in the justice of our cause and the necessity of its success at the polls, we submit the foregoing declaration of principles and purposes to the considerate judgment of the American people. We invite the support of all citizens who approve them, and who desire to have them made effective through legislation for the relief of the people and the restoration of the country's prosperity."

In the course of the debate upon the silver question, a speech of impassioned eloquence was made by William J. Bryan, of Nebraska, who had represented his district in Congress for two terms, 1891–4, and who was rising to prominence among the leaders of the free-silver Democracy of the west. The speech excited an enthusiasm and an admiration which led to the nomination of Mr. Bryan for the presidency. That unexpected choice was reached after four ballots, in each of which the votes for the Nebraska orator rose steadily in number. At the fifth ballot they had passed the requisite two-thirds, and his nomination was declared to be unanimous, though protests were made. The entire delegation from New York and many delegates from New England and New Jersey cast no votes, refusing to take any part in the nomination of a candidate on the platform laid down. The chosen candidate for Vice President was Arthur Sewall, of Maine.

The National Silver Party.—The considerable body of Republicans who desired an unlimited free coinage of silver, and were prepared to quit their party on that issue, had made efforts to persuade the Democratic convention at Chicago to accept their leader, Senator Teller, of Colorado, for its presidential candidate. Failing in that, they assembled a convention of delegates at St. Louis, July 22–24, and, under the name of the "National Silver Party," took the alternative method of uniting the free-silver Republican vote with that of the free-silver Democracy, by accepting the Democratic nominations as their own. William J. Bryan and Arthur Sewall were duly nominated for President and Vice President, and a "platform" set forth as follows:

"The National Silver Party in Convention assembled hereby adopts the following declaration of principles:

"First. The paramount issue at this time in the United States is indisputably the money question. It is between the gold standard, gold bonds, and bank currency on the one side and the bimetallic standard, no bonds, and Government currency on the other.

"On this issue we declare ourselves to be in favor of a distinctively American financial system. We are unalterably opposed to the single gold standard, and demand the immediate return to the constitutional standard of gold and silver, by the restoration by this Government, independently of any foreign power, of the unrestricted coinage of both gold and silver into standard money at the ratio of sixteen to one, and upon terms of exact equality, as they existed prior to 1873; the silver coin to be a full legal tender equally with gold for all debts and dues, private and public, and we favor such legislation as will prevent for the future the demonetization of any kind of legal-tender money by private contract.

UNITED STATES, 1896.

"We hold that the power to control and regulate a paper currency is inseparable from the power to coin money, and hence that all currency intended to circulate as money should be issued, and its volume controlled by the General Government only, and should be legal tender.

"We are unalterably opposed to the issue by the United States of interest-bearing bonds in time of peace, and we denounce as a blunder worse than a crime the present Treasury policy, concurred in by a Republican House, of plunging the country in debt by hundreds of millions in the vain attempt to maintain the gold standard by borrowing gold, and we demand the payment of all coin obligations of the United States as provided by existing laws, in either gold or silver coin, at the option of the Government and not at the option of the creditor.

"The demonetization of silver in 1873 enormously increased the demand for gold, enhancing its purchasing power and lowering all prices measured by that standard; and since that unjust and indefensible act the prices of American products have fallen upon an average nearly fifty per cent., carrying down with them proportionately the money value of all other forms of property. Such fall of prices has destroyed the profits of legitimate industry, injuring the producer for the benefit of the non-producer, increasing the burden of the debtor, swelling the gains of the creditor, paralyzing the productive energies of the American people, relegating to idleness vast numbers of willing workers, sending the shadows of despair into the home of the honest toiler, filling the land with tramps and paupers, and building up colossal fortunes at the money centres.

"In the effort to maintain the gold standard the country has, within the last two years, in a time of profound peace and plenty, been loaded down with $262,000,000 of additional interest-bearing debt, under such circumstances as to allow a syndicate of native and foreign bankers to realize a net profit of millions on a single deal.

"It stands confessed that the gold standard can only be upheld by so depleting our paper currency as to force the prices of our product below the European and even below the Asiatic level to enable us to sell in foreign markets, thus aggravating the very evils our people so bitterly complain of, degrading American labor, and striking at the foundations of our civilization itself.

"The advocates of the gold standard persistently claim that the cause of our distress is overproduction; that we have produced so much that it has made us poor—which implies that the true remedy is to close the factory, abandon the farm, and throw a multitude of people out of employment, a doctrine that leaves us unnerved and disheartened, and absolutely without hope for the future.

"We affirm it to be unquestioned that there can be no such economic paradox as over-production, and at the same time tens of thousands of our fellow-citizens remaining half-clothed and half-fed, and who are piteously clamoring for the common necessities of life.

"Second. That over and above all other questions of policy we are in favor of restoring to the people of the United States the time-honored money of the Constitution—gold and silver, not one, but both—the money of Washington and

Hamilton and Jefferson and Monroe and Jackson and Lincoln, to the end that the American people may receive honest pay for an honest product; that the American debtor may pay his just obligations in an honest standard, and not in a standard that has depreciated 100 per cent. above all the great staples of our country, and to the end further that the standard countries may be deprived of the unjust advantage they now enjoy in the difference in exchange between gold and silver—an advantage which tariff legislation alone cannot overcome.

"We therefore confidently appeal to the people of the United States to leave in abeyance for the moment all other questions, however important and even momentous they may appear, to sunder, if need be, all former party ties and affiliations, and unite in one supreme effort to free themselves and their children from the domination of the money power—a power more destructive than any which has ever been fastened upon the civilized men of any race or in any age, and upon the consummation of our desires and efforts we invoke the gracious favor of Divine Providence.

"Inasmuch as the patriotic majority of the Chicago convention embodied in the financial plank of its platform the principles enunciated in the platform of the American Bimetallic party, promulgated at Washington, D. C., January 22, 1896, and herein reiterated, which is not only the paramount but the only real issue in the pending compaign, therefore, recognizing that their nominees embody these patriotic principles, we recommend that this convention nominate William J. Bryan, of Nebraska, for President, and Arthur Sewall, of Maine, for Vice President."

People's or Populist Party Platform and Nominations.—The People's Party, more commonly called the Populist Party, held its national convention at St. Louis on the 22d-25th of July, simultaneously with that of the National Silver Party, and with strong influences urging it to act on the same line. One section of the party strove to bring about a complete endorsement of the Democratic nominations made at Chicago. Another section, styled the "Middle-of-the-Road" Populists, opposed any coalition with other parties; while a third wished to nominate Bryan, with a Populist candidate for Vice President, looking to an arrangement with the Democratic organization for a fusion of electoral tickets in various States. The idea of the latter prevailed, and William J. Bryan was nominated for President, with Thomas E. Watson, of Georgia, for Vice President. The People's Party had little disagreement with the Chicago declarations of the Democratic Party, and none at all on financial questions, concerning which its doctrines were set forth in the following platform:

"The People's Party, assembled in National Convention, reaffirms its allegiance to the principles declared by the founders of the Republic, and also to the fundamental principles of just government as enunciated in the platform of the party in 1892.

"We recognize that through the connivance of the present and preceding administrations the country has reached a crisis in its National life, as predicted in our declaration of four years ago, and that prompt and patriotic action is the supreme duty of the hour.

"We realize that while we have political independence, our financial and industrial independence is yet to be attained by restoring to our country the constitutional control and exercise of the functions necessary to a people's government, which functions have been basely surrendered by our public servants to corporations and monopolies. The influence of European money-changers has been more potent in shaping legislation than the voice of the American people. Executive power and patronage have been used to corrupt our legislatures and defeat the will of the people, and plutocracy has been enthroned upon the ruins of democracy. To restore the government intended by the fathers, and for the welfare and prosperity of this and future generations, we demand the establishment of an economic and financial system which shall make us masters of our own affairs and independent of European control, by the adoption of the following declaration of principles:

"We demand a National money, safe and sound, issued by the general government only, without the intervention of banks of issue, to be a full legal tender for all debts, public and private, and a just, equitable, and efficient means of distribution direct to the people and through the lawful disbursements of the Government.

"We demand the free and unrestricted coinage of silver and gold at the present legal ratio of sixteen to one, without waiting for the consent of foreign nations.

"We demand that the volume of circulating medium be speedily increased to an amount sufficient to meet the demands of the business population of this country and to restore the just level of prices of labor and production.

"We denounce the sale of bonds and the increase of the public interest-bearing bond debt made by the present administration as unnecessary and without authority of law, and we demand that no more bonds be issued except by specific act of Congress.

"We demand such legislation as will prevent the demonetization of the lawful money of the United States by private contract.

"We demand that the Government, in payment of its obligations, shall use its option as to the kind of lawful money in which they are to be paid, and we denounce the present and preceding administrations for surrendering this option to the holders of government obligations.

"We demand a graduated income tax, to the end that aggregated wealth shall bear its just proportion of taxation, and we denounce the recent decision of the Supreme Court relative to the income-tax law as a misinterpretation of the Constitution and an invasion of the rightful powers of Congress over the subject of taxation.

"We demand that postal savings banks be established by the Government for the safe deposit of the savings of the people and to facilitate exchange.

"Transportation being a means of exchange and a public necessity, the Government should own and operate the railroads in the interest of the people and on non-partisan basis, to the end that all may be accorded the same treatment in transportation, and that the tyranny and political power now exercised by the great railroad corporations, which result in the impairment if not the destruction of the political rights and personal liberties of the citizens, may be destroyed. Such ownership is to be accomplished

gradually, in a manner consistent with sound public policy.

"The interest of the United States in the public highways built with public moneys and the proceeds of extensive grants of land to the Pacific railroads should never be alienated, mortgaged, or sold, but guarded and protected for the general welfare as provided by the laws organizing such railroads. The foreclosure of existing liens of the United States on these roads should at once follow default in the payment of the debt of the companies, and at the foreclosure sales of said roads the Government should purchase the same if it becomes necessary to protect its interests therein, or if they can be purchased at a reasonable price; and the Government should operate said railroads as public highways for the benefit of the whole and not in the interest of the few, under suitable provisions for protection of life and property, giving to all transportation interests and privileges and equal rates for fares and freight.

"We denounce the present infamous schemes for refunding those debts and demand that the laws now applicable thereto be executed and administered according to their true intent and spirit.

"The telegraph, like the post-office system, being a necessity for the transmission of news, should be owned and operated by the Government in the interest of the people.

"The true policy demands that the National and State legislation shall be such as will ultimately enable every prudent and industrious citizen to secure a home, and therefore the land should not be monopolized for speculative purposes.

"All land now held by railroads and other corporations in excess of their actual needs should by lawful means be reclaimed by the Government and held for actual settlers only, and private land monopoly, as well as alien ownership, should be prohibited.

"We condemn the frauds by which the land grant to the Pacific Railroad Companies have, through the connivance of the Interior Department, robbed multitudes of bona fide settlers of their homes and miners of their claims, and we demand legislation by Congress which will enforce the exemption of mineral land from such grants after as well as before patent.

"We demand that bona fide settlers on all public lands be granted free homes, as provided in the National homestead law, and that no exception be made in the case of Indian reservations when opened for settlement, and that all lands not now patented come under this demand.

"We favor a system of direct legislation through the initiative and referendum under proper constitutional safeguards.

"We demand the election of President, Vice-President, and United States Senators by a direct vote of the people.

"We tender to the patriotic people of Cuba our deepest sympathy in their heroic struggle for political freedom and independence, and we believe the time has come when the United States, the great Republic of the world, should recognize that Cuba is and of right ought to be a free and independent State.

"We favor home rule in the Territories and the District of Columbia and the early admission of the Territories as States.

"All public salaries should be made to correspond to the price of labor and its products.

"In times of great industrial depression idle labor should be employed on public works as far as practicable.

"The arbitrary course of the courts in assuming to imprison citizens for indirect contempt and ruling by injunction should be prevented by proper legislation.

"We favor just pensions for our disabled Union soldiers.

"Believing that the elective franchise and untrammelled ballot are essential to a government of, for, and by the people, the People's Party condemn the wholesale system of disfranchisement adopted in some States as unrepublican and undemocratic, and we declare it to be the duty of the several State legislatures to take such action as will secure a full, free, and fair ballot and an honest count.

"While the foregoing propositions constitute the platform upon which our party stands, and for the vindication of which its organization will be maintained, we recognize that the great and pressing issue of the pending campaign, upon which the present Presidential election will turn, is the financial question, and upon this great and specific issue between the parties we cordially invite the aid and co-operation of all organizations and citizens agreeing with us upon this vital question."

National Democratic Platform and Nominations.—An extensive revolt in the Democratic Party against the declarations and the action of the party convention at Chicago had been quickly made manifest, and steps were soon taken towards giving it an organized form. These led to the assembling of a convention of delegates at Indianapolis, on the 2d and 3d of September, which, in the name of the "National Democratic Party," repudiated the platform and the candidates put forward at Chicago, and branded them as false to the historic party name which they assumed. General John M. Palmer, of Illinois, was put in nomination for President, and General Simon Bolivar Buckner, of Kentucky, for Vice President, of the United States, and a declaration of Democratic principles adopted, the fundamental passages of which are quoted in the following: "This convention has assembled to uphold the principles upon which depend the honor and welfare of the American people, in order that democrats throughout the Union may unite their patriotic efforts to avert disaster from their country and ruin from their party.

"The democratic party is pledged to equal and exact justice to all men of every creed and condition; to the largest freedom of the individual consistent with good government; to the preservation of the federal government in its constitutional vigor, and to the support of the states in all their just rights; to economy in the public expenditures; to the maintenance of the public faith and sound money; and it is opposed to paternalism and all class legislation. The declarations of the Chicago convention attack individual freedom, the right of private contract, the independence of the judiciary, and the authority of the president to enforce federal laws. They advocate a reckless attempt to increase the price of silver by legislation, to the debasement of our monetary standard; and threaten unlimited issues of paper money by the government. They abandon for

republican allies the democratic cause of tariff reform, to court favor of protectionists to their fiscal heresy. In view of these and other grave departures from democratic principles, we cannot support the candidates of that convention, nor be bound by its acts. The democratic party has survived defeats, but could not survive a victory won in behalf of the doctrine and policy proclaimed in its name at Chicago.

"The conditions, however, which made possible such utterances from a national convention, are the direct result of class legislation by the republican party. It still proclaims, as it has for years, the power and duty of government to raise and maintain prices by law, and it proposes no remedy for existing evils except oppressive and unjust taxation. . . . The demand of the republican party for an increase in tariff taxation has its pretext in the deficiency of the revenue, which has its causes in the stagnation of trade and reduced consumption, due entirely to the loss of confidence that has followed the populist threat of free coinage and depreciation of our money, and the republican practice of extravagant appropriations beyond the needs of good government. We arraign and condemn the populistic conventions of Chicago and St. Louis for their coöperation with the republican party in creating these conditions, which are pleaded in justification of a heavy increase of the burdens of the people by a further resort to protection. We therefore denounce protection and its ally, free coinage of silver, as schemes for the personal profit of a few at the expense of the masses ; and oppose the two parties which stand for these schemes as hostile to the people of the republic, whose food and shelter, comfort and prosperity are attacked by higher taxes and depreciated money. In fine, we reaffirm the historic democratic doctrine of tariff for revenue only. . . .

"The experience of mankind has shown that, by reason of their natural qualities, gold is the necessary money of the large affairs of commerce and business, while silver is conveniently adapted to minor transactions, and the most beneficial use of both together can be insured only by the adoption of the former as a standard of monetary measure, and the maintenance of silver at a parity with gold by its limited coinage under suitable safeguards of law. Thus the largest possible employment of both metals is gained with a value universally accepted throughout the world, which constitutes the only practical bimetallic currency, assuring the most stable standard, and especially the best and safest money for all who earn their livelihood by labor or the produce of husbandry. They cannot suffer when paid in the best money known to man, but are the peculiar and most defenceless victims of a debased and fluctuating currency, which offers continual profits to the money changer at their cost.

"Realizing these truths demonstrated by long and public inconvenience and loss, the democratic party, in the interests of the masses and of equal justice to all, practically established by the legislation of 1834 and 1853 the gold standard of monetary measurement, and likewise entirely divorced the government from banking and currency issues. To this long-established democratic policy we adhere, and insist upon the maintenance of the gold standard, and of the parity therewith of every dollar issued by the government, and are firmly opposed to the free and unlimited coinage of silver and to the compulsory purchase of silver bullion. But we denounce also the further maintenance of the present costly patchwork system of national paper currency as a constant source of injury and peril. We assert the necessity of such intelligent currency reform as will confine the government to its legitimate functions, completely separated from the banking business, and afford to all sections of our country uniform, safe, and elastic bank currency under governmental supervision, measured in volume by the needs of business.

"The fidelity, patriotism, and courage with which President Cleveland has fulfilled his great public trust, the high character of his administration, its wisdom and energy in the maintenance of civil order and the enforcement of the laws, its equal regard for the rights of every class and every section, its firm and dignified conduct of foreign affairs, and its sturdy persistence in upholding the credit and honor of the nation are fully recognized by the democratic party, and will secure to him a place in history beside the fathers of the republic. We also commend the administration for the great progress made in the reform of the public service, and we indorse its effort to extend the merit system still further. We demand that no backward step be taken, but that the reform be supported and advanced until the un-democratic spoils system of appointments be eradicated."

Prohibition Platform and Nominations.—The Prohibition Party had been the first to open the presidential campaign with candidates placed in the field. Its national convention was held at Pittsburg, on the 27th and 28th of May, and its nominees for President and Vice President were Joshua Levering, of Maryland, and Hale Johnson, of Illinois. But a split in the convention occurred on attempts made to graft free-silver and kindred doctrines on the one-issue platform which the majority of the party desired. Except in a single particular, the latter prevailed. The platform adopted was as follows :

"The Prohibition Party, in national convention assembled, declares its firm conviction that the manufacture, exportation, importation, and sale of alcoholic beverages has produced such social, commercial, industrial, and political wrongs, and is now so threatening the perpetuity of all our social and political institutions, that the suppression of the same by a national party organized therefor is the greatest object to be accomplished by the voters of our country, and is of such importance that it, of right, ought to control the political actions of all our patriotic citizens until such suppression is accomplished. The urgency of this course demands the union without further delay of all citizens who desire the prohibition of the liquor traffic. Therefore be it

"Resolved, That we favor the legal prohibition by state and national legislation of the manufacture, importation, and sale of alcoholic beverages. That we declare our purpose to organize and unite all the friends of prohibition into one party ; and in order to accomplish this end we deem it of right to leave every prohibitionist the freedom of his own convictions upon all other political questions, and trust our representatives to take such action upon other political questions as the changes occasioned by prohibition and the welfare of the whole people shall demand."

Resolved, "The right of suffrage ought not to be abridged on account of sex."

Those delegates who were dissatisfied with this platform withdrew from the convention, assembled in another hall, assumed the name of "The National Party," adopted the following declarations, and nominated Charles E. Bentley, of Nebraska, and J. H. Southgate, of North Carolina, for the two highest offices in the national government:

"The National Party, recognizing God as the author of all just power in government, presents the following declaration of principles, which it pledges itself to enact into effective legislation when given the power to do so:

"The suppression of the manufacture and sale, importation, exportation, and transportation of intoxicating liquors for beverage purposes. We utterly reject all plans for regulating or compromising with this traffic, whether such plans be called local option, taxation, license, or public control. The sale of liquors for medicinal and other legitimate uses should be conducted by the State, without profit, and with such regulations as will prevent fraud or evasion.

"No citizen should be denied the right to vote on account of sex.

"All money should be issued by the General Government only, and without the intervention of any private citizen, corporation, or banking institution. It should be based upon the wealth, stability, and integrity of the nation. It should be a full legal tender for all debts, public and private, and should be of sufficient volume to meet the demands of the legitimate business interests of the country. For the purpose of honestly liquidating our outstanding coin obligations, we favor the free and unlimited coinage of both silver and gold, at the ratio of sixteen to one, without consulting any other nation.

"Land is the common heritage of the people and should be preserved from monopoly and speculation. All unearned grants of land, subject to forfeiture, should be reclaimed by the Government and no portion of the public domain should hereafter be granted except to actual settlers, continuous use being essential to tenure.

"Railroads, telegraphs, and other natural monopolies should be owned and operated by the Government, giving to the people the benefit of service at actual cost.

"The National Constitution should be so amended as to allow the national revenues to be raised by equitable adjustment of taxation on the properties and incomes of the people, and import duties should be levied as a means of securing equitable commercial relations with other nations.

"The contract convict-labor system, through which speculators are enriched at the expense of the State, should be abolished.

"All citizens should be protected by law in their right to one day of rest in seven, without oppressing any who conscientiously observe any other than the first day of the week.

"American public schools, taught in the English language, should be maintained, and no public funds should be appropriated for sectarian institutions.

"The President, Vice-President, and United States Senators should be elected by direct vote of the people.

"Ex-soldiers and sailors of the United States army and navy, their widows, and minor children, should receive liberal pensions, graded on disability and term of service, not merely as a debt of gratitude, but for service rendered in the preservation of the Union.

"Our immigration laws should be so revised as to exclude paupers and criminals. None but citizens of the United States should be allowed to vote in any State, and naturalized citizens should not vote until one year after naturalization papers have been issued.

"The initiative and referendum and proportional representation should be adopted.

"Having herein presented our principles and purposes, we invite the co-operation and support of all citizens who are with us substantially agreed."

Socialist-Labor Party Nominations.—Still another party which placed candidates for the presidency and vice-presidency in nomination was the Socialist-Labor organization, which held a convention in New York, July 4–10, and named for the two high offices, Charles H. Matchett, of New York, and Mathew Maguire, of New Jersey. Its platform embodied the essential doctrines of socialism, as commonly understood, and was as follows:

"The Socialist Labor Party of the United States, in convention assembled, reasserts the inalienable rights of all men to life, liberty, and the pursuit of happiness.

"With the founders of the American Republic we hold that the purpose of government is to secure every citizen in the enjoyment of this right; but in the right of our conditions we hold, furthermore, that no such right can be exercised under a system of economic inequality, essentially destructive of life, of liberty, and of happiness.

"With the founders of this Republic we hold that the true theory of politics is that the machinery of government must be owned and controlled by the whole people; but in the light of our industrial development we hold, furthermore, that the true theory of economics is that the machinery of production must likewise belong to the people in common.

"To the obvious fact that our despotic system of economics is the direct opposite of our democratic system of politics, can plainly be traced the existence of a privileged class, the corruption of Government by that class, the alienation of public property, public franchises, and public functions to that class, and the abject dependence of the mightiest of nations upon that class.

"Again, through the perversion of democracy to the ends of plutocracy, labor is robbed of its wealth which it alone produces, is denied the means of self-employment, and by compulsory idleness in wage slavery, is even deprived of the necessaries of life.

"Human power and natural forces are thus wasted, that the plutocracy may rule. Ignorance and misery, with all their concomitant evils, are perpetuated, that the people may be kept in bondage. Science and invention are diverted from their humane purpose to the enslavement of women and children.

"Against such a system the Socialist Labor party once more enters its protest. Once more it reiterates its fundamental declaration that private property in the natural sources of produc-

tion and in the instruments of labor is the obvious cause of all economic servitude and political dependence.

"The time is fast coming when, in the natural course of social evolution, this system, through the destructive action of its failures and crises on one hand, and the constructive tendencies of its trusts and other capitalistic combinations on the other hand, shall have worked out its own downfall.

"We therefore call upon the wage-workers of the United States, and upon all honest citizens, to organize under the banner of the Socialist Labor party into a class-conscious body, aware of its rights and determined to conquer them by taking possession of the public powers, so that, held together by an indomitable spirit of solidarity under the most trying conditions of the present class struggle, we may put a summary end to that barbarous struggle by the abolition of classes, the restoration of the land and of all the means of production, transportation, and distribution to the people as a collective body, and the substitution of the co-operative commonwealth for the present state of planless production, industrial war, and social disorder, a commonwealth in which every worker shall have the free exercise and full benefit of his faculties, multiplied by all modern factors of civilization.

"With a view to immediate improvement in the condition of labor we present the following demands:

"1. Reduction of the hours of labor in proportion to the progress of production.

"2. The United States shall obtain possession of the railroads, canals, telegraphs, telephones, and all other means of public transportation and communication; the employés to operate the same co-operatively under control of the Federal Government and to elect their own superior officers, but no employé shall be discharged for political reasons.

"3. The municipalities shall obtain possession of the local railroads, ferries, waterworks, gasworks, electric plants, and all industries requiring municipal franchises; the employés to operate the same co-operatively under control of the municipal administration and to elect their own superior officers, but no employé shall be discharged for political reasons.

"4. The public lands declared inalienable. Revocation of all land grants to corporations or individuals the conditions of which have not been complied with.

"5. The United States to have the exclusive right to issue money.

"6. Congressional legislation providing for the scientific management of forests and waterways, and prohibiting the waste of the natural resources of the country.

"7. Inventions to be free to all; the inventors to be remunerated by the nation.

"8. Progressive income tax and tax on inheritances; the smaller incomes to be exempt.

"9. School education of all children under fourteen years of age to be compulsory, gratuitous, and accessible to all by public assistance in meals, clothing, books, etc., where necessary.

"10. Repeal of all pauper, tramp, conspiracy, and sumptuary laws. Unabridged right of combination.

"11. Prohibition of the employment of children of school age and of female labor in occupations detrimental to health or morality. Abolition of the convict-labor contract system.

"12. Employment of the unemployed by the public authorities (county, State, or nation).

"13. All wages to be paid in lawful money of the United States. Equalization of women's wages to those of men where equal service is performed.

"14. Laws for the protection of life and limb in all occupations, and an efficient employers' liability law.

"15. The people to have the right to propose laws and to vote upon all measures of importance according to the referendum principle.

"16. Abolition of the veto power of the Executive (National, State, or municipal), wherever it exists.

"17. Abolition of the United States Senate and all upper legislative chambers.

"18. Municipal self-government.

"19. Direct vote and secret ballots in all elections. Universal and equal right of suffrage without regard to color, creed, or sex. Election days to be legal holidays. The principle of proportional representation to be introduced.

"20. All public officers to be subject to recall by their respective constituencies.

"21. Uniform civil and criminal law throughout the United States. Administration of justice free of charge. Abolition of capital punishment."

The Canvass and Election.—The canvass which occupied the months between party nominations and the election was the most remarkable, in many respects, that the country had ever gone through. On both sides of the silver question intense convictions were burning and intense anxieties being felt. To the defenders of the gold standard of value—the monetary standard of the world at large—an unlimited free coinage of silver legal tender money, at the ratio of 16 to 1, meant both dishonor and ruin—national bankruptcy, the wreck of industry, and chaos in the commercial world. To many of those who strove with desperate eagerness to bring it about it meant, on the contrary, a millennial social state, in which abundance would prevail, the goods of the world be divided more fairly, and labor have a juster reward. So the issue fronted each as one personal, vital, almost as of life and death. Their conflict bore no likeness to those commonly in politics, where consequences seem remote, vague, general to the body politic,—not instantly overhanging the head of the individual citizen, as in this case they did. Not even the patriotic and moral excitements of the canvass of 1860 produced so intense a feeling of personal interest in the election—so painful an anxiety in waiting for its result. And never in any former political contest had the questions involved been debated so earnestly, studied so widely and intently, set forth by every artifice of exposition and illustration with so much ingenious pains. The "campaign literature" distributed by each party was beyond computation in quantity and beyond classification in its kinds. The speeches of the canvass were innumerable. Mr. Bryan contributed some hundreds, in tours which he made through the country, and Mr. McKinley, at his home, in Canton, Ohio, received visiting delegations from all parts of the country and addressed them at more or less length.

With all the excitement of anxiety and the

heated conflict of beliefs there was little violence of any kind, from first to last. The critical election day (November 3) passed with no serious incidents of disorder. The verdict of the people, pronounced for the preservation of the monetary standard which the world at large has established in general use, was accepted with the equanimity to which self-governing citizens are trained. Nearly fourteen millions of votes were cast, of which the Republican presidential electors received 7,104,244; electors representing the various parties which had nominated Mr. Bryan received, in all, 6,506,835; those on the National Democratic ticket received 134,652; those on the Prohibition tickets, 144,606; those on the Socialist-Labor ticket, 36,416. In the Electoral College, there were 271 votes for McKinley, and 176 for Bryan. The States giving their electoral votes for McKinley were California (excepting 1 vote, cast for Bryan), Connecticut, Delaware, Illinois, Indiana, Iowa, Kentucky (except 1), Maine, Maryland, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, Vermont, West Virginia, Wisconsin. The States which chose electors for Bryan were Alabama, Arkansas, Colorado, Florida, Georgia, Idaho, Kansas, Louisiana, Mississippi, Missouri, Montana, Nebraska, Nevada, North Carolina, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia, Washington, Wyoming, besides the single votes won in California and Kentucky. For Vice President, Hobart received 271 electoral votes—the same as McKinley; but Sewall received 27 less than Bryan, that number being cast for the Populist candidate, Watson. This was consequent on fusion arrangements between Democrats and Populists in 28 States.

In some States, the majority given against silver free coinage was overwhelming, as for example, in New York, 268,000 plurality for McKinley, besides 19,000 votes cast for the "Gold Democratic" candidate; New Jersey, 87,000 Republican plurality and 6,000 votes for General Palmer; Pennsylvania, 295,000 and 11,000; Massachusetts, 173,000 and 11,000. On the other hand, Texas gave Bryan a plurality of 202,000, and Colorado 135,000.

A. D. 1896-1897.—Immigration Bill vetoed by President Cleveland.—On the 17th of December, 1896, a bill to amend the immigration laws, which had passed the House of Representatives during the previous session of Congress, passed the Senate, with amendments which the House refused to accept. By conferences between the two branches of Congress an agreement was finally reached, in which the House concurred on the 9th of February and the Senate on the 17th. But the President disapproved the measure, and returned it to Congress on the 2d of March, with his objections set forth in the following Message:

"I herewith return without approval House bill No. 7864, entitled 'An act to amend the immigration laws of the United States.'

"By the first section of this bill it is proposed to amend section 1 of the act of March 3, 1891, relating to immigration by adding to the classes of aliens thereby excluded from admission to the United States the following: 'All persons physically capable and over 16 years of age who can not read and write the English language or some other language; but a person not so able to read and write who is over 50 years of age and is the parent or grandparent of a qualified immigrant over 21 years of age and capable of supporting such parent or grandparent may accompany such immigrant, or such a parent or grandparent may be sent for and come to join the family of a child or grandchild over 21 years of age similarly qualified and capable, and a wife or minor child not so able to read and write may accompany or be sent for and come and join the husband or parent similarly qualified and capable.'

"A radical departure from our national policy relating to immigration is here presented. Heretofore we have welcomed all who came to us from other lands except those whose moral or physical condition or history threatened danger to our national welfare and safety. Relying upon the zealous watchfulness of our people to prevent injury to our political and social fabric, we have encouraged those coming from foreign countries to cast their lot with us and join in the development of our vast domain, securing in return a share in the blessings of American citizenship. A century's stupendous growth, largely due to the assimilation and thrift of millions of sturdy and patriotic adopted citizens, attests the success of this generous and free-handed policy which, while guarding the people's interests, exacts from our immigrants only physical and moral soundness and a willingness and ability to work. A contemplation of the grand results of this policy can not fail to arouse a sentiment in its defense, for however it might have been regarded as an original proposition and viewed as an experiment its accomplishments are such that if it is to be uprooted at this late day its disadvantages should be plainly apparent and the substitute adopted should be just and adequate, free from uncertainties, and guarded against difficult or oppressive administration.

"It is not claimed, I believe, that the time has come for the further restriction of immigration on the ground that an excess of population overcrowds our land. It is said, however, that the quality of recent immigration is undesirable. The time is quite within recent memory when the same thing was said of immigrants who, with their descendants, are now numbered among our best citizens. It is said that too many immigrants settle in our cities, thus dangerously increasing their idle and vicious population. This is certainly a disadvantage. It can not be shown, however, that it affects all our cities, nor that it is permanent; nor does it appear that this condition where it exists demands as its remedy the reversal of our present immigration policy. The claim is also made that the influx of foreign laborers deprives of the opportunity to work those who are better entitled than they to the privilege of earning their livelihood by daily toil. An unfortunate condition is certainly presented when any who are willing to labor are unemployed, but so far as this condition now exists among our people it must be conceded to be a result of phenomenal business depression and the stagna-

UNITED STATES, 1896–1897.

tion of all enterprises in which labor is a factor. With the advent of settled and wholesome financial and economic governmental policies and consequent encouragement to the activity of capital the misfortunes of unemployed labor should, to a great extent at least, be remedied. If it continues, its natural consequences must be to check the further immigration to our cities of foreign laborers and to deplete the ranks of those already there. In the meantime those most willing and best entitled ought to be able to secure the advantages of such work as there is to do.

"It is proposed by the bill under consideration to meet the alleged difficulties of the situation by establishing an educational test by which the right of a foreigner to make his home with us shall be determined. Its general scheme is to prohibit from admission to our country all immigrants 'physically capable and over 16 years of age who can not read and write the English language or some other language,' and it is provided that this test shall be applied by requiring immigrants seeking admission to read and afterwards to write not less than twenty nor more than twenty-five words of the Constitution of the United States in some language, and that any immigrant failing in this shall not be admitted, but shall be returned to the country from whence he came at the expense of the steamship or railroad company which brought him.

"The best reason that could be given for this radical restriction of immigration is the necessity of protecting our population against degeneration and saving our national peace and quiet from imported turbulence and disorder. I can not believe that we would be protected against these evils by limiting immigration to those who can read and write in any language twenty-five words of our Constitution. In my opinion, it is infinitely more safe to admit a hundred thousand immigrants who, though unable to read and write, seek among us only a home and opportunity to work than to admit one of those unruly agitators and enemies of governmental control who can not only read and write, but delights in arousing by inflammatory speech the illiterate and peacefully inclined to discontent and tumult. Violence and disorder do not originate with illiterate laborers. They are, rather, the victims of the educated agitator. The ability to read and write, as required in this bill, in and of itself affords, in my opinion, a misleading test of contented industry and supplies unsatisfactory evidence of desirable citizenship or a proper apprehension of the benefits of our institutions. If any particular element of our illiterate immigration is to be feared for other causes than illiteracy, these causes should be dealt with directly, instead of making illiteracy the pretext for exclusion, to the detriment of other illiterate immigrants against whom the real cause of complaint cannot be alleged.

"The provisions intended to rid that part of the proposed legislation already referred to from obvious hardship appear to me to be indefinite and inadequate. A parent, grandparent, wife, or minor child of a qualified immigrant, though unable to read and write, may accompany the immigrant or be sent for to join his family, provided the immigrant is capable of supporting such relative. These exceptions to the general rule of exclusion contained in the bill were made to prevent the separation of families, and yet neither brothers nor sisters are provided for. In order that relatives who are provided for may be reunited, those still in foreign lands must be sent for to join the immigrant here. What formality is necessary to constitute this prerequisite, and how are the facts of relationship and that the relative is sent for to be established? Are the illiterate relatives of immigrants who have come here under prior laws entitled to the advantage of these exceptions? A husband who can read and write and who determines to abandon his illiterate wife abroad will find here under this law an absolutely safe retreat. The illiterate relatives mentioned must not only be sent for, but such immigrant must be capable of supporting them when they arrive. This requirement proceeds upon the assumption that the foreign relatives coming here are in every case, by reason of poverty, liable to become a public charge unless the immigrant is capable of their support. The contrary is very often true. And yet if unable to read and write, though quite able and willing to support themselves and their relatives here besides, they could not be admitted under the provisions of this bill if the immigrant was impoverished, though the aid of his fortunate but illiterate relative might be the means of saving him from pauperism.

"The fourth section of this bill provides—'That it shall be unlawful for any male alien who has not in good faith made his declaration before the proper court of his intention to become a citizen of the United States to be employed on any public works of the United States or to come regularly or habitually into the United States by land or water for the purpose of engaging in any mechanical trade or manual labor for wages or salary, returning from time to time to a foreign country.' The fifth section provides—'That it shall be unlawful for any person, partnership, company, or corporation knowingly to employ any alien coming into the United States in violation of the next preceding section of this act.'

"The prohibition against the employment of aliens upon any public works of the United States is in line with other legislation of a like character. It is quite a different thing, however, to declare it a crime for an alien to come regularly and habitually into the United States for the purpose of obtaining work from private parties, if such alien returns from time to time to a foreign country, and to constitute any employment of such alien a criminal offense. When we consider these provisions of the bill in connection with our long northern frontier and the boundaries of our States and Territories, often but an imaginary line separating them from the British dominions, and recall the friendly intercourse between the people who are neighbors on either side, the provisions of this bill affecting them must be regarded as illiberal, narrow, and un-American. The residents of these States and Territories have separate and especial interests which in many cases make an interchange of labor between their people and their alien neighbors most important, frequently with the advantage largely in favor of our citizens. This suggests the inexpediency of Federal interference with these conditions when not necessary to the correction of a substantial evil, affecting the general welfare. Such unfriendly legislation as is proposed could hardly fail to provoke retaliatory measures, to the injury of many of our

citizens who now find employment on adjoining foreign soil. The uncertainty of construction to which the language of these provisions is subject is a serious objection to a statute which describes a crime. An important element in the offense sought to be created by these sections is the coming 'regularly or habitually into the United States.' These words are impossible of definite and certain construction. The same may be said of the equally important words 'returning from time to time to a foreign country.'

"A careful examination of this bill has convinced me that for the reasons given and others not specifically stated its provisions are unnecessarily harsh and oppressive, and its defects in construction would cause vexation and its operation would result in harm to our citizens. GROVER CLEVELAND."

In the House of Representatives, the Bill was passed again, over the veto, by the requisite vote of two-thirds; in the Senate it was referred to the Committee on Immigration, and no further action was taken upon it. Therefore, it did not become a law.

A. D. 1896-1898.—Agitation for monetary reforms.—The Indianapolis Commission.—Secretary Gage's plan.—The Senatorial block in the way.—On November 18, 1896, the Governors of the Indianapolis Board of Trade invited the Boards of Trade of Chicago, St. Louis, Cincinnati, Louisville, Cleveland, Columbus, Toledo, Kansas City, Detroit, Milwaukee, St. Paul, Des Moines, Minneapolis, Grand Rapids, Peoria, and Omaha to a conference on the first of December following, to consider the advisability of calling a larger convention from commercial organizations throughout the country for the purpose of discussing the wisdom of selecting a non-partisan commission to formulate a sound currency system. This preliminary conference issued a call for a non-partisan monetary convention of business men, chosen from boards of trade, chambers of commerce, and commercial clubs, to meet in Indianapolis, on January 12, 1897. At the convention there were assembled, with credentials, 299 delegates, representing business organizations and cities in nearly every State in the Union. The result of its deliberations was expressed in resolutions which opened as follows:

"This convention declares that it has become absolutely necessary that a consistent, straightforward, and deliberately planned monetary system shall be inaugurated, the fundamental basis of which should be: First, that the present gold standard should be maintained. Second, that steps should be taken to insure the ultimate retirement of all classes of United States notes by a gradual and steady process, and so as to avoid the injurious contraction of the currency, or disturbance of the business interests of the country, and that until such retirements provision should be made for a separation of the revenue and note-issue departments of the Treasury. Third, that a banking system be provided, which should furnish credit facilities to every portion of the country and a safe and elastic circulation, and especially with a view of securing such a distribution of the loanable capital of the country as will tend to equalize the rates of interest in all parts thereof."

Recognizing the necessity of committing the formulation of such a plan to a body of men trained and experienced in these matters, a commission was proposed. In case no commission should be authorized by Congress in the spring of 1897, the Executive Committee of the Convention was authorized to select a commission of eleven members, "to make thorough investigation of the monetary affairs and needs of this country, in all relations and aspects, and to make appropriate suggestions as to any evils found to exist, and the remedies therefor."

Congress did not authorize the appointment of a monetary commission; and the Executive Committee of the Convention selected a commission of eleven members, which began its sittings in Washington, September 22, 1897. . . . The Commission was composed as follows: George F. Edmunds, Vermont, chairman; George E. Leighton, Missouri, vice-chairman; T. G. Bush, Alabama; W. B. Dean, Minnesota; Charles S. Fairchild, New York; Stuyvesant Fish, New York; J. W. Fries, North Carolina; Louis A. Garnett, California; J. Laurence Laughlin, Illinois; C. Stuart Patterson, Pennsylvania; Robert S. Taylor, Indiana; and L. Carroll Root and H. Parker Willis, secretaries. Early in January, 1898, the report of the Monetary Commission was made public, and a second convention of delegates from the boards of trade and other commercial organizations of leading cities in the country was called together at Indianapolis, January 20-26, to consider its recommendations. The measures proposed by the Commission were approved by the convention, and were submitted to Congress by a committee appointed to urge their enactment in law. The Secretary of the Treasury, Mr. Gage, had already, in his first annual report and in the draft of a bill which he laid before the House committee on banking and currency, made recommendations which accorded in principle with those of the Commission, differing somewhat in details. Both plans, with some proposals from other sources, were now taken in hand by the House committee on banking and currency, and a bill was prepared, which the committee reported to the House on the 15th of June. But the other branch of Congress, the Senate, had already declared itself in a way which forbade any hope of success. By a vote of 47 to 32, that body had resolved, on the 28th of January, that "all the bonds of the United States issued, or authorized to be issued, under the said acts of Congress hereinbefore recited, are payable, principal and interest, at the option of the government of the United States, in silver dollars, of the coinage of the United States, containing 412 1-2 grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith, nor in derogation of the rights of the public creditor." The House, by 182 to 132, had rejected this resolution; but the Senate action had demonstrated the evident uselessness of attempting legislation in the interest of a monetary reform. Accordingly the House bill, after being reported and made public, for discussion outside, was withdrawn by the committee, and the subject rested in Congress, while agitation in the country went on.

A. D. 1897.—The Industrial Revolution.—"In 1865 the problem presented was this: The United States could certainly excel any European nation in economic competition, and possi-

bly the whole Continent combined, if it could utilize its resources. So much was admitted; the doubt touched the capacity of the people to organize a system of transportation and industry adequate to attain that end. Failure meant certain bankruptcy. Unappalled by the magnitude of the speculation, the American people took the risk. What that risk was may be imagined when the fact is grasped that in 1865, with 35,000 miles of road already built, this people entered on the construction of 160,000 miles more, at an outlay, probably, in excess of $10,000,000,000. Such figures convey no impression to the mind, any more than a statement of the distance of a star. It may aid the imagination, perhaps, to say that Mr. Giffen estimated the cost to France of the war of 1870, including the indemnity and Alsace and Lorraine, at less than $3,500,000,000, or about one-third of this portentous mortgage on the future.

"As late as 1870 America remained relatively poor, for America, so far as her export trade went, relied on agriculture alone. To build her roads she had to borrow, and she expected to pay dear; but she did not calculate on having to pay twice the capital she borrowed, estimating that capital in the only merchandise she had to sell. Yet this is very nearly what occurred. Agricultural prices fell so rapidly that between 1890 and 1897, when the sharpest pressure prevailed, it took something like twice the weight of wheat or cotton to repay a dollar borrowed in 1873, that would have sufficed to satisfy the creditor when the debt was contracted. Merchandise enough could not be shipped to meet the emergency, and balances had to be paid in coin. The agony this people endured may be measured by the sacrifice they made. At the moment of severest contraction, in the single year 1893, the United States parted with upwards of $87,000,000 of gold, when to lose gold was like draining a living body of its blood. . . .

"What America owed abroad can never be computed; it is enough that it reached an enormous sum, to refund which, even under favorable circumstances, would have taken years of effort; actually forced payment brought the nation to the brink of a convulsion. Perhaps no people ever faced such an emergency and paid, without recourse to war. America triumphed through her inventive and administrative genius. Brought to a white heat under compression, the industrial system of the Union suddenly fused into a homogeneous mass. One day, without warning, the gigantic mechanism operated, and two hemispheres vibrated with the shock. In March, 1897, the vast consolidation of mines, foundries, railroads, and steamship companies, centralized at Pittsburg, began producing steel rails at $18 the ton, and at a bound America bestrode the world. She had won her great wager with fate. . . . The end seems only a question of time. Europe is doomed not only to buy her raw material abroad, but to pay the cost of transport. And Europe knew this instinctively in March, 1897, and nerved herself for resistance. Her best hope, next to a victorious war, lay in imitating America, and in organizing a system of transportation which would open up the East.

"Carnegie achieved the new industrial revolution in March, 1897. Within a twelvemonth the rival nations had emptied themselves upon the shore of the Yellow Sea. In November Germany seized Kiao-chau, a month later the Russians occupied Port Arthur, and the following April the English appropriated Wei-hai-wei; but the fact to remember is that just 400 miles inland, due west of Kiao-chau, lies Tszechau, the centre, according to Richthofen, of the richest coal and iron deposits in existence. There with the rude methods used by the Chinese, coal actually sells at 13 cents the ton. Thus it has come to pass that the problem now being attacked by all the statesmen, soldiers, scientific men, and engineers of the two eastern continents is whether Russia, Germany, France, England, and Japan, combined or separately, can ever bring these resources on the market in competition with the United States."—B. Adams, *The New Industrial Revolution* (*Atlantic Monthly, Feb.*, 1901).

A. D. 1897 (January—May).—Arbitration Treaty with Great Britain rejected by the Senate.—The correspondence which took place between the governments of the United States and Great Britain, on the subject of an arbitration of the Venezuela Boundary dispute, having led (see, in this vol., VENEZUELA: A. D. 1896–1899) to the revival of a project for the negotiation of a general treaty of arbitration, which the late American Secretary of State, Mr. Gresham, had broached to the British government in the spring of 1895, the terms of such an arrangement were carefully and fully discussed between Secretary Olney and Lord Salisbury, during the year 1896, and an agreement was reached which took form in a solemn compact for the settlement by arbitration of all matters in difference between the two countries, signed at Washington on the 11th of January, 1897. The treaty thus framed was as follows:

"ARTICLE I. The High Contracting Parties agree to submit to Arbitration in accordance with the provisions and subject to the limitations of this Treaty all questions in difference between them which they may fail to adjust by diplomatic negotiation.

"ARTICLE II. All pecuniary claims or groups of pecuniary claims which do not in the aggregate exceed £100,000 in amount, and which do not involve the determination of territorial claims, shall be dealt with and decided by an Arbitral Tribunal constituted as provided in the next following Article. In this Article and in Article IV the words 'groups of pecuniary claims' mean pecuniary claims by one or more persons arising out of the same transactions or involving the same issues of law and fact.

"ARTICLE III. Each of the High Contracting Parties shall nominate one arbitrator who shall be a jurist of repute and the two arbitrators so nominated shall within two months of the date of their nomination select an umpire. In case they shall fail to do so within the limit of time above mentioned, the umpire shall be appointed by agreement between the Members for the time being of the Supreme Court of the United States and the Members for the time being of the Judicial Committee of the Privy Council in Great Britain, each nominating body acting by a majority. In case they shall fail to agree upon an umpire within three months of the date of an application made to them in that behalf by the High Contracting Parties or either of them, the umpire shall be selected in the manner provided for in Article X. The person so selected shall

be the President of the Tribunal and the award of the majority of the Members thereof shall be final.

"ARTICLE IV. All pecuniary claims or groups of pecuniary claims which shall exceed £100,000 in amount and all other matters in difference, in respect of which either of the High Contracting Parties shall have rights against the other under Treaty or otherwise, provided that such matters in difference do not involve the determination of territorial claims, shall be dealt with and decided by an Arbitral Tribunal, constituted as provided in the next following Article.

"ARTICLE V. Any subject of Arbitration described in Article IV shall be submitted to the Tribunal provided for by Article III, the award of which Tribunal, if unanimous, shall be final. If not unanimous either of the High Contracting Parties may within six months from the date of the award demand a review thereof. In such case the matter in controversy shall be submitted to an Arbitral Tribunal consisting of five jurists of repute, no one of whom shall have been a member of the Tribunal whose award is to be reviewed and who shall be selected as follows, viz:—two by each of the High Contracting Parties, and one, to act as umpire, by the four thus nominated and to be chosen within three months after the date of their nomination. In case they shall fail to choose an umpire within the limit of time above-mentioned, the umpire shall be appointed by agreement between the Nominating Bodies designated in Article III acting in the manner therein provided. In case they shall fail to agree upon an umpire within three months of the date of an application made to them in that behalf by the High Contracting Parties or either of them, the umpire shall be selected in the manner provided for in Article X. The person so selected shall be the President of the Tribunal and the award of the majority of the Members thereof shall be final.

"ARTICLE VI. Any controversy which shall involve the determination of territorial claims shall be submitted to a Tribunal composed of six members, three of whom (subject to the provisions of Article VIII) shall be Judges of the Supreme Court of the United States or Justices of the Circuit Courts to be nominated by the President of the United States, and the other three of whom (subject to the provisions of Article VIII) shall be Judges of the British Supreme Court of Judicature or Members of the Judicial Committee of the Privy Council to be nominated by Her Britannic Majesty, whose award by a majority of not less than five to one shall be final. In case of an award made by less than the prescribed majority, the award shall also be final unless either Power shall, within three months after the award has been reported, protest that the same is erroneous, in which case the award shall be of no validity. In the event of an award made by less than the prescribed majority and protested as above provided, or if the members of the Arbitral Tribunal shall be equally divided, there shall be no recourse to hostile measures of any description until the mediation of one or more friendly Powers has been invited by one or both of the High Contracting Parties.

"ARTICLE VII. Objections to the jurisdiction of an Arbitral Tribunal constituted under this Treaty shall not be taken except as provided in this Article. If before the close of the hearing upon a claim submitted to an Arbitral Tribunal constituted under Article III or Article V either of the High Contracting Parties shall move such Tribunal to decide, and thereupon it shall decide that the determination of such claim necessarily involves the decision of a disputed question of principle of grave general importance affecting the national rights of such party as distinguished from the private rights whereof it is merely the international representative, the jurisdiction of such Arbitral Tribunal over such claim shall cease and the same shall be dealt with by arbitration under Article VI.

"ARTICLE VIII. In cases where the question involved is one which concerns a particular State or Territory of the United States, it shall be open to the President of the United States to appoint a judicial officer of such State or Territory to be one of the Arbitrators under Article III or Article V or Article VI. In like manner in cases where the question involved is one which concerns a British Colony or possession, it shall be open to Her Britannic Majesty to appoint a judicial officer of such Colony or possession to be one of the Arbitrators under Article III or Article V or Article VI.

"ARTICLE IX. Territorial claims in this Treaty shall include all claims to territory and all claims involving questions of servitudes, rights of navigation and of access, fisheries and all rights and interests necessary to the control and enjoyment of the territory claimed by either of the High Contracting Parties.

"ARTICLE X. If in any case the nominating bodies designated in Articles III and V shall fail to agree upon an Umpire in accordance with the provisions of the said Articles, the Umpire shall be appointed by His Majesty the King of Sweden and Norway. Either of the High Contracting Parties, however, may at any time give notice to the other that, by reason of material changes in conditions as existing at the date of this Treaty, it is of opinion that a substitute for His Majesty should be chosen either for all cases to arise under the Treaty or for a particular specified case already arisen, and thereupon the High Contracting Parties shall at once proceed to agree upon such substitute to act either in all cases to arise under the Treaty or in the particular case specified as may be indicated by said notice; provided, however, that such notice shall have no effect upon an Arbitration already begun by the constitution of an Arbitral Tribunal under Article III. The High Contracting Parties shall also at once proceed to nominate a substitute for His Majesty in the event that His Majesty shall at any time notify them of his desire to be relieved from the functions graciously accepted by him under this Treaty either for all cases to arise thereunder or for any particular specified case already arisen.

"ARTICLE XI. In case of the death, absence or incapacity to serve of any Arbitrator or Umpire, or in the event of any Arbitrator or Umpire omitting or declining or ceasing to act as such, another Arbitrator or Umpire shall be forthwith appointed in his place and stead in the manner provided for with regard to the original appointment.

"ARTICLE XII. Each Government shall pay its own agent and provide for the proper remuneration of the counsel employed by it and of

the Arbitrators appointed by it and for the expense of preparing and submitting its case to the Arbitral Tribunal. All other expenses connected with any Arbitration shall be defrayed by the two Governments in equal moieties. Provided, however, that, if in any case the essential matter of difference submitted to arbitration is the right of one of the High Contracting Parties to receive disavowals of or apologies for acts or defaults of the other not resulting in substantial pecuniary injury, the Arbitral Tribunal finally disposing of the said matter shall direct whether any of the expenses of the successful party shall be borne by the unsuccessful party, and if so to what extent.

"ARTICLE XIII. The time and place of meeting of an Arbitral Tribunal and all arrangements for the hearing and all questions of procedure shall be decided by the Tribunal itself. Each Arbitral Tribunal shall keep a correct record of its proceedings and may appoint and employ all necessary officers and agents. The decision of the Tribunal shall, if possible, be made within three months from the close of the arguments on both sides. It shall be made in writing and dated and shall be signed by the Arbitrators who may assent to it. The decision shall be in duplicate, one copy whereof shall be delivered to each of the High Contracting Parties through their respective agents.

"ARTICLE XIV. This Treaty shall remain in force for five years from the date at which it shall come into operation, and further until the expiration of twelve months after either of the High Contracting Parties shall have given notice to the other of its wish to terminate the same.

"ARTICLE XV. The present Treaty shall be duly ratified by the President of the United States of America, by and with the advice and consent of the Senate thereof, and by Her Britannic Majesty; and the mutual exchange of ratifications shall take place in Washington or in London within six months of the date hereof or earlier if possible."—*United States, 54th Cong., 2d Sess., Senate Doc. No.* 63.

Public feeling in both countries gave joyful welcome to this nobly conceived treaty when it was announced. All that was best in English sentiment and American sentiment had been shuddering at the thought of possible war between the kindred peoples, and thanked God for what promised some certitude that no dispute would be pushed to that barbarous appeal. Only the mean thought and temper of either country was provoked to opposition; but, unhappily, the meaner temper and the narrower and more ignorant opinion on one side of the sea had been getting so strong a representation in the United States Senate as to prove capable of much mischief there, on this and other matters of most serious public concern. When the great covenant of peace went to that body for approval, there were senators who found it offensive to them because it came from the hands of President Cleveland and Secretary Olney; and there were other senators whose dignity was hurt by the eager impatience with which the public voice cried out for their ratifying vote; and still others there were who looked with official jealousy at the project of an arbitral tribunal which might sometimes take something from senatorial functions in foreign affairs. And the combination of pitiful motives had strength enough to baffle the high hopes and defeat the will of the American people.

Of the public feeling thus outraged, the following is one expression of the time, among many which it would be possible to quote: Many people "are represented by influential papers like the St. Paul 'Pioneer Press' and the Minneapolis 'Journal,' the latter declaring that it is humiliating to think that, widely as the treaty is favored throughout the country, a few ill-natured men in the Senate have the power to delay ratification. In the Central West the feeling is generally strong for arbitration, if we may judge from the Chicago 'Times-Herald,' the St. Louis 'Republic,' the Indianapolis 'Journal,' and the Cleveland 'Leader.' In the South there are such cheering reports as this from the Memphis 'Scimetar': 'If the treaty now under consideration in the Senate Committee on Foreign Relations should fail of ratification, public opinion in this country would demand that the incoming Administration provide another embodying the same vital principle.' In the East the sentiment in favor of immediate ratification of the original draft has been almost universal, the only two journals of note differing from this being the New York 'Sun' and the Washington 'Post.' The trend of opinion is shown in the adoption by the Massachusetts House of Representatives of an endorsement by a vote of 141 to 11. An important meeting took place last week in Washington in favor of ratification. The speakers were ex-Secretary of State Foster, Mr. G. G. Hubbard, Professor B. L. Whitman, ex-Senator J. B. Henderson, ex-Governor Stanard, and Justice Brewer, of the Supreme Court. The last named said: 'I do not believe in saying to the gentlemen charged with the duty of considering carefully that treaty, that "you must vote for it." There is something in my own nature which, when anybody says to me "you must," causes something to run up my spinal column which says "I won't." It is the Senate's duty to consider that treaty carefully, and when I say that, I say it is no trespass upon their rights for American citizens to express their views of that treaty. What are the errors and losses incidental to arbitration compared to the horrors of war? What are a few million dollars of wrongful damages in comparison to the sacrifice of thousands of human lives?'"—*The Outlook, Feb.* 6, 1897.

"This treaty was greeted with widespread favor in the press, but was antagonized at once in the Senate by the jingo element and by the personal adversaries of the administration. The committee on foreign relations reported the draft favorably, but with certain amendments, on February 1. The ensuing debate soon revealed that a vote on ratification could not be obtained before March 4, and the whole matter was dropped. At the opening of the new Congress the Senate Committee again considered the treaty and reported it, with amendments, on March 18. During two weeks' discussion the Senate adopted the committee's amendments and also others, with the result that the draft was radically transformed. Instead of the general reference of all disputes to the tribunals, it was provided that any difference 'which, in the judgment of either power, materially affects

its honor or its domestic or foreign policy,' should be submitted to arbitration only by special agreement; that no question should be submitted save with the consent of the Senate in its treaty-making capacity; and that no claim of a British subject against a state or territory of the United States should be submitted under any circumstances. The first of these changes was due mainly to the objection that without it the Monroe Doctrine might be subjected to arbitration; the second to the sensitiveness of senators as to their constitutional functions in foreign relations; and the third to a desire to protect states against claims on their defaulted bonds. Other changes modified materially the method of appointing the arbitrators for the United States, and struck out entirely the designation of the King of Sweden as umpire. Even with these amendments, the opposition to the treaty was not overcome; and the final vote on ratification, taken May 5, resulted in its rejection, the vote standing 43 to 26, less than two-thirds in the affirmative. Thirty Republicans and 13 Democrats voted for the treaty; 8 Republicans, 12 Democrats and 6 Populists against it." —*Political Science Quarterly, June*, 1897.

A. D. 1897 (March).—Inauguration of President McKinley.— Leading topics of the inaugural address.—The President's Cabinet.— The inauguration of President McKinley was performed with the customary ceremonies on the 4th of March. In his inaugural address, the new President laid somewhat less emphasis than might have been expected on the need of measures for reforming the monetary system of the country, but strongly urged that instant steps be taken to increase the revenues of the government by a return to higher tariff charges. "With adequate revenue secured," he argued, "but not until then, we can enter upon such changes in our fiscal laws as will, while insuring safety and volume to our money, no longer impose upon the government the necessity of maintaining so large a gold reserve, with its attendant and inevitable temptations to speculation. Most of our financial laws are the outgrowth of experience and trial, and should not be amended without investigation and demonstration of the wisdom of the proposed changes. We must be both 'sure we are right' and 'make haste slowly.' . . .

"The question of international bimetallism will have early and earnest attention. It will be my constant endeavor to secure it by coöperation with the other great commercial powers of the world. Until that condition is realized, when the parity between our gold and silver money springs from and is supported by the relative value of the two metals, the value of the silver already coined, and of that which may hereafter be coined, must be kept constantly at par with gold by every resource at our command. The credit of the government, the integrity of its currency, and the inviolability of its obligations must be preserved. This was the commanding verdict of the people, and it will not be unheeded.

"Economy is demanded in every branch of the government at all times, but especially in periods like the present of depression in business and distress among the people. The severest economy must be observed in all public expenditures, and extravagance stopped wherever it is found, and prevented wherever in the future it may be developed. If the revenues are to remain as now, the only relief that can come must be from decreased expenditures. But the present must not become the permanent condition of the government. It has been our uniform practice to retire, not increase, our outstanding obligations; and this policy must again be resumed and vigorously enforced. Our revenues should always be large enough to meet with ease and promptness not only our current needs and the principal and interest of the public debt, but to make proper and liberal provision for that most deserving body of public creditors, the soldiers and sailors and the widows and orphans who are the pensioners of the United States. . . .

"A deficiency is inevitable so long as the expenditures of the government exceed its receipts. It can only be met by loans or an increased revenue. While a large annual surplus of revenue may invite waste and extravagance, inadequate revenue creates distrust and undermines public and private credit. Neither should be encouraged. Between more loans and more revenue there ought to be but one opinion. We should have more revenue, and that without delay, hindrance, or postponement. A surplus in the treasury created by loans is not a permanent or safe reliance. It will suffice while it lasts, but it cannot last long while the outlays of the government are greater than its receipts, as has been the case during the last two years. . . . The best way for the government to maintain its credit is to pay as it goes—not by resorting to loans, but by keeping out of debt—through an adequate income secured by a system of taxation, external, or internal, or both. It is the settled policy of the government, pursued from the beginning and practiced by all parties and administrations, to raise the bulk of our revenue from taxes upon foreign productions entering the United States for sale and consumption, and avoiding, for the most part, every form of direct taxation except in time of war.

"The country is clearly opposed to any needless additions to the subjects of internal taxation, and is committed by its latest popular utterance to the system of tariff taxation. There can be no misunderstanding either about the principle upon which this tariff taxation shall be levied. Nothing has ever been made plainer at a general election than that the controlling principle in the raising of revenue from duties on imports is zealous care for American interests and American labor. The people have declared that such legislation should be had as will give ample protection and encouragement to the industries and the development of our country. . . . The paramount duty of congress is to stop deficiencies by the restoration of that protective legislation which has always been the firmest prop of the treasury. The passage of such a law or laws would strengthen the credit of the government both at home and abroad, and go far toward stopping the drain upon the gold reserve held for the redemption of our currency, which has been heavy and well-nigh constant for several years. In the revision of the tariff, especial attention should be given to the re-enactment and extension of the reciprocity principle of the law of 1890, under which so great a stimulus was given to our foreign trade in new and advantageous markets for our surplus agricultural and manufactured products."

Without effect, the incoming President urged the ratification of the treaty of arbitration with Great Britain, negotiated by his predecessor and still pending in the Senate. In concluding his address he announced his intention to convene Congress in extra session, saying: "The condition of the public treasury demands the immediate consideration of congress. It alone has the power to provide revenue for the government. Not to convene it under such circumstances, I can view in no other sense than the neglect of a plain duty."

On the day following his inauguration, the President sent to the Senate the following nominations for his Cabinet, which were confirmed: Secretary of State, John Sherman of Ohio; Secretary of the Treasury, Lyman J. Gage of Illinois; Secretary of War, Russel A. Alger of Michigan; Attorney-General, Joseph McKenna of California; Postmaster-General, James A. Gary of Maryland; Secretary of the Navy, John D. Long of Massachusetts; Secretary of the Interior, Cornelius N. Bliss of New York; Secretary of Agriculture, James Wilson of Iowa.

A. D. 1897 (March—July).—Passage of the Dingley Tariff Act.—Carrying out an intention announced in his Inaugural Address, President McKinley called Congress together in extra session on the 15th of March, asking for immediate action to increase the revenue of the government by increased duties, "so levied upon foreign products as to preserve the home market, so far as possible, to our own producers." In his Inaugural Address the President had expressed the understanding of his party as to the chief meaning of the late election, by saying that "the country is . . . committed by its latest popular utterance to the system of tariff taxation. . . . The people have declared that such legislation should be had as will give ample protection and encouragement to the industries and development of our country. . . . The paramount duty of Congress is to stop deficiencies by the restoration of that protective legislation which has always been the firmest prop of the treasury." To the majority in both Houses of Congress these views were entirely acceptable, and they were acted upon at once. The Ways and Means Committee of the House of Representatives in the previous Congress had already prepared a comprehensive new tariff bill, which it passed on to its successor. This ready-made bill was reported to the House on the first day of the session, by Mr. Dingley, chairman of the newly appointed committee, as he had been of the one before it. Debate on the measure began a week later, and was controlled by a fixed programme, which required it to be ended on the 31st of March. The bill was then passed, by a vote of 205 against 121. Of the action of the Senate upon it, and of the main features of the bill as it was finally shaped and became law, the following is a succinct account:

"The bill, referred at once to the Senate Committee on Finance, was reported after a month, on May 8, with important amendments. There was an attempt to impose some purely revenue duties, and, as to the protective duties, the tendency was towards lower rates than in the House bill, though on certain articles, such as wools of low grade, hides, and others (of which more will be said presently), the drift was the other way. The Senate, however, paid much less respect than the House to the recommendations of the committee in charge. In the course of two months, from May 4 to July 7, it went over the tariff bill item by item, amending without restraint, often in a perfunctory manner, and not infrequently with the outcome settled by the accident of attendance on the particular day; on the whole, with a tendency to retain the higher rates of the House bill. As passed finally by the Senate on July 7, the bill, though it contained some 872 amendments, followed the plan of the House Committee rather than that of the Senate Committee. As usual, it went to a Conference Committee. In the various compromises and adjustments in the Senate and in the Conference Committee there was little sign of the deliberate plan and method which the House had shown, and the details of the act were settled in no less haphazard fashion than has been the case with other tariff measures. As patched up by the Conference Committee, the bill was promptly passed by both branches of Congress, and became law on July 24. In what manner these political conditions affected the character of the act will appear from a consideration of the more important specific changes.

"First and foremost was the reimposition of the duties on wool. As the repeal of these duties had been the one important change made by the act of 1894, so their restoration was the salient feature in the act of 1897. . . . Clothing wool was subjected once more to a duty of 11 cents a pound, combing wool to one of 12 cents. On carpet wool there were new graded duties, heavier than any ever before levied. If its value was 12 cents a pound or less the duty was 4 cents; if over 12 cents, the duty was 7 cents. . . . The duties on carpet wool, as has already been noted, were made higher than ever before. In the House the rates of the act of 1890 had been retained; but in the Senate new and higher rates were inserted. . . . They were demanded by the Senators from some States in the Far West, especially from Idaho and Montana. . . . They [the Senators in question] needed to be placated; and they succeeded in getting higher duties on the cheap carpet wools, on the plea of encouragement for the comparatively coarse clothing wool of their ranches. . . . The same complications that led to the high duty on carpet wool brought about a duty on hides. This rawest of raw materials had been on the free list for just a quarter of a century, since 1872, when the duty of the war days had been repealed. . . . But here, again, the Senators from the ranching States were able to dictate terms. . . . In the Senate a duty of 20 per cent. was tacked on. The rate was reduced to 15 per cent. in the Conference Committee, and so remains in the act. The restored duties on wool necessarily brought in their train the old system of high compensating duties on woollens. . . . In the main, the result was a restoration of the rates of the act of 1890. There was some upward movement almost all along the line; and the ad valorem duty alone, on the classes of fabrics which are most largely imported, crept up to 55 per cent. . . .

"On cotton goods the general tendency was to impose duties lower than those of 1890. This was indicated by the drag-net rate, on manufactures of cotton not otherwise provided for, which had been 50 per cent. in 1890, and was 45 per cent. in 1897. On two large classes of textile goods new and distinctly higher duties were im-

posed,—on silks and linens. . . . The mode of gradation was to levy the duties according to the amount of pure silk contained in the goods. The duties were fixed by the pound, being lowest on goods containing a small proportion of pure silk, and rising as that proportion became larger; with the proviso that in no case should the duty be less than 50 per cent. . . . Thus, the duty on certain kinds of silks was $1.30 cents per pound, if they contained 45 per cent in weight of silk; but advanced suddenly to $2.25, if they contained more than 45 per cent. . . . On linens another step of the same kind was taken, specific duties being substituted here also for ad-valorem. . . . Linens were graded somewhat as cottons had been graded since 1861, according to the fineness of the goods as indicated by the number of threads to the square inch. If the number of threads was 60 or less per square inch, the duty was 1¾ cents a square yard; if the threads were between 60 and 120, the duty was 2¾ cents; and so on,—plus 30 per cent. ad-valorem duty in all cases. But finer linen goods, unless otherwise specially provided for, were treated leniently. If the weight was small (less than 4½ ounces per yard), the duty was but 35 per cent. On the other hand, linen laces, or articles trimmed with lace or embroidery, were dutiable at 60 per cent., —an advance at 10 per cent. over the rate of 1890. . . . It was inevitable, under the political conditions of the session, that in this schedule something should again be attempted for the farmer; and, accordingly, we find a substantial duty on flax. The rate of the act of 1890 was restored, —3 cents a pound on prepared flax, in place of the rate of 1½ cents imposed by the act of 1894. . . .

"On chinaware the rates of 1890 were restored. The duty on the finer qualities which are chiefly imported had been lowered to 35 per cent. in 1894, and was now once more put at 60 per cent. On glassware, also, the general ad-valorem rate, which had been reduced to 35 per cent. in 1894, was again fixed at 45 per cent., as in 1890. Similarly the specific duties on the cheaper grades of window-glass and plate-glass, which had been lowered in 1894, were raised to the figures of 1890. . . . The metal schedules in the act of 1897 showed in the main a striking contrast with the textile schedules. Important advances of duty were made on many textiles, and in some cases rates went considerably higher even than those of 1890. But on most metals, and especially on iron and steel, duties were left very much as they had been in 1894. . . . On steel rails there was even a slight reduction from the rate of 1894—$6.72 per ton instead of $7.84. On coal there was a compromise rate. The duty had been 75 cents a ton in 1890, and 40 cents in 1894; it was now fixed at 67 cents. On the other hand, as to certain manufactures of iron and steel farther advanced beyond the crude stage, there was a return to rates very similar to those of 1890. Thus, on pocket cutlery, razors, guns, we find once more the system of combined ad-valorem and specific duties, graded according to the value of the article. . . . Copper remained on the free list, where it had been put in 1894. . . . For good or ill the copper duty had worked out all its effects years before. On the other hand, the duties on lead and on lead ore went up to the point at which they stood in 1890. Here we have once more the signs of concession to the silver Republicans of the far West. . . . The duty on tin plate, a bone of contention under the act of 1890, was disposed of, with little debate, by the imposition of a comparatively moderate duty. . . .

"A part of the act which aroused much public attention and which had an important bearing on its financial yield was the sugar schedule—the duties on sugar, raw and refined. . . . The act of 1890 had admitted raw sugar free, while that of 1894 had imposed a duty of 40 per cent. ad valorem. . . . The price of raw sugar had maintained its downward tendency; and the duty of 40 per cent. had been equivalent in 1896 to less than one cent a pound. In the act of 1897 the duty was made specific, and was practically doubled. Beginning with a rate of one cent a pound on sugar tested to contain 75 per cent., it advanced by stages until on sugar testing 95 per cent. (the usual content of commercial raw sugar) it reached 1.65 cents per pound. The higher rate thus imposed was certain to yield a considerable increase of revenue. Much was said also of the protection now afforded to the beet sugar industry of the West. That industry, however, was still of small dimensions and uncertain future. . . . On refined sugar, the duty was made 1.95 cents per pound, which, as compared with raw sugar testing 100 per cent., left a protection for the domestic refiner,—i. e., for the Sugar 'Trust,'—of 1/8 of one cent a pound. Some intricate calculation would be necessary to make out whether this 'differential' for the refining interest was more or less than in the act of 1894; but, having regard to the effect of the substitution of specific for ad-valorem duties, the Trust was no more favored by the act of 1897 than by its predecessor, and even somewhat less favored. The changes which this part of the tariff act underwent in the two Houses are not without significance." In the bill passed by the House, "the so-called differential, or protection to the refiners, was one-eighth of a cent per pound. In the Senate there was an attempt at serious amendment. The influence of the Sugar Trust in the Senate had long been great. How secured, whether through party contributions, entangling alliances, or coarse bribery, the public could not know; but certainly great, as the course of legislation in that body demonstrated." The Senate attempted to make an entire change in the scheme of sugar duties, which would give the Trust a fifth of a cent per pound of protective differential, instead of an eighth; but the House resisted, with more success than in 1894, and the senatorial friends of the Sugar Trust had to give way.—See, also (in this vol.), TRUSTS: UNITED STATES; and SUGAR BOUNTIES.

"The tariff act of 1894 had repealed the provisions as to reciprocity in the act of 1890, and had rendered nugatory such parts of the treaties made under the earlier act as were inconsistent with the provisions of its successor. The act of 1897 now revived the policy of reciprocity, and in some ways even endeavored to enlarge the scope of the reciprocity provisions" (see below: A. D. 1899–1901.)—F. W. Taussig, *Tariff History of the United States, 4th edition, ch. 7 (N. Y.: G. P. Putnam's Sons)*.

aragua Canal Commission. See (in this vol.) CANAL, INTEROCEANIC: A. D. 1889–1899.

A. D. 1897 (November).—Refusal to negotiate with the insurgent republic of the Philippine Islands.—On the 3d of November, 1897, Mr. Rounseville Wildman, the U. S. Consul at Hongkong, addressed the following to the State Department: "Since my arrival in Hongkong I have been called upon several times by Mr. F. Agoncilla, foreign agent and high commissioner, etc., of the new republic of the Philippines. Mr. Agoncilla holds a commission, signed by the president, members of cabinet, and general in chief of the republic of Philippines, empowering him absolutely with power to conclude treaties with foreign governments. Mr. Agoncilla offers on behalf of his government alliance offensive and defensive with the United States when the United States declares war on Spain, which, in Mr. Agoncilla's judgment, will be very soon. In the meantime he wishes the United States to send to some port in the Philippines 20,000 stand of arms and 200,000 rounds of ammunition for the use of his government, to be paid for on the recognition of his government by the United States. He pledges as security two provinces and the custom-house at Manila. He is not particular about the price—is willing the United States should make 25 per cent or 30 per cent profit. He is a very earnest and attentive diplomat and a great admirer of the United States. On his last visit he surprised me with the information that he had written his government that he had hopes of inducing the United States to supply the much-needed guns, etc. In case Señor Agoncilla's dispatch should fall into the hands of an unfriendly power and find its way into the newspapers, I have thought it wise to apprise the State Department of the nature of the high commissioner's proposals. Señor Agoncilla informs me by late mail that he will proceed at once to Washington to conclude the proposed treaty, if I advise. I shall not advise said step until so instructed by the State Department."

To this communication, the Third Assistant Secretary of State, Mr. Cridler, returned the following reply, Dec. 15, 1897: "I have to acknowledge the receipt of your dispatch No. 19 of November 3, 1897, in which you announce the arrival at your post of Mr. F. Agoncilla, whom you describe as foreign agent and high commissioner of the new republic of the Philippines, and who holds full power to negotiate and conclude treaties with foreign powers. Mr. Agoncilla offers an alliance 'offensive and defensive with the United States when the United States declares war on Spain, which, in Mr. Agoncilla's judgment, will be very soon,' and suggests that 20,000 stand of arms and 200,000 rounds of ammunition be supplied to his government by that of the United States. You may briefly advise Mr. Agoncilla, in case he should call upon you, that the Government of the United States does not negotiate such treaties and that it is not possible to forward the desired arms and ammunition. You should not encourage any advances on the part of Mr. Agoncilla, and should courteously decline to communicate with the Department further regarding his alleged mission."—*Treaty of Peace and Accompanying Papers* (*55th Congress, 3d Sess., Senate Doc. No.* 62, *pt.* 1, *pp.* 333, 334).

A. D. 1898 (February—March).—American sympathy with the Cubans and indignation against Spain.—Destruction of the United States battle-ship "Maine" in Havana harbor.—Investigation and findings of the American and Spanish courts of inquiry.—Public feeling in the United States, excited by a terrible state of suffering in Cuba, resulting from Spanish methods of dealing with insurrection in that island (see, in this vol., CUBA: A. D. 1896–1897 and 1897–1898), had been gathering intensity for months past, and threatening a rupture of peaceful relations between the United States and Spain. A sudden crisis in the situation was produced, on the morning of the 15th of February, 1898, by news that the United States battle-ship "Maine," while paying a visit of courtesy to the harbor of Havana, had been totally destroyed, on the previous evening, by an explosion which killed most of her crew. In a subsequent message on the subject to Congress, President McKinley recited the circumstances of the catastrophe, and the proceedings adopted to ascertain its cause, with the conclusions reached, in the following words: "For some time prior to the visit of the 'Maine' to Havana Harbor our consular representatives pointed out the advantages to flow from the visit of national ships to the Cuban waters, in accustoming the people to the presence of our flag as the symbol of good will and of our ships in the fulfillment of the mission of protection to American interests, even though no immediate need therefor might exist. Accordingly on the 24th of January last, after conference with the Spanish minister, in which the renewal of visits of our war vessels to Spanish waters was discussed and accepted, the peninsular authorities at Madrid and Havana were advised of the purpose of this Government to resume friendly naval visits at Cuban ports, and that in that view the 'Maine' would forthwith call at the port of Havana. This announcement was received by the Spanish Government with appreciation of the friendly character of the visit of the 'Maine,' and with notification of intention to return the courtesy by sending Spanish ships to the principal ports of the United States. Meanwhile the 'Maine' entered the port of Havana on the 25th of January, her arrival being marked with no special incident besides the exchange of customary salutes and ceremonial visits.

"The 'Maine' continued in the harbor of Havana during the three weeks following her arrival. No appreciable excitement attended her stay; on the contrary, a feeling of relief and confidence followed the resumption of the long-interrupted friendly intercourse. So noticeable was this immediate effect of her visit that the consul-general strongly urged that the presence of our ships in Cuban waters should be kept up by retaining the 'Maine' at Havana, or, in the event of her recall, by sending another vessel there to take her place. At forty minutes past 9 in the evening of the 15th of February the 'Maine' was destroyed by an explosion, by which the entire forward part of the ship was utterly wrecked. In this catastrophe 2 officers and 264 of her crew perished, those who were not killed outright by her explosion being penned between decks by the tangle of wreckage and drowned by the immediate sinking of the hull. Prompt assistance was rendered by the neighboring vessels anchored in the harbor, aid being especially given by the boats of the Spanish cruiser 'Alfonso XII' and the Ward Line steamer 'City of Washington,' which lay not far distant. The wounded were generously cared for by the authorities of Havana, the hospitals being freely opened to them, while the earliest recovered bodies of the dead were interred by the municipality in a public cemetery in the city. Tributes of grief and sympathy were offered from all official quarters of the island.

"The appalling calamity fell upon the people of our country with crushing force, and for a brief time an intense excitement prevailed, which in a community less just and self-controlled than ours might have led to hasty acts of blind resentment. This spirit, however, soon gave way to the calmer processes of reason and to the resolve to investigate the facts and await material proof before forming a judgment as to the cause, the responsibility, and, if the facts warranted, the remedy due. This course necessarily recommended itself from the outset to the Executive, for only in the light of a dispassionately ascertained certainty could it determine the nature and measure of its full duty in the matter. The usual procedure was followed, as in all cases of casualty or disaster to national vessels of any maritime State. A naval court of inquiry was at once organized, composed of officers well qualified by rank and practical experience to discharge the onerous duty imposed upon them. Aided by a strong force of wreckers and divers, the court proceeded to make a thorough investigation on the spot, employing every available means for the impartial and exact determination of the causes of the explosion. Its operations have been conducted with the utmost deliberation and judgment, and while independently pursued no attainable source of information was neglected, and the fullest opportunity was allowed for a simultaneous investigation by the Spanish authorities. The finding of the court of inquiry was reached, after twenty-three days of continuous labor, on the 21st of March, instant, and, having been approved on the 22d by the commander in chief of the United States naval force on the North Atlantic Station, was transmitted to the Executive. It is herewith laid before the Congress, together with the voluminous testimony taken before the court. Its purport is, in brief, as follows:

"When the 'Maine' arrived at Havana she was conducted by the regular Government pilot to buoy No. 4, to which she was moored in from 5½ to 6 fathoms of water. The state of discipline on board and the condition of her magazines, boilers, coal bunkers, and storage compartments are passed in review, with the conclusion that excellent order prevailed and that no indication of any cause for an internal explosion existed in any quarter. At 8 o'clock in the evening of February 15 everything had been reported secure, and all was quiet. At forty minutes past 9 o'clock the vessel was suddenly destroyed. There were two distinct explosions, with a brief interval between them. The first lifted the forward part of the ship very perceptibly. The second, which was more open, prolonged, and of greater volume, is attributed by the court to the partial explosion of two or more of the forward magazines. The evidence of the divers establishes that the after part of the ship was practically intact and sank in that condition a very few moments after the explosion. The forward part was completely demolished. Upon the evidence of a concurrent external cause the finding of the court is as follows:

"'At frame 17 the outer shell of the ship, from a point of 11½ feet from the middle line of the ship and 6 feet above the keel when in its normal position, has been forced up so as to be now about 4 feet above the surface of the water, therefore about 34 feet above where it would be had the ship sunk uninjured. The outside bottom plating is bent into a reversed V shape (Λ), the after wing of which, about 15 feet broad and 32 feet in length (from frame 17 to frame 25), is doubled back upon itself against the continuation of the same plating, extending forward. At frame 18 the vertical keel is broken in two and the flat keel bent into an angle similar to the angle formed by the outside bottom plates. This break is now about 6 feet below the surface of the water and about 30 feet above its normal position. In the opinion of the court this effect could have been produced only by the explosion of a mine situated under the bottom of the ship at about frame 18 and somewhat on the port side of the ship.'

"The conclusions of the court are: That the loss of the 'Maine' was not in any respect due to fault or negligence on the part of any of the officers or members of her crew; That the ship was destroyed by the explosion of a submarine mine, which caused the partial explosion of two or more of her forward magazines; and That no evidence has been obtainable fixing the responsibility for the destruction of the 'Maine' upon any person or persons.

"I have directed that the finding of the court of inquiry and the views of this Government thereon be communicated to the Government of Her Majesty the Queen Regent, and I do not permit myself to doubt that the sense of justice of the Spanish nation will dictate a course of action suggested by honor and the friendly relations of the two Governments. It will be the duty of the Executive to advise the Congress of the result, and in the meantime deliberate consideration is invoked."—*Congressional Record, March* 28, 1898.

A Spanish naval board of inquiry, convened by the maritime authority at Havana, and investigating the matter with haste, arrived at a

conclusion quite opposite to that stated above, reporting on the 22d of March that "an explosion of the first order, in the forward magazine of the American ironclad 'Maine,' caused the destruction of that part of the ship and its total submersion in the same place in this bay at which it was anchored. . . . That the important facts connected with the explosion in its external appearances at every moment of its duration having been described by witnesses, and the absence of all circumstances which necessarily accompany the explosion of a torpedo having been proved by these witnesses and experts, it can only be honestly asserted that the catastrophe was due to internal causes. . . . That the character of the proceedings undertaken and respect for the law which establishes the absolute extraterritoriality of a foreign war vessel have prevented the determination, even by conjecture, of the said internal origin of the disaster, to which also the impossibility of establishing the necessary communication either with the crew of the wrecked vessel or the officials of their Government commissioned to investigate the causes of the said event, or with those subsequently intrusted with the issue, has contributed. . . . That the interior and exterior examination of the bottom of the 'Maine,' whenever it is possible, unless the bottom of the ship and that of the place in the bay where it is sunk are altered by the work which is being carried on for the total or partial recovery of the vessel, will prove the correctness of all that is said in this report; but this must not be understood to mean that the accuracy of these present conclusions requires such proof."—*U. S. Senate Report No. 885, 55th Cong., 2d Sess., p. 635.*

A. D. 1898 (March—April).—Continued discussion of Cuban affairs with Spain.—Unsatisfactory results.—Message of the President asking Congress for authority to terminate hostilities in Cuba.—On the 11th of April, President McKinley addressed another special message to Congress, setting forth the unsatisfactory results with which Cuban affairs had been further discussed with the government of Spain, and formally asking to be authorized and empowered to take measures for securing a "full and final termination of hostilities" in the oppressed island. He said:

"Obedient to that precept of the Constitution which commands the President to give from time to time to the Congress information of the state of the Union and to recommend to their consideration such measures as he shall judge necessary and expedient, it becomes my duty now to address your body with regard to the grave crisis that has arisen in the relations of the United States to Spain by reason of the warfare that for more than three years has raged in the neighboring island of Cuba. I do so because of the intimate connection of the Cuban question with the state of our own Union, and the grave relation the course which it is now incumbent upon the nation to adopt must needs bear to the traditional policy of our Government, if it is to accord with the precepts laid down by the founders of the Republic and religiously observed by succeeding Administrations to the present day.

"The present revolution is but the successor of other similar insurrections which have occurred in Cuba against the dominion of Spain, extending over a period of nearly half a century, each of which, during its progress, has subjected the United States to great effort and expense in enforcing its neutrality laws, caused enormous losses to American trade and commerce, caused irritation, annoyance, and disturbance among our citizens, and, by the exercise of cruel, barbarous, and uncivilized practices of warfare, shocked the sensibilities and offended the humane sympathies of our people. Since the present revolution began, in February, 1895, this country has seen the fertile domain at our threshold ravaged by fire and sword in the course of a struggle unequaled in the history of the island and rarely paralleled as to the numbers of the combatants and the bitterness of the contest by any revolution of modern times where a dependent people striving to be free have been opposed by the power of the sovereign state. Our people have beheld a once prosperous community reduced to comparative want, its lucrative commerce virtually paralyzed, its exceptional productiveness diminished, its fields laid waste, its mills in ruins, and its people perishing by tens of thousands from hunger and destitution. We have found ourselves constrained, in the observance of that strict neutrality which our laws enjoin and which the law of nations commands, to police our own waters and to watch our own seaports in prevention of any unlawful act in aid of the Cubans. Our trade has suffered; the capital invested by our citizens in Cuba has been largely lost, and the temper and forbearance of our people have been so sorely tried as to beget a perilous unrest among our own citizens which has inevitably found its expression from time to time in the National Legislature, so that issues wholly external to our own body politic engross attention and stand in the way of that close devotion to domestic advancement that becomes a self-contained commonwealth whose primal maxim has been the avoidance of all foreign entanglements. All this must needs awaken, and has, indeed, aroused the utmost concern on the part of this Government, as well during my predecessor's term as in my own.

"In April, 1896, the evils from which our country suffered through the Cuban war became so onerous that my predecessor made an effort to bring about a peace through the mediation of this Government in any way that might tend to an honorable adjustment of the contest between Spain and her revolted colony, on the basis of some effective scheme of self-government for Cuba under the flag and sovereignty of Spain. It failed through the refusal of the Spanish Government then in power to consider any form of mediation or, indeed, any plan of settlement which did not begin with the actual submission of the insurgents to the mother country, and then only on such terms as Spain herself might see fit to grant. The war continued unabated. The resistance of the insurgents was in no wise diminished. The efforts of Spain were increased, both by the dispatch of fresh levies to Cuba and by the addition to the horrors of the strife of a

new and inhuman phase happily unprecedented in the modern history of civilized Christian peoples. The policy of devastation and concentration, inaugurated by the captain-general's bando of October 21, 1896, in the province of Pinar del Rio, was thence extended to embrace all of the island to which the power of the Spanish arms was able to reach by occupation or by military operations. The peasantry, including all dwelling in the open agricultural interior, were driven into the garrison towns or isolated places held by the troops. The raising and movement of provisions of all kinds were interdicted. The fields were laid waste, dwellings unroofed and fired, mills destroyed, and, in short, everything that could desolate the land and render it unfit for human habitation or support was commanded by one or the other of the contending parties and executed by all the powers at their disposal.

"By the time the present Administration took office, a year ago, reconcentration—so called—had been made effective over the better part of the four central and western provinces—Santa Clara, Matanzas, Habana, and Pinar del Rio. The agricultural population to the estimated number of 300,000 or more was herded within the towns and their immediate vicinage, deprived of the means of support, rendered destitute of shelter, left poorly clad, and exposed to the most unsanitary conditions. As the scarcity of food increased with the devastation of the depopulated areas of production, destitution and want became misery and starvation. Month by month the death rate increased in an alarming ratio. By March, 1897, according to conservative estimates from official Spanish sources, the mortality among the reconcentrados, from starvation and the diseases thereto incident, exceeded 50 per centum of their total number. No practical relief was accorded to the destitute. The overburdened towns, already suffering from the general dearth, could give no aid. So-called 'zones of cultivation' established within the immediate areas of effective military control about the cities and fortified camps proved illusory as a remedy for the suffering. The unfortunates, being for the most part women and children, with aged and helpless men, enfeebled by disease and hunger, could not have tilled the soil without tools, seed, or shelter for their own support or for the supply of the cities. Reconcentration, adopted avowedly as a war measure in order to cut off the resources of the insurgents, worked its predestined result. As I said in my message of last December, it was not civilized warfare; it was extermination. The only peace it could beget was that of the wilderness and the grave.

"Meanwhile the military situation in the island had undergone a noticeable change. The extraordinary activity that characterized the second year of the war, when the insurgents invaded even the thitherto unharmed fields of Pinar del Rio and carried havoc and destruction up to the walls of the city of Habana itself, had relapsed into a dogged struggle in the central and eastern provinces. The Spanish arms regained a measure of control in Pinar del Rio and parts of Habana, but, under the existing conditions of the rural country, without immediate improvement of their productive situation. Even thus partially restricted, the revolutionists held their own, and their conquest and submission, put forward by Spain as the essential and sole basis of peace, seemed as far distant as at the outset. In this state of affairs my Administration found itself confronted with the grave problem of its duty. My message of last December reviewed the situation, and narrated the steps taken with a view to relieving its acuteness and opening the way to some form of honorable settlement. The assassination of the prime minister, Canovas, led to a change of government in Spain. The former administration, pledged to subjugation without concession, gave place to that of a more liberal party, committed long in advance to a policy of reform involving the wider principle of home rule for Cuba and Porto Rico.

"The overtures of this Government, made through its new envoy, General Woodford, and looking to an immediate and effective amelioration of the condition of the island, although not accepted to the extent of admitted mediation in any shape, were met by assurances that home rule, in an advanced phase, would be forthwith offered to Cuba, without waiting for the war to end, and that more humane methods should thenceforth prevail in the conduct of hostilities. Coincidentally with these declarations, the new Government of Spain continued and completed the policy already begun by its predecessor, of testifying friendly regard for this nation by releasing American citizens held under one charge or another connected with the insurrection, so that by the end of November not a single person entitled in any way to our national protection remained in a Spanish prison.

"While these negotiations were in progress the increasing destitution of the unfortunate reconcentrados and the alarming mortality among them claimed earnest attention. The success which had attended the limited measure of relief extended to the suffering American citizens among them by the judicious expenditure through the consular agencies of the money appropriated expressly for their succor by the joint resolution approved May 24, 1897, prompted the humane extension of a similar scheme of aid to the great body of sufferers. A suggestion to this end was acquiesced in by the Spanish authorities. On the 24th of December last I caused to be issued an appeal to the American people, inviting contributions in money or in kind for the succor of the starving sufferers in Cuba, following this on the 8th of January by a similar public announcement of the formation of a central Cuban relief committee, with headquarters in New York City, composed of three members, representing the American National Red Cross and the religious and business elements of the community. The efforts of that committee have been untiring and have accomplished much. Arrangements for free transportation to Cuba have greatly aided the charitable work. The president of the American Red Cross and representatives of other contributory organizations have generously visited Cuba and coöperated with the consul-general and the local authorities to make effective distribution of the relief collected through the efforts of the central committee. Nearly $200,000 in money and supplies has already reached the sufferers, and more is forthcoming. The supplies are admitted duty free, and transportation to the interior has been arranged, so that the relief, at first necessarily confined to Habana and the larger cities, is now

extended through most, if not all, of the towns where suffering exists. Thousands of lives have already been saved. The necessity for a change in the condition of the reconcentrados is recognized by the Spanish Government. Within a few days past the orders of General Weyler have been revoked; the reconcentrados, it is said, are to be permitted to return to their homes, and aided to resume the self-supporting pursuits of peace. Public works have been ordered to give them employment, and a sum of $600,000 has been appropriated for their relief.

"The war in Cuba is of such a nature that short of subjugation or extermination a final military victory for either side seems impracticable. The alternative lies in the physical exhaustion of the one or the other party, or perhaps of both—a condition which in effect ended the ten years' war by the truce of Zanjon. The prospect of such a protraction and conclusion of the present strife is a contingency hardly to be contemplated with equanimity by the civilized world, and least of all by the United States, affected and injured as we are, deeply and intimately, by its very existence. Realizing this, it appeared to be my duty, in a spirit of true friendliness, no less to Spain than to the Cubans who have so much to lose by the prolongation of the struggle, to seek to bring about an immediate termination of the war. To this end I submitted on the 27th ultimo, as a result of much representation and correspondence, through the United States minister at Madrid, propositions to the Spanish Government looking to an armistice until October 1 for the negotiation of peace with the good offices of the President. In addition, I asked the immediate revocation of the order of reconcentration, so as to permit the people to return to their farms and the needy to be relieved with provisions and supplies from the United States, coöperating with the Spanish authorities, so as to afford full relief.

"The reply of the Spanish cabinet was received on the night of the 31st ultimo. It offered, as the means to bring about peace in Cuba, to confide the preparation thereof to the insular parliament, inasmuch as the concurrence of that body would be necessary to reach a final result, it being, however, understood that the powers reserved by the constitution to the Central Government are not lessened or diminished. As the Cuban parliament does not meet until the 4th of May next, the Spanish Government would not object, for its part, to accept at once a suspension of hostilities if asked for by the insurgents from the general in chief, to whom it would pertain, in such case, to determine the duration and conditions of the armistice. The propositions submitted by General Woodford and the reply of the Spanish Government were both in the form of brief memoranda, the texts of which are before me, and are substantially in the language above given. The function of the Cuban parliament in the matter of 'preparing' peace and the manner of its doing so are not expressed in the Spanish memorandum; but from General Woodford's explanatory reports of preliminary discussions preceding the final conference it is understood that the Spanish Government stands ready to give the insular congress full powers to settle the terms of peace with the insurgents—whether by direct negotiation or indirectly by means of legislation does not appear.

UNITED STATES, 1898.

"With this last overture in the direction of immediate peace, and its disappointing reception by Spain, the Executive is brought to the end of his effort. In my annual message of December last I said: 'Of the untried measures there remain only: Recognition of the insurgents as belligerents; recognition of the independence of Cuba; neutral intervention to end the war by imposing a rational compromise between the contestants, and intervention in favor of one or the other party. I speak not of forcible annexation, for that can not be thought of. That, by our code of morality, would be criminal aggression.' Thereupon I review these alternatives, in the light of President Grant's measured words, uttered in 1875, when after seven years of sanguinary, destructive, and cruel hostilities in Cuba he reached the conclusion that the recognition of the independence of Cuba was impracticable and indefensible; and that the recognition of belligerence was not warranted by the facts according to the tests of public law. I commented especially upon the latter aspect of the question, pointing out the inconveniences and positive dangers of a recognition of belligerence which, while adding to the already onerous burdens of neutrality within our own jurisdiction, could not in any way extend our influence or effective offices in the territory of hostilities. Nothing has since occurred to change my view in this regard; and I recognize as fully now as then that the issuance of a proclamation of neutrality, by which process the so-called recognition of belligerents is published, could, of itself and unattended by other action, accomplish nothing toward the one end for which we labor—the instant pacification of Cuba and the cessation of the misery that afflicts the island.

"Turning to the question of recognizing at this time the independence of the present insurgent government in Cuba, we find safe precedents in our history from an early day. They are well summed up in President Jackson's message to Congress, December 21, 1836, on the subject of the recognition of the independence of Texas. He said: 'In all the contests that have arisen out of the revolutions of France, out of the disputes relating to the Crowns of Portugal and Spain, out of the separation of the American possessions of both from the European Governments, and out of the numerous and constantly occurring struggles for dominion in Spanish America, so wisely consistent with our just principles has been the action of our Government that we have, under the most critical circumstances, avoided all censure, and encountered no other evil than that produced by a transient estrangement of good will in those against whom we have been by force of evidence compelled to decide. It has thus made known to the world that the uniform policy and practice of the United States is to avoid all interference in disputes which merely relate to the internal government of other nations, and eventually to recognize the authority of the prevailing party without reference to our particular interests and views or to the merits of the original controversy. . . . But on this, as on every other trying occasion, safety is to be found in a rigid adherence to principle. In the contest between Spain and the revolted colonies we stood aloof, and waited not only until the ability of the new States to protect themselves was fully estab-

lished, but until the danger of their being again subjugated had entirely passed away. Then, and not until then, were they recognized. Such was our course in regard to Mexico herself. . . . It is true that with regard to Texas the civil authority of Mexico has been expelled, its invading army defeated, the chief of the Republic himself captured, and all present power to control the newly-organized government of Texas annihilated within its confines; but, on the other hand, there is, in appearance at least, an immense disparity of physical force on the side of Texas. The Mexican Republic, under another Executive, is rallying its forces under a new leader and menacing a fresh invasion to recover its lost dominion. Upon the issue of this threatened invasion the independence of Texas may be considered as suspended; and were there nothing peculiar in the relative situation of the United States and Texas, our acknowledgment of its independence at such a crisis could scarcely be regarded as consistent with that prudent reserve with which we have hitherto held ourselves bound to treat all similar questions.'

"Thereupon Andrew Jackson proceeded to consider the risk that there might be imputed to the United States motives of selfish interest in view of the former claim on our part to the territory of Texas, and of the avowed purpose of the Texans in seeking recognition of independence as an incident to the incorporation of Texas in the Union, concluding thus: 'Prudence, therefore, seems to dictate that we should still stand aloof and maintain our present attitude, if not until Mexico itself or one of the great foreign powers shall recognize the independence of the new government, at least until the lapse of time or the course of events shall have proved beyond cavil or dispute the ability of the people of that country to maintain their separate sovereignty and to uphold the government constituted by them. Neither of the contending parties can justly complain of this course. By pursuing it we are but carrying out the long-established policy of our Government, a policy which has secured to us respect and influence abroad and inspired confidence at home.'

"These are the words of the resolute and patriotic Jackson. They are evidence that the United States, in addition to the test imposed by public law as the condition of the recognition of independence by a neutral state (to wit, that the revolted state shall 'constitute in fact a body politic, having a government in substance as well as in name, possessed of the elements of stability,' and forming de facto, 'if left to itself, a state among the nations, reasonably capable of discharging the duties of a state'), has imposed for its own governance in dealing with cases like these the further condition that recognition of independent statehood is not due to a revolted dependency until the danger of its being again subjugated by the parent state has entirely passed away. This extreme test was, in fact, applied in the case of Texas. The Congress, to whom President Jackson referred the question as one 'probably leading to war,' and therefore a proper subject for 'a previous understanding with that body, by whom war can alone be declared, and by whom all the provisions for sustaining its perils must be furnished,' left the matter of the recognition of Texas to the discretion of the Executive, providing merely for the sending of a diplomatic agent when the President should be satisfied that the Republic of Texas had become 'an independent State.' It was so recognized by President Van Buren, who commissioned a chargé d'affaires March 7, 1837, after Mexico had abandoned an attempt to reconquer the Texan territory, and when there was at the time no bona fide contest going on between the insurgent province and its former sovereign.

"I said in my message of December last, 'It is to be seriously considered whether the Cuban insurrection possesses beyond dispute the attributes of statehood which alone can demand the recognition of belligerency in its favor.' The same requirement must certainly be no less seriously considered when the graver issue of recognizing independence is in question, for no less positive test can be applied to the greater act than to the lesser, while, on the other hand, the influences and consequences of the struggle upon the internal policy of the recognizing State, which form important factors when the recognition of belligerency is concerned, are secondary, if not rightly eliminable, factors when the real question is whether the community claiming recognition is or is not independent beyond peradventure.

"Nor from the standpoint of expediency do I think it would be wise or prudent for this Government to recognize at the present time the independence of the so-called Cuban republic. Such recognition is not necessary in order to enable the United States to intervene and pacify the island. To commit this country now to the recognition of any particular government in Cuba might subject us to embarrassing conditions of international obligation toward the organization so recognized. In case of intervention our conduct would be subject to the approval or disapproval of such government. We would be required to submit to its direction and to assume to it the mere relation of a friendly ally. When it shall appear hereafter that there is within the island a government capable of performing the duties and discharging the functions of a separate nation, and having, as a matter of fact, the proper forms and attributes of nationality, such government can be promptly and readily recognized and the relations and interests of the United States with such nation adjusted.

"There remain the alternative forms of intervention to end the war, either as an impartial neutral by imposing a rational compromise between the contestants or as the active ally of the one party or the other. As to the first, it is not to be forgotten that during the last few months the relation of the United States has virtually been one of friendly intervention in many ways, each not of itself conclusive, but all tending to the exertion of a potential influence toward an ultimate pacific result just and honorable to all interests concerned. The spirit of all our acts hitherto has been an earnest, unselfish desire for peace and prosperity in Cuba untarnished by differences between us and Spain and unstained by the blood of American citizens. The forcible intervention of the United States as a neutral to stop the war, according to the large dictates of humanity and following many historical precedents where neighboring states have interfered to check the hopeless sacrifices of life by inter-

necine conflicts beyond their borders, is justifiable on rational grounds. It involves, however, hostile constraint upon both the parties to the contest, as well to enforce a truce as to guide the eventual settlement.

"The grounds for such intervention may be briefly summarized as follows: First. In the cause of humanity and to put an end to the barbarities, bloodshed, starvation, and horrible miseries now existing there, and which the parties to the conflict are either unable or unwilling to stop or mitigate. It is no answer to say this is all in another country, belonging to another nation, and is therefore none of our business. It is specially our duty, for it is right at our door. Second. We owe it to our citizens in Cuba to afford them that protection and indemnity for life and property which no government there can or will afford, and to that end to terminate the conditions that deprive them of legal protection. Third. The right to intervene may be justified by the very serious injury to the commerce, trade, and business of our people and by the wanton destruction of property and devastation of the island. Fourth, and which is of the utmost importance. The present condition of affairs in Cuba is a constant menace to our peace, and entails upon this Government an enormous expense. With such a conflict waged for years in an island so near us and with which our people have such trade and business relations—when the lives and liberty of our citizens are in constant danger and their property destroyed and themselves ruined —where our trading vessels are liable to seizure and are seized at our very door by warships of a foreign nation, the expeditions of filibustering that we are powerless to prevent altogether, and the irritating questions and entanglements thus arising—all these and others that I need not mention, with the resulting strained relations, are a constant menace to our peace, and compel us to keep on a semi-war footing with a nation with which we are at peace.

"These elements of danger and disorder already pointed out have been strikingly illustrated by a tragic event which has deeply and justly moved the American people. I have already transmitted to Congress the report of the naval court of inquiry on the destruction of the battleship 'Maine' in the harbor of Habana during the night of the 15th of February. The destruction of that noble vessel has filled the national heart with inexpressible horror. Two hundred and fifty-eight brave sailors and marines and two officers of our Navy, reposing in the fancied security of a friendly harbor, have been hurled to death, grief and want brought to their homes and sorrow to the nation. The naval court of inquiry, which, it is needless to say, commands the unqualified confidence of the Government, was unanimous in its conclusion that the destruction of the 'Maine' was caused by an exterior explosion, that of a submarine mine. It did not assume to place the responsibility: that remains to be fixed. In any event the destruction of the 'Maine' by whatever exterior cause, is a patent and impressive proof of a state of things in Cuba that is intolerable. That condition is thus shown to be such that the Spanish Government cannot assure safety and security to a vessel of the American Navy in the harbor of Habana on a mission of peace, and rightfully there.

"Further referring in this connection to recent diplomatic correspondence, a dispatch from our minister to Spain, of the 26th ultimo, contained the statement that the Spanish minister for foreign affairs assured him positively that Spain will do all that the highest honor and justice require in the matter of the 'Maine.' The reply above referred to of the 31st ultimo, also contained an expression of the readiness of Spain to submit to an arbitration all the differences which can arise in this matter, which is subsequently explained by the note of the Spanish minister at Washington of the 10th instant, as follows: 'As to the question of fact which springs from the diversity of views between the reports of the American and Spanish boards, Spain proposes that the facts be ascertained by an impartial investigation by experts, whose decision Spain accepts in advance.' To this I have made no reply.

"President Grant, in 1875, after discussing the phases of the contest as it then appeared, and its hopeless and apparent indefinite prolongation, said: 'In such an event, I am of opinion that other nations will be compelled to assume the responsibility which devolves upon them, and to seriously consider the only remaining measures possible—mediation and intervention. Owing, perhaps, to the large expanse of water separating the island from the peninsula, . . . the contending parties appear to have within themselves no depository of common confidence, to suggest wisdom when passion and excitement have their sway, and to assume the part of peacemaker. In this view in the earlier days of the contest the good offices of the United States as a mediator were tendered in good faith, without any selfish purpose, in the interest of humanity and in sincere friendship for both parties, but were at the time declined by Spain, with the declaration, nevertheless, that at a future time they would be indispensable. No intimation has been received that in the opinion of Spain that time has been reached. And yet the strife continues with all its dread horrors and all its injuries to the interests of the United States and of other nations. Each party seems quite capable of working great injury and damage to the other, as well as to all the relations and interests dependent on the existence of peace in the island; but they seem incapable of reaching any adjustment, and both have thus far failed of achieving any success whereby one party shall possess and control the island to the exclusion of the other. Under these circumstances, the agency of others, either by mediation or by intervention, seems to be the only alternative which must sooner or later be invoked for the termination of the strife.'

"In the last annual message of my immediate predecessor during the pending struggle, it was said: 'When the inability of Spain to deal successfully with the insurrection has become manifest, and it is demonstrated that her sovereignty is extinct in Cuba for all purposes of its rightful existence, and when a hopeless struggle for its re-establishment has degenerated into a strife which means nothing more than the useless sacrifice of human life and the utter destruction of the very subject-matter of the conflict, a situation will be presented in which our obligations to the sovereignty of Spain will be superseded by higher obligations, which we can hardly hesitate to recognize and discharge.'

"In my annual message to Congress, December

last, speaking to this question, I said: 'The near future will demonstrate whether the indispensable condition of a righteous peace, just alike to the Cubans and to Spain, as well as equitable to all our interests so intimately involved in the welfare of Cuba, is likely to be attained. If not, the exigency of further and other action by the United States will remain to be taken. When that time comes that action will be determined in the line of indisputable right and duty. It will be faced, without misgiving or hesitancy, in the light of the obligation this Government owes to itself, to the people who have confided to it the protection of their interests and honor, and to humanity. Sure of the right, keeping free from all offense ourselves, actuated only by upright and patriotic considerations, moved neither by passion nor selfishness, the Government will continue its watchful care over the rights and property of American citizens and will abate none of its efforts to bring about by peaceful agencies a peace which shall be honorable and enduring. If it shall hereafter appear to be a duty imposed by our obligations to ourselves, to civilization, and humanity to intervene with force, it shall be without fault on our part, and only because the necessity for such action will be so clear as to command the support and approval of the civilized world.'

"The long trial has proved that the object for which Spain has waged the war cannot be attained. The fire of insurrection may flame or may smoulder with varying seasons, but it has not been and it is plain that it cannot be extinguished by present methods. The only hope of relief and repose from a condition which can no longer be endured is the enforced pacification of Cuba. In the name of humanity, in the name of civilization, in behalf of endangered American interests which give us the right and the duty to speak and act, the war in Cuba must stop.

"In view of these facts and of these considerations, I ask the Congress to authorize and empower the President to take measures to secure a full and final termination of hostilities between the Government of Spain and the people of Cuba, and to secure in the island the establishment of a stable government, capable of maintaining order and observing its international obligations, insuring peace and tranquillity and the security of its citizens as well as our own, and to use the military and naval forces of the United States as may be necessary for these purposes. And in the interest of humanity and to aid in preserving the lives of the starving people of the island I recommend that the distribution of food and supplies be continued, and that an appropriation be made out of the public Treasury to supplement the charity of our citizens.

"The issue is now with the Congress. It is a solemn responsibility. I have exhausted every effort to relieve the intolerable condition of affairs which is at our doors. Prepared to execute every obligation imposed upon me by the Constitution and the law, I await your action.

"Yesterday, and since the preparation of the foregoing message, official information was received by me that the latest decree of the Queen Regent of Spain directs General Blanco, in order to prepare and facilitate peace, to proclaim a suspension of hostilities, the duration and details of which have not yet been communicated to me. This fact with every other pertinent consideration will, I am sure, have your just and careful attention in the solemn deliberations upon which you are about to enter. If this measure attains a successful result, then our aspirations as a Christian, peace-loving people will be realized. If it fails, it will be only another justification for our contemplated action."—*Congressional Record, April* 11, 1898.

A. D. 1898 (April).—Action of Congress empowering the President to expel Spanish authority from the island of Cuba, and its result in a state of war with Spain.—On the 13th of April, two days after receiving the President's Message, as above, the House of Representatives adopted the following resolution, by a vote of 324 against 19: "Resolved, That the President is hereby authorized and directed to intervene at once to stop the war in Cuba, to the end and with the purpose of securing permanent peace and order there and establishing by the free action of the people thereof a stable and independent government of their own in the island of Cuba; and the President is hereby authorized and empowered to use the land and naval forces of the United States to execute the purpose of this resolution."—*Congressional Record, April* 13, 1898, *pp.* 4192–6.

Three days later the Senate adopted the following, by 27 votes against 21: "Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, First. That the people of the Island of Cuba are, and of right ought to be, free and independent, and that the Government of the United States hereby recognizes the Republic of Cuba as the true and lawful Government of that island.

"Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the Island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters.

"Third. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry these resolutions into effect.

"Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination when that is accomplished to leave the government and control of the island to its people."—*Congressional Record, April* 16, 1898, *pp.* 4386–7.

The two Houses were in conflict, it will be seen, on the question of the recognition of what claimed to be the government of the Republic of Cuba, organized by the insurgents. A majority of the House shared the doubts expressed by the President in his message, as to the existence of such a government in Cuba as could be recognized without embarrassment; a majority of the Senate shut its eyes to that doubt. After two days of heated controversy, the Senate gave way, and the following resolution, recommended by conference committees, was adopted in both Houses,—in the Senate by 42 yeas to 35 nays (12 not voting); in the House by 311 to 6 (39 not voting):

"Resolved, etc.

"First. That the people of the Island of Cuba are and of right ought to be free and independent.

"Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the Island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters.

"Third. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry these resolutions into effect.

"Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island, except for the pacification thereof, and asserts its determination when that is accomplished to leave the government and control of the island to its people."—*Congressional Record, April* 18, 1898, *pp.* 4421–22, *and* 4461–62.

One week later, on the 25th of April, the President communicated to Congress an account of his action in accordance with this joint resolution, and its result in a state of war between the United States and Spain as follows:

"Upon communicating to the Spanish minister in Washington the demand which it became the duty of the Executive to address to the Government of Spain in obedience to said resolution, the minister asked for his passports and withdrew. The United States minister at Madrid was in turn notified by the Spanish minister for foreign affairs that the withdrawal of the Spanish representative from the United States had terminated diplomatic relations between the two countries, and that all official communications between their respective representatives ceased therewith.

"I commend to your special attention the note addressed to the United States minister at Madrid by the Spanish minister for foreign affairs on the 21st instant, whereby the foregoing notification was conveyed. It will be perceived therefrom that the Government of Spain, having cognizance of the joint resolution of the United States Congress, and in view of the things which the President is thereby required and authorized to do, responds by treating the reasonable demands of this Government as measures of hostility, following with that instant and complete severance of relations by its action which, by the usage of nations, accompanies an existent state of war between sovereign powers.

"The position of Spain being thus made known and the demands of the United States being denied with a complete rupture of intercourse by the act of Spain, I have been constrained, in exercise of the power and authority conferred upon me by the joint resolution aforesaid, to proclaim under date of April 22, 1898, a blockade of certain ports of the north coast of Cuba, lying between Cardenas and Bahia Honda and of the port of Cienfuegos on the south coast of Cuba; and further, in exercise of my constitutional powers and using the authority conferred upon me by the act of Congress approved April 22, 1898, to issue my proclamation dated April 23, 1898, calling forth volunteers in order to carry into effect the said resolution of April 20, 1898. . . .

"In view of the measures so taken, and with a view to the adoption of such other measures as may be necessary to enable me to carry out the expressed will of the Congress of the United States in the premises, I now recommend to your honorable body the adoption of a joint resolution declaring that a state of war exists between the United States of America and the Kingdom of Spain, and I urge speedy action thereon, to the end that the definition of the international status of the United States as a belligerent power may be made known, and the assertion of all its rights and the maintenance of all its duties in the conduct of a public war may be assured."—*Congressional Record, April* 25, 1898, *p.* 4671.

The recommendation of the President was carried out, on the same day, by the passage in both Houses, unanimously, of an enactment, "First. That war be, and the same is hereby, declared to exist, and that war has existed since the 21st day of April, A. D. 1898, including said day, between the United States of America and the Kingdom of Spain. Second. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry this act into effect."—*Congressional Record, April* 25, *pp.* 4674 *and* 4693.

A. D. 1898 (April).—Cabinet changes.—Two resignations from the President's cabinet occurred in April, both occasioned by failing health. Hon. James A. Gary was succeeded as Postmaster-General by Hon. Charles Emory Smith, and Hon. John Sherman was followed in the Secretaryship of State by his First Assistant in that office, Judge William R. Day.

A. D. 1898 (April—May).—War with Spain.—Military preparations.—Regular and Volunteer armies.—"The Rough Riders."—At the outbreak of the war, the Regular Army of the United States numbered but 28,000 officers and men. Under authority given by acts of Congress it was rapidly increased, and returns for May, 1898, show 2,191 officers and nearly 42,000 men in the ranks. At the same time, a Volunteer Army was being speedily raised and equipped. By proclamation of April 23d, the President called for 125,000 volunteers, to be apportioned, as far as practicable, among the states and territories, according to population. On the 25th of May he called for 75,000 more. Before the end of May, 118,580 enlisted volunteers, with 6,224 officers, were reported to have been mustered in. These were assembled in various camps and prepared for service in a more or less hurried way. At the beginning, six army corps were constituted, embracing both the Regular and Volunteer branches of the army. The First Corps, under Maj. Gen. John R. Brooke, and the Third under Maj. Gen. James F. Wade, were organized at Camp Thomas, Ga. The Second was organized under Maj. Gen. William M. Graham, at Camp Alger, near Falls Church, Va. The organization of the Fourth Corps, Maj. Gen. John J. Coppinger, commanding, was begun at Mobile, Ala. The Fifth Corps was organized at Tampa, Fla., under Maj. Gen. William R. Shafter. A Sixth Corps, which had been provided for, was never

UNITED STATES, 1898.

organized; but the Seventh was formed, at Tampa, Fla., under Maj. Gen. Fitzhugh Lee. Subsequently an Eighth Corps was concentrated at San Francisco, and transported to the Philippine Islands. Tampa, Fla., was the port chosen for the shipment of troops to Cuba, and extensive preparations were made for the transport service from that point. The movement waited, first, for the preparation of newly levied troops, and, secondly, for naval operations to make the voyage of transports to Cuba safe from attack.—*Annual Rep't of the Adjutant-General to the Major-General Commanding the Army*, 1898.

Among the Volunteer regiments organized, one known as that of "the Rough Riders" excited public interest in the greatest degree. "The moment that the newspapers sent broadcast the tale that such a regiment was contemplated, excitement began in nearly every State in the Union, and did not end until the announcement was made that the regiment was complete. As it stood, finished, the troops which made it up, theoretically came from the following sections, although men from the East and from other States and Territories were scattered through each troop. Troops A, B, and C, from Arizona. Troop D, from Oklahoma. Troops E, F, G, H, and I, from New Mexico. Troop K, from Eastern colleges and cities. Troops L and M, from Indian Territory.

"Senator Warren, of Iowa, is responsible for the idea of the Rough Riders. He introduced and carried through Congress, aided by Senators Kyle, Carter, and others, a bill authorizing the enrollment of three regiments, to be made up of expert hunters, riflemen, cow-men, frontiersmen, and such other hardy characters as might care to enlist from the Territories. Captain Leonard Wood, of the Medical Corps, was the President's chief medical adviser, and had had much experience in Indian fighting in the West. Theodore Roosevelt was Assistant Secretary of the Navy, and had had some knowledge of men and things on the frontier, through his life on his own and other ranches. It was the President's intention to offer to Wood the colonelcy of one regiment, to Roosevelt the colonelcy of a second, and to Griggsby, of Montana, the colonelcy of a third. Wood and Roosevelt received their offers at about the same moment. Roosevelt promptly declined his, on the theory that he had not had sufficient military experience to warrant him in taking command of a regiment. He asked that he might be given the second place in the regiment commanded by Wood, which was done. Thus the Rough Riders began.

"Alexander Brodie, who afterwards became major of the regiment, was probably the first man to systematically start towards the organization of this particular regiment. . . . It was on the 3d of May that the Arizona men started for San Antonio. It was on the 8th of May that the very last men of all—those of K Troop—left Washington for San Antonio. These were the 'dude warriors,' the 'dandy troopers,' the 'gilded gang.' When their train pulled into San Antonio, and they started stragglingly to march into camp, they encountered a contingent of 340 cowboys from New Mexico. Oil and water are not farther removed than were the everyday natures of these two groups of men. Yet, instantly they fraternized, and from that moment—through the hardships of it all—these men were brothers. . . . Probably no military organization has ever been made up of men selected from so large a number of applicants, or of men so carefully selected. . . . A large delegation of men from Harvard College called upon Roosevelt one day in Washington and offered their services in a body. Indeed, delegations of that kind from most of the Eastern Colleges went to him, but went to him in vain. His secretary answered more than five thousand individual applications for places in the regiment, and answered ninety-nine per cent. of them with declinations."—E. Marshall, *The Story of the Rough Riders, ch.* 1 (*copyright, G. W. Dillingham & Co., N. Y.*).

A. D. 1898 (April—May: Cuba)—War with Spain.—Blockade of Cuban ports.—On the 21st of April, the following instructions were despatched by the Secretary of the Navy to Rear-Admiral Sampson, appointed that day to the command of the naval force on the Atlantic Station: "You will immediately institute a blockade of the north coast of Cuba, extending from Cardenas on the east to Bahia Honda on the west; also, if in your opinion your force warrants, the port of Cienfuegos, on the south side of the island. It is considered doubtful if the present force at your command would warrant a more extensive blockade. It should be borne in mind that whenever the Army is ready to embark for Cuba the Navy will be required to furnish the necessary convoy for its transports. For this reason it does not seem desirable that you should undertake at present to blockade any more of the island than has been indicated. It is believed that this blockade will cut off Havana almost entirely from receiving supplies from the outside. The Navy Department is considering the question of occupying the port of Matanzas by a military force large enough to hold it and to open communications with the insurgents, and this may be done at an early date, even before the main party of the Army is ready to embark. If this operation is decided upon, you are directed to co-operate with the Army and assist with such vessels as are necessary to cover and protect such a movement."—*Report of Secretary of Navy*, 1898, *v.* 2, *p.* 175.

In previous confidential orders to the commander of the North Atlantic squadron, issued April 6, in anticipation of hostilities, the Department had directed as follows: "In the event of hostilities with Spain, the Department wishes you to do all in your power to capture or destroy the Spanish war vessels in West Indian waters, including the small gunboats which are stationed along the coast of Cuba.

"2. The Department does not wish the vessels of your squadron to be exposed to the fire of the batteries at Havana, Santiago de Cuba, or other strongly fortified ports in Cuba, unless the more formidable Spanish vessels should take refuge within those harbors. Even in this case the Department would suggest that a rigid blockade and employment of our torpedo boats might accomplish the desired object, viz, the destruction of the enemy's vessels, without subjecting unnecessarily our own men-of-war to the fire of the land batteries. There are two reasons for this: First. There may be no United States

troops to occupy any captured stronghold, or to protect from riot and arson, until after the dry season begins, about the first of October. Second. The lack of docking facilities makes it particularly desirable that our vessels should not be crippled before the capture or destruction of Spain's most formidable vessels.

"3. The Department further desires that, in case of war, you will maintain a strict blockade of Cuba, particularly at the ports of Havana, Matanzas, and, if possible, of Santiago de Cuba, Manzanillo, and Cienfuegos. Such a blockade may cause the Spaniards to yield before the rainy season is over."—*Same Report, p.* 171.

The prudent policy here set forth restricted the action of the fleet to blockading duty so closely, during the early weeks of the war, that no serious demonstrations against the Spanish land batteries were made. Admiral Sampson had been urgent for permission to force the entrance to Havana harbor, before its defenses were strengthened, expressing perfect confidence that he could silence the western batteries, and reach a position from which the city would be at the mercy of his guns; but he was not allowed to make the attempt. The projected occupation of Matanzas was not undertaken.

A. D. 1898 (April—May: Philippines).—Statements of the circumstances in which Aguinaldo, the head of the insurrectionary movement in the Philippines, went to Manila, to co-operate with the American forces.—On the 4th of May, 1898, the following was published in the "Singapore Free Press": "Gen. Emilio Aguinaldo, accompanied by his aide-de-camp, Col. Marcelo H. del Pilar, and his private secretary, Mr. J. Leyba, arrived incognito in Singapore from Saigon on April 21, 1898. In Saigon, where Aguinaldo had remained for one week, he had interviews with one or two old Philippino friends now resident there. The special purpose of Aguinaldo's visit to Singapore was to consult other friends here, particularly Mr. Howard W. Bray, an old and intimate English friend, for fifteen years resident in the Philippines, about the state of affairs in the islands generally—particularly as to the possibility of war between the United States and Spain, and whether, in such an event, the United States would eventually recognize the independence of the Philippines, provided he lent his co-operation to the Americans in the conquest of the country. The situation of the moment was this, that the conditions of the honorable peace concluded on December 14, 1897, between President Aguinaldo, on behalf of the Philippine rebels, and H. E. Governor-General Primo di Rivera, on behalf of Spain, had not been carried out, although their immediate execution had been vouched for in that agreement. These reforms would have provided protection to the people against the organized oppression and rapacity of the religious fraternities, would have secured improved civil and criminal procedure in courts, and have guaranteed, in many ways, improvements in the fiscal and social conditions of the people. The repudiation by the Spanish Government of these conditions, made by General Primo di Rivera, now left the rebel leaders, who had for the most part gone to Hongkong, free to act. And it was in pursuance of that freedom of action that Aguinaldo again sought counsel of his friends in Saigon and Singapore, with a view to the immediate resumption of operations in the Philippines.

"Meantime Mr. Bray, whose assistance to this journal on matters connected with the Philippines has been very considerable, as our readers will have seen, was introduced by the editor of the Singapore Free Press to Mr. Spencer Pratt, consul-general of the United States, who was anxious, in view of contingencies, to learn as much as possible about the real condition of the Philippines. It was a few days after this that Aguinaldo arrived incognito in Singapore, when he at once met his friends, including Mr. Bray. Affairs now becoming more warlike, Mr. Bray, after conversation with Mr. Spencer Pratt, eventually arranged an interview between that gentleman and General Aguinaldo, which took place late on the evening of Sunday, the 24th April, at 'The Mansion,' River Valley road. There were present on that occasion Gen. Emilio Aguinaldo y Fami, Mr. E. Spencer Pratt, consul-general United States of America; Mr. Howard W. Bray; Aguinaldo's private secretary, Mr. J. Leyba; Col. M. H. del Pilar, and Dr. Marcelino Santos.

"During this conference, at which Mr. Bray acted as interpreter, General Aguinaldo explained to the American consul-general, Mr. Pratt, the incidents and objects of the late rebellion, and described the present disturbed state of the country. General Aguinaldo then proceeded to detail the nature of the co-operation he could give, in which he, in the event of the American forces from the squadron landing and taking possession of Manila, would guarantee to maintain order and discipline amongst the native troops and inhabitants in the same humane way in which he had hitherto conducted the war, and prevent them from committing outrages on defenceless Spaniards beyond the inevitable in fair and honorable warfare. He further declared his ability to establish a proper and responsible government on liberal principles, and would be willing to accept the same terms for the country as the United States intend giving to Cuba.

"The consul-general of the United States, coinciding with the general views expressed during the discussion, placed himself at once in telegraphic communication with Admiral Dewey at Hongkong, between whom and Mr. Pratt a frequent interchange of telegrams consequently took place. As a result another private interview was arranged at the American consular residence at the Raffles Hotel between General Aguinaldo, Mr. Spencer Pratt, Mr. Howard Bray, and Mr. Leyba, private secretary to General Aguinaldo. As a sequel to this interview, and in response to the urgent request of Admiral Dewey, General Aguinaldo left Singapore for Hongkong by the first available steamer, the Peninsular and Oriental 'Malacca,' on Tuesday, the 26th April, at noon, accompanied by his aide-de-camp, Captain del Pilar, and Mr. Leyba, his private secretary. . . .

"Throughout the whole stay of General Aguinaldo in Singapore the editor was kept fully informed daily of the progress of affairs. Naturally, however, all statement of what occurred has been withheld by us until what has been deemed the fitting moment has arrived. The substance of the whole incident in its relations to the recent course of affairs in the Philippines has been very fully telegraphed by the editor both to New York and London."

Mr. Pratt, the U. S. Consul-General at Singapore, had already, under date of April 28, given his own official report of the interview with General Aguinaldo, to the Department at Washington, as follows: "I have the honor to report that I sent you on the 27th instant, and confirmed in my dispatch No. 211 of that date, a telegram which deciphered read as follows . . . : 'General Aguinaldo gone my instance Hongkong arrange with Dewey co-operation insurgents Manila. PRATT.'

"The facts are these: On the evening of Saturday the 23d instant, I was confidentially informed of the arrival here, incognito, of the supreme leader of the Philippine insurgents, General Emilio Aguinaldo, by Mr. H. W. Bray, an English gentleman of high standing, who, after fifteen years' residence as a merchant and planter in the Philippines, had been compelled by the disturbed condition of things resulting from Spanish misrule to abandon his property and leave there, and from whom I had previously obtained much valuable information for Commodore Dewey regarding fortifications, coal deposits, etc., at different points in the islands. Being aware of the great prestige of General Aguinaldo with the insurgents, and that no one, either at home or abroad, could exert over them the same influence and control that he could, I determined at once to see him, and, at my request, a secret interview was accordingly arranged for the following morning, Sunday, the 24th, in which, besides General Aguinaldo, were only present the General's trusted advisers and Mr. Bray, who acted as interpreter.

"At this interview, after learning from General Aguinaldo the state of and object sought to be obtained by the present insurrectionary movement, which, though absent from the Philippines, he was still directing, I took it upon myself, whilst explaining that I had no authority to speak for the Government, to point out the danger of continuing independent action at this stage; and, having convinced him of the expediency of co-operating with our fleet, then at Hongkong, and obtained the assurance of his willingness to proceed thither and confer with Commodore Dewey to that end, should the latter so desire, I telegraphed the Commodore the same day as follows, through our consul-general at Hongkong: 'Aguinaldo, insurgent leader, here. Will come Hongkong arrange with Commodore for general cooperation insurgents Manila if desired. Telegraph. PRATT.'

"The Commodore's reply reading thus: 'Tell Aguinaldo come soon as possible. DEWEY.'

"I received it late that night, and at once communicated to General Aguinaldo, who, with his aide-de-camp and private secretary, all under assumed names, I succeeded in getting off by the British steamer 'Malacca,' which left here on Tuesday, the 26th. Just previous to his departure, I had a second and last interview with General Aguinaldo, the particulars of which I shall give you by next mail. The general impressed me as a man of intelligence, ability, and courage, and worthy the confidence that had been placed in him.

"I think that in arranging for his direct cooperation with the commander of our forces, I have prevented possible conflict of action and facilitated the work of occupying and administering the Philippines. If this course of mine meets with the Government's approval, as I trust it may, I shall be fully satisfied; to Mr. Bray, however, I consider there is due some special recognition for most valuable services rendered. How that recognition can best be made I leave to you to decide."

Two days later (April 30), Mr. Pratt reported further, as follows: "Referring to my dispatch No. 212, of the 28th instant, I have the honor to report that in the second and last interview I had with Gen. Emilio Aguinaldo, on the eve of his departure for Hongkong, I enjoined upon him the necessity, under Commodore Dewey's direction, of exerting absolute control over his forces in the Philippines, as no excesses on their part would be tolerated by the American Government, the President having declared that the present hostilities with Spain were to be carried on in strict accord with modern principles of civilized warfare. To this General Aguinaldo fully assented, assuring me that he intended and was perfectly able, once on the field, to hold his followers, the insurgents, in check and lead them as our commander should direct. The general further stated that he hoped the United States would assume protection of the Philippines for at least long enough to allow the inhabitants to establish a government of their own, in the organization of which he would desire American advice and assistance. These questions I told him I had no authority to discuss."

Of the arrival of Aguinaldo at Hongkong and his conveyance thence to Manila, the following account was given by Mr. Wildman, the U. S. Consul at Hongkong, in a communication to the State Department at Washington, which bears date July 18: "On May 2 Aguinaldo arrived in Hongkong and immediately called on me. It was May 16 before I could obtain permission from Admiral Dewey to allow Aguinaldo to go by the United States ship 'McCulloch,' and I put him aboard in the night so as to save any complications with the local Government. Immediately on the arrival of Aguinaldo at Cavite he issued a proclamation, which I had outlined for him before he left, forbidding pillage, and making it a criminal offense to maltreat neutrals. He, of course, organized a government of which he was dictator, an absolutely necessary step if he hoped to maintain control over the natives, and from that date until the present time he has been uninterruptedly successful in the field and dignified and just as the head of his government. According to his own statements to me by letter, he has been approached by both the Spaniards and the Germans, and has had tempting offers made him by the Catholic Church. He has been watched very closely by Admiral Dewey, Consul Williams, and his own junta here in Hongkong, and nothing of moment has occurred which would lead any one to believe that he was not carrying out to the letter the promises made to me in this consulate. The insurgents are fighting for freedom from the Spanish rule, and rely upon the well-known sense of justice that controls all the actions of our Government as to their future."

In reply to Consul Pratt's report of his interviews with General Aguinaldo, and of his proceedings in connection with the departure of that personage from Singapore to Hongkong, the United States Secretary of State, Mr. Day, wrote, June 16, as follows: "The Department observes that you informed General Aguinaldo that you

had no authority to speak for the United States; and, in the absence of the fuller report which you promise, it is assumed that you did not attempt to commit this Government to any alliance with the Philippine insurgents. To obtain the unconditional personal assistance of General Aguinaldo in the expedition to Manila was proper, if in so doing he was not induced to form hopes which it might not be practicable to gratify. This Government has known the Philippine insurgents only as discontented and rebellious subjects of Spain, and is not acquainted with their purposes. While their contest with that power has been a matter of public notoriety, they have neither asked nor received from this Government any recognition. The United States, in entering upon the occupation of the islands, as the result of its military operations in that quarter, will do so in the exercise of the rights which the state of war confers, and will expect from the inhabitants, without regard to their former attitude toward the Spanish Government, that obedience which will be lawfully due from them. If, in the course of your conferences with General Aguinaldo, you acted upon the assumption that this government would coöperate with him for the furtherance of any plan of his own, or that, in accepting his coöperation, it would consider itself pledged to recognize any political claims which he may put forward, your action was unauthorized and cannot be approved."—*Treaty of Peace, and Accompanying Papers* (*55th Congress, 3d Sess., Senate Doc. No.* 62, *pt.* 2, *pp.* 337-354).—See, also (in this vol.), PHILIPPINE ISLANDS: A. D. 1896-1898.

A. D. 1898 (April—June).—The War with Spain.—Movements of the Spanish squadron under Admiral Cervera, and the blockading of it in the harbor of Santiago de Cuba.—Lieutenant Hobson's exploit.—The sinking of the collier "Merrimac" in the channel.—The opening of hostilities found a Spanish squadron of four armored cruisers (the "Cristobal Colon," the "Almirante Oquendo," the "Vizcaya," and the "Infanta Maria Teresa,") with three torpedo-boat destroyers (the "Pluton," "Furor" and "Terror") and some lighter craft, assembled at the Cape Verde islands, under Rear-Admiral Pascual Cervera. They were in Portuguese waters, and Portugal, though friendly to Spain, was forced to issue a proclamation of neutrality, on the 29th of April, which required the Spanish fleet to depart. Some of the vessels then returned to Spain; but the seven named above sailed westward, and their destination became a mystery, very exciting for some time to the American mind. They might attempt to surprise some American coast city; they might intercept the battle-ship "Oregon," then making her way from the Pacific coast, by the long circuit around Cape Horn; they might have some plan for breaking the Cuban blockade. Acting on the latter conjecture, and surmising that Porto Rico would be chosen for the Spanish naval base, Admiral Sampson moved in that direction to seek them. He attacked the forts at San Juan (May 12), and satisfied himself that no fleet was in the bay.

The truth was that Cervera was then just entering the Caribbean Sea, considerably to the south of Sampson's search. He touched at the French island of Martinique, and at the Dutch island of Curaçoa, and then slipped across to Santiago de Cuba, where he was to be overtaken by his fate. In the long hill-sheltered bay, with a narrow entrance, which forms this excellent Cuban harbor, the Spanish fleet was so hidden that nearly a fortnight passed before its whereabouts could be fully ascertained. It was not until May 29 that a blockade of Santiago was established by a flying squadron of the American fleet, under Commodore Schley, with certainty that the squadron of Cervera was harbored there. On the 1st of June, Admiral Sampson arrived on the scene, with a stronger naval force, and took command. To attempt to force the narrow entrance of the harbor, strongly fortified and thickly mined as it was, and attack the Spanish fleet in the bay, was not deemed practicable. The course resolved upon was to hold the enemy fast in the shelter he had sought, until Santiago could be taken, by a land attack. In pursuance of this plan, an exploit of splendid daring was performed, in the early morning of June 3, by a young officer, Lieutenant Richmond Pearson Hobson, with a crew of seven volunteers, who placed and sank a huge coaling ship, the "Merrimac," in the channel that leads into Santiago Bay. The following is Admiral Sampson's report of the undertaking and its achievement:

"Before coming here, I decided to make the harbor entrance secure against the possibility of egress of the Spanish ships by obstructing the narrow part of the entrance by sinking a collier at that point. Upon calling upon Mr. Hobson for his professional opinion as to a sure method of sinking the ship, he manifested a most lively interest in the problem. After several days' consideration he presented a solution which he considered would insure the immediate sinking of the ship when she had reached the desired point in the channel. This plan we prepared for before we reached Santiago. This plan included ten electric torpedoes on the outside of the ship, each of 78 pounds of gunpowder, sinking the ship partially before going in, cutting the sea valves, and opening the cargo ports. The plan contemplated a crew of only seven men and Mr. Hobson, who begged that it might be intrusted to him. The anchor chains were ranged upon deck for both the anchors, forward and aft, the plan including the anchoring of the ship almost automatically. As soon as I reached Santiago and had the collier to work upon the details were commenced and diligently prosecuted, hoping to complete them in one day, as the moon and tide served best the first night after our arrival. Notwithstanding every effort, the hour of 4 o'clock in the morning arrived and the preparations were scarcely completed. After a careful inspection of the final preparations I was forced to relinquish the plan for that morning, as dawn was breaking. Mr. Hobson begged to try it at all hazards.

"This morning proved more propitious, as a prompt start could be made. Nothing could have been more gallantly executed. We waited impatiently after the firing by the Spaniards had ceased. When they did not reappear from the harbor at 6 o'clock I feared they had all perished. A steam launch, which had been sent in charge of Naval Cadet Powell to rescue the men, appeared at this time, coming out under a persistent fire from the batteries, but brought none of the crew. A careful inspection of the harbor from this ship showed that the 'Merrimac' had

been sunk in the channel somewhat farther in than had been intended. This afternoon the chief of staff of Admiral Cervera came out under a flag of truce with a letter from the Admiral extolling the bravery of the crew in an unusual manner. I can not myself too earnestly express my appreciation of the conduct of Mr. Hobson and his gallant crew. I venture to say that a more brave and daring thing has not been done since Cushing blew up the 'Albemarle.'" The sunken ship did not actually block the channel; but that fact takes nothing from the gallantry of the exploit. Why the intended spot in the channel was missed was explained by Lieutenant Hobson in a statement which he afterwards made: "When the 'Merrimac' poked her nose into the channel," says the Lieutenant, "our troubles commenced. The deadly silence was broken by the swash of a small boat approaching us from the shore. I made her out to be a picket-boat. She ran close up under the stern of the 'Merrimac' and fired several shots from what seemed to be 3-pounder guns. The 'Merrimac's' rudder was carried away by this fire. That is why the collier was not sunk across the channel. We did not discover the loss of the rudder until Murphy [the volunteer assigned to that duty] had cast anchor. We then found that the 'Merrimac' would not answer to the helm and were compelled to make the best of the situation. . . . Submarine mines and torpedoes were exploded all around us, adding to the excitement. The mines did no damage, although we could hear the rumbling and feel the ship tremble. We were running without lights, and only the darkness saved us from utter destruction. When the ship was in the desired position and we found that the rudder was gone, I called the men on deck. While they were launching the catamaran I touched off the explosives. At the same time two torpedoes, fired by the 'Reina Mercedes,' struck the 'Merrimac' amidships. I can not say whether our own explosives or the Spanish torpedoes did the work, but the 'Merrimac' was lifted out of the water, and almost rent asunder."

What followed, in the experience of the crew, when their vessel went down, is described as follows by Lieut. Hobson, in a narrative of "The Sinking of the Merrimac," which he published at a later day: "The stricken vessel now reeled to port. Some one said: 'She is going to turn over on us, sir,' to which I replied: 'No; she will right herself in sinking, and we shall be the last spot to go under.' The firing suddenly ceased. The vessel lowered her head like a faithful animal, proudly aware of its sacrifice, bowed below the surface, and plunged forward. The stern rose and heeled heavily; it stood for a moment, shuddering, then started downward. righting as it went. A great rush of water came up the gangway, seething and gurgling out of the deck. The mass was whirling from right to left 'against the sun'; it seized us and threw us against the bulwarks, then over the rail. Two were swept forward as if by a momentary recession, and one was carried down into a coal-bunker—luckless Kelly. In a moment, however, with increased force, the water shot him up out of the same hole and swept him among us. The bulwarks disappeared. A sweeping vortex whirled above. We charged about with casks, cans, and spars, the incomplete stripping having left quantities on the deck. The life-preservers stood us in good stead, preventing chests from being crushed, as well as buoying us on the surface; for spars came end on like battering-rams, and the sharp corners of tin cans struck us heavily. . . . When we looked for the life-boat we found that it had been carried away. The catamaran was the largest piece of floating debris; we assembled about it. The line suspending it from the cargo-boom held and anchored us to the ship, though barely long enough to reach the surface, causing the raft to turn over and set us scrambling as the line came taut.

"The firing had ceased. It was evident the enemy had not seen us in the general mass of moving objects; but soon the tide began to drift these away, and we were being left alone with the catamaran. The men were directed to cling close in, bodies below and only heads out, close under the edges, and were directed not to speak above a whisper, for the destroyer was near at hand, and boats were passing near. We mustered; all were present, and direction was given to remain as we were till further orders, for I was sure that in due time after daylight a responsible officer would come out to reconnoiter. It was evident that we could not swim against the tide to reach the entrance. Moreover, the shores were lined with troops, and the small boats were looking for victims that might escape from the vessel. The only chance lay in remaining undiscovered until the coming of the reconnoitering boat, to which, perhaps, we might surrender without being fired on. . . . The air was chilly and the water positively cold. In less than five minutes our teeth were chattering; so loud, indeed, did they chatter that it seemed the destroyer or the boats would hear. . . . We remained there probably an hour."

At daylight a steam launch approached, and was hailed by Lieutenant Hobson, who judged that there must be officers on board to whom it would be safe to surrender. He was more than right. The commander of the launch was Admiral Cervera, in person, who took the nearly exhausted men from the water and treated them with great kindness, admiring the bravery of their exploit, and sending a flag of truce to Admiral Sampson to announce their safety. They were taken aboard the 'Reina Mercedes,' and, as prisoners of war, were confined at first in Morro Castle, and afterwards in the city. It so happened that they were locked in the Morro during a bombardment of the Spanish coast defences and fleet by ten of our vessels on June 6th, when about 1,500 projectiles were fired; and much anxiety and indignation were expressed in this country in view of that circumstance; but Mr. Ramsden, British consul at Santiago, explained in a despatch that they were removed as soon as lodgings could be prepared in the barracks—actually on June 7th. They were released on July 6th in exchange for prisoners captured by our forces.

A. D. 1898 (April—July).—War with Spain.—Destruction of the Spanish fleet in Manila Bay.—Despatches of Admiral Dewey.—His relations with Aguinaldo, the insurgent chief.—Arrival of American troops for the occupation of the city.—Commodore George Dewey, commanding the Asiatic Squadron, then awaiting orders at Hongkong, received on the 25th of April the following despatch by cable from the Secretary of the Navy: "War has commenced

between the United States and Spain. Proceed at once to Philippine Islands. Commence operations at once, particularly against the Spanish fleet. You must capture vessels or destroy. Use utmost endeavors." On the sixth day after receiving these orders (namely on May 1st), he was able to report from Manila, by a telegram sent from Hongkong on the 7th: "The squadron arrived at Manila at daybreak this morning. Immediately engaged enemy and destroyed the following Spanish vessels: 'Reina Christina,' 'Castillia,' 'Don Antonio de Biloa,' 'Don Juan de Austria,' 'Isla de Luzon,' 'Isla de Cuba,' 'General Lezo,' 'Marques del Duaro,' 'El Curreo,' 'Velasco,' one transport, 'Isla de Mandano,' water battery at Cavite. I shall destroy Cavite arsenal dispensatory. The squadron is uninjured. Few men were slightly wounded. I request the Department will send immediately from San Francisco fast steamer with ammunition. The only means of telegraphing is to the American consul at Hongkong."

In due time the post brought particulars of the action, in the following report from Commodore Dewey, dated May 4: "The squadron left Mirs Bay, [China] on April 27, immediately on the arrival of Mr. O. F. Williams, United States consul at Manila, who brought important information and who accompanies the squadron. Arrived off Bolinao on the morning of April 30 and, finding no vessels there, proceeded down the coast and arrived off the entrance to Manila Bay on the same afternoon. The 'Boston' and 'Concord' were sent to reconnoiter Port Subic, I having been informed that the enemy intended to take position there. A thorough search of the port was made by the 'Boston' and 'Concord,' but the Spanish fleet was not found, although, from a letter afterwards found in the arsenal (inclosed with translation), it appears that it had been their intention to go there. Entered the Boca Grande, or south channel, at 11.30 p. m., steaming in column at distance at 8 knots. After half the squadron had passed, a battery on the south side of the channel opened fire, none of the shots taking effect. The 'Boston' and 'McCulloch' returned the fire. The squadron proceeded across the bay at slow speed, and arrived off Manila at daybreak, and was fired upon at 5.15 a. m. by three batteries at Manila and two at Cavite and by the Spanish fleet anchored in an approximately east and west line across the mouth of Bakor Bay, with their left in shoal water in Canacao Bay. The squadron then proceeded to the attack, the flagship 'Olympia,' under my personal direction, leading, followed at distance by the 'Baltimore,' 'Raleigh,' 'Petrel,' 'Concord,' and 'Boston,' in the order named, which formation was maintained throughout the action. The squadron opened fire at 5.41 a. m. While advancing to the attack, two mines were exploded ahead of the flagship, too far to be effective. The squadron maintained a continuous and precise fire at ranges varying from 5,000 to 2,000 yards, countermarching in a line approximately parallel to that of the Spanish fleet. The enemy's fire was vigorous, but generally ineffective.

"Early in the engagement two launches put out toward the 'Olympia' with the apparent intention of using torpedoes. One was sunk and the other disabled by our fire and beached before an opportunity occurred to fire torpedoes. At 7 a. m. the Spanish flagship 'Reina Christina' made a desperate attempt to leave the line and come out to engage at short range, but was received with such galling fire, the entire battery of the 'Olympia' being concentrated upon her, that she was barely able to return to the shelter of the point. The fires started in her by our shell at this time were not extinguished until she sank. At 7.35 a. m., it having been erroneously reported to me that only 15 rounds per gun remained for the 5-inch rapid-fire battery, I ceased firing and withdrew the squadron for consultation and a redistribution of ammunition, if necessary. The three batteries at Manila had kept up a continuous fire from the beginning of the engagement, which fire was not returned by this squadron. The first of these batteries was situated on the south mole head at the entrance to the Pasig River, the second on the south bastion of the walled city of Manila, and the third at Malate, about one-half mile farther south. At this point I sent a message to the Governor-General to the effect that if the batteries did not cease firing the city would be shelled. This had the effect of silencing them.

"At 11.16 a. m., finding that the report of scarcity of ammunition was incorrect, I returned with the squadron to the attack. By this time the flagship and almost the entire Spanish fleet were in flames, and at 12.30 p. m. the squadron ceased firing, the batteries being silenced and the ships sunk, burnt, and deserted. At 12.40 p. m. the squadron returned and anchored off Manila, the 'Petrel' being left behind to complete the destruction of the smaller gunboats, which were behind the point of Cavite. This duty was performed by Commander E. P. Wood in the most expeditious and complete manner possible. The Spanish lost the following vessels: Sunk—'Reina Christina,' 'Castillia,' 'Don Antonio de Ulloa.' Burnt—'Don Juan de Austria,' 'Isla de Luzon,' 'Isla de Cuba,' 'General Lezo,' 'Marques del Duaro,' 'El Correo,' 'Velasco,' and 'Isla de Mindanao,' (transport). Captured—'Rapido,' and 'Hercules' (tugs), and several small launches. I am unable to obtain complete accounts of the enemy's killed and wounded, but believe their loss to be very heavy. The 'Reina Christina' alone had 150 killed, including the captain, and 90 wounded.

"I am happy to report that the damage done to the squadron under my command was inconsiderable. There were none killed, and only 7 men in the squadron very slightly wounded. As will be seen by the reports of the commanding officers which are herewith inclosed, several of the vessels were struck and even penetrated, but the damage was of the slightest, and the squadron is in as good condition now as before the battle. I beg to state to the Department that I doubt if any commander in chief, under similar circumstances, was ever served by more loyal, efficient, and gallant captains than those of the squadron now under my command. . . . On May 2, the day following the engagement, the squadron again went to Cavite, where it remains. A landing party was sent to destroy the guns and magazines of the batteries there. . . . On the 3d the military forces evacuated the Cavite Arsenal, which was taken possession of by a landing party."

Promptly in response to this report of his victory, a joint resolution of thanks to Commodore Dewey and his officers and men, by the two

Houses of Congress, was despatched to them, with announcement to the former of his promotion to the rank of rear-admiral. The admiral replied, on the 13th, from Cavite, making due acknowledgments, and adding: "I am maintaining strict blockade of Manila by sea, and believe rebels are hemming in by land, although they are inactive and making no demonstrations. Great scarcity of provisions in the city. I believe the Spanish Governor-General will be obliged to surrender soon. I can take Manila at any moment. To retain possession and thus control Philippine Islands would require, in my best judgment, a well equipped force of 5,000 men."

On the 20th he reported, further: "Aguinaldo, the rebel commander in chief, was brought down by the 'McCulloch' [from Hongkong]. Organizing forces near Cavite and may render assistance that will be valuable." On the 27th of June, in reply to inquiries from the Navy Department, he explained his relations with Aguinaldo, as follows: "Aguinaldo, insurgent leader, with thirteen of his staff, arrived May 19, by permission, on 'Nanshan.' Established self Cavite, outside arsenal, under the protection of our guns, and organized his army. I have had several conferences with him, generally of a personal nature. Consistently I have refrained from assisting him in any way with the force under my command, and on several occasions I have declined requests that I should do so, telling him the squadron could not act until the arrival of the United States troops. At the same time I have given him to understand that I consider insurgents as friends, being opposed to a common enemy. He has gone to attend a meeting of insurgent leaders for the purpose of forming a civil government. Aguinaldo has acted independently of the squadron, but has kept me advised of his progress, which has been wonderful. I have allowed to pass by water recruits, arms, and ammunition, and to take such Spanish arms and ammunition from the arsenal as he needed. Have advised frequently to conduct the war humanely, which he has done invariably. My relations with him are cordial, but I am not in his confidence. The United States has not been bound in any way to assist insurgents by any act or promises, and he is not, to my knowledge, committed to assist us. I believe he expects to capture Manila without my assistance, but doubt ability, they not yet having many guns. In my opinion these people are far superior in their intelligence and more capable of self-government than the natives of Cuba, and I am familiar with both races."—*Report of the Secretary of the Navy*, 1898, *v.* 2, *pp.* 67–72 *and* 103.

On the 30th of June, troops sent from San Francisco, to the number of 2,500 officers and men, commanded by Gen. T. M. Anderson, arrived in Manila Bay, to co-operate with the navy in taking Manila and occupying the city, when taken. They were followed by a second expeditionary force, under Gen. F. V. Greene, which arrived July 17, and by a third, July 25 and 31, with which came Gen. Merritt, commanding the corps and the Department of the Pacific. Gen. Merritt's army then numbered nearly 11,000 men, and it was increased during the next few weeks to more than 15,000.—*Reports of the War Dept.*, 1898, *v.* 1, *pt.* 2, *p.* 499.

An English officer, Major Younghusband, who visited Manila at this time, remarked: "It may, perhaps, with some confidence be prophesied that when the cold fit, which will in due course follow the warmth of the present enthusiasm, falls on the nation, America will discover that the true parting of the ways was . . . in having allowed Admiral Dewey to do more than defeat the Spanish fleet and exact a heavy indemnity from the city of Manila before sailing away." It would seem to be more true, however, to say that the parting of the ways was when a military expedition was sent from San Francisco to Manila, to be landed, for the capture of the city and for the occupation of the islands. It is claimed with reason that Admiral Dewey could not "sail away," after the destruction of the Spanish ships, because he needed the harbor he had seized, his fleet having lost most of the privileges it had formerly been using in neutral ports, when it became the fleet of a belligerent power. To retain possession of Manila Bay while it was needed by the American fleet was clearly a measure connected legitimately with the general conduct of the war against Spain. But it is difficult to see that the landing of soldiers on the island of Luzon and the capture of the city of Manila added anything to the security with which the Bay was held for the purposes of Admiral Dewey's fleet, or that it contributed at all to the weakening of Spain in the war, and to the rescue of Cuba from Spanish misrule. For two months, from the first day of May until the last day of June, before a soldier arrived, and for six weeks longer, before Manila surrendered, Admiral Dewey appears to have been as fully and as conveniently in possession of all the advantages that harborage there could give him, as he was after the Spanish flag had been lowered in the city and on the island. Therefore, the American conquest of the Philippines does not readily connect itself with the war for the liberation of Cuba, as a necessary part of it, but presents itself to the mind as a somewhat supplementary enterprise, undertaken with objects of its own.

A. D. 1898 (May—August).—Conduct of English and German naval officers at Manila.—While Admiral Dewey was holding Manila Bay, before the taking of the city, there were many rumors and exciting stories afloat, of offensive behavior towards the American fleet by commanders of German war ships that were sent to the scene. As far as possible, the facts were officially suppressed, in order to avoid a quarrel between the two countries, and no authoritative account of what occurred can be found. But some incidents obtained publicity which are probably true in the main. The first unpleasant happening appears to have been the arrival in Manila Bay of a German naval vessel, which steamed in with entire disregard of the blockading fleet, as though the port was its own. Thereupon Admiral Dewey sent a forcible reminder to the captain that he was intruding upon a blockade, by firing a shot across his bow, and ordering him to heave to. The German captain, in a rage, is said to have called on the commanding officer of a British squadron that was in the Bay, for advice as to what he should do, and was told that he owed the American Admiral an apology for his violation of naval etiquette, well settled for such circumstances as those existing in Manila Bay. According to the story, the British commander, Captain Sir Edward Chichester, himself on the best of terms with

Admiral Dewey, visited the latter, on behalf of the German officer, and made the matter smooth. But, either through indiscretion of his own, or because he had instructions to interfere as much as possible with the proceedings of the Americans, the German commander continued to pursue an offensive course. According to report, he went so far as to stop a movement which Aguinaldo (then a recognized ally of the United States) was making, to take possession of a certain island, and to capture some Spaniards who were on it. This provoked Admiral Dewey to a demonstration against him so threatening that he drew back in haste, and the island was occupied.

According to all accounts, Admiral Dewey showed unsurpassed wisdom and dignity in meeting and checking these offensive proceedings without allowing them to become a cause of international quarrel; and he was happily aided in doing so by the hearty support of the British naval commander. According to still another report of the time, a German admiral, who had come upon the scene, meditated an interference to forbid the bombarding of Manila, when the city was about to be attacked, and, calling upon Sir Edward Chichester to ascertain what action the latter would take, was significantly told, "That is only known to Admiral Dewey and myself,"—which convinced him that his project was not wise. An English writer has related, with much satisfaction, that when Sir Edward's ship, the "Immortalité," finally steamed out of Manila Bay, returning to Hong Kong, "every ship in the American fleet manned her yards and gave the British man-of-war three cheers as she passed along; and she with the answering signal, 'thank you,' flying at her mast-head, went on her way."

A. D. 1898 (June).—Act creating the United States Industrial Commission.—An Act "authorizing the appointment of a non-partisan Commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital," was passed by Congress and approved by the President June 18, 1898. It provided: "That a commission is hereby created, to be called the 'Industrial Commission,' to be composed as follows. Five members of the Senate, to be appointed by the presiding officer thereof; five members of the House of Representatives, to be appointed by the Speaker, and nine other persons, who shall fairly represent the different industries and employments, to be appointed by the President, by and with the advice and consent of the Senate. . . . That it shall be the duty of this commission to investigate questions pertaining to immigration, to labor, to agriculture, to manufacturing, and to business, and to report to Congress and to suggest such legislation as it may deem best upon these subjects. . . . That it shall furnish such information and suggest such laws as may be made a basis for uniform legislation by the various States of the Union, in order to harmonize conflicting interests and to be equitable to the laborer, the employer, the producer, and the consumer. . . . That the commission shall give reasonable time for hearings, if deemed necessary, and if necessary it may appoint a subcommission or subcommissions of its own members to make investigation in any part of the United States, and it shall be allowed actual necessary expenses for the same. It shall have the authority to send for persons and papers and to administer oaths and affirmations. . . . That it may report from time to time to the Congress of the United States, and shall at the conclusion of its labors submit a final report."

The Commission thus contemplated was duly appointed by the President, and organized by the election of Senator Kyle for its chairman. For the scope and plan of its investigations a committee on procedure made the following recommendations, which were adopted by the Commission and which have been followed in what it has done: "The main work of the Commission may . . . be said to be to study and compare existing laws bearing upon industrial conditions, here and elsewhere, to ascertain by competent testimony wherein they are deficient, defective, inoperative, or oppressive, and to recommend such remedial statutes as will tend not only to make the conditions of industry more uniform as between the several States, but to remove such existing sources or causes of discontent, inequality, and injustice as can be reached and regulated through legislation. . . . In order to secure satisfactory results, it appears to your committee imperatively necessary that the work shall be confined strictly to the main purpose, viz, of ascertaining the nature and effects of existing legislation, and the nature of remedial legislation which may be necessary or desirable to equalize conditions in industry and to remove any just grounds of complaint on the part of either labor or capital or of the people at large.

"To facilitate the progress of the work we recommend the division of the Commission into four subcommissions of five members each, to be severally charged with the investigation of present conditions and the formulation of remedial suggestions in the following branches of industry: 1. On agriculture and agricultural labor. 2. On the conditions of labor and capital employed in manufacturing and general business. 3. On the conditions of labor and capital employed in mining. 4. On transportation. In addition, we recommend a fifth subcommission, to be known as the subcommission on statistics, in the membership of which there shall be one representative of each of the above subcommissions. . . .

"The committee also suggests that there are certain subjects of inquiry which appertain equally to all the groups into which it has recommended that the Commission be segregated. The subjects of immigration, of education, of combinations and trusts, and of taxation at once suggest themselves as belonging in this category. It is therefore recommended that these subjects, one or more of them, be examined into by the full Commission pending the organization of the several subcommissions."

The subject to which the Commission gave earliest attention was that of "Trusts and Industrial Combinations," on which it submitted a preliminary report on the 1st of March, 1900. See (in this vol.) TRUSTS.

A. D. 1898 (June).—Act providing for the arbitration of disputes between employers and employees in inter-state commerce.—The following are the main sections of a very important Act of Congress, approved June 1, 1898, which provides for the arbitration of disputes between

railway and other employees engaged in interstate commerce and the companies or individuals employing them:

"That the provisions of this Act shall apply to any common carrier or carriers and their officers, agents, and employees, except masters of vessels and seamen, . . . engaged in the transportation of passengers or property wholly by railroad, or partly by railroad and partly by water, for a continuous carriage or shipment, from one State or Territory of the United States or the District of Columbia, to any other State or Territory of the United States, or the District of Columbia, or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States. . . .

"Sec. 2. That whenever a controversy concerning wages, hours of labor, or conditions of employment shall arise between a carrier subject to this Act and the employees of such carrier, seriously interrupting or threatening to interrupt the business of said carrier, the chairman of the Interstate Commerce Commission and the Commissioner of Labor shall, upon the request of either party to the controversy, with all practicable expedition, put themselves in communication with the parties to such controversy, and shall use their best efforts, by mediation and conciliation, to amicably settle the same; and if such efforts shall be unsuccessful, shall at once endeavor to bring about an arbitration of said controversy in accordance with the provisions of this Act.

"Sec. 3. That whenever a controversy shall arise between a carrier subject to this Act and the employees of such carrier which can not be settled by mediation and conciliation in the manner provided in the preceding section, said controversy may be submitted to the arbitration of a board of three persons, who shall be chosen in the manner following: One shall be named by the carrier or employer directly interested; the other shall be named by the labor organization to which the employees directly interested belong, or, if they belong to more than one, by that one of them which specially represents employees of the same grade and class and engaged in services of the same nature as said employees so directly interested: Provided, however, That when a controversy involves and affects the interests of two or more classes and grades of employees belonging to different labor organizations, such arbitrator shall be agreed upon and designated by the concurrent action of all such labor organizations; and in cases where the majority of such employees are not members of any labor organization, said employees may by a majority vote select a committee of their own number, which committee shall have the right to select the arbitrator on behalf of said employees. The two thus chosen shall select the third commissioner of arbitration; but, in the event of their failure to name such arbitrator within five days after their first meeting, the third arbitrator shall be named by the commissioners named in the preceding section. A majority of said arbitrators shall be competent to make a valid and binding award under the provisions hereof. The submission shall be in writing, shall be signed by the employer and by the labor organization representing the employees, shall specify the time and place of meeting of said board of arbitration, shall state the questions to be decided, and shall contain appropriate provisions by which the respective parties shall stipulate, as follows:

"First. That the board of arbitration shall commence their hearings within ten days from the date of the appointment of the third arbitrator, and shall find and file their award, as provided in this section, within thirty days from the date of the appointment of the third arbitrator; and that pending the arbitration the status existing immediately prior to the dispute shall not be changed: Provided, That no employee shall be compelled to render personal service without his consent.

"Second. That the award and the papers and proceedings, including the testimony relating thereto certified under the hands of the arbitrators and which shall have the force and effect of a bill of exceptions, shall be filed in the clerk's office of the circuit court of the United States for the district wherein the controversy arises or the arbitration is entered into, and shall be final and conclusive upon both parties, unless set aside for error of law apparent on the record.

"Third. That the respective parties to the award will each faithfully execute the same, and that the same may be specifically enforced in equity so far as the powers of a court of equity permit: Provided, That no injunction or other legal process shall be issued which shall compel the performance by any laborer against his will of a contract for personal labor or service.

"Fourth. That employees dissatisfied with the award shall not by reason of such dissatisfaction quit the service of the employer before the expiration of three months from and after the making of such award without giving thirty days' notice in writing of their intention so to quit. Nor shall the employer dissatisfied with such award dismiss any employee or employees on account of such dissatisfaction before the expiration of three months from and after the making of such award without giving thirty days' notice in writing of his intention so to discharge.

"Fifth. That said award shall continue in force as between the parties thereto for the period of one year after the same shall go into practical operation, and no new arbitration upon the same subject between the same employer and the same class of employees shall be had until the expiration of said one year if the award is not set aside as provided in section four. That as to individual employees not belonging to the labor organization or organizations which shall enter into the arbitration, the said arbitration and the award made therein shall not be binding, unless the said individual employees shall give assent in writing to become parties to said arbitration. . . .

"Sec. 7. That during the pendency of arbitration under this Act it shall not be lawful for the employer, party to such arbitration, to discharge the employees, parties thereto, except for inefficiency, violation of law, or neglect of duty; nor for the organization representing such employees to order, nor for the employees to unite in, aid, or abet, strikes against said employer; nor, during a period of three months after an award under such an arbitration, for such an employer to discharge any such employees, except for the causes aforesaid, without giving thirty days' written notice of an intent so to discharge; nor for any of such employees, during a like period, to

quit the service of said employer without just cause, without giving to said employer thirty days' written notice of an intent so to do; nor for such organization representing such employees to order, counsel, or advise otherwise. Any violation of this section shall subject the offending party to liability for damages; Provided, that nothing herein contained shall be construed to prevent any employer, party to such arbitration, from reducing the number of its or his employees whenever in its or his judgment business necessities require such reduction. . . .

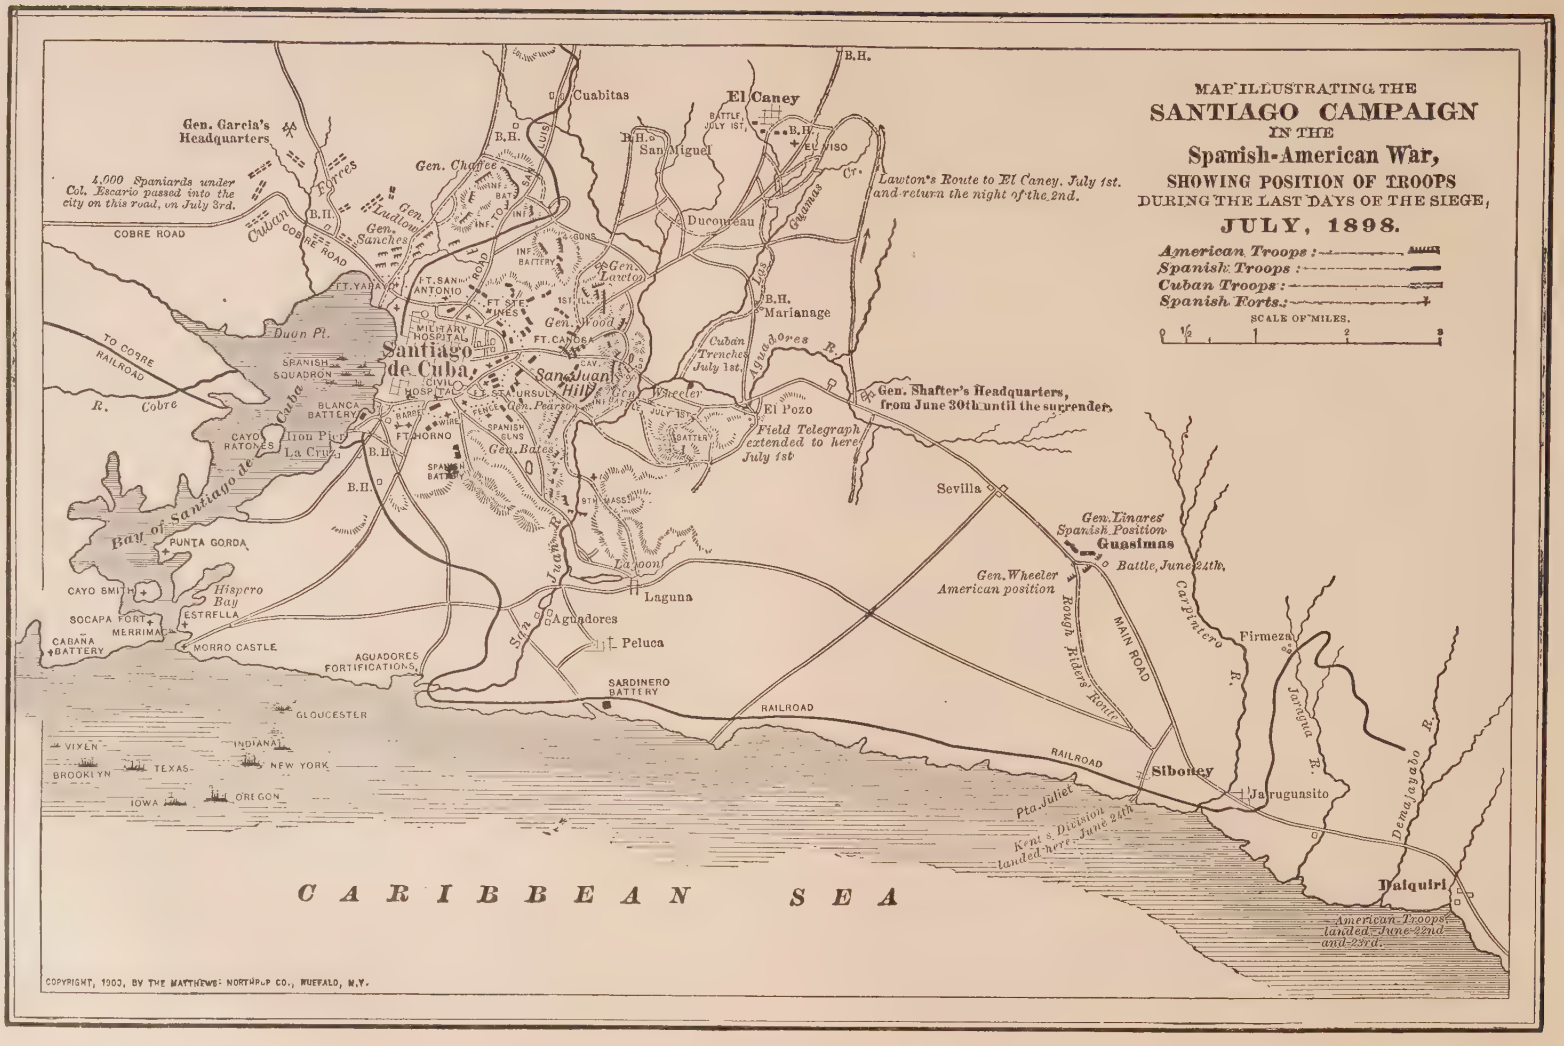
"Sec. 10. That any employer subject to the provisions of this Act and any officer, agent, or receiver of such employer who shall require any employee, or any person seeking employment, as a condition of such employment, to enter into an agreement, either written or verbal, not to become or remain a member of any labor corporation, association, or organization; or shall threaten any employee with loss of employment, or shall unjustly discriminate against any employee because of his membership in such a labor corporation, association, or organization; or who shall require any employee or any person seeking employment, as a condition of such employment, to enter into a contract whereby such employee or applicant for employment shall agree to contribute to any fund for charitable, social or beneficial purposes; to release such employer from legal liability for any personal injury by reason of any benefit received from such fund beyond the proportion of the benefit arising from the employer's contribution to such fund; or who shall, after having discharged an employee, attempt or conspire to prevent such employee from obtaining employment, or who shall, after the quitting of an employee, attempt or conspire to prevent such employee from obtaining employment, is hereby declared to be guilty of a misdemeanor, and, upon conviction thereof in any court of the United States of competent jurisdiction in the district in which such offense was committed, shall be punished for each offense by a fine of not less than one hundred dollars and not more than one thousand dollars."—*U. S. Statutes at Large, v.* 30, *p.* 424.

A. D. 1898 (June).—The War with Spain. —Seizure of the island of Guam.—The following order, dated May 10, 1898, was addressed by the Secretary of the Navy to the Commander of the U. S. S. 'Charleston': "Upon the receipt of this order, which is forwarded by the steamship 'City of Pekin' to you at Honolulu, you will proceed with the 'Charleston' and 'City of Pekin' in company, to Manila, Philippine Islands. On your way, you are hereby directed to stop at the Spanish Island of Guam. You will use such force as may be necessary to capture the port of Guam, making prisoners of the governor and other officials and any armed force that may be there. You will also destroy any fortifications on said island and any Spanish naval vessels that may be there, or in the immediate vicinity. These operations at the Island of Guam should be very brief, and should not occupy more than one or two days. Should you find any coal at the Island of Guam, you will make such use of it as you consider desirable. It is left to your discretion whether or not you destroy it. From the Island of Guam, proceed to Manila and report to Rear-Admiral George Dewey, U. S. N., for duty in the squadron under his command."

In a despatch dated June 24, Captain Glass, of the "Charleston," reported the execution of these orders as follows: "I have the honor to report that in obedience to the Department's telegraphic order of May 24, 1898, this ship sailed from Honolulu, Hawaiian Islands, on the 4th instant for Manila with the transports 'City of Pekin,' 'Australia,' and 'City of Sydney' under convoy. When clear of land, I opened the confidential order of May 10, 1898, and changed course for the Island of Guam, next day informing Commander Gibson, in charge of transports, and Brigadier-General Anderson, commanding expeditionary force, of the change in my orders and that the transports would accompany the 'Charleston.' Arriving off the north end of the island at daylight, June 20, I first visited the port of Agaña, the capital of Guam, and of the Mariana group, and finding no vessels there of any kind, proceeded to San Luis D'Apra, where it was expected that a Spanish gunboat and a military force would be found, a rumor to that effect having reached me while at Honolulu. Arriving off the port at 8.30 a. m., it was found that Fort Santiago, on Oroté Point, was abandoned and in ruins, and I steamed directly into the harbor, having ordered the transports to take a safe position outside and await instructions. A few shots were fired from the secondary battery at Fort Santa Cruz to get the range and ascertain if it was occupied. Getting no response, ceased firing and came to anchor in a position to control the harbor, and it was then found that this fort also was abandoned. The only vessel in port was a small Japanese trading vessel from Yokohama. An officer had just shoved off from the ship to board the Japanese vessel, and obtain information as to the condition of affairs on shore, when a boat was seen approaching the ship, through the reefs at the head of the harbor, flying the Spanish flag and bringing two officers, the captain of the port, a lieutenant-commander in the Spanish navy, and the health officer, a surgeon of the Spanish army. These officers came on board, and, in answer to my questions, told me they did not know that war had been declared between the United States and Spain, their last news having been from Manila, under date of April 14. I informed them that war existed and that they must consider themselves as prisoners. As they stated that no resistance could be made by the force on the island, I released them on parole for the day, to proceed to Agaña and inform the governor that I desired him to come on board ship at once, they assuring me that he would do so as soon as he could reach the port. While awaiting the return of these officers, an examination was made of the harbor, the only dangers to navigation were buoyed, and the transports came in during the afternoon.

"At 5 p. m. the governor's secretary, a captain in the Spanish army, came on board, bringing me a letter from the governor, in which he stated that he was not allowed by law to go on board a foreign vessel and requested me to meet him on shore for a conference. This letter is appended, marked A. As it was then too late to land a party, from the state of the tide on the reef between the ship and the landing place, I directed the secretary to return and say to the governor that I would send an officer ashore with a communication for him early next day. . . . At

8.30 a. m. on June 21 Lieut. William Braunersreuther was sent ashore, under flag of truce, with a written demand for the immediate surrender of the defenses of the Island of Guam and all officials and persons in the military service of Spain. Mr. Braunersreuther was directed to wait half an hour only for a reply, to bring the governor and other officials on board as prisoners of war in case of surrender, or in case of refusal or delay beyond the time given, to return and take command of the landing force, which he would find in readiness, and proceed to Agaña. At 12.15 p. m. Mr. Braunersreuther returned to the ship, bringing off the governor and three other officers, his staff, and handed me a letter from the governor acceding fully to my demand. Having received the surrender of the Island of Guam, I took formal possession at 2.45 p. m., hoisting the American flag on Fort Santa Cruz and saluting it with 21 guns from the 'Charleston.' From a personal examination of Fort Santa Cruz, I decided that it was entirely useless as a defensive work, with no guns and in a partly ruinous condition, and that it was not necessary to expend any mines in blowing it up. The forts at Agaña, San Luis D'Apra, and Umata are of no value and no guns remain in the island except four small cast-iron guns of obsolete pattern at Agaña, formerly used for saluting, but now condemned as unsafe even for that purpose. No Spanish vessel of war has visited Guam during the last eighteen months. No coal was found on the island."—*Annual Reports of the Navy Dep't*, 1898, *v.* 2, *pp.* 151–3.



A. D. 1898 (June—July).—War with Spain. —Expedition of the army under General Shafter against Santiago de Cuba.—Battles of El Caney and San Juan Hill.—To co-operate with the navy in operations for the capture of Santiago de Cuba, and of the Spanish fleet blockaded in the harbor of that town, orders were issued from Washington on the 31st of May, by Major-General Miles, Commanding the Army, "with the approval of the Secretary of War," which directed General Shafter, commanding the forces assembled at Tampa, Florida, to place them on transports and proceed with them, under convoy of the navy, to Santiago. Owing to an extreme lack of both railway and harbor facilities at Tampa, an entire week was consumed in the embarkation of the troops and supplies. When on shipboard, the expedition was delayed another week by false reports of the appearance of Spanish cruisers on the Cuban coast, which seemed to the Washington authorities to call for a stronger naval convoy to guard the transport fleet. It was not until the 14th of June that the fleet was permitted to sail, with 16,000 men. It arrived off Guantanamo, near Santiago, on the morning of the 20th.

Meantime, the blockading fleet had bombarded the forts at Santiago twice, on the 6th and on the 16th, and had silenced them, for the time being, on both occasions, but apparently with no permanent effect. With more success, two vessels from the fleet had entered the harbor of Guantanamo on the 7th and taken possession of the lower bay, where a marine battalion was landed on the 10th and established in camp, to hold ground until the army arrived. Meantime, also, communication with General Garcia, commanding Cuban forces, had been opened, and arrangements made, the results of which were subsequently acknowledged by General Miles, in his annual report, as follows: "General García regarded my requests as his orders, and promptly took steps to execute the plan of operations. He sent 3,000 men to check any movement of the 12,000 Spaniards stationed at Holguín. A portion of this latter force started to the relief of the garrison at Santiago, but was successfully checked and turned back by the Cuban forces under General Feria. General García also sent 2,000 men, under Pérez, to oppose the 6,000 Spaniards at Guantánamo, and they were successful in their object. He also sent 1,000 men, under General Ríos, against the 6,000 men at Manzanillo. Of this garrison, 3,500 started to reenforce the garrison at Santiago, and were engaged in no less than thirty combats with the Cubans on their way before reaching Santiago. . . . With an additional force of 5,000 men General García besieged the garrison of Santiago, taking up a strong position on the west side and in close proximity to the harbor, and he afterwards received General Shafter and Admiral Sampson at his camp near that place. He had troops in the rear, as well as on both sides of the garrison at Santiago before the arrival of our troops."—*Annual Reports of the War Dept.*, 1898, *v.* 1, *pt.* 2, *p.* 16.

The troops from Tampa, under General Shafter, arriving on the 20th, were disembarked on the 22d, 23d and 24th, at Daiquiri, and advanced to Siboney. The first resistance encountered was at La Guasima, three miles from Siboney, on the Santiago road, where the Spaniards were driven from strong entrenchments by a part of Young's brigade of General Wheeler's cavalry division (dismounted). The brigade thus first in the fighting was composed of the 1st and 10th regiments of regular cavalry and the 1st U. S. Vol. cavalry, commonly called the "Rough Riders." After the engagement at La Guasima, six days were occupied in concentrating the army (including the Cuban auxiliaries of General García), mostly at Sevilla, a short distance beyond La Guasima, on the same road, and in overcoming great difficulties of transportation for supplies.

On June 30, General Shafter reconnoitered the country around Santiago and made his plan of attack. "From a high hill," says his subsequent report, "from which the city was in plain view, I could see the San Juan Hill and the country about El Caney. The roads were very poor, and, indeed, little better than bridlepaths, until the San Juan River and El Caney were reached. The position of El Caney, to the northeast of Santiago, was of great importance to the enemy as holding the Guantanamo road, as well as furnishing shelter for a strong outpost that might be used to assail the right flank and rear of any force operating against San Juan Hill. In view of this I decided to begin the attack next day at El Caney with one division, while sending two divisions on the direct road to Santiago, passing by El Poso House, and, as a diversion, to direct a small force against Aguadores from Siboney along the railroad by the sea, with a view of attracting the attention of the Spaniards in the latter direction and of preventing them from attacking our left flank.

"During the afternoon I assembled the division commanders and explained to them my general plan of battle. Lawton's division [composed of Chaffee's, Miles' and Ludlow's brig-

UNITED STATES, 1898

ades], assisted by Capron's light battery, was ordered to move out during the afternoon toward El Caney, to begin the attack there early the next morning. After carrying El Caney, Lawton was to move by the Caney road toward Santiago and take position on the right of the line. Wheeler's division of dismounted cavalry [embracing Sumner's brigade—3d, 6th and 9th regular cavalry, and Young's brigade mentioned above] and Kent's division of infantry [Wikoff's, Hawkins's and Pearson's brigades] were directed on the Santiago road, the head of the column resting near El Poso, toward which heights Grimes's battery moved on the afternoon of the 30th, with orders to take position thereon early the next morning and at the proper time prepare the way for the advance of Wheeler and Kent on San Juan Hill. The attack at this point was to be delayed until Lawton's guns were heard at El Caney and his infantry fire showed he had become well engaged.

"The remainder of the afternoon and night was devoted to cutting out and repairing the roads and to other necessary preparations for battle. These preparations were far from what I desired them to be; but we were in a sickly climate; our supplies had to be brought forward by a narrow wagon road, which the rains might at any time render impassable; fear was entertained that a storm might drive the vessels containing our stores to sea, thus separating us from our base of supplies; and lastly, it was reported that General Pando, with 8,000 reenforcements for the enemy, was en route from Manzanillo and might be expected in a few days. Under those conditions I determined to give battle without delay.

"Early on the morning of July 1, Lawton was in position around El Caney, Chaffee's brigade [7th, 12th, and 13th U. S. Infantry] on the right, across the Guantanamo road; Miles's brigade [1st, 4th, and 25th U. S. Infantry] in the center, and Ludlow's [8th and 22d U. S. Infantry and 2d Mass. Vols.] on the left. The duty of cutting off the enemy's retreat along the Santiago road was assigned to the latter brigade. The artillery opened on the town at 6.15 A. M. The battle here soon became general and was hotly contested. The enemy's position was naturally strong and was rendered more so by blockhouses, a stone fort, and entrenchments cut in solid rock, and the loopholing of a solidly built stone church. The opposition offered by the enemy was greater than had been anticipated, and prevented Lawton from joining the right of the main line during the day, as had been intended.

"After the battle had continued for some time Bates's brigade of two regiments [3d and 20th U. S. Infantry] reached my headquarters from Siboney. I directed him to move near El Caney, to give assistance, if necessary. He did so and was put in position between Miles and Chaffee. The battle continued with varying intensity during most of the day and until the place was carried by assault, about 4.30 p. m. As the Spaniards endeavored to retreat along the Santiago road, Ludlow's position enabled him to do very effective work and to practically cut off all retreat in that direction.

"After the battle at El Caney was well opened and the sound of the small-arms fire caused us to believe that Lawton was driving the enemy before him, I directed Grimes's battery to open fire from the heights of El Poso on the San Juan blockhouse, which could be seen situated in the enemy's entrenchments extending along the crest of San Juan Hill. This fire was effective and the enemy could be seen running away from the vicinity of the blockhouse. The artillery fire from El Poso was soon returned by the enemy's artillery. They evidently had the range of this hill, and their first shells killed and wounded several men. As the Spaniards used smokeless powder it was very difficult to locate the positions of their pieces, while, on the contrary, the smoke caused by our black powder plainly indicated the position of our battery.

"At this time the cavalry division [of General Wheeler] under General Sumner [commanding temporarily in consequence of the illness of General Wheeler, who returned to duty that day], which was lying concealed in the general vicinity of the El Poso House, was ordered forward, with directions to cross the San Juan River and deploy to the right on the Santiago side, while Kent's division was to follow closely in its rear and deploy to the left. These troops moved forward in compliance with orders, but the road was so narrow as to render it impracticable to retain the column of fours formation at all points, while the undergrowth on either side was so dense as to preclude the possibility of deploying skirmishers. It naturally resulted that the progress made was slow, and the long range rifles of the enemy's infantry killed and wounded a number of our men while marching along this road and before there was any opportunity to return this fire. At this time Generals Kent and Sumner were ordered to push forward with all possible haste and place their troops in position to engage the enemy. General Kent, with this end in view, forced the head of his column alongside of the cavalry column as far as the narrow trail permitted, and thus hurried his arrival at the San Juan and the formation beyond that stream. A few hundred yards before reaching the San Juan the road forks, a fact that was discovered by Lieutenant-Colonel Derby, of my staff, who had approached well to the front in a war balloon. This information he furnished to the troops, resulting in Sumner moving on the right-hand road, while Kent was enabled to utilize the road to the left. . . . After crossing the stream, the cavalry moved to the right with a view of connecting with Lawton's left when he should come up, and with their left resting near the Santiago road. In the meanwhile Kent's division, with the exception of two regiments of Hawkins's brigade, being thus uncovered, moved rapidly to the front from the forks previously mentioned in the road, utilizing both trails, but more especially the one to the left, and crossing the creek formed for attack in the front of San Juan Hill."—*Annual Reports of the War Dept.*, 1898, *v.* 1, *pt.* 2, *p.* 147.

"The particulars of this gallant attack, which won the hill and decided the fate of Santiago, are given with more clearness in the report of General Kent, who commanded the division which had most of the fighting to do, than in that of General Shafter. Wikoff's 'heroic brigade,' writes General Kent, 'consisting of the 13th, 9th, and 24th U. S. Infantry, speedily crossed the stream and were quickly deployed to the left of the lower ford. While personally superintending this movement Colonel Wikoff

was killed, the command of the brigade then devolving upon Lieutenant-Colonel Worth, 13th Infantry, who immediately fell severely wounded, and then upon Lieutenant-Colonel Liscum, 24th Infantry, who, five minutes later, also fell under the withering fire of the enemy. The command of the brigade then devolved upon Lieutenant-ant-Colonel E. P. Ewers, 9th Infantry. Meanwhile I had again sent a staff officer to hurry forward the second brigade [Pearson's] which was bringing up the rear. The 10th and 2d Infantry, soon arriving at the forks, were deflected to the left to follow the Third Brigade [Wikoff's], while the 21st was directed along the main road to support Hawkins [whose brigade was composed of the 6th and 16th U. S. Infantry and the 71st N. Y. Vols.].

"Crossing the lower ford a few minutes later, the 10th and 2d moved forward in column in good order toward the green knoll . . . on the left. Approaching the knoll the regiments deployed, passed over the knoll, and ascended the high ridge beyond, driving back the enemy in the direction of his trenches. I observed this movement from the Fort San Juan Hill. . . . Prior to this advance of the second brigade, the third, connecting with Hawkins's gallant troops on the right, had moved toward Fort San Juan, sweeping through a zone of most destructive fire, scaling a steep and difficult hill, and assisting in capturing the enemy's strong position (Fort San Juan) at 1.30 p. m. This crest was about 125 feet above the general level and was defended by deep trenches and a loopholed brick fort surrounded by barbed-wire entanglements. General Hawkins, some time after I reached the crest, reported that the 6th and 16th Infantry had captured the hill, which I now consider incorrect. Credit is almost equally due the 6th, 9th, 13th, 16th, and 24th regiments of infantry. . . . The Thirteenth Infantry captured the enemy's colors waving over the fort, but unfortunately destroyed them. . . .

"The greatest credit is due to the officers of my command, whether company, battalion, regimental, or brigade commanders, who so admirably directed the formation of their troops, unavoidably intermixed in the dense thicket, and made the desperate rush for the distant and strongly defended crest. I have already mentioned the circumstances of my third brigade's advance across the ford, where, in the brief space of ten minutes, it lost its brave commander (killed) and the next two ranking officers by disabling wounds; yet in spite of these confusing conditions the formations were effected without hesitation, although under a stinging fire, companies acting singly in some instances and by battalions and regiments in others, rushing through the jungle, across the stream, waist deep, and over the wide bottom thickly set with barbed-wire entanglements. . . .

"The enemy having retired to a second line of rifle pits, I directed my line to hold their positions and intrench. At ten minutes past 3 p. m. I received almost simultaneously two requests—one from Colonel Wood, commanding a cavalry brigade, and one from General Sumner—asking for assistance for the cavalry on my right, 'as they were hard pressed.' I immediately sent to their aid the 13th Infantry, who promptly went on this further mission, despite the heavy losses they had already sustained. Great credit is due to the gallant officer and gentleman, Brig. Gen. H. S. Hawkins, who, placing himself between the two regiments, leading his brigade, the 6th and 16th Infantry, urged and led them by voice and bugle calls to the attack so successfully accomplished."—*Annual Reports of the War Dept.*, 1898, *v.* 1, *pt.* 2, *p.* 164.

The part borne by the dismounted cavalry division in the capture of the Spanish intrenchments on San Juan Hill is described as follows in the report of General Sumner, temporarily in command: "After crossing the creek with sufficient strength to hold it and protect the crossing, I received verbal orders to move by the right flank to connect with Lawton's left. During the execution of this movement a balloon, under command of Colonel Derby, came up the road, forcing open Wood's Brigade and cutting it in two, thereby delaying the movement. The artillery fire of the enemy opened upon the balloon and continued for more than an hour, thereby subjecting part of my command massed and the rest moving by the flank to long shrapnel fire. Many officers and men were wounded here by exploding shells and small arms' firing of the enemy. After completing the deployment the command was so much committed to battle that it became necessary either to advance or else retreat under fire.

"Lieutenant Miley, representing General Shafter, authorized an advance, which was ordered, Carroll's brigade taking the advance, reinforced on the right by Roosevelt's regiment and supported by the 1st and 10th Cavalry of Wood's Brigade. The advance was made under heavy infantry fire through open flat ground, cut up by wire fences, to the creek, distant about 600 yards. The advance was made in good order, the enemy's fire being returned only under favorable opportunities. In crossing the flat one officer (Captain O'Neil) and several men were killed and several officers and men wounded. Both sides of the creek are heavily wooded for about 200 yards. The creek was swollen, and the crossing through this space and the creek was made with great difficulty. After passing through the thick woods the ground was entirely open and fenced by wire. From this line it was necessary to storm the hill, upon the top of which is a house loopholed, etc., for defense. The slope of the hill is very difficult, but the assault was made with great gallantry and with much loss to the enemy. In this assault Colonel Hamilton, Lieutenants Smith and Shipp were killed; Colonel Carroll, Lieutenants Thayer and Myer were wounded. A number of casualties occurred among the enlisted men. After taking this hill the front line advanced to take the Fort San Juan Hill under fire from strong force of the enemy in trenches and house known as 'Blockhouse.' . . . The assault was successful, the line storming the trenches and blockhouse with conspicuous gallantry and coolness, capturing three prisoners, wounding and killing many of the enemy. . . . Connected with my left, Hawkins's brigade of Kent's division carried everything in front of it and captured the house and hill known as 'Fort San Juan' proper."—*Annual Reports of the War Dept.*, 1898, *v.* 1, *pt.* 2, *p.* 370.

Lieutenant-Colonel Roosevelt, who commanded the Rough Riders regiment that day, while Colonel Wood commanded the brigade, tells the story of the fight, and what followed, very

tersely, in his report: "After crossing the river at the ford," says the Lieutenant-Colonel, "we were moved along and up its right bank under fire, and were held in reserve at a sunken road. Here we lost a good many men, including Captain O'Neil, killed, and Lieutenant Haskell, wounded. We then received your order to advance and support the regular cavalry in the attack on the intrenchments and blockhouses on the hills to the left. The regiment was deployed on both sides of the road, and moved forward until we came to the rearmost lines of the regulars. We continued to move forward until I ordered a charge, and the men rushed the blockhouse and rifle pits on the hill to the right of our advance. They did the work in fine shape, though suffering severely. The guidons of Troops E and G were first planted on the summit, though the first men up were some A and B troopers who were with me.

"We then opened fire on the intrenchments on a hill to our left which some of the other regiments were assailing and which they carried a few minutes later. Meanwhile we were under a heavy rifle fire from the intrenchments along the hills to our front, from whence they also shelled us with a piece of field artillery until some of our marksmen silenced it. When the men got their wind we charged again and carried the second line of intrenchments with a rush. Swinging to the left, we then drove the Spaniards over the brow of the chain of hills fronting Santiago. By this time the regiments were much mixed, and we were under a very heavy fire, both of shrapnel and from rifles from the batteries, intrenchments, and forts immediately in front of the city. On the extreme front I now found myself in command with fragments of the six cavalry regiments of the two brigades under me. The Spaniards made one or two efforts to retake the line, but were promptly driven back.

"Both General Sumner and you sent me word to hold the line at all hazards, and that night we dug a line of intrenchments across our front, using the captured Spaniards' intrenching tools. We had nothing to eat except what we captured from the Spaniards; but their dinners had fortunately been cooked, and we ate them with relish, having been fighting all day. We had no blankets and coats, and lay by the trenches all night. The Spaniards attacked us once in the night, and at dawn they opened a heavy artillery and rifle fire. Very great assistance was rendered us by Lieutenant Parker's Gatling battery at critical moments; he fought his guns at the extreme front of the firing line in a way that repeatedly called forth the cheers of my men. One of the Spanish batteries which was used against us was directly in front of the hospital so that the red cross flag flew over the battery, saving it from our fire for a considerable period. The Spanish Mauser bullets made clean wounds; but they also used a copper-jacketed or brass-jacketed bullet which exploded, making very bad wounds indeed.

"Since then we have continued to hold the ground; the food has been short; and until today [July 4] we could not get our blankets, coats, or shelter tents, while the men lay all day under the fire from the Spanish batteries, intrenchments, and guerrillas in trees, and worked all night in the trenches, never even taking off their shoes. But they are in excellent spirits, and ready and anxious to carry out any orders they receive. At the end of the first day the eight troops were commanded, two by captains, three by first lieutenants, two by second lieutenants, and one by the sergeant whom you made acting lieutenant. We went into the fight about 490 strong; 86 were killed or wounded, and there are about half a dozen missing. The great heat prostrated nearly 40 men, some of them among the best in the regiment."—*Annual Reports of the War Dept.*, 1898, *v.* 1, *pt.* 2, *p.* 684.

There have been much contradiction and controversy concerning some of the orders by which the battle of San Juan was directed. The following are the conclusions on that subject of a civilian observer who seems to have seen and investigated with impartiality: "The orders under which the battle of San Juan was fought were given by Adjutant-General McClernand to General Kent, commanding the Infantry Division—consisting, in addition to the organizations already mentioned (Wikoff's and Pearson's brigades), of the First Brigade, including the Sixth and Sixteenth U. S. Infantry and the Seventy-first New York, under General Hawkins—at about nine o'clock in the morning. There is no question fortunately as to the exact wording of the orders. A little green knoll to the left of the Santiago road and half a mile short of the San Juan Heights was pointed out as the point which was to be the extreme limit of the forward movement of the Infantry Division. Once there, further orders would be given. The orders under which General Sumner advanced from El Pozo would appear to have been more specific, and certainly more clear than the orders which General Kent received for the Infantry Division a few minutes later. At the same time, it is true that these orders were also based upon a complete misconception of the situation and a total ignorance of the Spanish position and the lay of the country beyond El Pozo. General Sumner's orders were to advance along that branch of the Aguadores Creek which runs parallel with the Santiago road from El Pozo, until it joins the main stream of the Aguadores at the angle subsequently known as the 'bloody angle,' where the creek makes a sharp turn to the left, and then runs a general southerly course toward the town of Aguadores and the sea. This creek General Sumner was instructed to hold until the result of Lawton's attack upon Caney became known, and he received further orders. Once the creek was reached, Sumner, under the most unfavorable circumstances of a heavy fire, and the thick and pathless jungles which his men had to penetrate, deployed his whole division, and then sent back word to McClernand, the adjutant-general of the corps, acquainting him with the actual conditions by which he was confronted, and asking whether his orders contemplated an attack upon the enemy's intrenched position, setting forth at the same time the utter impossibility of keeping his men inactive for a long time under such a heavy fire as was being poured in upon them.

"Had it been proposed to carry out the plan, as discussed and agreed upon at General Shafter's headquarters the night before, to advance along the right flank of the Spanish position, keeping in touch with Lawton, obviously these two divisions, or a large part of them, should have been directed to take the direct road which ran north from El Pozo to Marianaje and thence

to El Caney, leaving in front of San Juan only force sufficient to retain the Spaniards in their position. But the divisions were ordered to proceed along the Santiago road, and in a very few minutes came under fire. The original plan may have been changed at the last moment, of course; but as every movement that was subsequently made was in the line of carrying this plan out, until finally, on the 12th, General Lawton succeeded in completely investing the town on the north and west, this does not seem likely. The more probable explanation of the movement and of what followed, and the one accepted by general officers, is as follows: That it was still intended to follow Lawton's advance on the right, but that owing to our failure to develop the Spanish position in our front, and our complete ignorance of the lay of the land, the flank movement was not begun until too late—not until the troops had been led into a position from which they could be extricated only by wresting from the Spaniards the block-houses and the trenches from which, unexposed and unseen, they were delivering such a galling fire upon our men, engaged in wandering aimlessly about in an almost trackless tropical jungle. At this moment of great confusion and uncertainty, when the road was choked with the regiments of both the cavalry and infantry divisions, mutually hindering one another in their struggles to advance, and having to sustain a heavy and destructive fire which could not be answered, an ordeal even for the veteran soldier; at this moment, when something might still have been done to mislead the enemy and cover our advance, the war balloon was sent up directly behind our columns. This mistake betrayed the exact location of our advance, and the Spanish fire became heavier and better directed, and our losses more severe."—S. Bonsal, *The Fight for Santiago, ch.* 6 (*N. Y.: Doubleday, Page & Co.*).

The same writer gives a sickening account of the sufferings of the wounded after the battle and the miserable failure of provision for any kind of succor or care of them. "Of course," he says, "in view of the perilous situation which the two divisions now occupied upon the crest of the hill, and the great anxiety which was felt at headquarters for the safety of the whole army, and the preparations which had to be made against the expected night attack of the Spaniards to drive our men back and retake their lost position, the search for the dead and wounded this evening had to be confined to a very limited area, and was only as thorough as the shortness of the time for which men could be spared from the colors permitted. The jungle and the great fields of long grass were not searched, and thus many of the wounded were not discovered until the following day; and quite a number, indeed, not until the armistice was declared, on the third day after the battle, when the men had time to ransack the hill-side and the valley for the missing. And there were some—those who had the strength when they fell to crawl through the cactus, the Spanish bayonet, and all manner of prickly and trailing plants into the deeper and more protected recesses of the jungle—who were never discovered at all until days, many days, had passed; and the gathering of the vultures told where some poor fellow had died without care and without food, of his wounds or from starvation. Of such an one, when his place of hiding was discovered, there was, as a rule, only left a whitened skeleton and pieces of the uniform he had worn. The last resting-place of not a few was never discovered at all.

"I believe I am giving a moderate estimate when I say that at least one-third of the men wounded on July 1st received no attention, and were not brought back to the division hospital until the afternoon of July 3d. This night we knew nothing, and had not even the slightest suspicion, of how numerous the undiscovered wounded were. . . . Only about half of the wounded men who were discovered this evening had been brought back to the dressing station when the moon rose above the dark forest line, and lit up the battlefield and the heights of San Juan as clearly, and, indeed, more clearly than day, for there was now not the dazzling force and the confusing mirage of the pitiless sunlight to blind the sight. The majority of these men had had their wounds dressed where they fell, or soon after falling, with the first-aid bandages. There were very few indeed to whom it had been possible to give any further attention than this, as the regimental surgeons, for want of transportation, had been unable to bring their medical chests, and those who were best provided carried with them only small pocket cases. . . .

"When the first-aid bandages were applied, the wounded man and those who helped him were, as a rule, under fire, which made any but the most summary methods of wound-dressing quite impossible. Fortunately these bandages, so simple and practical, lent themselves excellently well to this procedure. The first thing the soldiers or the hospital attendants would do when they came upon a wounded man was, in the case of a wound in the body, to tear off his shirt, or in the case of a wound in the leg, tear off his trousers, and then wrap around the wound the first-aid bandage. The wound-dressers were generally in such haste, and the wounded men usually so helpless to assist in any way, and their shirts and trousers so rotten from the drenching rains in which they had been worn without change day or night, that the taking off of the clothing was literally what I call it—tearing, and the garment came off so rent as to be quite useless for further wear. Consequently the soldiers were carried half-naked, or, if they had been wounded in both the body and the lower limbs, as was so frequently the case, entirely naked, to the army wagons and so down to the hospital, where there was not a scrap of clothing or bedding forthcoming to cover them with. These who were stripped in this way during the daytime were baked and blistered by the fierce sunlight, only to shiver with the penetrating cold and dampness after the rain had ceased to fall and when the chill night came on.

"Knowing that he was totally unprepared to clothe or cover the wounded that would probably be brought in, the chief surgeon of the corps issued an order, the evening before the battle, that all wounded men should be brought in with their blankets, halves of shelter-tents, and ponchos when possible. This was certainly a step in the right direction, even if it was but a frank confession by the authorities that no preparation had been made by them for the emergency which it cannot be said was suddenly thrust upon them, but which they might have foreseen and should have been preparing against

for many weeks previous. While the attending soldiers, realizing how serious for their wounded comrades it would be to have to lie in the hospitals uncovered to wind and weather, made great efforts to find their packs, these efforts were not often successful, and a great majority of the wounded reached the hospital half naked, and had thereafter only the covering and the bedding which their comrades and the hospital attendants were able to 'rustle' for them, and this was little enough and not seldom nothing at all.

"Had this expedition been provided with a greater number of surgeons and hospital attendants, had the ambulances been at hand which we left in Tampa or upon the transports, ambulances without which it is reasonable to suppose —at least we had supposed—no civilized power would enter upon an aggressive war, much less upon a campaign in which we had the advantage of choosing both our own time and the field of operations, the outrageous treatment which our wounded suffered, and the barbarous scenes which we were called upon to witness upon this and the following days would never have occurred."—S. Bonsal, *The Fight for Santiago, ch.* 8 (*N. Y.: Doubleday, Page & Co.*).

The troops which had carried San Juan Hill were intrenched, that night, in the positions they had gained, and those which had taken El Caney were brought into connection with them, Lawton's division on their right and Bates's brigade on the left. The battle was renewed by the Spaniards soon after daylight on the morning of the 2d, and raged with more or less fury throughout the day. That evening, about 10 o'clock, a fierce attempt was made to break through the American lines, but without success. Again, on the morning of the third, the Spaniards reopened battle, but with less vigor than before. General Shafter then sent the following letter to General Toral, the Spanish commander: "I shall be obliged, unless you surrender, to shell Santiago de Cuba. Please inform the citizens of foreign countries, and all women and children, that they should leave the city before 10 o'clock to-morrow morning." In reply, General Toral wrote: "It is my duty to say to you that this city will not surrender, and that I will inform the foreign consuls and inhabitants of the contents of your message." Several of the foreign consuls at Santiago then came into the American lines and persuaded General Shafter to delay the shelling of the town until noon of the 5th, provided that the Spanish forces made no demonstration meantime against his own. This established a truce which was renewed, in a series of negotiations until the 10th. "I was of the opinion," reported General Shafter, "that the Spaniards would surrender if given a little time, and I thought this result would be hastened if the men of their army could be made to understand they would be well treated as prisoners of war. Acting upon this presumption I determined to offer to return all the wounded Spanish officers at El Caney who were able to bear transportation, and who were willing to give their paroles not to serve against the forces of the United States until regularly exchanged. This offer was made and accepted. These officers, as well as several of the wounded Spanish privates, 27 in all, were sent to their lines under the escort of some of our mounted cavalry. Our troops were received with honors, and I have every reason to believe the return of the Spanish prisoners produced a good impression on their comrades. The cessation of firing about noon on the 3d practically terminated the battle of Santiago." General Shafter goes on to say that when the battle was fiercest, on July 1st, he probably had no more than 12,000 men on the firing line, not counting a few Cubans who assisted in the attack on El Caney, and who fought with valor. They were confronted by about equal numbers of the enemy, in strong and intrenched positions. "Our losses in these battles were 22 officers and 208 men killed, and 81 officers and 1,203 men wounded; missing 79. The missing, with few exceptions, reported later." Up to this time, General Shafter had been unable to complete the investment of the town with his own men, and had depended upon General Garcia with his Cubans, placed on the extreme right of the American lines, to watch for and intercept reinforcements. They failed to do so, and 2,800 Spaniards, under General Escario, entered the city on the night of the 2d. The American commander now extended his own lines as rapidly as possible and completed the investment of the town.—*Annual Reports of the War Dept.*, 1898, *v.* 1, *pt.* 2, *p.* 155–7.—As stated above, permission was given on the 3d for noncombatants to leave the city. "They did leave in the following days to the number of perhaps 20,000, filling the neighboring villages and roads with destitute people, mostly women and children. It then seemed to fall to our lot to see that these people did not starve in a desolate country, and to be as much our duty to take care of these people, whom our policy had driven from their homes, as it was for Spain to feed the reconcentrados, whom they drove from their homes under their war policy. The task was not insignificant."—*Report of Inspector-General* (*Annual Reports of the War Dept.*, 1898, *v.* 1, *pt.* 2, *p.* 596).

A. D. 1898 (July).—Annexation of the Hawaiian Islands. See (in this vol.) HAWAIIAN ISLANDS: A. D. 1898.

A. D. 1898 (July 1).—National Bankrupt Law.—After years of effort on the part of its advocates, a national bankrupt law was enacted by both Houses of Congress and received the President's signature on the 1st of July, 1898.

A. D. 1898 (July 3).—Destruction of the Spanish squadron at Santiago.—On the morning of July 3, Admiral Cervera, convinced that Santiago would be taken by the American forces, and acting under orders from the Captain-General at Havana, made a desperate attempt to save his squadron by escaping to sea. The result was a total destruction of the Spanish ships, in an engagement with the blockading fleet, of which Admiral Sampson gave the following account in his official report:

"The enemy's vessels came out of the harbor between 9.35 and 10 a. m., the head of the column appearing around Cay Smith at 9.31 and emerging from the channel five or six minutes later. The positions of the vessels of my command off Santiago at that moment were as follows: The flagship 'New York' was 4 miles east of her blockading station and about 7 miles from the harbor entrance. She had started for Siboney, where I intended to land, accompanied by several of my staff, and go to the front to consult with General Shafter. A discussion of the situation and a more definite understanding

between us of the operations proposed had been rendered necessary by the unexpectedly strong resistance of the Spanish garrison of Santiago. I had sent my chief of staff on shore the day before to arrange an interview with General Shafter, who had been suffering from heat prostration. I made arrangements to go to his headquarters, and my flagship was in the position mentioned above when the Spanish squadron appeared in the channel. The remaining vessels were in or near their usual blockading positions, distributed in a semicircle about the harbor entrance, counting from the eastward to the westward, in the following order: The 'Indiana' about a mile and a half from shore, the 'Oregon'—the 'New York's' place being between these two—the 'Iowa,' 'Texas,' and 'Brooklyn,' the latter two miles from the shore west of Santiago. The distance of the vessels from the harbor entrance was from 2½ to 4 miles, the latter being the limit of day blockading distance. The length of the arc formed by the ships was about 8 miles. The 'Massachusetts' had left at 4 a. m., for Guantanamo for coal. Her station was between the 'Iowa' and 'Texas.' The auxiliaries 'Gloucester' and 'Vixen' lay close to the land and nearer the harbor entrance than the large vessels, the 'Gloucester' to the eastward and the 'Vixen' to the westward. The torpedo boat 'Ericsson' was in company with the flagship and remained with her during the chase until ordered to discontinue, when she rendered very efficient service in rescuing prisoners from the burning 'Vizcaya.'. . .

"The Spanish vessels came rapidly out of the harbor, at a speed estimated at from 8 to 10 knots, and in the following order: 'Infanta Maria Teresa' (flagship), 'Vizcaya,' 'Cristobal Colon,' and the 'Almirante Oquendo.' The distance between these ships was about 800 yards, which means that from the time the first one became visible in the upper reach of the channel until the last one was out of the harbor an interval of only about 12 minutes elapsed. Following the 'Oquendo,' at a distance of about 1,200 yards, came the torpedo-boat destroyer 'Pluton,' and after her the 'Furor.' The armored cruisers, as rapidly as they could bring their guns to bear, opened a vigorous fire upon the blockading vessels, and emerged from the channel shrouded in the smoke from their guns. The men of our ships in front of the port were at Sunday 'quarters for inspection.' The signal was made simultaneously from several vessels, 'Enemy ships escaping,' and general quarters was sounded. The men cheered as they sprang to their guns, and fire was opened probably within 8 minutes by the vessels whose guns commanded the entrance. The 'New York' turned about and steamed for the escaping fleet, flying the signal, 'Close in towards harbor entrance and attack vessels,' and gradually increasing speed, until toward the end of the chase she was making 16½ knots, and was rapidly closing on the 'Cristobal Colon.' She was not, at any time, within the range of the heavy Spanish ships, and her only part in the firing was to receive the undivided fire from the forts in passing the harbor entrance, and to fire a few shots at one of the destroyers. thought at the moment to be attempting to escape from the 'Gloucester.'

"The Spanish vessels, upon clearing the harbor, turned to the westward in column, increasing their speed to the full power of their engines. The heavy blockading vessels, which had closed in towards the Morro at the instant of the enemy's appearance, and at their best speed, delivered a rapid fire, well sustained and destructive, which speedily overwhelmed and silenced the Spanish fire. The initial speed of the Spaniards carried them rapidly past the blockading vessels, and the battle developed into a chase in which the 'Brooklyn' and 'Texas' had, at the start, the advantage of position. The 'Brooklyn' maintained this lead. The 'Oregon,' steaming with amazing speed from the commencement of the action, took first place. The 'Iowa' and the 'Indiana' having done good work, and not having the speed of the other ships, were directed by me, in succession, at about the time the 'Vizcaya' was beached, to drop out of the chase and resume blockading stations. These vessels rescued many prisoners. The 'Vixen,' finding that the rush of the Spanish ships would put her between two fires, ran outside of our own column and remained there during the battle and chase.

"The skillful handling and gallant fighting of the 'Gloucester' excited the admiration of everyone who witnessed it, and merits the commendation of the Navy Department. She is a fast and entirely unprotected auxiliary vessel—the yacht 'Corsair'—and has a good battery of light rapid-fire guns. She was lying about 2 miles from the harbor entrance, to the southward and eastward, and immediately steamed in, opening fire upon the large ships. Anticipating the appearance of the 'Pluton' and 'Furor,' the 'Gloucester' was slowed, thereby gaining more rapidly a high pressure of steam, and when the destroyers came out she steamed for them at full speed, and was able to close to short range, while her fire was accurate, deadly, and of great volume. During this fight the 'Gloucester' was under the fire of the Socapa Battery. Within twenty minutes from the time they emerged from Santiago Harbor the careers of the 'Furor' and the 'Pluton' were ended, and two-thirds of their people killed. The 'Furor' was beached and sunk in the surf; the 'Pluton' sank in deep water a few minutes later. The destroyers probably suffered much injury from the fire of the secondary batteries of the battle ships 'Iowa,' 'Indiana,' and the 'Texas,' yet I think a very considerable factor in their speedy destruction was the fire, at close range, of the 'Gloucester's' battery. After rescuing the survivors of the destroyers, the 'Gloucester' did excellent service in landing and securing the crew of the 'Infanta Maria Teresa.'

"The method of escape attempted by the Spaniards, all steering in the same direction, and in formation, removed all tactical doubts or difficulties, and made plain the duty of every United States vessel to close in, immediately engage, and pursue. This was promptly and effectively done. As already stated, the first rush of the Spanish squadron carried it past a number of the blockading ships which could not immediately work up to their best speed; but they suffered heavily in passing, and the 'Infanta Maria Teresa' and the 'Oquendo' were probably set on fire by shells fired during the first fifteen minutes of the engagement. It was afterwards learned that the 'Infanta Maria Teresa's' fire main had been cut by one of our first shots, and that she was unable to extin-

guish fire. With large volumes of smoke rising from their lower decks aft, these vessels gave up both fight and flight and ran in on the beach —the 'Infanta Maria Teresa' at about 10.15 a. m. at Nima Nima, 6¼ miles from Santiago Harbor entrance, and the 'Almirante Oquendo' at about 10.30 a. m. at Juan Gonzales, 7 miles from the port.

"The 'Vizcaya' was still under the fire of the leading vessels; the 'Cristobal Colon' had drawn ahead, leading the chase, and soon passed beyond the range of the guns of the leading American ships. The 'Vizcaya' was soon set on fire, and, at 11.15, she turned inshore, and was beached at Aserraderos, 15 miles from Santiago, burning fiercely, and with her reserves of ammunition on deck already beginning to explode. When about 10 miles west of Santiago the 'Indiana' had been signaled to go back to the harbor entrance, and at Aserraderos the 'Iowa' was signaled to 'Resume blockading station.' The 'Iowa' assisted by the 'Ericsson' and the 'Hist,' took off the crew of the 'Vizcaya,' while the 'Harvard' and the 'Gloucester' rescued those of the 'Infanta Maria Teresa' and the 'Almirante Oquendo.' This rescue of prisoners, including the wounded, from the burning Spanish vessels, was the occasion of some of the most daring and gallant conduct of the day. The ships were burning fore and aft, their guns and reserve ammunition were exploding, and it was not known at what moment the fire would reach the main magazines. In addition to this a heavy surf was running just inside of the Spanish ships. But no risk deterred our officers and men until their work of humanity was complete.

"There remained now of the Spanish ships only the 'Cristobal Colon'—but she was their best and fastest vessel. Forced by the situation to hug the Cuban coast, her only chance of escape was by superior and sustained speed. When the 'Vizcaya' went ashore, the 'Colon' was about 6 miles ahead of the 'Brooklyn' and the 'Oregon'; but her spurt was finished, and the American ships were now gaining upon her. Behind the 'Brooklyn' and the 'Oregon' came the 'Texas,' 'Vixen,' and 'New York.' It was evident from the bridge of the 'New York' that all the American ships were gradually overhauling the chase, and that she had no chance of escape. At 12.50 the 'Brooklyn' and the 'Oregon' opened fire and got her range —the 'Oregon's' heavy shell striking beyond her—and at 1.20 she gave up without firing another shot, hauled down her colors, and ran ashore at Rio Torquino, 48 miles from Santiago. Captain Cook, of the 'Brooklyn,' went on board to receive the surrender. While his boat was alongside I came up in the 'New York,' received his report, and placed the 'Oregon' in charge of the wreck to save her, if possible, and directed the prisoners to be transferred to the 'Resolute,' which had followed the chase. Commodore Schley, whose chief of staff had gone on board to receive the surrender, had directed that all their personal effects should be retained by the officers. This order I did not modify. The 'Cristobal Colon' was not injured by our firing, and probably is not much injured by beaching, though she ran ashore at high speed. The beach was so steep that she came off by the working of the sea. But her sea valves were opened and broken, treacherously, I am sure, after her surrender, and despite all efforts she sank. When it became evident that she could not be kept afloat, she was pushed by the 'New York' bodily up on the beach, the 'New York's' stem being placed against her for this purpose—the ship being handled by Captain Chadwick with admirable judgment—and sank in shoal water and may be saved. Had this not been done she would have gone down in deep water and would have been, to a certainty, a total loss.

"I regard this complete and important victory over the Spanish forces as the successful finish of several weeks of arduous and close blockade, so stringent and effective during the night that the enemy was deterred from making the attempt to escape at night, and deliberately elected to make the attempt in daylight. The object of the blockade of Cervera's squadron was fully accomplished, and each individual bore well his part in it—the commodore in command on the second division, the captains of ships, their officers, and men. The fire of the battle ships was powerful and destructive, and the resistance of the Spanish squadron was, in great part, broken almost before they had got beyond the range of their own forts. . . . Several of the [American] ships were struck—the 'Brooklyn' more often than the others—but very slight material injury was done, the greatest being aboard the 'Iowa.' Our loss was 1 man killed and 1 wounded, both on the 'Brooklyn.' It is difficult to explain this immunity from loss of life or injury to ships in a combat with modern vessels of the best type, but Spanish gunnery is poor at the best, and the superior weight and accuracy of our fire speedily drove the men from their guns and silenced their fire. This is borne out by the statements of prisoners and by observation."—*Annual Report of Secretary of the Navy*, 1898, *v.* 2, *pp.* 506–511.

Some particulars of the destruction of the "Furor," the "Pluton," and the "Infanta Maria Teresa," and of the rescue of surviving Spaniards, including Admiral Cervera, are given in a report by Lieutenant Huse, executive officer of the "Gloucester," as follows: "The 'Pluton' was run on the rocks about 4 miles west of Morro and blew up. Our crew cheered at the sight of the explosion. The 'Furor' soon commenced to describe circles with a starboard helm, her fire ceased, and it became apparent that she was disabled. A white rag was waved from forward and we stopped firing. Lieutenants Wood and Norman and Assistant Engineer Proctor were sent to rescue the crews and to see if the prizes could be saved. These found a horrible state of affairs on the 'Furor.' The vessel was a perfect shambles. As she was on fire and burning rapidly, they took off the living and then rescued all they could find in the water and on the beach. The 'Pluton' was among the rocks in the surf and could not be boarded, but her crew had made their way ashore or were adrift on life buoys and wreckage. These were all taken on board. I have since learned that the 'New York' passed a number of men in the water who had doubtless jumped overboard from the destroyers to escape our fire. All these were probably drowned. While this work was going on several explosions took place on the 'Furor,' and presently—at about 11.30—she threw her bows in the air, and turning to port slowly sank in deep water. . . .

"While one of our boats was still ashore, seeing heavy clouds of smoke behind the next point the ship was moved in that direction, the men being at quarters and everything in readiness for further action. On rounding the point two men-of-war were found on the beach burning fiercely aft, the majority of the crew being crowded on the forecastle and unable apparently to reach land, only 200 yards away. Our boats, under Lieutenant Norman and Ensign Edson, put off to the nearer vessel, which proved to be the flagship 'Infanta Maria Teresa,' and rescued all on board by landing them on the beach through the surf. Lieutenant Norman formally received the surrender of the commander in chief and all his officers and men present, and as soon as all hands had been transferred ashore, brought on board this ship all the higher officers, including the admiral. Lieutenant Wood meanwhile rescued the remaining survivors on board the 'Oquendo,' the second of the burning vessels. The Spanish officers not feeling that the prisoners on shore were secure from attack by Cuban partisans, by your orders I directed Lieutenant Norman to land with a small force, establish a camp on shore, and hoist the United States flag over it. He took with him all the rations that could be spared from the stores aboard." —*Annual Report of Secretary of the Navy*, 1898, *v.* 2, *p.* 542.

The following is a translation, from Admiral Cervera's report, as partly published in newspapers at Madrid, giving his description of the destruction of his flagship and his own rescue from death: "The enemy's fire produced terrible damages on board the 'Infanta Maria Teresa,' destroying the elements of defence—among others, the net for protection against fire. In this critical moment the captain of the ship, Señor Concas, fell wounded, and it was necessary to withdraw him, I taking command of the vessel, because it was impossible to find the second commandant of the 'Maria Teresa.' Immediately afterwards they reported to me that my cabin was burning in consequence of an explosion. The fire soon became very great and ignited other parts of the ship. I gave orders to my aid to flood the after magazines, but it was impossible. Dense clouds of smoke impeded walking in the passages and practicing any kind of operations. In this situation I could only think of beaching the ship, and did so, running aground on Punta Cabrera. The contest was impossible on our side, and there was nothing more to be done but to save as much as possible. I thought to lower the flag, but that was not possible on account of the fire, which prevented all operations. In these anxious moments two boats came to the aid of the 'Maria Teresa,' into which a number of us jumped. Those that were not dying were saved with nothing. The 'Teresa' lowered a small boat, which sank before it could be of any service. Subsequently they succeeded in launching a steam launch, but this also sank after making one voyage to the beach. I succeeded in saving myself with nothing, two sailors helping me, one named Andres Sequeros and the officer D. Angel Cervera, all of us arriving on board the American ship 'Gloucester' naked. At this time we were all naked."—*Annual Report of Secretary of the Navy*, 1898, *v.* 2, *pp.* 558–559.

A. D. 1898 (July 4-17).—The surrender of Santiago and of all the Spanish forces in eastern Cuba.—The following is a continuation of the report made by General Shafter of his operations at Santiago de Cuba, resulting in the surrender of the entire forces of Spain in eastern Cuba: "The information of our naval victory was transmitted under flag of truce to the Spanish commander in Santiago on July 4, and the suggestion again made that he surrender to save needless effusion of blood. On the same date I informed Admiral Sampson that if he would force his way into the harbor the city would surrender without any further sacrifice of life. Commodore Watson replied that Admiral Sampson was temporarily absent, but that in his (Watson's) opinion the navy should not enter the harbor. In the meanwhile letters passing between General Toral and myself caused the cessation of hostilities to continue; each army, however, continued to strengthen its intrenchments. I was still of the opinion the Spaniards would surrender without much more fighting, and on July 6 called General Toral's attention to the changed conditions and at his request gave him time to consult his home Government. This he did, asking that the British consul, with the employees of the cable company, be permitted to return from El Caney to the city. This I granted. The strength of the enemy's position was such I did not wish to assault if it could be avoided. An examination of the enemy's works, made after the surrender, fully justified the wisdom of the course adopted. The intrenchments could only have been carried with very great loss of life, probably with not less than 3,000 killed and wounded.

"On July 8 General Toral offered to march out of the city with arms and baggage, provided he would not be molested before reaching Holguin, and to surrender to the American forces the territory then occupied by him. I replied that while I would submit his proposition to my home Government, I did not think it would be accepted. In the meanwhile arrangements were made with Admiral Sampson that when the army again engaged the enemy the navy would assist by shelling the city from ships stationed off Aguadores, dropping a shell every few minutes. On July 10 the 1st Illinois and the 1st District of Columbia arrived, and were placed on the line to the right of the cavalry division. This enabled me to push Lawton further to the right and to practically command the Cobra road. On the afternoon of the date last mentioned the truce was broken off at 4 p. m., and I determined to open with four batteries of artillery, and went forward in person to the trenches to give the necessary orders; but the enemy anticipated us by opening fire with his artillery a few minutes after the hour stated. His batteries were apparently silenced before night, while ours continued playing upon his trenches until dark. During this firing the navy fired from Aguadores, most of the shells falling in the city. There was also some small-arms firing. On this afternoon and the next morning we lost Capt. Charles W. Rowell, 2d Infantry, and 1 man killed, and Lieutenant Lutz, 2d Infantry, and 10 men wounded. On the morning of July 11 the bombardment by the Navy and my field guns was renewed and continued until nearly noon, and on the same day I reported to the Adjutant-General of the Army that the right of Ludlow's

brigade of Lawton's division rested on the bay. Thus our hold upon the enemy was complete.

"At 2 p. m. on this date, the 11th, the surrender of the city was again demanded. The firing ceased and was not again renewed. By this date the sickness in the army was increasing very rapidly as a result of exposure in the trenches to the intense heat of the sun and the heavy rains. Moreover, the dews in Cuba are almost equal to rains. The weakness of the troops was becoming so apparent I was anxious to bring the siege to an end, but in common with most of the officers of the army I did not think an assault would be justifiable, especially as the enemy seemed to be acting in good faith in their preliminary propositions to surrender. On July 11 I wrote General Toral as follows: 'With the largely increased forces which have come to me, and the fact that I have your line of retreat securely in my hands, the time seems fitting that I should again demand of your excellency the surrender of Santiago and of your excellency's army. I am authorized to state that should your excellency so desire the Government of the United States will transport the entire command of your excellency to Spain.' General Toral replied that he had communicated my proposition to his general-in-chief, General Blanco.

"July 12 I informed the Spanish commander that Major-General Miles, commander-in-chief of the American Army, had just arrived in my camp, and requested him to grant us a personal interview on the following day. He replied he would be pleased to meet us. The interview took place on the 13th, and I informed him his surrender only could be considered, and that as he was without hope of escape he had no right to continue the fight. On the 14th another interview took place, during which General Toral agreed to surrender, upon the basis of his army, the Fourth Army Corps, being returned to Spain, the capitulation embracing all of eastern Cuba east of a line passing from Acerraderos on the south to Sagua de Tanamo on the north, via Palma Soriano. It was agreed commissioners should meet during the afternoon to definitely arrange the terms. . . . The terms of surrender finally agreed upon included about 12,000 Spanish troops in the city and as many more in the surrendered district. It was arranged the formal surrender should take place between the lines on the morning of July 17, each army being represented by 100 armed men. At the time appointed, I appeared at the place agreed upon with my general officers, staff, and 100 troopers of the Second Cavalry under Captain Brett. General Toral also arrived with a number of his officers and 100 infantry. We met midway between the representatives of our two armies, and the Spanish commander formally consummated the surrender of the city and the 24,000 troops in Santiago and the surrendered district. After this ceremony I entered the city with my staff and escort, and at 12 o'clock noon the American flag was raised over the governor's palace with appropriate ceremonies."—*Annual Reports of the War Dept.*, 1898, *v.* 2, *pp.* 157–159.

A. D. 1898 (July—August: Army administration). — Red-tape and politics. — Their working in the campaign.—"The Cuban campaign had been foreseen by intelligent officers for more than a year, but the department which clothes the army had taken no steps toward providing a suitable uniform for campaigning in the tropics until war was declared. The Fifth Army Corps, a comparatively small body of 17,000 men, was concentrated at Tampa on the railroad within reach of all the appliances for expediting business. Between April 26, when war was declared, and June 6, when the corps embarked for Cuba, sufficient time elapsed to have clothed 1,000,000 men if the matter had been handled in the same manner a wholesale clothing firm would handle similar business. Yet the corps went to Cuba wearing the winter clothing it had brought on its backs from Montana, Wyoming, and Michigan. It endured the heat of the tropics clad in this, and was furnished with light summer clothing by the department to wear for its return to Montauk, where the breezes were so bracing that the teeth chattered even when the men were clad in winter clothing. The only reason for this absolute failure to properly clothe the army was that the methods of the department are too slow and antiquated for the proper performance of business. There was no lack of money. It was a simple case of red-tape delays. There can be no doubt that the intention was that the summer clothing should be worn in Cuba and that there should be warm clothing issued at Montauk. It was issued after the troops had shivered for days in their light clothes. The delays unavoidably connected with an obsolete method caused great suffering that should not have been inflicted upon men expected to do arduous duty. A sensible man would not put a heavy blanket on a horse to do draught work on a hot day; but the red tape of an antiquated way of doing business caused our soldiers to wear heavy woolen clothes in torrid heat, when every nerve was to be strained to the breaking point in athletic exertion. This is not pointed out in a fault-finding spirit. The men are proud to have been in the Fifth Corps and to have endured these things for the country and the flag; but these unnecessary sufferings impaired the fighting strength of the army, caused much of the sickness that visited the Fifth Corps, and might have caused the failure of the whole expedition. . . .

"The difficulty here depicted was one which beset the department at every turn in the whole campaign. It is a typical case. Transports, tentage transportation—it was the same in everything. With the most heroic exertions the department was able to meet emergencies only after they had passed. This was caused partly by lack of ready material, but mainly by an inelastic system of doing business which broke down in emergencies. This, in turn, was caused mainly by the illiberal treatment accorded to this, as well as to every other department of the army by Congress. It uniformly cuts mercilessly all estimates of this, as of every other department, and leaves no margin of expenditure or chance of improvement. It dabbles in matters which are purely technical and require the handling of expert executive talent. . . .

"Plans for war should be prepared in advance. This was especially true of the last war, which had been foreseen for years and considered a probability for several months. All details should have been previously worked out, all contingencies foreseen before hostilities began. Such plans would require some modifications, of course, but would form a working basis.

Neither Santiago nor Manila Bay would have been foreseen; but any plans for war would have involved the consideration and solution of the following problems: How to raise, arm, equip, organize, mobilize, clothe, feed, shelter, and transport large bodies of soldiers. The point where the battle might occur would be a mere tactical detail to be worked out at the proper time. The above problems could all be solved in time of peace and should have been solved. The general staff performs this function in foreign armies, but we had no such body in our service and nothing to imperfectly take its place. . . .

"The most urgently needed reform is the absolute divorcement of the army in all of its departments from politics. . . . No department of the army should be more exempt from political influence than the staff. This points at once to the most urgent reform, viz., make the commanding general the real working head of the army, instead of the Secretary of War. No good results have come to the service by the extension of the Secretary's powers in Grant's first administration. Most of the evils of the service can be traced to the fact that the general commanding has since that time been practically deprived of his proper functions, and the real head of the army has been a politician."—Lieut. J. H. Parker, *Our Army Supply Departments and the need of a General Staff* (*Review of Reviews, Dec.*, 1898).

A. D. 1898 (July—August: Cuba).—The War with Spain.—Sickness in the American army at Santiago.—Its alarming state.—Hurried removal of troops to Montauk Point, Long Island.—"After the surrender of General Toral's army General Shafter urged the War Department from time to time to hasten the shipment of the Spanish prisoners to their homes, in order that the American Army, whose condition was now deplorable, might be transported to the United States. At this time about half the command had been attacked by malarial fever, with a few cases of yellow fever, dysentery, and typhoid fever. The yellow-fever cases were mainly confined to the troops at Siboney, and the few cases found among the troops at the front were at once transferred to that place. . . . There was great fear, and excellent grounds for it, that the yellow fever, now sporadic throughout the command, would become epidemic. With the command weakened by malarial fevers, and its general tone and vitality much reduced by all the circumstances incident to the campaign, the effects of such an epidemic would practically mean its annihilation. The first step taken to check the spread of disease was the removal of all the troops to new camping grounds. . . . It was directed that the command be moved in this way every few days, isolating the cases of yellow fever as they arose, and it was expected that in a short time the yellow fever would be stamped out. . . . But the effect produced on the command by the work necessary to set up the tents and in the removal of the camps increased the number on the sick report to an alarming degree. Convalescents from malarial fever were taken again with the fever, and yellow fever, dysentery, and typhoid increased. It was useless now to attempt to confine the yellow-fever cases to Siboney, and isolation hospitals were established around Santiago. It was apparent that to keep moving the command every few days simply weakened the troops and increased the fever cases. Any exertion in this heat caused a return of the fever, and it must be remembered that the convalescents now included about 75 per cent. of the command. The Commanding General was now directed to move the entire command into the mountains to the end of the San Luis railroad, where the troops would be above the yellow fever limit; but this was a physical impossibility. . . .

"The situation was desperate; the yellow-fever cases were increasing in number, and the month of August, the period in which it is epidemic, was at hand. It was with these conditions staring them in the face, that the officers commanding divisions and brigades and the Chief Surgeon were invited by General Shafter to discuss the situation. As a result of this conference the General sent the following telegram giving his views [and those of the General Officers and Medical Officers]. . . . 'In reply to telegram of this date [August 3], stating that it is deemed best that my command be moved to end of railroad, where yellow fever is impossible, I have to say that under the circumstances this move is practically impossible. The railroad is not yet repaired, although it will be in about a week. Its capacity is not to exceed 1,000 men a day, at the best, and it will take until the end of August to make this move, even if the sick-list should not increase. An officer of my staff, Lieutenant Miley, who has looked over the ground, says it is not a good camping ground. . . . In my opinion there is but one course to take, and that is to immediately transport the Fifth Corps and the detached regiments that came with it, and were sent immediately after it, with the least delay possible, to the United States. If this is not done I believe the death-rate will be appalling. I am sustained in this view by every medical officer present. I called together to-day the General Officers and the senior Medical Officers and telegraph you their views.' . . .

"On August 4th instructions were received from the War Department to begin the removal of the command to Montauk Point, Long Island. Some of the immune regiments were on the way to Santiago, and other regiments were at once ordered there to garrison the district as General Shafter's command was withdrawn. The first of the fleet of vessels to return the Spanish troops arrived in time to be loaded and leave August 9th, and by the end of the month nearly all were transported.

"After the surrender the relations between the American and Spanish troops were very cordial. There could be little or no conversation between individuals, but in many ways the respect each had for the other was shown, and there seemed to be no hatred on either side. Most of the Spanish officers remained in their quarters in town, and they shared in the feeling displayed by their men. Salutations were generally exchanged between the officers, and American ways and manners became very popular among the Spaniards. . . .

"By the 25th of the month General Shafter's entire command, with the exception of a few organizations just ready to embark, had departed, and, turning over the command to Gen-

eral Lawton, he sailed that day with his staff on the 'Mexico,' one of the captured transports, and at noon September 1st went ashore at Montauk Point, Long Island."—J. D. Miley, *In Cuba with Shafter, ch.* 12 (*N. Y.: Chas. Scribner's Sons*).

A. D. 1898 (July—August: Philippines).—Correspondence between the General commanding United States forces at Cavite and Manila, and Aguinaldo, the Filipino leader.—On the 4th of July, General Thomas M. Anderson, then commanding the "U. S. Expeditionary Forces" at Cavite Arsenal, addressed the following communication to "Señor Don Emilio Aguinaldo y Famy, Commanding Philippine Forces":

"General: I have the honor to inform you that the United States of America, whose land forces I have the honor to command in this vicinity, being at war with the Kingdom of Spain, has entire sympathy and most friendly sentiments for the native people of the Philippine Islands. For these reasons I desire to have the most amicable relations with you, and to have you and your people co-operate with us in military operations against the Spanish forces. In our operations it has become necessary for us to occupy the town of Cavite as a base of operations. In doing this I do not wish to interfere with your residence here and the exercise by yourself and other native citizens of all functions and privileges not inconsistent with military rule. I would be pleased to be informed at once of any misconduct of soldiers under my command, as it is the intention of my Government to maintain order and to treat all citizens with justice, courtesy, and kindness. I have therefore the honor to ask your excellency to instruct your officials not to interfere with my officers in the performance of their duties and not to assume that they can not visit Cavite without permission."

On the following day Aguinaldo replied: "General: Interpreting the sentiments of the Philippine people, I have the honor to express to your excellency my most profound gratefulness for the sympathy and amicable sentiments with which the natives of these islands inspire the great North American nation and your excellency. I also thank most profoundly your desire of having friendly relations with us, and of treating us with justice, courtesy, and kindness, which is also our constant wish to prove the same, and special satisfaction whenever occasion represents. I have already ordered my people not to interfere in the least with your officers and men, orders which I shall reiterate to prevent their being unfulfilled; hoping that you will inform me of whatever misconduct that may be done by those in my command, so as to reprimand them and correspond with your wishes." . . .

To this communication General Anderson returned the following on the 6th: "General: I am encouraged by the friendly sentiment expressed by your excellency in your welcome letter received on the 5th instant to endeavor to come to a definite understanding, which I hope will be advantageous to both. Very soon we expect a large addition to our forces, and it must be apparent to you as a military officer that we will require much more room to camp our soldiers, and also storeroom for our supplies. For this I would like to have your excellency's advice and co-operation, as you are best acquainted with the resources of this country. It must be apparent to you that we do not intend to remain here inactive, but to move promptly against our common enemy. But for a short time we must organize and land supplies, and also retain a place for storing them near our fleet and transports. I am solicitous to avoid any conflict of authority which may result from having two sets of military officers exercising command in the same place. I am also anxious to avoid sickness by taking sanitary precaution. Your own medical officers have been making voluntary inspections with mine, and fear epidemic diseases if the vicinity is not made clean. Would it not be well to have prisoners work to this end under the advice of the surgeons?" . . .

On the 9th of July General Anderson reported to the War Department at Washington: "General Aguinaldo tells me he has about 15,000 fighting men, but only 11,000 armed with guns, which mostly were taken from the Spaniards. He claims to have in all 4,000 prisoners. When we first landed he seemed very suspicious, and not at all friendly, but I have now come to a better understanding with him and he is much more friendly and seems willing to co-operate. But he has declared himself dictator and president, and is trying to take Manila without our assistance. This is not probable, but if he can effect his purpose he will, I apprehend, antagonize any attempt on our part to establish a provisional government."

On the 17th the American commander caused another communication to be addressed to "General Emilio Aguinaldo" as follows: "Sir: General Anderson wishes me to say that, the second expedition having arrived, he expects to encamp in the vicinity of Paranaque from 5,000 to 7,000 men. To do this, supply this army and shelter, will require certain assistance from the Filipinos in this neighborhood. We will want horses, buffaloes, carts, etc., for transportation, bamboo for shelter, wood to cook with, etc. For all this we are willing to pay a fair price, but no more. We find so far that the native population are not willing to give us this assistance as promptly as required. But we must have it, and if it becomes necessary we will be compelled to send out parties to seize what we may need. We would regret very much to do this, as we are here to befriend the Filipinos. Our nation has spent millions of money to send forces here to expel the Spaniards and to give good government to the whole people, and the return we are asking is comparatively slight. General Anderson wishes you to inform your people that we are here for their good, and that they must supply us with labor and material at the current market prices. We are prepared to purchase 500 horses at a fair price, but can not undertake to bargain for horses with each individual owner. I regret very much that I am unable to see you personally, as it is of the utmost importance that these arrangements should be made as soon as possible."

To this communication there seems to have been no written reply until the 24th; and, on the 20th, the Chief Quartermaster reported to General Anderson "that it is impossible to procure transportation except upon Señor Aguinaldo's order, in this section, who has an inventory of everything. The natives have removed their wheels and hid them." On the 23d General Anderson repeated his request, as follows:

"General: When I came here three weeks ago I requested your excellency to give what assistance you could to procure means of transportation for the American Army, as it was to fight the cause of your people. So far we have received no response. As you represent your people, I now have the honor to make requisition on you for 500 horses and 50 oxen and ox carts. If you can not secure these, I will have to pass you and make requisition directly on the people. I beg leave to request an answer at your earliest convenience."

The next day Aguinaldo replied: "I have the honor to manifest to your excellency that I am surprised beyond measure at that which you say to me in it, lamenting the nonreceipt of any response relative to the needs (or aids) that you have asked of me in the way of horses, buffaloes, and carts, because I replied in a precise manner, through the bearer, that I was disposed to give convenient orders whenever you advised me of the number of these with due anticipation (notice). I have circulated orders in the provinces in the proximity that in the shortest time possible horses be brought for sale, but I cannot assure your excellency that we have the number of 500 that is needed, because horses are not abundant in these vicinities, owing to deaths caused by epizootic diseases in January and March last. Whenever we have them united (or collected), I shall have the pleasure to advise your excellency. I have also ordered to be placed at my disposal 50 carts that I shall place at your disposition whenever necessary, always (premising) that you afford me a previous advice of four days in anticipation."

Meantime, General Anderson had written to the War Department, on the 18th: "Since reading the President's instructions to General Merritt, I think I should state to you that the establishment of a provisional government on our part will probably bring us in conflict with insurgents, now in active hostility to Spain. The insurgent chief, Aguinaldo, has declared himself dictator and self-appointed president. He has declared martial law and promulgated a minute method of rule and administration under it. We have observed all official military courtesies, and he and his followers express great admiration and gratitude to the great American Republic of the north, yet in many ways they obstruct our purposes and are using every effort to take Manila without us. I suspect also that Aguinaldo is secretly negotiating with the Spanish authorities, as his confidential aid is in Manila. The city is strongly fortified and hard to approach in the rainy season. If a bombardment fails we should have the best engineering ability here."

And, again on the 21st, he had written: "Since I wrote last, Aguinaldo has put in operation an elaborate system of military government, under his assumed authority as dictator, and has prohibited any supplies being given us, except by his order. As to this last I have written to him that our requisitions on the country for horses, ox carts, fuel and bamboo (to make scaling ladders) must be filled, and that he must aid in having them filled. His assumption of civil authority I have ignored, and let him know verbally that I could, and would, not recognize it, while I did not recognize him as a military leader. It may seem strange that I have made no formal protest against his proclamation as dictator, his declaration of martial law, and publication and execution of a despotic form of government. I wrote such a protest, but did not publish it, at Admiral Dewey's request, and also for fear of wounding the susceptibilities of Major-General Merritt, but I have let it be known in every other way that we do not recognize the dictatorship. These people only respect force and firmness. I submit, with all deference, that we have heretofore underrated the natives. They are not ignorant, savage tribes, but have a civilization of their own; and although insignificant in appearance, are fierce fighters, and for a tropical people they are industrious. A small detail of natives will do more work in a given time than a regiment of volunteers."

On the 24th General Anderson received from the Philippine leader a very clear and definite statement of his attitude towards the "Expeditionary Forces of the United States," and the intentions with which he and the people whom he represented were acting. "I came," he wrote, "from Hongkong to prevent my countrymen from making common cause with the Spanish against the North Americans, pledging before my word to Admiral Dewey to not give place [to allow] to any internal discord, because, [being] a judge of their desires, I had the strong convictions that I would succeed in both objects, establishing a government according to their desires. Thus it is that in the beginning I proclaimed the dictatorship, and afterwards, when some of the provinces had already liberated themselves from Spanish domination, I established a revolutionary government that to-day exists, giving it a democratic and popular character as far as the abnormal circumstances of war permitted, in order that they [the provinces] might be justly represented, and administered to their satisfaction. It is true that my government has not been acknowledged by any of the foreign powers, but we expected that the great North American nation, which struggled first for its independence, and afterwards for the abolition of slavery, and is now actually struggling for the independence of Cuba, would look upon it with greater benevolence than any other nation. Because of this we have always acknowledged the right of preference to our gratitude.

"Debtor to the generosity of the North Americans, and to the favors we have received through Admiral Dewey, and [being] more desirous than any other person of preventing any conflict which would have as a result foreign intervention, which must be extremely prejudicial, not alone to my nation but also to that of your excellency, I consider it my duty to advise you of the undesirability of disembarking North American troops in the places conquered by the Filipinos from the Spanish, without previous notice to this government, because as no formal agreement yet exists between the two nations the Philippine people might consider the occupation of its territories by North American troops as a violation of its rights.

"I comprehend that without the destruction of the Spanish squadron the Philippine revolution would not have advanced so rapidly. Because of this I take the liberty of indicating to your excellency the necessity that, before disembarking, you should communicate in writing to this government the places that are to be occupied and also the object of the occupation, that

the people may be advised in due form and [thus] prevent the commission of any transgression against friendship. I can answer for my people, because they have given me evident proofs of their absolute confidence in my government, but I can not answer for that which another nation whose friendship is not well guaranteed might inspire in it [the people]; and it is certain that I do this not as a menace, but as a further proof of the true and sincere friendship which I have always professed for the North American people, in the complete security that it will find itself completely identified with our cause of liberty."

In the same strain, on the 1st of August, Aguinaldo wrote to U. S. Consul Williams, as to a "distinguished friend:" "I have said always, and I now repeat, that we recognize the right of the North Americans to our gratitude, for we do not forget for a moment the favors which we have received and are now receiving; but however great those favors may be, it is not possible for me to remove the distrust of my compatriots. These say that if the object of the United States is to annex these islands, why not recognize the government established in them, in order in that manner to join with it the same as by annexation? Why do not the American generals operate in conjunction with the Filipino generals and, uniting the forces, render the end more decisive? Is it intended, indeed, to carry out annexation against the wish of these people, distorting the legal sense of that word? If the revolutionary government is the genuine representative by right and deed of the Filipino people, as we have proved when necessary, why is it wished to oppress instead of gaining their confidence and friendship?

"It is useless for me to represent to my compatriots the favors received through Admiral Dewey, for they assert that up to the present the American forces have shown not an active, only a passive, co-operation, from which they suppose that the intentions of these forces are not for the best. They assert, besides, that it is possible to suppose that I was brought from Hongkong to assure those forces by my presence that the Filipinos would not make common cause with the Spaniards, and that they have delivered to the Filipinos the arms abandoned by the former in the Cavite Arsenal, in order to save themselves much labor, fatigue, blood, and treasure that a war with Spain would cost. But I do not believe these unworthy suspicions. I have full confidence in the generosity and philanthropy which shine in characters of gold in the history of the privileged people of the United States, and for that reason, invoking the friendship which you profess for me and the love which you have for my people, I pray you earnestly, as also the distinguished generals who represent your country in these islands, that you entreat the Government at Washington to recognize the revolutionary government of the Filipinos, and I, for my part, will labor with all my power with my people that the United States shall not repent their sentiments of humanity in coming to the aid of an oppressed people.

"Say to the Government at Washington that the Filipino people abominate savagery; that in the midst of their past misfortunes they have learned to love liberty, order, justice, and civil life, and that they are not able to lay aside their own wishes when their future lot and history are under discussion. Say also that I and my leaders know what we owe to our unfortunate country; that we know how to admire and are ready to imitate the disinterestedness, the abnegation, and the patriotism of the grand men of America, among whom stands pre-eminent the immortal General Washington."—*United States, 56th Congress, 1st Sess., Senate Doc. No.* 208.

In an article published in the "North American Review," February, 1900, General Anderson discussed his relations with Aguinaldo very frankly, in part as follows: "On the 1st of July, 1898, I called on Aguinaldo with Admiral Dewey. He asked me at once whether 'the United States of the North' either had recognized or would recognize his government—I am not quite sure as to the form of his question, whether it was 'had' or 'would.' In either form it was embarrassing. My orders were, in substance, to effect a landing, establish a base, not to go beyond the zone of naval co-operation, to consult Admiral Dewey and to wait for Merritt. Aguinaldo had proclaimed his government only a few days before (June 28), and Admiral Dewey had no instructions as to that assumption. The facts as to the situation at that time I believe to be these: Consul Williams states in one of his letters to the State Department that several thousand Tagals were in open insurrection before our declaration of war with Spain. I do not know as to the number, yet I believe the statement has foundation in fact. Whether Admiral Dewey and Consuls Pratt, Wildman and Williams did or did not give Aguinaldo assurances that a Filipino government would be recognized, the Filipinos certainly thought so, probably inferring this from their acts rather than from their statements. If an incipient rebellion was already in progress, what could be inferred from the fact that Aguinaldo and thirteen other banished Tagals were brought down on a naval vessel and landed in Cavite? Admiral Dewey gave them arms and ammunition, as I did subsequently, at his request. They were permitted to gather up a lot of arms which the Spaniards had thrown into the bay; and, with the four thousand rifles taken from Spanish prisoners and two thousand purchased in Hong Kong, they proceeded to organize three brigades and also to arm a small steamer they had captured. I was the first to tell Admiral Dewey that there was any disposition on the part of the American people to hold the Philippines, if they were captured. The current of opinion was setting that way when the first expeditionary force left San Francisco, but this the Admiral had had no reason to surmise.

"But to return to our interview with Aguinaldo. I told him I was acting only in a military capacity; that I had no authority to recognize his government; that we had come to whip the Spaniards, and that, if we were successful, the indirect effect would be to free them from Spanish tyranny. I added that, as we were fighting a common enemy, I hoped we would get along amicably together. He did not seem pleased with this answer. The fact is, he hoped and expected to take Manila with Admiral Dewey's assistance, and he was bitterly disappointed when our soldiers landed at Cavite. . . . A few days thereafter, he made an official call, coming with cabinet and staff and a band of music. On that occasion he handed me an elab-

orate schedule for an autonomous government which he had received from some Filipinos in Manila, with a statement that they had reason to believe that Spain would grant them such a form of government. With this was an open letter addressed to the Filipino people from Pedro Alexandre Paterno, advising them to put their trust in Spain rather than America. The day before, two German officers had called on Aguinaldo and I believed they had brought him these papers. I asked him if the scheme was agreeable to him. He did not answer, but asked if we, the North Americans, as he called us, intended to hold the Philippines as dependencies. I said I could not answer that, but that in one hundred and twenty years we had established no colonies. He then made this remarkable statement: 'I have studied attentively the Constitution of the United States, and I find in it no authority for colonies and I have no fear.' It may seem that my answer was somewhat evasive, but I was at the time trying to contract with the Filipinos for horses, carts, fuel and forage. . . .

"The origin of our controversies and conflicts with the Filipinos can . . . be traced back to our refusal to recognize the political authority of Aguinaldo. Our first serious break with them arose from our refusal to let them co-operate with us. About nine o'clock on the evening of August 12, I received from General Merritt an order to notify Aguinaldo to forbid the Filipino insurgents under his command from entering Manila. This notification was delivered to him at twenty minutes past ten that night. The Filipinos had made every preparation to assail the Spanish lines in their front. Certainly, they would not have given up part of their line to us unless they thought they were to fight with us. They, therefore, received General Merritt's interdict with anger and indignation. They considered the war as their war, and Manila as their capital, and Luzon as their country. . . . At seven o'clock I received an order from General Merritt to remove the Filipinos from the city. . . . I therefore took the responsibility of telegraphing Aguinaldo, who was at Bacoor, ten miles below, requesting him to withdraw his troops and intimating that serious consequences would follow if he did not do so. I received his answer at eleven, saying that a Commission would come to me the next morning with full powers. Accordingly the next day Señors Buencomeno, Lagarde, Araneto and Sandeco came to Division Headquarters in Manila and stated that they were authorized to order the withdrawal of their troops, if we would promise to reinstate them in their present positions on our making peace with Spain. Thereupon I took them over to General Merritt. Upon their repeating their demands, he told them he could not give such a pledge, but that they could rely on the honor of the American people. The General then read to them the proclamation he intended to issue to the Filipino people. . . .

"There is a great diversity of opinion as to whether a conflict with the Filipinos could not have been avoided if a more conciliatory course had been followed in dealing with them. I believe we came to a parting of the ways when we refused their request to leave their military force in a good strategic position on the contingency of our making peace with Spain without a guarantee of their independence."—T. M. Anderson, *Our Rule in the Philippines* (*N. Am. Review*, *v.* 170, *p.* 275).

A. D. 1898 (July—August: Porto Rico).—Occupation of Porto Rico.—"With the fall of Santiago the occupation of Porto Rico became the next strategic necessity. Gen. Miles had previously been assigned to organize an expedition for that purpose. Fortunately, he was already at Santiago, where he had arrived on the 11th of July with reinforcements for Gen. Shafter's army. With these troops, consisting of 3,415 infantry and artillery, 2 companies of engineers and 1 company of the signal corps, Gen. Miles left Guantanamo on July 21st, having 9 transports, convoyed by the fleet, under Capt. Higginson, with the 'Massachusetts' (flagship), 'Dixie,' 'Gloucester,' 'Columbia' and 'Yale,' the two latter carrying troops. The expedition landed at Guanica on July 25th, which port was entered with little opposition. Here the fleet was joined by the 'Annapolis' and the 'Wasp,' while the 'Puritan' and 'Amphitrite' went to San Juan and joined the 'New Orleans,' which was engaged in blockading that port. The major general commanding was subsequently reinforced by General Schwan's brigade of the Third Army Corps, by Gen. Wilson with a part of his division and also by Gen. Brooke with a part of his corps, numbering in all 16,973 officers and men. On July 27th he entered Ponce, one of the most important ports in the island, from which he thereafter directed operations for the capture of the island. With the exception of encounters with the enemy at Guayama, Hormigueros [the Rio Prieto], Coamo, and Yauco and an attack on a force landed at Cape San Juan, there was no serious resistance. The campaign was prosecuted with great vigor and by the 12th of August much of the island was in our possession and the acquisition of the remainder was only a matter of a short time. At most of the points in the island our troops were enthusiastically welcomed. Protestations of loyalty to the flag and gratitude for delivery from Spanish rule met our commanders at every stage."—*Message of the President of the U. S. to Congress, Dec.* 5, 1898.—"During the nineteen days of active campaign on the Island of Puerto Rico a large portion of the island was captured by the United States forces and brought under our control. Our forces were in such a position as to make the positions of the Spanish forces, outside of the garrison at San Juan, utterly untenable. The Spaniards had been defeated or captured in the six different engagements which took place, and in every position they had occupied up to that time. The volunteers had deserted their colors, and many of them had surrendered to our forces and taken the oath of allegiance. This had a demoralizing effect upon the regular Spanish troops. . . . The loss of the enemy in killed, wounded and captured was nearly ten times our own, which was only 3 killed and 40 wounded."—General Miles, *Report* (*Annual Reports of the War Dep't*, 1898, *v.* 1, *pt.* 2, *p.* 36).

A. D. 1898 (July—September).—The War with Spain.—Capture of Manila.—Relations with the Filipino insurgents.—General Merritt's report.—Aguinaldo declared President of the Philippine Republic.—"Immediately after my arrival [July 25] I visited General Greene's camp and made a reconnaissance of the position held by the Spanish, and also the opposing lines of

the insurgent forces, hereafter to be described. I found General Greene's command encamped on a strip of sandy land running parallel to the shore of the bay and not far distant from the beach, but owing to the great difficulties of landing supplies, the greater portion of the force had shelter tents only, and were suffering many discomforts, the camp being situated in a low, flat place, without shelter from the heat of the tropical sun or adequate protection during the terrific downpours of rain so frequent at this season. I was at once struck by the exemplary spirit of patient, even cheerful, endurance shown by the officers and men under such circumstances, and this feeling of admiration for the manner in which the American soldier, volunteer and regular alike, accept the necessary hardships of the work they have undertaken to do, has grown and increased with every phase of the difficult and trying campaign which the troops of the Philippine expedition have brought to such a brilliant and successful conclusion.

"I discovered during my visit to General Greene that the left or north flank of his brigade camp extended to a point on the 'Calle Real' about 3,200 yards from the outer line of Spanish defenses of the city of Manila. This Spanish line began at the powder magazine, or old Fort San Antonio, within a hundred yards of the beach and just south of the Malate suburb of Manila, and stretched away to the Spanish left in more or less detached works, eastward, through swamps and rice fields, covering all the avenues of approach to the town and encircling the city completely. The Filipinos, or insurgent forces at war with Spain, had, prior to the arrival of the American land forces, been waging a desultory warfare with the Spaniards for several months, and were at the time of my arrival in considerable force, variously estimated and never accurately ascertained, but probably not far from 12,000 men. These troops, well supplied with small arms, with plenty of ammunition and several field guns, had obtained positions of investment opposite to the Spanish line of detached works throughout their entire extent; and on the particular road called the 'Calle Real,' passing along the front of General Greene's brigade camp and running through Malate to Manila, the insurgents had established an earthwork or trench within 800 yards of the powder-magazine fort. They also occupied as well the road to the right, leading from the village of Pasay, and the approach by the beach was also in their possession. This anomalous state of affairs, namely, having a line of quasi-hostile native troops between our forces and the Spanish position, was, of course, very objectionable, but it was difficult to deal with, owing to the peculiar condition of our relations with the insurgents, which may be briefly stated as follows:

"Shortly after the naval battle of Manila Bay, the principal leader of the insurgents, Gen. Emilio Aguinaldo, came to Cavite from Hongkong, and, with the consent of our naval authorities, began active work in raising troops and pushing the Spaniards in the direction of the city of Manila. Having met with some success, and the natives flocking to his assistance, he proclaimed an independent government of republican form, with himself as president, and at the time of my arrival in the islands the entire edifice of executive and legislative departments and subdivision of territory for administrative purposes had been accomplished, at least on paper, and the Filipinos held military possession of many points in the islands other than those in the vicinity of Manila. As General Aguinaldo did not visit me on my arrival nor offer his services as a subordinate military leader, and as my instructions from the President fully contemplated the occupation of the islands by the American land forces, and stated that 'the powers of the military occupant are absolute and supreme and immediately operate upon the political condition of the inhabitants,' I did not consider it wise to hold any direct communication with the insurgent leader until I should be in possession of the city of Manila, especially as I would not until then be in a position to issue a proclamation and enforce my authority, in the event that his pretensions should clash with my designs.

"For these reasons the preparations for the attack on the city were pressed and military operations conducted without reference to the situation of the insurgent forces. The wisdom of this course was subsequently fully established by the fact that when the troops of my command carried the Spanish intrenchments, extending from the sea to the Pasay road on the extreme Spanish right, we were under no obligations, by pre-arranged plans of mutual attack, to turn to the right and clear the front still held against the insurgents, but were able to move forward at once and occupy the city and suburbs.

"To return to the situation of General Greene's brigade as I found it on my arrival, it will be seen that the difficulty in gaining an avenue of approach to the Spanish line lay in the fact of my disinclination to ask General Aguinaldo to withdraw from the beach and the 'Calle Real,' so that Greene could move forward. This was overcome by instructions to General Greene to arrange, if possible, with the insurgent brigade commander in his immediate vicinity to move to the right and allow the American forces unobstructed control of the roads in their immediate front. No objection was made, and accordingly General Greene's brigade threw forward a heavy outpost line on the 'Calle Real' and the beach and constructed a trench, in which a portion of the guns of the Utah batteries was placed. The Spanish, observing this activity on our part, made a very sharp attack with infantry and artillery on the night of July 31. The behavior of our troops during this night attack was all that could be desired, and I have, in cablegrams to the War Department, taken occasion to commend by name those who deserve special mention for good conduct in the affair. Our position was extended and strengthened after this and resisted successfully repeated night attacks, our forces suffering, however, considerable loss in wounded and killed, while the losses of the enemy, owing to the darkness, could not be ascertained.

"The strain of the night fighting and the heavy details for outpost duty made it imperative to re-enforce General Greene's troops with General MacArthur's brigade, which had arrived in transports on the 31st of July. The difficulties of this operation can hardly be overestimated. The transports were at anchor off Cavite, 5 miles from a point on the beach where it was desired to disembark the men. Several squalls, accompanied by floods of rain, raged day after day, and the only way to get the troops and

supplies ashore was to load them from the ship's side into native lighters (called 'cascos') or small steamboats, move them to a point opposite the camp, and then disembark them through the surf in small boats, or by running the lighters head on to the beach. The landing was finally accomplished, after days of hard work and hardship; and I desire here to express again my admiration for the fortitude and cheerful willingness of the men of all commands engaged in this operation. Upon the assembly of MacArthur's brigade in support of Greene's, I had about 8,500 men in position to attack, and I deemed the time had come for final action. During the time of the night attacks I had communicated my desire to Admiral Dewey that he would allow his ships to open fire on the right of the Spanish line of intrenchments, believing that such action would stop the night firing and loss of life, but the admiral had declined to order it unless we were in danger of losing our position by the assaults of the Spanish, for the reason that, in his opinion, it would precipitate a general engagement, for which he was not ready. Now, however, the brigade of General MacArthur was in position and the 'Monterey' had arrived, and under date of August 6 Admiral Dewey agreed to my suggestion that we should send a joint letter to the captain-general notifying him that he should remove from the city all non-combatants within forty-eight hours, and that operations against the defenses of Manila might begin at any time after the expiration of that period.

"This letter was sent August 7, and a reply was received the same date, to the effect that the Spanish were without places of refuge for the increased numbers of wounded, sick women, and children now lodged within the walls. On the 9th a formal joint demand for the surrender of the city was sent in. This demand was based upon the hopelessness of the struggle on the part of the Spaniards, and that every consideration of humanity demanded that the city should not be subjected to bombardment under such circumstances. The captain-general's reply, of same date, stated that the council of defense had declared that the demand could not be granted; but the captain-general offered to consult his Government if we would allow him the time strictly necessary for the communications by way of Hongkong. This was declined on our part for the reason that it could, in the opinion of the admiral and myself, lead only to a continuance of the situation, with no immediate result favorable to us, and the necessity was apparent and very urgent that decisive action should be taken at once to compel the enemy to give up the town, in order to relieve our troops from the trenches and from the great exposure to unhealthy conditions which were unavoidable in a bivouac during the rainy season.

"The seacoast batteries in defense of Manila are so situated that it is impossible for ships to engage them without firing into the town, and as the bombardment of a city filled with women and children, sick and wounded, and containing a large amount of neutral property, could only be justified as a last resort, it was agreed between Admiral Dewey and myself that an attempt should be made to carry the extreme right of the Spanish line of intrenchments in front of the positions at that time occupied by our troops, which, with its flank on the seashore, was entirely open to the fire of the navy. It was not my intention to press the assault at this point, in case the enemy should hold it in strong force, until after the navy had made practicable breaches in the works and shaken the troops holding them, which could not be done by the army alone, owing to the absence of siege guns. . . . It was believed, however, as most desirable, and in accordance with the principles of civilized warfare, that the attempt should be made to drive the enemy out of his intrenchments before resorting to the bombardment of the city. . . .

"All the troops were in position on the 13th at an early hour in the morning. About 9 a. m. on that day our fleet steamed forward from Cavite and before 10 a. m. opened a hot and accurate fire of heavy shells and rapid-fire projectiles on the sea flank of the Spanish intrenchments at the powder magazine fort, and at the same time the Utah batteries, in position in our trenches near the 'Calle Real,' began firing with great accuracy. At 10.25, on a prearranged signal from our trenches that it was believed our troops could advance, the navy ceased firing, and immediately a light line of skirmishers from the Colorado regiment of Greene's brigade passed over our trenches and deployed rapidly forward, another line from the same regiment from the left flank of our earthworks advancing swifty up the beach in open order. Both these lines found the powder-magazine fort and the trenches flanking it deserted, but as they passed over the Spanish works they were met by a sharp fire from a second line situated in the streets of Malate, by which a number of men were killed and wounded, among others the soldier who pulled down the Spanish colors still flying on the fort and raised our own.

"The works of the second line soon gave way to the determined advance of Greene's troops, and that officer pushed his brigade rapidly through Malate and over the bridges to occupy Binondo and San Miguel, as contemplated in his instructions. In the meantime the brigade of General MacArthur, advancing simultaneously on the Pasay road, encountered a very sharp fire, coming from the blockhouses, trenches, and woods in his front, positions which it was very difficult to carry, owing to the swampy condition of the ground on both sides of the roads and the heavy undergrowth concealing the enemy. With much gallantry and excellent judgment on the part of the brigade commander and the troops engaged these difficulties were overcome with a minimum loss, and MacArthur advanced and held the bridges and the town of Malate, as was contemplated in his instructions.

"The city of Manila was now in our possession, excepting the walled town, but shortly after the entry of our troops into Malate a white flag was displayed on the walls, whereupon Lieut. Col. C. A. Whittier, United States Volunteers, of my staff, and Lieutenant Brumby, United States Navy, representing Admiral Dewey, were sent ashore to communicate with the Captain-General. I soon personally followed these officers into the town, going at once to the palace of the Governor-General, and there, after a conversation with the Spanish authorities, a preliminary agreement of the terms of capitulation was signed by the Captain-General and myself. This agreement was subsequently incorporated into the formal terms of capitulation, as arranged by the officers representing the two forces, a copy

of which is hereto appended and marked. Immediately after the surrender the Spanish colors on the sea front were hauled down and the American flag displayed and saluted by the guns of the navy. The Second Oregon Regiment, which had proceeded by sea from Cavite, was disembarked and entered the walled town as a provost guard, and the colonel was directed to receive the Spanish arms and deposit them in places of security. The town was filled with the troops of the enemy driven in from the intrenchments, regiments formed and standing in line in the streets, but the work of disarming proceeded quietly and nothing unpleasant occurred.

"In leaving the subject of the operations of the 13th, I desire here to record my appreciation of the admirable manner in which the orders for attack and the plan for occupation of the city were carried out by the troops exactly as contemplated. I submit that for troops to enter under fire a town covering a wide area, to rapidly deploy and guard all principal points in the extensive suburbs, to keep out the insurgent forces pressing for admission, to quietly disarm an army of Spaniards more than equal in numbers to the American troops, and finally by all this to prevent entirely all rapine, pillage, and disorder, and gain entire and complete possession of a city of 300,000 people, filled with natives hostile to the European interests, and stirred up by the knowledge that their own people were fighting in the outside trenches, was an act which only the law-abiding, temperate, resolute American soldier, well and skillfully handled by his regimental and brigade commanders, could accomplish. . . .

"The amount of public funds and the numbers of the prisoners of war and small arms taken have been reported in detail by cable. It will be observed that the trophies of Manila were nearly $900,000, 13,000 prisoners, and 22,000 arms. Immediately after the surrender my headquarters were established in the ayuntamiento, or city office of the Governor-General, where steps were at once inaugurated to set up the government of military occupancy. . . . On the 16th a cablegram containing the text of the President's proclamation directing a cessation of hostilities was received by me, and at the same time an order to make the fact known to the Spanish authorities, which was done at once. This resulted in a formal protest from the Governor-General in regard to the transfer of public funds then taking place, on the ground that the proclamation was dated prior to the surrender. To this I replied that the status quo in which we were left with the cessation of hostilities was that existing at the time of the receipt by me of the official notice, and that I must insist upon the delivery of the funds. The delivery was made under protest.

"After the issue of my proclamation and the establishment of my office as military governor, I had direct written communication with General Aguinaldo on several occasions. He recognized my authority as military governor of the town of Manila and suburbs, and made professions of his willingness to withdraw his troops to a line which I might indicate, but at the same time asking certain favors for himself. The matters in this connection had not been settled at the date of my departure. Doubtless much dissatisfaction is felt by the rank and file of the insurgents that they have not been permitted to enjoy the occupancy of Manila, and there is some ground for trouble with them owing to that fact, but, notwithstanding many rumors to the contrary, I am of the opinion that the leaders will be able to prevent serious disturbances, as they are sufficiently intelligent and educated to know that to antagonize the United States would be to destroy their only chance of future political improvement.

"On the 28th instant I received a cablegram directing me to transfer my command to Major-General Otis, United States Volunteers, and to proceed to Paris, France, for conference with the peace commissioners. I embarked on the steamer 'China' on the 30th in obedience to these instructions."—*Report of General Wesley Merritt* (*Annual Reports of the War Department*, 1898, *v.* 1, *pp.* 39–45).

"Aguinaldo. . . retired to Malalos, about 25 miles to the northward, leaving his troops entrenched round Manila, and there with considerable pomp and ceremony on September 29th, 1898, he was declared First President of the Philippine Republic, and the National Congress was opened with Pedro Paterno as President of that assembly."—G. J. Younghusband, *The Philippines and Round About*, *p.* 27.

A. D. 1898 (July—December).—War with Spain.—Suspension of hostilities.—Negotiation of Treaty of Peace.—Instructions to American Commissioners.—Relinquishment of Spanish sovereignty over Cuba and cession of Porto Rico, the island of Guam and the Philippine Islands to the United States.—In his message to Congress, December 5, 1898, President McKinley gave the following account of his reception of overtures from Spain, for the termination of the war, and of the negotiations which resulted in a treaty of peace: "The annihilation of Admiral Cervera's fleet, followed by the capitulation of Santiago, having brought to the Spanish Government a realizing sense of the hopelessness of continuing a struggle now become wholly unequal, it made overtures of peace through the French Ambassador, who, with the assent of his Government, had acted as the friendly representative of Spanish interests during the war. On the 26th of July M. Cambon presented a communication signed by the Duke of Almodovar, the Spanish Minister of State, inviting the United States to state the terms upon which it would be willing to make peace. On the 30th of July, by a communication addressed to the Duke of Almodovar and handed to M. Cambon, the terms of this Government were announced, substantially as in the protocol afterwards signed. On the 10th of August the Spanish reply, dated August 7th, was handed by M. Cambon to the Secretary of State. It accepted unconditionally the terms imposed as to Cuba, Porto Rico and an island of the Ladrone group, but appeared to seek to introduce inadmissible reservations in regard to our demand as to the Philippine Islands. Conceiving that discussion on this point could neither be practical nor profitable, I directed that, in order to avoid misunderstanding, the matter should be forthwith closed by proposing the embodiment in a formal protocol of the terms upon which the negotiations for peace were to be undertaken. The vague and inexplicit suggestion of the Spanish note could not be accepted, the only reply being

to present as a virtual ultimatum a draft of protocol embodying the precise terms tendered to Spain in our note of July 30th, with added stipulations of detail as to the appointment of commissioners to arrange for the evacuation of the Spanish Antilles. On August 12th M. Cambon announced his receipt of full powers to sign the protocol submitted. Accordingly, on the afternoon of August 12th M. Cambon, as the plenipotentiary of Spain, and the Secretary of State, as the plenipotentiary of the United States, signed a protocol providing: Article I—Spain will relinquish all claim of sovereignty over and title to Cuba. Article II—Spain will cede to the United States the island of Porto Rico and other islands now under Spanish sovereignty in the West Indies and also an island in the Ladrones to be selected by the United States. Article III—The United States will occupy and hold the city, bay and harbor of Manila pending the conclusion of a treaty of peace, which shall determine the control, disposition and government of the Philippines. The fourth article provided for the appointment of joint commissions on the part of the United States and Spain, to meet in Havana and San Juan, respectively, for the purpose of arranging and carrying out the details of the stipulated evacuation of Cuba, Porto Rico and other Spanish islands in the West Indies. The fifth article provided for the appointment of not more than five commissioners on each side, to meet at Paris not later than October 1st, and proceed to the negotiation and conclusion of a treaty of peace, subject to ratification according to the respective constitutional forms of the two countries. The sixth and last article provided that upon the signature of the protocol hostilities between the two countries should be suspended and that notice to that effect should be given as soon as possible by each government to the commanders of its military and naval forces. Immediately upon the conclusion of the protocol I issued a proclamation of August 12th, suspending hostilities on the part of the United States. The necessary orders to that end were at once given by telegraph. The blockade of the ports of Cuba and San Juan de Porto Rico was in like manner raised. On the 18th of August the muster-out of 100,000 Volunteers, or as near that number as was found to be practicable, was ordered. On the 1st of December 101,165 officers and men had been mustered out and discharged from the service and 9,002 more will be mustered out by the 10th of this month. Also a corresponding number of general staff officers have been honorably discharged from the service. The military commissions to superintend the evacuation of Cuba, Porto Rico and the adjacent islands were forthwith appointed: For Cuba, Maj.-Gen. James F. Wade, Rear-Admiral William T. Sampson, Maj.-Gen. Matthew C. Butler. For Porto Rico, Maj.-Gen. John R. Brooke, Rear-Admiral Winfield S. Schley and Brig.-Gen. William W. Gordon, who soon afterwards met the Spanish commissioners at Havana and San Juan respectively. . . . Pursuant to the fifth article of the protocol, I appointed William R. Day, late Secretary of State; Cushman K. Davis, William P. Frye and George Gray, Senators of the United States, and Whitelaw Reid, to be the peace commissioners on the part of the United States. Proceeding in due season to Paris they there met on the first of October five commissioners, similarly appointed on the part of Spain."—*Message of the President to Congress, Dec.* 5, 1898.

The instructions given (September 16) by President McKinley to the commissioners appointed to treat for peace with Spain, and the correspondence between the commissioners at Paris and the President and the Secretary of State at Washington during the progress of the negotiations, were communicated confidentially to the U. S. Senate on the 30th of January, 1899, but not published until February, 1901, when the injunction of secrecy was removed and the printing of the papers ordered by vote of the Senate. The chief interest of these papers lies in their disclosure of what passed between the American executive and the peace commissioners on the subject of the Philippine Islands which led to the demand for their entire surrender by Spain.

In his instructions of September 16th to the commissioners, on their departure for the meeting with Spanish commissioners at Paris, the President wrote on this subject: "By article 6 of the protocol it was agreed that hostilities between the two countries should be suspended, and that notice to that effect should be given as soon as possible by each Government to the commanders of its military and naval forces. Such notice was given by the Government of the United States immediately after the signature of the protocol, the forms of the necessary orders having previously been prepared. But before notice could reach the commanders of the military and naval forces of the United States in the Philippines they captured and took possession by conquest of the city of Manila and its suburbs, which are therefore held by the United States by conquest as well as by virtue of the protocol. In view of what has taken place it is necessary now to determine what shall be our future relations to the Philippines. . . .

"Our aim in the adjustment of peace should be directed to lasting results and to the achievement of the common good under the demands of civilization rather than to ambitious designs. The terms of the protocol were framed upon this consideration. The abandonment of the Western Hemisphere by Spain was an imperative necessity. In presenting that requirement we only fulfilled a duty universally acknowledged. It involves no ungenerous reference to our recent foe, but simply a recognition of the plain teachings of history, to say that it was not compatible with the assurance of permanent peace on and near our own territory that the Spanish flag should remain on this side of the sea. This lesson of events and of reason left no alternative as to Cuba, Porto Rico, and the other islands belonging to Spain in this hemisphere. The Philippines stand upon a different basis. It is none the less true, however, that, without any original thought of complete or even partial acquisition, the presence and success of our arms at Manila imposes upon us obligations which we can not disregard. The march of events rules and overrules human action. Avowing unreservedly the purpose which has animated all our effort, and still solicitous to adhere to it, we can not be unmindful that without any desire or design on our part the war has brought us new duties and responsibilities which we must meet and discharge as becomes a great nation on whose growth and career from the beginning the Ruler

of Nations has plainly written the high command and pledge of civilization.

"Incidental to our tenure in the Philippines is the commercial opportunity to which American statesmanship can not be indifferent. It is just to use every legitimate means for the enlargement of American trade; but we seek no advantages in the Orient which are not common to all. Asking only the open door for ourselves, we are ready to accord the open door to others. The commercial opportunity which is naturally and inevitably associated with this new opening depends less on large territorial possessions than upon an adequate commercial basis and upon broad and equal privileges. It is believed that in the practical application of these guiding principles the present interests of our country and the proper measure of its duty, its welfare in the future, and the consideration of its exemption from unknown perils will be found in full accord with the just, moral, and humane purpose which was invoked as our justification in accepting the war.

"In view of what has been stated, the United States can not accept less than the cession in full right and sovereignty of the island of Luzon. It is desirable, however, that the United States shall acquire the right of entry for vessels and merchandise belonging to citizens of the United States into such ports of the Philippines as are not ceded to the United States upon terms of equal favor with Spanish ships and merchandise, both in relation to port and customs charges and rates of trade and commerce, together with other rights of protection and trade accorded to citizens of one country within the territory of another. You are therefore instructed to demand such concession, agreeing on your part that Spain shall have similar rights as to her subjects and vessels in the ports of any territory in the Philippines ceded to the United States."

On the 7th of October, Mr. Day, on behalf of the American commissioners, cabled a long communication from Paris to Mr. Hay, his successor in the U. S. Department of State, summarizing testimony given before the Commission by General Merritt, lately commanding in the Philippines, and statements brought by General Merritt from Admiral Dewey, General Greene, and others. In part, the telegram was as follows: "General Anderson, in correspondence with Aguinaldo in June and July, seemed to treat him and his forces as allies and native authorities, but subsequently changed his tone. General Merritt reports that Admiral Dewey did not approve this correspondence and advised against it. Merritt and Dewey both kept clear of any compromising communications. Merritt expresses opinion we are in no way committed to any insurgent programme. Answering questions of Judge Day, General Merritt said insurrection practically confined to Luzon. Tribal and religious differences between the inhabitants of various islands. United States has helped rather than injured insurrection. Under no obligation other than moral to help natives. Natives of Luzon would not accept Spanish rule, even with amnesty. Insurgents would be victorious unless Spaniards did better in future than in past. Insurgents would fight among themselves if they had no common enemy. Think it feasible for United States to take Luzon and perhaps some adjacent islands and hold them as England does her colonies. Natives could not resist 5,000 troops. . . . General Merritt thinks that if United States attempted to take possession of Luzon, or all the group as a colony, Aguinaldo and his immediate followers would resist it, but his forces are divided and his opposition would not amount to anything. If the islands were divided, filibustering expeditions might go from one island to another, thus exposing us to constant danger of conflict with Spain. In answer to questions of Senator Frye, Merritt said insurgents would murder Spaniards and priests in Luzon and destroy their property if the United States withdrew. United States under moral obligation to stay there. He did not know whether the effect of setting up a government by the United States in Luzon would be to produce revolutions in other islands. It might cause reforms in their government. . . . Answering questions of Mr. Gray, Merritt said consequences in case of either insurgent or Spanish triumph made it doubtful whether United States would be morally justified in withdrawing. Our acts were ordinary acts of war, as if we had attacked Barcelona, but present conditions in Philippine Islands were partly brought about by us. Insurgents not in worse condition by our coming. Spaniards hardly able to defend themselves. If we restored them to their position and trenches, they might maintain themselves with the help of a navy when we withdrew. Did not know that he could make out a responsibility by argument, but he felt it. It might be sentimental. He thought it would be an advantage if the United States would change its policy and keep the islands. (He) thought our interests in the East would be helped by the cheap labor in the Philippines, costing only from 20 to 80 cents a day, according to skill. . . . Answering questions of Mr. Reid, Merritt said he considered capture of Manila practically capture of group. Nothing left of Spanish sovereignty that was not at mercy of the United States. Did not think our humanity bounded by geographical lines. After Dewey's victory we armed insurgents to some extent, but Dewey says it was over-estimated. Insurgents bought arms from Hongkong merchants with Dewey's cognizance, but Dewey was not in favor of allowing this to continue. Spaniards would destroy Aguinaldo and his principal followers, if allowed to do so."

October 25, Judge Day cabled a message to Washington, saying: "Differences of opinion among commissioners concerning Philippine Islands are set forth in statements transmitted herewith. On these we request early consideration and explicit instructions. Liable now to be confronted with this question in joint commission almost immediately." The differing statements then transmitted were three in number, the first of them signed by Messrs. Davis, Frye, and Reid, who said: "Information gained by commission in Paris leads to conviction that it would be naval, political, and commercial mistake to divide the archipelago. Nearly all expert testimony taken tends to this effect. As instructions provide for retention at least of Luzon, we do not consider question of remaining in Philippine Islands at all as now properly before us. We therefore ask for extension of instructions. Spain governed and defended these islands from Manila, and with destruction of her fleet and the surrender of her army we became as complete masters of the whole group as she had been, with nothing needed to complete the conquest save to

proceed with the ample forces we had at hand to take unopposed possession. The Ladrones and Carolines were also governed from the same capital by the same governor-general. National boundaries ought to follow natural divisions, but there is no natural place for dividing Philippine Islands. . . . If we do not want the islands ourselves, better to control their disposition; that is, to hold the option on them rather than to abandon it. Could then at least try to protect ourselves by ample treaty stipulations with the acquiring powers. Commercially, division of archipelago would not only needlessly establish dangerous rivals at our door, but would impair value of part we kept."

Disagreeing with this view, Judge Day said: "I am unable to agree that we should peremptorily demand the entire Philippine island group. In the spirit of our instructions, and bearing in mind the often declared disinterestedness of purpose and freedom from designs of conquest with which the war was undertaken, we should be consistent in our demands in making peace. Territory permanently held must be taken as war indemnity and with due regard to our responsibility because of the conduct of our military and naval authorities in dealing with the insurgents. Whether this conduct was wise or unwise is not now important. We cannot leave the insurgents to mere treaty stipulations or to their unaided resources, either to form a government or to battle against a foe which (although) unequal to us, might readily overcome them. On all hands it is agreed that the inhabitants of the islands are unfit for self-government. This is particularly true of Mindanao and the Sulu group. Only experience can determine the success of colonial expansion upon which the United States is entering. It may prove expensive in proportion to the scale upon which it is tried with ignorant and semibarbarous people at the other side of the world. It should therefore be kept within bounds." Judge Day, accordingly, suggested a division of the archipelago that would give to the United States Luzon, Mindoro, and Palawan, and control the entrance to the China Sea.

Senator Gray, in a third statement, dissented from both these views, saying: "The undersigned can not agree that it is wise to take Philippine Islands in whole or in part. To do so would be to reverse accepted continental policy of the country, declared and acted upon throughout our history. Propinquity governs the case of Cuba and Porto Rico. Policy proposed introduces us into European politics and the entangling alliances against which Washington and all American statesmen have protested. It will make necessary a navy equal to largest of powers; a greatly increased military establishment; immense sums for fortifications and harbors; multiply occasions for dangerous complications with foreign nations, and increase burdens of taxation. Will receive in compensation no outlet for American labor in labor market already overcrowded and cheap; no area for homes for American citizens; climate and social conditions demoralizing to character of American youth; new and disturbing questions introduced into our politics; church question menacing. On whole, instead of indemnity—injury. The undersigned can not agree that any obligation incurred to insurgents is paramount to our own manifest interests. . . . No place for colonial administration or government of subject people in American system. So much from standpoint of interest; but even conceding all benefits claimed for annexation, we thereby abandon the infinitely greater benefit to accrue from acting the part of a great, powerful, and Christian nation; we exchange the moral grandeur and strength to be gained by keeping our word to nations of the world and by exhibiting a magnanimity and moderation in the hour of victory that becomes the advanced civilization we claim, for doubtful material advantages and shameful stepping down from high moral position boastfully assumed. We should set example in these respects, not follow in the selfish and vulgar greed for territory which Europe has inherited from medieval times. Our declaration of war upon Spain was accompanied by a solemn and deliberate definition of our purpose. Now that we have achieved all and more than our object, let us simply keep our word. . . . At the very least let us adhere to the President's instructions and if conditions require the keeping of Luzon forego the material advantages claimed in annexing other islands. Above all let us not make a mockery of the injunction contained in those instructions, where, after stating that we took up arms only in obedience to the dictates of humanity and in the fulfillment of high public and moral obligations, and that we had no design of aggrandizement and no ambition of conquest, the President among other things eloquently says: 'It is my earnest wish that the United States in making peace should follow the same high rule of conduct which guided it in facing war. It should be as scrupulous and magnanimous in the concluding settlement as it was just and humane in its original action.' This and more, of which I earnestly ask a re-perusal, binds my conscience and governs my actions."

But the President had now arrived at a different state of mind, and directed Secretary Hay to make the following reply, on the 26th:

"The information which has come to the President since your departure convinces him that the acceptance of the cession of Luzon alone, leaving the rest of the islands subject to Spanish rule, or to be the subject of future contention, can not be justified on political, commercial, or humanitarian grounds. The cession must be of the whole archipelago or none. The latter is wholly inadmissible and the former must therefore be required. The President reaches this conclusion after most thorough consideration of the whole subject, and is deeply sensible of the grave responsibilities it will impose, believing that this course will entail less trouble than any other and besides will best subserve the interests of the people involved, for whose welfare we can not escape responsibility."

Two days later, the moral and political reflections of the President on the subject were expressed still further to the commissioners by Secretary Hay, in the following telegram: "While the Philippines can be justly claimed by conquest, which position must not be yielded, yet their disposition, control, and government the President prefers should be the subject of negotiation as provided in the protocol. It is imperative upon us that as victors we should be governed only by motives which will exalt our nation. Territorial expansion should be our least concern; that we shall not shirk the moral obli-

gations of our victory is of the greatest. It is undisputed that Spain's authority is permanently destroyed in every part of the Philippines. To leave any part in her feeble control now would increase our difficulties and be opposed to the interests of humanity. The sentiment in the United States is almost universal that the people of the Philippines, whatever else is done, must be liberated from Spanish domination. In this sentiment the President fully concurs. Nor can we permit Spain to transfer any of the islands to another power. Nor can we invite another power or powers to join the United States in sovereignty over them. We must either hold them or turn them back to Spain. Consequently, grave as are the responsibilities and unforeseen as are the difficulties which are before us, the President can see but one plain path of duty—the acceptance of the archipelago. Greater difficulties and more serious complications—administrative and international—would follow any other course. The President has given to the views of the commissioners the fullest consideration, and in reaching the conclusion above announced in the light of information communicated to the commission and to the President since your departure, he has been influenced by the single consideration of duty and humanity. The President is not unmindful of the distressed financial condition of Spain, and whatever consideration the United States may show must come from its sense of generosity and benevolence, rather than from any real or technical obligation. The terms upon which the full cession of the Philippines shall be made must be left largely with the commission."

On the 3d of November, Judge Day cabled: "After a careful examination of the authorities, the majority of the commission are clearly of opinion that our demand for the Philippine Islands can not be based on conquest. When the protocol was signed Manila was not captured, siege was in progress and capture made after the execution of the protocol. Captures made after agreement for armistice must be disregarded and status quo restored as far as practicable. We can require cession of Philippine Islands only as indemnity for losses and expenses of the war. Have in view, also, condition of islands, the broken power of Spain, anarchy in which our withdrawal would leave the islands, etc. These are legitimate factors."

On the 4th, Senator Davis added a personal telegram as follows: "I think we can demand cession of entire archipelago on other and more valid grounds than a perfected territorial conquest of the Philippine Islands, such as indemnity or as conditions of peace imposed by our general military success and in view of our future security and general welfare, commercial and otherwise. I think the protocol admits all these grounds, and that the ground alone of perfected territorial conquest of the Philippine Islands is too narrow and untenable under protocol."

Secretary Hay replied, for the President, on the 5th: "The President has no purpose to question the commission's judgment as to the grounds upon which the cession of the archipelago is to be claimed. His only wish in that respect is to hold all the ground upon which we can fairly and justly make the claim. He recognizes fully the soundness of putting forward indemnity as the chief ground, but conquest is a consideration which ought not to be ignored. How our demand shall be presented, and the grounds upon which you will rest it, he confidently leaves with the commissioners. His great concern is that a treaty shall be effected in terms which will not only satisfy the present generation but, what is more important, be justified in the judgment of posterity."

Discussion followed, in which Judge Day and Senator Gray repeated the views they had formerly expressed, in dissent from the policy determined upon by the President and his cabinet, the latter saying: "Believing that the result of a failure to obtain a treaty would be the forcible seizure of the whole Philippine Islands group, an event greatly to be deprecated as inconsistent with the traditions and civilization of the United States, I would be willing to take the islands by the cession of a treaty of peace, and I would, to that end, make such reasonable concessions as would comport with the magnanimity of a great nation dealing with a weak and prostrate foe. I mean that I would prefer the latter alternative to the former, not that I have changed my mind as to the policy of taking the Philippine Islands at all."

So far as concerned the demands of the United States (which Spain was powerless to resist), the question was settled, on the 13th of November, by a telegram from Secretary Hay to Mr. Day, in which he said: "We are clearly entitled to indemnity for the cost of the war. We can not hope to be fully indemnified. We do not expect to be. It would probably be difficult for Spain to pay money. All she has are the archipelagoes of the Philippines and the Carolines. She surely can not expect us to turn the Philippines back and bear the cost of the war and all claims of our citizens for damages to life and property in Cuba without any indemnity but Porto Rico, which we have and which is wholly inadequate. . . . You are therefore instructed to insist upon the cession of the whole of the Philippines, and, if necessary, pay to Spain ten to twenty millions of dollars, and if you can get cession of a naval and telegraph station in the Carolines, and the several concessions and privileges and guaranties, so far as applicable, enumerated in the views of Commissioners Frye and Reid, you can offer more."—*United States, 56th Congress, 2d Sess., Senate Doc. No.* 148 (*Papers relating to the Treaty with Spain*).

Discussion between the Spanish and American commissioners at Paris was prolonged until the 10th of December, when the former yielded to what they protested against as hard terms, and the following Treaty of Peace was signed:

Treaty of Peace.

ART. I. Spain relinquishes all claim of sovereignty over and title to Cuba. And as the island is, upon its evacuation by Spain, to be occupied by the United States, the United States will, so long as such occupation shall last, assume and discharge the obligations that may under international law result from the fact of its occupation, for the protection of life and property.

ART. II. Spain cedes to the United States the island of Porto Rico and other islands now under Spanish sovereignty in the West Indies, and the island of Guam in the Marianas or Ladrones.

ART. III. Spain cedes to the United States

the archipelago known as the Philippine Islands, and comprehending the islands lying within the following line: A line running from west to east along or near the twentieth parallel of north latitude, and through the middle of the navigable channel of Bachi, from the one hundred and eighteenth (118th) to the one hundred and twenty seventh (127th) degree meridian of longitude east of Greenwich, thence along the one hundred and twenty seventh (127th) degree meridian of longitude east of Greenwich to the parallel of four degrees and forty five minutes (4° 45′) north latitude, thence along the parallel of four degrees and forty five minutes (4° 45′) north latitude to its intersection with the meridian of longitude one hundred and nineteen degrees and thirty five minutes (119° 35′) east of Greenwich, thence along the meridian of longitude one hundred and nineteen degrees and thirty five minutes (119° 35′) east of Greenwich to the parallel of latitude seven degrees and forty minutes (7° 40′) north, thence along the parallel of latitude of seven degrees and forty minutes (7° 40′) north to its intersection with the one hundred and sixteenth (116th) degree meridian of longitude east of Greenwich, thence by a direct line to the intersection of the tenth (10th) degree parallel of north latitude with the one hundred and eighteenth (118th) degree meridian of longitude east of Greenwich, and thence along the one hundred and eighteenth (118th) degree meridian of longitude east of Greenwich to the point of beginning. The United States will pay to Spain the sum of twenty million dollars ($20,000,000) within three months after the exchange of the ratifications of the present treaty.

ART. IV. The United States will, for the term of ten years from the date of the exchange of the ratifications of the present treaty, admit Spanish ships and merchandise to the ports of the Philippine Islands on the same terms as ships and merchandise of the United States.

ART. V. The United States will, upon the signature of the present treaty, send back to Spain, at its own cost, the Spanish soldiers taken as prisoners of war on the capture of Manila by the American forces. The arms of the soldiers in question shall be restored to them. Spain will, upon the exchange of the ratifications of the present treaty, proceed to evacuate the Philippines, as well as the island of Guam, on terms similar to those agreed upon by the Commissioners appointed to arrange for the evacuation of Porto Rico and other islands in the West Indies, under the Protocol of August 12, 1898, which is to continue in force till its provisions are completely executed. The time within which the evacuation of the Philippine Islands and Guam shall be completed shall be fixed by the two Governments. Stands of colors, uncaptured war vessels, small arms, guns of all calibres, with their carriages and accessories, powder, ammunition, livestock, and materials and supplies of all kinds, belonging to the land and naval forces of Spain in the Philippines and Guam, remain the property of Spain. Pieces of heavy ordnance, exclusive of field artillery, in the fortifications and coast defences, shall remain in their emplacements for the term of six months, to be reckoned from the exchange of ratifications of the treaty; and the United States may, in the meantime, purchase such material from Spain, if a satisfactory agreement between the two Governments on the subject shall be reached.

ART. VI. Spain will, upon the signature of the present treaty, release all prisoners of war, and all persons detained or imprisoned for political offences, in connection with the insurrections in Cuba and the Philippines and the war with the United States. Reciprocally the United States will release all persons made prisoners of war by the American forces, and will undertake to obtain the release of all Spanish prisoners in the hands of the insurgents in Cuba and the Philippines. The Government of the United States will at its own cost return to Spain and the Government of Spain will at its own cost return to the United States, Cuba, Porto Rico, and the Philippines, according to the situation of their respective homes, prisoners released or caused to be released by them, respectively, under this article.

ART. VII. The United States and Spain mutually relinquish all claims for indemnity, national and individual, of every kind, of either Government, or of its citizens or subjects, against the other Government, that may have arisen since the beginning of the late insurrection in Cuba and prior to the exchange of ratifications of the present treaty, including all claims for indemnity for the cost of the war. The United States will adjudicate and settle the claims of its citizens against Spain relinquished in this article.

ART. VIII. In conformity with the provisions of Articles I, II, and III of this treaty, Spain relinquishes in Cuba, and cedes in Porto Rico and other islands in the West Indies, in the island of Guam, and in the Philippine Archipelago, all the buildings, wharves, barracks, forts, structures, public highways and other immovable property which, in conformity with law, belong to the public domain, and as such belong to the Crown of Spain. And it is hereby declared that the relinquishment or cession, as the case may be, to which the preceding paragraph refers, cannot in any respect impair the property or rights which by law belong to the peaceful possession of property of all kinds, of provinces, municipalities, public or private establishments, ecclesiastical or civic bodies, or any other associations having legal capacity to acquire and possess property in the aforesaid territories renounced or ceded, or of private individuals, of whatsoever nationality such individuals may be. The aforesaid relinquishment or cession, as the case may be, includes all documents exclusively referring to the sovereignty relinquished or ceded that may exist in the archives of the Peninsula. Where any document in such archives only in part relates to said sovereignty, a copy of such part will be furnished whenever it shall be requested. Like rules shall be reciprocally observed in favor of Spain in respect of documents in the archives of the islands above referred to. In the aforesaid relinquishment or cession, as the case may be, are also included such rights as the Crown of Spain and its authorities possess in respect of the official archives and records, executive as well as judicial, in the islands above referred to, which relate to said islands or the rights and property of their inhabitants. Such archives and records shall be carefully preserved, and private persons shall without distinction have the right to require, in accordance with law, authenticated copies of the contracts, wills and other instruments forming

part of notarial protocols or files, or which may be contained in the executive or judicial archives, be the latter in Spain or in the islands aforesaid.

ART. IX. Spanish subjects, natives of the Peninsula, residing in the territory over which Spain by the present treaty relinquishes or cedes her sovereignty, may remain in such territory or may remove therefrom, retaining in either event all their rights of property, including the right to sell or dispose of such property or of its proceeds; and they shall also have the right to carry on their industry, commerce and professions, being subject in respect thereof to such laws as are applicable to other foreigners. In case they remain in the territory they may preserve their allegiance to the Crown of Spain by making, before a court of record, within a year from the date of the exchange of ratifications of this treaty, a declaration of their decision to preserve such allegiance; in default of which declaration they shall be held to have renounced it and to have adopted the nationality of the territory in which they may reside. The civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by the Congress.

ART. X. The inhabitants of the territories over which Spain relinquishes or cedes her sovereignty shall be secured in the free exercise of their religion.

ART. XI. The Spaniards residing in the territories over which Spain by this treaty cedes or relinquishes her sovereignty shall be subject in matters civil as well as criminal to the jurisdiction of the courts of the country wherein they reside, pursuant to the ordinary laws governing the same; and they shall have the right to appear before such courts, and to pursue the same course as citizens of the country to which the courts belong.

ART. XII. Judicial proceedings pending at the time of the exchange of ratifications of this treaty in the territories over which Spain relinquishes or cedes her sovereignty shall be determined according to the following rules: 1. Judgments rendered either in civil suits between private individuals, or in criminal matters, before the date mentioned, and with respect to which there is no recourse or right of review under the Spanish law, shall be deemed to be final, and shall be executed in due form by competent authority in the territory within which such judgments should be carried out. 2. Civil suits between private individuals which may on the date mentioned be undetermined shall be prosecuted to judgment before the court in which they may then be pending or in the court that may be substituted therefor. 3. Criminal actions pending on the date mentioned before the Supreme Court of Spain against citizens of the territory which by this treaty ceases to be Spanish shall continue under its jurisdiction until final judgment; but, such judgment having been rendered, the execution thereof shall be committed to the competent authority of the place in which the case arose.

ART. XIII. The rights of property secured by copyrights and patents acquired by Spaniards in the Island of Cuba and in Porto Rico, the Philippines and other ceded territories, at the time of the exchange of the ratifications of this treaty, shall continue to be respected. Spanish scientific, literary and artistic works, not subversive of public order in the territories in question, shall continue to be admitted free of duty into such territories, for the period of ten years, to be reckoned from the date of the exchange of the ratifications of this treaty.

ART. XIV. Spain will have the power to establish consular officers in the ports and places of the territories, the sovereignty over which has been either relinquished or ceded by the present treaty.

ART. XV. The Government of each country will, for the term of ten years, accord to the merchant vessels of the other country the same treatment in respect of all port charges, including entrance and clearance dues, light dues, and tonnage duties, as it accords to its own merchant vessels, not engaged in the coastwise trade. This article may at any time be terminated on six months notice given by either Government to the other.

ART. XVI. It is understood that any obligations assumed in this treaty by the United States with respect to Cuba are limited to the time of its occupancy thereof; but it will upon the termination of such occupancy, advise any Government established in the island to assume the same obligations.

ART. XVII. The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by Her Majesty the Queen Regent of Spain; and the ratifications shall be exchanged at Washington within six months from the date hereof, or earlier if possible. In faith whereof, we, the respective Plenipotentiaries, have signed this treaty and have hereunto affixed our seals. Done in duplicate at Paris, the tenth day of December, in the year of Our Lord one thousand eight hundred and ninety-eight. [Signed] William R. Day, Cushman K. Davis, William P. Frye, Geo. Gray, Whitelaw Reid, Eugenio Montero Ríos, B. de Abarzuza, J. de Garnica, W. R. de Villa Urrutia, Rafael Cerero.

That the treaty would be ratified by the Senate of the United States was by no means certain when it was signed, and remained questionable for two months. See below: A. D. 1899 (JANUARY—FEBRUARY).

Some time after the conclusion of the treaty, it was discovered that the boundaries defined in it for the cession of the Philippine Islands failed to include the islands of Cagayan, or Kagayan, and Sibutu, in the southern part of the archipelago. Still later, it was found that several small islands (the Bachi or Bashee group, and others) belonging to the Spanish possessions in the East were left lying outside of the northern Philippine boundary, as laid down in the treaty of cession. It is said that the Japanese government called attention to this latter error, desiring to have the islands in question, which are near to Formosa, controlled by the United States, rather than by Spain. By a new treaty with Spain, negotiated in 1900, all these outlying islands were acquired by the United States, for the sum of $100,000.

A. D. 1898 (August).—Losses of the armies at Santiago and in the Philippines. See below: A. D. 1900 (JUNE).

A. D. 1898 (August 21).—The War with Spain.—Letter from departing Spanish soldiers to the soldiers of the American army.—The following letter, addressed, on the eve of their

departure for Spain, by the Spanish soldiers at Santiago, to the soldiers of the American army, "is surely," says Lieutenant-Colonel Miley, who quotes it in his book entitled "In Cuba with Shafter"—"is surely the most remarkable letter ever addressed by vanquished soldiers to their conquerors: 'Soldiers of the American Army: We would not be fulfilling our duty as well-born men in whose breasts there lives gratitude and courtesy, should we embark for our beloved Spain without sending you our most cordial and sincere good wishes and farewell. We fought you with ardor and with all our strength, endeavoring to gain the victory, but without the slightest rancor or hate toward the American nation. We have been vanquished by you, so our generals and chiefs judged in signing the capitulation, but our surrender and the blood-battles preceding it have left in our souls no place for resentment against the men who fought us nobly and valiantly. You fought and acted in compliance with the same call of duty as we, for we all but represent the power of our respective States. You fought us as men, face to face, and with great courage, as before stated—a quality we had not met with during the three years we have carried on this war against a people without a religion, without morals, without conscience, and of doubtful origin, who could not confront the enemy, but shot their noble victims from ambush and then immediately fled. This was the kind of warfare we had to sustain in this unfortunate land. You have complied exactly with all the laws and usages of war as recognized by the armies of the most civilized nations of the world; have given honorable burial to the dead of the vanquished; have cured their wounded with great humanity; have respected and cared for your prisoners and their comfort; and lastly, to us, whose condition was terrible, you have given freely of food and of your stock of medicines, and have honored us with distinction and courtesy, for after the fighting the two armies mingled with the utmost harmony. With this high sentiment of appreciation from us all, there remains but to express our farewell, and with the greatest sincerity we wish you all happiness and health in this land, which will no longer belong to our dear Spain, but will be yours. You have conquered it by force and watered it with your blood, as your conscience called for under the demands of civilization and humanity; but the descendants of the Congos and Guineas, mingled with the blood of unscrupulous Spaniards and of traitors and adventurers—these people are not able to exercise or enjoy their liberty, for they will find it a burden to comply with the laws which govern civilized humanity. From eleven thousand Spanish soldiers. (Signed) Pedro Lopez De Castillo, Soldier of Infantry. Santiago de Cuba, August 21, 1898.'"

A. D. 1898 (August—December).—Situation in the Philippines following the occupation of Manila by American forces.—Growing distrust and unfriendliness of the Tagalos.—Report of General Otis. See (in this vol.) PHILIPPINE ISLANDS: A. D. 1898 (AUGUST—DECEMBER).

A. D. 1898-1899.—Statistics of the Spanish-American War.—The following military and naval statistics of the war with Spain, compiled from official sources, were submitted to the House of Representatives, during its debate on the Army Bill, in December, 1900, as part of an appendix to a speech made in support of the Bill by Hon. Charles Dick, of Ohio:

ORGANIZATION AND STRENGTH OF THE ARMY DURING AND AFTER THE WAR.

By an Act of Congress approved April 22, 1898, providing for the temporary increase of the military establishment of the United States, "the organized and active land forces were declared to consist of the Regular Army and of the militia of the several States when called into service, constituting two branches, designated, respectively, as the Regular Army and the Volunteer Army of the United States. And the President was authorized to organize the regular and volunteer troops into divisions of three brigades, each brigade to be composed of three or more regiments, and when three or more divisions are present in the same army, to organize them into army corps, each corps to consist of not more than three divisions. Under the authority conferred upon him by the joint resolution of April 20 and the act of April 22, 1898, the President issued a proclamation, dated April 23, 1898, calling for volunteers to the number of 125,000 men, to be apportioned as far as practicable among the several States, Territories, and the District of Columbia, according to population, to serve for two years unless sooner discharged. Among the several arms of the service the troops were apportioned as follows: Five regiments and 17 troops of cavalry, 16 batteries of light artillery, 1 regiment and 7 batteries of heavy artillery, 119 regiments and 10 battalions of infantry. May 25, 1898, the President issued a proclamation calling for an additional force of 75,000 men. For controlling military reasons, it was determined to utilize so much of this additional force as was necessary to bring up the several State organizations in service to the full legal strength, the remainder to be apportioned among the several States and Territories according to their respective quotas as nearly as possible. The apportionment to the several arms of service under this second call was for 16 batteries of light artillery, 3 battalions of heavy artillery, and 22 regiments, ten battalions, and 46 companies of infantry."

The strength of the Regular Army on the 1st of April, 1898, just before the breaking out of the war, was as follows:

	Officers.	Enlisted Men.
General officers and staff corps	532	2,026
Cavalry	437	6,047
Artillery	288	4,486
Infantry	886	12,828
Miscellaneous	.....	653
Total	2,143	26,040

The Regular Army was authorized to be increased to 65,000 men as a war footing. The total strength of the armies, Regular and Volunteer, at several later dates, was as follows:

UNITED STATES, 1898–1899.

DATE.	Regulars.	Volunteers.	Total.
April 15, 1898	28,183	.....	28,183
May 31, 1898	38,816	124,776	162,592
August 31, 1898	56,362	216,256	272,618
January 31, 1899	65,531	90,241	155,772
June 30, 1899	63,535	16,550	80,085

Maximum force at any one time during Spanish-American war, 274,717 officers and men. On the 29th of November, 1898, the Army of the United States consisted of 2,324 officers and 61,444 enlisted men of the regular force, and of 5,216 officers and 110,202 enlisted men of the volunteer force, making an aggregate of 7,540 officers and 171,646 enlisted men.

PAY OF ARMY.

Payments made to Regular and Volunteer armies engaged during Spanish-American war, from April 21, 1898, to April 11, 1899, $67,065,-629.56.

CASUALTIES IN ACTION.

The deaths from all causes (including casualties in action) in the whole Army, regulars and volunteers, for the fourteen months from May, 1898, to June, 1899, inclusive, were 6,619. This is equivalent to an annual rate of 33.03 per thousand of strength. The deaths from disease during the whole period were at an annual rate of but 25.68 per thousand. These were as follows :

STATIONS.	Number of Deaths.	Rate per 1,000.

HOSPITALS.

From the declaration of war with Spain to September 20, 1899, there have been established:

	Beds.
20 field division hospitals, averaging 250 beds each	5,000
31 general hospitals with a total capacity of about	13,800
Railroad ambulance train	270
4 hospital ships	1,000
Total	20,070

In addition to these over 5,000 cases were treated in civil hospitals. It is difficult even to approximate the number of men treated in these hospitals. During that period somewhat over 100,000 cases were admitted on sick report, a number equal to 2,147 per 1,000 of strength during the year, or to 179 per 1,000 per month—the ratio of admissions to hospital cases being 13 to 8. Using these data as a basis, and assuming the mean strength of the Army (Regulars and Volunteers) to have been 154,000, it would appear that from May 1, 1898, to September 20, 1899, about 275,000 cases have been treated in these hospitals.

TRANSPORTATION OF SPANISH PRISONERS OF WAR TO SPAIN.

The following is a statement showing the dates of embarkation, names of vessels, and number of officers, enlisted men, and others who took passage:

Date of embarkation.	Name of Vessel.	Officers.	Enlisted Men.	Women and children over 5 years of age.	Priests and Sisters of Charity.	Total.

UNITED STATES, 1898–1899.

Mauser — Spanish — cartridges, 7 mm	1,500,000
Mauser — Argentine — cartridges, 7½ mm	1,471,200
Remington cartridges, 7½ mm	1,680,000
Total	4,651,200

Nine hundred and seventy-three thousand Remington cartridges, 7½ mm., worthless.

STRENGTH OF THE NAVY, REGULAR AND AUXILIARY.

The number of enlisted men allowed by law prior to the outbreak of hostilities was 12,500. On August 15, when the enlisted force reached its maximum, there were 24,123 men in the service. This great increase was made necessary by the addition of 128 ships to the Navy. The maximum fighting force of the Navy, separated into classes, was as follows:

Battle ships (first class)	4
Battle ships (second class)	1
Armored cruisers	2
Coast defense monitors	6
Armored ram	1
Protected cruisers	12
Unprotected cruisers	3
Gunboats	18
Dynamite cruiser	1
Torpedo boats	11
Vessels of old Navy, including monitors	14
Auxiliary Navy:	
Auxiliary cruisers	11
Converted yachts	28
Revenue cutters	15
Light-house tenders	4
Converted tugs	27
Converted colliers	19

—*Congressional Record, Feb.* 1, 1901, *pp.* 1941–62.

A. D. 1898-1899.—Investigation of the conduct of the War Department in the war with Spain.—Severe criticism of the conduct of the War Department during the war with Spain, including many charges of inefficiency in its service, produced by improper appointments made for political reasons, and other charges of misdoing in the purchase of supplies, under influences either political or otherwise corrupt, led to the appointment by the President, in September, 1898, of an investigating commission, composed of nine soldier and civilian members, as follows: General Grenville M. Dodge, President, Colonel James A. Sexton, Colonel Charles Denby, Captain Evan P. Howell, Hon. Urban A. Woodbury, Brigadier-General John M. Wilson, U. S. A., General James A. Beaver, Major-General Alexander McD. Cook, U. S. A., Dr. Phineas S. Conner. The report of the Commission, made in the following February, cannot be said to have been a convincing and satisfactory one to the country at large. It was indignantly described as a "whitewashing report," even by many journals and writers of the party in power. Its inquiries did not appear to have been keenly and impartially searching; its conclusions were not thought to be drawn with a rigorous and fearless hand.

The charges against the War Department which excited most feeling and drew most public attention related to the quality of the fresh beef supplied to the army, which was in two forms, refrigerated and canned. Major-General Miles, commanding the Army, had declared that much of the refrigerated beef furnished to the soldiers should be called "embalmed beef," maintaining that it had been "apparently preserved with secret chemicals, which destroy its natural flavor" and which were believed to be "detrimental to the health of the troops." He intimated that hundreds of tons of such beef had been contracted for by the Commissary-General "under pretense of experiment." In repelling this serious accusation, Commissary-General Charles P. Eagan read a statement before the Commission, so violent and unmeasured in its vituperation of the commanding general that it was returned to him for correction; many newspapers declined to publish it, and he was subsequently tried by court-martial in consequence — as related below. The conclusion of the Commission on the subject of the charges relating to refrigerated beef was stated in its report as follows: "The Commission is of the opinion that no refrigerated beef furnished by contractors and issued to the troops during the war with Spain was subjected to or treated with any chemicals by the contractors or those in their employ."

Concerning the canned beef, which had caused much disgust in the army, the Commission reported: "The result of our own testing and of all the analyses made at our instance. . . is that the canned meat which has been brought to our attention is pure, sound, and nutritive. It has not been found to contain any acids or any deleterious substance, but to be unadulterated meat. The testimony before us is that the canned meat is not, in general, intended to be issued to troops except as an emergency ration. The preponderance of the proof is that meat on the hoof and the refrigerated beef are more acceptable. A number of officers and others have testified that the meat is unpalatable. Its palatability greatly depends upon the mode in which it is cooked. In a tropical climate, carried on the march, exposed to heat, the meat so changes in appearance as to become repulsive. In the Navy, where the meat is properly cared for, there has been no complaint, so far as has appeared in evidence before us. After careful consideration we find that canned meat, as issued to the troops, was generally of good quality, was properly prepared, and contained no deleterious substance.

UNITED STATES, 1898–1899.

At times probably material of poor quality is issued; in one of the cans sent to us and examined by the chemist a large amount of gristle was found. That it was not issued 'under pretense of an experiment' is indicated by the fact that it has been in use in the Army for more than 20 years."

On the general management of the Quartermaster's Department, with which much fault had been found, the Commission reported: "The conclusions drawn . . . are as follows:

"1. The Quartermaster's Department, a month before war was declared, was neither physically nor financially prepared for the tremendous labor of suddenly equipping and transporting an army over ten times the size of the Regular Army of the United States.

"2. That the department devoted the ability, zeal, and industry of its officers to accomplish the herculean task before it so soon as funds were made available and war was declared.

"3. That it deserves credit for the great work accomplished, for the immense quantity of materials obtained and issued within so short a period, and for its earnest efforts in reference to railroad transportation and in protecting the great interests of the General Government committed to its charge. Its officers, especially those at the headquarters of the department and at its depots, worked earnestly and laboriously day and night, sparing themselves in no possible way.

"4. There appears to have been a lack of system, whereby, even as late as October, troops in camps and in the field were lacking in some articles of clothing, camp and garrison equipage; and hospitals, at least at two important localities in the South — Fort Monroe, Va., and Huntsville, Ala. — lacked stoves, while at Huntsville fuel was wanting.

"5. There appears to have been lack of executive or administrative ability, either on the part of the Quartermaster's Department or the railroad officials, in preventing the great congestion of cars at Tampa and Chickamauga when these camps were first established, which congestion caused delay, annoyance, and discomfort to the large bodies of troops concentrating at those places.

"6. There appears to have been a lack of foresight in preparing and promptly having available at some central locality on the seacoast the necessary fleet of transports which it seemed evident would be required for the movement of troops to a foreign shore, and, finally, when the call came suddenly and the emergency was supreme, the department appears not to have fully comprehended the capacity of the fleet under its command; not to have supplied it with a complete outfit of lighters for the immediate disembarkation of troops and supplies; to have accepted without full investigation the statement that the vessels were capable of transporting 25,000 men, while really they could not and did not transport more than 17,000 with their artillery, equipments, ammunition, and supplies, and lacked sufficient storage room for the necessary amount of wagon transportation — that very important element in the movement of an army in the face of an enemy.

"7. The Quartermaster's Department should maintain on hand at all times a complete supply for at least four months for an army of 100,000 men of all articles of clothing, camp and garrison equipage, and other quartermaster's supplies which will not deteriorate by storage or which cannot at once be obtained in open market.

"Finally. In the opinion of this commission, there should be a division of the labor now devolving upon the Quartermaster's Department."

In another part of its report, dealing especially with the Santiago campaign, the Commission makes a statement which seems to reflect some additional light on the sixth paragraph of the finding quoted above, relative to the unpreparedness of the quartermaster's department for the landing of the Santiago expedition. It says: "The Navy Department, on the 31st of May, 1898, sent the following communication to the honorable the Secretary of War: 'This Department begs leave to inquire what means are to be employed by the War Department for landing the troops, artillery, horses, siege guns, mortars, and other heavy objects when the pending military expedition arrives on the Cuban coast near Santiago. While the Navy will be prepared to furnish all the assistance that may be in its power, it is obvious that the crews of the armored ships and of such others as will be called upon to remove the Spanish mines and to meet the Spanish fleet in action can not be spared for other purposes, and ought not to be fatigued by the work incident to landing of the troops and stores, etc.' This information, so far as can be ascertained, was never communicated to either General Miles or General Shafter; the expedition therefore left Tampa with no facilities for landing other than were afforded by the boats of the several transports conveying the expedition, with the exception of several lighters and steam tugs of light draft, such as could be hastily secured."

On the conduct of the Medical Department, which was another matter of investigation, the Commission reported: "To sum up, in brief, the evidence submitted shows:

"1. That at the outbreak of the war the Medical Department was, in men and materials, altogether unprepared to meet the necessities of the army called out.

"2. That as a result of the action through a generation of contracted and contracting methods of administration, it was impossible for the Department to operate largely, freely, and without undue regard to cost.

"3. That in the absence of a special corps of inspectors, and the apparent infrequency of inspections by chief surgeons, and of official reports of the state of things in camps and hospitals, there was not such investigation of the sanitary conditions of the army as is the first duty imposed upon the Department by the regulations.

"4. That the nursing force during the months of May, June, and July was neither ample nor efficient, reasons for which may be found in the lack of a proper volunteer hospital corps, due to the failure of Congress to authorize its establishment, and to the nonrecognition in the beginning of the value of women nurses and the extent to which their services could be secured.

"5. That the demand made upon the resources of the Department in the care of sick and wounded was very much greater than had been anticipated, and consequently, in like proportion, these demands were imperfectly met.

"6. That powerless as the Department was to

have supplies transferred from point to point, except through the intermediation of the Quartermaster's Department, it was seriously crippled in its efforts to fulfil the regulation duty of 'furnishing all medical and hospital supplies.'

"7. That the shortcomings in administration and operation may justly be attributed, in large measure, to the hurry and confusion incident to the assembling of an army of untrained officers and men, ten times larger than before, for which no preparations in advance had been or could be made because of existing rules and regulations.

"8. That notwithstanding all the manifest errors, of omission rather than of commission, a vast deal of good work was done by medical officers, high and low, regular and volunteer, and there were unusually few deaths among the wounded and the sick.

"What is needed by the medical department in the future is—

"1. A larger force of commissioned medical officers.

"2. Authority to establish in time of war a proper volunteer hospital corps.

"3. A reserve corps of selected trained women nurses, ready to serve when necessity shall arise, but under ordinary circumstances, owing no duty to the War Department, except to report residence at determined intervals.

"4. A year's supply for an army of at least four times the actual strength, of all such medicines, hospital furniture, and stores as are not materially damaged by keeping, to be held constantly on hand in the medical supply depots.

"5. The charge of transportation to such extent as will secure prompt shipment and ready delivery of all medical supplies.

"6. The simplification of administrative 'paper work,' so that medical officers may be able to more thoroughly discharge their sanitary and strictly medical duties.

"7. The securing of such legislation as will authorize all surgeons in medical charge of troops, hospitals, transports, trains, and independent commands to draw from the Subsistence Department funds for the purchase of such articles of diet as may be necessary to the proper treatment of soldiers too sick to use the army ration. This to take the place of all commutation of rations of the sick now authorized.

"Convalescent soldiers traveling on furlough should be furnished transportation, sleeping berths or staterooms, and $1.50 per diem for subsistence in lieu of rations, the soldier not to be held accountable or chargeable for this amount." —*Report of the Commission*, *v.* 1.

Public opinion of the report, when divested of partisan prejudice, was probably expressed very fairly in the following comments of "The Nation," of New York: "The two leading conclusions of the court of inquiry as to the quality of the beef supplied to our troops during the war with Spain, are in accordance with the evidence and will be accepted as fairly just by the country. The court finds that so far as the canned roast beef was concerned, the charges which Gen. Miles made against it as an unsuitable ration are sustained, but that as regards the use of chemicals in the treatment of refrigerated beef his charges were not established. If instead of saying 'not established,' the court had said 'not fully sustained,' its verdict would have been above criticism on these two points. There was evidence of the use of chemicals, but it was not conclusive and was flatly contradicted. There is no doubt whatever that the use of the refrigerated beef was a blunder, but there was very little evidence to sustain a more serious charge than that against it.

"But while the court has found justly on these points, it is difficult to read its report without feeling that its members did so reluctantly, and that, if left to follow their inclinations, they would have censured Gen. Miles and allowed everybody else concerned to go free. Gen. Miles is the one person involved whom they allow no extenuating circumstances to benefit in their report. At every opportunity they take the worst possible view of his conduct, while almost invariably taking the most lenient view possible of nearly everybody else. . . . So far as the findings of the court apply to Eagan's conduct, they are condemnatory in general terms, but they do not seek to go behind him for the reasons for his conduct. . . . No attention whatever is paid to the evidence of several reputable witnesses that Eagan had told them that he had to buy of certain contractors; none is paid, either, to the evidence of Eagan's subordinates that he himself so altered the refrigerated beef contracts that no one could say whether they called for preservation for seventy-two hours or twenty-four. Leniency of this kind is never shown toward Gen. Miles."—*The Nation*, *May* 11, 1899.

Perhaps a weightier criticism is represented by the following, which we quote from an article contributed to "The Independent" by General Wingate, President of the National Guard Association of the United States: "So far as the refrigerated beef was concerned, the truth probably is that there was little, if any, 'embalming' about it. Soldiers generally agree that the beef itself was almost universally good. . . . General Miles, on the other hand, was clearly right in asking that the troops might be furnished with beef cattle on the hoof, which could follow the army over any road and which would keep in good condition on the luxuriant grasses of Cuba and Porto Rico. This was the system pursued in our Civil War. No one has yet explained why it was abandoned for the experiment of furnishing this kind of beef to places in the tropics where it had to be hauled in wagons for many hours over muddy roads, and when most of the wagons required to move it promptly had to be left behind for want of water transportation.

"The matter of the refrigerated or so-called 'embalmed' beef is, however, of very slight consequence compared with that of the canned roast beef. The use of that beef as an army ration in this country, at least, was new. Officer after officer has testified before the court of inquiry that they never saw it so issued before the Cuban campaign. It is true that the navy uses it, but the facilities on shipboard for caring for and cooking food are so different and so superior to those of an army in the field that no comparison can justly be made between them. Moreover, as was recently stated in the 'Army and Navy Journal,' the belief is general in the navy that the canned beef it had rejected on inspection was afterward sold to the army and accepted by it without inspection. Be this as it may, the evidence is overwhelming that the canned roast beef which was issued to the army was repulsive

in appearance and disagreeable in smell. . . . Governor Roosevelt says in his testimony that 'from generals to privates he never heard any one who did not condemn it as an army ration.' Its defects appeared on the voyage to Santiago, if not before. It was then so bad that the men would not touch it, and as Governor Roosevelt says in his article in 'Scribner's,' his Rough Riders, who certainly were not particular, could not eat it, and as it constituted one-third of the rations, his men had to go hungry. And yet, in spite of these facts, a million pounds of that beef was purchased from Armour & Co. alone, and its issue was continued not only in Cuba but in Porto Rico. What is worse than all, after its defects were fully known it was issued as a traveling ration to the fever-racked men on their homeward voyage to this country; men who needed and were entitled to receive the most nourishing food and to whom this indigestible stuff was poison. This should never be forgotten or forgiven by the plain people of the country. . . .

"No one in authority has been willing to admit that there was the slightest thing wrong, or the least need for improvement in his department. . . . This is another of the hundreds of examples which have occurred in our past war, and which will continue to take place in the future until the whole staff system of the army has been rectified, of the reign of that hide bound bureaucratic spirit which induces the head of a department in Washington to decide in his office what should be used by the troops in the field without practical experience on the subject, and to stubbornly close his eyes and ears to everything which will tend to show that it is possible that his department has made a mistake. . . .

"It is noticeable that so far not an official in any of the supply or medical departments is known to have been court martialed or even censured. Yet I do not hesitate to say that the summary dismissal from the service, in the beginning, of two or three quartermasters and commissaries, including the gentlemen who were the cause of sending thousands of cars to Tampa without invoices or anything on the outside of them to indicate their contents, would have saved the lives of hundreds of our soldiers. Under these circumstances it is most lamentable to find that the awful experiences which have made so many homes desolate, and so many of our best young men invalids, have borne no practical fruit. Both the army officials and Congress are like the Bourbons, they 'have learned nothing and forgotten nothing.'"—G. W. Wingate, *What the Beef Scandal Teaches* (*Independent, Apr.* 6, 1899).

A. D. 1899 (January).—The case of Commissary-General Eagan.—A court-martial, sitting in January, 1899, for the trial of Commissary-General Eagan, on the charge that he had been guilty of "conduct unbecoming an officer and a gentleman, and conduct to the prejudice of good order and military discipline," in the abusive language that he had applied to the commanding general of the army, in the course of his testimony before the Commission to investigate the conduct of the War Department (see above: A. D. 1898–1899), found the accused officer guilty, and imposed the inevitable penalty of dismissal from the service, but recommended executive clemency in his case. The sentence was commuted by the President to suspension from rank and duty for six years. This involved no loss of pay, and, at the end of six years, General Eagan will go on the retired list.

A. D. 1899 (January).—Appointment of the First Commission to the Philippines.—The President's instructions to the Commissioners. See (in this vol.) PHILIPPINE ISLANDS: A. D. 1899 (JANUARY).

A. D. 1899 (January—February).—The Treaty of Peace in the Senate.—Its ratification.—The Treaty of Peace with Spain, signed at Paris December 10, 1898, was sent by the President to the Senate on the 4th of January, 1899, and held under debate in that body until the 6th of February following. The opposition to it was very strong, being especially directed against the acquisition of the Philippine Islands, involving, as that acquisition did, the embarkation of the Republic in a colonial or imperial policy, of conquest and of government without the consent of the governed, which seemed to a great number of thoughtful people, not only incongruous with its constitution, but a dangerous violation of the principles on which its republican polity is founded. But even those most opposed to the acquisition of the Philippine Islands were reluctant to reopen the state of war by rejection of the treaty, and directed their efforts mainly towards the securing of a definite declaration from Congress of the intention of the government of the United States to establish independence in the islands.

"Even before the signing of the treaty at Paris, on the 6th of December, when the demand of the American commissioners for cession of the Philippines was known, the opposition expressed itself in the following resolution, introduced by Senator Vest, of Missouri:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That under the Constitution of the United States no power is given to the Federal Government to acquire territory to be held and governed permanently as colonies. The colonial system of European nations can not be established under our present Constitution, but all territory acquired by the Government, except such small amount as may be necessary for coaling stations, correction of boundaries, and similar governmental purposes, must be acquired and governed with the purpose of ultimately organizing such territory into States suitable for admission into the Union."

This resolution became the ground of much senatorial debate during the following weeks. The arguments opposed to it, and supporting the policy of the administration, are represented fairly by the following passage from a speech

made by Senator Platt, of Connecticut, on December 16:

"I propose to maintain that the United States is a nation; that as a nation it possesses every sovereign power not reserved in its Constitution to the States or the people; that the right to acquire territory was not reserved, and is therefore an inherent sovereign right; that is a right upon which there is no limitation, and with regard to which there is no qualification; that in certain instances the right may be inferred from specific clauses in the Constitution, but that it exists independent of these clauses; that in the right to acquire territory is found the right to govern it; and as the right to acquire is a sovereign and inherent right, the right to govern is a sovereign right not limited in the Constitution, and that these propositions are in accordance with the views of the framers of the Constitution, the decisions of the Supreme Court, and the legislation of Congress.

"Mr. President, this is a nation. It has been called by various names. It has been called a Confederated Republic, a Federal Union, the Union of States, a league of States, a rope of sand; but during all the time these names have been applied to it it has been a nation. It was so understood by the framers of the Constitution. It was so decided by the great judges of the Supreme Court in the early days of the Constitution. It is too late to deny it, and, Mr. President, it is also too late to admit it, and not have faith in it. Intellectual assent to the doctrines of Christianity does not make a man a Christian. It is saving faith that makes the Christian. And a mere intellectual assent to the doctrine that we are a nation does not make the true patriot. It is high time that we come to believe without qualification, to believe in our hearts, in the exercise of patriotic faith, that the United States is a nation. When we come to believe that, Mr. President, many of the doubts and uncertainties which have troubled men will disappear.

"It is time to be heroic in our faith and to assert all the power that belongs to the nation as a nation. . . . The attempt to shear the United States of a portion of its sovereign power is an attempt which may well be thoroughly and fully discussed. In the right to acquire territory is found the right to govern, and as the right to acquire is sovereign and unlimited, the right to govern is a sovereign right, and I maintain is not limited in the Constitution. If I am right in holding that the power to acquire is the sovereign power without limitation, I think it must be admitted that the right to govern is also sovereign and unlimited. But if it is sought to rest the right to govern upon that clause of the Constitution which gives Congress the power to dispose of or make 'all needful rules and regulations' for the government of the territory of the United States, I submit there is no limitation there. There is no qualification there."

On the 4th of January the Senate received the treaty from the President. On the 7th, Senator Mason, of Illinois, introduced the following resolution, and, subsequently, spoke with earnestness in its support:

"Whereas all just powers of government are derived from the consent of the governed: Therefore, be it

"Resolved by the Senate of the United States, That the Government of the United States of America will not attempt to govern the people of any other country in the world without the consent of the people themselves, or subject them by force to our dominion against their will."

On the 9th an impressive speech was made by Senator Hoar, of Massachusetts, mainly in reply to Senator Platt. He spoke partly as follows: "Mr. President, I am quite sure that no man who will hear or who will read what I say today will doubt that nothing could induce me to say it but a commanding sense of public duty. I think I dislike more than most men to differ from men with whom I have so long and so constantly agreed. I dislike to differ from the President, whose election I hailed with such personal satisfaction and such exulting anticipations for the Republic. I dislike to differ from so many of my party associates in this Chamber, with whom I have for so many years trod the same path and sought the same goal. I am one of those men who believe that little that is great or good or permanent for a free people can be accomplished without the instrumentality of party. And I have believed religiously, and from my soul, for half a century, in the great doctrines and principles of the Republican party. I stood in a humble capacity by its cradle. I do not mean, if I can help it, to follow its hearse. I am sure I render it a service; I am sure I help to protect and to prolong the life of that great organization, if I can say or can do anything to keep it from forsaking the great principles and doctrines in which alone it must live or bear no life. I must, in this great crisis, discharge the trust my beloved Commonwealth has committed to me according to my sense of duty as I see it. However unpleasant may be that duty, as Martin Luther said, 'God help me. I can do no otherwise.'

"I am to speak for my country, for its whole past and for its whole future. I am to speak to a people whose fate is bound up in the preservation of our great doctrine of constitutional liberty. I am to speak for the dead soldier who gave his life for liberty that his death might set a seal upon his country's historic glory. I am to speak for the Republican party, all of whose great traditions are at stake, and all of whose great achievements are in peril. . . .

"The question with which we now have to deal is whether Congress may conquer and may govern, without their consent and against their will, a foreign nation, a separate, distinct, and numerous people, a territory not hereafter to be populated by Americans, to be formed into American States and to take its part in fulfilling and executing the purposes for which the Constitution was framed, whether it may conquer, control, and govern this people, not for the general welfare, common defense, more perfect union, more blessed liberty of the people of the United States, but for some real or fancied benefit to be conferred against their desire upon the people so governed or in discharge of some fancied obligation to them, and not to the people of the United States.

"Now, Mr. President, the question is whether the men who framed the Constitution, or the people who adopted it, meant to confer that power among the limited and restrained powers of the sovereign nation that they were creating. Upon that question I take issue with my honorable friend from Connecticut. I declare not only

that this is not among the express powers conferred upon the sovereignty they created, that it is not among the powers necessarily or reasonably or conveniently implied for the sake of carrying into effect the purposes of that instrument, but that it is a power which it can be demonstrated by the whole contemporaneous history and by our whole history since until within six months they did not mean should exist—a power that our fathers and their descendants have ever loathed and abhorred—and that they believed that no sovereign on earth could rightfully exercise it, and that no people on earth could rightfully confer it. They not only did not mean to confer it, but they would have cut off their right hands, every one of them, sooner than set them to an instrument which should confer it. . . .

"The great contemporaneous exposition of the Constitution is to be found in the Declaration of Independence. Over every clause, syllable, and letter of the Constitution the Declaration of Independence pours its blazing torchlight. The same men framed it. The same States confirmed it. The same people pledged their lives, their fortunes, and their sacred honor to support it. The great characters in the Constitutional Convention were the great characters of the Continental Congress. There are undoubtedly, among its burning and shining truths, one or two which the convention that adopted it were not prepared themselves at once to put into practice. But they placed them before their countrymen as an ideal moral law to which the liberty of the people was to aspire and to ascend as soon as the nature of existing conditions would admit. Doubtless slavery was inconsistent with it, as Jefferson, its great author, has in more than one place left on record. But at last in the strife of a great civil war the truth of the Declaration prevailed and the falsehood of slavery went down, and at last the Constitution of the United States conformed to the Declaration and it has become the law of the land, and its great doctrines of liberty are written upon the American flag wherever the American flag floats. Who shall haul them down?"

Two days later (January 11) the following resolutions were introduced by Senator Bacon, of Georgia:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, First, That the Government and people of the United States have not waged the recent war with Spain for conquest and for the acquisition of foreign territory, but solely for the purposes set forth in the resolution of Congress making the declaration of said war, the acquisition of such small tracts of land or harbors as may be necessary for governmental purposes being not deemed inconsistent with the same.

"Second. That in demanding and in receiving the cession of the Philippine Islands it is not the purpose of the Government of the United States to secure and maintain dominion over the same as a part of the territory of the United States, or to incorporate the inhabitants thereof as citizens of the United States, or to hold said inhabitants as vassals or subjects of this Government.

"Third. That whereas at the time of the declaration of war by the United States against Spain, and prior thereto, the inhabitants of the Philippine Islands were actively engaged in a war with Spain to achieve their independence, and whereas said purpose and the military operations thereunder have not been abandoned, but are still being actively prosecuted thereunder, therefore, in recognition of and in obedience to the vital principle announced in the great declaration that governments derive 'their just powers from the consent of the governed,' the Government of the United States recognizes that the people of the Philippine Islands of a right ought to be free and independent; that, with this view and to give effect to the same, the Government of the United States has required the Government of Spain to relinquish its authority and government in the Philippine Islands and to withdraw its land and naval forces from the Philippine Islands and from the waters thereof.

"Fourth. That the United States hereby disclaim any disposition or intention to exercise sovereignty, jurisdiction, or control over said islands, and assert their determination when an independent government shall have been duly erected therein entitled to recognition as such, to transfer to said government, upon terms which shall be reasonable and just, all rights secured under the cession by Spain, and to thereupon leave the government and control of the islands to their people."

On the 13th, Senator McLaurin, of South Carolina, returned to the question of constitutional power in the government of the United States to hold territory in a permanently subject state, and spoke against the view maintained by Senator Platt, of Connecticut: "To hold," he said, "that there is an inherent power of sovereignty in the nation, outside of the Constitution, to do something not authorized by that instrument is to place this 'inherent sovereignty' above the Constitution and thus destroy the very foundation upon which constitutional government rests. Judge Gray in the Chinese-exclusion case, said: 'The United States are a sovereign and independent nation, and are invested by the Constitution with the entire control of international relations and with all the powers of government necessary to maintain that control and make it effective.' While holding that the United States are a sovereign and independent nation, it will be seen that he also holds that the sovereignty of the nation is vested by the Constitution; and if so, it can only be exercised in the mode pointed out in the Constitution and is controlled by the words of the grant of this sovereignty. There was no nation of the United States until the adoption of the Federal Constitution; hence before that time there could be no sovereignty of the nation. What conferred this sovereignty? Clearly the States, by and through the Federal Constitution. If so, then there can be no inherent right of sovereignty except that conferred by the Constitution.

"The Senator further contends that we are a sovereign nation, and as such have the same inherent right to acquire territory as England, France, Germany, and Mexico. I controvert that proposition. The sovereignty of the nation of Great Britain and the others is vested in the people, and has never been delegated and limited as in our country. These Governments enjoy sovereignty in its elementary form. What the government wills it may do without considering

the act or its consequences in the light of an organic law of binding obligation. Our Government is in a very different position. The Federal Constitution is the embodiment of the sovereignty of the United States as a nation, and this sovereignty can only be exercised in accordance with the powers contained in its provisions. Great Britain can do anything as a nation in the way of the exercise of governmental functions. There is nothing to prohibit or restrict the fullest exercise of her sovereignty as a nation. Hence there is no analogy, and the sovereignty of the United States as a nation differs widely from that of Great Britain.

"It is further contended that a sovereign right can not be limited and that all our Constitution can do is to prescribe the manner in which it can be exercised. If, as already shown, the sovereignty of the United States was conferred by the States through the Federal Constitution, it is clear that, in conferring the power and prescribing the manner of its exercise, they did set a limit in the very terms of the instrument itself. I deny, therefore, that the United States as a nation has a sovereign, inherent right and control outside of the grant of such power in the Constitution. This is not an essential element of nationality so far as our nation is concerned, although it may be in England or Russia, where the nationality and sovereignty incident to it are not created and limited by a written constitution."

On the 14th of January, Mr. Hoar submitted the following:

"Resolved, That the people of the Philippine Islands of right ought to be free and independent; that they are absolved from all allegiance to the Spanish Crown, and that all political connection between them and Spain is and ought to be totally dissolved, and that they have, therefore, full power to do all acts and things which independent states may of right do; that it is their right to institute a new government for themselves, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness; and that with these rights the people of the United States do not propose to interfere."

On the 18th, Mr. Bacon amended his resolutions, given above, by changing the phrase "an independent government" to "a stable and independent government," and then spoke upon them with force, saying, among other things: "The simple fact that we went to war with Spain did not devolve upon us any obligation with reference to the Philippine Islands. We went to war with Spain not for the purpose of correcting all the evils with which her people were afflicted; we went to war with Spain not to break the chains of tyranny with which she might be binding her different colonies; we did not undertake to be the great universal benefactor and to right all the wrongs of all the world, or even all the wrongs that Spain might be inflicting upon any of her people. We went to war because a particular colony which she was afflicting lay at our doors; we went to war because the disorders of that Government affected the peace of our community and were injurious to our material interest. We said there was a condition of affairs which was unbearable and that we would put an end to it.

UNITED STATES, 1899.

"To that extent and to that alone we claimed and avowed the reason for the declaration of war. So it follows that the mere declaration of war did not affect in any manner our relations with the Philippine Islands except to put us in a state of war with them as a part of the Spanish domain, and in no manner laid any obligations upon us as to those islands. We were not charged with the duty of preserving order in Asia. We were not charged with the obligations of seeing that they had a stable and orderly government in any part of that hemisphere. No such duty rested upon us. None such was assumed by us. Therefore the simple declaration of war did not lay any obligation upon us as to the Philippine Islands, and I desire that any Senator will put his finger upon the act which laid us under any obligations to the Philippine Islands outside of the fact that in the war which ensued we took those who were the insurgents in those islands to be our allies and made a common cause with them.

"Now, Mr. President, all that grows out of that—all that grows out of the fact of that cooperation and that alliance—is to impose upon us a single obligation which we must not ignore. How far does that obligation go? Does it require that we shall for all time undertake to be the guardians of the Philippine Islands? Does that particular obligation lay upon us the duty hereafter, not only now but for years to come, to maintain an expensive military establishment, to burden our people with debt, to run the risk of becoming involved in wars in order that we may keep our hands upon the Philippine Islands and keep them in proper condition hereafter? I am unable to see how the obligation growing out of the fact that they were our allies can possibly be extended to that degree. No Senator has yet shown any reason why such an obligation rests upon us, and I venture to say that none which is logical will or can be shown."

The practical considerations, of circumstance and expediency, which probably had more influence than those of law or principle, were strongly urged by Senator Lodge, of Massachusetts, who said, on the 24th: "Suppose we ratify the treaty. The islands pass from the possession of Spain into our possession without committing us to any policy. I believe we can be trusted as a people to deal honestly and justly with the islands and their inhabitants thus given to our care. What our precise policy shall be I do not know, because I for one am not sufficiently informed as to the conditions there to be able to say what it will be best to do, nor, I may add, do I think anyone is. But I believe that we shall have the wisdom not to attempt to incorporate those islands with our body politic, or make their inhabitants part of our citizenship, or set their labor alongside of ours and within our tariff to compete in any industry with American workmen. I believe that we shall have the courage not to depart from those islands fearfully, timidly, and unworthily and leave them to anarchy among themselves, to the brief and bloody domination of some self-constituted dictator, and to the quick conquest of other powers, who will have no such hesitation as we should feel in crushing them into subjection by harsh and repressive methods. It is for us to decide the destiny of the Philippines, not for Europe, and we can do it alone and without assistance. . . .

"During the campaign of last autumn I said in many speeches to the people of my State that I could never assent to hand those islands back to Spain; that I wanted no subject races and no vassal States; but that we had by the fortunes of war assumed a great responsibility in the Philippines; that we ought to meet it, and that we ought to give to those people an opportunity for freedom, for peace, and for self-government; that we ought to protect them from the rapacity of other nations and seek to uplift those whom we had freed. From those views I have never swerved, and I believed then, as I believe now, that they met with the approbation of an overwhelming majority of the people of Massachusetts. . . .

"Take now the other alternative. Suppose we reject the treaty or strike out the clause relating to the Philippines. That will hand the islands back to Spain; and I cannot conceive that any American should be willing to do that. Suppose we reject the treaty; what follows? Let us look at it practically. We continue the state of war, and every sensible man in the country, every business interest, desires the re-establishment of peace in law as well as in fact. At the same time we repudiate the President and his action before the whole world, and the repudiation of the President in such a matter as this is, to my mind, the humiliation of the United States in the eyes of civilized mankind and brands us a people incapable of great affairs or of taking rank where we belong, as one of the greatest of the great world powers.

"The President cannot be sent back across the Atlantic in the person of his commissioners, hat in hand, to say to Spain, with bated breath, 'I am here in obedience to the mandate of a minority of one-third of the Senate to tell you that we have been too victorious, and that you have yielded us too much, and that I am very sorry that I took the Philippines from you.' I do not think that any American President would do that, or that any American would wish him to."

Senator Harris, of Kansas, submitted the following on the 3d of February:

"Resolved by the Senate of the United States of America, That the United States hereby disclaim any disposition or intention to exercise permanent sovereignty, jurisdiction, or control over the Philippine Islands, and assert their determination, when a stable and independent government shall have been erected therein entitled to recognition as such, to transfer to said government, upon terms which shall be reasonable and just, all rights secured under the cession by Spain, and to thereupon leave the government and control of the islands to their people."

The following was offered on the 27th of January by Senator Sullivan, of Mississippi:

"Resolved, That the ratification of the pending treaty of peace with Spain shall in no wise determine the policy to be pursued by the United States in regard to the Philippines, nor shall it commit this Government to a colonial policy; nor is it intended to embarrass the establishment of a stable, independent government by the people of those islands whenever conditions make such a proceeding hopeful of successful and desirable results."

On the same day a joint resolution was proposed by Senator Lindsay, of Kentucky:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the acquisition by the United States, through conquest, treaty, or otherwise, of territory, carries with it no constitutional obligation to admit said territory, or any portion thereof, into the Federal Union as a State or States.

"Sec. 2. That it is against the policy, traditions, and interests of the American people to admit states erected out of other than North American territory into our Union of American States.

"Sec. 3. That the United States accept from Spain the cession of the Philippine Islands with the hope that the people of those islands will demonstrate their capacity to establish and maintain a stable government, capable of enforcing law and order at home and of discharging the international obligations resting on separate and independent States, and with no expectation of permanently holding those islands as colonies or provinces after they shall demonstrate their capacity for self-government, the United States to be the judge of such capacity."

None of the resolutions given above obtained favorable consideration in the Senate. On the 6th of February the treaty was ratified, by one vote in excess of the two-thirds which the constitution requires. It received 57 votes against 27, or 61 against 29 if account be taken of senators absent and paired. Of the supporters of the treaty, 42 were Republicans; of its opponents, 24 were Democrats. It was signed by President McKinley on the 10th of February, and by the Queen of Spain on the 17th of March.

After the ratification of the treaty, the Senate, by 26 votes against 22, adopted the following resolution, offered by Mr. McEnery of Louisiana:

"Resolved, That by the ratification of the treaty of peace with Spain it is not intended to incorporate the inhabitants of the Philippine islands into citizenship of the United States, nor is it intended to permanently annex said islands as an integral part of the territory of the United States. But it is the intention of the United States to establish on said islands a government suitable to the wants and conditions of the inhabitants of said islands, to prepare them for local self-government, and in due time to make such disposition of said islands as will best promote the interests of the citizens of the United States and the inhabitants of said islands."—*Congressional Record, Dec.* 6, 1898—*Feb.* 6, 1899.

A. D. 1899-1901. — Reciprocity arrangements under the Dingley Tariff Act, not ratified by the Senate.—The Dingley Tariff Act, which became law on the 24th of July, 1897, authorized the making of tariff concessions to other countries on terms of reciprocity, if negotiated within two years from the above date. At the expiration of two years, such conventions of reciprocity had been arranged with France and Portugal, and with Great Britain for her West Indian colonies of Jamaica, Barbadoes, Trinidad, Bermuda, and British Guiana. With France, a preliminary treaty signed in May, 1898, was superseded in July, 1899, by one of broader scope, which opens the French markets to an extensive list of American commodities at the minimum rates of the French tariff, and cuts the American tariff from 5 to 20 per cent. on many French products, not inclusive of sparkling wines. In the treaty with Portugal, the reduction of American duties on wines is more general. The reciprocal reduction on American products extends to many agricultural and mineral products. The reciprocal agreement with the British West Indies covers sugar, fruits, garden products, coffee and asphalt, on one side, and flour, meat, cotton goods, agricultural machinery, oils, etc., on the other.

None of these treaties was acted upon by the United States Senate during the session of 1899–1900, and it became necessary to extend the time for their ratification, which was done. Some additional reciprocity agreements were then negotiated, of which the following statement was made by the President in his Message to Congress, December 3, 1900: "Since my last communication to the Congress on this subject special commercial agreements under the third section of the tariff act have been proclaimed with Portugal, with Italy and with Germany. Commercial conventions under the general limitations of the fourth section of the same act have been concluded with Nicaragua, with Ecuador, with the Dominican Republic, with Great Britain on behalf of the island of Trinidad and with Denmark on behalf of the island of St. Croix. These will be early communicated to the Senate. Negotiations with other governments are in progress for the improvement and security of our commercial relations."

The question of the ratification of all these treaties was pending in the Senate when the term of the 56th Congress expired, March 4, 1901. Opposing interests in the United States seemed likely then to defeat their ratification. On the last day of the special session of the Senate, March 5–9, an agreement extending the time for the ratification of the French reciprocity treaty was received and referred to the committee on foreign relations. On the 15th of March, Secretary Hay and Lord Pauncefote signed protocols extending for one year the time of ratification for four of the British West Indian reciprocity treaties, namely, Jamaica, Bermuda, Guiana and Turks and Caicos islands.

A. D. 1900 (March—December).—Passage of the Financial Bill.—Settlement of the question of the monetary standard.—The working of the act.—Legislation in the direction sought by the advocates of the gold standard and of a reformed monetary system for the country, whose agitations are referred to above (see above: A. D. 1896–1898), was attained in the spring of 1900, by the passage of an important "Financial Bill" which became law on the 14th of March. The provisions and the effect of the Act were summarized at the time by the Secretary of the Treasury, Mr. Gage, in a published statement, as follows: "The financial bill has for its first object what its title indicates, the fixing of the standard of value and the maintaining at a parity with that standard of all forms of money issued or coined by the United States. It reaffirms that the unit of value is the dollar, consisting of 25.8 grains of gold, nine tenths fine, but from that point it goes on to make it the duty of the Secretary of the Treasury to maintain all forms of money issued or coined at a parity with this standard. It puts into the hands of the Secretary ample power to do that. For that purpose, the bill provides in the Treas-

ury bureaus of issue and redemption and transfers from the general fund of the Treasury's cash $150,000,000 in gold coin and bullion to redemption fund, that gold to be used for the redemption of United States notes and Treasury notes. That fund is henceforth absolutely cut out of and separated from the cash balance in the Treasury and the available cash balance will hereafter show a reduction of $150,000,000 from the figures that have heretofore prevailed. This $150,000,000 redemption fund is to be used for no other purpose than the redemption of United States notes and Treasury notes and those notes so redeemed may be exchanged for the gold in the general fund or with the public, so that the reserve fund is kept full with gold to the $150,000,000 limit. If redemptions go on so that the gold in this reserve fund is reduced below $100,000,000, and the Secretary is unable to build it up to the $150,000,000 mark by exchange for gold in the general fund or otherwise, he is given power to sell bonds and it is made his duty to replenish the gold to the $150,000,000 mark by such means.

"The 'endless chain' is broken by a provision which prohibits the use of notes so redeemed to meet deficiencies in the current revenues. The act provides for the ultimate retirement of all the Treasury notes issued in payment for silver bullion under the Sherman act. As fast as that bullion is coined into silver dollars Treasury notes are to be retired and replaced with an equal amount of silver certificates. The measure authorizes the issue of gold certificates in exchange for deposits of gold coin, the same as at present, but suspends that authority whenever and so long as the gold in the redemption fund is below $100,000,000 and gives to the Secretary the option to suspend the issue of such certificates whenever the silver certificates and United States notes in the general fund of the Treasury exceed $40,000,000. The bill provides for a larger issue of silver certificates, by declaring that hereafter silver certificates shall be issued only in denominations of $10 and under except as to 10 per cent. of the total volume. Room is made for this larger use of silver certificates in the way of small bills by another provision which makes it necessary as fast as the present silver certificates of high denominations are broken up into small bills to cancel a similar volume of United States notes of small denominations and replace them with notes of denominations of $10 and upward. Further room is made for the circulation of small silver certificates by a clause which permits national banks to have only one third of their capital in denomination under $10.

"One clause of the bill which the public will greatly appreciate is the right it gives to the Secretary to coin any of the 1890 bullion into subsidiary silver coins up to a limit of $100,000,000. There has for years been a scarcity of subsidiary silver during periods of active retail trade, but this provision will give the Treasury ample opportunity to supply all the subsidiary silver that is needed. Another provision that the public will greatly appreciate is the authority given to the Secretary to recoin worn and uncurrent subsidiary silver now in the Treasury or hereafter received.

"A distinct feature of the bill is in reference to refunding the 3 per cent. Spanish war loan, the 2 per cent. bonds maturing in 1907 and the 5 per cent. bonds maturing in 1904, a total of $839,000,000, into new 2 per cent. bonds. These new 2 per cent. bonds will not be offered for sale, but will only be issued in exchange for an equal amount, face value, of old bonds. This exchange will save the Government, after deducting the premium paid, nearly $23,000,000, if all the holders of the old bonds exchange them for the new ones. National banks that take out circulation based on the new bonds are to be taxed only one half of 1 per cent. on the average amount of circulation outstanding, while those who have circulation based on a deposit of old bonds will be taxed, as at present, 1 per cent. There are some other changes in the national banking act. The law permits national banks with $25,000 capital to be organized in places of 3,000 inhabitants or less, whereas heretofore the minimum capital has been $50,000. It also permits banks to issue circulation on all classes of bonds deposited up to the par value of the bonds, instead of 90 per cent. of their face, as heretofore. This ought to make an immediate increase in national bank circulation of something like $24,000,000, as the amount of bonds now deposited to secure circulation is about $242,000,000. If the price of the new 2s is not forced so high in the market that there is no profit left to national banks in taking out circulation, we may also look for a material increase in national bank circulation based on additional deposits of bonds. National banks are permitted under the law to issue circulation up to an amount equal to their capital. The total capital of all national banks is $616,000,000. The total circulation outstanding is $253,000,000. There is, therefore, a possibility of an increase in circulation of $363,000,000, although the price of the 2 per cent. bonds, as already foreshadowed by market quotations in advance of their issue, promises to be so high that the profit to the banks in taking out circulation will not be enough to make the increase anything like such a possible total."

Upon the working of the Act, during the first nine months of its operation, Secretary Gage remarked as follows, in his annual report dated December 14, 1900: "The operation of the act of March 14 last with respect to these two important matters of our finances has well exemplified its wisdom. Confidence in the purpose and power of the Government to maintain the gold standard has been greatly strengthened. The result is that gold flows toward the Treasury instead of away from it. At the date of this report the free gold in the Treasury is larger in amount than at any former period in our history. Including the $150,000,000 reserve, the gold in the Treasury belonging to the Government amounts to over $242,000,000, while the Treasury holds, besides, more than $230,000,000, against which certificates have been issued. That provision of the act which liberalized the conditions of bank-note issue was also wise and timely. Under it, . . . there has been an increase of some $77,000,000 in bank-note issues. To this fact may be chiefly attributed the freedom from stress for currency to handle the large harvests of cotton, wheat, and corn. In this respect the year has been an exception to the general rule of stringency which for several years has so plainly marked the autumn season.

"Nevertheless, the measures referred to, prolific as they have been in good results, will yet need re-enforcement in some important particulars. Thus, as to the redemption fund provided for in said act, while the powers conferred upon the Secretary are probably ample to enable a zealous and watchful officer to protect fully the gold reserve, there appears to be lacking sufficient mandatory requirement to furnish complete confidence in the continued parity, under all conditions, between our two forms of metallic money, silver and gold. Upon this point further legislation may become desirable. As to the currency, while the liberalizing of conditions has, as previously noted, found response in a necessary increase of bank-note issues, there is under our present system no assurance whatever that the volume of bank currency will be continuously responsive to the country's needs, either by expanding as such needs require or by contracting when superfluous in amount. The truth is that safe and desirable as is our currency system in many respects, it is not properly related. The supply of currency is but remotely, if at all, influenced by the everchanging requirements of trade and industry. It is related most largely, if not entirely, to the price of Government bonds in the market."—*Annual Report of the Secretary of the Treasury*, 1900, *pp.* 72–73.

A. D. 1900 (April).—Speech of Senator Hoar in denial of the right of the government of the United States, under the Constitution, to hold the Philippine Islands as a subject state.—On the 17th of April, the following joint resolution was under consideration in the Senate: "Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, that the Philippine Islands are territory belonging to the United States; that it is the intention of the United States to retain them as such and to establish and maintain such governmental control throughout the archipelago as the situation may demand." Senator Hoar, of Massachusetts, spoke in opposition to the resolution, and some passages from his speech are quoted here, because they are notably representative of the ground and spirit of an opposition which existed within the party controlling the government to the war of subjugation in the Philippine Islands, to which the party and the government were finally committed by the adoption of this Congressional declaration. The attitude and argument of parties on the question are set forth below, in the platforms and manifestos of the presidential election. This speech exhibits a feeling on that question which was overridden in the winning party, and it has an importance both forensic and historical:

"The American people, so far as I know, were all agreed that their victory [in the Spanish American war] brought with it the responsibility of protecting the liberated peoples from the cupidity of any other power until they could establish their own independence in freedom and in honor. I stand here to-day to plead with you not to abandon the principles that have brought these things to pass. I implore you to keep to the policy that has made the country great, that has made the Republican party great, that has made the President great. I have nothing new to say. But I ask you to keep in the old channels, and to keep off the old rocks laid down in the old charts, and to follow the old sailing orders that all the old captains of other days have obeyed, to take your bearings, as of old, from the north star,

> Of whose true fixed and resting quality
> There is no fellow in the firmament,

and not from this meteoric light of empire.

"Especially, if I could, would I persuade the great Republican party to come back again to its old faith, to its old religion, before it is too late. There is yet time. The President has said again and again that his is only an ad interim policy until Congress shall act. It is not yet too late. Congress has rejected, unwisely, as I think, some declarations for freedom. But the two Houses have not as yet committed themselves to despotism. The old, safe path, the path alike of justice and of freedom, is still easy. It is a path familiar, of old, to the Republican party. If we have diverged from it for the first time, everything in our history, everything in our own nature calls us back. The great preacher of the English church tells you how easy is the return of a great and noble nature from the first departure from rectitude:—'For so a taper, when its crown of flame is newly blown off, retains a nature so symbolical to light, that it will with greediness reenkindle and snatch a ray from the neighbor fire.'

"I, for one, believed, and still believe that the pathway to prosperity and glory for the country was also the pathway to success and glory for the Republican party. I thought the two things inseparable. If, when we made the treaty of peace, we had adhered to the purpose we declared when we declared war; if we had dealt with the Philippine Islands as we promised to deal, have dealt, and expect to deal with Cuba, the country would have escaped the loss of 6,000 brave soldiers, other thousands of wrecked and shattered lives, the sickness of many more, the expenditure of hundreds of millions, and, what is far worse than all, the trampling under foot of its cherished ideals. There would have been to-day a noble republic in the East, sitting docile at our feet, receiving from us civilization, laws, manners, and giving in turn everything the gratitude of a free people could give—love, obedience, trade. The Philippine youth would throng our universities; our Constitution, our Declaration, the lives of Washington and Lincoln, the sayings of Jefferson and Franklin would have been the textbooks of their schools. How our orators and poets would have delighted to contrast America liberating and raising up the republic of Asia, with England subduing and trampling under foot the republic of Africa. Nothing at home could have withstood the great party and the great President who had done these things. We should have come from the next election with a solid North and have carried half the South. You would at least have been spared the spectacle of great Republican States rising in revolt against Republican policies. I do not expect to accomplish anything for liberty in the Philippine Islands but through the Republican party. Upon it the fate of these Islands for years to come is to depend. If that party can not be persuaded, the case is in my judgment for the present hopeless. . . .

UNITED STATES, 1900.

"The practical question which divided the American people last year, and which divides them to-day, is this: Whether in protecting the people of the Philippine Islands from the ambition and cupidity of other nations we are bound to protect them from our own. . . . In dealing with this question, Mr. President, I do not mean to enter upon any doubtful ground. I shall advance no proposition ever seriously disputed in this country till within twelve months. . . . If to think as I do in regard to the interpretation of the Constitution; in regard to the mandates of the moral law or the law of nations, to which all men and all nations must render obedience; in regard to the policies which are wisest for the conduct of the State, or in regard to those facts of recent history in the light of which we have acted or are to act hereafter, be treason, then Washington was a traitor; then Jefferson was a traitor; then Jackson was a traitor; then Franklin was a traitor; then Sumner was a traitor; then Lincoln was a traitor; then Webster was a traitor; then Clay was a traitor; then Corwin was a traitor; then Kent was a traitor; then Seward was a traitor; then McKinley, within two years, was a traitor; then the Supreme Court of the United States has been in the past a nest and hotbed of treason; then the people of the United States, for more than a century, have been traitors to their own flag and their own Constitution.

"We are presented with an issue that can be clearly and sharply stated as a question of constitutional power, a question of international law, a question of justice and righteousness, or a question of public expediency. This can be stated clearly and sharply in the abstract, and it can be put clearly and sharply by an illustration growing out of existing facts.

"The constitutional question is: Has Congress the power, under our Constitution, to hold in subjection unwilling vassal States?

"The question of international law is: Can any nation rightfully convey to another sovereignty over an unwilling people who have thrown off its dominion, asserted their independence, established a government of their own, over whom it has at the time no practical control, from whose territory it has been disseized, and which it is beyond its power to deliver?

"The question of justice and righteousness is: Have we the right to crush and hold under our feet an unwilling and subject people whom we had treated as allies, whose independence we are bound in good faith to respect, who had established their own free government, and who had trusted us?

"The question of public expediency is: Is it for our advantage to promote our trade at the cannon's mouth and at the point of the bayonet?

"All these questions can be put in a way of practical illustration by inquiring whether we ought to do what we have done, are doing, and mean to do in the case of Cuba; or what we have done, are doing, and some of you mean to do in the case of the Philippine Islands.

"It does not seem to me to be worth while to state again at length the constitutional argument which I have addressed to the Senate heretofore. It has been encountered with eloquence, with clearness and beauty of statement, and, I have no doubt, with absolute sincerity by Senators who have spoken upon the other side. But the issue between them and me can be summed up in a sentence or two, and if, so stated, it can not be made clear to any man's apprehension, I despair of making it clear by any elaboration or amplification. I admit that the United States may acquire and hold property, and may make rules and regulations for its disposition. I admit that, like other property, the United States may acquire and hold land. It may acquire it by purchase. It may acquire it by treaty. It may acquire it by conquest. And it may make rules and regulations for its disposition and government, however it be acquired. When there are inhabitants upon the land so acquired it may make laws for their government. But the question between me and the gentlemen on the other side is this: Is this acquisition of territory, of land or other property, whether gained by purchase, conquest, or treaty, a constitutional end or only a means to a constitutional end? May you acquire, hold, and govern territory or other property as an end for which our Constitution was framed, or is it only a means toward some other and further end? May you acquire, hold, and govern property by conquest, treaty, or purchase for the sole object of so holding and governing it, without the consideration of any further constitutional purpose? Or must you hold it for a constitutional purpose only, such as the making of new States, the national defense and security, the establishment of a seat of government, or the construction of forts, harbors, and like works, which, of course, are themselves for the national defense and security?

"I hold that this acquisition, holding and governing, can be only a means for a constitutional end—the creation of new States or some other of the constitutional purposes to which I have adverted. And I maintain that you can no more hold and govern territory than you can hold and manage cannon or fleets for any other than a constitutional end; and I maintain that the holding in subjection an alien people, governing them against their will for any fancied advantage to them, is not only not an end provided for by the Constitution, but is an end prohibited therein. . . . It is an end which the generation which framed the Constitution and the Declaration of Independence declared was unrighteous and abhorrent. So, in my opinion, we have no constitutional power to acquire territory for the purpose of holding it in subjugation, in a state of vassalage or serfdom, against the will of its people.

"It is to be noted just here that we have acquired no territory or other property in the Philippine Islands, save a few public buildings. By every other acquisition of territory the United States became a great land owner. She owned the public lands as she had owned the public lands in the Northwest ceded to her by the old States. But you own nothing in the Philippines. The people own their farms and dwellings and cities. The religious orders own the rest. The Filipinos desire to do what our English ancestors did in the old days when England was Catholic. The laity feared that the Church would engross all the land. So they passed their statute of mortmain. You have either got to let the people of the Philippine Islands settle this matter for themselves, or you must take upon you the delicate duty of settling it for

them. Your purchase or conquest is a purchase or conquest of nothing but sovereignty. It is a sovereignty over a people who are never to be admitted to exercise it or to share it. In the present case we have not, I repeat, bought any property. We have undertaken to buy mere sovereignty. There were no public lands in the Philippine Islands, the property of Spain, which we have bought and paid for. The mountains of iron and the nuggets of gold and the hemp-bearing fields—do you purpose to strip the owners of their rightful title? We have undertaken to buy allegiance, pure and simple. And allegiance is just what the law of nations declares you can not buy. . . .

"I have been unable to find a single reputable authority more than twelve months old for the power now claimed for Congress to govern dependent nations or territories not expected to become States. The contrary, until this war broke out, has been taken as too clear for reasonable question. I content myself with a few authorities. Among them are Daniel Webster, William H. Seward, the Supreme Court of the United States, James Madison.

"Daniel Webster said in the Senate, March 23, 1848: 'Arbitrary governments may have territories and distant possessions, because arbitrary governments may rule them by different laws and different systems. We can do no such thing. They must be of us, part of us, or else strangers. I think I see a course adopted which is likely to turn the Constitution of the land into a deformed monster, into a curse rather than a blessing; in fact, a frame of an unequal government, not founded on popular representation, not founded on equality, but on the grossest inequality; and I think that this process will go on, or that there is danger that it will go on, until this Union shall fall to pieces. I resist it to-day and always! Whoever falters or whoever flies, I continue the contest!'

"James Madison said in the Federalist: 'The object of the Federal Constitution is to secure the union of the thirteen primitive States, which we know to be practicable; and to add to them such other States as may arise in their own bosoms, or in their neighborhood, which we can not doubt will be practicable.'—*James Madison, Federalist, No.* 14.

"William H. Seward said: 'It is a remarkable feature of the Constitution of the United States that its framers never contemplated colonies, or provinces, or territories at all. On the other hand, they contemplated States only, nothing less than States, perfect States, equal States, as they are called here, sovereign States. . . . There is reason—there is sound political wisdom in this provision of the Constitution excluding colonies, which are always subject to oppression, and excluding provinces, which always tend to corrupt and ultimately to break down the parent State.'—*Seward's Works, Volume* 1, *page* 122. 'By the Constitution of the United States, there are no subjects. Every citizen of any one State is a free and equal citizen of the United States. Again, by the Constitution of the United States there are no permanent provinces or dependencies.'—*Seward's Works, Volume* 4, *page* 167.

"The Supreme Court of the United States, in the case of Fleming vs. Page, said: 'The genius and character of our institutions are peaceful; and the power to declare war was not conferred upon Congress for the purposes of aggression or aggrandizement, but to enable the Government to vindicate by arms, if it should become necessary, its own rights and the rights of its citizens. A war, therefore, declared by Congress, can never be presumed to be waged for the purpose of conquest or the acquisition of territory; nor does the law declaring the war imply an authority to the President to enlarge the limits of the United States by subjugating the enemy's country.'

"Our territories, so far, have all been places where Americans would go to dwell as citizens, to establish American homes, to obtain honorable employment, and to build a State. Will any man go to the Philippine Islands to dwell, except to help govern the people, or to make money by a temporary residence? . . .

"When hostilities broke out, February 5, 1899, we had no occupancy of and no title of any kind to any portion of the Philippine territory, except the town and bay of Manila. Everything else was in the peaceful possession of the inhabitants. In such a condition of things, Mr. President, international law speaks to us with its awful mandate. It pronounces your proposed action sheer usurpation and robbery. You have no better title, according to the law of nations, to reduce this people to subjection than you have to subjugate Mexico or Haiti or Belgium or Switzerland. This is the settled doctrine, as declared by our own great masters of jurisprudence. You have no right, according to the law of nations, to obtain by purchase or acquisition sovereignty over a people which is not actually exercised by the country which undertakes to convey it or yield it. . . . We have not yet completed the acquisition. But at the time we entered upon it, and at the time of this alleged purchase, the people of the Philippine Islands, as appears by General Otis's report, by Admiral Dewey's report, and the reports of officers for whom they vouched, held their entire territory, with the exception of the single town of Manila. They had, as appears from these reports, a full organized government. They had an army fighting for independence, admirably disciplined, according to the statement of zealous advocates of expansion.

"Why, Mr. President, is it credible that any American statesman, that any American Senator, that any intelligent American citizen anywhere, two years ago could have been found to affirm that a proceeding like that of the Paris treaty could give a just and valid title to sovereignty over a people situated as were the people of those islands? A title of Spain, originally by conquest, never submitted to nor admitted by the people of the islands, with frequent insurrections at different times for centuries, and then the yoke all thrown off, a constitutional government, schools, colleges, churches, universities, hospitals, town governments, a legislature, a cabinet, courts, a code of laws, and the whole island occupied and controlled by its people, with the single exception of one city; with taxes lawfully levied and collected, with an army and the beginning of a navy.

"And yet the Senate, the Congress enacted less than two years ago that the people of Cuba—controlling peaceably no part of their island, levying no taxes in any orderly or peaceable way, with no administration of justice, no cabi-

net—not only of right ought to be, but were, in fact, a free and independent State. I did not give my assent to that declaration of fact. I assented to the doctrine that they of right ought to be. But I thought the statement of fact much calculated to embarass the Government of the United States, if it were bound by that declaration; and it has been practically disregarded by the Administration ever since. But the question now is a very different one. You not only deny that the Filipinos are, but you deny that they of right ought to be free and independent; and you recognize Spain as entitled to sell to you the sovereignty of an island where she was not at the time occupying a foot of territory, where her soldiers were held captives by the government of the island, a government to which you had delivered over a large number of Spanish prisoners to be held as captives. And yet you come here to-day and say that they not only are not, but they of right ought not to be free and independent; and when you are pressed you answer us by talking about mountains of iron and nuggets of gold, and trade with China.

"I affirm that you can not get by conquest, and you can not get by purchase, according to the modern law of nations, according to the law of nations as accepted and expounded by the United States, sovereignty over a people, or title to a territory, of which the power that undertakes to sell it or the power from whom you undertake to wrest it has not the actual possession and dominion. . . . You cannot buy a war. More than this, you cannot buy a tyrant's claim to subject again an oppressed people who have achieved their freedom. . . .

"Gentlemen tell us that the bill of the Senator from Wisconsin is copied from that introduced in Jefferson's time for the purchase of Louisiana. Do you claim that you propose to deal with these people as Jefferson meant to deal with Louisiana? You talk of Alaska, of Florida, of California; do you mean to deal with the Philippines as we mean to deal with Alaska and dealt with Florida or California?

"I have spoken of the Declaration of Independence as a solemn affirmation of public law, but it is far more than that. It is a solemn pledge of national faith and honor. It is a baptismal vow. It is the bedrock of our republican institutions. It is, as the Supreme Court declared, the soul and spirit of which the Constitution is but the body and letter. It is the light by which the Constitution must be read. . . . There is expansion enough in it, but it is the expansion of freedom and not of despotism; of life, not of death. Never was such growth in all human history as that from the seed Thomas Jefferson planted. The parable of the mustard seed, than which, as Edward Everett said, 'the burning pen of inspiration, ranging heaven and earth for a similitude, can find nothing more appropriate or expressive to which to liken the Kingdom of God,' is repeated again. 'Whereunto shall we liken it, or with what comparison shall we compare it? It is like a grain of mustard seed, which, when it is sown in the earth, is less than all the seeds that be in the earth. But when it is sown, it groweth up, and becometh greater than all herbs, and shooteth out great branches, so that the fowls of the air may lodge under the shadow of it.' This is the expansion of Thomas Jefferson. It has covered the continent. It is on both the seas. It has saved South America. It is revolutionizing Europe. It is the expansion of freedom. It differs from your tinsel, pinchbeck, pewter expansion as the growth of a healthy youth into a strong man differs from the expansion of an anaconda when he swallows his victim. Ours is the expansion of Thomas Jefferson. Yours is the expansion of Aaron Burr. It is destined to as short a life and to a like fate. . . .

"There are 1,200 islands in the Philippine group. They extend as far as from Maine to Florida. They have a population variously estimated at from 8,000,000 to 12,000,000. There are wild tribes who never heard of Christ, and islands that never heard of Spain. But among them are the people of the island of Luzon, numbering 3,500,000, and the people of the Visayan Islands, numbering 2,500,000 more. They are a Christian and civilized people. They wrested their independence from Spain and established a republic. Their rights are no more to be affected by the few wild tribes in their own mountains or by the dwellers in the other islands than the rights of our old thirteen States were affected by the French in Canada, or the Six Nations of New York, or the Cherokees of Georgia, or the Indians west of the Mississippi. Twice our commanding generals, by their own confession, assured these people of their independence. Clearly and beyond all cavil we formed an alliance with them. We expressly asked them to co-operate with us. We handed over our prisoners to their keeping; we sought their help in caring for our sick and wounded. We were told by them again and again and again that they were fighting for independence. Their purpose was as well known to our generals, to the War Department, and to the President, as the fact that they were in arms. We never undeceived them until the time when hostilities were declared in 1899. The President declared again and again that we had no title and claimed no right to anything beyond the town of Manila. Hostilities were begun by us at a place where we had no right to be, and were continued by us in spite of Aguinaldo's disavowal and regret and offer to withdraw to a line we should prescribe. If we crush that republic, despoil that people of their freedom and independence, and subject them to our rule, it will be a story of shame and dishonor. . . .

"But we are told if we oppose the policy of our imperialistic and expanding friends we are bound to suggest some policy of our own as a substitute for theirs. We are asked what we would do in this difficult emergency. It is a question not difficult to answer. I for one am ready to answer it.

"1. I would declare now that we will not take these islands to govern them against their will.

"2. I would reject a cession of sovereignty which implies that sovereignty may be bought and sold and delivered without the consent of the people. Spain had no rightful sovereignty over the Philippine Islands. She could not rightfully sell it to us. We could not rightfully buy it from her.

"3. I would require all foreign governments to keep out of these islands.

"4. I would offer to the people of the Philippines our help in maintaining order until they

have a reasonable opportunity to establish a government of their own.

"5. I would aid them by advice, if they desire it, to set up a free and independent government.

"6. I would invite all the great powers of Europe to unite in an agreement that that independence shall not be interfered with by us, by themselves, or by any one of them with the consent of the others. As to this I am not so sure. I should like quite as well to tell them it is not to be done whether they consent or not.

"7. I would declare that the United States will enforce the same doctrine as applicable to the Philippines that we declared as to Mexico and Haiti and the South American Republics. It is true that the Monroe Doctrine, a doctrine based largely on our regard for our own interests, is not applicable either in terms or in principle to a distant Asiatic territory. But, undoubtedly, having driven out Spain, we are bound, and have the right, to secure to the people we have liberated an opportunity, undisturbed and in peace, to establish a new government for themselves.

"8. I would then, in a not distant future, leave them to work out their own salvation, as every nation on earth, from the beginning of time, has wrought out its own salvation. Let them work out their own salvation, as our own ancestors slowly and in long centuries wrought out theirs; as Germany, as Switzerland, as France, in briefer periods, wrought out theirs; as Mexico and the South American Republics have accomplished theirs, all of them within a century, some of them within the life of a generation. To attempt to confer the gift of freedom from without, or to impose freedom from without, on any people, is to disregard all the lessons of history. It is to attempt

> 'A gift of that which is not to be given
> By all the blended powers of earth and heaven.'

"9. I would strike out of your legislation the oath of allegiance to us and substitute an oath of allegiance to their own country."

A. D. 1900 (April).—Act temporarily to provide revenues and a civil government for Porto Rico. See (in this vol.) PORTO RICO: A. D. 1899–1900; and 1900 (APRIL).

A. D. 1900 (April).—Appointment of Second Commission to the Philippines.—The President's instructions.—Steps toward the establishment of civil government and the principles to be observed. See (in this vol.) PHILIPPINE ISLANDS: A. D. 1900 (APRIL).

A. D. 1900 (May—October).—The Twelfth Census of the Republic.—The Twelfth Census of the United States was taken between May 1 and Nov. 1, 1900, with general results reported on the latter date by the Director, William R. Merriam, as follows:—The following statement . . . gives the population of the United States in detail for each State and organized Territory and for Alaska and Hawaii as finally revised. The figures purporting to give the number of "persons in the service of the United States stationed abroad" include an estimated population of 14,400 for certain military organizations and naval vessels stationed abroad, principally in the Philippines, for which the returns have not yet been received. The total population of the United States in 1900, as shown by the accompanying statement, is 76,304,799, of which 74,610,523 persons are contained in the 45 States, representing the population to be used for apportionment purposes. This statement also shows a total of 134,158 Indians not taxed, of which 44,617 are found in certain of the States and which are to be deducted from the population of such States for the purpose of determining the apportionment of Representatives. The total population in 1890, with which the aggregate population at the present census should be compared, is 63,069,756, comprising 62,622,250 persons enumerated in the States and organized Territories at that census, 32,052 persons in Alaska, 180,182 Indians and other persons in the Indian Territory, 145,282 Indians and other persons on Indian reservations, etc., and 89,990 persons in Hawaii, this last-named figure being derived from the census of the Hawaiian Islands taken as of December 28, 1890. Taking this population for 1890 as a basis, there has been a gain in population of 13,235,043 during the ten years from 1890 to 1900, representing an increase of very nearly 21 per cent. No provision was made by the census act for the enumeration of the inhabitants of Porto Rico, but a census for that island, taken as of October 16, 1899, under the direction of the War Department, showed a population of 953,243.

—*Report of the Director of the Census, Nov.* 1, 1900.

"By the twelfth census the center of population in 1900 was in the following position: Latitude 39° 9′ 36″; longitude 85° 48′ 54″. In ten years the center of population has moved westward 16′ 1″, or about fourteen miles, and southward 2′ 20″, or about two and one half miles. It rests now in Southern Indiana, at a point about six miles southeast of Columbus, the county seat of Bartholomew county, Indiana. The center of population is the center of gravity of the country, each individual being assumed to have the same weight. . . . The center of area of the United States, excluding Alaska and Hawaii and other recent accessions, is in northern Kansas, in approximate latitude 39° 55′, and approximate longitude 98° 50′. The center of population is therefore about three-fourths of a degree south and more than 13 degrees east of the center of area."—*United States, Twelfth Census, Bulletin No.* 62.

A. D. 1900 (May—November).—The Presidential election.—Party platforms and nominations.—The issues on which the presidential election of 1900 would naturally and logically have turned were those growing out of the Spanish-American War, relative to principles and policy in dealing with the colonial possessions that were taken from Spain. But circumstances forced those most important political questions into the background of consideration, so far as concerned the opinion of a large part of the American people. The monetary question, which might have been supposed to be settled by the election of 1896 and by the Congressional legislation of March, 1900, was brought forward again with a persistency that caused uneasy feeling in the commercial and industrial world. The party which had fought the battle for a silver monetary standard in 1896, and been beaten, seemed willing to abandon that "lost cause," but the candidate to whose fortunes the party had become commmitted would not consent. His will prevailed, and the old issue came into the canvass again, with such confusing effects that the real meaning of the votes that were cast, as an expression of the judgment and will of the American people, can by no possibility be known. Men dreaded a disturbance of the conditions under which the business of the country was active and prosperous. How far their wish to preserve those conditions coincided, as a motive in voting, with their judgment on other issues, and how far it overcame dispositions that urged them contrariwise, are puzzling questions which the election of 1900 has left behind.

United Christian Party Platform and Nominations.—The first candidates to be set in the field of the presidential campaign were put forward by a convention held at Rock Island, Illinois, May 1, representing a small combination of voters styled the United Christian Party. It named, in the first instance, the Rev. S. C. Swallow, of Pennsylvania, for President, and John G. Woolley, of Illinois, for Vice President, both of whom declined the nomination. Jonah F. R. Leonard, of Iowa, and David H. Martin, of Pennsylvania, were subsequently made the candidates of the party, and received a few hundred votes at the ensuing election, mostly, it would seem, in Illinois. The "Declarations" of the United Christian Party were as follows:

"We, the United Christian party, in National Convention assembled in the city of Rock Island, Ill., May 1 and 2, 1900, acknowledging Almighty God as the source of all power and authority, the Lord Jesus Christ as the sovereign ruler of nations, and the Bible as the standard by which to decide moral issues in our political life, do make the following declaration:

"We believe the time to have arrived when the eternal principles of justice, mercy, and love, as exemplified in the life and teachings of Jesus Christ should be embodied in the Constitution of our nation, and applied in concrete form to every function of our Government.

"We maintain that this statement is in harmony with the fundamental principles of our National common law; our Christian usages and customs; the declaration of the Supreme Court of the United States that 'This is a Christian nation,' and the accepted principle in judicial decisions that no law should contravene the Divine law.

"We deprecate certain immoral laws which have grown out of the failure of our nation to recognize these principles, notably such as require the desecration of the Christian Sabbath, authorize unscriptural marriage and divorce, and license the manufacture and sale of intoxicating liquors as a beverage.

"The execution of these immoral laws above mentioned we hold to be neither loyalty to our country nor honoring to God; therefore it shall be our purpose to administer the Government, so far as it shall be intrusted to us by the suffrages of the people, in accordance with the principles herein set forth, and, until amended, our oath of office shall be to the Constitution and laws as herein explained, and to no other, and we will look to Him who has all power in Heaven and in earth to vindicate our purpose in seeking His glory and the welfare of our beloved land.

"As an expression of consent or allegiance on the part of the governed, in harmony with the above statements, we declare for the adoption and use of the system of legislation known as the 'initiative and referendum,' together with 'proportionate representation' and the 'imperative mandate.'

"We hold that all men and women are created free and with equal rights, and declare for the establishment of such political, industrial, and social conditions as shall guarantee to every person civic equality, the full fruits of his or her

honest toil, and opportunity for the righteous enjoyment of the same; and we especially condemn mob violence and outrages against any individual or class of individuals in our country.

"We declare against war, and for the arbitration of all National and international disputes.

"We hold that the legalized liquor traffic is the crowning infamy of civilization, and we declare for the immediate abolition of the manufacture and sale of intoxicating liquors as a beverage.

"We are gratified to note the widespread agitation of the cigarette question, and declare ourselves in favor of the enactment of laws prohibiting the sale of cigarettes or tobacco in any form to minors.

"We declare for the daily reading of the Bible in the public schools and institutions of learning under control of the State.

"We declare for the Government ownership of public utilities.

"We declare for the election of the President and Vice-President and United States Senators by the direct vote of the people.

"We declare for such amendment of the United States Constitution as shall be necessary to give the principles herein set forth an undeniable legal basis in the fundamental law of our land.

"We invite into the United Christian party every honest man and woman who believes in Christ and His golden rule and standard of righteousness. We say especially to the sons of toil: Jesus, the carpenter's son, is your true friend. In His name and through the practice of His principles you may obtain your rights long withheld and long outraged. You have the votes necessary to enthrone Him. His love and principles, politically applied, will lift you up and give you true civic liberty forever."

People's or Populist Party Platforms and Nominations.—The second of the political parties to appear in the field of the national contest was the People's, known more commonly as the Populist Party, the division in which, shown in 1896, had become separation, complete. The two wings of the party held distinct conventions, in different places, but on the same day, May 10. Those known as the Middle-of-the-Road Populists assembled at Cincinnati and named Wharton Barker, of Pennsylvania, for President, with Ignatius Donnelly, of Minnesota for Vice President. The convention representing those who wished to act in co-operation with the Democratic Party, and known as the Fusion wing, met at Sioux Falls, South Dakota, and anticipated the action of the Democracy by nominating William J. Bryan for President (see, also, in this vol., FARMERS' ALLIANCE), with Charles A. Towne, of Minnesota, for Vice President. The platform declarations of the two wings were substantially the same on main questions; but those of the Fusionists covered several subjects which the Cincinnati convention passed by. They were as follows:

"The People's party of the United States, in convention assembled, congratulating its supporters on the wide extension of its principles in all directions, does hereby reaffirm its adherence to the fundamental principles proclaimed in its two prior platforms and calls upon all who desire to avert the subversion of free institutions by corporate and imperialistic power to unite with it in bringing the Government back to the ideals of Washington, Jefferson, Jackson, and Lincoln. It extends to its allies in the struggle for financial and economic freedom, assurances of its loyalty to the principles which animate the allied forces and the promise of honest and hearty coöperation in every effort for their success. To the people of the United States we offer the following platform as the expression of our unalterable convictions:

"Resolved, That we denounce the act of March 14, 1900, as the culmination of a long series of conspiracies to deprive the people of their constitutional rights over the money of the nation and relegate to a gigantic money trust the control of the purse and hence of the people. We denounce this act, first, for making all money obligations, domestic and foreign, payable in gold coin or its equivalent, thus enormously increasing the burdens of the debtors and enriching the creditors. Second—For refunding 'coin bonds' not to mature for years into long-time gold bonds so as to make their payment improbable and our debt perpetual. Third—For taking from the Treasury over $50,000,000 in a time of war and presenting it, as a premium, to bondholders to accomplish the refunding of bonds not due. Fourth—For doubling the capital of bankers by returning to them the face value of their bonds in current money notes so that they may draw one interest from the Government and another from the people. Fifth—For allowing banks to expand and contract their circulation at pleasure, thus controlling prices of all products. Sixth—For authorizing the Secretary of the Treasury to issue new gold bonds to an unlimited amount whenever he deems it necessary to replenish the gold hoard, thus enabling usurers to secure more bonds and more bank currency by drawing gold from the Treasury, thereby creating an 'endless chain' for perpetually adding to a perpetual debt. Seventh—For striking down the greenback in order to force the people to borrow $346,000,000 more from the banks at an annual cost of over $20,000,000. While barring out the money of the Constitution this law opens the printing mints of the Treasury to the free coinage of bank paper money, to enrich the few and impoverish the many.

"We pledge anew the People's party never to cease the agitation until this great financial conspiracy is blotted from the statute books, the Lincoln greenback restored, the bonds all paid, and all corporation money forever retired. We affirm the demand for the reopening of the mints of the United States for the free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1, the immediate increase in the volume of silver coins and certificates thus created to be substituted, dollar for dollar, for the banknotes issued by private corporations under special privilege granted by law of March 14, 1900, and prior National banking laws, the remaining portion of the banknotes to be replaced with full legal-tender Government paper money, and its volume so controlled as to maintain at all times a stable money market and a stable price level.

"We demand a graduated income and inheritance tax, to the end that aggregated wealth shall bear its just proportion of taxation.

"We demand that postal savings banks be established by the Government for the safe deposit of the savings of the people and to facilitate exchange.

UNITED STATES, 1900.

"With Thomas Jefferson we declare the land, including all natural sources of wealth, the inalienable heritage of the people. Government should so act as to secure homes for the people and prevent land monopoly. The original homestead policy should be enforced, and future settlers upon the public domain should be entitled to a free homestead, while all who have paid an acreage price to the Government under existing laws should have their homestead rights restored.

"Transportation being a means of exchange and a public necessity, the Government should own and operate the railroads in the interests of the people and on a non-partisan basis, to the end that all may be accorded the same treatment in transportation, and that the extortion, tyranny, and political power now exercised by the great railroad corporations, which result in the impairment, if not the destruction, of the political rights and personal liberties of the citizen, may be destroyed. Such ownership is to be accomplished in a manner consistent with sound public policy.

"Trusts, the overshadowing evil of the age, are the result and culmination of the private ownership and control of the three great instruments of commerce—money, transportation, and the means of transmission of information—which instruments of commerce are public functions, and which our forefathers declared in the Constitution should be controlled by the people through their Congress for the public welfare. The one remedy for the trusts is that the ownership and control be assumed and exercised by the people. We further demand that all tariffs on goods controlled by a trust shall be abolished. To cope with the trust evil, the people must act directly without the intervention of representatives who may be controlled or influenced. We therefore demand direct legislation, giving the people the lawmaking and veto power under the initiative and referendum. A majority of the people can never be corruptly influenced.

"Applauding the valor of our army and navy in the Spanish war, we denounce the conduct of the Administration in changing a war for humanity into a war of conquest. The action of the Administration in the Philippines is in conflict with all the precedents of our National life; at war with the Declaration of Independence, the Constitution, and the plain precepts of humanity. Murder and arson have been our response to the appeals of the people who asked only to establish a free government in their own land. We demand a stoppage of this war of extermination by the assurance to the Philippines of independence and protection under a stable government of their own creation.

"The Declaration of Independence, the Constitution, and the American flag are one and inseparable. The island of Porto Rico is a part of the territory of the United States, and by levying special and extraordinary customs duties on the commerce of that island the Administration has violated the Constitution, abandoned the fundamental principles of American liberty, and has striven to give the lie to the contention of our forefathers that there should be no taxation without representation.

"Out of the imperialism which would force an undesired domination on the people of the Philippines springs the un-American cry for a large standing army. Nothing in the character or purposes of our people justifies us in ignoring the plain lesson of history and putting our liberties in jeopardy by assuming the burden of militarism, which is crushing the people of the Old World. We denounce the Administration for its sinister efforts to substitute a standing army for the citizen soldiery, which is the best safeguard of the Republic.

"We extend to the brave Boers of South Africa our sympathy and moral support in their patriotic struggle for the right of self-government, and we are unalterably opposed to any alliance, open or covert, between the United States and any other nation that will tend to the destruction of liberty.

"And a further manifestation of imperialism is to be found in the mining districts of Idaho. In the Cœur d'Alene soldiers have been used to overawe miners striving for a greater measure of industrial independence. And we denounce the State Government of Idaho and the Federal Government for employing the military arm of the Government to abridge the civil rights of the people, and to enforce an infamous permit system which denies to laborers their inherent liberty and compels them to forswear their manhood and their right before being permitted to seek employment.

"The importation of Japanese and other laborers under contract to serve monopolistic corporations is a notorious and flagrant violation of the immigration laws. We demand that the Federal Government shall take cognizance of this menacing evil and repress it under existing laws. We further pledge ourselves to strive for the enactment of more stringent laws for the exclusion of Mongolian and Malayan immigration.

"We indorse municipal ownership of public utilities, and declare that the advantages which have accrued to the public under that system would be multiplied a hundredfold by its extension to natural interstate monopolies.

"We denounce the practice of issuing injunctions in the cases of dispute between employers and employés, making criminal acts by organizations which are not criminal when performed by individuals, and demand legislation to restrain the evil.

"We demand that United States Senators and all other officials as far as practicable be elected by direct vote of the people, believing that the elective franchise and untrammelled ballot are essential to a government for and by the people.

"The People's party condemns the wholesale system of disfranchisement by coercion and intimidation, adopted in some States, as un-republican and un-democratic. And we declare it to be the duty of the several State Legislatures to take such action as will secure a full, free, and fair ballot, and an honest count.

"We favor home rule in the Territories and the District of Columbia, and the early admission of the Territories as States.

"We denounce the expensive red-tape system, political favoritism, cruel and unnecessary delay and criminal evasion of the statutes in the management of the Pension Office, and demand the simple and honest execution of the law, and the fulfilment by the nation of its pledges of service pension to all its honorably discharged veterans."

Socialist Labor Party Platform and Nominations.—The convention of the Populists was followed next by that of the Socialist Labor Party, which met in New York City, on the 2d of June, and put in nomination Joseph P. Maloney, of Massachusetts, and Valentine Remmel, of Pennsylvania. Its Platform was as follows:

"The Socialist Labor party of the United States, in convention assembled, reasserts the inalienable right of all men to life, liberty, and the pursuit of happiness.

"With the founders of the American Republic we hold that the purpose of government is to secure every citizen in the enjoyment of this right; but in the light of our social conditions we hold, furthermore, that no such right can be exercised under a system of economic inequality, essentially destructive of life, of liberty, and of happiness.

"With the founders of this Republic we hold that the true theory of politics is that the machinery of government must be owned and controlled by the whole people; but in the light of our industrial development we hold, furthermore, that the true theory of economics is that the machinery of production must likewise belong to the people in common.

"To the obvious fact that our despotic system of economics is the direct opposite of our democratic system of politics can plainly be traced the existence of a privileged class, the corruption of government by that class, the alienation of public property, public franchises, and public functions to that class, and the abject dependence of the mightiest of nations upon that class.

"Again, through the perversion of democracy to the ends of plutocracy, labor is robbed of the wealth which it alone produces, is denied the means of self-employment, and, by compulsory idleness in wage slavery, is even deprived of the necessaries of life. Human power and natural forces are thus wasted, that the plutocracy may rule. Ignorance and misery, with all their concomitant evils, are perpetuated, that the people may be kept in bondage. Science and invention are diverted from their humane purpose to the enslavement of women and children.

"Against such a system the Socialist Labor party once more enters its protest. Once more it reiterates its fundamental declaration that private property in the natural sources of production and in the instruments of labor is the obvious cause of all economic servitude and political dependence.

"The time is fast coming when, in the natural course of social evolution, this system, through the destructive action of its failures and crises on the one hand, and the constructive tendencies of its trusts and other capitalistic combinations on the other hand, shall have worked out its own downfall.

"We, therefore, call upon the wage workers of the United States, and upon all other honest citizens, to organize under the banner of the Socialist Labor party into a class-conscious body, aware of its rights and determined to conquer them by taking possession of the public powers; so that, held together by an indomitable spirit of solidarity under the most trying conditions of the present class struggle, we may put a summary end to that barbarous struggle by the abolition of classes, the restoration of the land and of all the means of production, transportation, and distribution to the people as a collective body, and the substitution of the Coöperative Commonwealth for the present state of planless production, industrial war, and social disorder—a commonwealth in which every worker shall have the free exercise and full benefit of his faculties, multiplied by all the modern factors of civilization."

Republican Party Platform and Nominations.—On the 19th of June the national convention of the Republican Party began its session at Philadelphia; adopted its platform on the following day, and nominated President William McKinley for re-election on the 21st, naming Theodore Roosevelt, then Governor of New York, for Vice President, in opposition to his earnestly expressed wish. The adopted platform of principles was as follows:

"The Republicans of the United States, through their chosen representatives, met in National Convention, looking back upon an unsurpassed record of achievement and looking forward to a great field of duty and opportunity, and appealing to the judgment of their countrymen, make these declarations:

"The expectation in which the American people, turning from the Democratic party, intrusted power four years ago to a Republican Chief Magistrate and a Republican Congress, has been met and satisfied. When the people then assembled at the polls, after a term of Democratic legislation and administration, business was dead, industry paralyzed, and the National credit disastrously impaired. The country's capital was hidden away and its labor distressed and unemployed. The Democrats had no other plan with which to improve the ruinous conditions which they had themselves produced than to coin silver at the ratio of 16 to 1. The Republican Party, denouncing this plan as sure to produce conditions even worse than those from which relief was sought, promised to restore prosperity by means of two legislative measures—a protective tariff and a law making gold the standard of value.

"The people, by great majorities, issued to the Republican party a commission to enact these laws. This commission has been executed, and the Republican promise is redeemed. Prosperity more general and more abundant than we have ever known has followed these enactments. There is no longer controversy as to the value of any government obligations. Every American dollar is a gold dollar, or its assured equivalent, and American credit stands higher than that of any nation. Capital is fully employed, and labor everywhere is profitably occupied. No single fact can more strikingly tell the story of what Republican government means to the country than this—that while during the whole period of 107 years from 1790 to 1897 there was an excess of exports over imports of only $383,028,497, there has been in the short three years of the present Republican Administration an excess of exports over imports in the enormous sum of $1,483,537,094.

"And while the American people, sustained by this Republican legislation, have been achieving these splendid triumphs in their business and commerce, they have conducted and in victory concluded a war for liberty and human rights. No thought of National aggrandizement tarnished the high purpose with which American

standards were unfurled. It was a war unsought and patiently resisted, but when it came the American Government was ready. Its fleets were cleared for action, its armies were in the field, and the quick and signal triumph of its forces on land and sea bore equal tribute to the courage of American soldiers and sailors and to the skill and foresight of Republican statesmanship. To ten millions of the human race there was given 'a new birth of freedom,' and to the American people a new and noble responsibility.

"We indorse the Administration of William McKinley. Its acts have been established in wisdom and in patriotism, and at home and abroad it has distinctly elevated and extended the influence of the American nation. Walking untried paths and facing unforeseen responsibilities, President McKinley has been in every situation the true American patriot and the upright statesman, clear in vision, strong in judgment, firm in action, always inspiring and deserving the confidence of his countrymen. In asking the American people to indorse this Republican record and to renew their commission to the Republican party, we remind them of the fact that the menace to their prosperity has always resided in Democratic principles, and no less in the general incapacity of the Democratic party to conduct public affairs. The prime essential of business prosperity is public confidence in the good sense of the Government, and in its ability to deal intelligently with each new problem of administration and legislation. That confidence the Democratic party has never earned. It is hopelessly inadequate, and the country's prosperity when Democratic success at the polls is announced halts and ceases in mere anticipation of Democratic blunders and failures.

" We renew our allegiance to the principle of the gold standard, and declare our confidence in the wisdom of the legislation of the Fifty-sixth Congress by which the parity of all our money and the stability of our currency upon a gold basis has been secured.

" We recognize that interest rates are potent factors in production and business activity, and for the purpose of further equalizing and of further lowering the rates of interest, we favor such monetary legislation as will enable the varying needs of the seasons and of all sections to be promptly met in order that trade may be evenly sustained, labor steadily employed, and commerce enlarged. The volume of money in circulation was never so great per capita as it is to-day.

" We declare our steadfast opposition to the free and unlimited coinage of silver. No measure to that end could be considered which was without the support of the leading commercial countries of the world. However firmly Republican legislation may seem to have secured the country against the peril of base and discredited currency, the election of a Democratic President could not fail to impair the country's credit and to bring once more into question the intention of the American people to maintain upon the gold standard the parity of their money circulation. The Democratic party must be convinced that the American people will never tolerate the Chicago platform.

" We recognize the necessity and propriety of the honest coöperation of capital to meet new business conditions, and especially to extend our rapidly increasing foreign trade, but we condemn all conspiracies and combinations intended to restrict business, to create monopolies, to limit production, or to control prices, and favor such legislation as will effectively restrain and prevent all such abuses, protect and promote competition, and secure the rights of producers, laborers, and all who are engaged in industry and commerce.

" We renew our faith in the policy of protection to American labor. In that policy our industries have been established, diversified, and maintained. By protecting the home market competition has been stimulated and production cheapened. Opportunity to the inventive genius of our people has been secured and wages in every department of labor maintained at high rates, higher now than ever before, and always distinguishing our working people in their better conditions of life from those of any competing country. Enjoying the blessings of the American common school, secure in the right of self-government, and protected in the occupancy of their own markets, their constantly increasing knowledge and skill have enabled them finally to enter the markets of the world.

" We favor the associated policy of reciprocity so directed as to open our markets on favorable terms for what we do not ourselves produce in return for free foreign markets.

" In the further interest of American workmen we favor a more effective restriction of the immigration of cheap labor from foreign lands, the extension of opportunities of education for working children, the raising of the age limit for child labor, the protection of free labor as against contract convict labor, and an effective system of labor insurance.

" Our present dependence upon foreign shipping for nine-tenths of our foreign carrying is a great loss to the industry of this country. It is also a serious danger to our trade, for its sudden withdrawal in the event of European war would seriously cripple our expanding foreign commerce. The National defence and naval efficiency of this country, moreover, supply a compelling reason for legislation which will enable us to recover our former place among the trade carrying fleets of the world.

"The nation owes a debt of profound gratitude to the soldiers and sailors who have fought its battles, and it is the Government's duty to provide for the survivors and for the widows and orphans of those who have fallen in the country's wars. The pension laws, founded in this just sentiment, should be liberal, and should be liberally administered, and preference should be given wherever practicable with respect to employment in the public service to soldiers and sailors and to their widows and orphans.

" We commend the policy of the Republican party in maintaining the efficiency of the Civil Service. The Administration has acted wisely in its effort to secure for public service in Cuba, Porto Rico, Hawaii and the Philippine Islands only those whose fitness has been determined by training and experience. We believe that employment in the public service in these territories should be confined as far as practicable to their inhabitants.

"It was the plain purpose of the Fifteenth Amendment to the Constitution to prevent discrimination on account of race or color in regulating the elective franchise. Devices of State governments, whether by statutory or constitu-

tional enactment to avoid the purpose of this amendment are revolutionary and should be condemned.

"Public movements looking to a permanent improvement of the roads and highways of the country meet with our cordial approval and we recommend this subject to the earnest consideration of the people and of the Legislatures of the several States. We favor the extension of the rural free delivery service wherever its extension may be justified.

"In further pursuance of the constant policy of the Republican party to provide free homes on the public domain, we recommend adequate National legislation to reclaim the arid lands of the United States, reserving control of the distribution of water for irrigation to the respective States and Territories.

"We favor home rule for and the early admission to Statehood of the Territories of New Mexico, Arizona and Oklahoma.

"The Dingley act, amended to provide sufficient revenue for the conduct of the war, has so well performed its work that it has been possible to reduce the war debt in the sum of $40,000,000. So ample are the Government's revenues and so great is the public confidence in the integrity of its obligations that its newly funded 2 per cent bonds sell at a premium. The country is now justified in expecting, and it will be the policy of the Republican party to bring about, a reduction of the war taxes.

"We favor the construction, ownership, control and protection of an isthmian canal by the Government of the United States.

"New markets are necessary for the increasing surplus of our farm products. Every effort should be made to open and obtain new markets, especially in the Orient, and the Administration is warmly to be commended for its successful effort to commit all trading and colonizing nations to the policy of the open door in China.

"In the interest of our expanding commerce we recommend that Congress create a department of commerce and industries in the charge of a secretary with a seat in the Cabinet. The United States consular system should be reorganized under the supervision of this new department, upon such a basis of appointment and tenure as will render it still more serviceable to the Nation's increasing trade. The American Government must protect the person and property of every citizen wherever they are wrongfully violated or placed in peril.

"We congratulate the women of America upon their splendid record of public service in the volunteer aid association, and as nurses in camp and hospital during the recent campaigns of our armies in the Eastern and Western Indies, and we appreciate their faithful co-operation in all works of education and industry.

"President McKinley has conducted the foreign affairs of the United States with distinguished credit to the American people. In releasing us from the vexatious conditions of a European alliance for the government of Samoa his course is especially to be commended. By securing to our undivided control the most important island of the Samoan group and the best harbor in the Southern Pacific, every American interest has been safeguarded. We approve the annexation of the Hawaiian Islands to the United States. We commend the part taken by our Government in the Peace Conference at The Hague. We assert our steadfast adherence to the policy announced in the Monroe Doctrine. The provisions of The Hague Convention were wisely regarded when President McKinley tendered his friendly offices in the interest of peace between Great Britain and the South African republics. While the American Government must continue the policy prescribed by Washington, affirmed by every succeeding President and imposed upon us by The Hague Treaty, of non-intervention in European controversies, the American people earnestly hope that a way may soon be found, honorable alike to both contending parties, to terminate the strife between them.

"In accepting by the Treaty of Paris the just responsibility of our victories in the Spanish war the President and the Senate won the undoubted approval of the American people. No other course was possible than to destroy Spain's sovereignty throughout the West Indies and in the Philippine Islands. That course created our responsibility before the world, and with the unorganized population whom our intervention had freed from Spain, to provide for the maintenance of law and order, and for the establishment of good government and for the performance of international obligations. Our authority could not be less than our responsibility, and wherever sovereign rights were extended it became the high duty of the Government to maintain its authority, to put down armed insurrection and to confer the blessings of liberty and civilization upon all the rescued peoples. The largest measure of self-government consistent with their welfare and our duties shall be secured to them by law.

"To Cuba independence and self-government were assured in the same voice by which war was declared, and to the letter this pledge will be performed.

"The Republican party upon its history, and upon this declaration of its principles and policies, confidently invokes the considerate and approving judgment of the American people."

Prohibition Party Platform and Nominations.—In the next week after the meeting of the Republican national convention, that of the Prohibition Party was held at Chicago, opening on the 27th of June. It chose Mr. John G. Woolley, of Chicago (already named by the United Christian Party for Vice President—see above) to be its candidate for President, with Mr. Henry B. Metcalfe, of Rhode Island, for Vice President. Setting aside all political issues save those connected with the liquor traffic, its declarations were confined to that subject alone, and were as follows:

"The National Prohibition party, in convention represented at Chicago, June 27 and 28, 1900, acknowledged Almighty God as the supreme source of all just government. Realizing that this Republic was founded upon Christian principles, and can endure only as it embodies justice and righteousness, and asserting that all authority should seek the best good of all the governed, to this end wisely prohibiting what is wrong and permitting only what is right, hereby records and proclaims:

"First.—We accept and assert the definition given by Edward Burke, that a party is 'a body of men joined together for the purpose of pro-

tecting by their joint endeavor the National interest upon some particular principle upon which they are all agreed.'

"We declare that there is no principle now advocated, by any other party, which could be made a fact in government with such beneficent moral and material results as the principle of prohibition applied to the beverage liquor traffic; that the National interest could be promoted in no other way so surely and widely as by its adoption and assertion through a National policy and a coöperation therein by every State, forbidding the manufacture, sale, exportation, importation, and transportation of intoxicating liquors for beverage purposes; that we stand for this as the only principle proposed by any party anywhere for the settlement of a question greater and graver than any other before the American people, and involving more profoundly than any other their moral future and financial welfare; and that all the patriotic citizenship of this country agreed upon this principle, however much disagreement there may be as to minor considerations and issues, should stand together at the ballot-box from this time forward until prohibition is the established policy of the United States, with a party in power to enforce it and to insure its moral and material benefits.

"We insist that such a party agreed upon this principle and policy, having sober leadership, without any obligation for success to the saloon vote and to those demoralizing political combinations, can successfully cope with all other and lesser problems of government, in legislative halls and in the executive chair, and that it is useless for any party to make declarations in its platform as to any questions concerning which there may be serious differences of opinion in its own membership and as to which, because of such differences, the party could legislate only on a basis of mutual concessions when coming into power.

"We submit that the Democratic and Republican parties are alike insincere in their assumed hostility to trusts and monopolies. They dare not and do not attack the most dangerous of them all, the liquor power. So long as the saloon debauches the citizen and breeds the purchasable voter, money will continue to buy its way to power. Break down this traffic, elevate manhood, and a sober citizenship will find a way to control dangerous combinations of capital. We purpose, as a first step in the financial problem of the nation, to save more than a billion of dollars every year, now annually expended to support the liquor traffic and to demoralize our people. When that is accomplished, conditions will have so improved that with a clearer atmosphere the country can address itself to the questions as to the kind and quantity of currency needed.

"Second.—We reaffirm as true indisputably the declaration of William Windom, when Secretary of the Treasury in the Cabinet of President Arthur, that 'considered socially, financially, politically, or morally, the licensed liquor traffic is or ought to be the overwhelming issue in American politics, and that the destruction of this iniquity stands next on the calendar of the world's progress.' We hold that the existence of our party presents this issue squarely to the American people, and lays upon them the responsibility of choice between liquor parties, dominated by distillers and brewers, with their policy of saloon perpetuation breeding waste, wickedness, woe, pauperism, taxation, corruption, and crime, and our one party of patriotic and moral principle, with a policy which defends it from domination by corrupt bosses, and which insures it forever against the blighting control of saloon politics.

"We face with sorrow, shame, and fear the awful fact that this liquor traffic has a grip on our Government, municipal, State, and National, through the revenue system and a saloon sovereignty, which no other party dare to dispute; a grip which dominates the party now in power, from caucus to Congress, from policemen to President, from the rum shop to the White House; a grip which compels the Executive to consent that law shall be nullified in behalf of the brewer, that the canteen shall curse our army and spread intemperance across the seas, and that our flag shall wave as the symbol of partnership, at home and abroad, between this Government and the men who defy and defile it for their unholy gain.

"Third.—We charge upon President McKinley, who was elected to his high office by appeal to Christian sentiment and patriotism almost unprecedented and by a combination of moral influences never before seen in this country, that by his conspicuous example as a wine-drinker at public banquets and as a wine-serving host in the White House, he has done more to encourage the liquor business, to demoralize the temperance habits of young men, and to bring Christian practices and requirements into disrepute than any other President this Republic has had.

"We further charge upon President McKinley responsibility for the Army canteen, with all its dire brood of disease, immorality, sin and death, in this country, in Cuba, in Porto Rico and the Philippines; and we insist that by his attitude concerning the canteen, and his apparent contempt for the vast number of petitions and petitioners protesting against it, he has outraged and insulted the moral sentiment of this country in such a manner and to such a degree as calls for its righteous uprising and his indignant and effective rebuke. We challenge denial of the fact that our Chief Executive, as commander in chief of the military forces of the United States, at any time prior to or since March 2, 1899, could have closed every Army saloon, called a canteen, by executive order, as President Hayes in effect did before him, and should have closed them, for the same reason that actuated President Hayes; we assert that the act of Congress passed March 2, 1899, forbidding the sale of liquor, 'in any post exchange or canteen,' by any 'officer or private soldier' or by 'any other person on any premises used for military purposes in the United States,' was and is as explicit an act of prohibition as the English language can frame; we declare our solemn belief that the Attorney-General of the United States in his interpretation of that law, and the Secretary of War in his acceptance of that interpretation and his refusal to enforce the law, were and are guilty of treasonable nullification thereof, and that President McKinley, through his assent to and indorsement of such interpretation and refusal on the part of officials appointed by and responsible to him, shares responsibility in their guilt; and we record our conviction that a new and serious peril confronts

our country, in the fact that its President, at the behest of the beer power, dare and does abrogate a law of Congress, through subordinates removable at will by him and whose acts become his, and thus virtually confesses that laws are to be administered or to be nullified in the interest of a law-defying business, by an Administration under mortgage to such business for support.

"Fourth.—We deplore the fact that an Administration of this Republic claiming the right and power to carry our flag across seas, and to conquer and annex new territory, should admit its lack of power to prohibit the American saloon on subjugated soil, or should openly confess itself subject to liquor sovereignty under that flag. We are humiliated, exasperated and grieved by the evidence painfully abundant that this Administration's policy of expansion is bearing so rapidly its first fruits of drunkenness, insanity and crime under the hothouse sun of the tropics; and when the president of the first Philippine Commission says 'It was unfortunate that we introduced and established the saloon there, to corrupt the natives and to exhibit the vices of our race,' we charge the inhumanity and un-Christianity of this act upon the Administration of William McKinley and upon the party which elected and would perpetuate the same.

"Fifth.—We declare that the only policy which the Government of the United States can of right uphold as to the liquor traffic under the National Constitution upon any territory under the military or civil control of that Government is the policy of prohibition; that 'to establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and insure the blessings of liberty to ourselves and our posterity,' as the Constitution provides, the liquor traffic must neither be sanctioned nor tolerated, and that the revenue policy, which makes our Government a partner with distillers and brewers and barkeepers, is a disgrace to our civilization, an outrage upon humanity, and a crime against God.

"We condemn the present Administration at Washington because it has repealed the prohibitory law in Alaska, and has given over the partly civilized tribes there to be the prey of the American grogshop, and because it has entered upon a license policy in our new possessions by incorporating the same in the revenue act of Congress in the code of laws for the government of the Hawaiian Islands.

"We call general attention to the fearful fact that exportation of liquors from the United States to the Philippine Islands increased from $337 in 1898 to $167,198 in the first ten months of the fiscal year ended June 30, 1900; and that while our exportations of liquor to Cuba never reached $30,000 a year previous to American occupation of that island, our exports of such liquors to Cuba during the fiscal year of 1899 reached the sum of $629,655.

"Sixth.—One great religious body (the Baptist) having truly declared of the liquor traffic 'that it has no defensible right to exist, that it can never be reformed, that it stands condemned by its unrighteous fruits as a thing unchristian, un-American, and perilous utterly to every interest in life'; another great religious body (the Methodist) having as truly asserted and reiterated that 'no political party has the right to expect, nor should it receive, the votes of Christian men so long as it stands committed to the license system or refuses to put itself on record in an attitude of open hostility to the saloons'; other great religious bodies having made similar deliverances, in language plain and unequivocal, as to the liquor traffic and the duty of Christian citizenship in opposition thereto, and the fact being plain and undeniable that the Democratic party stands for license, the saloon, and the canteen, while the Republican party, in policy and administration, stands for the canteen, the saloon, and revenue therefrom, we declare ourselves justified in expecting that Christian voters everywhere shall cease their complicity with the liquor curse by refusing to uphold a liquor party, and shall unite themselves with the only party which upholds the prohibition policy, and which for nearly thirty years has been the faithful defender of the church, the State, the home, and the school against the saloon, its expanders and perpetuators, their actual and persistent foes.

"We insist that no differences of belief, as to any other question or concern of government, should stand in the way of such a union of moral and Christian citizenship as we hereby invite for the speedy settlement of this paramount moral, industrial, financial, and political issue which our party presents; and we refrain from declaring ourselves upon all minor matters as to which differences of opinion may exist that hereby we may offer to the American people a platform so broad that all can stand upon it who desire to see sober citizenship actually sovereign over the allied hosts of evil, sin, and crime in a government of the people, by the people, and for the people.

"We declare that there are but two real parties to-day concerning the liquor traffic—Perpetuationists and Prohibitionists—and that patriotism, Christianity, and every interest of genuine republicanism and of pure democracy, besides the loyal demands of our common humanity, require the speedy union, in one solid phalanx at the ballot-box, of all who oppose the liquor traffic's perpetuation, and who covet endurance for this Republic."

Democratic Party Platform and Nominations.—The delegates of the Democratic Party met in national convention at Kansas City, on the Fourth of July. By unanimous vote, on the following day, they again nominated William J. Bryan, of Nebraska, for President, and subsequently associated with him ex-Vice President Adlai E. Stevenson, of Illinois, for Vice President. The platform, adopted on the same day, reiterating the demand of 1896 for a free and unlimited coinage of silver at the ratio of 16 to 1, but emphasizing the question of colonial expansion as the "paramount issue of the campaign," was as follows: "We, the representatives of the Democratic party of the United States, assembled in national convention on the anniversary of the adoption of the Declaration of Independence, do reaffirm our faith in that immortal proclamation of the inalienable rights of man, and our allegiance to the constitution framed in harmony therewith by the fathers of the Republic. We hold with the United States Supreme Court that the Declaration of Independence is the spirit of our government, of which the constitution is the form and letter. We declare again that all governments instituted among men derive their just powers from the

consent of the governed; that any government not based upon the consent of the governed is a tyranny; and that to impose upon any people a government of force is to substitute the methods of imperialism for those of a republic. We hold that the constitution follows the flag and denounce the doctrine that an executive or congress, deriving their existence and their powers from the constitution, can exercise lawful authority beyond it, or in violation of it. We assert that no nation can long endure half republic and half empire, and we warn the American people that imperialism abroad will lead quickly and inevitably to despotism at home.

"Believing in these fundamental principles, we denounce the Porto Rico law, enacted by a Republican Congress against the protest and opposition of the Democratic minority, as a bold and open violation of the Nation's organic law and a flagrant breach of National good faith It imposes upon the people of Porto Rico a government without their consent, and taxation without representation. It dishonors the American people by repudiating a solemn pledge made in their behalf by the commanding general of our Army, which the Porto Ricans welcomed to a peaceful and unresisted occupation of their land. It dooms to poverty and distress a people whose helplessness appeals with peculiar force to our justice and magnanimity. In this, the first act of its imperialistic programme, the Republican party seeks to commit the United States to a colonial policy inconsistent with republican institutions and condemned by the Supreme Court in numerous decisions.

"We demand the prompt and honest fulfilment of our pledge to the Cuban people and the world, that the United States has no disposition nor intention to exercise sovereignty, jurisdiction, or control over the island of Cuba, except for its pacification. The war ended nearly two years ago, profound peace reigns over all the island, and still the Administration keeps the government of the island from its people, while Republican carpetbag officials plunder its revenue and exploit the colonial theory to the disgrace of the American people.

"We condemn and denounce the Philippine policy of the present Administration. It has embroiled the Republic in an unnecessary war, sacrificed the lives of many of its noblest sons, and placed the United States, previously known and applauded throughout the world as the champion of freedom, in the false and un-American position of crushing with military force the efforts of our former allies to achieve liberty and self-government. The Filipinos cannot be citizens without endangering our civilization; they cannot be subjects without imperilling our form of government; and as we are not willing to surrender our civilization, or to convert the Republic into an empire, we favor an immediate declaration of the Nation's purpose to give to the Filipinos, first, a stable form of government; second, independence; and third, protection from outside interference such as has been given for nearly a century to the republics of Central and South America. The greedy commercialism which dictated the Philippine policy of the Republican Administration attempts to justify it with the plea that it will pay, but even this sordid and unworthy plea fails when brought to the test of facts. The war of 'criminal aggression' against the Filipinos, entailing an annual expense of many millions, has already cost more than any possible profit that could accrue from the entire Philippine trade for years to come. Furthermore, when trade is extended at the expense of liberty the price is always too high.

"We are not opposed to territorial expansion, when it takes in desirable territory which can be erected into States in the Union, and whose people are willing and fit to become American citizens. We favor trade expansion by every peaceful and legitimate means. But we are unalterably opposed to the seizing or purchasing of distant islands to be governed outside the Constitution and whose people can never become citizens. We are in favor of extending the Republic's influence among the nations, but believe that influence should be extended not by force and violence, but through the persuasive power of a high and honorable example.

"The importance of other questions now pending before the American people is in nowise diminished and the Democratic party takes no backward step from its position on them; but the burning issue of imperialism, growing out of the Spanish war, involving the very existence of the Republic and the destruction of our free institutions, we regard as the paramount issue of the campaign.

"The declaration of the Republican platform adopted at the Philadelphia Convention, held in June, 1900, that the Republican party 'steadfastly adheres to the policy announced in the Monroe Doctrine,' is manifestly insincere and deceptive. This profession is contradicted by the avowed policy of that party, in opposition to the spirit of the Monroe Doctrine, to acquire and hold sovereignty over large areas of territory and large numbers of people in the Eastern Hemisphere. We insist on the strict maintenance of the Monroe Doctrine in all its integrity, both in letter and in spirit, as necessary to prevent the extension of European authority on these continents and as essential to our supremacy in American affairs. At the same time we declare that no American people shall ever be held by force in unwilling subjection to European authority.

"We oppose militarism. It means conquest abroad and intimidation and oppression at home. It means the strong arm which has ever been fatal to free institutions. It is what millions of our citizens have fled from in Europe. It will impose upon our peace loving people a large standing army, an unnecessary burden of taxation, and would be a constant menace to their liberties. A small standing army and a well disciplined State militia are amply sufficient in time of peace. This Republic has no place for a vast military establishment, a sure forerunner of compulsory military service and conscription. When the Nation is in danger the volunteer soldier is his country's best defender. The National Guard of the United States should ever be cherished in the patriotic hearts of a free people. Such organizations are ever an element of strength and safety. For the first time in our history and coeval with the Philippine conquest has there been a wholesale departure from our time honored and approved system of volunteer organization. We denounce it as un-American, undemocratic and unrepublican and as a sub-

version of the ancient and fixed principles of a free people.

"Private monopolies are indefensible and intolerable. They destroy competition, control the price of raw material and of the finished product, thus robbing both producer and consumer. They lessen the employment of labor and arbitrarily fix the terms and conditions thereof; and deprive individual energy and small capital of their opportunity for betterment. They are the most efficient means yet devised for appropriating the fruits of industry to the benefit of the few at the expense of the many, and, unless their insatiate greed is checked, all wealth will be aggregated in a few hands and the Republic destroyed. The dishonest paltering with the trust evil by the Republican party in its State and National platforms is conclusive proof of the truth of the charge that trusts are the legitimate product of Republican policies, that they are fostered by Republican laws, and that they are protected by the Republican Administration in return for campaign subscriptions and political support. We pledge the Democratic party to an unceasing warfare in Nation, State and city against private monopoly in every form. Existing laws against trusts must be enforced and more stringent ones must be enacted providing for publicity as to the affairs of corporations engaged in interstate commerce and requiring all corporations to show, before doing business outside of the State of their origin, that they have no water in their stock, and that they have not attempted and are not attempting to monopolize any branch of business or the production of any articles of merchandise; and the whole constitutional power of Congress over interstate commerce, the mails and all modes of interstate communication shall be exercised by the enactment of comprehensive laws upon the subject of trusts.

"Tariff laws should be amended by putting the products of trusts upon the free list, to prevent monopoly under the plea of protection. The failure of the present Republican Administration, with an absolute control over all the branches of the National Government, to enact any legislation designed to prevent or even curtail the absorbing power of trusts and illegal combinations, or to enforce the anti-trust laws already on the statute books, proves the insincerity of the high sounding phrases of the Republican platform. Corporations should be protected in all their rights and their legitimate interests should be respected, but any attempt by corporations to interfere with the public affairs of the people or to control the sovereignty which creates them should be forbidden under such penalties as will make such attempts impossible. We condemn the Dingley tariff law as a trust breeding measure skilfully devised to give to the few favors which they do not deserve, and to place upon the many burdens which they should not bear. We favor such an enlargement of the scope of the Interstate Commerce law as will enable the Commission to protect individuals and communities from discrimination and the public from unjust and unfair transportation rates.

"We reaffirm and indorse the principles of the National Democratic platform adopted at Chicago in 1896 and we reiterate the demand of that platform for an American financial system made by the American people for themselves, which shall restore and maintain a bimetallic price level, and as part of such system the immediate restoration of the free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1, without waiting for the aid or consent of any other nation.

"We denounce the currency bill enacted at the last session of Congress as a step forward in the Republican policy which aims to discredit the sovereign right of the National Government to issue all money, whether coin or paper, and to bestow upon National banks the power to issue and control the volume of paper money for their own benefit. A permanent National bank currency, secured by Government bonds, must have a permanent debt to rest upon, and, if the bank currency is to increase with population and business, the debt must also increase. The Republican currency scheme is, therefore, a scheme for fastening upon the taxpayers a perpetual and growing debt for the benefit of the banks. We are opposed to this private corporation paper circulated as money, but without legal tender qualities, and demand the retirement of National bank notes as fast as Government paper or silver certificates can be substituted for them. We favor an amendment to the Federal Constitution providing for the election of United States Senators by direct vote of the people, and we favor direct legislation wherever practicable. We are opposed to government by injunction; we denounce the blacklist, and favor arbitration as a means of settling disputes between corporations and their employés.

"In the interest of American labor and the upbuilding of the workingman as the cornerstone of the prosperity of our country, we recommend that Congress create a Department of Labor, in charge of a Secretary, with a seat in the Cabinet, believing that the elevation of the American laborer will bring with it increased production and increased prosperity to our country at home and to our commerce abroad. We are proud of the courage and fidelity of the American soldiers and sailors in all our wars; we favor liberal pensions to them and their dependents; and we reiterate the position taken in the Chicago platform in 1896, that the fact of enlistment and service shall be deemed conclusive evidence against disease and disability before enlistment.

"We favor the immediate construction, ownership and control of the Nicaraguan canal by the United States, and we denounce the insincerity of the plank in the Republican national platform for an Isthmian canal, in the face of the failure of the Republican majority to pass the bill pending in Congress.

"We condemn the Hay-Pauncefote treaty as a surrender of American rights and interests, not to be tolerated by the American people.

"We denounce the failure of the Republican party to carry out its pledges to grant statehood to the territories of Arizona, New Mexico and Oklahoma, and we promise the people of those territories immediate statehood, and home rule during their condition as territories; and we favor home rule and a territorial form of government for Alaska and Porto Rico.

"We favor an intelligent system of improving the arid lands of the West, storing the waters for the purposes of irrigation, and the holding of such lands for actual settlers.

"We favor the continuance and strict enforce-

ment of the Chinese exclusion law and its application to the same classes of all Asiatic races.

"Jefferson said: 'Peace, commerce and honest friendship with all nations, entangling alliances with none.' We approve this wholesome doctrine and earnestly protest against the Republican departure which has involved us in so-called world politics, including the diplomacy of Europe and the intrigue and land-grabbing in Asia, and we especially condemn the ill-concealed Republican alliance with England, which must mean discrimination against other friendly nations, and which has already stifled the nation's voice while liberty is being strangled in Africa.

"Believing in the principles of self-government and rejecting, as did our forefathers, the claims of monarchy, we view with indignation the purpose of England to overwhelm with force the South African Republics. Speaking, as we believe, for the entire American nation, except its Republican officeholders, and for all free men everywhere, we extend our sympathy to the heroic Burghers in their unequal struggle to maintain their liberty and independence.

"We denounce the lavish appropriations of recent Republican congresses, which have kept taxes high and which threaten the perpetuation of the oppressive war levies. We oppose the accumulation of a surplus to be squandered in such barefaced frauds upon the taxpayers as the shipping subsidy bill, which, under the false pretense of fostering American ship-building, would put unearned millions into the pockets of favorite contributors to the Republican campaign fund.

"We favor the reduction and speedy repeal of the war taxes, and a return to the time-honored Democratic policy of strict economy in governmental expenditures.

"Believing that our most cherished institutions are in great peril, that the very existence of our constitutional Republic is at stake, and that the decision now to be rendered will determine whether or not our children are to enjoy those blessed privileges of free government which have made the United States great, prosperous and honored, we earnestly ask for the foregoing declaration of principles the hearty support of the liberty-loving American people, regardless of previous party affiliations."

Silver Republican Platform and Nominations.—The Republicans who broke from their party in 1896 on the silver question, and supported Mr. Bryan for the presidency, were still in affiliation with him and his party, but preserving a distinct organization, assuming the name of Lincoln Republicans. Simultaneously with that of the Democrats (July 6), they held a convention at Kansas City, and named Mr. Bryan as their candidate for President. The nomination for Vice President was referred to the national committee, which ultimately placed Mr. Stevenson's name on the Silver Republican ticket. The platform adopted differed little in leading principles from that of the Democratic party, except in the greater emphasis put on the monetary doctrines that were common to both. It was as follows:

"We, the Silver Republican party, in National Convention assembled, declare these as our principles and invite the coöperation of all who agree therewith:

"We recognize that the principles set forth in the Declaration of Independence are fundamental and everlastingly true in their applications of governments among men. We believe the patriotic words of Washington's farewell to be the words of soberness and wisdom, inspired by the spirit of right and truth. We treasure the words of Jefferson as priceless gems of American statesmanship.

"We hold in sacred remembrance the broad philanthropy and patriotism of Lincoln, who was the great interpreter of American history and the great apostle of human rights and of industrial freedom, and we declare, as was declared by the convention that nominated the great emancipator, that the maintenance of the principles promulgated in the Declaration of Independence and embodied in the Federal Constitution, 'that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed,' is essential to the preservation of our republican institutions.

"We declare our adherence to the principle of bimetallism as the right basis of a monetary system under our National Constitution, a principle that found place repeatedly in Republican platforms from the demonetization of silver in 1873 to the St. Louis Republican Convention of 1896. Since that convention a Republican Congress and a Republican President, at the dictation of the trusts and money power, have passed and approved a currency bill which in itself is a repudiation of the doctrine of bimetallism advocated theretofore by the President and every great leader of his party.

"This currency law destroys the full money power of the silver dollar, provides for the payment of all government obligations and the redemption of all forms of paper money in gold alone; retires the time-honored and patriotic greenbacks, constituting one-sixth of the money in circulation, and surrenders to banking corporations a sovereign function of issuing all paper money, thus enabling these corporations to control the prices of labor and property by increasing or diminishing the volume of money in circulation, thus giving the banks power to create panics and bring disaster upon business enterprises. The provisions of this currency law making the bonded debt of the Republic payable in gold alone change the contract between the Government and the bondholders to the advantage of the latter, and is in direct opposition to the declaration of the Matthews resolution passed by Congress in 1878, for which resolution the present Republican President, then a member of Congress, voted, as did also all leading Republicans, both in the House and Senate. We declare it to be our intention to lend our efforts to the repeal of this currency law, which not only repudiates the ancient and time-honored principles of the American people before the Constitution was adopted, but is violative of the principles of the Constitution itself, and we shall not cease our efforts until there has been established in its place a monetary system based upon the free and unlimited coinage of silver and gold into money at the present legal ratio of 16 to 1 by the independent action of the United States, under which system all paper money shall

be issued by the Government and all such money coined or issued shall be a full legal tender in payment of all debts, public and private, without exception.

"We are in favor of a graduated tax upon incomes, and if necessary to accomplish this we favor an amendment to the Constitution.

"We believe that United States Senators ought to be elected by direct vote of the people, and we favor such amendment of the Constitution and such legislation as may be necessary to that end.

"We favor the maintenance and the extension wherever practicable of the merit system in the public service, appointments to be made according to fitness, competitively ascertained, and public servants to be retained in office only so long as shall be compatible with the efficiency of the service.

"Combinations, trusts, and monopolies contrived and arranged for the purpose of controlling the prices and quantity of articles supplied to the public are unjust, unlawful, and oppressive. Not only do these unlawful conspiracies fix the prices of commodities in many cases, but they invade every branch of the State and National Government with their polluting influence and control the actions of their employés and dependents in private life until their influence actually imperils society and the liberty of the citizen. We declare against them. We demand the most stringent laws for their destruction and the most severe punishment of their promoters and maintainers and the energetic enforcement of such laws by the courts.

"We believe the Monroe doctrine to be sound in principle and a wise National policy, and we demand a firm adherence thereto. We condemn acts inconsistent with it and that tend to make us parties to the interests and to involve us in the controversies of European nations and to recognition by pending treaty of the right of England to be considered in the construction of an interoceanic canal. We declare that such canal, when constructed, ought to be controlled by the United States in the interests of American nations.

"We observe with anxiety and regard with disapproval the increasing ownership of American lands by aliens and their growing control over our international transportation, natural resources, and public utilities. We demand legislation to protect our public domain, our natural resources, our franchises, and our internal commerce and to keep them free and maintain their independence of all foreign monopolies, institutions, and influences, and we declare our opposition to the leasing of the public lands of the United States whereby corporations and syndicates will be able to secure control thereof and thus monopolize the public domain, the heritage of the people.

"We are in favor of the principles of direct legislation. In view of the great sacrifice made and patriotic services rendered we are in favor of liberal pensions to deserving soldiers, their widows, orphans, and other dependents. We believe that enlistment and service should be accepted as conclusive proof that the soldier was free from disease and disability at the time of his enlistment. We condemn the present administration of the pension laws.

"We tender to the patriotic people of the South African Republics our sympathy and express our admiration for them in their heroic attempts to preserve their political freedom and maintain their national independence. We declare the destruction of these republics and the subjugation of their people to be a crime against civilization. We believe this sympathy should have been voiced by the American Congress, as was done in the case of the French, the Greeks, the Hungarians, the Poles, the Armenians, and the Cubans, and as the traditions of this country would have dictated. We declare the Porto Rican Tariff law to be not only a serious but a dangerous departure from the principles of our form of government. We believe in a republican form of government and are opposed to monarchy and to the whole theory of imperialistic control.

"We believe in self-government—a government by the consent of the governed—and are unalterably opposed to a government based upon force. It is clear and certain that the inhabitants of the Philippine Archipelago cannot be made citizens of the United States without endangering our civilization. We are, therefore, in favor of applying to the Philippine Archipelago the principle we are solemnly and publicly pledged to observe in the case of Cuba.

"There no longer being any necessity for collecting war taxes, we demand the repeal of the war taxes levied to carry on the war with Spain.

"We favor the immediate admission into the union of States the Territories of Arizona, New Mexico, and Oklahoma.

"We demand that our nation's promises to Cuba shall be fulfilled in every particular.

"We believe the National Government should lend every aid, encouragement, and assistance toward the reclamation of the arid lands of the United States, and to that end we are in favor of a comprehensive survey thereof and an immediate ascertainment of the water supply available for such reclamation, and we believe it to be the duty of the General Government to provide for the construction of storage reservoirs and irrigation works so that the water supply of the arid region may be utilized to the greatest possible extent in the interests of the people, while preserving all rights of the State.

"Transportation is a public necessity and the means and methods of it are matters of public concern. Railway companies exercise a power over industries, business, and commerce which they ought not to do, and should be made to serve the public interests without making unreasonable charges or unjust discriminations.

"We observe with satisfaction the growing sentiment among the people in favor of the public ownership and operation of public utilities.

"We are in favor of expanding our commerce in the interests of American labor and for the benefit of all our people by every honest and peaceful means. Our creed and our history justify the nations of the earth in expecting that wherever the American flag is unfurled in authority human liberty and political liberty will be found. We protest against the adoption of any policy that will change in the thought of the world the meaning of our flag.

"We are opposed to the importation of Asiatic laborers in competition with American labor, and favor a more rigid enforcement of the laws relating thereto.

"The Silver Republican party of the United States, in the foregoing principles, seeks to per-

petuate the spirit and to adhere to the teachings of Abraham Lincoln."

Platform of the American League of Anti-Imperialists.—Republicans and others opposed to a policy of conquest, and to the government of people, not as citizens, but as subjects of the Republic of the United States, and who wished to make that opposition distinct and emphatic in the presidential canvass, met in convention at Indianapolis, on the 16th of August, as the "Liberty Congress of the American League of Anti-Imperialists." One party among them thought the best demonstration of public opinion on this issue could be obtained by the nomination of a third ticket; while another and larger party deemed it expedient to indorse the candidacy of William J. Bryan, as a pronounced opponent of the imperial policy. The views of the latter prevailed, and the indorsement of Mr. Bryan was carried in the convention; but many of the former refused submission to the vote of the majority, and subsequently held a Third Party convention at New York (see below). The Indianapolis Declaration was as follows:

"This Liberty Congress of Anti-Imperialists recognizes a great National crisis, which menaces the Republic, upon whose future depends in such large measure the hope of freedom throughout the world. For the first time in our country's history the President has undertaken to subjugate a foreign people and to rule them by despotic power. He has thrown the protection of the flag over slavery and polygamy in the Sulu Islands. He has arrogated to himself the power to impose upon the inhabitants of the Philippines government without their consent and taxation without representation. He is waging war upon them for asserting the very principles for the maintenance of which our forefathers pledged their lives, their fortunes and their sacred honor. He claims for himself and Congress authority to govern the territories of the United States without constitutional restraint.

"We believe in the Declaration of Independence. Its truths, not less self-evident to-day than when first announced by our fathers, are of universal application and cannot be abandoned while government by the people endures.

"We believe in the Constitution of the United States. It gives the President and Congress certain limited powers and secures to every man within the jurisdiction of our Government certain essential rights. We deny that either the President or Congress can govern any person anywhere outside the Constitution.

"We are absolutely opposed to the policy of President McKinley, which proposes to govern millions of men without their consent, which in Porto Rico establishes taxation without representation, and government by the arbitrary will of a legislature unfettered by constitutional restraint, and in the Philippines prosecutes a war of conquest and demands unconditional surrender from a people who are of right free and independent. The struggle of men for freedom has ever been a struggle for constitutional liberty. There is no liberty if the citizen has no right which the Legislature may not invade, if he may be taxed by the Legislature in which he is not represented, or if he is not protected by fundamental law against the arbitrary action of executive power. The policy of the President offers the inhabitants of Porto Rico, Hawaii and the Philippines no hope of independence, no prospect of American citizenship, no constitutional protection, no representation in the Congress which taxes them. This is the government of men by arbitrary power without their consent. This is imperialism. There is no room under the free flag of America for subjects. The President and Congress, who derive all their powers from the Constitution, can govern no man without regard to its limitations.

"We believe the greatest safeguard of liberty is a free press, and we demand that the censorship in the Philippines, which keeps from the American people the knowledge of what is done in their name, be abolished. We are entitled to know the truth, and we insist that the powers which the President holds in trust for us shall not be used to suppress it.

"Because we thus believe, we oppose the re-election of Mr. McKinley. The supreme purpose of the people in this momentous campaign should be to stamp with their final disapproval his attempt to grasp imperial power. A self-governing people can have no more imperative duty than to drive from public life a Chief Magistrate who, whether in weakness or of wicked purpose, has used his temporary authority to subvert the character of their government and to destroy their National ideals.

"We, therefore, in the belief that it is essential at this crisis for the American people again to declare their faith in the universal application of the Declaration of Independence and to reassert their will that their servants shall not have or exercise any powers whatever other than those conferred by the Constitution, earnestly make the following recommendations to our countrymen:

"First, that, without regard to their views on minor questions of domestic policy, they withhold their votes from Mr. McKinley, in order to stamp with their disapproval what he has done.

"Second, that they vote for those candidates for Congress in their respective districts who will oppose the policy of imperialism.

"Third, while we welcome any other method of opposing the re-election of Mr. McKinley we advise direct support of Mr. Bryan as the most effective means of crushing imperialism. We are convinced of Mr. Bryan's sincerity and of his earnest purpose to secure to the Filipinos their independence. His position and the declarations contained in the platform of his party on the vital issue of the campaign meet our unqualified approval.

"We recommend that the Executive committees of the American Anti-Imperialist League and its allied leagues continue and extend their organizations, preserving the independence of the movement; and that they take the most active part possible in the pending political campaign.

"Until now the policy which has turned the Filipinos from warm friends to bitter enemies, which has slaughtered thousands of them and laid waste their country, has been the policy of the President. After the next election it becomes the policy of every man who votes to re-elect him and who thus becomes with him responsible for every drop of blood thereafter shed.

"In declaring that the principles of the Declaration of Independence apply to all men, this Congress means to include the negro race in

America as well as the Filipinos. We deprecate all efforts, whether in the South or in the North, to deprive the negro of his rights as a citizen under the Declaration of Independence and the Constitution of the United States."

The "Third Party" Anti-Imperialist Platform and Nominations.—The Anti-Imperialists who desired a Third Party ticket in the field, called a convention which met in the city of New York, September 5, and put in nomination for President and Vice President Senator Donelson Caffery, of Louisiana, and Archibald Murray Howe, of Massachusetts. The name "National Party" was assumed, and its "aims and purposes" were thus declared:

"We find our country threatened with alternative perils. On the one hand is a public opinion misled by organized forces of commercialism, that have perverted a war intended by the people to be a war of humanity into a war of conquest. On the other is a public opinion swayed by demagogic appeals to factional and class passions, the most fatal of diseases to a republic. We believe that either of these influences, if unchecked, would ultimately compass the downfall of our country, but we also believe that neither represents the sober conviction of our countrymen. Convinced that the extension of the jurisdiction of the United States for the purpose of holding foreign people as colonial dependents is an innovation dangerous to our liberties and repugnant to the principles upon which our Government is founded, we pledge our earnest efforts through all constitutional means:

"First, to procure the renunciation of all imperial or colonial pretensions with regard to foreign countries claimed to have been acquired through or in consequence of military or naval operations of the last two years.

"Second, we further pledge our efforts to secure a single gold standard and a sound banking system.

"Third, to secure a public service based on merit only.

"Fourth, to secure the abolition of all corrupting special privileges, whether under the guise of subsidies, bounties, undeserved pensions or trust breeding tariffs."

Within a few weeks after the holding of this convention, Senator Caffery and Mr. Howe withdrew their names from the canvass, and it was decided to appoint electors-at-large in as many states as possible, to receive the votes of those supporting the movement.

Social Democratic Party Platform and Nominations.—The last distinct movement of organization for the presidential election was that of a "Social Democratic Party," whose convention, at Chicago, September 29, placed Eugene V. Debs, of Illinois, in nomination for President, and Job Harriman, of California, for Vice President, on principles declared as follows:

"The Social Democratic party of America declares that life, liberty, and happiness depend upon equal political and economic rights.

"In our economic development an industrial revolution has taken place, the individual tool of former years having become the social tool of the present. The individual tool was owned by the worker, who employed himself and was master of his product. The social tool, the machine, is owned by the capitalist, and the worker is dependent upon him for employment. The capitalist thus becomes the master of the worker, and is able to appropriate to himself a large share of the product of his labor.

"Capitalism, the private ownership of the means of production, is responsible for the insecurity of subsistence, the poverty, misery, and degradation of the ever-growing majority of our people; but the same economic forces which have produced and now intensify the capitalist system will necessitate the adoption of Socialism, the collective ownership of the means of production for the common good and welfare.

"The present system of social production and private ownership is rapidly converting society into two antagonistic classes—i. e., the capitalist class and the propertyless class. The middle class, once the most powerful of this great nation, is disappearing in the mill of competition. The issue is now between the two classes first named. Our political liberty is now of little value to the masses unless used to acquire economic liberty. Independent political action and the trade-union movement are the chief emancipating factors of the working class, the one representing its political, the other its economic wing, and both must coöperate to abolish the capitalist system.

"Therefore, the Social Democratic party of America declares its object to be:

"First—The organization of the working class into a political party to conquer the public powers now controlled by capitalists.

"Second—The abolition of wage-slavery by the establishment of a National system of cooperative industry, based upon the social or common ownership of the means of production and distribution, to be administered by society in the common interest of all its members, and the complete emancipation of the socially useful classes from the domination of capitalism.

"The working class and all those in sympathy with their historic mission to realize a higher civilization should sever connection with all capitalist and reform parties and unite with the Social Democratic party of America. The control of political power by the Social Democratic party will be tantamount to the abolition of all class rule. The solidarity of labor connecting the millions of class-conscious fellow-workers throughout the civilized world will lead to international Socialism, the brotherhood of man.

"As steps in that direction, we make the following demands:

"First—Revision of our Federal Constitution, in order to remove the obstacles to complete control of government by the people irrespective of sex.

"Second—The public ownership of all industries controlled by monopolies, trusts, and combines.

"Third—The public ownership of all railroads, telegraphs, and telephones; all means of transportation and communication; all waterworks, gas and electric plants, and other public utilities.

"Fourth—The public ownership of all gold, silver, copper, lead, iron, coal, and other mines, and all oil and gas wells.

"Fifth—The reduction of the hours of labor in proportion to the increasing facilities of production.

"Sixth—The inauguration of a system of public works and improvements for the employment of the unemployed, the public credit to be utilized for that purpose.

"Seventh—Useful inventions to be free, the inventor to be remunerated by the public.

"Eighth—Labor legislation to be National instead of local, and international when possible.

"Ninth—National insurance of working people against accidents, lack of employment, and want in old age.

"Tenth—Equal civil and political rights for men and women, and the abolition of all laws discriminating against women.

"Eleventh—The adoption of the initiative and referendum, proportional representation, and the right of recall of representatives by the voters.

"Twelfth—Abolition of war and the introduction of international arbitration."

The Canvass and Election.—The canvass preceding the election was much less excited than that of 1896. The confusion of issues greatly lessened the intensity with which they were discussed. Mr. Bryan again took the field in person, travelling widely through all parts of the country, making great numbers of speeches to immense audiences everywhere ; and Governor Roosevelt did the same on the Republican side, to a somewhat less extent.

The election, which occurred on the 6th of November, was conducted with the quiet order that is rarely broken at such times in America. About fourteen millions of votes were cast, of which, according to the returns compiled for the Tribune Almanac, President McKinley received 7,214,027, and Bryan, 6,342,514. For the Prohibition ticket, 197,112 votes were cast ; for the Socialist Labor ticket, 32,433 ; for the Social Democratic ticket, 82,904 ; and 78,444 votes were scattered among other candidates. The States carried for McKinley were: California, giving 9 electoral votes; Connecticut, 6 ; Delaware, 3 ; Illinois, 24 ; Indiana, 15 ; Iowa, 13 ; Kansas, 10 ; Maine, 6 ; Maryland, 8 ; Massachusetts, 15 ; Michigan, 14 ; Minnesota, 9 ; Nebraska, 8 ; New Hampshire, 4 ; New Jersey, 10 ; New York, 36 ; North Dakota, 3 ; Ohio, 23 ; Oregon, 4 ; Pennsylvania, 32 ; Rhode Island, 4 ; South Dakota, 4 ; Utah, 3 ; Vermont, 4 ; Washington, 4 ; West Virginia, 6 ; Wisconsin, 12 ; Wyoming, 3 ; Total, 292. For Bryan, the electoral votes of the following States were given: Alabama, 11 ; Arkansas, 8 ; Colorado, 4 ; Florida, 4 ; Georgia, 13 ; Idaho, 3 ; Kentucky, 13 ; Louisiana, 8 ; Mississippi, 9 ; Missouri, 17 ; Montana, 3 ; Nevada, 3 ; North Carolina, 11 ; South Carolina, 9 ; Tennessee, 12 ; Texas, 15 ; Virginia, 12 ; Total, 155.

President McKinley was re-elected by a majority of 137 votes in the Electoral College, and by a majority of nearly half a million of the popular vote.

"The popular vote for President shows three interesting things:—

"(1) Many men of each party abstained from voting, for the total was only 45,132 greater than in 1896, whereas the increase in population adds about a million to the electorate every four years. The total vote last year was 13,970,234. Mr. McKinley received only about 100,000 more than in 1896, and Mr. Bryan 130,000 less. Many men in each party, then, were dissatisfied with their candidate and platform.

"(2) Mr. Bryan's largest gains were in New England, because of the anti-Imperialistic feeling, and in New York and New Jersey and Illinois, because of a milder fear of financial disturbance ; and his losses were greatest in Utah, in Colorado, and in the Pacific States, an indication of better times and of less faith in free silver.

"(3) Twelve Southern States cast a smaller vote than in 1896, partly because of the elimination of the Negroes, and partly because many Gold Democrats abstained from voting."—*The World's Work, Feb.*, 1901.

The Democratic candidate on "Imperialism."—The issue which ought to have been supreme in the Presidential election, because fundamental principles of government and lasting consequences of policy were bound up in it, but which was unhappily confused by prevailing anxieties in the sensitive region of commercial and industrial affairs, is more broadly and adequately defined in the declarations of the two leading candidates, on their formal acceptance of nominations by the Democratic and Republican parties, than it is in the party platforms quoted above. The first to speak was Mr. Bryan. Responding to the committee which notified him of his nomination, at Indianapolis, on the 8th of August, he devoted the greater part of his remarks to the policy of colonial acquisition on which the government had been embarked. The following passages are fairly representative of the view taken by those who condemned what they termed "imperialism," in the undertaking of the government of the American Republic to impose its sovereignty upon the people of the Philippine Islands, and to hold their country as a "possession:"

"When the president, supported by a practically unanimous vote of the House and Senate, entered upon a war with Spain for the purpose of aiding the struggling patriots of Cuba, the country, without regard to party, applauded. Although the Democrats realized that the administration would necessarily gain a political advantage from the conduct of a war which in the very nature of the case must soon end in a complete victory, they vied with the Republicans in the support which they gave to the President. When the war was over and the Republican leaders began to suggest the propriety of a colonial policy, opposition at once manifested itself.

"When the President finally laid before the Senate a treaty which recognized the independence of Cuba, but provided for the cession of the Philippine Islands to the United States, the menace of imperialism became so apparent that many preferred to reject the treaty and risk the ills that might follow rather than take the chance of correcting the errors of the treaty by the independent action of this country. I was among the number of those who believed it better to ratify the treaty and end the war, release the volunteers, remove the excuse for war expenditures, and then give the Filipinos the independence which might be forced from Spain by a new treaty. . . . The title of Spain being extinguished we were at liberty to deal with the Filipinos according to American principles. The Bacon resolution, introduced a month before hostilities broke out at Manila, promised independence to the Filipinos on the same terms that it was promised to the Cubans. I supported this

resolution and believe that its adoption prior to the breaking out of hostilities would have prevented bloodshed, and that its adoption at any subsequent time would have ended hostilities. . . . If the Bacon resolution had been adopted by the Senate and carried out by the President, either at the time of the ratification of the treaty or at any time afterwards, it would have taken the question of imperialism out of politics and left the American people free to deal with their domestic problems. But the resolution was defeated by the vote of the Republican Vice-President, and from that time to this a Republican Congress has refused to take any action whatever in the matter.

"When hostilities broke out at Manila, Republican speakers and Republican editors at once sought to lay the blame upon those who had delayed the ratification of the treaty, and, during the progress of the war, the same Republicans have accused the opponents of imperialism of giving encouragement to the Filipinos. . . .

"The Filipinos do not need any encouragement from Americans now living. Our whole history has been an encouragement, not only to the Filipinos, but to all who are denied a voice in their own government. If the Republicans are prepared to censure all who have used language calculated to make the Filipinos hate foreign domination, let them condemn the speech of Patrick Henry. When he uttered that passionate appeal, 'Give me liberty or give me death,' he expressed a sentiment which still echoes in the hearts of men. Let them censure Jefferson; of all the statesmen of history none have used words so offensive to those who would hold their fellows in political bondage. Let them censure Washington, who declared that the colonists must choose between liberty and slavery. Or, if the statute of limitations has run against the sins of Henry and Jefferson and Washington, let them censure Lincoln, whose Gettysburg speech will be quoted in defense of popular government when the present advocates of force and conquest are forgotten. . . . If it were possible to obliterate every word written or spoken in defense of the principles set forth in the Declaration of Independence, a war of conquest would still leave its legacy of perpetual hatred, for it was God himself who placed in every human heart the love of liberty. He never made a race of people so low in the scale of civilization or intelligence that it would welcome a foreign master.

"Those who would have this nation enter upon a career of empire must consider not only the effect of imperialism on the Filipinos, but they must also calculate its effects upon our own nation. We cannot repudiate the principle of self-government in the Philippines without weakening that principle here. . . .

"Our opponents, conscious of the weakness of their cause, seek to confuse imperialism with expansion, and have even dared to claim Jefferson as a supporter of their policy. Jefferson spoke so freely and used language with such precision that no one can be ignorant of his views. On one occasion he declared: 'If there be one principle more deeply rooted than any other in the mind of every American, it is that we should have nothing to do with conquest.' And again he said: 'Conquest is not in our principles; it is inconsistent with our government.' The forcible annexation of territory to be governed by arbitrary power differs as much from the acquisition of territory to be built up into states as a monarchy differs from a democracy. The Democratic party does not oppose expansion when expansion enlarges the area of the Republic and incorporates land which can be settled by American citizens, or adds to our population people who are willing to become citizens and are capable of discharging their duties as such. . . .

"A colonial policy means that we shall send to the Philippine Islands a few traders, a few taskmasters and a few officeholders and an army large enough to support the authority of a small fraction of the people while they rule the natives. If we have an imperial policy we must have a great standing army as its natural and necessary complement. The spirit which will justify the forcible annexation of the Philippine Islands will justify the seizure of other islands and the domination of other people, and with wars of conquest we can expect a certain, if not rapid, growth of our military establishment. . . .

"The Republican platform assumes that the Philippine Islands will be retained under American sovereignty, and we have a right to demand of the Republican leaders a discussion of the future status of the Filipino. Is he to be a citizen or a subject? Are we to bring into the body politic eight or ten million Asiatics, so different from us in race and history that amalgamation is impossible? Are they to share with us in making the laws and shaping the destiny of this nation? No Republican of prominence has been bold enough to advocate such a proposition. The McEnery resolution, adopted by the Senate immediately after the ratification of the treaty, expressly negatives this idea. The Democratic platform describes the situation when it says that the Filipinos cannot be citizens without endangering our civilization. Who will dispute it? And what is the alternative? If the Filipino is not to be a citizen, shall we make him a subject? On that question the Democratic platform speaks with equal emphasis. It declares that the Filipino cannot be a subject without endangering our form of government. A Republic can have no subjects. A subject is possible only in a government resting upon force; he is unknown in a government deriving its just powers from the consent of the governed.

"The Republican platform says that 'the largest measure of self-government consistent with their welfare and our duties shall be secured to them (the Filipinos) by law.' This is a strange doctrine for a government which owes its very existence to the men who offered their lives as a protest against government without consent and taxation without representation. In what respect does the position of the Republican party differ from the position taken by the English government in 1776? Did not the English government promise a good government to the colonists? What king ever promised a bad government to his people? Did not the English government promise that the colonists should have the largest measure of self-government consistent with their welfare and English duties? Did not the Spanish government promise to give to the Cubans the largest measure of self-government consistent with their welfare and Spanish duties? The whole difference between a Monarchy and a Republic may be summed up in one

sentence. In a Monarchy the King gives to the people what he believes to be a good government; in a Republic the people secure for themselves what they believe to be a good government. . . .

"The Republican platform promises that some measure of self-government is to be given the Filipinos by law; but even this pledge is not fulfilled. Nearly sixteen months elapsed after the ratification of the treaty before the adjournment of Congress last June, and yet no law was passed dealing with the Philippine situation. The will of the President has been the only law in the Philippine Islands wherever the American authority extends. Why does the Republican party hesitate to legislate upon the Philippine question? Because a law would disclose the radical departure from history and precedent contemplated by those who control the Republican party. The storm of protest which greeted the Porto Rican bill was an indication of what may be expected when the American people are brought face to face with legislation upon this subject. If the Porto Ricans, who welcomed annexation, are to be denied the guarantees of our Constitution, what is to be the lot of the Filipinos, who resisted our authority? If secret influences could compel a disregard of our plain duty toward friendly people, living near our shores, what treatment will those same influences provide for unfriendly people 7,000 miles away? . . .

"Is the sunlight of full citizenship to be enjoyed by the people of the United States, and the twilight of semi-citizenship endured by the people of Porto Rico, while the thick darkness of perpetual vassalage covers the Philippines? The Porto Rico tariff law asserts the doctrine that the operation of the Constitution is confined to the forty-five States. The Democratic party disputes this doctrine and denounces it as repugnant to both the letter and spirit of our organic law. There is no place in our system of government for the deposit of arbitrary and irresponsible power. That the leaders of a great party should claim for any President or Congress the right to treat millions of people as mere 'possessions' and deal with them unrestrained by the Constitution or the bill of rights, shows how far we have already departed from the ancient landmarks and indicates what may be expected if this nation deliberately enters upon a career of empire.

"The territorial form of government is temporary and preparatory, and the chief security a citizen of a territory has is found in the fact that he enjoys the same constitutional guarantees and is subject to the same general laws as the citizen of a state. Take away this security and his rights will be violated and his interests sacrificed at the demand of those who have political influence. This is the evil of the colonial system, no matter by what nation it is applied. . . .

"Let us consider briefly the reasons which have been given in support of an imperialistic policy. Some say that it is our duty to hold the Philippine Islands. But duty is not an argument; it is a conclusion. To ascertain what our duty is, in any emergency, we must apply well settled and generally accepted principles. It is our duty to avoid stealing, no matter whether the thing to be stolen is of great or little value. It is our duty to avoid killing a human being, no matter where the human being lives or to what race or class he belongs. . . .

"It is said that we have assumed before the world obligations which make it necessary for us to permanently maintain a government in the Philippine Islands. I reply, first, that the highest obligation of this nation is to be true to itself. No obligation to any particular nations, or to all the nations combined, can require the abandonment of our theory of government, and the substitution of doctrines against which our whole national life has been a protest. And, second, that our obligation to the Filipinos, who inhabit the islands, is greater than any obligation which we can owe to foreigners who have a temporary residence in the Philippines or desire to trade there. It is argued by some that the Filipinos are incapable of self-government and that, therefore, we owe it to the world to take control of them. Admiral Dewey, in an official report to the Navy Department, declared the Filipinos more capable of self-government than the Cubans, and said that he based his opinion upon a knowledge of both races. . . .

"Republicans ask, 'Shall we haul down the flag that floats over our dead in the Philippines?' The same question might have been asked when the American flag floated over Chapultepec and waved over the dead who fell there; but the tourist who visits the City of Mexico finds there a national cemetery owned by the United States and cared for by an American citizen. Our flag still floats over our dead, but when the treaty with Mexico was signed American authority withdrew to the Rio Grande, and I venture the opinion that during the last fifty years the people of Mexico have made more progress under the stimulus of independence and self-government than they would have made under a carpet-bag government held in place by bayonets. The United States and Mexico, friendly republics, are each stronger and happier than they would have been had the former been cursed and the latter crushed by an imperialistic policy disguised as 'benevolent assimilation.'

"'Can we not govern colonies?' we are asked. The question is not what we can do, but what we ought to do. This nation can do whatever it desires to do, but it must accept responsibility for what it does. If the Constitution stands in the way, the people can amend the Constitution. I repeat, the nation can do whatever it desires to do, but it cannot avoid the natural and legitimate results of its own conduct. . . .

"Some argue that American rule in the Philippine Islands will result in the better education of the Filipinos. Be not deceived. If we expect to maintain a colonial policy, we shall not find it to our advantage to educate the people. The educated Filipinos are now in revolt against us, and the most ignorant ones have made the least resistance to our domination. If we are to govern them without their consent and give them no voice in determining the taxes which they must pay, we dare not educate them, lest they learn to read the Declaration of Independence and Constitution of the United States and mock us for our inconsistency. The principal arguments, however, advanced by those who enter upon a defense of imperialism are:

"First—That we must improve the present opportunity to become a world power and enter into international politics.

"Second—That our commercial interests in the Philippine Islands and in the Orient make it necessary for us to hold the islands permanently.

"Third—That the spread of the Christian religion will be facilitated by a colonial policy.

"Fourth—That there is no honorable retreat from the position which the nation has taken.

"The first argument is addressed to the nation's pride and the second to the nation's pocket-book. The third is intended for the church member and the fourth for the partisan. It is sufficient answer to the first argument to say that for more than a century this nation has been a world power. For ten decades it has been the most potent influence in the world. Not only has it been a world power, but it has done more to affect the politics of the human race than all the other nations of the world combined. Because our Declaration of Independence was promulgated others have been promulgated. Because the patriots of 1776 fought for liberty, others have fought for it. Because our Constitution was adopted, other constitutions have been adopted. The growth of the principle of self-government, planted on American soil, has been the overshadowing political fact of the nineteenth century. It has made this nation conspicuous among the nations and given it a place in history such as no other nation has ever enjoyed. Nothing has been able to check the onward march of this idea. I am not willing that this nation shall cast aside the omnipotent weapon of truth to seize again the weapons of physical warfare. I would not exchange the glory of this Republic for the glory of all the empires that have risen and fallen since time began.

"The permanent chairman of the last Republican National Convention presented the pecuniary argument in all its baldness when he said: 'We make no hypocritical pretense of being interested in the Philippines solely on account of others. While we regard the welfare of those people as a sacred trust, we regard the welfare of the American people first. We see our duty to ourselves as well as to others. We believe in trade expansion. By every legitimate means within the province of government and constitution we mean to stimulate the expansion of our trade and open new markets.' This is the commercial argument. It is based upon the theory that war can be rightly waged for pecuniary advantage, and that it is profitable to purchase trade by force and violence. . . . The Democratic party is in favor of the expansion of trade. It would extend our trade by every legitimate and peaceful means; but it is not willing to make merchandise of human blood. But a war of conquest is as unwise as it is unrighteous. A harbor and coaling station in the Philippines would answer every trade and military necessity, and such a concession could have been secured at any time without difficulty.

"It is not necessary to own people in order to trade with them. We carry on trade to-day with every part of the world, and our commerce has expanded more rapidly than the commerce of any European empire. We do not own Japan or China, but we trade with their people. We have not absorbed the republics of Central and South America, but we trade with them. It has not been necessary to have any political connection with Canada or the nations of Europe in order to trade with them. Trade cannot be permanently profitable unless it is voluntary. . . .

"Imperialism would be profitable to the army contractors; it would be profitable to the ship-owners, who would carry live soldiers to the Philippines and bring dead soldiers back; it would be profitable to those who would seize upon the franchises, and it would be profitable to the officials whose salaries would be fixed here and paid over there; but to the farmer, to the laboring man and to the vast majority of those engaged in other occupations it would bring expenditure without return and risk without reward.

"The pecuniary argument, though more effective with certain classes, is not likely to be used so often or presented with so much enthusiasm as the religious argument. If what has been termed the 'gunpowder gospel' were urged against the Filipinos only, it would be a sufficient answer to say that a majority of the Filipinos are now members of one branch of the Christian church; but the principle involved is one of much wider application and challenges serious consideration. The religious argument varies in positiveness, from a passive belief that Providence delivered the Filipinos into our hands for their good and our glory, to the exultation of the minister who said that we ought to 'thrash the natives (Filipinos) until they understand who we are,' and that 'every bullet sent, every cannon shot and every flag waved, means righteousness.' . . . If true Christianity consists in carrying out in our daily lives the teachings of Christ, who will say that we are commanded to civilize with dynamite and proselyte with the sword? . . .

"Love, not force, was the weapon of the Nazarene; sacrifice for others, not the exploitation of them, was His method of reaching the human heart. A missionary recently told me that the Stars and Stripes once saved his life because his assailant recognized our flag as a flag that had no blood upon it. Let it be known that our missionaries are seeking souls instead of sovereignty; let it be known that instead of being the advance guard of conquering armies, they are going forth to help and uplift, having their loins girt about with truth and their feet shod with the preparation of the gospel of peace, wearing the breastplate of righteousness and carrying the sword of the spirit; let it be known that they are citizens of a nation which respects the rights of the citizens of other nations as carefully as it protects the rights of its own citizens, and the welcome given to our missionaries will be more cordial than the welcome extended to the missionaries of any other nation.

"The argument made by some that it was unfortunate for the nation that it had anything to do with the Philippine Islands, but that the naval victory at Manila made the permanent acquisition of those islands necessary, is also unsound. We won a naval victory at Santiago, but that did not compel us to hold Cuba. The shedding of American blood in the Philippine Islands does not make it imperative that we should retain possession forever. American blood was shed at San Juan Hill and El Caney, and yet the President has promised the Cubans independence. The fact that the American flag floats over Manila does not compel us to exercise perpetual sovereignty over the islands; the American flag waves over Havana to-day, but the

President has promised to haul it down when the flag of the Cuban Republic is ready to rise in its place. Better a thousand times that our flag in the Orient give way to a flag representing the idea of self-government than that the flag of this Republic should become the flag of an empire.

"There is an easy, honest, honorable solution of the Philippine question. It is set forth in the Democratic platform, and it is submitted with confidence to the American people. This plan I unreservedly indorse. If elected, I will convene congress in extraordinary session as soon as inaugurated and recommend an immediate declaration of the nation's purpose, first, to establish a stable form of government in the Philippine Islands, just as we are now establishing a stable form of government in Cuba; second, to give independence to the Cubans; third, to protect the Filipinos from outside interference while they work out their destiny, just as we have protected the republics of Central and South America, and are, by the Monroe doctrine, pledged to protect Cuba."

The Republican candidate on the same subject.—The answer of the party controlling the government to the impeachment of its policy of colonial acquisition, and especially of its conduct in the Philippine Islands, was given by Mr. McKinley, in a letter of acceptance, addressed, September 8, to the committee which gave him formal notice of his renomination by the Republican convention. After rehearsing at considerable length the events which preceded, attended and followed the capture of Manila, he continued:

"Would not our adversaries have sent Dewey's fleet to Manila to capture and destroy the Spanish sea power there, or, dispatching it there, would they have withdrawn it after the destruction of the Spanish fleet; and, if the latter, whither would they have directed it to sail? Where could it have gone? What port in the Orient was opened to it? Do our adversaries condemn the expedition under the command of Gen. Merritt to strengthen Dewey in the distant ocean and assist in our triumph over Spain, with which nation we were at war? Was it not our highest duty to strike Spain at every vulnerable point, that the war might be successfully concluded at the earliest practicable moment? And was it not our duty to protect the lives and property of those who came within our control by the fortunes of war? Could we have come away at any time between May 1, 1898, and the conclusion of peace without a stain upon our good name? Could we have come away without dishonor at any time after the ratification of the peace treaty by the Senate of the United States? There has been no time since the destruction of the enemy's fleet when we could or should have left the Philippine Archipelago. After the treaty of peace was ratified, no power but Congress could surrender our sovereignty or alienate a foot of the territory thus acquired. The Congress has not seen fit to do the one or the other, and the President had no authority to do either, if he had been so inclined, which he was not. So long as the sovereignty remains in us it is the duty of the Executive, whoever he may be, to uphold that sovereignty, and if it be attacked to suppress its assailants. Would our political adversaries do less?

"It has been asserted that there would have been no fighting in the Philippines if Congress had declared its purpose to give independence to the Tagal insurgents. The insurgents did not wait for the action of Congress. They assumed the offensive; they opened fire on our Army. Those who assert our responsibility for the beginning of the conflict have forgotten that, before the treaty was ratified in the Senate, and while it was being debated in that body and while the Bacon resolution was under discussion, on February 4, 1899, the insurgents attacked the American Army, after being previously advised that the American forces were under orders not to fire upon them except in defense. The papers found in the recently captured archives of the insurgents demonstrate that this attack had been carefully planned for weeks before it occurred. This unprovoked assault upon our soldiers at a time when the Senate was deliberating upon the treaty shows that no action on our part, except surrender and abandonment, would have prevented the fighting, and leaves no doubt in any fair mind of where the responsibility rests for the shedding of American blood.

"With all the exaggerated phrase-making of this electoral contest, we are in danger of being diverted from the real contention. We are in agreement with all of those who supported the war with Spain and also with those who counseled the ratification of the treaty of peace. Upon these two great essential steps there can be no issue and out of these came all of our responsibilities. If others would shirk the obligations imposed by the war and the treaty, we must decline to act further with them, and here the issue was made. It is our purpose to establish in the Philippines a government suitable to the wants and conditions of the inhabitants and to prepare them for self-government when they are ready for it and as rapidly as they are ready for it. That I am aiming to do under my Constitutional authority, and will continue to do until Congress shall determine the political status of the inhabitants of the archipelago.

"Are our opponents against the treaty? If so, they must be reminded that it could not have been ratified in the Senate but for their assistance. The Senate which ratified the treaty and the Congress which added its sanction by a large approbation comprised Senators and Representatives of the people of all parties. Would our opponents surrender to the insurgents, abandon our sovereignty or cede it to them? If that be not their purpose, then it should be promptly disclaimed, for only evil can result from the hopes raised by our opponents in the minds of the Filipinos, that with their success at the polls in November there will be a withdrawal of our Army and of American sovereignty over the archipelago; the complete independence of the Tagalog people recognized and the powers of government over all the other people of the archipelago conferred upon the Tagalog leaders. The effect of a belief in the minds of the insurgents that this will be done has already prolonged the rebellion and increases the necessity for the continuance of a large army. It is now delaying full peace in the archipelago and the establishment of civil governments and has influenced many of the insurgents against accepting the liberal terms of amnesty offered by Gen. MacArthur under my direction. But for these false hopes, a considerable reduction could have been

had in our military establishment in the Philippines, and the realization of a stable government would be already at hand.

"The American people are asked by our opponents to yield the sovereignty of the United States in the Philippines to a small fraction of the population, a single tribe out of 80 or more inhabiting the archipelago, a faction which wantonly attacked the American troops in Manila while in rightful possession under the protocol with Spain, awaiting the ratification of the treaty of peace by the Senate, and which has since been in active, open rebellion against the United States. We are asked to transfer our sovereignty to a small minority in the islands, without consulting the majority, and to abandon the largest portion of the population, which has been loyal to us, to the cruelties of the guerrilla insurgent bands. More than this, we are asked to protect this minority in establishing a government, and to this end repress all opposition of the majority. We are required to set up a stable government in the interest of those who have assailed our sovereignty and fired upon our soldiers, and then maintain it at any cost or sacrifice against its enemies within and against those having ambitious designs from without. This would require an army and navy far larger than is now maintained in the Philippines and still more in excess of what will be necessary with the full recognition of our sovereignty. A military support of authority not our own, as thus proposed, is the very essence of militarism, which our opponents in their platform oppose, but which by their policy would of necessity be established in its most offensive form.

"The American people will not make the murderers of our soldiers the agents of the Republic to convey the blessings of liberty and order to the Philippines. They will not make them the builders of the new commonwealth. Such a course would be a betrayal of our sacred obligations to the peaceful Filipinos and would place at the mercy of dangerous adventurers the lives and property of the natives and foreigners. It would make possible and easy the commission of such atrocities as were secretly planned to be executed on the 22d of February, 1899, in the city of Manila, when only the vigilance of our Army prevented the attempt to assassinate our soldiers and all foreigners and pillage and destroy the city and its surroundings. In short, the proposition of those opposed to us is to continue all the obligations in the Philippines which now rest upon the Government, only changing the relation from principal, which now exists, to that of surety. Our responsibility is to remain, but our power is to be diminished. Our obligation is to be no less, but our title is to be surrendered to another power, which is without experience or training or the ability to maintain a stable government at home and absolutely helpless to perform its international obligations with the rest of the world. To this we are opposed. We should not yield our title while our obligations last. In the language of our platform, 'Our authority should not be less than our responsibility,' and our present responsibility is to establish our authority in every part of the islands.

"No government can so certainly preserve the peace, restore public order, establish law, justice and stable conditions as ours. Neither Congress nor the Executive can establish a stable government in these islands except under our right of sovereignty, our authority and our flag. And this we are doing. We could not do it as a protectorate power so completely or so successfully as we are doing it now. As the sovereign power, we can initiate action and shape means to ends and guide the Filipinos to self-development and self-government. As a protectorate power we could not initiate action, but would be compelled to follow and uphold a people with no capacity yet to go alone. In the one case we can protect both ourselves and the Filipinos from being involved in dangerous complications; in the other we could not protect even the Filipinos until after their trouble had come. Beside, if we cannot establish any government of our own without the consent of the governed, as our opponents contend, then we could not establish a stable government for them or make ours a protectorate without the like consent, and neither the majority of the people or a minority of the people have invited us to assume it. We could not maintain a protectorate even with the consent of the governed without giving provocation for conflicts and possibly costly wars. Our rights in the Philippines are now free from outside interference and will continue so in our present relation. They would not be thus free in any other relation. We will not give up our own to guarantee another sovereignty.

"Our title is good. Our peace commissioners believed they were receiving a good title when they concluded the treaty. The Executive believed it was a good title when he submitted it to the Senate of the United States for its ratification. The Senate believed it was a good title when they gave it their Constitutional assent, and the Congress seems not to have doubted its completeness when they appropriated $20,000,000 provided by the treaty. If any who favored its ratification believed it gave us a bad title, they were not sincere. Our title is practically identical with that under which we hold our territory acquired since the beginning of the government, and under which we have exercised full sovereignty and established government for the inhabitants. It is worthy of note that no one outside of the United States disputes the fulness and integrity of the cession. What then is the real issue on this subject? Whether it is paramount to any other or not, it is whether we shall be responsible for the government of the Philippines with the sovereignty and authority which enable us to guide them to regulated liberty, law, safety and progress, or whether we shall be responsible for the forcible and arbitrary government of a minority without sovereignty and authority on our part and with only the embarrassment of a protectorate which draws us into their troubles without the power of preventing them. There were those who two years ago were rushing us on to war with Spain who are unwilling now to accept its clear consequence, as there are those among us who advocated the ratification of the treaty of peace, but now protest against its obligations. Nations which go to war must be prepared to accept its resultant obligations, and when they make treaties must keep them.

"Those who profess to distrust the liberal and honorable purposes of the Administration in its treatment of the Philippines are not justified.

UNITED STATES, 1900.

Imperialism has no place in its creed or conduct. Freedom is a rock upon which the Republican party was builded and now rests. Liberty is the great Republican doctrine for which the people went to war and for which 1,000,000 lives were offered and billions of dollars expended to make it a lawful legacy of all without the consent of master or slave. There is a strain of ill-conceived hypocrisy in the anxiety to extend the Constitutional guarantees to the people of the Philippines while their nullification is openly advocated at home. Our opponents may distrust themselves, but they have no right to discredit the good faith and patriotism of the majority of the people, who are opposing them; they may fear the worst form of imperialism with the helpless Filipinos in their hands, but if they do, it is because they have parted with the spirit and faith of the fathers and have lost the virility of the founders of the party which they profess to represent.

"The Republican party does not have to assert its devotion to the Declaration of Independence. That immortal instrument of the fathers remained unexecuted until the people under the lead of the Republican party in the awful clash of battle turned its promises into fulfillment. It wrote into the Constitution the amendments guaranteeing political equality to American citizenship and it has never broken them or counseled others in breaking them. It will not be guided in its conduct by one set of principles at home and another set in the new territory belonging to the United States. If our opponents would only practice as well as preach the doctrines of Abraham Lincoln there would be no fear for the safety of our institutions at home or their rightful influence in any territory over which our flag floats.

"Empire has been expelled from Porto Rico and the Philippines by American freemen. The flag of the Republic now floats over these islands as an emblem of rightful sovereignty. Will the Republic stay and dispense to their inhabitants the blessings of liberty, education and free institutions, or steal away, leaving them to anarchy or imperialism? The American question is between duty and desertion—the American verdict will be for duty and against desertion, for the Republic against both anarchy and imperialism."

A. D. 1900 (June).—Revenues and expenditures of the government for the fiscal year ended June 30, 1900.—The revenues of the Government from all sources (by warrants) for the fiscal year ended June 30, 1900, were:

From internal revenue	$295,327,926.76
From customs	233,164,871.16
From profits on coinage, bullion deposits, etc	9,992,374.09
From District of Columbia	4,008,722.77
From fees—consular, letters patent, and land	3,291,716.68
From sales of public lands	2,836,882.98
From tax on national banks	1,998,554.00
From navy pension, navy hospital, clothing, and deposit funds	1,621,558.52
From sales of Indian lands	1,384,663.49
From payment of interest by Pacific railways	1,173,466.43
From miscellaneous	997,375.68
From sales of Government property	779,522.78
From customs fees, fines, penalties, etc	675,706.95
From immigrant fund	537,404.81
From deposits for surveying public lands	273,247.19
From sales of ordnance material	257,265.56
From Soldiers' Home, permanent fund	247,926.62
From tax on seal skins, and rent of seal islands	225,676.47
From license fees, Territory of Alaska	157,234.94
From trust funds, Department of State	152,794.56
From depredations on public lands	76,307.58
From Spanish indemnity	57,000.00
From sales of lands and buildings	3,842,737.68
From part payment Central Pacific Railroad indebtedness	3,338,016.49
From dividend received for account of Kansas Pacific Railway	821,897.70
From Postal Service	102,354,579.29
Total receipts	669,595,431.18

The expenditures for the same period were:

For the civil establishment, including foreign intercourse, public buildings, collecting the revenues, District of Columbia, and other miscellaneous expenses	$98,542,411.37
For the military establishment, including rivers and harbors, forts, arsenals, seacoast defenses, and expenses of the war with Spain and in the Philippines	134,774,767.78
For the naval establishment, including construction of new vessels, machinery, armament, equipment, improvement at navy-yards, and expenses of the war with Spain and in the Philippines	55,953,077.72
For Indian Service	10,175,106.76
For pensions	140,877,316.02
For interest on the public debt	40,160,333.27
For deficiency in postal revenues	7,230,778.79
For Postal Service	102,354,579.29
Total expenditures	590,068,371.00
Showing a surplus of	79,527,060.18

"As compared with the fiscal year 1899, the receipts for 1900 increased $58,613,426.83. . . . There was a decrease of $117,358,388.14 in expenditures." — *United States Secretary of the Treasury, Annual Report on the State of the Finances, 1900, pp. 7–9.*

A. D. 1900 (June). — Return of losses from all causes in the armies of the U. S. since May 1, 1898. — In response to a resolution of the Senate, the following return (56th Cong., 1st Sess., Senate Doc. 426) was made by the Secretary of War, June 1, 1900, showing the losses from all causes in the armies of the United States between May 1, 1898, and June 30, 1899; casualties in the Philippines during the war with Spain, and after the close of the war with Spain down to May 20, 1900; and other interesting details:

Statement showing losses, from all causes, in the armies of the United States between May 1, 1898, and June 30, 1899. Average strength. — 1898: Regular Army, 55,853; Volunteers, 163,103. 1899: Regular Army, 63,370; Volunteers, 45,457.

Causes.	Regular Army.

Statement of the number of insane soldiers admitted to the Government Hospital for the Insane, Washington, D. C., from the Philippine Islands, May 24, 1900, and the disposition made of them:

	Regulars.	Volunteers.
Admitted	47	15
Discharged recovered	16	3
Discharged unimproved	1	..
On visit from hospital	1	..
Remaining in hospital	29	12

A. D. 1900 (June).—Immigration for the year ended June 30.—"The Commissioner-General of Immigration, in the annual report of the operations of his Bureau for the fiscal year ended June 30, 1900, submits tabulated statements showing the arrival in this country during that period of 448,572 alien immigrants, 425,372 through ports of the United States and 23,200 through Canada. Of these, 304,148 were males and 144,424 females; 54,624 were under 14 years of age, 370,382 were from 14 to 45 years old, and 23,566 were 45 and over. As to the literacy of persons 14 years of age and over, there were 93,576 who could neither read nor write, and 2,097 who could read but were unable to write; 54,288 brought each $30 or over, and 271,821 showed sums less than $30, the total amounts displayed to inspectors aggregating $6,657,530. There were returned to their own countries within one year after landing 356, and hospital relief was rendered during the year to 2,417. The total debarred, or refused a landing at the ports, were 4,246, as compared with 3,798 last year. Of these, 1 was excluded for idiocy, 32 for insanity, 2,974 as paupers or persons likely to become public charges, 393 on account of disease, 4 as convicts, 2 as assisted immigrants, 833 as contract laborers, and 7 women upon the ground that they had been imported for immoral purposes. In addition to the foregoing, there were excluded at the Mexican and Canadian borders a total of 1,616 aliens.

"It appears that the Croatian and Slovenian races sent an increase of 99 per cent over those of the same races who came last year; the Hebrew, an increase of 62 per cent; the South Italian (including Sicilian), 28 per cent; the Japanese, 271 per cent; the Finnish, 106 per cent; the Magyar, 181 per cent; the Polish, 64 per cent; the Scandinavian, 41 per cent; the Slovak, 84 per cent. These nine races, of the total of forty-one races represented by immigration, furnished nearly as many immigrants as the total arrivals for the last year, or 310,444, and

their aggregate increase represented 85 per cent of the total increase shown for the year. The total immigration reported, 448,572, is in excess of that for the preceding year, 311,715, by 136,857, or 43.9 per cent. As to countries of origin, 424,700 came from European, 17,946 from Asiatic, 30 from African, and 5,896 from all other sources. The Commissioner-General points out that in addition to the 448,572 immigrants there arrived 65,635 other alien passengers, who, he contends, should be included in conformity to law with those classified as immigrants."—*United States, Secretary of the Treasury, Annual Report*, 1900, *p.* 37.

A. D. 1900 (December).—Exports for the calendar year exceeding those of any other nation.—A Press despatch from Washington, dated February 21, 1901, announced the fact that the "complete figures for the calendar year 1900, when compared with those of other nations, show that American exports of domestic products are greater than those of any other country. The total exports of domestic merchandise from the United States in the calendar year 1900 were $1,453,013,659; those from the United Kingdom, which has heretofore led in the race for this distinction were $1,418,348,000, and those from Germany $1,050,611,000. Additional interest is given to the first rank which the United States now holds as an exporting nation by the fact that a quarter of a century ago she stood fourth in that list. In 1875 the domestic exports of the United States were $497,263,737; those of Germany, $607,096,000; those of France, $747,489,000, and those of the United Kingdom, $1,087,497,000. To-day the United States stands at the head of the list, the United Kingdom second, Germany third and France fourth, with the figures as follows: United States, $1,453,013,659; United Kingdom, $1,418,348,000; Germany, $1,050,611,000; France, $787,060,000. All of these figures, it should be remembered, relate to the exports of domestic products. Thus in the quarter century the United States has increased her exports from $497,263,737 to $1,453,013,659, or 192 per cent; Germany, from $607,096,000 to $1,050,611,000, or 73 per cent; the United Kingdom, from $1,087,497,000 to $1,418,348,000, or 34 per cent, and France, from $747,489,000 to $787,060,000, or 5 per cent.

"The following table, compiled from official reports, shows the exports of domestic merchandise from the United States, the United Kingdom and Germany in each calendar year from 1875 to 1900:

YEAR.	United States.	United Kingdom.	Germany.
1875.....	$497,263,737	$1,087,497,000	$607,096,000
1876.....	575,735,804	976,410,000	619,919,000
1877.....	607,666,495	967,913,000	672,151,000
1878.....	723,286,821	938,500,000	702,513,000
1879.....	754,656,755	932,090,000	675,397,000
1880.....	875,564,075	1,085,521,000	741,202,000
1881.....	814,162,951	1,138,873,000	724,379,000
1882.....	749,911,309	1,175,099,000	776,228,000
1883.....	777,523,718	1,166,982,000	796,208,000
1884.....	733,768,764	1,134,016,000	779,832,000
1885.....	673,593,506	1,037,124,000	695,892,000
1886.....	699,519,430	1,035,226,000	726,471,000
1887.....	703,319,692	1,079,944,000	762,897,000
1888.....	679,597,477	1,141,365,000	780,076,000
1889.....	814,154,864	1,211,442,000	770,537,000
1890.....	845,999,603	1,282,474,000	809,810,000
1891.....	957,333,551	1,203,169,000	772,679,000
1892.....	923,237,315	1,105,747,000	718,806,000
1893.....	854,729,454	1,062,162,000	753,361,000
1894.....	807,312,116	1,051,193,000	720,607,000
1895.....	807,742,415	1,100,452,000	807,328,000
1896.....	986,830,080	1,168,671,000	857,745,000
1897.....	1,079,834,296	1,139,882,000	884,486,000
1898.....	1,233,564,828	1,135,642,000	894,063,000
1899.....	1,253,466,000	1,287,971,039	1,001,278,000
1900.....	1,453,013,659	1,418,348,000	1,050,611,000

A. D. 1900-1901.—Questions relating to the political status of the new possessions of the nation submitted to the Supreme Court.—Questions of surpassing importance, touching the political status of the new possessions which the nation had acquired from Spain, the relations of their inhabitants to the government and laws of the United States, the source and nature of the authority to be exercised over them by the Congress of the United States, whether exercised under the constitution of the United States or independently of it, were taken, in December and January (1900–1901), into the Supreme Court for authoritative decision, by appeals to that tribunal made in several suits which had arisen from disputed exactions of duty on importations from Porto Rico and the Philippine Islands. The questions had been burning ones in American politics, from the moment that the treaty of peace with Spain was signed, and the whole cast, character and consequence of the new policy of over-sea expansion on which the American Republic was then launched depended on the decision of the Court. Soon after the January

argument and submission of these cases to the Supreme Court, their extraordinary importance was touched upon with impressive eloquence by the Hon. W. Bourke Cockran, in an address upon "John Marshall," in which he said:

"At this moment the [Supreme Court] is considering the gravest question ever submitted to a judicial tribunal in the history of mankind. Within a few days it must decide whether the government of the United States, or rather whether two of its departments can govern territory anywhere by the sword, or whether authority exercised by officers of the United States must be controlled and limited everywhere by the Constitution of the United States.

"I do not mention this momentous question to express the slightest opinion upon its merits, but merely that this assemblage of judges and of lawyers may realize the part which the judiciary is now required to play in determining the influence which this country must exercise forevermore in the family of nations. The power of Congress to acquire territory is of course unquestioned, but the disposition to exercise that power will always be controlled by the conditions under which newly acquired territory must be held, and these conditions the court must now prescribe. On the one hand it may hold that wherever power is exercised under the constitution there the limitations of the constitution must be obeyed—that wherever the executive undertakes to administer, or Congress to legislate, there the judiciary must enforce upon both respect for the organic law to which they owe their existence. If this doctrine be established it is clear that no scheme of forcible conquest will ever be undertaken by this government, for the simple reason that there can be no profit in such an enterprise. On the other hand the Court may decide that Congress can hold newly annexed territories on any terms that it chooses—that it may govern them according to the constitution or independently of it—that they may be administered to establish justice among the governed or for the glory and profit of the governors. If it be held that government for profit can be maintained under the authority of the United States, conceive the extent to which it may be carried and the consequences which it may portend. If it be possible to maintain two forms of government under our constitution, it is possible to establish twenty in as many different places. Territory may be annexed to the North, to the South, to the East and to the West. The President of the United States may be vested with imperial powers in one place, with royal prerogatives in another and perhaps remain a constitutional magistrate at home. He may be made a military autocrat in some South American State, an anointed emperor in some Northern clime, a turbaned sultan in some Eastern island. Nay, more, Congress can move itself and the seat of government from Washington to some newly annexed territory governed by officers of its own creation, subject to its own unlimited power, and thus take both outside the jurisdiction of the Supreme Court.

"Has the world ever before seen—could the framers of this constitution have conceived—a bench of judges exercising such a power amid the universal submission and approval of the whole people. And more extraordinary than all, this submission remains unanimous though the decision of the court may seriously affect its own position in the structure of our government. For if it be held that the constitution does not extend of itself over newly annexed territory, then clearly the authority of the court cannot extend to it except by the action of Congress and the executive. If the authority, that is to say, the existence of the court in any part of the territory of the United States, depends upon the other departments, then it is idle to contend that it is an independent and coördinate branch of the government. To decide that the executive and legislative departments have the right to govern territory outside the constitution the court must deliberately renounce the importance which it has heretofore enjoyed and accept for itself an inferior place in our political system.

"To me this is the most sublime spectacle ever presented in the history of the world. Think of it! A war has been waged with signal success, vast territory has been exacted from a conquered foe; a great political campaign has been fought and won upon the policy of taking this territory and governing it at the pleasure of Congress and the executive, yet if the court should hold that what the executive has attempted, what Congress has sanctioned, and what the people appear to have approved at the polls is in contravention of the constitution, not one voice would be raised to question the judgment or to resist its enforcement. I have said the spectacle is sublime; my friends, even a few weeks ago it was inconceivable. Before the late election I confess I believed and said that the success of the present administration would be interpreted as a popular endorsement of its foreign policy and that the popular verdict would very probably be made to exercise a strong if not decisive influence on the court. I admit now that I was mistaken. It is evident that this question will be decided on its merits without the slightest attempt to coerce, intimidate or influence the judges, and I say now with all frankness that whatever may be the judgment it will be the very best outcome for the people of this country, for the peace of the world, for the welfare of the human race. I cannot tell what this outcome may be, but I know that whenever a crisis has arisen in the pathway of the republic, the statesmanship of the common people has always met it with justice and solved it with wisdom."—W. Bourke Cockran, *John Marshall: an address before the Erie County Bar Association, Feb.* 4, 1901, *at Buffalo.*

Argument before the Supreme Court was begun on the 17th of December, 1900, on two cases thus stated in the brief submitted for the government: "On June 6, 1899, Goetze imported from Porto Rico into the port of New York a quantity of leaf or filler tobacco, upon which duty was assessed at 35 cents per pound as filler tobacco not specially provided for, in accordance with the provisions of paragraph 213 of the tariff act of 1897, commonly known as the 'Dingley Act.' The importer protested, claiming that the merchandise was not subject to duty, because Porto Rico at the time of the importation was not a foreign country and because, therefore, the imposition of duties on goods brought from a place within the territory of the United States into a port of the United States is not lawful and valid under the Constitution.

The Board of General Appraisers sustained the assessment of duty imposed by the collector upon the merchandise in question, and thereupon the importer appealed to the United States circuit court for the southern district of New York, by which court the decision of the Board of General Appraisers was affirmed in an opinion rendered by District Judge Townsend. From the judgment of the circuit court this appeal was taken.

"Porto Rico was partially occupied by the war forces of the United States during the months of July and August, 1898. By the protocol of August 12, 1898, between the United States and Spain, Spain agreed to cede Porto Rico to the United States and immediately evacuate. The evacuation was effected and full possession of the island assumed by the United States prior to January 1, 1899. From that date until the 1st of May, 1900, Porto Rico was occupied and governed by the military forces of the United States, under the command of the President, as conquered territory, under the law of belligerent right. The treaty of Paris, made in pursuance of the protocol, was signed December 10, 1898, ratified by the Senate February 6, 1899, and ratifications exchanged April 11, 1899. So that the importation in this case was subsequent to the ratification of the treaty, but prior to the establishment of a civil government in the island under act of Congress. It does not appear that the importers are citizens of the United States or of Porto Rico, nor whether or not the imported tobacco was the product of Porto Rico.

"In the case of Fourteen Diamond Rings, it appears that the claimant, Pepke, is a citizen of the United States and served as a United States soldier in the Island of Luzon; that while there he purchased or acquired the rings in question and brought them into the United States without paying duty thereon some time in the year 1899, between July 31 and September 25. The rings were seized, on May 18, 1900, at Chicago, by a United States customs officer as merchandise liable to duty which should have been invoiced, and was fraudulently imported and brought into the United States contrary to law. An information for the forfeiture of the rings was filed on behalf of the Government, June 1, 1900, to which the claimant pleaded. Setting up that at the time he acquired said property Luzon was a part of the territory of the United States and that the seizure of said goods was contrary to the claimant's right as a citizen of the United States under the Constitution, and particularly under section 2, Article IV, thereof, and he insisted that under Article I, section 8, Congress is required in laying and collecting taxes to see to it that all taxes and duties shall be uniform throughout the United States. To this plea the United States demurred, and upon hearing of the demurrer, the district court gave judgment of forfeiture for the Government. This judgment the claimant has removed into this court by a writ of error."

The contention of the government as set forth in the same brief, and the main contention of the appellants in the case, against which the argument for the government was directed, were partly as follows:

"The Tariff Act of 1897 declares that 'there shall be levied, collected and paid upon all articles imported from foreign countries and mentioned in the schedules herein contained, the rates of duty which are by the schedules and paragraphs respectively prescribed.' (30 Stat., 151.)

"The Government contends, and the circuit court so held, that this act applied to merchandise imported from Porto Rico and the Philippine Islands after their cession to the United States exactly as it did before; that within the meaning of the act these countries are to be regarded as foreign, belonging to but not forming in a domestic sense a part of the United States.

"That it is within the constitutional province of the treaty-making power to accept the cession of foreign territory upon such terms, conditions, and limitations as to its internal status as may best subserve the interests of the United States, and it is not necessary to invest such territory with the full status of an integral part of the Union.

"That this is one of the ordinary and necessary sovereign powers of an independent nation, and nothing in the Federal Constitution or in the fundamental principles that underlie our Republic denies to the nation a right to the full exercise of this usual and common sovereign right.

"That the treaty-making power—the President and the Senate—as evidenced by the language of the treaty of Paris, did not intend to make Porto Rico and the Philippine Islands integral parts of the United States, but intended, in several particulars, to reserve their final status for adjustment by Congress, at the same time making peculiar and special differential provisions for variations and exceptions in customs and port regulations as to Spain and Spanish goods and subjects, which are inconsistent with the intention that the ceded countries became upon the ratification of the treaty a part of the United States in all respects and in the fullest sense.

"The Government contends that the term 'foreign countries' in the act of 1897 is to be regarded as having been understood by Congress to be subject to the rule of interpretation of the phrase given by the Supreme Court in the case of Fleming v. Page, where it was held that under our revenue laws every port is regarded as a foreign one until expressly established as domestic under the authority and control of the statutes of the United States.

"That the clause of the Constitution which declares that duties, imposts, and excises shall be uniform throughout the United States does not apply to nor govern these cases, because the term 'United States,' as there used, means only the territory comprised within the several States of the Union, and was intended only for their benefit and protection, and not for the benefit or protection of outside territory belonging to the nation; that in the latter sense duties on imports from these islands are uniform throughout the United States, because they are uniformly imposed at every port in the United States, so that there is no preference given to the ports of one State over those of another, nor is any inequality between the several States created.

"That the right to bring merchandise into the United States is a right entirely within the regu-

lation of Congress; such right in no wise differs as to either citizens or aliens. Citizenship carries with it no special or peculiar privileges at the custom-house. The American, the Spaniard, the Porto Rican, are treated alike. The basis of the customs laws is not ownership, but (1) the geographical origin of the shipment, and (2) the nature of the goods. The duty is imposed against merchandise, not upon the importer.

"The Government contends, therefore, that in view of the fact that tariff laws are 'in rem,' there is no principle of justice, much less of constitutional restriction, which forbids Congress from taxing in this way the merchandise of outlying possessions of the United States when brought into the ports of the Union. That the limitations of the Constitution as to customs, etc., were intended to secure equality between the States in the geographical sense, and not to forbid Congress from exercising the ordinary sovereign power of taxation as to the products of other sections of country not included within the geographical boundaries of the States; for which we rely upon the opinion of this court in Knowlton v. Moore as decisive and conclusive.

"If the foregoing propositions are sound, then it is established (1) that the tariff act of 1897 was intended by Congress to classify as foreign all countries not a part of or belonging to the United States at the time of its passage, and the subsequent cession of the Spanish islands to the United States did not operate to admit imports from those islands free of duty, under that law; (2) that the tariff act so construed and enforced violates no constitutional rule of uniformity.

"And the case of the plaintiffs in error would seem on these grounds to have no legal foundation.

"The Government might well be content to rest its argument upon these propositions. But counsel for the plaintiffs in error, in the court below as well as in this court, have gone far beyond these limits, and have challenged and denied the constitutionality of certain provisions of the treaty of Paris, contending that the cession of Porto Rico and the Philippine Archipelago effected a complete incorporation of those countries with the United States, so that they have become a part of the United States in the fullest and largest sense, not only internationally, but organically, so completely, indeed, that no difference or distinction can be made by law between imports from those countries and imports from one of the States of the Union.

"They insist that there can be no limited or qualified acquisition of territory by this nation; that when Porto Rico was ceded to the United States it came at once under the obligations of the Constitution and became entitled to the privileges of the Constitution, its inhabitants citizens of the United States, and its territory a part of the United States. They argue, therefore, that the clause of the treaty which says that 'the civil rights and political status of the inhabitants shall be determined by the Congress,' in so far as it is intended to defer the full enjoyment of the rights and privileges of citizenship under the Constitution until Congress shall bestow them hereafter upon the inhabitants, is 'ultra vires' and void, or at least superfluous and ineffective, because the Constitution 'ex proprio vigore' extends at once, as an automatic operation, to all territory ceded to this Government, and no treaty or treaty-making power can hinder or even suspend it. . . .

"Counsel have been at great pains to prove that the Government of the United States is one of delegated powers, and that its powers are not absolute and untrammeled, but subject to certain limits never and nowhere to be transcended; that the vague political entity known as The People stands behind the constituted agencies of government, holding in reserve the sources of supreme power, capable and ready to alter or destroy at its pleasure the machinery heretofore set up in its behalf. They call these doctrines truisms, and so they are. They do not help us in this case.

"The Government of the United States has been vested not with all powers but only with certain particular powers. These particular delegated powers are in some respects limited and confined in scope and operation, but in other respects they are entirely unlimited. So that the real and practical question is whether there is any limitation preventing the particular thing here complained of.

"It is worth while, in passing, to allude to the undeniable fact that 'The People' referred to are not the people of the Territories or of the outlying possessions of the United States, but the people of the several States, who ordained and established for themselves and their posterity the Federal Constitution.

"Counsel confuse ideas when they argue that the contention of the Government in these cases implies the possession by Congress of all unlimited and despotic powers in the government of territory. We mean no more than this court meant when it said:

"'The power of Congress over the Territories is general and plenary.

"'Its sovereignty over them is complete.

"'It has full and complete legislative authority over the people of the Territories and all departments of the Territorial governments.

"'The people of the United States, as sovereign owners of the National Territories, have supreme power over them and their inhabitants.

"'In legislating for the Territories Congress would doubtless be subject to those fundamental limitations in favor of personal rights which are formulated in the Constitution and its amendments, but these limitations would exist rather by inference and the general spirit of the Constitution than by any express and direct application of its provisions.'"—*In the Supreme Court of the U. S., October Term*, 1900, *John H. Goetze, Appellant, &c.; Brief for the United States.*

On the 8th of January, 1901, four other causes, involving substantially the same questions, came before the Supreme Court, and, by order of the Court, were consolidated, to be dealt with virtually as one case. The titles of the cases were respectively as follows: Elias S. A. De Lima et al., plaintiffs in error, agt. George R. Bidwell; Samuel B. Downes et al., plaintiffs in error, agt. George R. Bidwell; Henry W. Dooley et al., plaintiffs in error, agt. the United States; Carlos Armstrong, appellant, agt. the United States, and George W. Crossmon et al., appellants, agt. the United States. For the plaintiffs, in the case of Henry W. Dooley et al., the Hon. John G. Carlisle made an oral argument, in which he said: "What is the Constitution? In the first place it is not only the supreme law of the States

composing the union, but the supreme law of the land; supreme over every branch and department of the Government; supreme over every one exercising authority under the Government; supreme over every other law or order or regulation, and supreme over all the people, wherever they may be, within its jurisdiction, and what we claim is, that so long as this Constitution exists absolute and arbitrary power over the lives, liberties, or property of the people can be exercised nowhere in this Republic. It is now argued that it is supreme only within the boundaries of the several States, unless Congress extends it to the Territories; that it limits the powers of Congress only when legislating for the geographical area embraced in the States; that the inhabitants of the States are the only people who can, as a matter of right, claim the benefit of its guarantees and prohibitions for the protection even of those personal and property rights which have for ages been secured by the common law of England, and that all other people within the jurisdiction of the United States are dependent for the protection of their civil rights substantially upon the will of Congress. The question whether the Constitution should be declared to be the supreme law of the whole land, or only the supreme law of the respective States and their inhabitants or citizens, was presented in the Federal Convention of 1787, and was finally disposed of by the adoption of the clause as it now stands in the Constitution, which declares it to be the supreme law of the land.

"In the plan proposed by Mr. Charles Pinckney, of South Carolina, it was provided that 'all acts made by the legislature of the United States pursuant to this Constitution, and all treaties made under the authority of the United States, shall be the supreme law of the land,' etc. (1 Elliot, page 46). Mr. Patterson's plan proposed 'that all acts of the United States in Congress assembled made by virtue and in pursuance of the powers hereby vested in them, and by the Articles of Confederation and all treaties made and ratified under the authority of the United States, shall be the supreme law of the respective States, so far as those acts or treaties shall relate to such States or their citizens,' etc. (pages 71, 72). These plans and others were referred to the Committee of the Whole House and were reported back without any provision upon this subject. Afterwards the Convention unanimously agreed to the following resolution: 'That the Legislative acts made by virtue and in pursuance of the Articles of Union and all treaties made and ratified under the authority of the United States, shall be the supreme law of the respective States, so far as those acts or treaties shall relate to the said States or their citizens or inhabitants' (page 100). Thus it stood when referred to the committee of five, of which Mr. Rutledge was chairman, and on the 6th of August, 1787, that committee reported back to the Convention a draft of the proposed Constitution, the eighth article of which was the same as the resolution last quoted, except that in the place of the words 'Articles of Union' it contained the words 'this Constitution' (page 120). This report was considered in the Committee of the Whole, and on the 23d of August the eighth article was unanimously amended so as to read: 'This Constitution and all laws of the United States made in pursuance thereof, and all treaties made under the authority of the United States shall be the supreme law of the several States and of their citizens and inhabitants,' etc. (page 151).

"This was the form in which the article stood when the whole draft was referred to the committee of eleven, but when reported back September 12, it constituted the second clause of the sixth article and declared that the Constitution and laws and the treaties made and to be made should be 'the supreme law of the land,' and so it now stands as part of the Constitution. If the clause had been adopted in the form agreed to in the committee and inserted in the first draft, there would have been at least a certain degree of plausibility in the argument made here for the Government, but even in that case we think the powers of Congress would have been limited whenever and wherever it might attempt to exercise them. But it is argued here that the history of the Constitution and the language employed in the preamble, and in some other places, show that it was intended to establish a government only for such of the States then existing as might ratify it, and such other States as might thereafter be admitted into the Union, and that, therefore, while it confers power upon Congress to govern Territories, it does not require that body to govern them in accordance with the supreme law of the land; that is, in accordance with the instrument from which the power to govern is derived. Even if the premises were true, the conclusion would not follow; but is it true that the Constitution was ordained and established for the government of the States only? If so, how did it happen that the great men who framed that instrument made it confer the power to govern Territories as well as States? It is true that the Constitution was ordained and established by the people of the States, but it created a National Government for national purposes, not a mere league or compact between the States, and jurisdiction was conferred upon that Government over the whole national domain, whatever its boundaries might be. It is not true that the Government was established only for the States, their inhabitants or citizens, but if it were true, then it could exercise no power outside of the States, and this court would have to put a new construction upon that provision which authorizes Congress to dispose of and make all needful rules and regulations respecting the territory, or other property, belonging to the United States. The necessary construction of that clause would be that it conferred power only to dispose of land or other property, and to make necessary rules and regulations respecting land or other property belonging to the United States; that is, belonging to the several States composing the Union. It would confer no power whatever to govern the people outside of the States."—*Supreme Court of the U. S., October Term*, 1900, *Henry W. Dooley* [*et al.*] *vs. the United States: Argument of J. G. Carlisle.*

On one point the argument of Mr. Charles H. Aldrich, attorney for the plaintiff in the case of the "Fourteen Diamond Rings," was as follows: In "the relations of the United States to other nations, our government is a sovereign state, and has the right, and as such 'free and independent State has full power, to levy war, conclude peace, contract alliances, establish commerce,

and to do all other acts and things which independent States may of right do.' In this relation it is correct, as I conceive, to speak of the United States of America as a unit and use a singular verb. It is such unit and has this power because there was created a government upon which the people conferred these powers. If war is declared it must be under the constitution; if peace is concluded it is in the exercise of a constitutional power; if commerce is established it is because Congress under the constitution was given power to regulate commerce; if alliances are contracted it can only be done under the constitution. In short, the sovereign nation exists through the adoption of the constitution, and its powers are derived from that instrument and must be found, as this court has often declared, in the language thereof or by necessary implication therefrom. We are in the Philippines and Porto Rico and can be rightfully there only in the exercise of some of these enumerated powers, as in the language of the tenth amendment, 'the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.' This amendment designates the constitution as the source of the power of the United States and excludes the idea of power free from constitutional restraint derived by implication from powers delegated by the constitution.

"Nor is it true that at the time this declaration was made all independent states or nations claimed and exercised the right to acquire, hold and govern foreign dependencies, and no state or nation then recognized its obligation to confer on the people of such acquired territory the privileges and immunities enjoyed by the people of the home government, except at its own will and discretion. It is true that all independent states claimed and exercised the right to acquire territory, but if it were important in this case I think the arguments of Pitt, Camden and Barré could be used to establish the proposition that under the British Constitution as it then was, that nation had, from the time of King John and the Great Charter until King George, recognized that its subjects had essential rights not dependent upon the 'will and discretion' of the home government. It is unnecessary to follow that subject here. It is sufficient that the Declaration of Independence was brought about by the assertion on the part of King George and his ministers of precisely the present doctrine of this administration and its representatives in this court. If value is to be attached to contemporary history that fact cannot be lost sight of. The speeches of Grenville and Townshend in favor of unlimited power on the part of Parliament over the American colonists and their affairs have been substantially parodied in Congress by the advocates of unrestrained power over our 'colonies,' as it is now unfortunately fashionable to denominate them. The signers of the Declaration of Independence held that as subjects of the British Constitution there was no right to impose taxes upon them without their consent, to deprive them of trial by jury, to deprive them of their legislatures, and to declare Parliament invested with power to legislate for them 'in all cases whatsoever.' These and other grievances were held denials of rights belonging to every British subject as such and to justify rebellion and war. It seems impossible that a people who rebelled for such reasons established a State invested with the very power which they had denied to the British government and the assertions of which made rebellion necessary.

"This argument that the power to declare war and conclude peace carries with it, as an auxiliary, power to do whatever other nations are accustomed to do with the people and territory acquired through the exercise of these powers, has a remarkable likeness to the arguments put forward at the beginning of the century with reference to the Alien and Sedition Acts. The supporters of the constitutionality of these acts claimed that the common law had been introduced and become a part of the constitution of the United States, and therefore the powers usually exercisable under the common law could be exercised by the Congress of the United States in the respects involved in those acts. Mr. Madison's letter discussing this contention was answered, so far as it asserted the right of a state to nullify an act of Congress, but was never answered, so far as it denied the existence of the common law as a part of the constitution of the United States. His objections to that contention, succinctly stated, were, that if the common law was a part of the constitution, then there were no constitutional limitations. Congress, like Parliament, could legislate in all cases whatsoever; that the President would be possessed of the royal prerogatives (as is now claimed in this case by the Attorney-General); that the judiciary would have a discretion little short of legislative power; that these powers in the different branches of the government would not be alterable, because, being in the constitution, they could only be repealed by amendment of that instrument; and, lastly, that the constitution would have a different meaning in different States, inasmuch as the common law was different in such States, and that it would lack the certainty which a constitution should have, as the common law was an ever-growing or varying body of law, and, therefore, with reference to the proper action of the government in each instance, the question would be important as to what portion of the common law was in the constitution and what not so embodied.

"Nearly every sentence of Mr. Madison's able argument with reference to the common law as a part of the constitution is applicable to the contention that sovereign powers, so-called, as derived from or defined by international law, became a part of the constitution of the United States through the delegation of the powers to make war, conclude peace, and make all needful rules and regulations respecting the territory and other property belonging to the United States. This court has adopted the view of Mr. Madison. It is hoped that the child of the old error by which again the executive and legislative power is sought to be enlarged through the incorporation into the constitution of 'the sovereign power of other nations' will receive the same answer.

"In fact, we submit that this court has already held that sovereign power in the sense that the words are used in the law of nations as prerogative rights of the King or Emperor, not only is not vested in the United States or in any branch of its government, but cannot be so vested. The sovereign power is with the people. In leaving

it with the people our government marked a departure from all that had previously existed." —*Supreme Court of the U. S., October Term, 1900, No. 419*: C. H. Aldrich, *Argument in reply.*

A. D. 1901.—Military and naval expenditure, compared with that of other Powers. See (in this vol.) WAR BUDGETS.

A. D. 1901 (January).—Apportionment of Representatives under the Twelfth Census.—The question of obedience to the Fourteenth Amendment.—Restrictions of the elective franchise in the States.—Section 3 of Article 1 of the Constitution requires that "Representatives . . . shall be apportioned among the several States which may be included within this Union according to their respective numbers. . . . The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years. . . . The number of Representatives shall not exceed one for every 30,000; but each State shall have at least one." The first meeting of Congress was in 1789; the required first census of the United States was taken in 1790, and, in obedience to the constitutional requirement, the enumeration has been repeated within the closing year of every decade since, to supply the basis for a new apportionment of representatives among the States. The twelfth census, taken in 1900, called for such new distribution, and action upon it was taken in Congress in January, 1901.

As the section quoted above stood in the Constitution until 1868, it contained a further clause, inserted as one of the original compromises made between the slaveholding and the free States, requiring that the determination of numbers to be represented in the several States should be made "by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons." This original clause of the Constitution was superseded by the Fourteenth Amendment, adopted in 1868, which introduced this new provision, in its second section: "Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, except Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State." To many persons it seemed to be very clear that this provision of the amended Constitution required account to be taken of the qualifications by which a number of States have abridged the suffrage, especially where done for the understood purpose of disfranchising colored citizens (see, in this vol., LOUISIANA, NORTH CAROLINA, SOUTH CAROLINA, MISSISSIPPI, and MARYLAND), and that Congress was left with no discretion to do otherwise. Those holding this view in the House of Representatives gave support to the following resolution, introduced by Mr. Olmsted, of Pennsylvania:

"Whereas the continued enjoyment of full representation in this House by any State which has, for reasons other than participation in rebellion or other crime, denied to any of the male inhabitants thereof, being 21 years of age and citizens of the United States, the right to vote for Representatives in Congress, Presidential electors, and other specified officers, is in direct violation of the fourteenth amendment to the Constitution of the United States, which declares that in such case 'the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State,' and is an invasion of the rights and dignity of this House and of its members, and an infringement upon the rights and privileges in this House of other States and their representatives; and

"Whereas the States of Massachusetts, Maine, Connecticut, Delaware, California, Louisiana, Mississippi, North Carolina, South Carolina, Wyoming, Oregon, and other States do, by the provisions of the constitutions and statutes of said States, and for reasons other than participation in rebellion or other crime, deny the right to vote for members of Congress and Presidential electors, as well as the executive and judicial officers of such States and members of the legislatures thereof, to male inhabitants 21 years of age and over and citizens of the United States; and such denial in certain of the said States extends to more than one-half of those who prior to the last apportionment of representation were entitled to vote in such States; and

"Whereas in order that the apportionment of membership of the House of Representatives may be determined in a constitutional manner: Therefore, be it

"Resolved by the House of Representatives, That the Director of the Census is hereby directed to furnish this House, at the earliest possible moment, the following information:

"First. The total number of male citizens of the United States over 21 years of age in each of the several States of the Union.

"Second. The total number of male citizens of the United States over 21 years of age who, by reason of State constitutional limitations or State legislation, are denied the right of suffrage, whether such denial exists on account of illiteracy, on account of pauperism, on account of polygamy, or on account of property qualifications, or for any other reason.

"Resolved further, That the Speaker of the House of Representatives is hereby authorized and directed to appoint a select committee of five members from the membership of the Census Committee of the House of Representatives, who shall investigate the question of the alleged abridgment of the elective franchise for any of the causes mentioned in all the States of the Union in which constitutional or legislative restrictions on the right of suffrage are claimed to exist, and that such committee report its findings within twenty days from the date of the adoption of this resolution to the said Census Committee, and that within one week after the said report shall have been received by the Census Com-

mittee the Census Committee shall return a bill to the House of Representatives providing for the apportionment of the membership of the House of Representatives based on the provisions of the fourteenth amendment to the Constitution of the United States."

Republicans, hardly less than Democrats, in Congress and outside, were averse to raising what could not fail to be a burning sectional issue, and grounds for ignoring the constitutional mandate were sought with considerable eagerness on both sides. Strict obedience to the requirement of the Constitutional provision was claimed to be impracticable, at least within the time available for proceedings connected with the present apportionment of representatives. Said one speaker, opposing the resolutions in the House: "There is not a State in this Union that has not added to or subtracted from the Federal constitutional requirements—not one. . . . If there is any addition, whether as a matter of police regulation or otherwise, to the constitutional amendments regulating the franchise and the resultant representation in this House—if there is addition or subtraction of one iota—then those who desire to live up to this Constitution, no matter whether they ruin their neighbors, no matter whether they again kindle the fires of sectional strife, those who in their love for the Constitution are so mentally rigid that they would demand its enforcement though they set the Union aflame, must include every State in this Union."

Said another: "How would anybody find out how many people in the State of Mississippi were disfranchised for the reasons stated in this resolution? There is there an educational qualification. How are you to determine how many of the men in the State of Mississippi who did not vote, did not vote because they were disfranchised under the educational qualification? Then there is a qualification in extension and not in limitation of the suffrage, saying that even those who can not read and write may still vote, provided they can give an understanding interpretation of the Constitution or any part of it. How are you going to determine how many are disqualified by that? And then there is a qualification which says that those can not vote who shall not by a certain time have paid their poll tax. Out of the number of people who did not vote, how are you going to determine which of them have not voted because of the educational qualification? Which because of the understanding qualification? Which because of the poll-tax qualification? Which because of the registration qualification? How many because of the pure Australian ballot which exists in the State of Mississippi? . . . There is not a State in the Union which has the Australian ballot which by the very fact and the necessity of voting according to that Australian ballot does not prevent the citizen who can not read and write from voting if he votes a split ticket of any sort."

A third speaker remarked: "To live up to that amendment, 'that no male inhabitant shall be deprived of suffrage except for participation in the rebellion or other crimes,' the male inhabitant, I take it, is he who has acquired domicile in that State, and the moment that he acquires domicile, and is a male, he is a 'male inhabitant' of that State, and entitled at once to suffrage; and yet every State in the Union, I believe without exception, has requirements as to residence not only in the State, but in the city, in the county, in the precinct and ward and the voting place; and every one of those requirements, as every gentleman on that side must admit, are in direct conflict with and contravention of the fourteenth amendment to the Constitution of the United States literally construed."

But the advocates of obedience to the Constitution, supporting the resolutions of Mr. Olmsted, planted their argument on the very facts brought against it, as demonstrating the need of measures to check a growing tendency in the country to restrict the elective franchise. Said Mr. Shattuck, of Ohio: "We find that in 1870 there were three States that had abridged their electorates—California, Connecticut, and Massachusetts. In these three States there was a constitutional provision for an educational qualification, which disfranchised a certain percentage of the electorate—namely, the illiterates. But, in those States, the percentage of illiteracy is very light, averaging about 6 per cent. The basis of representation would hardly have been affected in those States had the fourteenth amendment been conformed with.

"An examination into the election laws of the various States reveals an astonishing tendency at this time to abridge their electorates. When the Congress which adopted the existing apportionment discussed the matter ten years ago but three States had abridged their electorate by action of the State, and in these the percentage of disfranchised males was but 6 per cent. But since that time similar policies have been adopted by other States, and to-day we face the fact that ten of the forty-five States of this Union have abridged their electorates, and that in these the percentage of males 21 years of age and over, disfranchised, averages over 20 per cent. The constitutions of several other States permit such an abridgment. Besides, there are other States preparing to adopt these policies and to disfranchise thousands of men who to-day hold the right of franchise. In view of this remarkable tendency it is inconceivable that Congress can longer permit the fourteenth amendment to remain a dead letter, and to pass a bill making an apportionment based solely upon the population and neglecting the proviso which applies to all States which have abridged their electorate.

"We will not review the past by any discussion of the question as to whether the provisions of the fourteenth amendment should have been made effective when the last apportionment was made ten years ago. We find to-day conditions existing which make its enforcement imperative. I do not propose to discuss at this time whether the reasons given for these abridgments by the people of the various States are valid or not. . . . I am simply pointing out the conditions as they exist; I am simply pointing out that the time has come when the tendency of the States to abridge their electorates has grown to such proportions as to demand that this Congress shall proceed in a constitutional manner in making the new apportionment. I do not say that States have not the right to establish educational qualifications for their electors, but I do maintain that when they have done so they must pay the penalty prescribed in the Constitution, and have

their representation abridged proportionately. I do not say that we shall punish only Louisiana; I do not say that we shall punish only Massachusetts; I do not say that we shall punish only California; but I do say and insist, as the representative of a State in which every male member 21 years of age and over is guaranteed the sacred right of franchise, that there is a constitutional remedy prescribed for their acts, and I do demand that that remedy be applied."

The following interesting table, showing the restrictions of the electorate in the various States of the Union, was appended to the remarks of Mr. Shattuck:

States.	Requirements as to Citizenship.	Persons Excluded from Suffrage.
Alabama	Citizen of United States, or alien who has declared intention.	Convicted of treason or other crime punishable by imprisonment, idiots, or insane.
Arkansas	Citizen of United States, or alien who has declared intention.	Idiots, insane, convicted of felony until pardoned, failure to pay poll tax, United States soldiers on duty in State.
California	Citizen by nativity, naturalization, or treaty of Queretaro.	Chinese, insane, embezzlers of public moneys, convicted of infamous crime, person unable to read Constitution in English, and to write his name.
Colorado	Citizen or alien, male or female, who has declared intention 4 months prior to election.	Under guardianship, insane, idiots, or imprisoned.
Connecticut	Citizen of United States	Convicted of felony or theft, unless pardoned. Person unable to read Constitution or statutes.
Delaware	Citizen who has paid registration fee of $1.	Idiots, insane, paupers, felons. Person who can not read the English language and write his name.
Florida	Citizen of United States	Insane, under guardianship, convicted of felony or any infamous crime.
Georgia	Citizen of the United States who has paid all his taxes since 1877.	Idiots, insane, convicted of crime punishable by imprisonment until pardoned, failure to pay taxes.
Idaho	Citizen of the United States, male or female.	Under guardianship, idiots, insane, convicted of felony, treason, or embezzlement of public funds, polygamist or bigamist.
Illinois	Citizen of the United States	Convicted of felony.
Indiana	Citizen of United States, or alien who has declared intention and resided 1 year in United States and 6 months in State.	Convicted of crime and disfranchised by judgment of the court, United States soldiers, sailors, and marines.
Iowa	Citizen of the United States	Idiots, insane, convicted of infamous crime.
Kansas	Citizen of United States, alien who has declared intention, or [under] treaties with Mexico.	Felons, insane, duelists, rebels, not restored to citizenship, under guardianship, public embezzlers, offering or accepting a bribe.
Kentucky	Citizen of the United States	Treason, felony, bribery at election.
Louisiana	Citizen of United States or alien who has declared intention.	Idiots, insane, convicted of treason, embezzlement of public funds, all crime punishable by imprisonment in penitentiary, persons unable to read and write, and not owning property in the State assessed at $300, or not the son or grandson of a citizen of the United States prior to Jan. 1, 1867, person who has not paid poll tax.
Maine	Citizen of the United States	Paupers, persons under guardianship, Indians not taxed, and in 1893 all new voters who can not read the Constitution or write their own names in English.
Maryland	Citizen of the United States	Convicted of larceny or other infamous crime, unless pardoned, persons convicted of bribery.
Massachusetts	Citizen of the United States	Paupers and persons under guardianship, person who can not read Constitution in English and write his name.
Michigan	Citizen or inhabitant who has declared intention under United States laws 6 months before election and lived in State 2½ years.	Indians, duelists, and accessories.
Minnesota	Citizen of United States or alien who has declared intention, and civilized Indians.	Convicted of treason or felony, unless pardoned, persons under guardianship or insane.
Mississippi	Citizen of the United States	Insane, idiots, Indians not taxed, felons, persons who have not paid taxes, persons who can not read or understand Constitution.
Missouri	Citizen of United States or alien who has declared intention not less than 1 year or more than 5 before offering to vote.	United States soldiers and marines, paupers, criminals convicted once until pardoned, felons and violators of suffrage laws convicted a second time.
Montana	Citizen of the United States	Felons, unless pardoned, idiots, insane, United States soldiers, seamen, and marines, Indians.
Nebraska	Citizen of United States or alien who has declared intention.	Convicts.
Nevada	Citizen of the United States	Idiots, insane, unpardoned convicts, Indians, Chinese.
New Hampshire	Citizen of United States	Paupers (except honorably discharged United States soldiers and sailors), persons excused from paying taxes at their own request.
New Jersey	Citizen of the United States or alien who has declared intention 30 days prior to election.	Idiots, insane paupers, persons convicted of crimes (unless pardoned) which exclude them from being witnesses.
New York	Citizen who shall have been a citizen for 90 days.	Convicted of bribery or any infamous crime, Indians under tribal relations.
North Carolina	Citizen of the United States	Convicted of felony or other infamous crime, idiots, lunatics, persons unable to read or write, unless lineal descendant of citizen of United States prior to Jan. 1, 1867, nonpayment of poll tax.
North Dakota	Citizen of the United States, alien who has declared intention 1 year, and civilized Indian.	Under guardianship, persons non compos mentis, or convicted of felony and treason, unless restored to civil rights.
Ohio	Citizen of the United States	Felony until pardoned, idiots, insane, United States soldiers and sailors.

States.	Requirements as to Citizenship.	Persons Excluded from Suffrage.
Oregon	Citizen of United States or alien who has declared intention 1 year preceding election.	Idiots, insane, convicted of felony, United States soldiers and sailors, Chinese.
Pennsylvania	Citizen of the United States at least 1 month, and if 22 years old or more, must have paid tax within 2 years.	Convicted of some offense whereby right of suffrage is forfeited, nontaxpayers.
Rhode Island	Citizen of the United States	Paupers, lunatics, persons non compos mentis, convicted of bribery or infamous crime until restored to right to vote under guardianship.
South Carolina	Citizen of the United States	Convicted of treason, murder, or other infamous crime, dueling, paupers, insane, idiots, person who has not paid poll tax, who can not read and write any section of the State constitution, or can show that he has paid all taxes on property within the State assessed at $300.
South Dakota	Citizen of the United States or alien who has declared intention.	Under guardianship, idiots, insane, convicted of treason or felony, unless pardoned.
Tennessee	Citizen of the United States who has paid poll tax of preceding year.	Convicted of bribery or other infamous offense.
Texas	Citizen of the United States or alien who has declared intention.	Idiots, lunatics, paupers, convicted of felony, United States soldiers and seamen.
Utah	Citizen, male and female	Idiots, insane, convicted of treason or violation of election laws.
Vermont	Citizen of the United States	Those who have not obtained the approbation of the board of civil authority of the town in which they reside.
Virginia	Citizen of the United States	Idiots, lunatics, convicted of bribery at election, embezzlement of public funds, treason, felony and petty larceny, duelists and abettors unless pardoned by legislature.
Washington	Citizen of the United States	Indians not taxed, idiots, insane, persons convicted of infamous crimes.
West Virginia	Citizen of the State	Paupers, idiots, lunatics, convicted of treason, felony, or bribery at elections.
Wisconsin	Citizen of the United States or alien who has declared intention.	Insane, under guardianship, convicted of treason or felony, unless pardoned, Indians having tribal relations.
Wyoming	Citizen of the United States, male and female.	Idiots, insane, persons convicted of infamous crimes unless restored to civil rights, unable to read State constitution.

— *Congressional Record, January* 4–5, 1901, *pp.* 618–20, *and* 662–5.

The resolutions of Mr. Olmsted were not adopted. The reapportionment was made on the basis of the totals of the census returns, with no reckoning of any denials of the right to vote. The following is the text of the Act, as passed and approved January 16:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That after the third day of March, nineteen hundred and three, the House of Representatives shall be composed of three hundred and eighty-six members [the existing number being 357] to be apportioned among the several States as follows: Alabama, nine; Arkansas, seven; California, eight; Colorado, three; Connecticut, five; Delaware, one; Florida, three; Georgia, eleven; Idaho, one; Illinois, twenty-five; Indiana, thirteen; Iowa, eleven; Kansas, eight; Kentucky, eleven; Louisiana, seven; Maine, four; Maryland, six; Massachusetts, fourteen; Michigan, twelve; Minnesota, nine; Mississippi, eight; Missouri, sixteen; Montana, one; Nebraska, six; Nevada, one; New Hampshire, two; New Jersey, ten; New York, thirty-seven; North Carolina, ten; North Dakota, two; Ohio, twenty-one; Oregon, two; Pennsylvania, thirty-two; Rhode Island, two; South Carolina, seven; South Dakota, two; Tennessee, ten; Texas, sixteen; Utah, one; Vermont, two; Virginia, ten; Washington, three; West Virginia, five; Wisconsin, eleven; and Wyoming, one.

"Sec. 2. That whenever a new State is admitted to the Union the Representative or Representatives assigned to it shall be in addition to the number three hundred and eighty-six.

"Sec. 3. That in each State entitled under this apportionment, the number to which such State may be entitled in the Fifty-eighth and each subsequent Congress shall be elected by districts composed of contiguous and compact territory and containing as nearly as practicable an equal number of inhabitants. The said districts shall be equal to the number of the Representatives to which such State may be entitled in Congress, no one district electing more than one Representative.

"Sec. 4. That in case of an increase in the number of Representatives which may be given to any State under this apportionment such additional Representative or Representatives shall be elected by the State at large, and the other Representatives by the districts now prescribed by law until the legislature of such State in the manner herein prescribed, shall redistrict such State; and if there be no increase in the number of Representatives from a State the Representatives thereof shall be elected from the districts now prescribed by law until such State be redistricted as herein prescribed by the legislature of said State; and if the number hereby provided for shall in any State be less than it was before the change hereby made, then the whole number to such State hereby provided for shall be elected at large, unless the legislatures of said States have provided or shall otherwise provide before the time fixed by law for the next election of Representatives therein.

"Sec. 5. That all Acts and parts of Acts inconsistent with this Act are hereby repealed."

No existing State quota was reduced by the new apportionment, and the gains were as follows: Illinois, New York and Texas, 3; Minnesota, New Jersey and Pennsylvania, 2; Arkansas, California, Colorado, Connecticut, Florida, Louisiana, Massachusetts, Mississippi, Missouri,

North Carolina, North Dakota, Washington, West Virginia and Wisconsin, 1.

That clause of the third section which requires districts to be "composed of contiguous and compact territory" is intended to be a bar to the partisan trick called "gerrymandering."

The vote on the bill in the House (165 against 102) was singularly non-partisan. The minority was said to be composed of exactly the same number of Republicans and Democrats, 51 of each, and in the majority vote there were included 84 Republicans and 81 Democrats. The vote was also non-sectional, except that New England voted almost solidly for the measure. East, South and West the State delegations were almost equally divided.

A. D. 1901 (February).—Act to increase the standing army of the nation to 100,000 men.—In his annual Message to Congress, December 3, 1900, the President set forth the military needs of the country, created by its new policy of imperial expansion, and recommended that the permanent army be raised to 100,000 in number, from 45,000 to 60,000 of which would be required in the Philippine Islands until their people were made submissive to the authority of the United States. In accord with the executive recommendation, Congress passed "an Act to increase the efficiency of the permanent military establishment of the United States," which became law by the President's signature on the 2d of February, 1901. Its first section provides that "from and after the approval of this Act the Army of the United States, including the existing organizations, shall consist of fifteen regiments of cavalry, a corps of artillery, thirty regiments of infantry, one Lieutenant-General, six major-generals, fifteen brigadier-generals, an Adjutant-General's Department, an Inspector-General's Department, a Judge-Advocate-General's Department, a Quartermaster's Department, a Subsistence Department, a Medical Department, a Pay Department, a Corps of Engineers, an Ordnance Department, a Signal Corps, the officers of the Record and Pension Office, the chaplains, the officers and enlisted men of the Army on the retired list, the professors, corps of cadets, the army detachments and band at the United States Military Academy, Indian scouts as now authorized by law, and such other officers and enlisted men as may hereinafter be provided for." A subsequent section enacts that the total enlisted force of the line of the army shall not exceed at any one time 100,000.

Section 2 provides that "each regiment of cavalry shall consist of one colonel, one lieutenant-colonel, three majors, fifteen captains, fifteen first lieutenants, and fifteen second lieutenants; two veterinarians, one sergeant-major, one quartermaster-sergeant, one commissary-sergeant, three squadron sergeants-major, two color-sergeants with rank, pay, and allowances of squadron sergeant-major, one band, and twelve troops organized into three squadrons of four troops each. . . . Each troop of cavalry shall consist of one captain, one first lieutenant, one second lieutenant, one first sergeant, one quartermaster-sergeant, six sergeants, six corporals, two cooks, two farriers and blacksmiths, one saddler, one wagoner, two trumpeters, and forty-three privates; the commissioned officers to be assigned from among those hereinbefore authorized."

Sections 3–9, relating to the Artillery, are, in part, as follows: "That the regimental organization of the artillery arm of the United States Army is hereby discontinued, and that arm is constituted and designated as the Artillery Corps. It shall be organized as hereinafter specified and shall belong to the line of the Army. That the Artillery Corps shall comprise two branches—the coast artillery and the field artillery. The coast artillery is defined as that portion charged with the care and use of the fixed and movable elements of land and coast fortifications, including the submarine mine and torpedo defenses; and the field artillery as that portion accompanying an army in the field, and including field and light artillery proper, horse artillery, siege artillery, mountain artillery, and also machine-gun batteries: Provided, That this shall not be construed to limit the authority of the Secretary of War to order coast artillery to any duty which the public service demands or to prevent the use of machine or other field guns by any other arm of the service under the direction of the Secretary of War. . . . That the Artillery Corps shall consist of a Chief of Artillery, who shall be selected and detailed by the President from the colonels of artillery, to serve on the staff of the general officer commanding the Army, and whose duties shall be prescribed by the Secretary of War; fourteen colonels, one of whom shall be the Chief of Artillery; thirteen lieutenant-colonels, thirty-nine majors, one hundred and ninety-five captains, one hundred and ninety-five first lieutenants, one hundred and ninety-five second lieutenants; and the captains and lieutenants provided for in this section not required for duty with batteries or companies shall be available for duty as staff officers of the various artillery garrisons and such other details as may be authorized by law and regulations; twenty-one sergeants-major, with the rank, pay, and allowances of regimental sergeants-major of infantry; twenty-seven sergeants-major, with the rank, pay, and allowances of battalion sergeants-major of infantry; one electrician sergeant to each coast artillery post having electrical appliances; thirty batteries of field artillery, one hundred and twenty-six batteries of coast artillery, and ten bands organized as now authorized by law for artillery regiments: Provided, That the aggregate number of enlisted men for the artillery, as provided under this Act, shall not exceed eighteen thousand nine hundred and twenty, exclusive of electrician sergeants."

Concerning the Infantry it is provided, in Section 10, that "each regiment of infantry shall consist of one colonel, one lieutenant colonel, three majors, fifteen captains, fifteen first lieutenants, and fifteen second lieutenants; one sergeant-major, one quartermaster-sergeant, one commissary-sergeant, three battalion sergeants-major, two color sergeants, with rank, pay, and allowances of battalion sergeants-major, one band, and twelve companies, organized into three battalions of four companies each. Of the officers herein provided, the captains and lieutenants not required for duty with the companies shall be available for detail as regimental and battalion staff officers and such other details as may be authorized by law or regulations. . . . Each infantry company shall consist of one captain, one first lieutenant, one second lieutenant, one first sergeant, one quartermaster-sergeant, four sergeants, six corporals, two cooks, two musicians, one artificer, and forty-eight privates, the com-

missioned officers to be assigned from those hereinbefore authorized."

Section 11 provides that "the enlisted force of the Corps of Engineers shall consist of one band and three battalions of engineers. . . . Each battalion of engineers shall consist of one sergeant-major, one quartermaster-sergeant, and four companies. Each company of engineers shall consist of one first sergeant, one quartermaster-sergeant, with the rank, pay, and allowances of sergeant, eight sergeants, ten corporals, two musicians, two cooks, thirty-eight first-class and thirty-eight second-class privates."

Section 12 relates to the appointment of army chaplains—one for each regiment of cavalry and infantry, and twelve for the corps of artillery—no person to be appointed who has passed the age of forty years. The office of post chaplain is abolished. Sections 13 to 27 relate mainly to the organization of the several Departments, of the Adjutant-General, Inspector-General, Judge-Advocate-General, Quartermaster-General, Commissary-General, Surgeon-General, Paymaster-General, Chief of Engineers, Chief of Ordnance, etc.

Section 28, prescribing the rules of promotion and appointment, is as follows: "That vacancies in the grade of field officers and captain, created by this Act, in the cavalry, artillery, and infantry shall be filled by promotion according to seniority in each branch, respectively. Vacancies existing after the promotions have been made shall be provided for as follows: A sufficient number shall be reserved in the grade of second lieutenant for the next graduating class at the United States Military Academy. Persons not over forty years of age who shall have at any time served as volunteers subsequent to April twenty-first, eighteen hundred and ninety-eight, may be ordered before boards of officers for such examination as may be prescribed by the Secretary of War, and those who establish their fitness before these examining boards may be appointed to the grades of first or second lieutenant in the Regular Army, taking rank in the respective grades according to seniority as determined by length of prior commissioned service; but no person appointed under the provisions of this section shall be placed above another in the same grade with longer commissioned service, and nothing herein contained shall change the relative rank of officers heretofore commissioned in the Regular Army. Enlisted men of the Regular Army or volunteers may be appointed second lieutenants in the Regular Army to vacancies created by this Act, provided that they shall have served one year, under the same conditions now authorized by law for enlisted men of the Regular Army."

Important provisions are embodied in Sections 35 and 36, as follows: "SEC. 35. That the Secretary of War be, and he is hereby, authorized and directed to cause preliminary examinations and surveys to be made for the purpose of selecting four sites with a view to the establishment of permanent camp grounds for instruction of troops of the Regular Army and National Guard, with estimates of the cost of the sites and their equipment with all modern appliances, and for this purpose is authorized to detail such officers of the Army as may be necessary to carry on the preliminary work; and the sum of ten thousand dollars is hereby appropriated for the necessary expense of such work, to be disbursed under the direction of the Secretary of War: Provided, That the Secretary of War shall report to Congress the result of such examination and surveys, and no contract for said sites shall be made nor any obligation incurred until Congress shall approve such selections and appropriate the money therefor.

"SEC. 36. That when in his opinion the conditions in the Philippine Islands justify such action the President is authorized to enlist natives of those islands for service in the Army, to be organized as scouts, with such officers as he shall deem necessary for their proper control, or as troops or companies, as authorized by this Act, for the Regular Army. The President is further authorized, in his discretion, to form companies, organized as are companies of the Regular Army, in squadrons or battalions, with officers and noncommissioned officers corresponding to similar organizations in the cavalry and infantry arms. The total number of enlisted men in said native organizations shall not exceed twelve thousand, and the total enlisted force of the line of the Army, together with such native force, shall not exceed at any one time one hundred thousand. . . . When, in the opinion of the President, natives of the Philippine Islands shall, by their services and character, show fitness for command, the President is authorized to make provisional appointments to the grades of second and first lieutenants from such natives, who, when so appointed, shall have the pay and allowances to be fixed by the Secretary of War, not exceeding those of corresponding grades of the Regular Army."

Section 38 abolishes the so-called "Army Canteen," in compliance with strenuous demands from temperance organizations in the country, notwithstanding much testimony favorable to the canteen system from well-informed and conscientious witnesses. The language of the section is as follows: "The sale of or dealing in beer, wine, or any intoxicating liquors, by any person in any post exchange or canteen or army transport, or upon any premises used for military purposes by the United States, is hereby prohibited. The Secretary of War is hereby directed to carry the provisions of this section into full force and effect." Prompt obedience to this command of law was given by the War Department, which issued the required general order February 4th.

The following amendment, proposed by Senator Hoar for addition to the Act, was voted down: "Provided, That no further military force shall be used in the Philippine Islands, except such as may be necessary to keep order in places there now actually under the peaceable control of the United States and to protect persons or property to whom, in the judgment of the President, protection may be due from the United States, until the President shall have first proclaimed an amnesty for all political offenses committed against the United States in the Philippine Islands, and shall have, if in his power, agreed upon an armistice with persons now in hostility to the United States, and shall have invited such number, not less than 10, as he shall think desirable of the leaders or representatives of the persons now hostile to the United States there to come to the United States and state their wishes and the condition, character, and wishes of the people of the Philippine Islands to the

Executive and Congress, and shall have offered to secure to them safe conduct to come, abide, and return, and shall have provided at the public charge for the expenses of their transportation both ways and their stay in this country for a reasonable and sufficient time for such purpose."

A. D. 1901 (March).—Reinauguration of President McKinley for a second term in the executive office.—His inaugural address.—The reinauguration of President McKinley, for the second term of office to which he had been elected, was performed with the customary ceremonies, at the capitol, in Washington, on the 4th of March, 1901. His inaugural address upon the occasion is especially interesting, for the reason that it indicates the understanding with which the President received his re-election, and the interpretation which he has put upon it as an expression of the national will on questions of extraordinary moment. He spoke as follows:

"My Fellow Citizens: When we assembled here on March 4, 1897, there was great anxiety with regard to our currency and credit. None exists now. Then our treasury receipts were inadequate to meet the current obligations of the government. Now they are sufficient for all public needs, and we have a surplus instead of a deficit. Then I felt constrained to convene the Congress in extraordinary session to devise revenues to pay the ordinary expenses of the government. Now I have the satisfaction to announce that the Congress just closed has reduced taxation in the sum of $41,000,000. Then there was deep solicitude because of the long depression in our manufacturing, mining, agricultural and mercantile industries, and the consequent distress of our laboring population. Now every avenue of production is crowded with activity, labor is well employed and American products find good markets at home and abroad. Our diversified productions, however, are increasing in such unprecedented volume as to admonish us of the necessity of still further enlarging our foreign markets by broader commercial relations. For this purpose reciprocal trade arrangements with other nations should in liberal spirit be carefully cultivated and promoted.

"The national verdict of 1896 has for the most part been executed. Whatever remains unfulfilled is a continuing obligation resting with undiminished force upon the Executive and the Congress. But fortunate as our condition is, its permanence can only be assured by sound business methods and strict economy in national administration and legislation. We should not permit our great prosperity to lead us to reckless ventures in business or profligacy in public expenditures. While the Congress determines the objects and the sum of appropriations, the officials of the executive departments are responsible for honest and faithful disbursement, and it should be their constant care to avoid waste and extravagance. Honesty, capacity and industry are nowhere more indispensable than in public employment. These should be fundamental requisites to original appointment and the surest guarantees against removal.

"Four years ago we stood on the brink of war without the people knowing it and without any preparation or effort at preparation for the impending peril. I did all that in honor could be done to avert the war, but without avail. It became inevitable, and the Congress at its first regular session, without party division, provided money in anticipation of the crisis and in preparation to meet it. It came. The result was signally favorable to American arms and in the highest degree honorable to the government. It imposed upon us obligations from which we cannot escape, and from which it would be dishonorable to seek to escape. We are now at peace with the world, and it is my fervent prayer that if differences arise between us and other powers they may be settled by peaceful arbitration, and that hereafter we may be spared the horrors of war.

"Intrusted by the people for a second time with the office of President, I enter upon its administration appreciating the great responsibilities which attach to this renewed honor and commission, promising unreserved devotion on my part to their faithful discharge and reverently invoking for my guidance the direction and favor of Almighty God. I should shrink from the duties this day assumed if I did not feel that in their performance I should have the co-operation of the wise and patriotic men of all parties. It encourages me for the great task which I now undertake to believe that those who voluntarily committed to me the trust imposed upon the chief executive of the republic will give to me generous support in my duties to 'preserve, protect and defend the constitution of the United States,' and to 'care that the laws be faithfully executed.' The national purpose is indicated through a national election. It is the constitutional method of ascertaining the public will. When once it is registered it is a law to us all, and faithful observance should follow its decrees

"Strong hearts and helpful hands are needed, and fortunately we have them in every part of our beloved country. We are reunited. Sectionalism has disappeared. Division on public questions can no longer be traced by the war maps of 1861. These old differences less and less disturb the judgment. Existing problems demand the thought and quicken the conscience of the country, and the responsibility for their presence as well as for their righteous settlement rests upon us all, no more upon me than upon you. There are some national questions in the solution of which patriotism should exclude partisanship. Magnifying their difficulties will not take them off our hands nor facilitate their adjustment. Distrust of the capacity, integrity and high purpose of the American people will not be an inspiring theme for future political contests. Dark pictures and gloomy forebodings are worse than useless. These only becloud,

they do not help to point, the way of safety and honor. 'Hope maketh not ashamed.'

"The prophets of evil were not the builders of the republic, nor in its crises have they saved or served it. The faith of the fathers was a mighty force in its creation, and the faith of their descendants has wrought its progress and furnished its defenders. They are obstructionists who despair and who would destroy confidence in the ability of our people to solve wisely and for civilization the mighty problems resting upon them. The American people, intrenched in freedom at home, take their love for it with them wherever they go, and they reject as mistaken and unworthy the doctrine that we lose our own liberties by securing the enduring foundations of liberty to others. Our institutions will not deteriorate by extension, and our sense of justice will not abate under tropic suns in distant seas.

"As heretofore so hereafter will the nation demonstrate its fitness to administer any new estate which events devolve upon it, and in the fear of God will 'take occasion by the hand and make the bounds of freedom wider yet.' If there are those among us who would make our way more difficult we must not be disheartened, but the more earnestly dedicate ourselves to the task upon which we have rightly entered. The path of progress is seldom smooth. New things are often found hard to do. Our fathers found them so. We find them so. They are inconvenient. They cost us something. But are we not made better for the effort and sacrifice, and are not those we serve lifted up and blessed?

"We will be consoled, too, with the fact that opposition has confronted every onward movement of the republic from its opening hour until now, but without success. The republic has marched on and on, and its every step has exalted freedom and humanity. We are undergoing the same ordeal as did our predecessors nearly a century ago. We are following the course they blazed. They triumphed. Will their successors falter and plead organic impotency in the nation? Surely after one hundred and twenty-five years of achievement for mankind we will not now surrender our equality with other Powers on matters fundamental and essential to nationality. With no such purpose was the nation created. In no such spirit has it developed its full and independent sovereignty. We adhere to the principle of equality among ourselves, and by no act of ours will we assign to ourselves a subordinate rank in the family of nations.

"My fellow citizens, the public events of the last four years have gone into history. They are too near to justify recital. Some of them were unforeseen; many of them momentous and far reaching in their consequences to ourselves and our relations with the rest of the world. The part which the United States bore so honorably in the thrilling scenes in China, while new to American life, has been in harmony with its true spirit and best traditions, and in dealing with the results its policy will be that of moderation and fairness.

"We face at this moment a most important question—that of the future relations of the United States and Cuba. With our near neighbors we must remain close friends. The declaration of the purposes of this government in the resolution of April 20, 1898, must be made good. Ever since the evacuation of the island by the army of Spain the Executive with all practicable speed has been assisting its people in the successive steps necessary to the establishment of a free and independent government prepared to assume and perform the obligations of international law, which now rest upon the United States under the Treaty of Paris. The convention elected by the people to frame a constitution is approaching the completion of its labors. The transfer of American control to the new government is of such great importance, involving an obligation resulting from our intervention and the treaty of peace, that I am glad to be advised by the recent act of Congress of the policy which the legislative branch of the government deems essential to the best interests of Cuba and the United States. The principles which led to our intervention require that the fundamental law upon which the new government rests should be adapted to secure a government capable of performing the duties and discharging the functions of a separate nation, of observing its international obligations, of protecting life and property, insuring order, safety and liberty, and conforming to the established and historical policy of the United States in its relation to Cuba.

"The peace which we are pledged to leave to the Cuban people must carry with it the guarantees of permanence. We became sponsors for the pacification of the island, and we remain accountable to the Cubans no less than to our own country and people for the reconstruction of Cuba as a free commonwealth, on abiding foundations of right, justice, liberty and assured order. Our enfranchisement of the people will not be completed until free Cuba shall 'be a reality, not a name—a perfect entity, not a hasty experiment, bearing within itself the elements of failure.'

"While the treaty of peace with Spain was ratified on February 6, 1899, and ratifications were exchanged nearly two years ago, the Congress has indicated no form of government for the Philippine Islands. It has, however, provided an army to enable the Executive to suppress insurrection, restore peace, give security to the inhabitants and establish the authority of the United States throughout the archipelago. It has authorized the organization of native troops as auxiliary to the regular force. It has been advised from time to time of the acts of the military and naval officers in the islands, of my action in appointing civil commissions, of the instructions with which they were charged, of their duties and powers, of their recommendations and of their several acts under Executive commission, together with the very complete general information they have submitted.

"These reports fully set forth the conditions, past and present, in the islands, and the instructions clearly show the principles which will guide the Executive until the Congress shall, as it is required to do by the treaty, determine 'the civil rights and political status of the native inhabitants.' The Congress having added the sanction of its authority to the powers already possessed and exercised by the Executive under the constitution, thereby leaving with the Executive the responsibility for the government of the Philippines, I shall continue the efforts already begun until order shall be restored throughout the islands, and as fast as conditions permit will

establish local governments, in the formation of which the full co-operation of the people has been already invited, and when established will encourage the people to administer them.

"The settled purpose, long ago proclaimed, to afford the inhabitants of the islands self-government as fast as they were ready for it will be pursued with earnestness and fidelity. Already something has been accomplished in this direction. The government's representatives, civil and military, are doing faithful and noble work in their mission of emancipation, and merit the approval and support of their countrymen. The most liberal terms of amnesty have already been communicated to the insurgents, and the way is still open for those who have raised their arms against the government for honorable submission to its authority.

"Our countrymen should not be deceived. We are not waging war against the inhabitants of the Philippine Islands. A portion of them are making war against the United States. By far the greater part of the inhabitants recognize American sovereignty, and welcome it as a guarantee of order and security for life, property, liberty, freedom of conscience and the pursuit of happiness. To them full protection will be given. They shall not be abandoned. We will not leave the destiny of the loyal millions in the islands to the disloyal thousands who are in rebellion against the United States. Order under civil institutions will come as soon as those who now break the peace shall keep it. Force will not be needed or used when those who make war against us shall make it no more. May it end without further bloodshed, and there be ushered in the reign of peace, to be made permanent by a government of liberty under law."

A. D. 1901 (April).—Organization of the enlarged regular army.—Its strength, 76,000 men.—A Press despatch from Washington, April 24, announced that the Secretary of War had approved recommendations of Lieutenant-General Miles for the organization of the army, not raising it to the full strength of 100,000 men authorized by Congress, but providing for a force of 76,787 enlisted men, distributed as follows: "Line of the army, 74,504; ordnance department, 700; signal corps, 760; post quartermaster sergeants, 150; post commissary sergeants, 200; electrician sergeants, 100; Military Academy detachment and band, 298; Indian scouts, 75. The cavalry is to be organized into fifteen regiments, consisting of 12 troops of 85 enlisted men, which, with the bands, will make a cavalry force of 15,840 men. The infantry is to consist of 38,520 men, divided into 30 regiments of 12 companies each. The artillery corps will have a total of 18,862 men, of which the coast artillery will have 13,734, organized into 126 companies of 109 men each; and the field artillery, 4,800 men, organized into 30 batteries of 150 men each. The engineer battalions will consist of 12 companies amounting to 1,282 men. This plan makes no provision for the employment of Filipino natives, but this is explained by the fact that the 12,000 authorized for the native military force was made a distinctive feature of the Army bill by Congress and separated from the Regular Army."

A. D. 1901 (April).—Petition from the workingmen of Porto Rico. See (in this vol.) PORTO RICO: A. D. 1901 (APRIL).

A. D. 1901 (May).—Decision of the Supreme Court in the cases involving questions touching the status of the new territorial possessions of the nation.—The opinions of the Supreme Court in the cases before it known as "the insular cases," involving questions touching the relations of the government of the United States to the insular possessions lately acquired (see above: A. D. 1900–1901), were announced on the 27th of May, as these sheets of the present volume were about to go to press.

In the case of Elias S. A. De Lima et al. the opinion of the majority of the Court, delivered by Justice Brown, was against the claim of the government to duties on goods imported into the United States from Porto Rico after the ratification of the treaty of peace with Spain and before the passage of the Porto Rican act of April 12, 1900 (see, in this vol., PORTO RICO: A. D. 1899–1900; and 1900, APRIL). It was held in this decisive opinion that Porto Rico, at the time the duties in question were collected, was not a foreign country, but a territory of the United States. Said Justice Brown: "If an Act of Congress be necessary to convert a foreign country into domestic territory, the question at once suggests itself, What is the character of the legislation demanded for this purpose? Will an act appropriating money for its purchase be sufficient? Apparently not. Will an act appropriating the duties collected upon imports to and from such country for the benefit of its government be sufficient? Apparently not. Will acts making appropriations for its postal service, for the establishment of lighthouses, for the maintenance of quarantine stations, for erecting public buildings, have that effect? Will an act establishing a complete local government, but with the reservation of a right to collect duties upon commerce, be adequate for that purpose? None of these, nor all together, will be sufficient, if the contention of the government be sound, since acts embracing all these provisions have been passed in connection with Porto Rico, and it is insisted that it is still a foreign country within the meaning of the tariff laws. We are unable to acquiesce in this assumption that a territory may be at the same time both foreign and domestic. We are, therefore, of the opinion that at the time these duties were levied Porto Rico was not a foreign country within the meaning of the tariff laws, but a territory of the United States; that the duties were illegally exacted, and that the plaintiffs are entitled to recover them back."

But in the case of Samuel B. Downes et al. a different set of circumstances was dealt with, since the duties in question were on goods imported from Porto Rico after the passage of the Act of April 12 (called "the Foraker Act").

On the question thus presented the majority of the Court sustained the contention of the government, saying, in an opinion delivered by Justice Brown: "We are of opinion that the island of Porto Rico is a territory appurtenant and belonging to the United States, but not a part of the United States within the revenue clause of the Constitution; that the Foraker act is constitutional so far as it imposes duties upon imports from such island and that the plaintiff cannot recover the duties exacted in this case." The following general conclusions were held by Justice Brown to be established:

"First—That the District of Columbia and the Territories are not States, within the judicial clause of the Constitution giving jurisdiction in cases between citizens of different States.

"Second—That Territories are not States, within the meaning of revised statutes, section 709, permitting writs of error from this court in cases where the validity of a State's statute is drawn in question.

"Third—That the District of Columbia and the Territories are States as that word is used in treaties with foreign powers, with respect to the ownership, disposition and inheritance of property.

"Fourth—That the Territories are not within the clause of the Constitution providing for the creation of a Supreme Court and such inferior courts as Congress may see fit to establish.

"Fifth—That the Constitution does not apply to foreign countries or trials therein conducted, and that Congress may lawfully provide for such trials before consular tribunals, without the intervention of a grand or petit jury.

"Sixth—That where the Constitution has been once formally extended by Congress to Territories, neither Congress nor the Territorial Legislature can enact laws inconsistent therewith."

Five of the nine justices of the Court concurred in the decree announced by Justice Brown; but three of them, viz., Justices White, Shiras and McKenna, placed their concurrence on different and quite opposed grounds, in an opinion prepared by Justice White. In their view of the case before the court, "the sole and only issue is, had Porto Rico, at the time of the passage of the Act in question, been incorporated into and become an integral part of the United States?" and their conclusion is reported to have been, that "the question when Porto Rico was to be incorporated was a political question, to be determined by the American people, speaking through Congress, and was not for the courts to determine."

The minority of the Court, consisting of Chief Justice Fuller, Justices Harlan, Brewer and Peckham dissented from the decree rendered by the majority, and from the varying grounds on which the two sections of that majority had rested it. As summarized in press despatches of the day, their opinion, delivered by the Chief Justice, "absolutely rejected the contention that the rule of uniformity [that is, the constitutional provision that 'all duties, imposts and excises shall be uniform throughout the United States'] was not applicable to Porto Rico because it had not been incorporated into and become an integral part of the United States; the word incorporation had no occult meaning, and whatever its situation before, the Foraker act made Porto Rico an organized Territory of the United States." "The concurring opinion of the majority," said the Chief Justice, "recognized that Congress, in dealing with the people of new territories or possessions, is bound to respect the fundamental guarantees of life, liberty and property, but assumes that Congress is not bound in those territories or possessions to follow the rules of taxation prescribed by the Constitution. And yet the power to tax involves the power to destroy and the levy of duty touches all our people in all places under the jurisdiction of the Government. The logical result is that Congress may prohibit commerce altogether between the States and Territories, and may prescribe one rule of taxation in one Territory, and a different rule in another. That theory assumes that the Constitution created a government empowered to acquire countries throughout the world, to be governed by different rules than those obtaining in the original States and Territories, and substitutes for the present system of republican government, a system of domination over distant provinces in the exercise of unrestricted power. In our judgment, so much of the Porto Rican act as authorized the imposition of these duties is invalid and plaintiffs were entitled to recover."

Justice Harlan announced his concurrence with the dissenting opinion delivered by the Chief Justice. He regarded the Foraker act as unconstitutional in its revenue provisions, and believed that Porto Rico, after the ratification of the treaty with Spain, became a part of the United States. In conclusion, Justice Harlan said: "The addition of Porto Rico to the territory of the United States has been recognized by direct action upon the part of Congress. It has legislated in recognition of the treaty with Spain. If Porto Rico did not by such action become a part of the United States it did become such, at least, when Congress passed the Foraker act. I can not believe that Congress may impose any duty, impost or excise with respect to that territory and its people which is not consistent with the constitutional requirement that all duties, imposts and excises shall be uniform throughout the United States."

No decision was rendered in the case of the Fourteen Diamond Rings, which involved questions relative to the status of the Philippine Islands in their relations to the government of the United States.

URUGUAY: A. D. 1896-1899.—Revolutionary movement.—Assassination of President Borda.—Blancos and Colorados.—Restoration of tranquil government by the Vice President, Cuestas.—In November, 1896, a movement for the overthrow of President Borda was begun, with strong assistance from the neighboring Brazilian State of Rio Grande do Sul. Months of civil war followed, with varying fortunes, but the summer of 1897 found the President parleying with the insurgents, endeavoring to make terms. His original opponents had been the party called that of the Blancos, or Whites; the Colorados, or Reds, had supported him; but he seemed to be making enemies among them. By an assassin of his own party he was shot, on the 25th of August, as he came from a service in the cathedral at Montevideo which commemorated the anniversary of Uruguayan independence. Señor Juan Luis Cuestas, the President of the Senate and ex-officio Vice President of the Republic, assumed the administration of the government, made peace with the insurgents, and prepared to deal with a faction in the Chambers which is said to have made good government impossible. "The Representatives had made themselves hated by violence, corruption, and attacks on property. Señor Cuestas accordingly removed all officials devoted to the Chambers, called out a thousand National Guards, and being thus master of the situation, on February 10th dissolved the Chambers and declared himself provisional President. He then appointed a 'Council' of eighty prominent citizens of all parties, invested them with the legislative power, and directed them to elect a new President, and to settle the method and time of the next elections. . . . According to the 'Times'' correspondent, the citizens of Monte Video of all parties approved his action, not a stroke was struck for the Chambers, and public securities rose at once by from eight to fourteen points. Señor Cuestas, in fact, is trusted and competent." —*The Spectator* (*London*), *March* 26, 1898.—In due time, the Provisional President had to deal with a military revolt, which he effectually suppressed. Then, on the 1st of March, 1899, he was constitutionally elected President, after resigning his dictatorial powers for a fortnight, in order that the election might be freely held.

UTAH: A. D. 1895-1896.—Prohibition of polygamous marriages.—Proclamation of admission to the Union.—On the 4th of January, 1896, a proclamation by the President of the United States, after reciting the provisions of the Act of Congress approved July 16, 1894, and the action taken by a convention of the people of Utah, held in accordance with the said act, in March, 1895, which convention "did, by ordinance irrevocable without the consent of the United States and the people of said State, as required by said act, provide that perfect toleration of religious sentiment shall be secured and that no inhabitant of said State shall ever be molested in person or property on account of his or her mode of religious worship, but that polygamous or plural marriages are forever prohibited," thereupon declared and proclaimed the creation of the State of Utah and its admission into the Union to be accomplished. The constitution of the new State has some radical features, providing for an eight-hours labor-day, and giving to women equal rights with men in suffrage and in eligibility to public office.

A. D. 1895 (July).—The question of the boundary of British Guiana taken up by the government of the United States.—Despatch of Secretary Olney to Ambassador Bayard.—For a number of years the government of the United States had been exerting itself to bring about the settlement of a long standing dispute between Great Britain and Venezuela concerning the line of boundary between the territory of Venezuela and that of British Guiana. In 1895 the effort became more resolute, as appeared in a lengthy despatch addressed, on the 20th of July, by the American Secretary of State, Mr. Olney, to the American Ambassador in London, Mr. Bayard. In this despatch Mr. Olney reviewed the long controversy which had been in progress, and recalled the communications on the subject which had passed between the governments of the United States and Great Britain since 1886. He then summarised "the important features of the existing situation" as represented in his recital, by the following statement:

"1. The title to territory of indefinite but confessedly very large extent is in dispute between Great Britain on the one hand, and the South American Republic of Venezuela on the other. 2. The disparity in the strength of the claimants is such that Venezuela can hope to establish her claim only through peaceful methods—through an agreement with her adversary either upon the subject itself or upon an arbitration. 3. The controversy with varying claims on the part of Great Britain has existed for more than half-a-century, during which period many earnest and persistent efforts of Venezuela to establish a boundary by agreement have proved unsuccessful. 4. The futility of the endeavour to obtain a conventional line being recognized, Venezuela, for a quarter of a century, has asked and striven for arbitration. 5. Great Britain, however, has always and continuously refused, and still refuses, to arbitrate except upon the condition of a renunciation of a large part of the Venezuelan claim, and of a concession to herself of a large share of the territory in controversy. 6. By the frequent interposition of its good offices at the instance of Venezuela, by constantly urging and promoting the restoration of diplomatic relations between the two countries, by pressing for arbitration of the disputed boundary,

by offering to act as Arbitrator, by expressing its grave concern whenever new alleged instances of British aggression upon Venezuelan territory have been brought to its notice, the Government of the United States has made it clear to Great Britain and to the world that the controversy is one in which both its honour and its interests are involved, and the continuance of which it cannot regard with indifference."

Mr. Olney proceeds next to consider the rights, the interests and the duty of the United States in the matter, and to what extent, if any, it "may and should intervene in a controversy between and primarily concerning only Great Britain and Venezuela," and his conclusions on these points are founded on the doctrine set forth by President Monroe, of resistance to European intervention in American affairs. Quoting President Monroe's celebrated Message on the subject, in 1823, Mr. Olney remarks:

"The Message just quoted declared that the American continents were fully occupied, and were not the subjects for future colonization by European Powers. To this spirit and this purpose, also, are to be attributed the passages of the same Message which treat any infringement of the rule against interference in American affairs on the part of the Powers of Europe as an act of unfriendliness to the United States. It was realized that it was futile to lay down such a rule unless its observance could be enforced. It was manifest that the United States was the only Power in this hemisphere capable of enforcing it. It was therefore courageously declared, not merely that Europe ought not to interfere in American affairs, but that any European Power doing so would be regarded as antagonizing the interests and inviting the opposition of the United States.

"That America is in no part open to colonization, though the proposition was not universally admitted at the time of its first enunciation, has long been universally conceded. We are now concerned, therefore, only with that other practical application of the Monroe doctrine the disregard of which by an European Power is to be deemed an act of unfriendliness towards the United States. The precise scope and limitations of this rule cannot be too clearly apprehended. It does not establish any general Protectorate by the United States over other American States. It does not relieve any American State from its obligations as fixed by international law, nor prevent any European Power directly interested from enforcing such obligations or from inflicting merited punishment for the breach of them. It does not contemplate any interference in the internal affairs of any American State, or in the relations between it and other American States. It does not justify any attempt on our part to change the established form of Government of any American State, or to prevent the people of such State from altering that form according to their own will and pleasure. The rule in question has but a single purpose and object. It is that no European Power or combination of European Powers shall forcibly deprive an American State of the right and power of self-government, and of shaping for itself its own political fortunes and destinies. That the rule thus defined has been the accepted public law of this country ever since its promulgation cannot fairly be denied. . . .

"It is manifest that, if a rule has been openly and uniformly declared and acted upon by the Executive Branch of the Government for more than seventy years without express repudiation by Congress, it must be conclusively presumed to have its sanction. Yet it is certainly no more than the exact truth to say that every Administration since President Monroe's has had occasion, and sometimes more occasions than one, to examine and consider the Monroe doctrine, and has in each instance given it emphatic indorsement. . . . A doctrine of American public law thus long and firmly established and supported could not easily be ignored in a proper case for its application, even were the considerations upon which it is founded obscure or questionable. No such objection can be made, however, to the Monroe doctrine understood and defined in the manner already stated. It rests, on the contrary, upon facts and principles that are both intelligible and incontrovertible. That distance and 3,000 miles of intervening ocean make any permanent political union between an European and an American State unnatural and inexpedient will hardly be denied. But physical and geographical considerations are the least of the objections to such a union. Europe, as Washington observed, has a set of primary interests which are peculiar to herself. America is not interested in them, and ought not to be vexed or complicated with them. . . .

"If, . . . for the reasons stated, the forcible intrusion of European Powers into American politics is to be deprecated—if, as it is to be deprecated, it should be resisted and prevented—such resistance and prevention must come from the United States. They would come from it, of course, were it made the point of attack. But, if they come at all, they must also come from it when any other American State is attacked, since only the United States has the strength adequate to the exigency. Is it true, then, that the safety and welfare of the United States are so concerned with the maintenance of the independence of every American State as against any European Power as to justify and require the interposition of the United States whenever that independence is endangered? The question can be candidly answered in but one way. The States of America, South as well as North, by geographical proximity, by natural sympathy, by similarity of Governmental Constitutions, are friends and allies, commercially and politically, of the United States. To allow the subjugation of any of them by an European Power is, of course, to completely reverse that situation, and signifies the loss of all the advantages incident to their natural relations to us. But that is not all. The people of the United States have a vital interest in the cause of popular self-government. . . . To-day the United States is practically Sovereign on this continent, and its fiat is law upon the subjects to which it confines its interposition. Why? It is not because of the pure friendship or goodwill felt for it. It is not simply by reason of its high character as a civilised State, nor because wisdom and justice and equity are the invariable characteristics of the dealings of the United States. It is because, in addition to all other grounds, its infinite resources, combined with its isolated position, render it master of the situation, and practically invulnerable as against any or all other Powers. All the advantages of this supe-

riority are at once imperilled if the principle be admitted that European Powers may convert American States into Colonies or provinces of their own. The principle would be eagerly availed of, and every Power doing so would immediately acquire a base of military operations against us. What one Power was permitted to do could not be denied to another, and it is not inconceivable that the struggle now going on for the acquisition of Africa might be transferred to South America. If it were, the weaker countries would unquestionably be soon absorbed, while the ultimate result might be the partition of all South America between the various European Powers. . . .

"The people of the United States have learned in the school of experience to what extent the relations of States to each other depend not upon sentiment nor principle, but upon selfish interest. They will not soon forget that, in their hour of distress, all their anxieties and burdens were aggravated by the possibility of demonstrations against their national life on the part of Powers with whom they had long maintained the most harmonious relations. They have yet in mind that France seized upon the apparent opportunity of our Civil War to set up a Monarchy in the adjoining State of Mexico. They realize that, had France and Great Britain held important South American possessions to work from and to benefit, the temptation to destroy the predominance of the Great Republic in this hemisphere by furthering its dismemberment might have been irresistible. From that grave peril they have been saved in the past, and may be saved again in the future, through the operation of the sure but silent force of the doctrine proclaimed by President Monroe. . . .

"There is, then, a doctrine of American public law, well founded in principle and abundantly sanctioned by precedent, which entitles and requires the United States to treat as an injury to itself the forcible assumption by an European Power of political control over an American State. The application of the doctrine to the boundary dispute between Great Britain and Venezuela remains to be made, and presents no real difficulty. Though the dispute relates to a boundary-line, yet, as it is between States, it necessarily imports political control to be lost by one party and gained by the other. The political control at stake, too, is of no mean importance, but concerns a domain of great extent—the British claim, it will be remembered, apparently expanding in two years some 33,000 square miles—and, if it also directly involves the command of the mouth of the Orinoco, is of immense consequence in connection with the whole river navigation of the interior of South America. It has been intimated, indeed, that in respect of these South American possessions, Great Britain is herself an American State like any other, so that a controversy between her and Venezuela is to be settled between themselves as if it were between Venezuela and Brazil, or between Venezuela and Colombia, and does not call for or justify United States' intervention. If this view be tenable at all, the logical sequence is plain. Great Britain as a South American State is to be entirely differentiated from Great Britain generally; and if the boundary question cannot be settled otherwise than by force, British Guiana with her own independent resources, and not those of the British Empire, should be left to settle the matter with Venezuela—an arrangement which very possibly Venezuela might not object to. But the proposition that an European Power with an American dependency is for the purposes of the Monroe doctrine to be classed not as an European but as an American State will not admit of serious discussion. If it were to be adopted, the Monroe doctrine would be too valueless to be worth asserting. . . .

"The declaration of the Monroe Message—that existing Colonies or dependencies of an European Power would not be interfered with by the United States—means Colonies or dependencies then existing with their limits as then existing. So it has been invariably construed, and so it must continue to be construed, unless it is to be deprived of all vital force. Great Britain cannot be deemed a South American State within the purview of the Monroe doctrine, nor, if she is appropriating Venezuelan territory, is it material that she does so by advancing the frontier of an old Colony instead of by the planting of a new Colony. The difference is matter of form, and not of substance, and the doctrine if pertinent in the one case must be in the other also. It is not admitted, however, and therefore cannot be assumed, that Great Britain is in fact usurping dominion over Venezuelan territory. While Venezuela charges such usurpation Great Britain denies it, and the United States, until the merits are authoritatively ascertained, can take sides with neither. But while this is so—while the United States may not, under existing circumstances at least, take upon itself to say which of the two parties is right and which wrong—it is certainly within its right to demand that the truth shall be ascertained. . . .

"It being clear, therefore, that the United States may legitimately insist upon the merits of the boundary question being determined, it is equally clear that there is but one feasible mode of determining them, viz., peaceful arbitration. The impracticability of any conventional adjustment has been often and thoroughly demonstrated. Even more impossible of consideration is an appeal to arms—a mode of settling national pretensions unhappily not yet wholly obsolete. If, however, it were not condemnable as a relic of barbarism and a crime in itself, so one-sided a contest could not be invited nor even accepted by Great Britain without distinct disparagement to her character as a civilized State. Great Britain, however, assumes no such attitude. On the contrary, she both admits that there is a controversy, and that arbitration should be resorted to for its adjustment. But, while up to that point her attitude leaves nothing to be desired, its practical effect is completely nullified by her insistence that the submission shall cover but a part of the controversy—that, as a condition of arbitrating her right to a part of the disputed territory, the remainder shall be turned over to her. If it were possible to point to a boundary which both parties had ever agreed or assumed to be such either expressly or tacitly, the demand that territory conceded by such line to British Guiana should be held not to be in dispute might rest upon a reasonable basis. But there is no such line. The territory which Great Britain insists shall be ceded to her as a condition of arbitrating her claim to other territory has never been admitted to belong to her. It

has always and consistently been claimed by Venezuela. Upon what principle—except her feebleness as a nation—is she to be denied the right of having the claim heard and passed upon by an impartial Tribunal? No reason or shadow of reason appears in all the voluminous literature of the subject. . . .

"In these circumstances, the duty of the President appears to him unmistakable and imperative. Great Britain's assertion of title to the disputed territory, combined with her refusal to have that title investigated, being a substantial appropriation of the territory to her own use, not to protest and give warning that the transaction will be regarded as injurious to the interests of the people of the United States, as well as oppressive in itself, would be to ignore an established policy with which the honour and welfare of this country are closely identified. While the measures necessary or proper for the vindication of that policy are to be determined by another branch of the Government, it is clearly for the Executive to leave nothing undone which may tend to render such determination unnecessary. You are instructed, therefore, to present the foregoing views to Lord Salisbury by reading to him this communication (leaving with him a copy should he so desire), and to reinforce them by such pertinent considerations as will doubtless occur to you. They call for a definite decision upon the point whether Great Britain will consent or will decline to submit the Venezuelan boundary question in its entirety to impartial arbitration. It is the earnest hope of the President that the conclusion will be on the side of arbitration, and that Great Britain will add one more to the conspicuous precedents she has already furnished in favour of that wise and just mode of adjusting international disputes. If he is to be disappointed in that hope, however—a result not to be anticipated, and in his judgment calculated to greatly embarrass the future relations between this country and Great Britain—it is his wish to be made acquainted with the fact at such early date as will enable him to lay the whole subject before Congress in his next Annual Message."—*Great Britain, Parliamentary Publications* (*Papers by Command: United States No.* 1, 1896, *pp.* 13–21).

A. D. 1895 (November).—The British Guiana boundary question.—Replies of Lord Salisbury to Secretary Olney.—The reply of Lord Salisbury was not written until the 26th of November. It was then given in two despatches, bearing the same date,—one devoted entirely to a discussion of "the Monroe doctrine" and of the argument founded on it by Mr. Olney; the other to a rehearsal of the Venezuela controversy from the standpoint of the British government. In the communication first mentioned he wrote:

"The contentions set forth by Mr. Olney in this part of his despatch are represented by him as being an application of the political maxims which are well known in American discussion under the name of the Monroe doctrine. As far as I am aware, this doctrine has never been before advanced on behalf of the United States in any written communication addressed to the Government of another nation; but it has been generally adopted and assumed as true by many eminent writers and politicians in the United States. It is said to have largely influenced the Government of that country in the conduct of its foreign affairs; though Mr. Clayton, who was Secretary of State under President Taylor, expressly stated that that Administration had in no way adopted it. But during the period that has elapsed since the Message of President Monroe was delivered in 1823, the doctrine has undergone a very notable development, and the aspect which it now presents in the hands of Mr. Olney differs widely from its character when it first issued from the pen of its author. The two propositions which in effect President Monroe laid down were, first, that America was no longer to be looked upon as a field for European colonization; and, secondly, that Europe must not attempt to extend its political system to America, or to control the political condition of any of the American communities who had recently declared their independence. The dangers against which President Monroe thought it right to guard were not as imaginary as they would seem at the present day. . . . The system of which he speaks, and of which he so resolutely deprecates the application to the American Continent, was the system then adopted by certain powerful States upon the Continent of Europe of combining to prevent by force of arms the adoption in other countries of political institutions which they disliked, and to uphold by external pressure those which they approved. . . . The dangers which were apprehended by President Monroe have no relation to the state of things in which we live at the present day. . . . It is intelligible that Mr. Olney should invoke, in defence of the views on which he is now insisting, an authority which enjoys so high a popularity with his own fellow-countrymen. But the circumstances with which President Monroe was dealing, and those to which the present American Government is addressing itself, have very few features in common. Great Britain is imposing no 'system' upon Venezuela, and is not concerning herself in any way with the nature of the political institutions under which the Venezuelans may prefer to live. But the British Empire and the Republic of Venezuela are neighbours, and they have differed for some time past, and continue to differ, as to the line by which their dominions are separated. It is a controversy with which the United States have no apparent practical concern. It is difficult, indeed, to see how it can materially affect any State or community outside those primarily interested, except perhaps other parts of Her Majesty's dominions, such as Trinidad. The disputed frontier of Venezuela has nothing to do with any of the questions dealt with by President Monroe. It is not a question of the colonization by a European Power of any portion of America. It is not a question of the imposition upon the communities of South America of any system of government devised in Europe. It is simply the determination of the frontier of a British possession which belonged to the Throne of England long before the Republic of Venezuela came into existence.

"But even if the interests of Venezuela were so far linked to those of the United States as to give to the latter a 'locus standi' in this controversy, their Government apparently have not formed, and certainly do not express, any opinion upon the actual merits of the dispute. The Government of the United States do not say that

VENEZUELA, 1895.

Great Britain, or that Venezuela, is in the right in the matters that are in issue. But they lay down that the doctrine of President Monroe, when he opposed the imposition of European systems, or the renewal of European colonization, confers upon them the right of demanding that when a European Power has a frontier difference with a South American community, the European Power shall consent to refer that controversy to arbitration; and Mr. Olney states that unless Her Majesty's Government accede to this demand, it will 'greatly embarrass the future relations between Great Britain and the United States.' Whatever may be the authority of the doctrine laid down by President Monroe, there is nothing in his language to show that he ever thought of claiming this novel prerogative for the United States. . . . I will not now enter into a discussion of the merits of this method of terminating international differences. It has proved itself valuable in many cases; but it is not free from defects, which often operate as a serious drawback on its value. It is not always easy to find an Arbitrator who is competent, and who, at the same time, is wholly free from bias; and the task of insuring compliance with the Award when it is made is not exempt from difficulty. . . .

"In the remarks which I have made, I have argued on the theory that the Monroe doctrine in itself is sound. I must not, however, be understood as expressing any acceptance of it on the part of Her Majesty's Government. It must always be mentioned with respect, on account of the distinguished statesman to whom it is due, and the great nation who have generally adopted it. But international law is founded on the general consent of nations; and no statesman, however eminent, and no nation, however powerful, are competent to insert into the code of international law a novel principle which was never recognized before, and which has not since been accepted by the Government of any other country. . . . Though the language of President Monroe is directed to the attainment of objects which most Englishmen would agree to be salutary, it is impossible to admit that they have been inscribed by any adequate authority in the code of international law; and the danger which such admission would involve is sufficiently exhibited both by the strange development which the doctrine has received at Mr. Olney's hands, and the arguments by which it is supported, in the despatch under reply. In defence of it he says: 'That distance and 3,000 miles of intervening ocean make any permanent political union between a European and an American State unnatural and inexpedient will hardly be denied. But physical and geographical considerations are the least of the objections to such a union. Europe has a set of primary interests which are peculiar to herself; America is not interested in them, and ought not to be vexed or complicated with them.' . . . The necessary meaning of these words is that the union between Great Britain and Canada; between Great Britain and Jamaica and Trinidad; between Great Britain and British Honduras or British Guiana are 'inexpedient and unnatural.' President Monroe disclaims any such inference from his doctrine; but in this, as in other respects, Mr. Olney develops it. He lays down that the inexpedient and unnatural character of the union between a European and American State is so obvious that it 'will hardly be denied.' Her Majesty's Government are prepared emphatically to deny it on behalf of both the British and American people who are subject to her Crown."

In his second despatch, Lord Salisbury drew the conclusions of his government from the facts as seen on the English side, and announced its decision, in the following terms: "It will be seen . . . that the Government of Great Britain have from the first held the same view as to the extent of territory which they are entitled to claim as a matter of right. It comprised the coast-line up to the River Amacura, and the whole basin of the Essequibo River and its tributaries. A portion of that claim, however, they have always been willing to waive altogether; in regard to another portion, they have been and continue to be perfectly ready to submit the question of their title to arbitration. As regards the rest, that which lies within the so-called Schomburgk line, they do not consider that the rights of Great Britain are open to question. Even within that line they have, on various occasions, offered to Venezuela considerable concessions as a matter of friendship and conciliation, and for the purpose of securing an amicable settlement of the dispute. If as time has gone on the concessions thus offered diminished in extent, and have now been withdrawn, this has been the necessary consequence of the gradual spread over the country of British settlements, which Her Majesty's Government cannot in justice to the inhabitants offer to surrender to foreign rule, and the justice of such withdrawal is amply borne out by the researches in the national archives of Holland and Spain, which have furnished further and more convincing evidence in support of the British claims.

"Her Majesty's Government are sincerely desirous of being in friendly relations with Venezuela, and certainly have no design to seize territory that properly belongs to her, or forcibly to extend sovereignty over any portion of her population. They have, on the contrary, repeatedly expressed their readiness to submit to arbitration the conflicting claims of Great Britain and Venezuela to large tracts of territory which from their auriferous nature are known to be of almost untold value. But they cannot consent to entertain, or to submit to the arbitration of another Power or of foreign jurists, however eminent, claims based on the extravagant pretensions of Spanish officials in the last century, and involving the transfer of large numbers of British subjects, who have for many years enjoyed the settled rule of a British Colony, to a nation of different race and language, whose political system is subject to frequent disturbance, and whose institutions as yet too often afford very inadequate protection to life and property. No issue of this description has ever been involved in the questions which Great Britain and the United States have consented to submit to arbitration, and Her Majesty's Government are convinced that in similar circumstances the Government of the United States would be equally firm in declining to entertain proposals of such a nature."—*Great Britain, Papers by Command: United States No.* 1, 1896, *pp.* 23–31.

A. D. 1895 (December).—Message of President Cleveland to the United States Con-

gress on the Guiana boundary dispute.—As the replies given by Lord Salisbury showed no disposition on the part of the British government to submit its dispute with Venezuela to arbitration, President Cleveland took the subject in hand, and addressed to Congress, on the 17th of December, 1895, a special Message which startled the world by the peremptoriness of its tone. "In my annual message addressed to the Congress on the 3d instant," he said, "I called attention to the pending boundary controversy between Great Britain and the Republic of Venezuela and recited the substance of a representation made by this Government to Her Britannic Majesty's Government suggesting reasons why such dispute should be submitted to arbitration for settlement and inquiring whether it would be so submitted. The answer of the British Government, which was then awaited, has since been received, and, together with the dispatch to which it is a reply, is hereto appended. Such reply is embodied in two communications addressed by the British prime minister to Sir Julian Pauncefote, the British ambassador at this capital. It will be seen that one of these communications is devoted exclusively to observations upon the Monroe doctrine, and claims that in the present instance a new and strange extension and development of this doctrine is insisted on by the United States; that the reasons justifying an appeal to the doctrine enunciated by President Monroe are generally inapplicable 'to the state of things in which we live at the present day,' and especially inapplicable to a controversy involving the boundary line between Great Britain and Venezuela.

"Without attempting extended argument in reply to these positions, it may not be amiss to suggest that the doctrine upon which we stand is strong and sound, because its enforcement is important to our peace and safety as a nation and is essential to the integrity of our free institutions and the tranquil maintenance of our distinctive form of government. It was intended to apply to every stage of our national life and can not become obsolete while our Republic endures. If the balance of power is justly a cause for jealous anxiety among the Governments of the Old World and a subject for our absolute non-interference, none the less is an observance of the Monroe doctrine of vital concern to our people and their Government. Assuming, therefore, that we may properly insist upon this doctrine without regard to 'the state of things in which we live' or any changed conditions here or elsewhere, it is not apparent why its application may not be invoked in the present controversy. If a European power by an extension of its boundaries takes possession of the territory of one of our neighboring Republics against its will and in derogation of its rights, it is difficult to see why to that extent such European power does not thereby attempt to extend its system of government to that portion of this continent which is thus taken. This is the precise action which President Monroe declared to be 'dangerous to our peace and safety,' and it can make no difference whether the European system is extended by an advance of frontier or otherwise.

"It is also suggested in the British reply that we should not seek to apply the Monroe doctrine to the pending dispute because it does not embody any principle of international law which 'is founded on the general consent of nations,' and that 'no statesman, however eminent, and no nation, however powerful, are competent to insert into the code of international law a novel principle which was never recognized before and which has not since been accepted by the government of any other country.' Practically the principle for which we contend has peculiar, if not exclusive, relation to the United States. It may not have been admitted in so many words to the code of international law, but since in international councils every nation is entitled to the rights belonging to it, if the enforcement of the Monroe doctrine is something we may justly claim, it has its place in the code of international law as certainly and as securely as if it were specifically mentioned; and when the United States is a suitor before the high tribunal that administers international law the question to be determined is whether or not we present claims which the justice of that code of law can find to be right and valid.

"The Monroe doctrine finds its recognition in those principles of international law which are based upon the theory that every nation shall have its rights protected and its just claims enforced. Of course this government is entirely confident that under the sanction of this doctrine we have clear rights and undoubted claims. Nor is this ignored in the British reply. The prime minister, while not admitting that the Monroe doctrine is applicable to present conditions, states: 'In declaring that the United States would resist any such enterprise if it was contemplated, President Monroe adopted a policy which received the entire sympathy of the English Government of that date.'

"He further declares: 'Though the language of President Monroe is directed to the attainment of objects which most Englishmen would agree to be salutary, it is impossible to admit that they have been inscribed by any adequate authority in the code of international law.'

"Again he says: 'They [Her Majesty's Government] fully concur with the view which President Monroe apparently entertained, that any disturbance of the existing territorial distribution in that hemisphere by any fresh acquisitions on the part of any European State would be a highly inexpedient change.'

"In the belief that the doctrine for which we contend was clear and definite, that it was founded upon substantial considerations, and involved our safety and welfare, that it was fully applicable to our present conditions and to the state of the world's progress, and that it was directly related to the pending controversy, and without any conviction as to the final merits of the dispute, but anxious to learn in a satisfactory and conclusive manner whether Great Britain sought under a claim of boundary to extend her possessions on this continent without right, or whether she merely sought possession of territory fairly included within her lines of ownership, this Government proposed to the Government of Great Britain a resort to arbitration as the proper means of settling the question, to the end that a vexatious boundary dispute between the two contestants might be determined and our exact standing and relation in respect to the controversy might be made clear. It will be seen from the correspondence herewith submitted

that this proposition has been declined by the British Government upon grounds which in the circumstances seem to me to be far from satisfactory. It is deeply disappointing that such an appeal, actuated by the most friendly feelings toward both nations directly concerned, addressed to the sense of justice and to the magnanimity of one of the great powers of the world, and touching its relations to one comparatively weak and small, should have produced no better results.

"The course to be pursued by this Government in view of the present condition does not appear to admit of serious doubt. Having labored faithfully for many years to induce Great Britain to submit this dispute to impartial arbitration, and having been now finally apprised of her refusal to do so, nothing remains but to accept the situation, to recognize its plain requirements, and deal with it acccordingly. Great Britain's present proposition has never thus far been regarded as admissible by Venezuela, though any adjustment of the boundary which that country may deem for her advantage and may enter into of her own free will can not of course be objected to by the United States. Assuming, however, that the attitude of Venezuela will remain unchanged, the dispute has reached such a stage as to make it now incumbent upon the United States to take measures to determine with sufficient certainty for its justification what is the true divisional line between the Republic of Venezuela and British Guiana. The inquiry to that end should of course be conducted carefully and judicially, and due weight should be given to all available evidence, records, and facts in support of the claims of both parties. In order that such an examination should be prosecuted in a thorough and satisfactory manner, I suggest that the Congress make an adequate appropriation for the expenses of a commission, to be appointed by the Executive, who shall make the necessary investigation and report upon the matter with the least possible delay. When such report is made and accepted it will, in my opinion, be the duty of the United States to resist by every means in its power, as a willful aggression upon its rights and interests, the appropriation by Great Britain of any lands or the exercise of governmental jurisdiction over any territory which after investigation we have determined of right belongs to Venezuela.

"In making these recommendations I am fully alive to the responsibility incurred and keenly realize all the consequences that may follow. I am, nevertheless, firm in my conviction that while it is a grievous thing to contemplate the two great English-speaking peoples of the world as being otherwise than friendly competitors in the onward march of civilization and strenuous and worthy rivals in all the arts of peace, there is no calamity which a great nation can invite which equals that which follows a supine submission to wrong and injustice and the consequent loss of national self-respect and honor, beneath which are shielded and defended a people's safety and greatness."—*United States, Message and Documents* (*Abridgment*, 1895–6).

The recommendations of the President were acted upon with remarkable unanimity and promptitude in Congress, a bill authorizing the appointment of the proposed commission, and appropriating $100,000 for the necessary expenditure, being passed by the House on the day following the Message (December 17), and by the Senate on the 20th. See (in this vol.) UNITED STATES OF AM.: A. D. 1895 (DECEMBER).

A. D. 1895-1896 (December—January).—Feeling in England and the United States over the boundary dispute. See (in this vol.) UNITED STATES OF AM.: A. D. 1895–1896 (DECEMBER—JANUARY).

A. D. 1896-1899.—Appointment of the United States Commission to investigate the boundary question.—Reopening of negotiations between the United States and Great Britain.—The solution of the main difficulty found.—Arbitration and its result.—The Commission authorized by the Congress of the United States to investigate and report on the true divisional line between British Guiana and Venezuela was named by the President of the United States, on the 1st of January, as follows: David J. Brewer, Associate Justice of the Supreme Court of the United States; Richard H. Alvey, Chief Justice of the Court of Appeals in the District of Columbia; Andrew D. White, ex-President of Cornell University, and ex-Minister to Germany and Russia; Daniel C. Gilman, President of Johns Hopkins University; Frederick R. Coudert, of New York. The Commission was organized on the 4th by the election of Justice Brewer to be its President. Mr. S. Mallet Prevost was subsequently appointed Secretary. One of the first proceedings of the Commission was to address a letter to the Secretary of State, suggesting a friendly intimation to the governments of Great Britain and Venezuela that their assistance to it, in procuring unpublished archives and the like evidence, would be highly acceptable, and that "if either should deem it appropriate to designate an agent or attorney, whose duty it would be to see that no such proofs were omitted or overlooked, the Commission would be grateful for such evidence of good will." This overture was well received in England, and had an excellent effect. It was responded to by Lord Salisbury, with an assurance that Her Majesty's government would readily place at the disposal of the President of the United States any information at their command, and would communicate advance copies of documents soon to be published on the subject of the boundary line. Before the close of January the Commission had organized its work, with several experts engaged to assist on special lines. Professor Justin Winsor, Librarian of Harvard University, had undertaken to report on the early maps of the Guiana-Venezuela country, Professor George L. Burr, of Cornell University, was making ready to examine the Dutch archives in Holland, and Professor J. Franklin Jameson, of Brown University, was enlisted for other investigations.

Before these labors had gone far, however, the two governments, of Great Britain and the United States, were induced to reopen a discussion of the possibility of an arbitration of the dispute. On the 27th of February, Mr. Bayard, the Ambassador of the United States at London, conveyed to Lord Salisbury a proposal from his government "that Her Majesty's Ambassador at Washington should be empowered to discuss the question at that capital with the Secretary of State," and that "a clear definition of the 'settlements' by individuals in the territory in dispute, which it is understood Her Majesty's Govern-

VENEZUELA, 1896–1899.

ment desire should be excluded from the proposed submission to arbitration, should be propounded." Lord Salisbury assented so far as to telegraph, on the same day, to Sir Julian Pauncefote: "I have agreed with the United States' Ambassador that, in principle, the matter may be discussed between the United States Government (acting as the friend of Venezuela) and your Excellency." But, a few days later (March 5), the British Premier and Foreign Secretary gave a broader range to the discussion, by recalling a correspondence that had taken place in the spring of 1895 between the then American Secretary of State, Mr. Gresham, and the British Ambassador, in contemplation of a general system of international arbitration for the adjustment of disputes between the two governments. Reviving that project, Lord Salisbury submitted the heads of a general arbitration treaty between the United States and Great Britain, which became a subject of discussion for some weeks, without offering much promise of providing for the settlement of the Venezuela dispute. In May, the correspondence returned to the latter subject more definitely, Lord Salisbury writing (May 22):

"From the first our objection has been to subject to the decision of an Arbiter, who, in the last resort, must, of necessity, be a foreigner, the rights of British colonists who have settled in territory which they had every ground for believing to be British, and whose careers would be broken, and their fortunes possibly ruined, by a decision that the territory on which they have settled was subject to the Venezuelan Republic. At the same time, we are very conscious that the dispute between ourselves and the Republic of Venezuela affects a large portion of land which is not under settlement, and which could be disposed of without any injustice to any portion of the colonial population. We are very willing that the territory which is comprised within this definition should be subjected to the results of an arbitration, even though some portion of it should be found to fall within the Schomburgk line." He proposed, accordingly, the creation of a commission of four persons, for the determination of the questions of fact involved, on whose report the two governments of Great Britain and Venezuela should endeavor to agree on a boundary line; failing which agreement, a tribunal of arbitration should fix the line, on the basis of facts reported by the Commission. "Provided always that in fixing such line the Tribunal shall not have power to include as the territory of Venezuela any territory which was bonâ fide occupied by subjects of Great Britain on the 1st January, 1887, or as the territory of Great Britain any territory bonâ fide occupied by Venezuelans at the same date."

Objections to this proposal, especially to its final stipulation, were raised by the government of the United States, and the negotiation looked unpromising again for a time; but at length, on the 13th of July, Mr. Olney made a suggestion which happily solved the one difficulty that had been, from the beginning, a bar to agreement between the two governments. "Can it be assumed," he asked, in a letter of that date, "that Her Majesty's Government would submit to unrestricted arbitration the whole of the territory in dispute, provided it be a rule of the arbitration, embodied in the arbitral agreement, that territory which has been in the exclusive, notorious, and actual use and occupation of either party for even two generations, or say for sixty years, shall be held by the arbitrators to be the territory of such party? In other words, will Her Majesty's Government assent to unrestricted arbitration of all the territory in controversy, with the period for the acquisition of title by prescription fixed by agreement of the parties in advance at sixty years?" Lord Salisbury assented to the principle thus suggested, but proposed a shorter term of occupation than sixty years. Finally the term of fifty years was accepted on both sides, and from that point the arrangement of a Treaty of Arbitration between Great Britain and Venezuela went smoothly on.

The good news that England and America were practically at the end of their dispute was proclaimed by Lord Salisbury, on the 9th of November, in a speech at the Lord Mayor's banquet, in London, when he said: "You are aware that in the discussion had with the United States on behalf of their friends in Venezuela, our question has not been whether there should be arbitration, but whether arbitration should have unrestricted application; and we have always claimed that those who, apart from historic right, had the right which attaches to established settlements, should be excluded from arbitration. Our difficulty for months has been to define the settled districts; and the solution has, I think, come from the suggestion of the government of the United States, that we should treat our colonial empire as we treat individuals; that the same lapse of time which protects the latter in civic life from having their title questioned, should similarly protect an English colony; but, beyond that, when a lapse could not be claimed, there should be an examination of title, and all the equity demanded in regard thereto should be granted. I do not believe I am using unduly sanguine words when I declare my belief that this has brought the controversy to an end."

On the 10th of November, the Secretary of the United States Commission appointed to investigate the disputed boundary published the following: "The statements of Lord Salisbury, as reported in the morning papers, make it probable that the boundary dispute now pending between Great Britain and Venezuela will be settled by arbitration at an early day. Under the circumstances the Commission, while continuing its deliberations in the preparation and orderly arrangement of many valuable maps, reports, and documents, which have been procured and used in the course of its labors, does not propose to formulate any decision for the present of the matters subject to its examination. It will continue its sessions from time to time, but with the hope and expectation that a friendly and just settlement of all pending differences between the nations interested will make any final decision on its part unnecessary." This hope was substantially realized a few days later, when a convention embodying the agreement of the United States and Great Britain was signed by Secretary Olney and the British Ambassador, Sir Julian Pauncefote. The agreement was carried to its next stage on the 2d of February, 1897, when a treaty between Great Britain and the United States of Venezuela was signed at Washington, which provided as follows:

"Art. I. An Arbitral Tribunal shall be im

VENEZUELA, 1896–1899.

mediately appointed to determine the boundary-line between the Colony of British Guiana and the United States of Venezuela.

"Art. II. The Tribunal shall consist of five Jurists: two on the part of Great Britain, nominated by the Members of the Judicial Committee of Her Majesty's Privy Council, namely, the Right Honourable Baron Herschell, Knight Grand Cross of the Most Honourable Order of the Bath, and the Honourable Sir Richard Henn Collins, Knight, one of the Justices of Her Britannic Majesty's Supreme Court of Judicature; two on the part of Venezuela, nominated, one by the President of the United States of Venezuela, namely, the Honourable Melville Weston Fuller, Chief Justice of the United States of America, and one nominated by the Justices of the Supreme Court of the United States of America, namely, the Honourable David Josiah Brewer, a Justice of the Supreme Court of the United States of America; and of a fifth Jurist to be selected by the four persons so nominated, or in the event of their failure to agree within three months from the date of the exchange of ratifications of the present Treaty, to be selected by His Majesty the King of Sweden and Norway. The Jurist so selected shall be President of the Tribunal. In case of the death, absence, or incapacity to serve of any of the four Arbitrators above named, or in the event of any such Arbitrator omitting or declining or ceasing to act as such, another Jurist of repute shall be forthwith substituted in his place. If such vacancy shall occur among those nominated on the part of Great Britain, the substitute shall be appointed by the members for the time being of the Judicial Committee of Her Majesty's Privy Council, acting by a majority, and if among those nominated on the part of Venezuela, he shall be appointed by the Justices of the Supreme Court of the United States, acting by a majority. If such vacancy shall occur in the case of the fifth Arbitrator, a substitute shall be selected in the manner herein provided for with regard to the original appointment.

"Art. III. The Tribunal shall investigate and ascertain the extent of the territories belonging to, or that might lawfully be claimed by, the United Netherlands or by the Kingdom of Spain respectively at the time of the acquisition by Great Britain of the Colony of British Guiana, and shall determine the boundary-line between the Colony of British Guiana and the United States of Venezuela.

"Art. IV. In deciding the matters submitted, the Arbitrators shall ascertain all facts which they deem necessary to a decision of the controversy, and shall be governed by the following Rules, which are agreed upon by the High Contracting Parties as Rules to be taken as applicable to the case, and by such principles of international law not inconsistent therewith as the Arbitrators shall determine to be applicable to the case:—Rules. (a.) Adverse holding or prescription during a period of fifty years shall make a good title. The Arbitrators may deem exclusive political control of a district, as well as actual settlement thereof, sufficient to constitute adverse holding or to make title by prescription. (b.) The Arbitrators may recognize and give effect to rights and claims resting on any other ground whatever valid according to international law, and on any principles of international law which the Arbitrators may deem to be applicable to the case, and which are not in contravention of the foregoing rule. (c.) In determining the boundary-line, if territory of one Party be found by the Tribunal to have been at the date of this Treaty in the occupation of the subjects or citizens of the other Party, such effect shall be given to such occupation as reason, justice, the principles of international law, and the equities of the case shall, in the opinion of the Tribunal, require. . . . Art. XIII. The High Contracting Parties engage to consider the result of the proceedings of the Tribunal of Arbitration as a full, perfect, and final settlement of all the questions referred to the Arbitrators."—*Great Britain, Papers by Command: Treaty Series No.* 5, 1897.

Before the Arbitrators named in the treaty had entered on their duties, a vacancy in the tribunal was created by the death of Baron Herschell, and the Lord Chief Justice of England, Lord Russell of Killowen, was appointed in his place. His Excellency, Frederic de Martens, Privy Councillor and Permanent Member of the Council of the Ministry of Foreign Affairs in Russia, was selected to be the fifth Arbitrator. As thus constituted, the Arbitral Tribunal met in Paris on the 15th of June, 1899. In the hearings before it, Venezuela was represented by Benjamin Harrison, ex-President of the United States, and other counsel; the British government by Sir Richard Webster, Attorney-General of Great Britain, and others. The decision of the Tribunal, which is said to have been rendered with unanimity, was announced on the 3d of October, 1899, as follows:

"We the undersigned Arbitrators do hereby make and publish our decision, determination, and Award of, upon, and concerning the questions submitted to us by the said Treaty of Arbitration, and do hereby, conformably to the said Treaty of Arbitration, finally decide, award, and determine that the boundary-line between the Colony of British Guiana and the United States of Venezuela is as follows:—Starting from the coast at Point Playa, the line of boundary shall run in a straight line to the River Barima at its junction with the River Mururuma, and thence along the mid-stream of the latter river to its source, and from that point to the junction of the River Haiowa with the Amakuru, and thence along the mid-stream of the Amakuru to its source in the Imataka Ridge, and thence in a south-westerly direction along the highest ridge of the spur of the Imataka Mountains to the highest point of the main range of such Imataka Mountains opposite to the source of the Barima, and thence along the summit of the main ridge in a south-easterly direction of the Imataka Mountains to the source of the Acarabisi, and thence along the mid-stream of the Acarabisi to the Cuyuni, and thence along the northern bank of the River Cuyuni westward to its junction with the Wenamu, and thence following the mid-stream of the Wenamu to its westernmost source, and thence in a direct line to the summit of Mount Roraima, and from Mount Roraima to the source of the Cotinga, and along the mid-stream of that river to its junction with the Takutu, and thence along the mid-stream of the Takutu to its source, thence in a straight line to the westernmost point of the Akarai Mountains, and thence along the ridge of the Akarai Mountains to the source of the Corentin called the

Cutari River. Provided always that the line of delimitation fixed by this Award shall be subject and without prejudice to any questions now existing, or which may arise, to be determined between the Government of her Britannic Majesty and the Republic of Brazil, or between the latter Republic and the United States of Venezuela.

"In fixing the above delimitation the Arbitrators consider and decide that in times of peace the Rivers Amakuru and Barima shall be open to navigation by the merchant-ships of all nations, subject to all just regulations and to the payment of light or other like dues: Provided that the dues charged by the Republic of Venezuela and the Government of the Colony of British Guiana in respect of the passage of vessels along the portions of such rivers respectively owned by them shall be charged at the same rates upon the vessels of Venezuela and Great Britain, such rates being no higher than those charged to any other nation: Provided also that no customs duties shall be chargeable either by the Republic of Venezuela or by the Colony of British Guiana in respect of goods carried on board ships, vessels, or boats passing along the said rivers, but customs duties shall only be chargeable in respect of goods landed in the territory of Venezuela or Great Britain respectively."—*Great Britain, Papers by Command: Venezuela No. 7, 1899, pp. 6–7.*

A. D. 1898-1900.—Change in the Presidency. —Death of ex-President Crespo.—Revolution.—Rebellion.—General Joaquin Crespo retired from the presidency and was succeeded by General Ignacio Andrade on the 1st of March, 1898. A revolutionary movement was soon started, with General Hernandez at its head, and ex-President Crespo, who led the forces of the government against it, was killed in a charge, on the 16th of April. Hernandez was surprised and captured a few weeks later, and the rebellion then subsided for a time. In the spring of 1899 Hernandez was set at liberty by Andrade, who, meantime, had crushed a minor revolt, undertaken by one General Guerra. August found the harassed President assailed by a fresh rising, started by General Cipriano Castro, and the restless revolutionist, Hernandez, was soon in league with it. This proved to be a revolution in earnest, and, after hard fighting, President Andrade fled from the capital and the country in October; Puerto Cabello, the last town to hold out for him, was bombarded and stormed the following month, and a new government was established, nominally under the Vice President, Rodriguez, but with Castro for its actual head. Before this had been fully accomplished, however, Hernandez was in arms against Castro, with his accustomed ill-success. Before the year closed he had fled the country; but early in 1900 he was once more in the field, maintaining a troublesome war until May, when he was defeated, and again a prisoner in his opponents' hands.

A. D. 1900.—Census.—According to a report from the United States Consul at Vienna, the census taken December 31, 1900, shows a population of 1,635,647, or nearly 63,000 less than that of Chicago, when the recent census of that city was taken. These figures show Vienna to rank next after London, Paris and Berlin among the European capitals, while in this country only New York and Chicago are larger. In the last ten years Vienna has increased 21.9 per cent, or slightly faster than the average for the whole United States. Of the two American cities larger than Vienna New York increased in ten years 37.8 per cent. and Chicago 54.4 per cent.

WAR BUDGETS: Military and naval expenditures of the great Powers.—The following compilation of statistics of the military and naval expenditure of the leading Powers (Great Britain excepted) was submitted to the House of Representatives at Washington by the Hon. George B. McClellan, of New York, in a speech, February 12, 1901, on the bill then pending in Congress, to make appropriations for the support of the Army of the United States. The tabulated statements were introduced with explanations and comments as follows: "For purposes of comparison, I have taken the armies and navies of Austria-Hungary, France, the German Empire, Italy, and Russia. I have not included Great Britain, for its conditions have been abnormal for nearly two years. I have based my estimates on the enlisted strength of the armies referred to, excluding commissioned officers. The figures are the most recent obtainable without direct communication with foreign authorities and are for the most part for the last fiscal year of the several countries, although in some cases they are for 1898–99. The German naval budget does not include the extraordinary expenditures for the new navy authorized by the recent enactment of the Reichstag. This does not begin to be effective until the next fiscal year. In estimating the equivalent in dollars of the Italian budget I have allowed 6 per cent for the depreciation of the present paper currency—a very moderate estimate. The Russian budget will appear abnormally low, for I have recently seen it stated at $159,000,000. This is because the ruble has been assumed to be the gold ruble, worth 52 cents, but the budget is expressed in paper rubles, and is now, under a recent order of M. Witte, uniformly reckoned at two-thirds of the gold ruble. I have therefore called it 34.6 cents."

As to the military expenditure of the United States, "the House has during the present session appropriated, or is about to appropriate, for the support of what may be called the active Army, $152,068,100.84. The appropriations growing out of past wars amount to a total of $154,694,292. I have charged to this account every item that could by any possible construction be assumed to refer to past wars and not to the maintenance of the present Army. The pension appropriation bill carried $145,245,230. The cost of administering the Pension Bureau will amount to $3,352,790. The Record and Pension Office costs $585,170. I have further included appropriations for National and State Homes, back pay, etc., cemeteries, and $712,580 for extra clerks due to the Spanish war. Adding the appropriations due to past wars to the appropriation for the active Army, we find a total of $306,762,392.84, which represents the total of our Army budget. Taking the total cost of our active Army, and assuming the enlisted strength of the Army to be 100,000, we find the cost per annum of each enlisted man to be $1,520. Taking the total Army budget, including appropriations arising from past wars, we find the cost per annum of each enlisted man $3,067.

"Without including appropriations arising from past wars, we find the cost of the Army per capita of population to be $1.99. Including appropriations arising from past wars, we find the cost of the Army per capita of population to be $4.02. The army budget of Austria-Hungary is $67,564,446, the cost of maintaining 1 enlisted man for one year being $183.86, and the cost of the army per capita of population $1.50. The army budget of France is $128,959,064, the cost of maintaining 1 enlisted man is $218.74, and the cost per capita of population is $3.34. The army budget of the German Empire is $156,127,743, the cost per annum of 1 enlisted man is $277.85, the cost per capita of population is $2.98. The army budget of Italy is $43,920,132, the cost of maintaining 1 enlisted man per annum is $202.65, the cost per capita of population is $1.39. The army budget of Russia is $99,927,997, the cost of maintaining 1 enlisted man is $119.65, the cost per capita of population is 77 cents.

"The appropriations for the support of the naval establishment are by no means so widely distributed as are those for the Army. The naval bill carries $77,016,635.60. In the legislative, executive, and judicial bill there are carried appropriations directly chargeable to the support of the Navy, including pay of the clerical force in the Auditor's office, the office of the Secretary, the office of the heads of the bureaus, maintenance of building, and contingent expenses, amounting to $399,150. In the sundry civil bill there are carried, for printing and binding, appropriations amounting to $127,000. Up to the present time the Secretary of the Treasury has submitted to the House a statement of deficiencies for the support of the naval establishment amounting to $2,491,549.64, making a total of $80,034,335.24 that the House has appropriated or is about to appropriate during the present session for the support of the naval establishment. In addition to this the legislative, executive, and judicial bill carries an appropriation of $21,800 for the payment of extra clerks whose employment is necessitated by the Spanish war, making a total naval budget of $80,056,135.24.

"The naval budget of Austria-Hungary is $7,028,167, a cost per capita of population of 15 cents. The naval budget of France is $61,238,478, a cost per capita of population of $1.58. The naval budget of the German Empire is $32,419,602, a cost per capita of population of 62 cents. The naval budget of Italy is $18,455,111, a cost

per capita of population of 58 cents. The naval budget of Russia is $48,132,220, a cost per capita of population of 37 cents.

"The combined appropriations for the Army and Navy represent the total war budget, or, as some European countries prefer to call it, the 'defense budget.' The total war budget of the United States, excluding appropriations due to past wars, amounts to $233,102,435, or a cost per capita of population of $3.03. Our total war budget, including appropriations due to past wars, amounts to $386,818,527, a cost per capita of population of $5.06. The total war budget of Austria-Hungary is $74,592,613, a cost per capita of population of $1.66. The total war budget of France is $190,197,542, a cost per capita of population of $4.92. The total war budget of the German Empire is $188,547,345, a cost per capita of population of $3.60. The total war budget of Italy is $62,375,243, a cost per capita of population of $1.97. The total war budget of Russia is $148,060,017, a cost per capita of population of $1.14. The combined total war budgets of France and of the German Empire amount to $378,744,887, or $8,073,640 less than that of the United States.

"The criticism has been made that there can be no comparison between the cost of maintaining our Army and the cost of maintaining those of Europe, for the reason that the European private receives 'no pay' and ours receives $156 a year. As a matter of fact, while service is compulsory on the Continent, the continental private is paid a small sum, amounting on the average to about $56 a year. In other words, our private receives about $100 more than his comrade of Europe. This criticism does not affect comparisons, as will be seen on the consideration of a few figures. The war budget of the German Empire is the largest in Europe. Were the Prussian private to receive the same pay as our private the Prussian army budget would be swelled to $212,354,343. Were the Russian private to receive the same pay as our private the Russian budget would be swelled to about $190,000,000 per annum. The difference in pay does not account for the proportionate difference in the size of the budgets, for were our Army to be increased to the size of that of the German Empire our budget would be increased by $702,644,320, making a total of $854,712,420, without including expenses due to past wars, or, including such expenses, making an Army budget of $1,009,406,712. Were our Army to be increased to the size of Russia's, our budget would be increased by $1,132,120,220, making a total Army budget, without including appropriations due to past wars, of $1,284,188,320, or, including appropriations due to past wars, making a total budget of $1,438,882,612.

"I submit these figures to the consideration of the House without any comment whatsoever. Comment is unnecessary.

"TABLE A. — Analysis of the war budget of the United States as agreed to, or about to be agreed to, by the House of Representatives, first session Fifty-sixth Congress.

1. ARMY.

Appropriations for the active Army.

Army bill	$117,994,649.10
Military Academy bill	700,151.88
Fortification bill	7,227,461.00
Legislative, executive, and judicial bill:	
Office of the Secretary of War	$104,150
Office of the Auditor for the War Department	318,300
Offices of heads of so-called "staff" departments	653,826
Maintenance of three-eighths of Department building	45,990
Rent	13,500
Stationery	32,500
Postage	1,000
Contingent expenses	58,000
	1,227,266.00
Sundry civil bill:	
Arsenals and armories	281,550
Military posts	1,008,960
Bringing home dead	150,000
Maps, etc	5,100
Printing and binding	244,000
Repairs, three-eighths Department building	31,500
	1,721,110.00
Deficiencies submitted:	
December 11, 1900	12,062,223.36
January 21, 1901	5,835,239.50
January 26, 1901	5,300,000.00
	23,197,462.86
Total, active Army	152,068,100.84

Appropriations growing out of past wars.

Pensions	$145,245,230.00
Salaries, Pension Bureau, etc	3,352,790.00
Record and Pension Office	585,170.00
National Homes for Disabled Volunteer Soldiers	3,074,142.00
State Homes for Disabled Volunteer Soldiers	950,000.00
Back pay and bounty (civil war)	325,000.00
Arrears of pay (Spanish war)	200,000.00
National cemeteries	191,880.00
Artificial limbs and appliances	27,000.00
Headstones and burials	28,000.00
Apache prisoners	2,500.00
Secretary of War, extra clerks (Spanish war)	600,000.00
Auditor for War Department, extra clerks (Spanish war)	112,580.00
Total	154,694,292.00
Appropriations for the active Army	152,068,100.84
Total Army budget	306,762,392.84

2. NAVY.

Naval bill	$77,016,635.60
Legislative, executive, and judicial bill:	
Office of the Secretary of the Navy	$47,900.00
Office of the Auditor for the Navy Department	68,080.00
Offices of heads of bureaus, etc	224,430.00
Maintenance of three-eighths of Department building	45,990.00
Contingent expenses	12,750.00
	$399,150.00
Sundry civil bill:	
Printing and binding	127,000.00
Deficiencies submitted:	
December 11, 1900	74,481.09
December 17, 1900	20,000.00
January 21, 1901	2,267,068.55
January 25, 1901	130,000.00
	2,491,549.64
Total, active Navy	80,034,335.24
Auditor for Navy Department, extra clerks (Spanish war)	21,800.00
Total Navy budget	80,056,135.24

3. RECAPITULATION.

Active Army	$152,068,100.84
Active Navy	80,034,335.24
	$232,102,436.08
Army (past wars)	154,694,292.00
Navy (past wars)	21,800.00
	154,716,092.00
Total war budget	386,818,528.08

TABLE B. — Analysis of war budgets of various armies.

	Population by last census.	Latest obtainable army budget.	Total enlisted strength, peace footing.	Cost of maintaining one enlisted man for one year.	Cost of army per capita of population.	Latest obtainable naval budget.	Cost of navy per capita of population.	Total war budget.	Cost of army and navy combined per capita of population.
Austria-Hungary	44,901,036	$67,564,446	368,002	$183.86	$1.50	$7,028,167	$0.15	$74,592,613	$1.66

— *Congressional Record, Feb.* 15, 1901, *pp.* 2707–9.

The following is an abstract of the British Army estimates for 1901–1902, submitted to Parliament in March, 1901, compared with those of the previous year. They cover, of course, the extraordinary expenditure incident to the South African war :

	NET ESTIMATES.	
	1901–1902.	1900–1901.
I. — NUMBERS.	Total Numbers.	Total Numbers.
Number of men on the Home and Colonial Establishments of the Army, exclusive of those serving in India	450,000	430,000
II. — EFFECTIVE SERVICES.	£	£
Pay, &c., of Army (General Staff, Regiments, Reserve, and Departments)	21,657,500	18,450,000
Medical Establishment: Pay, &c.	1,083,600	908,000
Militia : Pay, Bounty, &c	2,662,000	2,288,000
Yeomanry Cavalry : Pay and Allowances	375,000	141,000
Volunteer Corps : Pay and Allowances	1,230,000	1,730,000
Transport and Remounts	15,977,000	19,800,000
Provisions, Forage and other Supplies	18,782,000	18,200,000
Clothing Establishments and Services	4,825,000	5,530,000
Warlike and other Stores : Supply and Repair	13,450,000	13,200,000
Works, Buildings, and Repairs : Cost, including Staff for Engineer Services	3,281,000	4,730,700
Establishments for Military Education	119,200	113,800
Miscellaneous Effective Services	218,200	206,900
War Office : Salaries and Miscellaneous Charges	305,000	275,000
Total Effective Services	83,970,500	85,573,400
III. — NON-EFFECTIVE SERVICES.		
Non-Effective Charges for Officers, &c	2,271,000	1,861,000
Non-Effective Charges for Men, &c	1,485,000	1,379,000
Superannuation, Compensation, and Compassionate Allowances	188,500	186,000
Total Non-Effective Services.	3,944,500	3,426,000
Total Effective and Non-Effective Services	87,915,000	88,999,400

NOTE. — The provision for Ordinary and War Services is as follows : —

	1901–02.	1900–01.
	£	£
For War Services :		
South Africa	56,070,000	61,286,700
China	2,160,000	3,450,000
	58,230,000	64,736,700
For Ordinary Services	29,685,000	24,262,700
Total	87,915,000	88,999,400

The British navy estimates for 1901–1902 amount to a net total of £30,875,500, being an increase of £2,083,600 beyond the amount of £28,791,900 voted for the year 1900–1901. The total number of Officers, Seamen and Boys, Coastguard, and Royal Marines, proposed for the year 1901–1902 is 118,635, being an increase of 3,745.

The following statistics of the numerical strength and ratio to population of the armies of twenty-two nations, compiled in the War Department of the United States, were cited in the debate in the U. S. Senate on the bill to increase the strength of the U. S. Army, January 15, 1901. They differ in some particulars, but not greatly, from the corresponding figures given by Mr. McClellan :

"War Department, Adjutant-General's office, Washington, August 28, 1900. According to the latest available sources, which are considered fairly reliable, the peace and war strength of the armies of the nations mentioned below is stated to be as follows :

NATION.	PEACE STRENGTH.		WAR STRENGTH.
	Officers.	Men.	
Austria-Hungary, 1899.	26,454	335,239	1,872,178
Belgium, 1899	3,472	48,030	163,000
Brazil, 1897	2,300	25,860	.....
China	.....	300,000	[1]1,000,000
France, 1900	29,740	586,735	[2]2,500,000

[1] Estimated.
[2] Available men liable to military service.

Nation.	Peace Strength. Officers.	Peace Strength. Men.	War Strength.
Germany, 1899	23,230	562,266	[1] 3,000,000
Great Britain, 1900	11,904	[2] 247,237	503,484
Italy, 1898	14,084	310,602	1,304,854
Japan, 1898	6,356	115,673	407,963
Mexico, 1898	2,068	30,075	151,500
Persia	.....	24,500	105,500
Portugal, 1899	1,804	30,000	[3] 157,126
Roumania	3,280	60,000	171,948
Russia, 1900	36,000	860,000	[4] 3,500,000
Servia, 1897	.....	160,751	353,366
Spain, 1899	.....	98,140	183,972
Sweden, 1899	2,513	37,639	327,000
Switzerland, 1899 [5]	.....	.....	509,707
Turkey, 1898	.....	700,620	900,000
United States, 1900	2,587	65,000	100,000

[1] Estimated on present organization to have over 3,000,000 trained men. War strength not given.
[2] Of this number 74,288 are Indian troops.
[3] In addition there are maintained in the colonies 9,478 officers and men.
[4] Approximately.
[5] No standing army.

"War Department, Adjutant General's office, Washington, December 8, 1900. Peace strength of the armies, population, and percentage of former to latter of the principal countries of the world. This table is not strictly accurate at the present time, because the dates of censuses vary. In preparing this table the latest published census has been taken for population, and the countries are arranged in order of their percentages:

Nation.	Peace Strength.	Population.	Percentage.
France	616,475	38,517,975	1.6
Norway	30,900	2,000,917	1.54
Germany	585,896	52,279,901	1.1
Roumania	63,280	5,800,000	1.1
Italy	324,686	31,856,675	1
Greece	25,333	2,433,806	1
Servia	22,448	2,312,484	.97
Austria-Hungary	361,693	41,357,184	0.87
Sweden	40,152	5,062,918	.79
Belgium	51,502	6,669,732	.77
Russia	896,000	128,932,173	.69
Great Britain and Ireland	259,141	38,104,975	.68
Turkey	244,000	38,791,000	.63
Portugal	31,804	5,049,729	.62
Spain	98,140	17,565,632	.56
Netherlands	27,696	5,074,632	.54
Denmark	9,769	2,185,335	.45
Japan	122,029	43,745,353	.30
Mexico	32,143	12,630,863	.25
Brazil	28,160	14,333,915	.19
United States	67,587	76,295,220	.089
Switzerland [1]	.....	3,119,635	.....

[1] Switzerland has no standing army, but every citizen has to bear arms. The first class (élite), composed of men between the ages of 20 and 32, has from forty to eighty days' training the first year, and every second year thereafter sixteen days. About 18,000 men join the élite annually.

In December, 1900, the British Board of Trade issued a return, for the year 1899 (except as stated otherwise), of the "Naval expenditure and Mercantile Marine" of leading nations, from which the following table is taken:

Countries.	Aggregate Naval Expenditure on Seagoing Force.	Aggregate Revenue.	Aggregate Tonnage of Mercantile Marine.
	£	£	Tons.
Great Britain (United Kingdom)	26,145,599 (1898–99)	119,839,905 (Year ended 31st March, 1900)	9,164,342
Russian Empire	8,306,500	165,905,000	554,141 (1898)
Germany	6,672,788 (1899–1900)	76,309,000	1,639,552 (1898)
Netherlands	1,133,664 (1899–1900)	10,416,000	302,224 (1898)
France	13,796,033	142,021,000	957,756
Portugal	749,226 (Year ended 30th June, 1900)	11,474,000	129,522 (1898)
Spain	1,133,664 (Year ended 30th June, 1900)	34,633,000 (1898–99)	657,924 (1897)
Italy	4,617,034 (Year ended 30th June, 1900)	70,181,000 (Year ended 30th June, 1899)	815,162 (1898)
Austria-Hungary	1,403,441	Austria, 66,171,000 (1898) Hungary, 42,903,000	Austria. 164,506 (1898) Hungary. 60,072
United States (year ended 30th June)	9,840,912 (1900)	127,288,000	848,246 (*b*).
Japan	5,076,294 (1899–1900)	22,017,000 (*a*)	648,324 (1898)

Note.—(*a*) Includes the Chinese indemnity. (*b*) Registered for foreign trade only.

A. D. 1900 (December).—Celebration of the Centennial Anniversary.—The 100th anniversary of the removal of the national capital from Philadelphia to Washington was fittingly celebrated on the 12th of December, 1900, by an imposing military parade and by a notable assemblage in the House of Representatives, where addresses were delivered and the principal exercises took place. The President and the Vice Presi-

dent elect, members of all branches of the public service, the Governors and delegates from all the States and Territories, and various other dignitaries, were present. The day of celebration was not precisely that of the anniversary, but one chosen for convenience to represent it. Under the law in 1800 the two houses of Congress began their regular winter session about two weeks earlier than they do now, and November 17 was set as the date on which the VIth Congress should reassemble at the new seat of Federal power. As neither house could have taken part this year in anniversary ceremonies held on November 17, a day was naturally chosen which should allow the legislative branch its proper share in the centennial celebration. The Executive Departments had, in fact, been partially installed in the new District some time before the members of the VIth Congress found their way to the unfinished Capitol. President Adams, leaving Philadelphia on May 27, and travelling by a circuitous route through Lancaster and Frederick, reached Georgetown on June 3, 1800. He inspected the single wing of the original Capitol, then far from finished, visited Alexandria, at the southern extreme of the District, and after a ten days stay in Georgetown departed for Massachusetts. The President and Mrs. Adams returned to occupy the White House early in November of the same year.

WEST INDIES, The British: A. D. 1897.—Report of a Royal Commission on the condition and prospects of the sugar-growing colonies.—A state of increasing distress in most of the British West India colonies; caused by the depression of the sugar-growing industry, led to the appointment, in December, 1896, of a Royal Commission "to make an inquiry into the condition and prospects of the colonies of Jamaica, British Guiana, Trinidad and Tobago, Barbados, Grenada, St. Vincent, St. Lucia, and the Leeward Islands, and to suggest such measures as appeared calculated to restore and maintain the prosperity of these colonies and their inhabitants." In the August following the Commission made its report, with the following summary of conclusions:

"a. The sugar industry in the West Indies is in danger of great reduction, which in some colonies may be equivalent or almost equivalent to extinction.

"b. The depression of the industry is due to the competition of other sugar-producing countries and in a special degree to the competition of beet sugar produced under a system of bounties. It is also affected by high protective tariffs, and by the competition of cane sugar, the production of which is specially encouraged by the Governments concerned. The causes of the depression may be described as permanent, inasmuch as they are largely due to the policy of foreign countries, and there is no indication that that policy is likely to be abandoned in the immediate future.

"c. It is not due in any considerable degree to extravagance in management, to imperfection in the process of manufacture, or to inadequate supervision consequent on absentee ownership, and the removal of these causes, wherever they exist, would not enable it, generally, to be profitably carried on under present conditions of competition. . . .

"d. The depression in the industry is causing sugar estates to be abandoned, and will cause more estates to be abandoned, and such abandonment is causing and will cause distress among the labouring population, including a large number of East Indian immigrants, and will seriously affect, for a considerable time, the general prosperity of the sugar-producing Colonies, and will render it impossible for some, and perhaps the greater number of them, to provide, without external aid, for their own government and administration.

"e. If the production of sugar is discontinued or very largely reduced, there is no industry or industries that could completely replace it in such islands as Barbados, Antigua, and St. Kitts, and be profitably carried on and supply employment for the labouring population. In Jamaica, in Trinidad, in British Guiana, in St. Lucia, in St. Vincent, and to some extent in Montserrat and Nevis, the sugar industry may in time be replaced by other industries, but only after the lapse of a considerable period and at the cost of much displacement of labour and consequent suffering. In Dominica the sugar industry is not at the present day of great importance. We think it right to add that in all Colonies where sugar can be completely, or very largely, replaced by other industries, the Colonies in question will be in a much sounder position, both politically and economically, when they have ceased to depend wholly, or to a very great extent, upon the continued prosperity of a single industry.

"f. The total or partial extinction of the sugar industry would, in most places, very seriously affect the condition of the labouring classes for the worse, and would largely reduce the revenue of the Colonies. In some places the loss of revenue could be met to a limited extent by economies, but this could not be done universally nor in a material degree in most of the Colonies. Some of the Colonies could not provide the necessary cost of administration, including the relief of distressed and necessitous persons, or of the support and repatriation (when necessary) of the East Indian immigrants, without subventions from the mother country. Jamaica, Trinidad, and Grenada may be expected to meet from their own resources the whole of the expenditure that is likely to fall on them.

"g. The best immediate remedy for the state

of things which we have shown to exist would be the abandonment of the bounty system by continental nations. This change would in all probability enable a large portion of the sugar-cane cultivation to be carried on successfully, and would certainly reduce the rate at which it will diminish. Looking, however, to what appears to be the policy of the United States of America, to the great cheapening of the cost of production of beet sugar, and the fact that many countries appear to have singled out the sugar industry as one which ought to be artificially stimulated in various ways, it is not clear that, even if the bounties were abolished, another crisis of a similar character might not arise in the West Indies at a future day.

"h. A remedy which was strongly supported by witnesses interested in the West Indian sugar estates was the imposition of countervailing duties on bounty-fed sugar when imported into the United Kingdom. . . .

"i. The special remedies or measures of relief which we unanimously recommend are—(1.) The settlement of the labouring population on small plots of land as peasant proprietors. (2.) The establishment of minor agricultural industries, and the improvement of the system of cultivation, especially in the case of small proprietors. (3.) The improvement of the means of communication between the different islands. (4.) The encouragement of a trade in fruit with New York, and, possibly, at a future time, with London. (5.) The grant of a loan from the Imperial Exchequer for the establishment of Central Factories in Barbados. The subject of emigration from the distressed tracts also requires the careful attention of the various Governments, though we do not find ourselves at the present time in a position to make recommendations in detail.

"j. We estimate the cost of the special remedies recommended in (2) (3) and (4) of i, at 27,000*l.* a year for ten years, the expenditure to be borne by the mother country. We estimate the amount of the loan to Barbados for the erection of central factories at 120,000*l.* This measure no doubt involves the risk of loss. Grants will be required in Dominica and St. Vincent for roads, and to enable the settlement of the labouring population on the land to be carried out, and their amount may be taken at 30,000*l.* A further grant of about 60,000*l.* is required to clear off the floating debt in some of the smaller islands. In addition, the smaller islands should receive grants to enable them to meet their ordinary expenditure of an obligatory nature. The amount may be placed at 20,000*l.* a year for five years, and possibly a reduced amount for a further period of five years. The expenditure which we are able to estimate may be summarized as follows:—(1.) A grant of 27,000*l.* a year for ten years. (2.) A grant of 20,000*l.* a year for five years. (3.) Immediate grants of 60,000*l.* and 30,000*l.*, or 90,000*l.* in all. (4.) A loan of 120,000*l.* to Barbados for the establishment of central factories."

On a proposal for the federation of the West India colonies the Commission reported unfavorably, for the reason that the colonies are too widely scattered and differ too greatly in conditions for an efficient or economical common government. "Nor does it seem to us," says the report, "that the very important Island of Jamaica, which is separated by many hundreds of miles of sea from all the other West Indian Colonies, could dispense with a separate Governor, even if there should be a Governor-General; whilst the circumstances of British Guiana and Trinidad almost equally demand the constant presence and attention of an Administrator of Governor's rank. It might be possible, without disadvantage, to make some reduction in the number of higher officials in the smaller islands, and we are disposed to think that it would be conducive to efficiency and economy if the islands of the Windward Group, that is, Grenada and the Grenadines, St. Vincent and St. Lucia, were again placed under the Governor of Barbados, as they were for many years previous to 1885. We are also disposed to think that the Island of Dominica, which is not much further than Grenada from Barbados, and which, in its physical, social and industrial conditions partakes more of the character of the Windward Islands than of that of the other Leeward Islands, might be placed under this Government instead of being considered one of the Leeward Group. It might, indeed, be found possible to bring the whole of the Leeward Islands under the same Government as Barbados and the Windward Islands, and thus effect a further economy."—*Great Britain, Parliamentary Publications (Papers by Command: C.*—8655, 1897, *pp.* 69–70, *and* 23).

With the sanction of Parliament, most of the recommendations of the Commission were promptly carried out. Provision was made for the construction of roads in the islands; for subsidising steamer lines between the several islands and between Jamaica, Canada and London; for developing the cultivation of fruits and other crops by a botanical department; for establishing model factories for the better and cheaper working of sugar cane; and for wiping off certain debts which were a cause of distress to some of the poorer islands. In these measures the imperial government undertook obligations which might, it was said, involve the payment of £200,000.

WOMAN SUFFRAGE.—Four States have given to women unlimited political freedom, these States being Colorado, Utah, Wyoming, and Idaho. The women of all these States, except Idaho, had the privilege of voting in the Presidential election of 1896. The women of Idaho voted in the State election of 1898, but their first chance to vote for a Presidential ticket was in 1900. To some extent, in the election of school boards and officers, or on questions of taxation, woman suffrage exists in a limited way in Arizona, Connecticut, Delaware, Illinois, Iowa, Kentucky, Massachusetts, Michigan, Minnesota, Montana, Nebraska, New Hampshire, New York, North Dakota, Ohio, Oklahoma, Oregon, South Dakota, Texas, Vermont, Washington and Wisconsin.

YERKES OBSERVATORY, The.—The Yerkes Observatory, built and equipped for the University of Chicago, by Mr. Charles T. Yerkes, of Chicago, at the village of Williams Bay, near Lake Geneva, Wisconsin, was opened and dedicated on the 21st of October, 1897. A remarkable gathering of eminent astronomers gave distinction to the occasion. The Observatory was pronounced to be the most perfectly equipped in the world. The lens of its great telescope—40 inch objective—the last great work of the late Alvan G. Clark, of Cambridge, Massachusetts—was then the largest ever made. Its cost was $66,000; the cost of the equatorial mounting was $55,000.
